COVID-19 SITUATIONAL AWARENESS

SUMMARY

MAIN REPORT
7 September 2021

Contents

This situational awareness summary report collates information and intelligence from various sources. The summary will be provided daily and the content will continue to be developed.

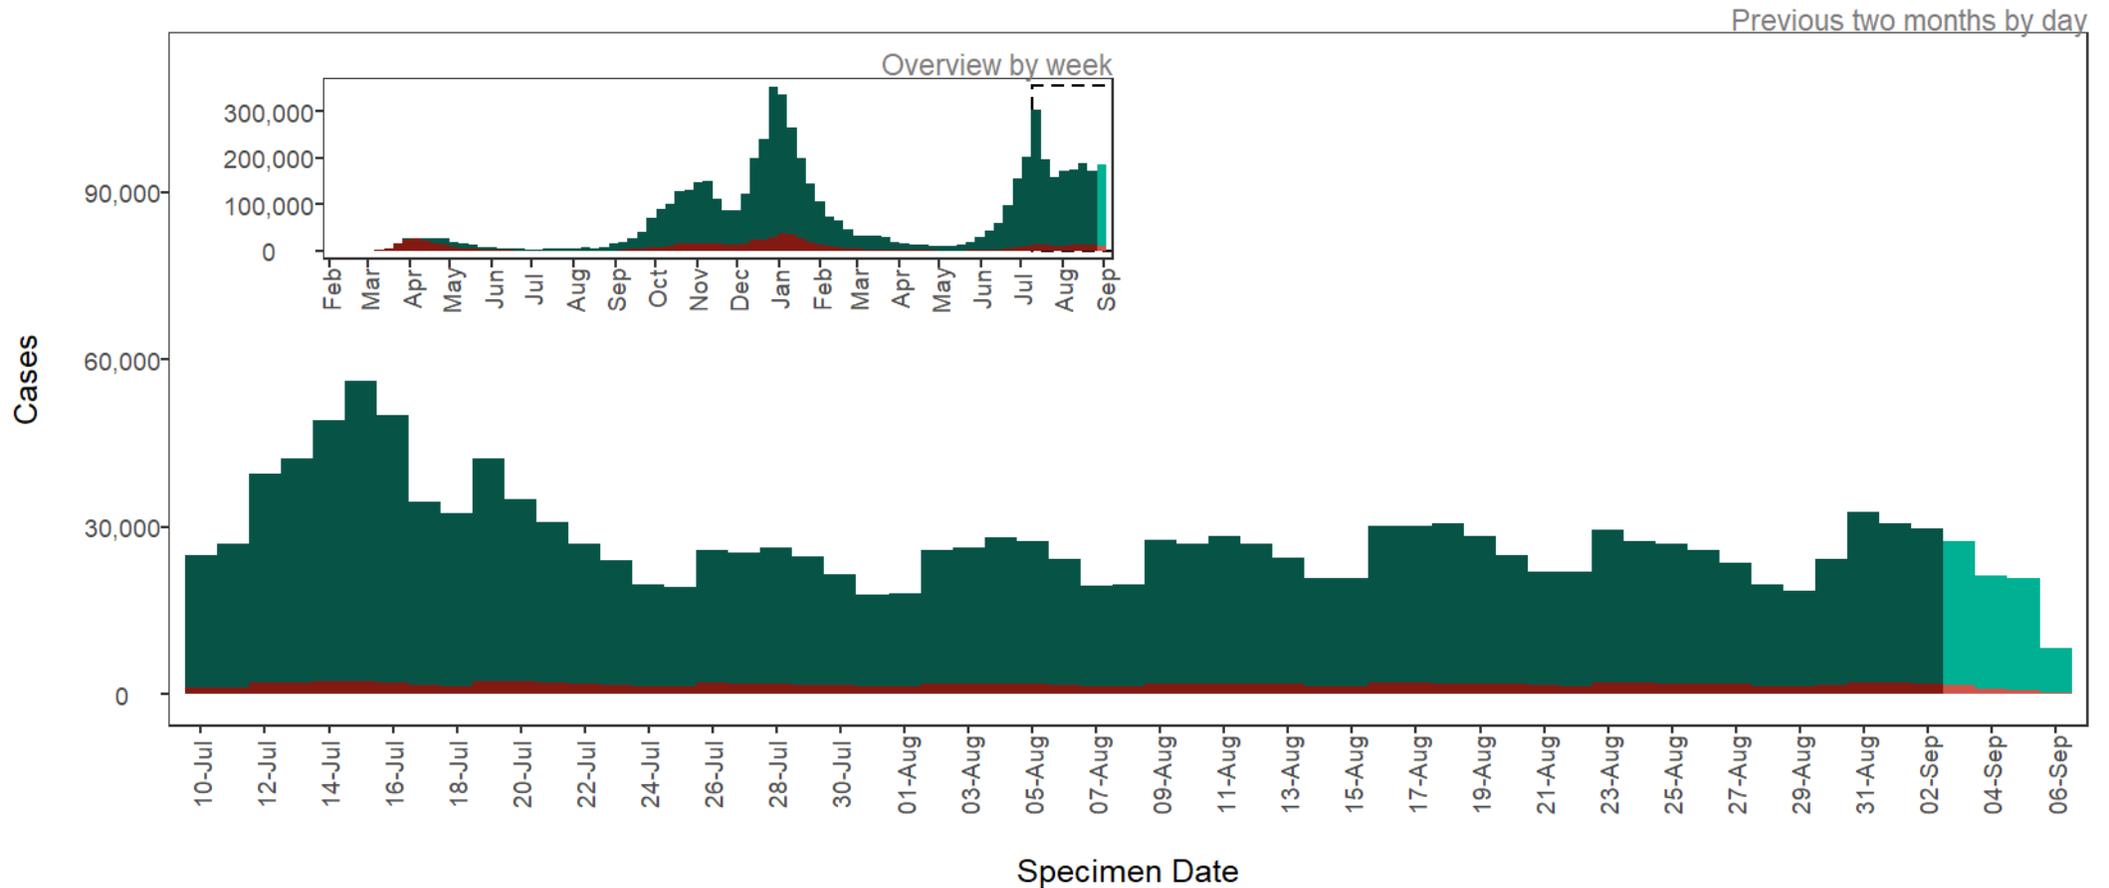

- [National context](#)
- [Case rate and case rate change maps](#)
- [High level summary tables](#)
- [REDACTED]
- [Case numbers by test type](#)
- [Case rates, \[REDACTED\], positivity and testing](#)
- [REDACTED]

