COVID-19 SITUATIONAL AWARENESS

SUMMARY

MAIN REPORT
6 April 2021

Contents

This situational awareness summary report collates information and intelligence from various sources. The summary will be provided daily and the content will continue to be developed.

- [National context](#)
- [Case rate and case rate change maps](#)
- [High level summary tables](#)
- [Genomically confirmed and probable cases by variant](#)
- [Case numbers by test type](#)
- [Case rates, \[REDACTED\] positivity and testing](#)
- [REDACTED]
- [National trends on common exposures](#)
- [REDACTED]
- [Prevalence](#)
- [Hospitalisation](#)
- [Mortality](#)
- [REDACTED]
- [REDACTED]

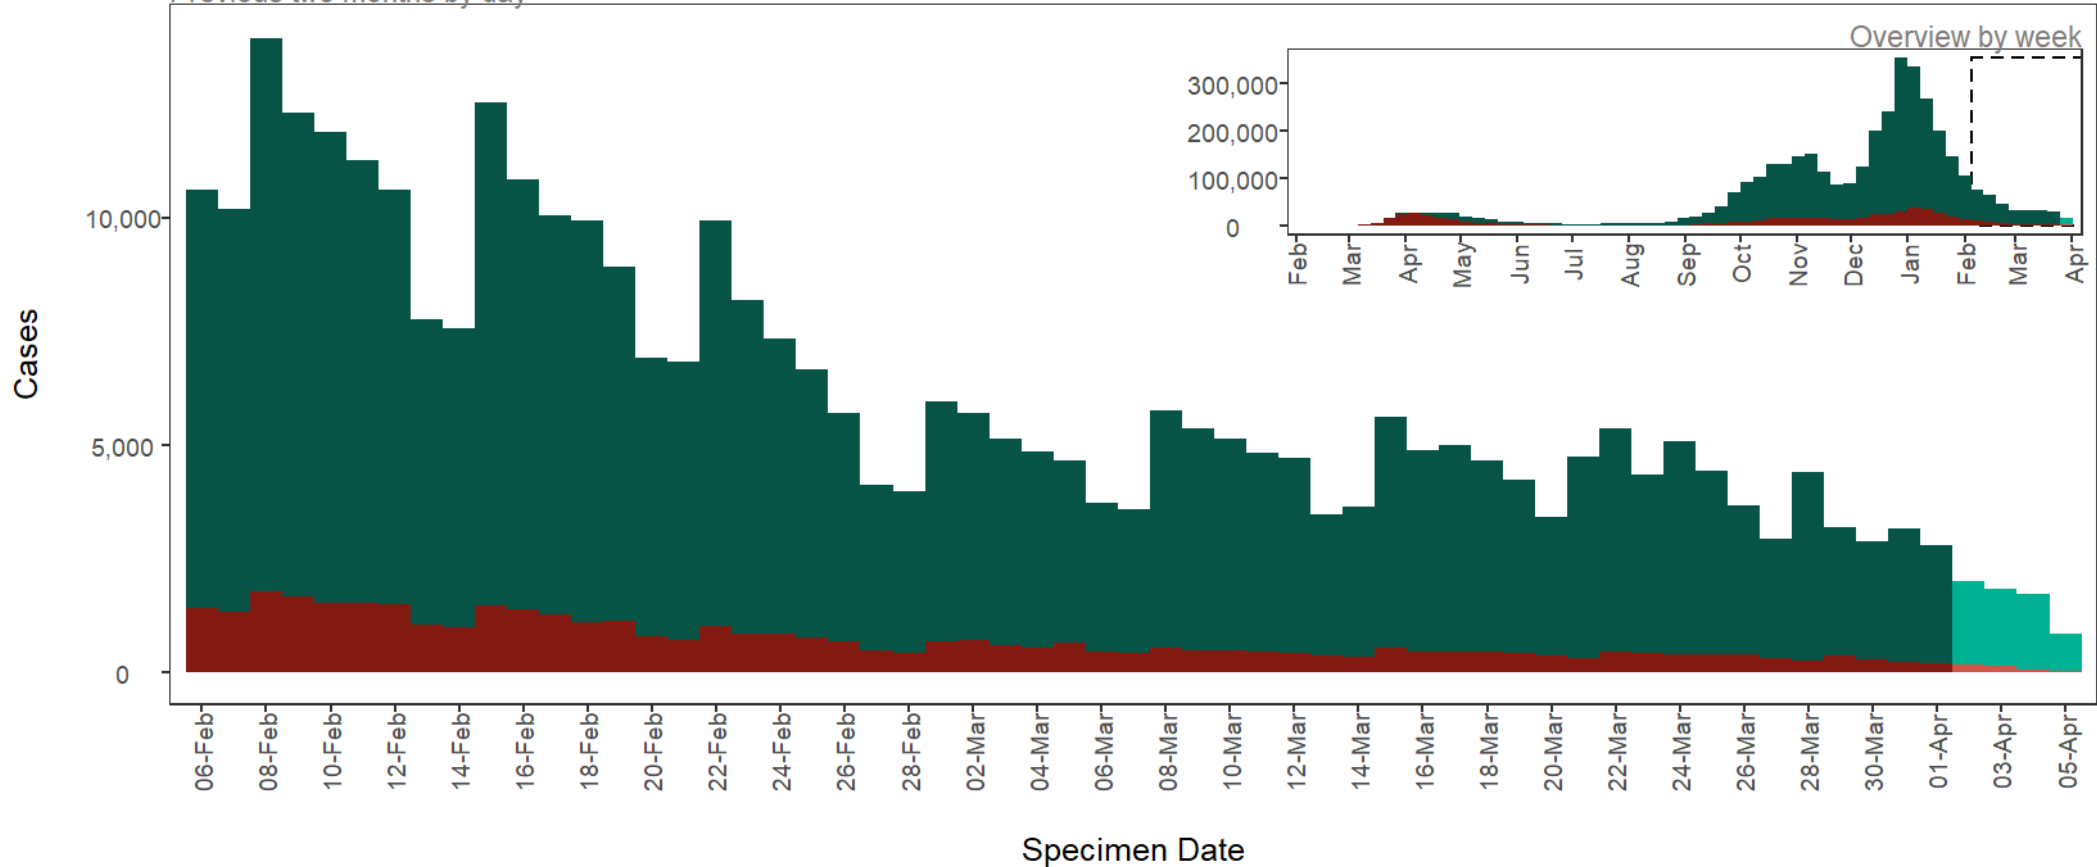

Throughout the SAR:

Lower tier local authorities is used to represent local authority districts, unitary authorities, metropolitan district and London boroughs,
Upper tier local authorities is used to represent counties, metropolitan counties, London boroughs and unitary authorities

