

Ambulance Syndromic Surveillance System Bulletin (England) 2022 Week 3

Key messages

Data reported to: 23 January 2022

During week 3, COVID-19-like ambulance calls continued to decrease. All other indicators were stable or decreasing and at or below baseline levels, excluding 'impact of heat/cold' and 'overdose/ingestion/poisoning', which were just above baseline levels.

Please note: nationally, ambulance trusts have restarted using the 'pandemic' triage card for assessing COVID-19 patients. The associated syndromic chart has therefore been returned to this report. Other syndromic indicators (eg difficulty breathing and chest pain) should therefore be interpreted with caution. Please see **Data quality issues of note this week** for more information.

Syndromic indicators at a glance

Table 1: The current trend (based on previous weeks, not only the current week) and the level (compared to the expected baseline), of each indicator included in this bulletin.

Indicator	Trend	Level
COVID-19-like (Figure 1)	Decreasing	No baseline
Difficulty breathing (Figure 2)	No trend	Below baseline
Chest pain (Figure 3)	Decreasing	Below baseline
Cardiac or respiratory arrest (Figure 4)	Decreasing	Below baseline
Impact of heat or cold (Figure 5)	No trend	Above baseline
Headache (Figure 6)	Decreasing	Below baseline
Unconscious or passing out (Figure 7)	No trend	Similar to baseline
Collapsed with unknown problem (Figure 8)	No trend	Below baseline
Allergic reactions (Figure 9)	Decreasing	Below baseline
Injuries (Figure 10)	No trend	Similar to baseline
Overdose, or ingestion or poisoning (Figure 11)	No trend	Above baseline

System coverage

Table 2: The number of ambulance Trusts included in surveillance each day during the most recent week.

Date	Number of ambulance Trusts ¹

About the UK Health Security Agency	19

About this syndromic surveillance system

This bulletin presents data from the UK Health Security Agency (UKHSA) ambulance syndromic surveillance system.

Syndromic surveillance can be used to:

- assess current trends
- assess current trends and levels compared to historical baselines
- compare trends between age groups/areas

Syndromic surveillance should not be used to:

- estimate total burden or number of 'cases' of a condition (see Notes and caveats)
- compare levels between age groups/areas

Fully anonymised, daily ambulance call data are analysed and reported here, to identify and describe trends for a variety of syndromic indicators:

- syndromic indicators include groupings such as difficulty breathing, chest pain and injuries
- syndromic indicators are based on:
 - o information gathered during the initial call
 - signs/symptoms and may not be laboratory confirmed
- Key messages describes any notable trends nationally (England), and/or by geographical area (based on UKHSA Regions)
- the full list of syndromic indicators reported here, along with their current level and trend, are summarised in Table 1
- charts are provided for each syndromic indicator, on a national basis, by geographical area (UKHSA Region). Each chart includes a year of data with:
 - 7-day moving averages (adjusted for weekends and bank holidays) to aid in the identification of trend
 - statistical baselines (where available) to aid in the assessment of level compared to historical expectations

For further information please see the **Notes and caveats** section.

Previous weekly bulletins from this system are available here.

Data quality issues of note this week

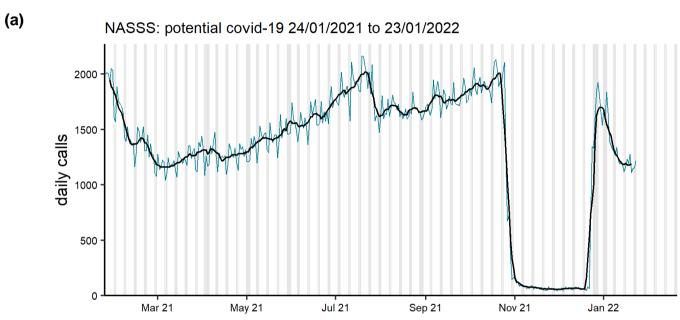

Ambulance trusts reduced use of the 'pandemic' triage card for assessing COVID-19 patients 25 October to 23 December 2021. Other syndromic indicators (particularly 'difficulty breathing' and 'chest pain') may have been affected in some regions as a result of this change.