- [REDACTED]
- [REDACTED]

Throughout the SAR:

Lower tier local authorities is used to represent local authority districts, unitary authorities, metropolitan district and London boroughs,
Upper tier local authorities is used to represent counties, metropolitan counties, London boroughs and unitary authorities

National context

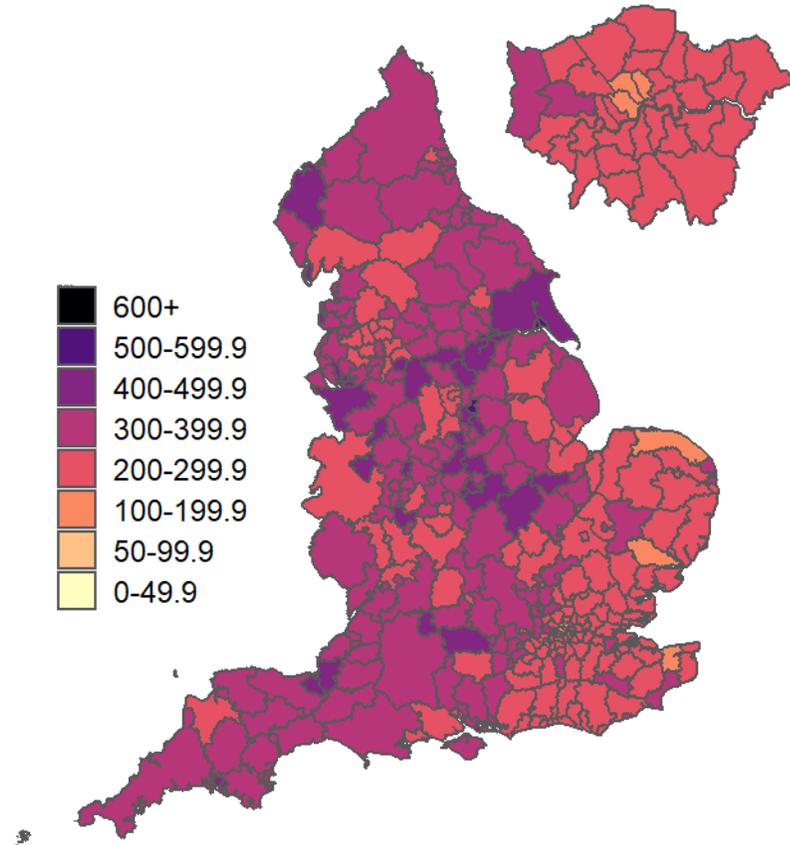

England confirmed cases - epidemic curve

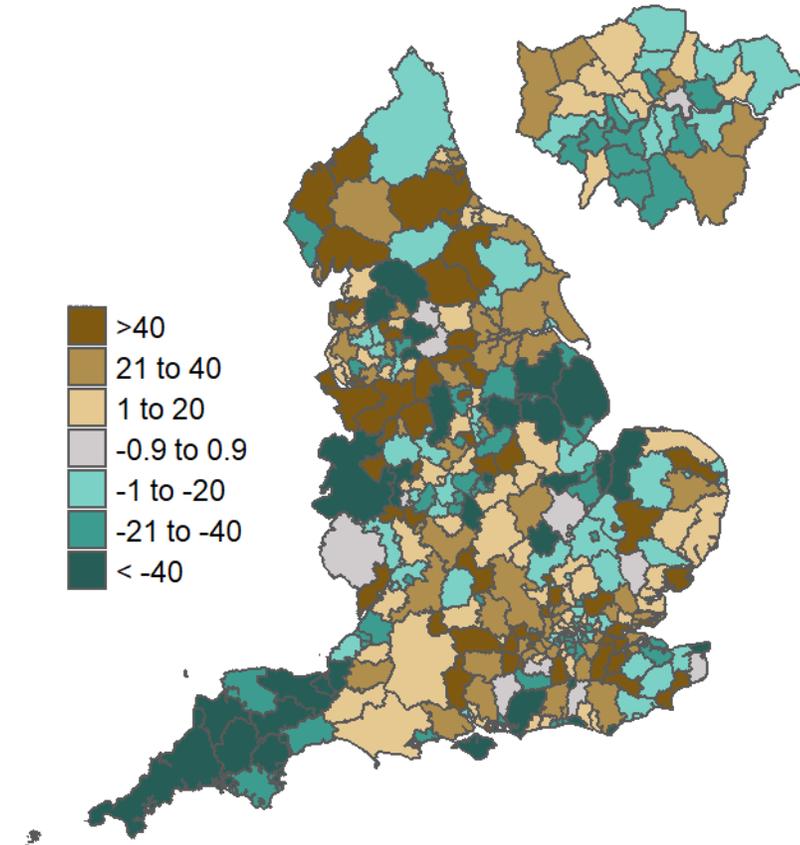

Bars shaded in light red and light green are provisional. Figures are expected to change as results are received for additional samples tested during this period. Inset epi curve is based on weekly reports from date of first case diagnosed. Main epi curve shows daily cases truncated to show the previous two months. Value labels are for combined pillar 1 and pillar 2 cases.