National context

England confirmed cases - epidemic curve

Previous two months by day

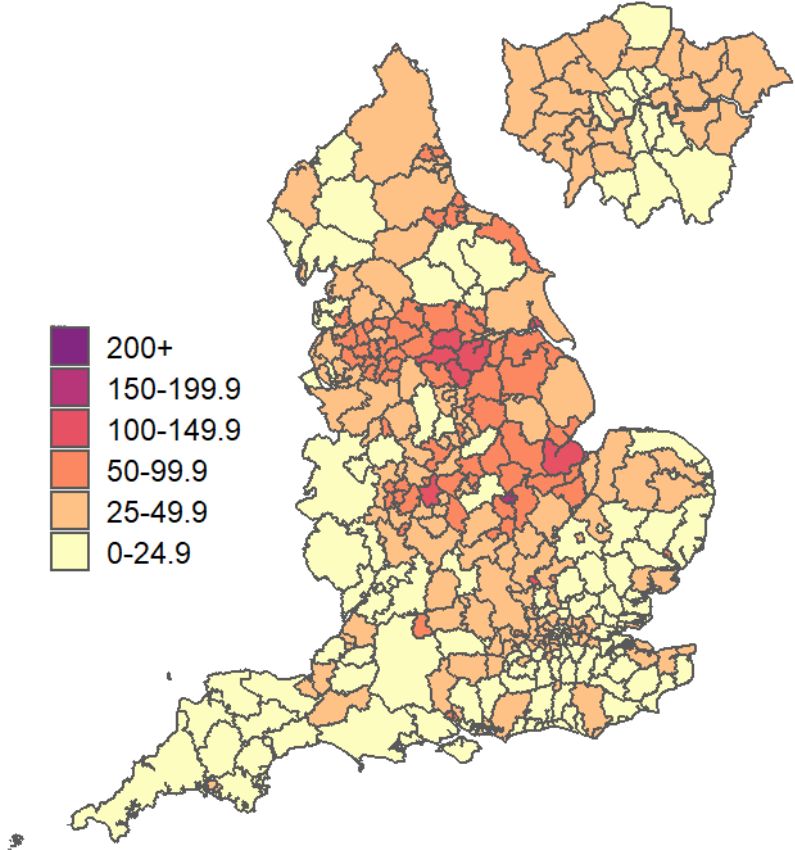

Bars shaded in **light red** and **light green** are provisional. Figures are expected to rise as results are received for additional samples tested during this period. Inset epi curve is based on weekly reports from date of first case diagnosed. Main epi curve shows daily cases truncated to show the previous two months. Value labels are for combined **pillar 1** and **pillar 2** cases.

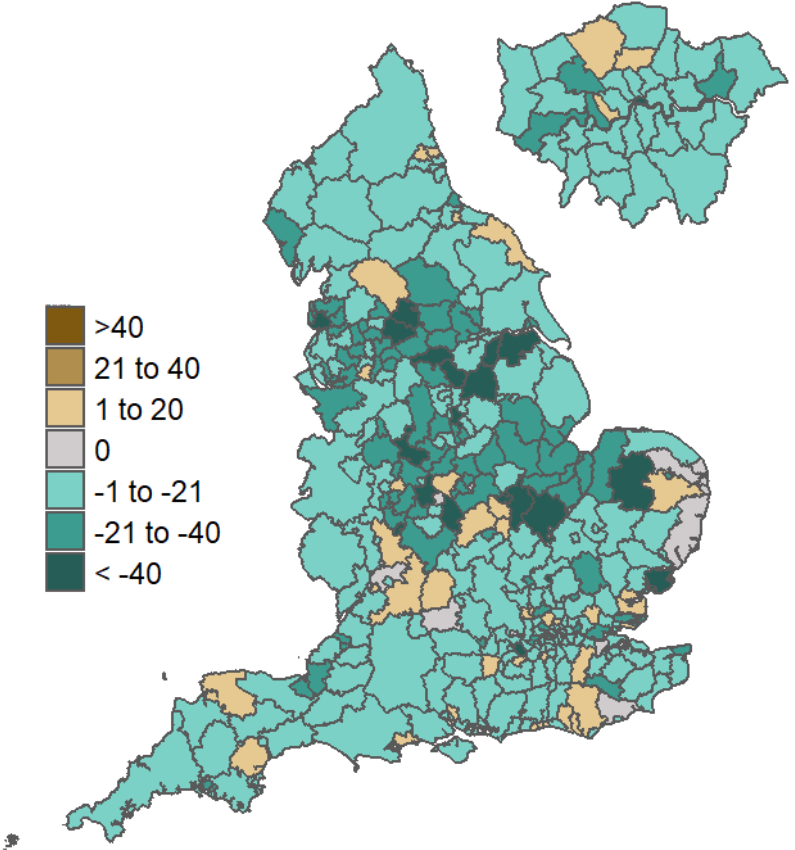

Produced by the Outbreak Surveillance Team, Public Health England.

Case Rates - Geographical spread of COVID-19 in England

Weekly case rates per 100,000 population
by local authority
26 Mar to 01 Apr 2021

