Monthly Summary

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of dust monitoring undertaken in the West Northamptonshire (WNDC) during June 2022.
- 1.1.2 Figures 1 and 2 in Appendix A presents the current worksites together with the dust monitoring locations for June 2022.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report available from www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2, which highlights: the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current worksites, as presented in Appendix A, Figures 1 and 2, include:

Twyford to Greatworth (T2G)

- Topsoil stripping
- Bulk excavation – Cutting
- Stockpile management
- Site Access Road maintenance
- Compound maintenance
- Drainage, temporary ponds

Greatworth to Southam (G2S)

- Excavation for chipping warden green tunnel
- Green tunnel Structure unit placement
- Stockpiling
- Chipping Warden Compound development
- A361 Temporary Overbridge material movement preparation works
- Installation of waterproofing and blinding

Chipping Warden Village worksite

- Topsoil stripping and material movement
- Chipping Warden Compound development
- Green tunnel Structure unit placement
- Established of site access road
- A361 Temporary Overbridge material movement preparation works
- Excavation for chipping warden green tunnel
- installation of waterproofing and blinding

Lower Boddington worksite

- Topsoil stripping and material movement
- Water Management
- Stockpiling
- Established of site access road

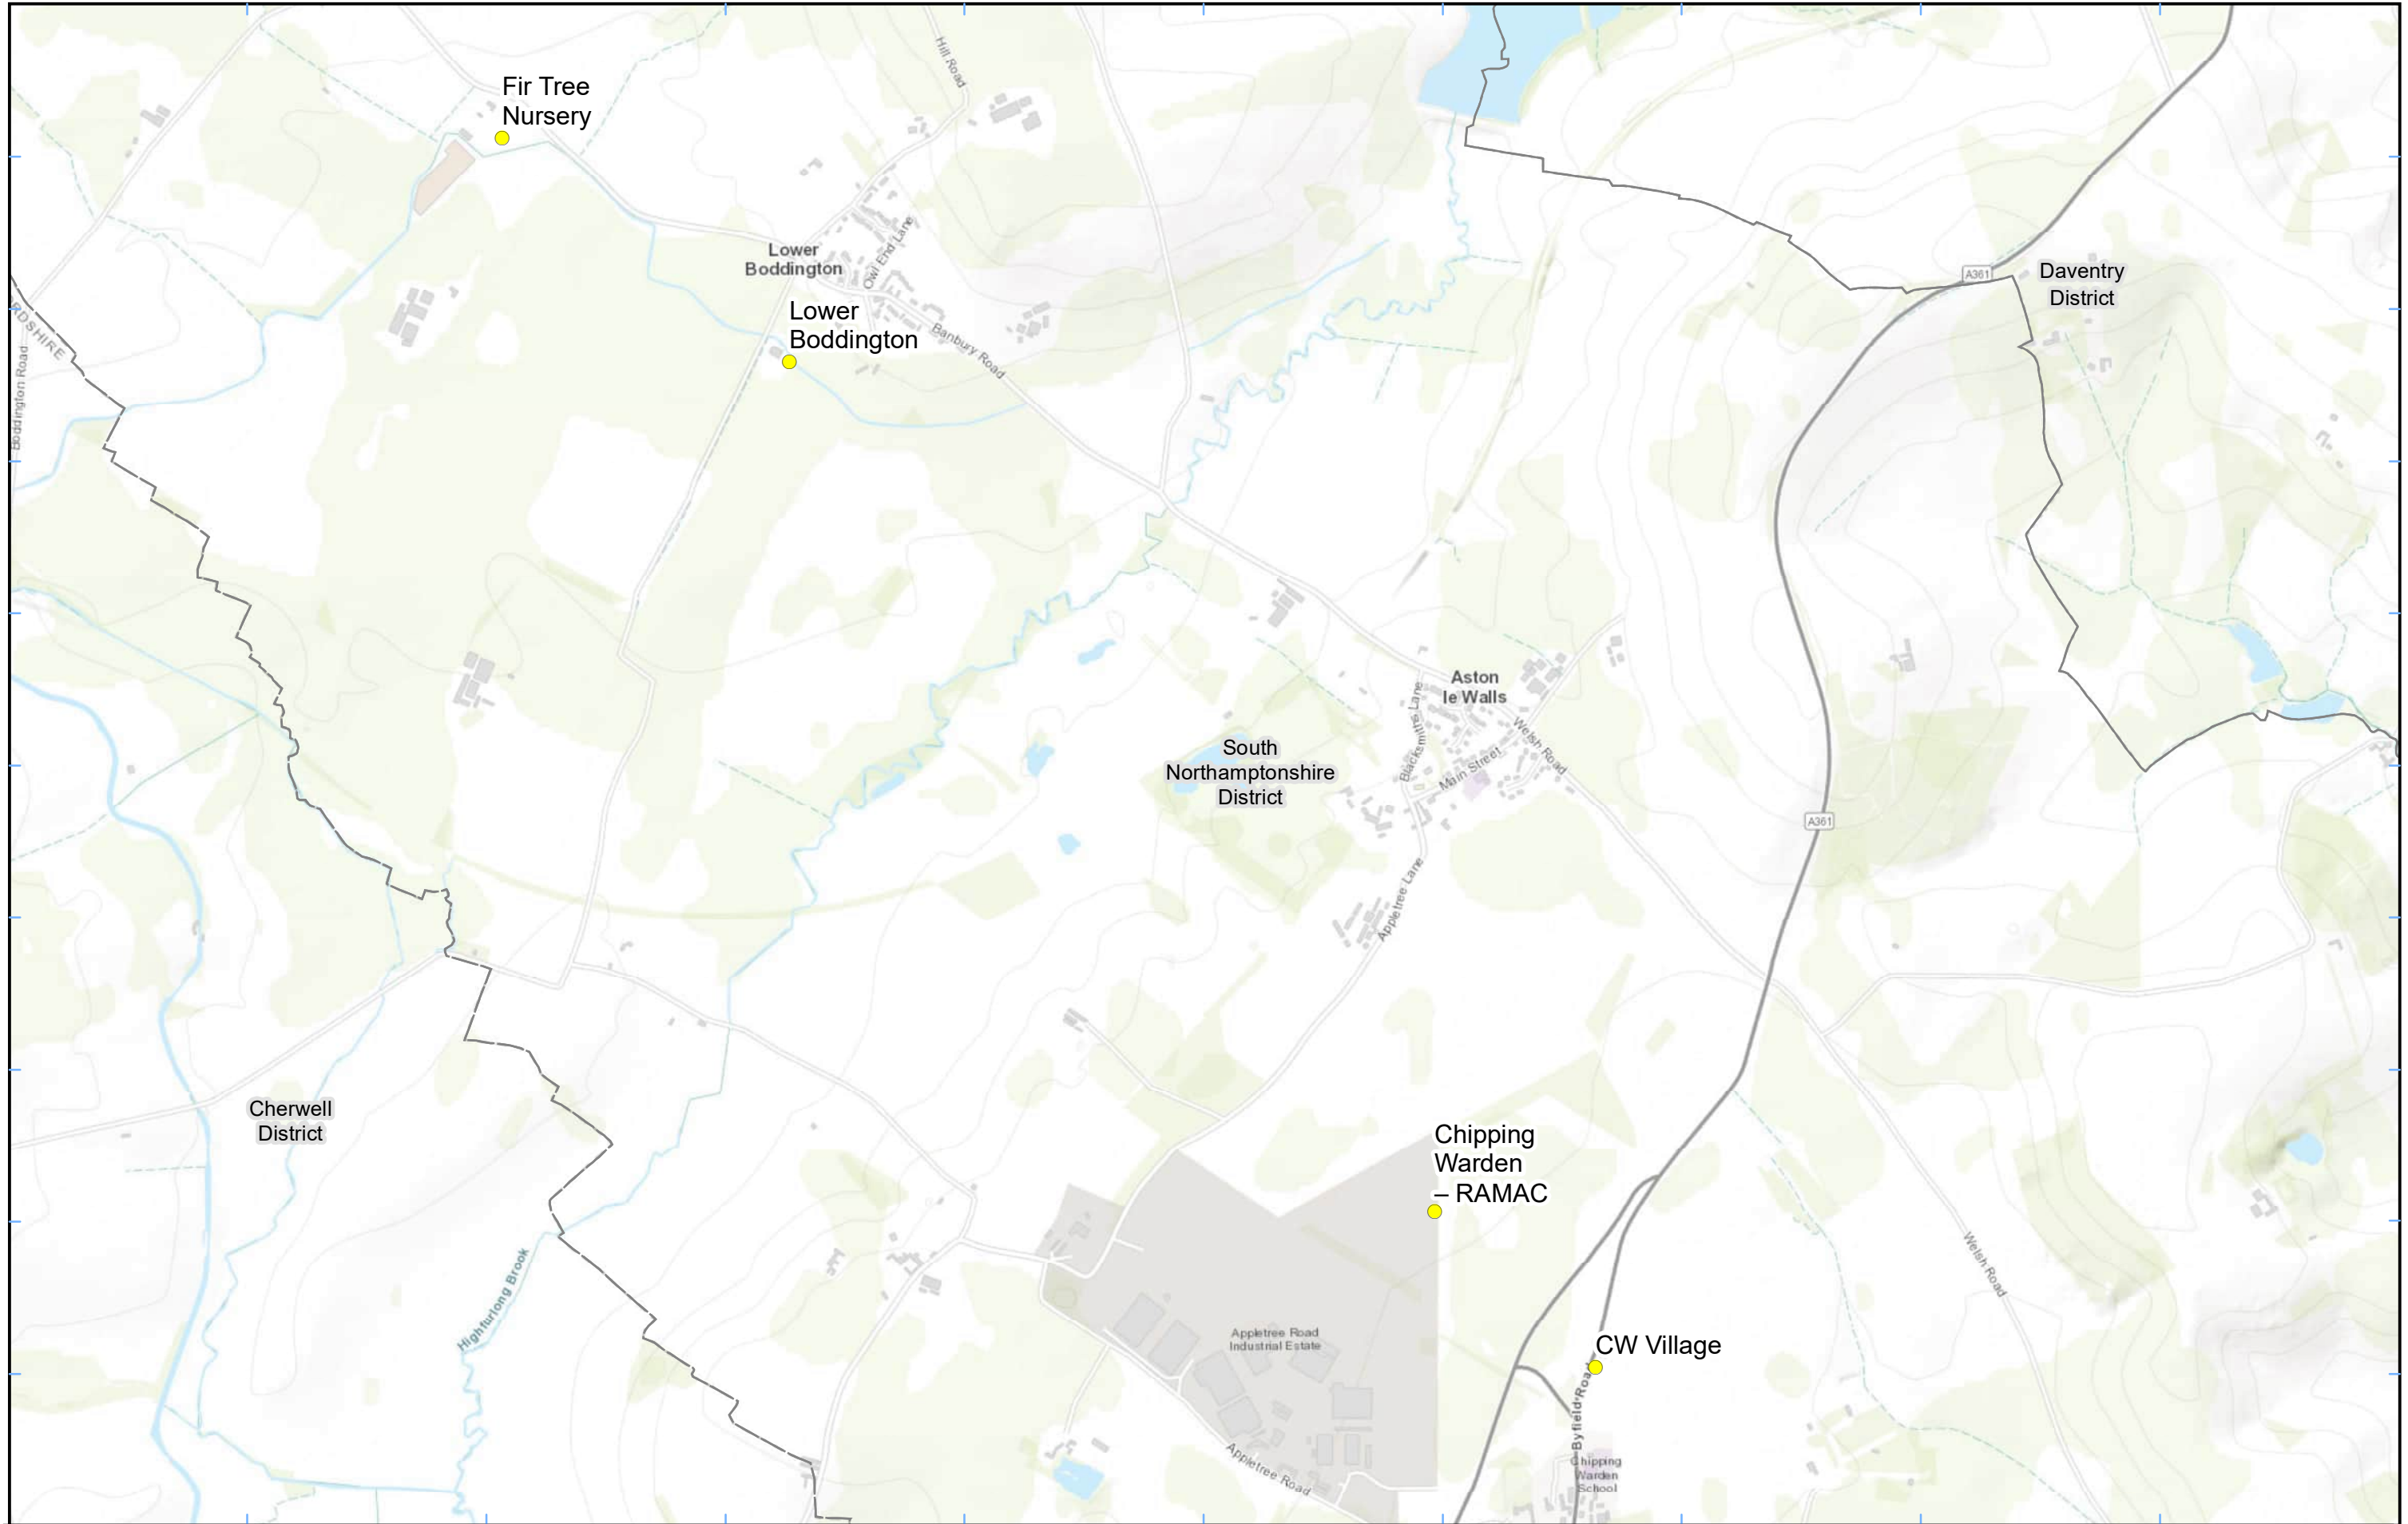

Fir Tree Nursery worksite

- Water Management
- Established of site access road
- Stockpiling
- Topsoil stripping and material movement

- 1.1.5 Dust monitoring locations and results are presented in Appendix B, Table 1, together with line charts of monthly data from the dust monitors presented in Figure 3. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.6 Six (6) dust monitors are installed around the worksites, where works are underway. These sites returned a medium dust risk rating.
- 1.1.7 The trigger level for PM₁₀ concentrations of 190 µg/m³, over a 1-hour period, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (October 2018)*' has been applied.
- 1.1.8 No (0) trigger alerts were recorded in the monitoring period (June 2022).
- 1.1.9 Data capture was below 90% for multiple monitors due to loose connections and damage to a controller box due to water ingress.
- 1.1.10 No (0) complaints were received during the reporting period.