Case Rates - Geographical spread of COVID-19 in England

Weekly case rates per 100,000 population
by local authority
27 Aug to 02 Sep 2021

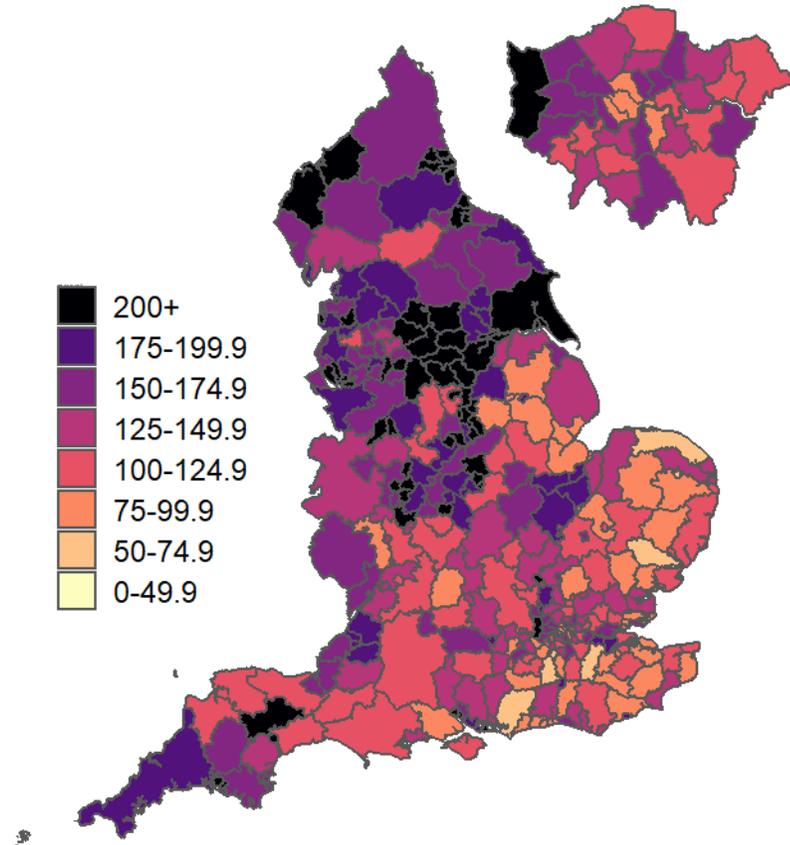

Absolute case rate change per 100,000 population
by local authority
20 Aug to 26 Aug 2021 and 27 Aug to 02 Sep 2021

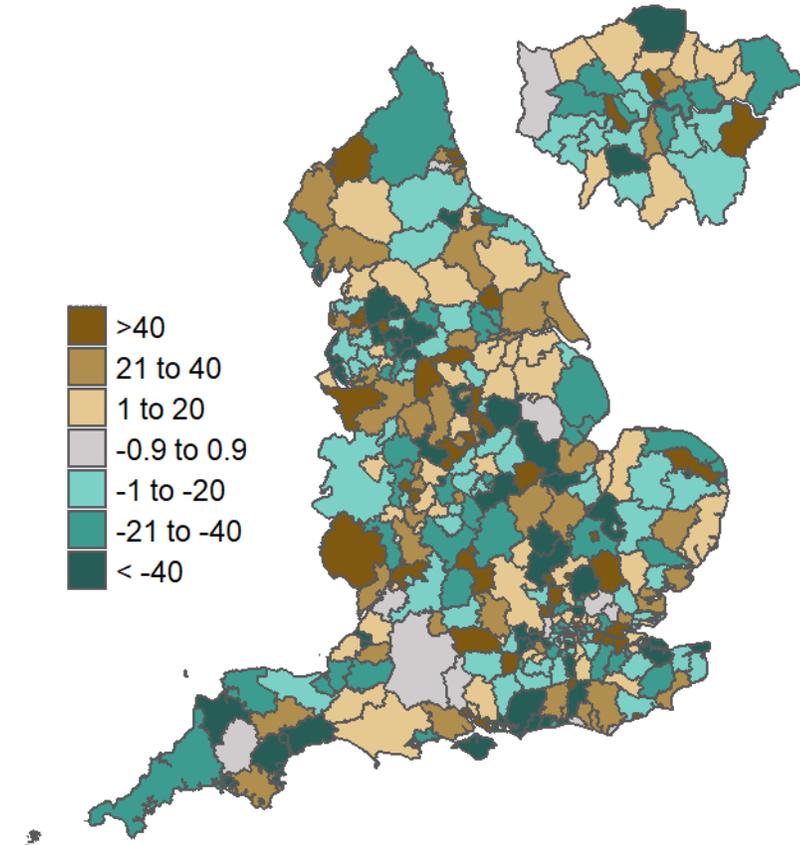

Case Rates - Geographical spread of COVID-19 in England (aged 60+ years)

Weekly case rates per 100,000 population
by local authority
27 Aug to 02 Sep 2021

Absolute case rate change per 100,000 population
by local authority
20 Aug to 26 Aug 2021 and 27 Aug to 02 Sep 2021

High level summary 1 - PHE regions

All indicators for the last 7 days (27 August 2021 to 02 September 2021)

Region	Individuals tested per day per 100,000 population		Percentage individuals test positive		Number of LTLAs by percentage individuals test positive RAG status			Percentage individual cases reporting symptoms		Case rate per 100,000 population, all ages		Number of LTLAs by case rate per 100,000 RAG status			Case rate per 100,000 population aged 60 years and over		Case rate per 100,000 population aged 11-16yrs		Case rate per 100,000 population aged 17-21yrs		Community outbreaks	Newly confirmed cases

High level summary data definitions

Weekly case rate	Total number of newly confirmed cases in the most recent 7 day period per 100,000 population
Individuals tested per day per 100,000 (7-dma)	7-day moving average number of individuals tested per 100,000 population per day
Weekly percentage individuals test positive	Percentage of all individuals tested with specimen dates in the most recent 7 day period test positive for SARS CoV-2
Community outbreaks	Number of outbreaks reported to PHE during the 7 day period, excluding those reported from secondary healthcare and care home settings.