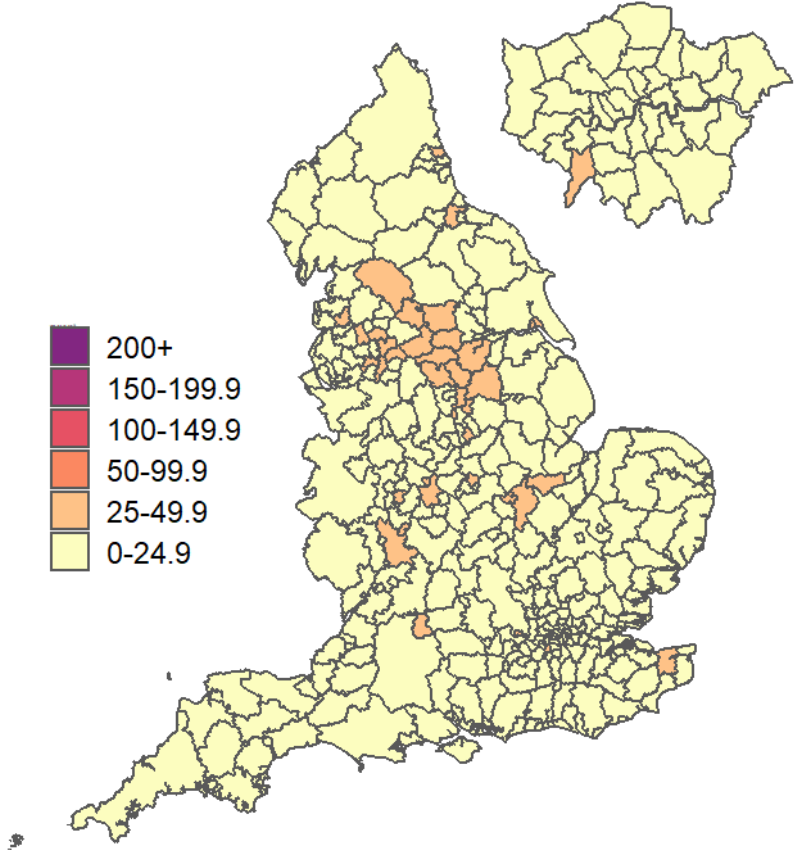

Absolute case rate change per 100,000 population
by local authority
19 Mar to 25 Mar 2021 and 26 Mar to 01 Apr 2021

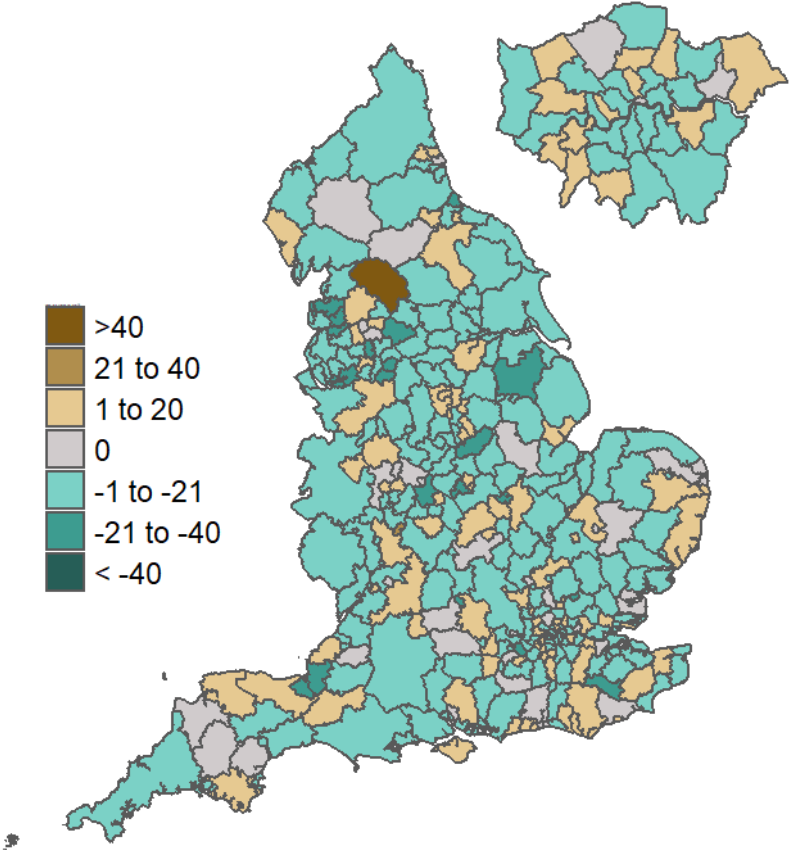

Data from SGSS; Pillar 1 and 2 testing. Figure by Outbreak Surveillance Team, Public Health England. Contains National Statistics data including 2019 population estimates. Crown copyright and database right 2021