See **Table 2** for the number of Trusts included in the most recent week, indicating where data has not arrived at the time of this report production. All historical data are complete.

Respiratory conditions

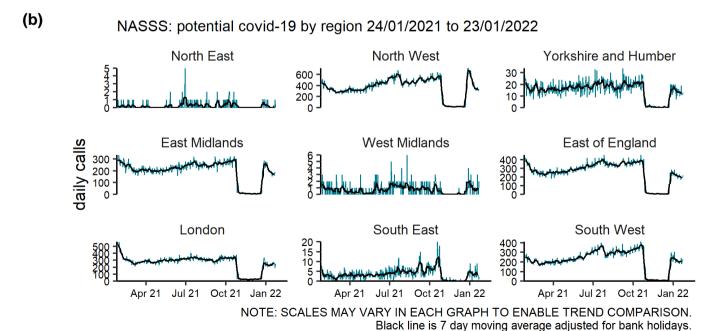

COVID-19-like

Figure 1: Daily number of COVID-19-like ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region. Please note there is minimal usage of this syndromic indicator by the North East, West Midlands and South East ambulance Trusts.

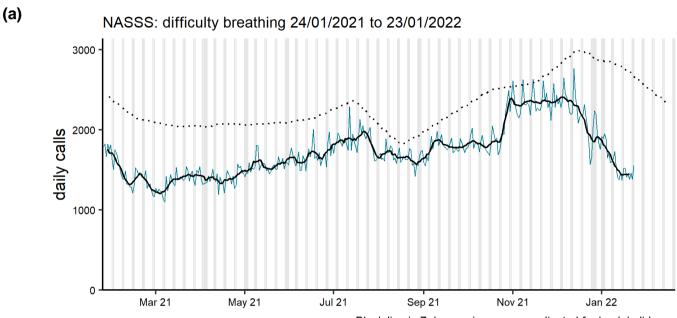

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

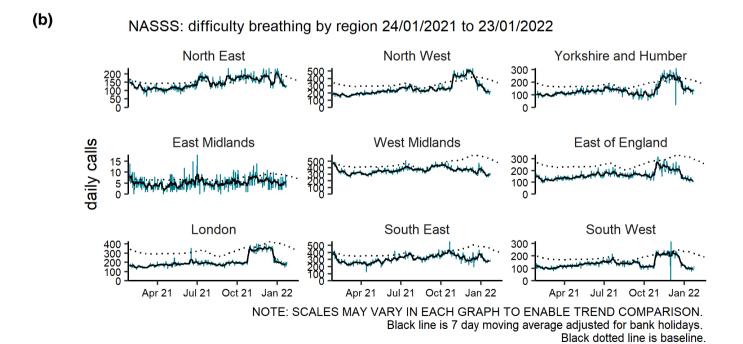

Black dotted line is baseline.

Difficulty breathing

Figure 2: Daily number of difficulty breathing ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region. Please note there is minimal usage of this syndromic indicator by the East Midlands ambulance Trust.

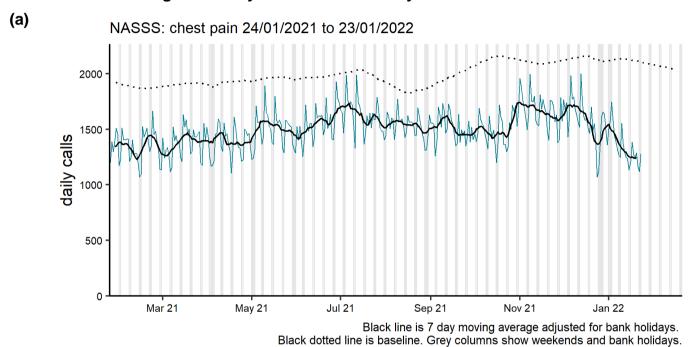

Cardiac conditions

Chest pain

Figure 3: Daily number of chest pain ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region. Please note there is minimal usage of this syndromic indicator by the South East ambulance Trust.