Data for positive cases with specimen dates between 27 August 2021 and 02 September 2021

7-day change % demonstrates how figures compare to the equivalent figure as of 26 August 2021

RAG rating thresholds

Percentage positive	Red >7.5%, Amber >4 to 7.5%
All cases / 11-16 / 17-21 year olds weekly case rate	Maroon >250 cases per week, Dark Red > 150 cases per week, Red >50 cases per 100,000 per week, Amber >25 per 100,000 per week
Age 60+ cases weekly case rate	Maroon >150 cases per week, Dark Red > 100 cases per week, Red >50 cases per 100,000 per week, Amber >25 per 100,000 per week
7-day change, %	Maroon > +100%, Dark Red > +50%, Red > +10%, Amber > -10%, Green < -10%

High level summary 2 - 20 Highest LTLAs by case rate

Source: NHS England & Improvement COVID-19 Hospital Activity Data, from 08 August 2021 to 04 September 2021. Values in parentheses are change from the previous day. All values are 7-day averages, i.e. mean averages of daily values from the 7 days up to and including the date in the column heading; totals are presented as integers, which may lead to small discrepancies due to rounding. The '7-day change' columns reflect the difference in 7-day average values compared to the value one week prior. Scale within each 'trend' column is consistent across all regions, except for the total row, which is scaled independently. Produced by Joint Biosecurity Centre.

NOTE: All values are 7-day averages rounded up to the nearest whole number. As a result of rounding, there may be a small discrepancy between the regional sum and the total England value. Relative changes on small numbers can result in a large percentage change.

