

## Maximum Residue Limits in Great Britain

Pharmacologically active substance and their classification regarding maximum residue limits (MRLs) in foodstuffs of animal origin in Great Britain.

To protect public health, substances used in veterinary medicines, on the basis of scientific assessment of the risk to consumers of those substances, are classified into three groups and provided in this document. The three groups are:

- [Allowed substances](#): for which an MRL is established, holds a provisional MRL, or it was not necessary to establish an MRL
- [Prohibited substances](#): for which an MRL could not be established because residues of those substances, at whatever limit, constitute a hazard to human health
- [Out of scope](#): Substances (including biological substances) that do not require an MRL evaluation