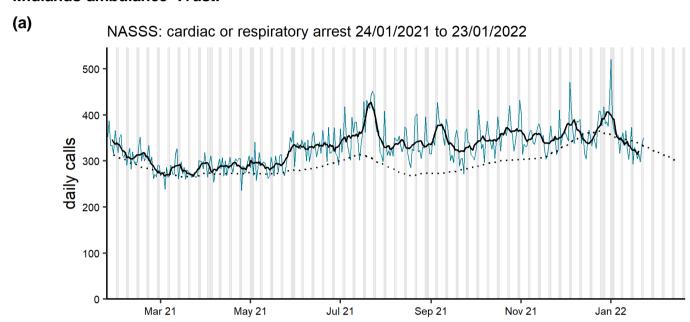

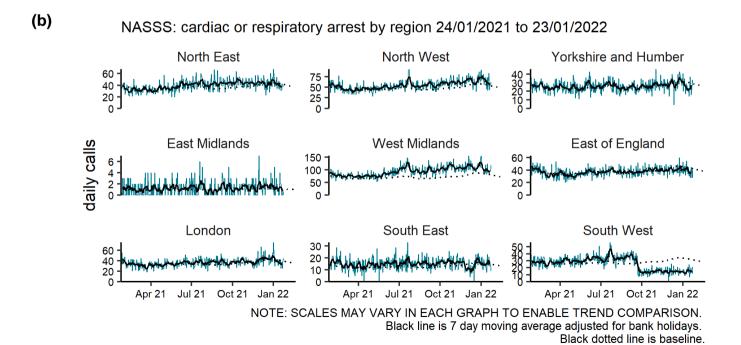

(b) NASSS: chest pain by region 24/01/2021 to 23/01/2022 North West North East Yorkshire and Humber East Midlands West Midlands East of England London South East South West 300 100 Oct 21 Jul 21 Oct 21 Jul 21 Jan 22 Apr 21 Jan 22 Apr 21 Jul 21 NOTE: SCALES MAY VARY IN EACH GRAPH TO ENABLE TREND COMPARISON. Black line is 7 day moving average adjusted for bank holidays.

Black dotted line is baseline.

Cardiac or respiratory arrest

Figure 4: Daily number of cardiac or respiratory arrest ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region. Please note there is minimal usage of this syndromic indicator by the East Midlands ambulance Trust.

Seasonal or environmental conditions

During set periods of the year the Met Office operates both heat and cold weather watch systems, in association with UKHSA. Syndromic indicators are used to monitor the impact of both extreme hot and cold weather in England during these periods and will be included below (where an appropriate syndromic indicator is available).

Cold weather alert period: 1 November to 31 March

Heat-Health Alert period:1 June to 15 September

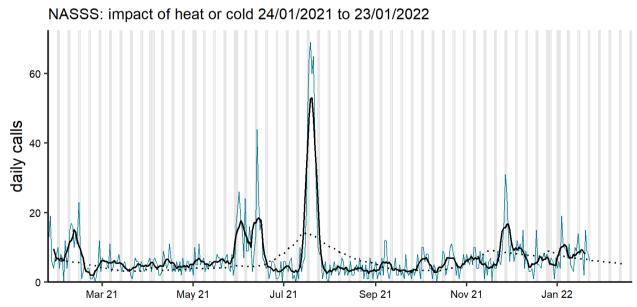

Highest weather alert level during the current reporting week:

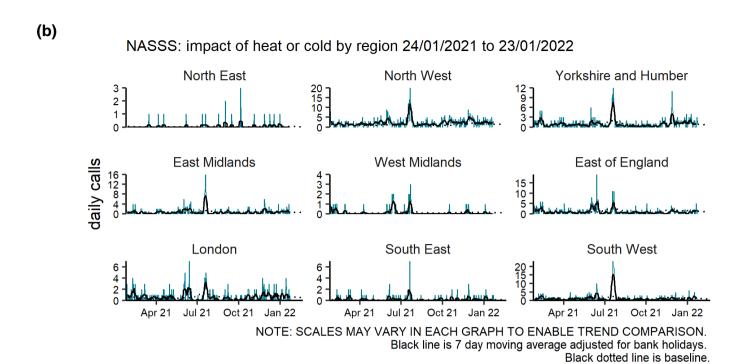

Level 3 - Severe Weather Action

(a)

