Dear Sir / Madam

**THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING  
AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS  
2020**

**CLAIR-RIDGE [Part of CLAIR], Clair Ridge Platform, DRILLING INJECTOR  
WELL 206/08a-BS2BU512 planned well**

A screening direction for the project detailed in your application, reference DR/2223/0 (Version 4), dated 24th February 2022 has been issued under regulation 6 of the above Regulations. The screening direction notice, and any relevant conditions and comments are attached. A copy of this screening direction will be forwarded to the application consultees, the Oil and Gas Authority and published on the gov.uk website.

If you have any queries in relation to this screening direction or the attachments, please do not hesitate to contact [REDACTED] on [REDACTED] or email the Environmental Management Team at [bst@beis.gov.uk](mailto:bst@beis.gov.uk).

Yours faithfully

**THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING  
AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS  
2020**

**SCREENING DIRECTION CONFIRMING THAT AN ENVIRONMENTAL IMPACT  
ASSESSMENT IS NOT REQUIRED**

**CLAIR-RIDGE [Part of CLAIR], Clair Ridge Platform, DRILLING INJECTOR  
WELL 206/08a-BS2BU512 planned well**

**DR/2223/0 (Version 4)**

Whereas BP EXPLORATION OPERATING COMPANY LIMITED has made an application dated 24th February 2022, under The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020, and whereas the Secretary of State has considered the application and is satisfied that the project is not likely to have a significant effect on the environment; in exercise of the powers available under regulation 6, the Secretary of State hereby directs that the application for consent in respect of the project need not be accompanied by an Environmental Impact Assessment, provided that the project is carried out as described in the application for the screening direction and in accordance with the conditions specified in the attached schedule.

In giving a screening direction under regulation 6 of the above Regulations, the Secretary of State accordingly gives agreement to the Oil and Gas Authority to grant of consent for the project as detailed in the application, WONS/13682/0/IDA/1.

Effective Date: 28th February 2022

## **THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2020**

### **SCHEDULE OF SCREENING DIRECTION CONDITIONS**

The grant of this screening direction is conditional upon the screening direction holder complying with the following conditions.

#### **1 Screening direction validity**

The screening direction shall be valid from 7 March 2022 until 31 May 2022.

#### **2 Commencement and completion of the project**

The holder of the screening direction must notify the Department for Business, Energy & Industrial Strategy (hereinafter called the 'Department') of commencement and completion of the project within two days:

- a) of commencement of the project and
- b) of completion of the project.

Notification should be sent by email to the Environmental Management Team Mailbox: [bst@beis.gov.uk](mailto:bst@beis.gov.uk)

#### **3 Prevention of pollution**

The holder of the screening direction must ensure that appropriate measures are taken to minimise discharges, emissions and waste, in particular through the appropriate use of technology; and to ensure that necessary measures are taken to prevent incidents affecting the environment or, where they occur, to limit their consequences in relation to the environment.

#### **4 Inspections**

Should the Department consider it necessary or expedient for an inspector appointed by the Secretary of State to investigate whether the conditions of the screening direction are being complied with, the holder of the screening direction shall afford the inspector with such facilities and assistance as the inspector considers necessary to exercise the powers conferred by the regulations. The holder of the screening direction shall additionally ensure that copies (electronic or paper) of the screening direction and any other relevant documents are available for inspection by the inspector at:

- a) the premises of the holder of the screening direction; and
- b) the facilities undertaking the project covered by the screening direction.

## **5 Check monitoring**

Should the Department consider it necessary or expedient to undertake an independent monitoring programme to assess the impact of the project covered by the screening direction, the screening direction holder shall afford the Department with such facilities and assistance as the Department considers necessary to undertake the work.

## **6 Atmospheric emissions returns**

Following completion of the project covered by the screening direction, the holder of the screening direction shall report all relevant atmospheric emissions, such as combustion emissions, extended well test emissions or flaring and venting emissions relating to a well test, using the appropriate Environmental Emissions Monitoring System (EEMS) reporting forms. In the case of atmospheric emissions relating to drilling projects undertaken from a fixed installation, they should be included in the annual EEMS reporting forms for the fixed installation.

## **7 Unauthorised deposits**

Following completion of the project covered by the screening direction, the holder of the screening direction shall recover any materials accidentally or temporarily deposited on the seabed, such as debris, temporary containers, structures or deposits, or scientific instruments, and shall return the materials to land. If it is not possible to recover any of these deposits, full details of the materials remaining on the seabed must be reported to the Department in accordance with the requirements of Petroleum Operations Notice No.2 (PON2).

## **8 Screening direction variation**

In the event that the holder of the screening direction proposes changes to any of the particulars detailed in the application for a screening direction, the holder must notify the Department immediately and submit an application for a post screening direction amendment. The post screening direction must be in place prior to the amended proposals taking effect.