High level summary - COVID-19 vaccination uptake by region, age and dose

Data to 07 September 2021

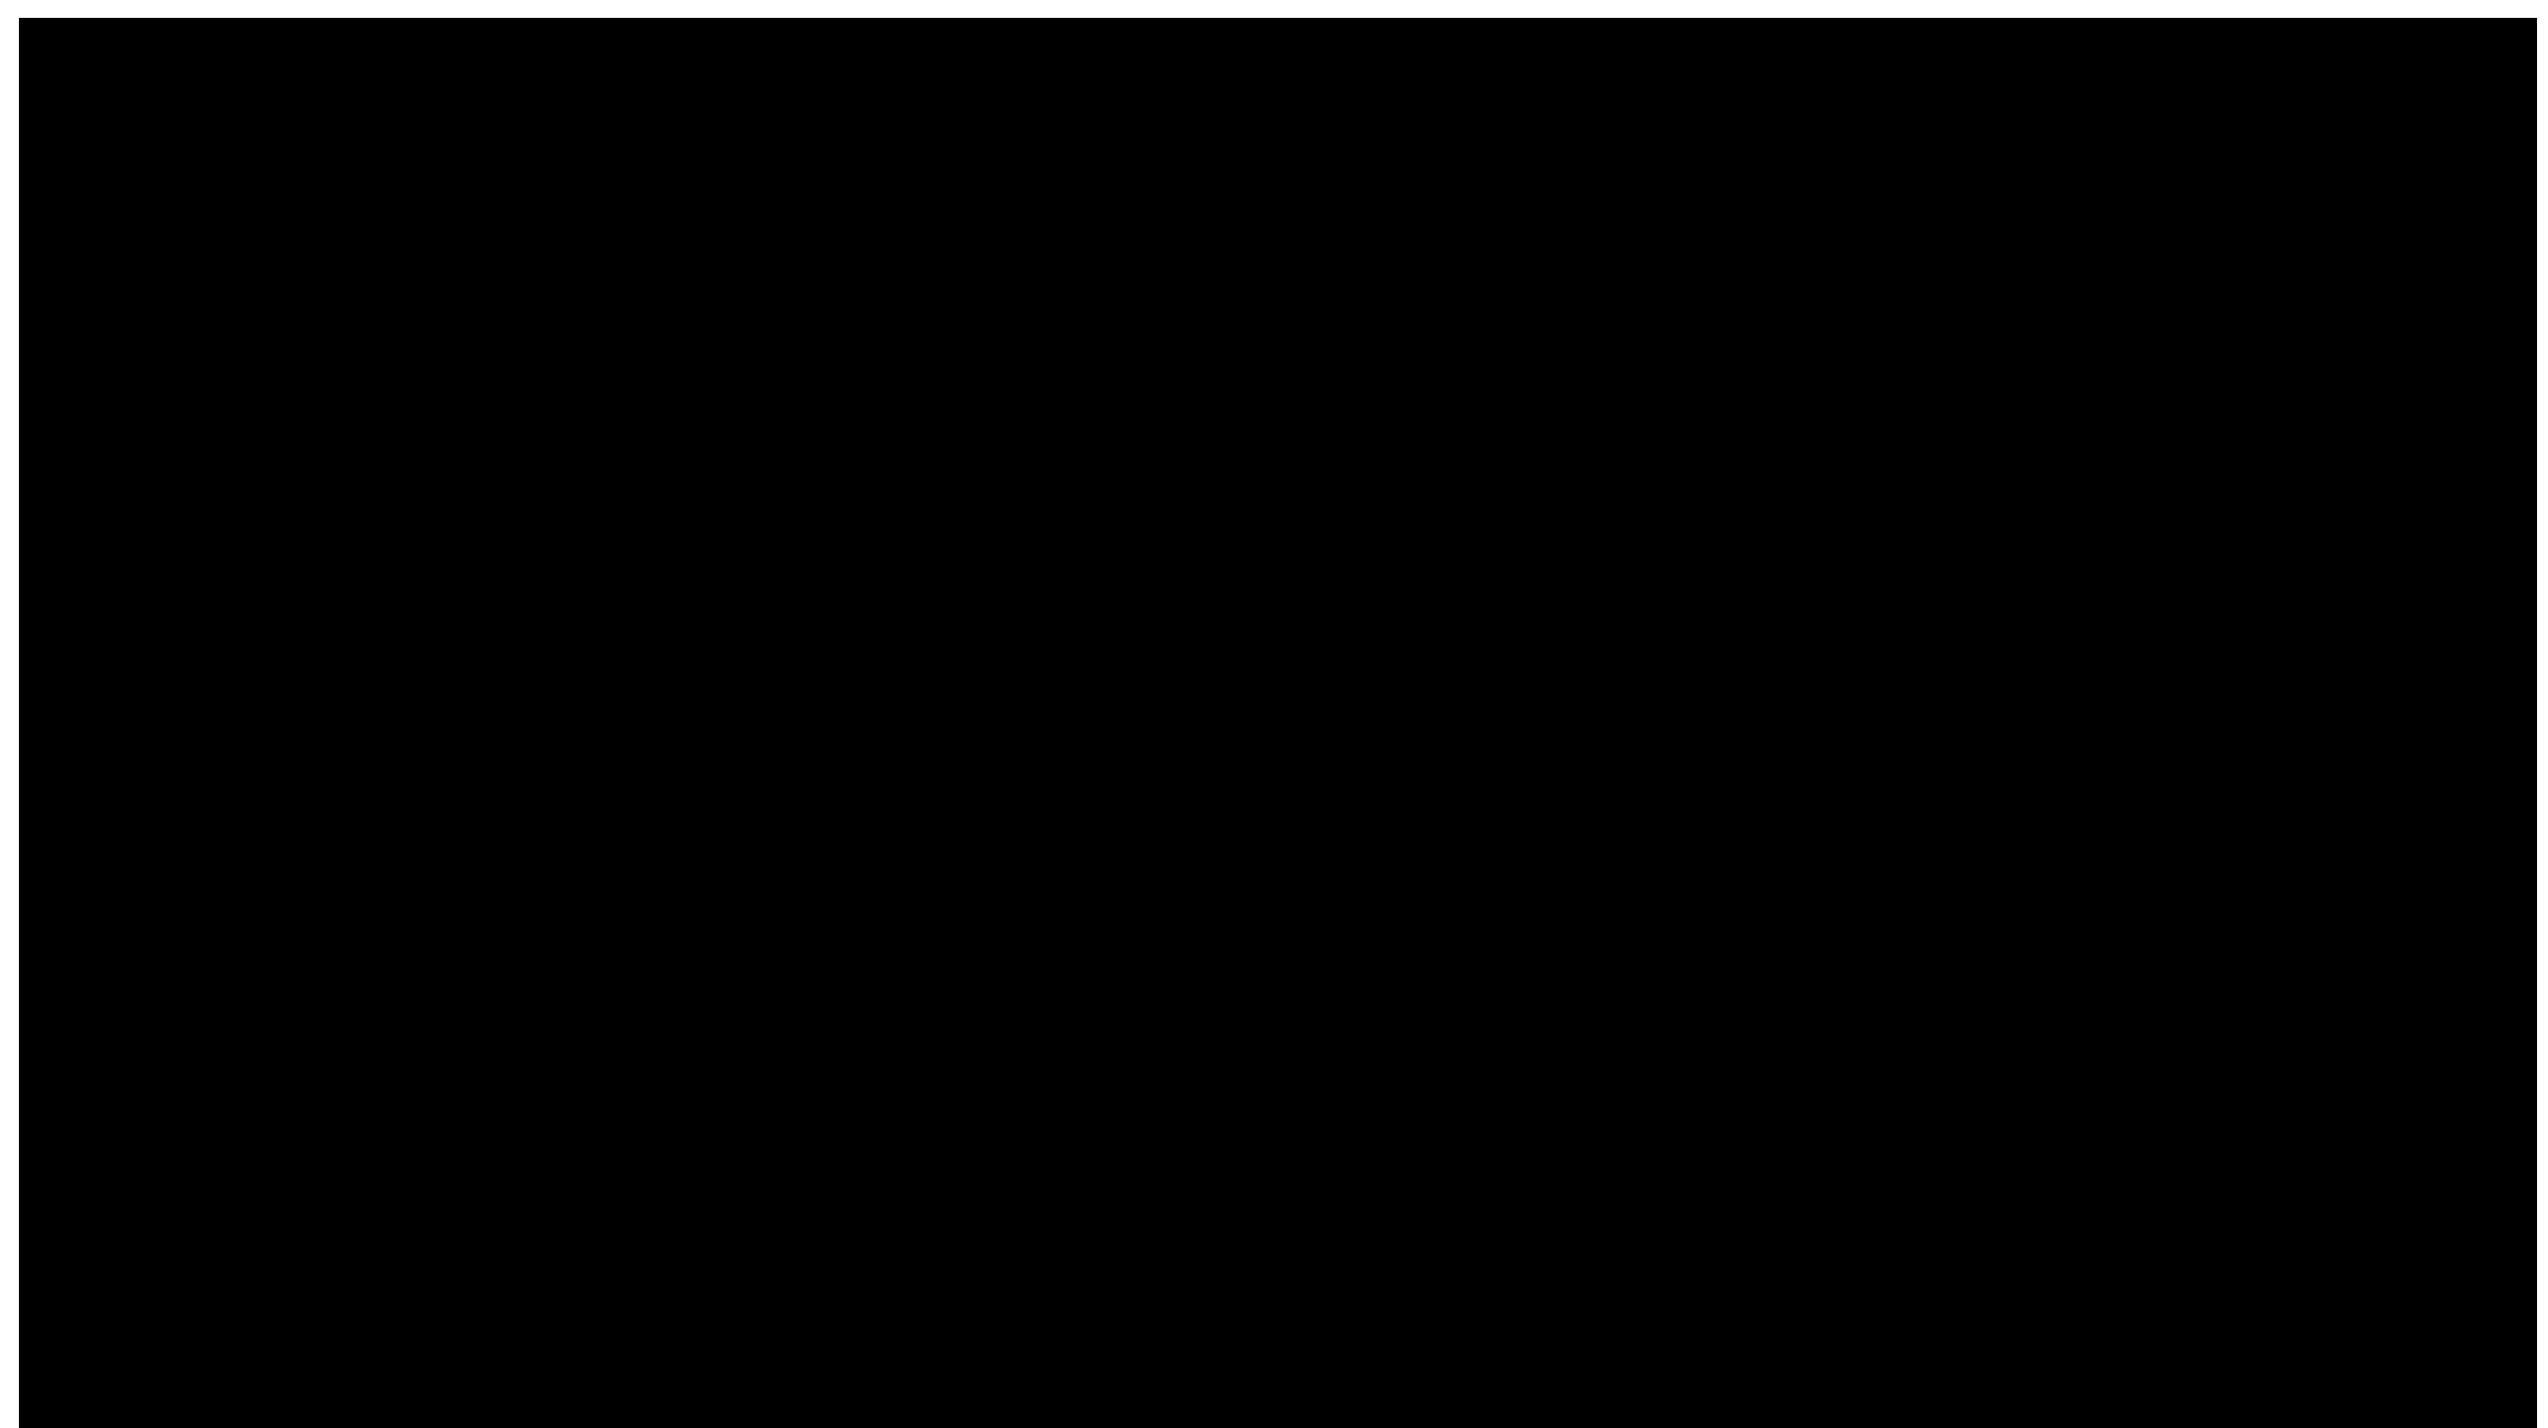

PHE Region of Residence	Dose 1				Dose 2			
	All persons	ESR NHS Workers	CEV	COVID19 At Risk	All persons	ESR NHS Workers	CEV	COVID19 At Risk
East Midlands	67.2% (0.3)	93.4% (0.1)	93.5% (0.0)	88.6% (0.1)	61.1% (0.9)	89.9% (0.3)	90.8% (0.1)	84.4% (0.3)

Percentage prevalence of COVID-19 across England and Government Office regions - table

Date of report 03 September 2021 by PHE Joint Modelling Cell

Methodology

Prevalence estimates were generated by the Cambridge real-time model on **27 August 2021** using data up to **23 August 2021**.

The percentage prevalence of COVID-19 infections in the regional populations are rated using the following scale:

- Low prevalence: less than 0.5%
- Medium prevalence: 0.5% to, but not including, 2%
- High prevalence: 2% and above.

These estimates are subject to, sometime significant, revision on a weekly basis. The underpinning model relies on death data which is subject to a reporting lag. In the weeks surrounding the implementation and relaxation of restrictions, it often takes a while for the system to settle, to account for the data lag and changes in mobility patterns. All prevalence estimates are reported as percentages, the values in parentheses represent the 5th and 95th percentiles respectively.