Case Rates - Geographical spread of COVID-19 in England (aged 60+ years)

Weekly case rates per 100,000 population by local authority 26 Mar to 01 Apr 2021

Absolute case rate change per 100,000 population by local authority 19 Mar to 25 Mar 2021 and 26 Mar to 01 Apr 2021

Data from SGSS; Pillar 1 and 2 testing. Figure by Outbreak Surveillance Team, Public Health England. Contains National Statistics data including 2019 population estimates. Crown copyright and database right 2021

High level summary 1 - PHE regions

All indicators for the last 7 days (26 March 2021 to 01 April 2021)

High level summary data definitions

Weekly case rate	Total number of newly confirmed cases in the most recent 7 day period per 100,000 population
Individuals tested per day per 100,000 (7-dma)	7-day moving average number of individuals tested per 100,000 population per day
Weekly percentage individuals test positive	Percentage of all individuals tested with specimen dates in the most recent 7 day period test positive for SARS CoV-2
Community outbreaks	Number of outbreaks reported to PHE during the 7 day period, excluding those reported from secondary healthcare and care home settings.

Data for positive cases with specimen dates between 26 March 2021 and 01 April 2021

7-day change % demonstrates how figures compare to the equivalent figure as of 25 March 2021

RAG rating thresholds

Percentage positive	Red >7.5%, Amber >4 to 7.5%
All cases / 11-16 / 17-21 year olds weekly case rate	Maroon >250 cases per week, Dark Red > 150 cases per week, Red >50 cases per 100,000 per week, Amber >25 per 100,000 per week
Age 60+ cases weekly case rate	Maroon >150 cases per week, Dark Red > 100 cases per week, Red >50 cases per 100,000 per week, Amber >25 per 100,000 per week
7-day change, %	Maroon > +100%, Dark Red > +50%, Red > +10%, Amber > -10%, Green < -10%

High level summary 2 - 20 Highest LTLAs by case rate

Source: NHS England & Improvement COVID-19 Hospital Activity Data, from 07 March 2021 to 03 April 2021. All values are 7-day averages, i.e. mean averages of daily values from the 7 days up to and including the date in the column heading. The '7-day change' columns reflect the difference in 7-day average values compared to the value one week prior. Scale within each 'trend' column is consistent across all areas, except for the total row ('England'), which is scaled independently of other areas. Produced by Joint Biosecurity Centre.

NOTE: All values are 7-day averages rounded up to the nearest whole number. As a result of rounding, there may be a small discrepancy between the regional sum and the total England value.

Case numbers by test type in England

Data reporting 15 February 2021 to 05 April 2021

Data for the four most recent specimen dates is incomplete and will include cases for which PCR testing has not yet been reported and/or undertaken

PCR = First positive specimen was a PCR test.

LFD with PCR confirmation = Positive LFD with a positive PCR result within 3 days.

LFD only = Positive LFD with no positive PCR result within 3 days.

Percentage prevalence of COVID-19 across England and Government Office regions - table

Date of report 2 April 2021 by PHE Joint Modelling Cell

Methodology

Prevalence estimates were generated by the Cambridge real-time model on **26 March 2021** using data up to **20 March 2021**.

The percentage prevalence of COVID-19 infections in the regional populations are rated using the following scale:

- Low prevalence: less than 0.5%
- Medium prevalence: 0.5% to, but not including, 2%
- High prevalence: 2% and above.

These estimates are subject to, sometime significant, revision on a weekly basis. The underpinning model relies on death data which is subject to a reporting lag. In the weeks surrounding the implementation and relaxation of restrictions, it often takes a while for the system to settle, to account for the data lag and changes in mobility patterns. All prevalence estimates are reported as percentages, the values in parentheses represent the 5th and 95th percentiles respectively.

