Subject: Solar Farm 0000004

Good Morning

I am writing a very short email to have my say on the planning for a solar farm by Stansted Airport.

Firstly, I don't see why these solar panels can't be used/positioned within the grounds of Stansted Airport, either on the terminal roof/car parks/grass land within the grounds. With it being well broadcast across the news of wheat shortage, why build over very good grade 2 farm land when you have roofs within the site.

Stansted Airport have also in the past, been massive players to stop anyone else having a solar farm within the area of Stansted Airport, Tye Green Farm, Easton air field (to name a few). The reason these solar farms never went to planning was simply because Stansted Airport said it was too unsafe for the incoming aircraft, and close to the Airport. Yet they now want to build a farm even closer?!

Finally, I'd also like to highlight that Stansted Airport have been making huge noises about 'birds of prey' increasingly becoming a concern to aircraft. Which resulted in the high house land not being fit of environmental flowers, yet the one thing which solar panels is well known for is attracting birds of prey!!!!

I really don't see how they can go against all their talk/objection to other local people, yet plough on with this horrendous eye sight that'll bring to the local villages, with the positioning of the site clearly with the view of more in fill.

BAA always prided themselves of Stansted Airport being part of the countryside, and never wanted any infill between the airport and local villages.

All the best.