Further details on the Cambridge real-time model can be found [here](#)

Geography	27/08/2021	03/09/2021	10/09/2021
England	1.05 (0.97, 1.14)	1.04 (0.92, 1.18)	1.03 (0.86, 1.23)
North East	1.09 (0.86, 1.41)	0.87 (0.61, 1.28)	0.68 (0.42, 1.16)
Yorkshire and The Humber	1.16 (0.96, 1.44)	1.02 (0.75, 1.42)	0.87 (0.58, 1.39)
North West	0.73 (0.58, 0.93)	0.70 (0.49, 1.04)	0.67 (0.40, 1.14)
East Midlands	1.20 (0.94, 1.54)	1.12 (0.78, 1.63)	1.03 (0.62, 1.71)
West Midlands	1.00 (0.80, 1.28)	0.89 (0.63, 1.29)	0.78 (0.48, 1.30)
East of England	1.06 (0.84, 1.36)	1.05 (0.73, 1.53)	1.01 (0.62, 1.70)
London	0.96 (0.78, 1.18)	0.94 (0.67, 1.32)	0.91 (0.56, 1.45)
South East	1.00 (0.82, 1.24)	1.14 (0.84, 1.60)	1.27 (0.84, 2.01)
South West	1.33 (1.03, 1.73)	1.41 (0.95, 2.09)	1.45 (0.86, 2.45)

Revisions of note

- This week's estimates for 03/09/2021 have generally been revised upwards from last week's, especially in the South East and South West, where notable increases in infections incidence have been recorded.
- This has led to this week's prevalence estimates for these two Regions (and England's by knock-on effect) being outside last week's credible intervals, though all other estimates are within.