Impact of heat or cold

Figure 5: Daily number of heat or cold related ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

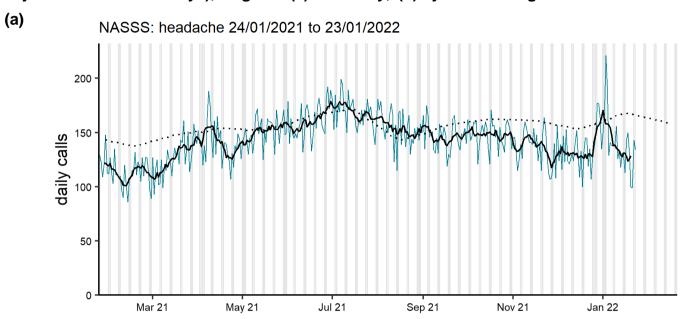

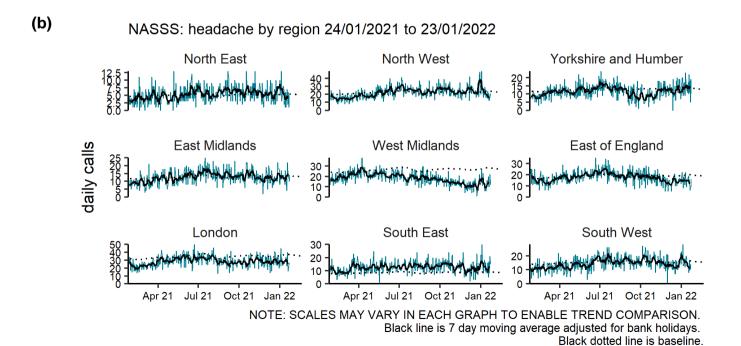

Other conditions

Headache

Figure 6: Daily number of headache ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

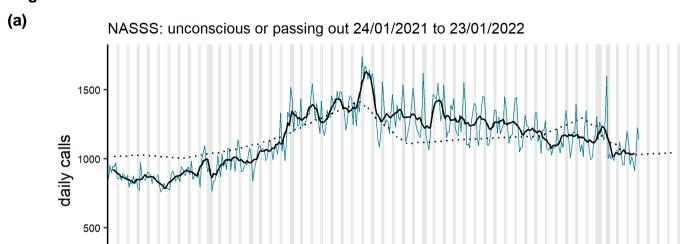

Unconscious or passing out

Mar 21

May 21

Figure 7: Daily number of unconscious or passing out ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