Offshore Petroleum Regulator  
for Environment & Decommissioning

## COMMENTS ON THE APPLICATION FOR SCREENING DIRECTION

### Section 1

The attention of screening direction holders is drawn to the following provisions regarding The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020.

1) You are deemed to have satisfied yourself that there are no barriers, legal or otherwise, to the carrying out of the project covered by the screening direction. The issue of a screening direction does not absolve the screening direction holder from obtaining such authorisations, consents etc that may be required under any other legislation.

2) The Department would draw your attention to the following comments:

The Department has no comments.

3) All communications relating to the screening direction should be addressed to:

bst@beis.gov.uk

or

Offshore Petroleum Regulator for Environment & Decommissioning  
Department for Business, Energy & Industrial Strategy  
AB1 Building  
Crimon Place  
Aberdeen

## **SCHEDULE OF SCREENING DIRECTION DECISION REASONS**

The Secretary of State has decided that, based on the information provided, the project is not likely to have a significant effect on the environment. The main reasons for this decision are:

### **1) Decision reasons**

The following provides a summary of the assessments undertaken by OPRED to determine whether an Environmental Impact Assessment is required for this project. This document summarises the information considered, the potential impacts and sets out the main reasons for the decision made.

In considering whether an Environmental Impact Assessment is required or not, the following have been taken into account:

- a) the information provided by the developer;
- b) the matters listed in Schedule 5 of The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Regulations 2020) (the Regulations);
- c) the results of any preliminary verifications or assessments of the effects on the environment of the project; and
- d) any conditions that the Secretary of State may attach to the agreement to the grant of consent.

### **Characteristics of the Project**

Having regard, in particular, to the matters identified at paragraphs 1(a) to (g) of Schedule 5 to the Regulations, the characteristics of the project include the following:

### **Summary of the Project**

Drilling of 32" section with Water Based Mud (WBM) and seawater and sweeps.

Drilling of 16" section with WBM.

Drilling of 12.25" section using Low Toxicity Oil Based Mud (LTOBM).

Drilling of 8.5" section using WBM

Well Clean up and Completion.

## **Description of project**

This project covers the drilling of water injection well 206/08a-BS2BU5I2 (B16) from the Clair Ridge Platform (CRP).

The well will be drilled with a combination of WBM and LTOBM. The 32" section will be drilled riserless, with WBM and cuttings discharged continuously at the seabed. WBM and cuttings from the 16" section will be discharged to sea from a cuttings caisson exiting the CRP approximately 50m below the sea surface. Cuttings generated in the LTOBM sections will be reinjected. If re-injection is unavailable, then the cuttings will be returned to shore for treatment and disposal. The 8.5" section will penetrate the hydrocarbon reservoir with cuttings preferentially reinjected however if reinjection is unavailable then these will be discharged. Once the well sections have been drilled, casings will be run, and cement will be used to provide integrity of the well. On completion of the drilling operations, wellbore clean-up operations will be undertaken. Operations are expected to take 58 days.

Drilling at Clair Ridge was assessed in the original scope for the Clair Ridge Development Environmental Statement (ES) which was approved 27th June 2011. A total of 36 wells are planned over approximately 12 years, with B16 being the 14th.

No cumulative impacts are expected to occur between this project and other existing projects due to the distance between them.

It is not considered to be likely that the project will be affected by natural disasters. The risk of a major accident such as a well blowout has been assessed. The Developer has control measures in place to reduce the risk of a major accident occurring and the probability of such an event occurring is very low.

Other than the matters considered further below, there is not likely to be any significant impact of the project on population and human health.

## **Location of the Project**

Having regard, in particular, to the matters identified at paragraphs 2(a) to (c) of Schedule 5 to the Regulations, the environmental sensitivity of geographical areas likely to be affected by the project has been considered as follows.

The CRP is located approximately 55 kilometres (km) west of Shetland and 92 km south east of the United Kingdom-Faroes median line. The operations are part of the existing Clair Ridge development and were included in the original scope of the ES. This is the 14th well to be drilled at the development.

The project is in an area characterised by coarse sediment and sand and muddy sand with a water depth of 143 metres (m). Mean monthly significant wave heights for the area range between 3.5 m and 4.5 m in the winter months, and 1.5 m and 2 m in the summer months. Surveys indicated that areas were predominately classified as

sublittoral coarse sediment. Additional habitats were identified to a lesser extent, including sublittoral sand and sublittoral mixed sediment. Survey work found that the sediments generally support a species-rich and relatively abundant macrofauna. Highly populated with juveniles, the total proportional taxa contribution around Clair Ridge consists mainly of annelids (63.4%), arthropods (15.9%), molluscs (14.6%), echinoderms (3.7%) and other (2.4%). This dominance of annelid taxa is broadly typical of the northeast Atlantic area. There is no evidence of threatened or declining species listed under OSPAR or benthic Priority Marine Features (PMF) within the Claire Ridge survey area. No species or habitats of conservation significance under the Offshore Petroleum Activities (Conservation of Habitats) Regulations 2001 (as amended) were observed within the survey area. The closest recorded Priority Marine Features are deep-sea sponge aggregations and ocean quahogs aggregations located approximately 23 km west and 69 km east of the CRP, respectively.