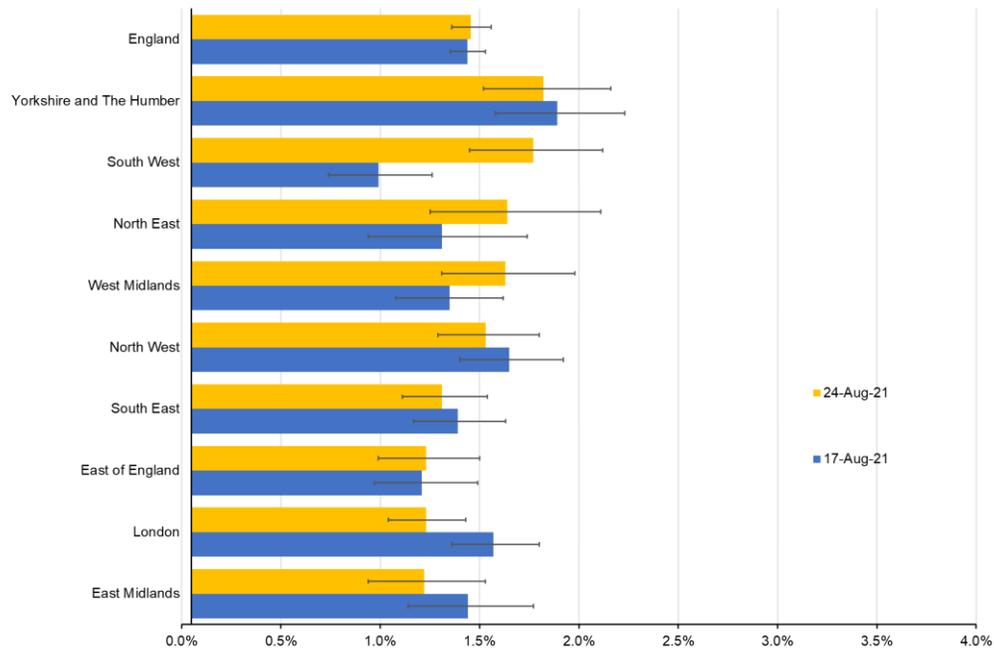

Estimated Prevalence by Region

ONS Coronavirus (COVID-19) Infection Survey (03 September)

In England, the percentage of people testing positive for coronavirus (COVID-19) was level in the week ending 27 August 2021; we estimate that 766,100 people within the community population in England had COVID-19 (95% credible interval: 714,400 to 821,800), equating to around 1 in 70 people.

In the week ending 27 August 2021, the percentage of people testing positive increased in the South West and the West Midlands. The percentage of people testing positive increased in the North East and the South East over the two weeks up to 27 August 2021, but the trend was uncertain in the most recent week. The percentage testing positive decreased in London and the East Midlands in the week ending 27 August 2021.

ONS (COVID-19) Infection Survey- Prevalence by region

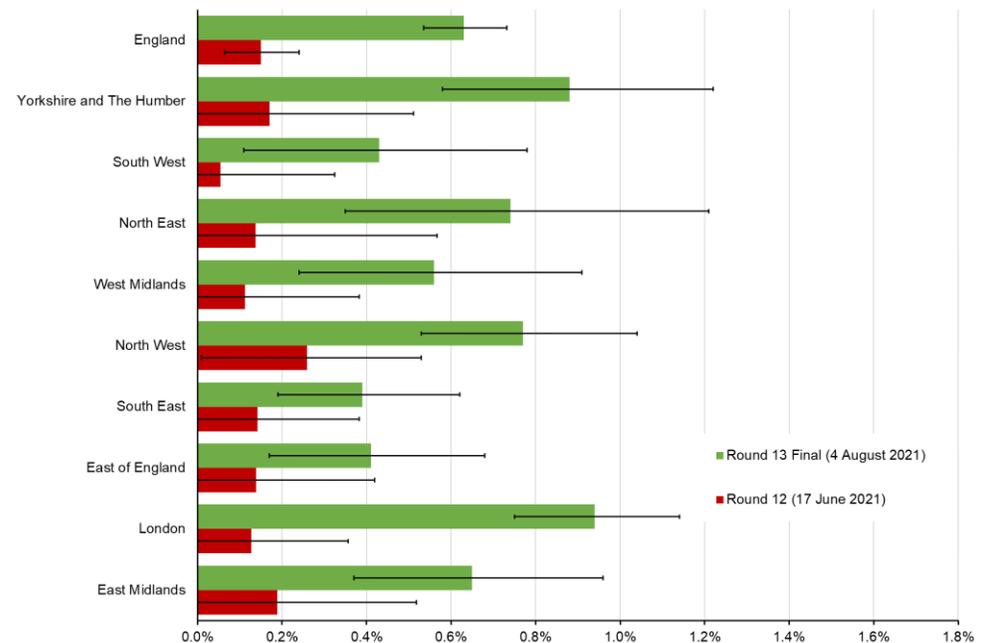

REACT-1 round 13 final report (4 August)