Further details on the Cambridge real-time model can be found [here](#)

Geography	26/03/2021	02/04/2021	09/04/2021
England	0.23 (0.15, 0.34)	0.24 (0.14, 0.41)	0.23 (0.11, 0.48)
North East	0.22 (0.08, 0.61)	0.19 (0.05, 0.82)	0.16 (0.03, 1.01)
Yorkshire and The Humber	0.23 (0.10, 0.54)	0.20 (0.06, 0.66)	0.16 (0.04, 0.75)
North West	0.35 (0.15, 0.83)	0.36 (0.10, 1.20)	0.34 (0.07, 1.52)
East Midlands	0.40 (0.17, 0.92)	0.40 (0.12, 1.32)	0.38 (0.08, 1.68)
West Midlands	0.30 (0.12, 0.80)	0.29 (0.07, 1.16)	0.27 (0.04, 1.45)
East of England	0.11 (0.04, 0.29)	0.08 (0.02, 0.36)	0.06 (0.01, 0.41)
London	0.10 (0.05, 0.25)	0.07 (0.02, 0.27)	0.05 (0.01, 0.28)
South East	0.16 (0.07, 0.36)	0.13 (0.04, 0.43)	0.10 (0.02, 0.48)
South West	0.04 (0.01, 0.12)	0.03 (0.01, 0.13)	0.02 (0.00, 0.14)

Revisions of note

North West - this is now in line with other data sources.

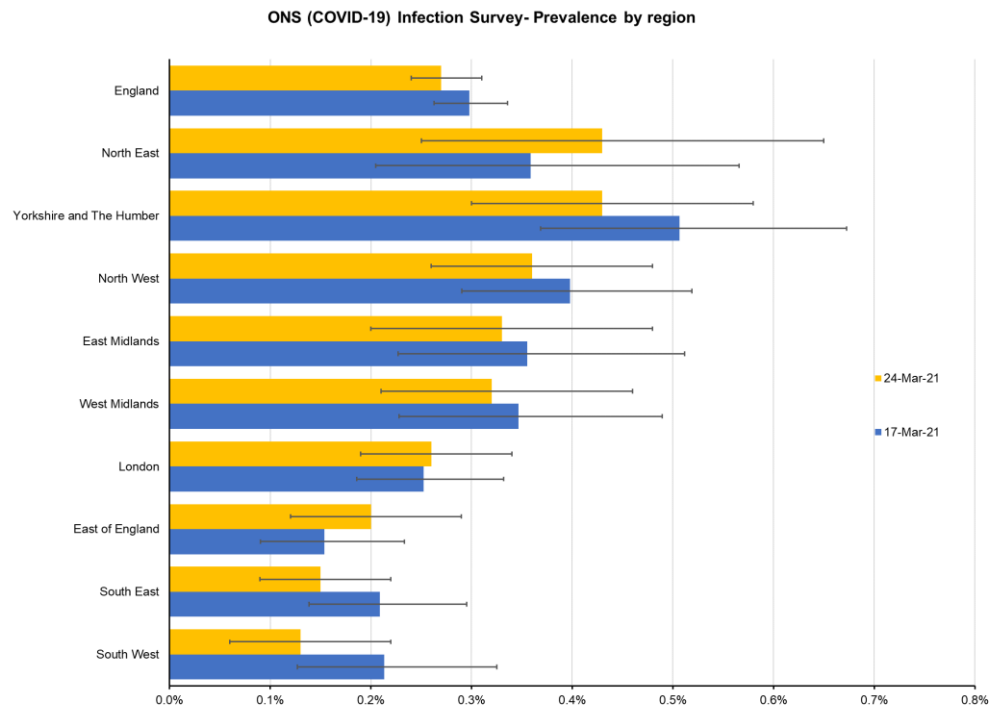

There have been issues with processing ONS data this week, and therefore there is lower confidence around the estimates for North East and South West. We would expect these to be revised next week.

Estimated Prevalence by Region

ONS Coronavirus (COVID-19) Infection Survey (1 April)

In England, the percentage of people testing positive for the coronavirus (COVID-19) has decreased in the week ending 27 March 2021; we estimate that 148,100 people within the community population in England had COVID-19 (95% credible interval: 129,700 to 167,400), equating to around 1 in 370 people

During the week ending 27 March 2021, the highest percentage of people testing positive is observed in the North East and Yorkshire and the Humber, the percentage of people testing positive increased in the East of England, and decreased in the South East and South West. The trend was uncertain for all other regions.