The project is in the National Marine Plan Area for Scotland. Low densities of harbour porpoise, minke whale and white-beaked dolphin have been recorded in the area. Low numbers of Grey, harbour and hooded seals are anticipated to be in the area at any time. Seabird sensitivity during the operational period (February March to May) is high in April and low in February, March and May. Fishing effort in the area is generally low during spring and summer and highest in January.

The proposed operations will coincide with fish spawning and/or nursery activity for a number of species.

Two wrecks have been identified within 7 km of the CRP. No aggregate dredging and disposal sites, sites of marine archaeological interest or planned offshore renewable energy developments have been identified within 40km of the CRP.

Given the location of the project, it is not likely that the areas identified at paragraphs 2(c)(i), (iii), (iv), (vi), (vii) of Schedule 5 to the Regulations will be affected by the project.

### **Type and characteristics of the potential impact**

In accordance with paragraph 3 of Schedule 5 to the Regulations, the likely significant effects of the project on the environment have been considered. Potential effects on the environment from the activities associated with the project were assessed, including impacts arising from atmospheric emissions, seabed disturbance, physical presence, planned discharges and accidental spills.

Other than the matters considered further below, there is not likely to be any significant impact of the project on population and human health.

There is a 500 m radius safety zone around the CRP, excluding unauthorised access of vessels and prohibiting access to fishing vessels. No additional impacts to other marine users are identified as part of the operations at B16.

Seabed disturbance from the discharge of water-based mud drill cuttings will impact a total area of 214 m<sup>2</sup>. Seabed disturbance could result in the smothering and mortality of benthic fauna which will result in some short term temporary impacts however the benthic communities are expected to regenerate the area impacted by drill cuttings over time. Up to 33 m<sup>3</sup> of cement slurry will be extruded to the seabed adjacent to the well during cementing operations. The impacts from seabed disturbance have been assessed as not likely to have significant effect.

Cuttings from the 8.5" section may be contaminated with up to 100 mg/l of reservoir hydrocarbons. In addition, up to 800 m<sup>3</sup> of WBM (which includes contingency allowance) could be discharged, resulting in the discharge of up to 80 kg of entrained oil. There is potential for deposition of oil contaminated solids to reduce benthic diversity by promoting colonisation by opportunistic, oil tolerant, fauna as well as by direct smothering. However, Cuttings including oil contaminated cuttings/WBM will be widely dispersed, with deposition depths falling to <1 mm within 100 m to 300 m of the discharge. The resulting deposits of hydrocarbons will be biodegraded at the sediment surface or drawn down into the sediments. Therefore, the areal extent of impact is sufficiently small to ensure the environmental impact is likely to be insignificant. In addition, any discharge of cuttings will be as a contingency as the primary option is for the cuttings to be re-injected. The impacts have therefore been assessed as not having a likely significant effect.

Discharge of offshore chemicals associated with the drilling of the well, cementing and completion operations have been assessed as not likely to have a significant effect on the environment. Offshore chemicals associated with LTOBM will be re-injected.

There are no expected transboundary effects from the operations at B16. The nearest boundary line (UK/Faroes Median Line) is located approximately 92 km north west of the operations. It is not considered likely that any planned operational discharge (cuttings, chemicals or base oil) will be detectable at this distance from CRP.

Although not a planned activity, a worst-case major accident scenario resulting from a potential well blow-out was modelled and assessed. The probability of a large oil spill from the proposed operations is low. Therefore, it is considered that the control measures in place to prevent loss of well control minimise the risk of an oil spill that could have a significant impact and the proposed operations carried out as planned are not likely to have a significant effect on the environment.

Operations at B16 will use existing platform power generation. Atmospheric emissions resulting from drilling at CRP were assessed as part of the ES and are considered to have no significant impact on the environment.

The drilling operations do not contradict any of the Scottish marine plan objectives and policies.

The operations at B16 are not likely to have a significant impact on the two wrecks

that have been identified within 7 km of the CRP.

Operations at B16 will be conducted from the existing CRP such that there is no increase in the infrastructure footprint. No cumulative impacts are expected to occur between this project and other existing projects due to the distance between them. Impacts from the discharge of cuttings, including potential cumulative impacts from the 36 Claire Ridge wells were considered and as the drilling will occur over a 12 year period and will be dispersed over time, impacts were concluded to be localised and not significant.

## **2) Decision**

Taking the above considerations into account, the Secretary of State has concluded that the project is not likely to have a significant impact on the environment and that an environmental impact assessment is not required.

## **3) Mitigation of significant effects**

The following are features of the project or measures envisaged that the developer has proposed to avoid or prevent what might otherwise have been significant adverse effects on the environment:

N/A