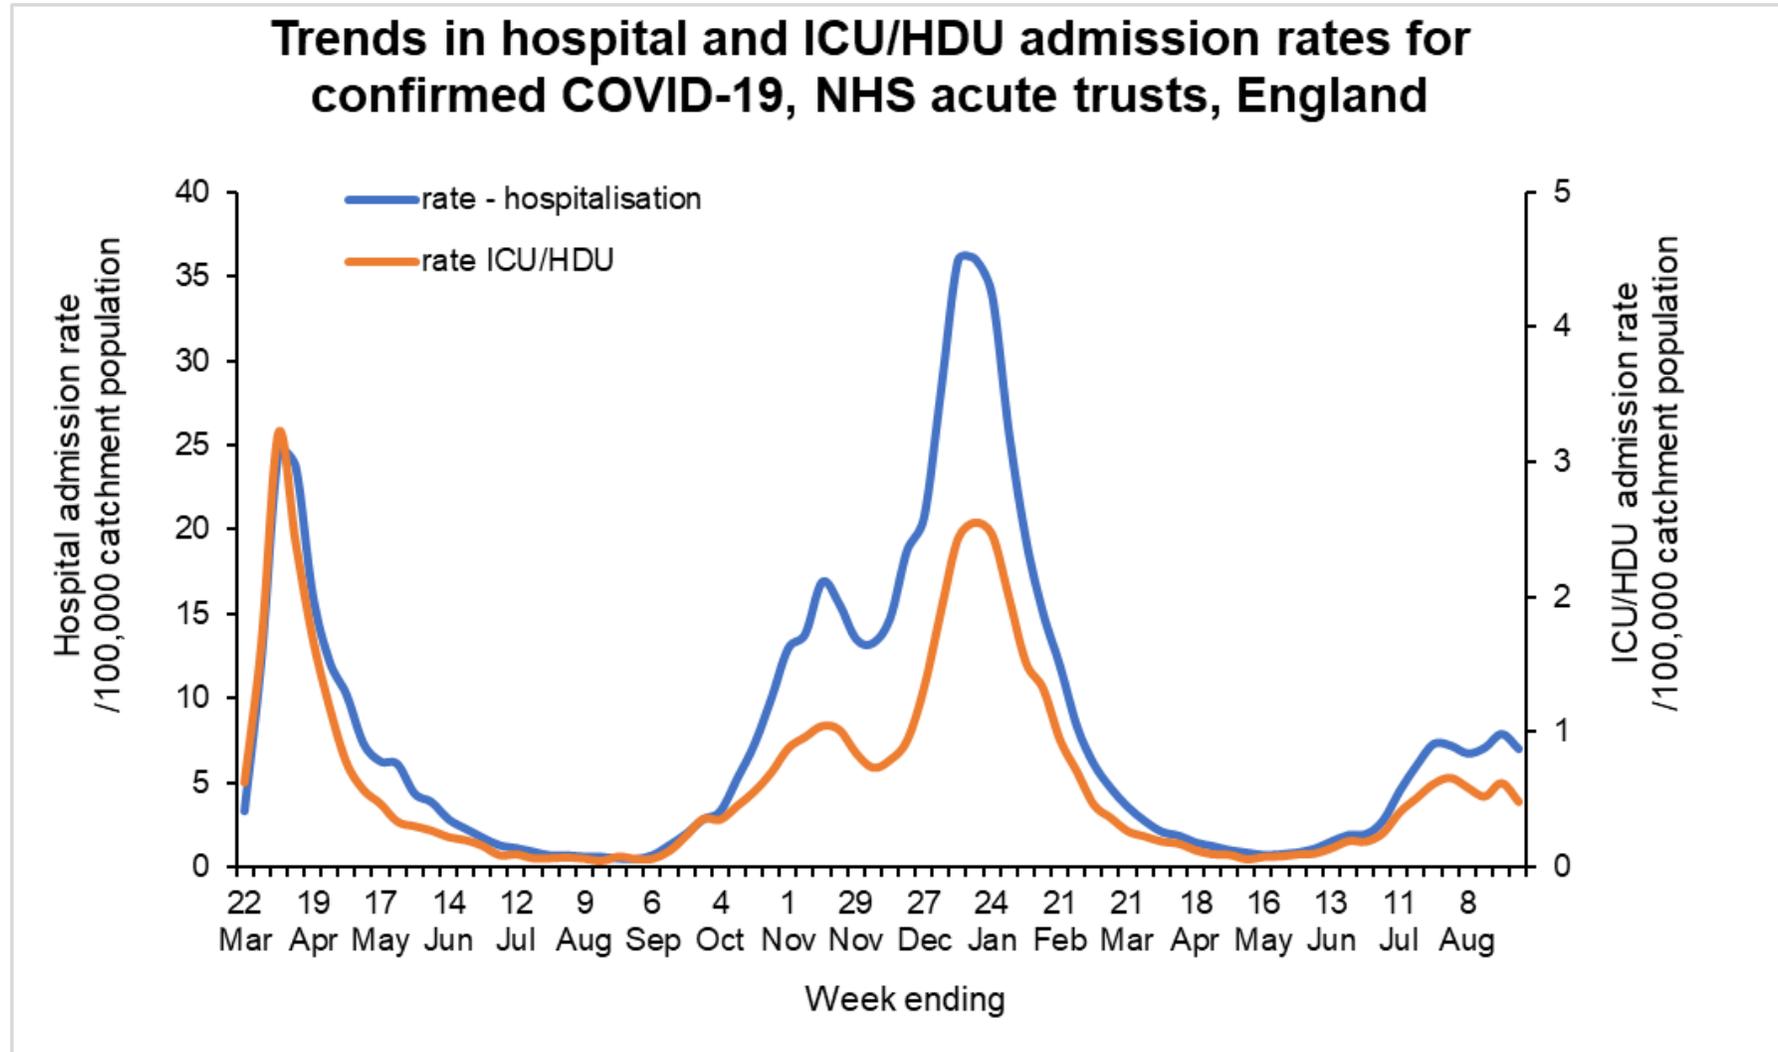

Between rounds 12 and 13, national prevalence increased from 0.15% (0.12%, 0.18%) in round 12 to 0.63% (0.57%, 0.18%) in round 13. We observed sustained exponential growth with an average doubling time in round 13 of 25 days (lower Credible Interval of 15 days). The rapid growth across and within rounds appears to have been driven by complete replacement of Alpha variant by Delta, and by the high prevalence in younger less-vaccinated age groups, with a nine-fold increase between rounds 12 and 13 among those aged 13 to 17 years

Weighted prevalence in round 13 was nine-fold higher in 13-17 year olds at 1.56% (1.25%, 1.95%) compared with 0.16% (0.08%, 0.31%) in round 12. Therefore, any interventions targeted at the younger ages would have a disproportionate impact in slowing the epidemic

REACT-1 study - Prevalence by region

Hospitalisations national trends

Hospital admissions refers to admissions to all levels of care inclusive of ICU/HDU admissions
