| **Subject:** | Please allow PWA and alt browser engines on IOS |

Hi,

I'm a developer and CTO of a Uk based SaaS company. I've worked in the field of the web over 20 years. Please push for apple to open up iOS more and allow browser choice and alternative browser engines within apps. This would help level the field with android and offer consumers more choice and freedom. It's also important for the future of the web that innovation is not blocked by operating systems.

Happy to offer more perspective if you want but figured I would just register my voice.

Thanks for your work,
Luke