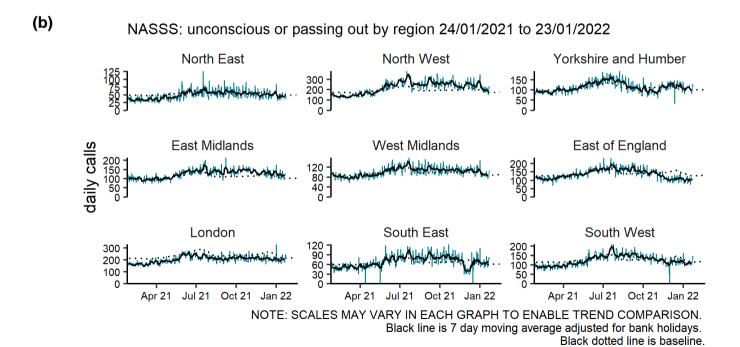

Jul 21

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

Nov 21

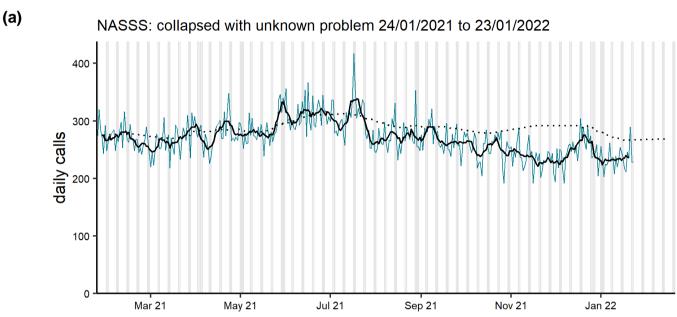

Jan 22

Sep 21

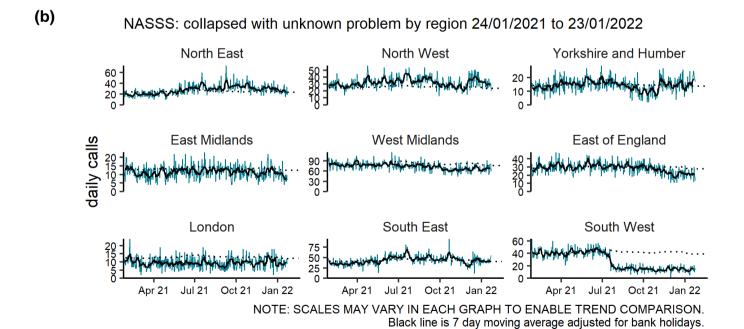

Collapsed with unknown problem

Figure 8: Daily number of collapsed with unknown problem ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

Black dotted line is baseline.

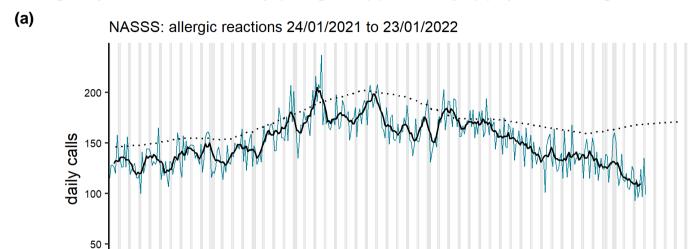

Allergic reactions

0

Mar 21

May 21

Figure 9: Daily number of allergic reactions ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

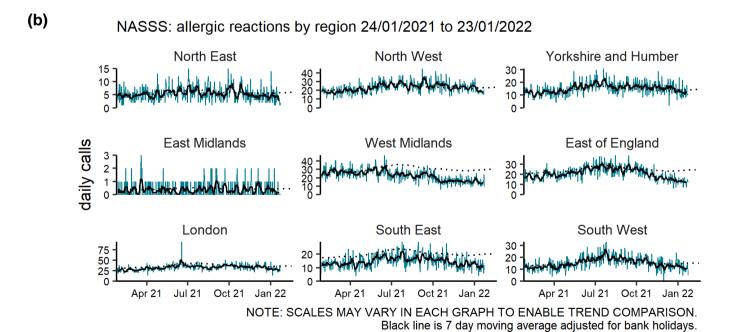

Jul 21

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

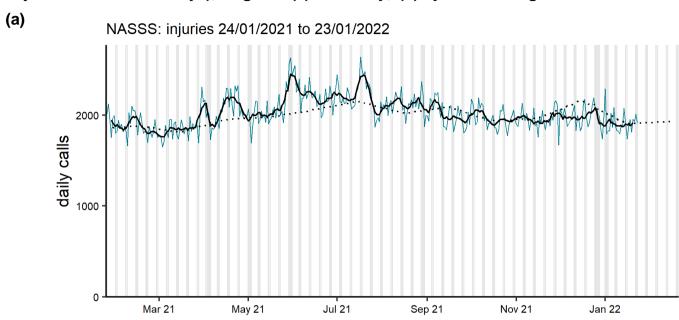

Black dotted line is baseline.

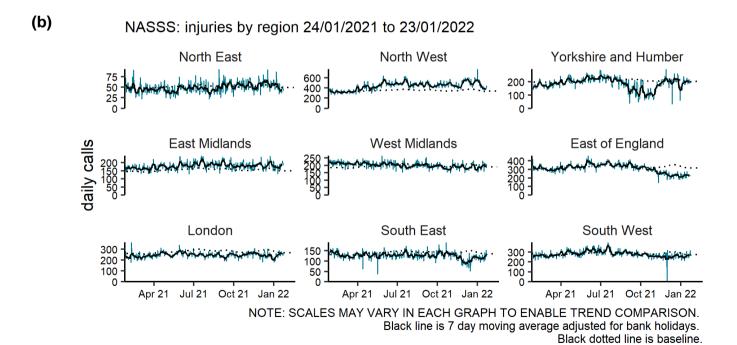

Sep 21

Injuries

Figure 10: Daily number of injury ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