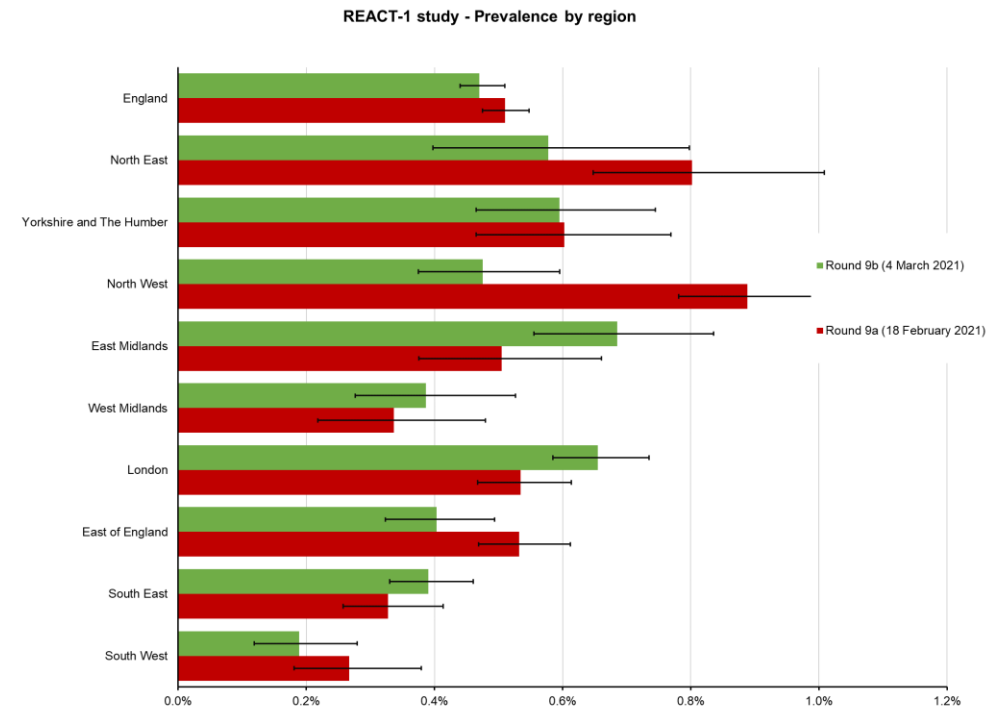

Coronavirus (COVID-19) Infection Survey, UK: 1 April 2021

REACT-1 round 9 final report (4 March)