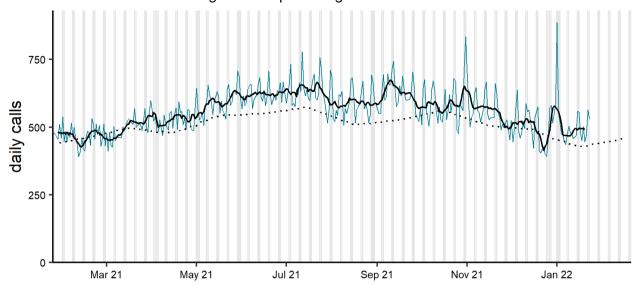

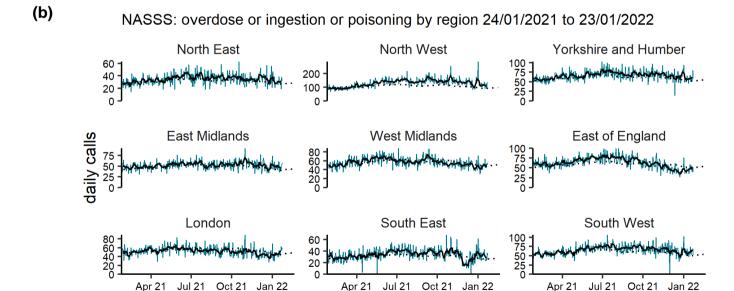

Overdose or poisoning

Figure 11: Daily number of overdose or poisoning ambulance service calls (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by UKHSA Region.

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

NOTE: SCALES MAY VARY IN EACH GRAPH TO ENABLE TREND COMPARISON.

Black line is 7 day moving average adjusted for bank holidays.

Black dotted line is baseline.

Notes and caveats

The following additional caveats apply to the UKHSA ambulance syndromic surveillance system

- the data presented are based on a national syndromic surveillance system:
 - o the 10 ambulance trusts in mainland England are included
 - the number of Trusts included each day of the most recent week is included in Table 2
 - indicating where data has not arrived at the time of this report production.
 All historical data is complete
- the signs/symptoms related to each call may be recorded differently by each ambulance Trust
 - there may be minimal usage of some syndromic indicators by some ambulance Trusts
 - the title for each set of syndromic indicator charts will describe which Trusts (if any) are affected
- baselines:
 - o were last remodelled July 2021
 - o are constructed from historical data since January 2019
 - represent seasonally expected levels of activity
 - take account of any known substantial changes in data collection, population coverage or reporting practices:
 - the COVID-19 pandemic period is excluded, to show seasonally expected levels if COVID-19 had not occurred
 - may be remodelled to include the impacts seen during periods of the COVID-19 pandemic if/when appropriate due to introduction of large scale public health interventions which may affect call levels

COVID-19 syndromic surveillance

- the COVID-19-like syndromic indicator is based on calls grouped into a 'Pandemic/ Epidemic/ Outbreak' triage card:
 - these data are based on COVID-19-like symptoms reported and are not based on outcomes of tests for coronavirus
 - o not all ambulance trusts use this grouping:
 - COVID-19-like calls to the North East, West Midlands and South East ambulance Trusts are included here in the 'difficulty breathing' syndromic indicator
 - the number of COVID-19-like calls should not be used to estimate an absolute count of ambulance calls for COVID-19 patients

Acknowledgements

We would like to thank:

- North East, North West, Yorkshire, East Midlands, West Midlands, East of England, London, South East Coast, South Central, and South Western NHS ambulance Trusts for submitting anonymised, daily data to this syndromic surveillance system
- the Association of Ambulance Chief Executives for their support in establishing this syndromic surveillance system

About the UK Health Security Agency

UKHSA is responsible for protecting every member of every community from the impact of infectious diseases, chemical, biological, radiological and nuclear incidents and other health threats. We provide intellectual, scientific and operational leadership at national and local level, as well as on the global stage, to make the nation heath secure.

UKHSA is an executive agency, sponsored by the Department of Health and Social Care.