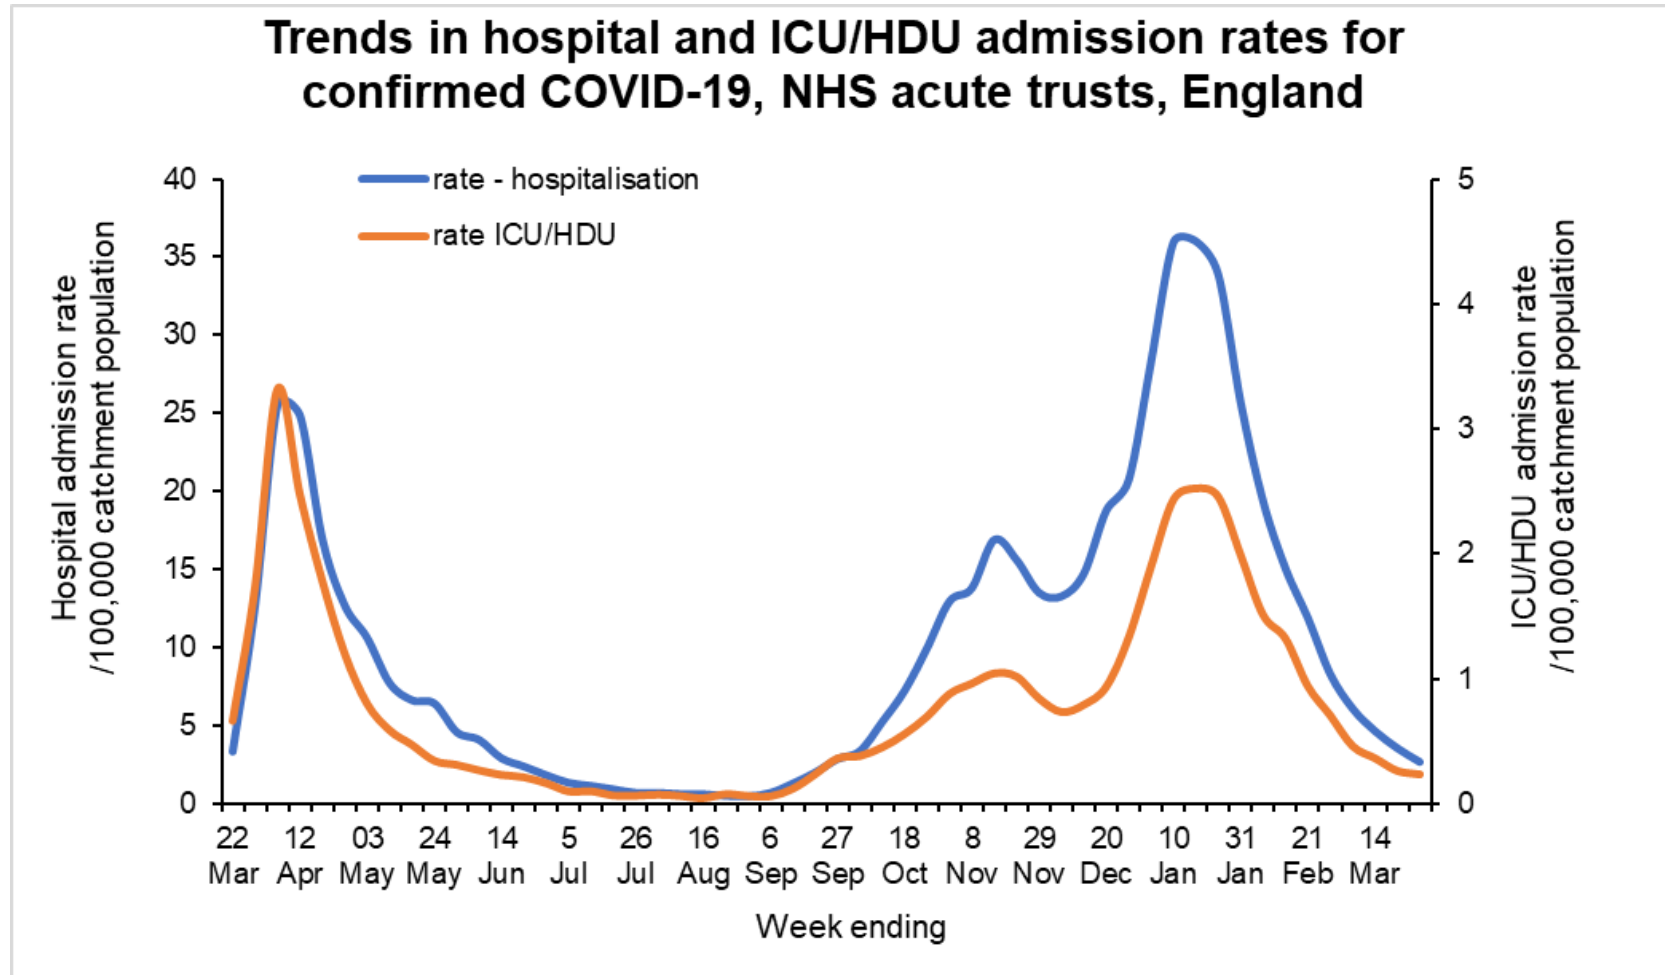

Out of 165,456 results for round 9 overall, 689 were positive. Overall weighted prevalence of infection in the community in England was 0.49% (0.44%, 0.55%), representing a fall of over two thirds from round 8. However the rate of decline of the epidemic has slowed from 15 (13, 17) days, estimated for the period from the end of round 8 to the start of round 9, to 31 days estimated using data from round 9 alone (lower confidence limit 17 days).

When comparing round 9a to 9b there were apparent falls in four regions, no apparent change in one region and apparent rises in four regions, including London where there was a suggestion of sub-regional heterogeneity in growth and decline.

REACT-1 round 9 final report from 04/03/21. The report includes swabs collected between 04/02/21 and 23/02/21

Hospitalisations national trends

Hospital admissions refers to admissions to all levels of care inclusive of ICU/HDU admissions
