Non-Technical Summary

This Noise and Vibration Monitoring Report fulfils HS2 Limited's commitment detailed in the Environmental Minimum Requirements (EMRs), Annex 1, Code of Construction Practice, to present the results of noise and vibration monitoring carried out within Warwick District Council (WDC) area during the month of August 2022.

Within this period monitoring was undertaken at the following worksites:

- Noise monitoring was undertaken at the Burton Green Tunnel and Bockenden Cutting worksites (ref.: BGT & BC), where work activities included maintenance of landscape area, utility protection works and fencing.
- Noise monitoring was undertaken at the A429 Kenilworth Road Overbridge (ref.: A429KRO), where work activities reinforced concreting, cranage, pumping, and excavation and compaction of haul roads.
- Noise monitoring was undertaken at the A46 Compound (ref.: A46C), where work activities included fencing works, sweeper pit construction and drainage works.
- Noise monitoring was undertaken at the Stoneleigh Park (ref.: SP), where work activities included compound construction, topsoil stripping, haul road construction and operation, fencing and installing of geographical control stations.
- Noise monitoring was undertaken at the Cubbington Road (ref.: C), where work activities included tree protection works and strimming.
- Noise monitoring was undertaken at Offchurch Cutting (ref.: OC), where work activities included borehole and ground Investigation works, concrete pours, fencing, excavations, embankment creation, conveyor operation, lime stabilisation works, road and car park works, and relocation of cabins and compound adjustments.
- Noise monitoring was undertaken at Fosseway Diversion (ref.: FD), where work activities included roadworks, lighting installation / adjustment and demobilisation.

Further works, where monitoring did not take place, were undertaken at Burton Green Tunnel and Lavender Farm where water main utility works were underway.

There were two exceedances of the HS2 threshold levels for significant noise impacts, which are defined in Information Paper E23

(https://www.gov.uk/government/publications/hs2-information-papers-environment), during the reporting period.

There were no exceedances of trigger levels as defined in Section 61 consents during the reporting period at any monitoring position.

One (1) noise complaint was received during the monitoring period. A description of the complaints, the results of investigations and any actions taken are detailed in Table 8 of this report.

Abbreviations and Descriptions

The abbreviations, descriptions and project terminology used within this report can be found in Table 1.

Table 1: Table of Abbreviations

Acronym/Term	Definition			
L _{Aeq,T}	See equivalent continuous sound pressure level			
Ambient sound	A description of the all-encompassing sound at a given location and time which will include sound from many sources near and far. Ambient sound can be quantified in terms of the equivalent continuous sound pressure level, $L_{pAeq,T}$			
Decibel(s), or dB Between the quietest audible sound and the loudest tolerable sound there is a mill sound pressure (measured in Pascal (Pa)). Because of this wide range, a level scale (dB) scale, based on a logarithmic ratio, is used in sound measurement. Audibility or range of approximately 0-140dB.				
Decibel(s) A- weighted, or dB(A)	The human ear system does not respond uniformly to sound across the detectable frequency range and consequently instrumentation used to measure sound is weighted to represent the performance of the ear. This is known as the 'A weighting' and is written as 'dB(A)'.			
Equivalent continuous sound pressure level, or L _{Aeq,T}	An index used internationally for the assessment of environmental sound impacts. It is defined as the notional unchanging level that would, over a given period of time (T), deliver the same sound energy as the actual time-varying sound over the same period. Hence fluctuating sound levels can be described in terms of an equivalent single figure value, typically expressed as a decibel level.			
Exclusion of data	Measurement of noise levels can be affected by weather conditions such as prolonged periods of rain, winds speeds higher than 5m/s and snow/ice ground cover. Noise levels measured during these periods are considered not representative of normal noise conditions at the site and, for the purposes of this report, are excluded from the assessment of exceedances and calculation of typical noise levels and are also greyed out in charts. Identifiable incongruous noise and vibration events not attributable to HS2 construction noise are also excluded.			
Façade	A facade noise level is the noise level 1m in front of a large reflecting surface. The effect of reflection, is to produce a slightly higher (typically +3 dB) sound level than it would be if the reflecting surface was not there.			
Free-field	A free-field noise level is the noise level measured at a location where no reflective surfaces, other than the ground, lies within 3.5 metres of the microphone position.			
LOAEL	Lowest Observed Adverse Effect Level - the level above which adverse effects on health and quality of life can be detected.			
Peak particle velocity, or PPV	Instantaneous maximum velocity reached by a vibrating element as it oscillates about its rest position. The PPV is a simple indicator of perceptibility and risk of damage to structures due to vibration. It is usually measured in mm/s.			
SOAEL	Significant Observed Adverse Effect Level - the level above which significant adverse effects on health and quality of life occur.			
Sound pressure level	The parameter by which sound levels are measured in air. It is measured in decibels. The threshold of hearing has been set at 0dB, while the threshold of pain is approximately 120dB. Normal speech is approximately 60dB at a distance of 1 metre and a change of 3dB in a time varying sound signal is commonly regarded as being just detectable. A change of 10dB is subjectively twice, or half, as loud.			
Vibration dose value, or VDV	An index used to evaluate human exposure to vibration in buildings. While the PPV provides information regarding the magnitude of single vibration events, the VDV provides a measure of the total vibration experienced over a specified period of time (typically 16h daytime and 8h night-time). It takes into account the magnitude, the number and the duration of vibration events and can be used to quantify exposure to continuous, impulsive, occasional and intermittent vibration. The vibration dose value is measured in m/s ^{1.75} .			

1 Introduction

- 1.1.1 HS2 is required to undertake noise (and vibration) monitoring as necessary to comply with the requirements of the High Speed Rail (London-West Midlands) Environmental Minimum Requirements, including specifically Annex 1: Code of Construction Practice, in addition to any monitoring requirements arising from conditions imposed through consents under Section 61 of the Control of Pollution Act, 1974 or through Undertakings & Assurances given to third parties. Such monitoring may be undertaken for the following purposes:
 - monitoring the impact of construction works;
 - to investigate complaints, incidents and exceedance of trigger levels; or
 - monitoring the effectiveness of noise and vibration control measures.
- 1.1.2 Monitoring data and interpretive reports are to be provided to each relevant local authority on a monthly basis and shall include a summary of the construction activities occurring, the data recorded over the monitoring period, any complaints received, any periods in exceedance of agreed trigger levels, the results of any investigations and any actions taken or mitigation measures implemented. This report provides noise data, and interpretation thereof, for monitoring carried out by HS2 within the Warwick District Council (WDC) area for the period 1st to 31st August 2022.
- 1.1.3 Construction sites in the local authority area where monitoring was undertaken during this period include:
 - Burton Green Tunnel and Bockenden Cutting worksites (ref.: BGT / BC, see plan 1 in Appendix A), where work activities included:
 - Maintenance of landscape area.
 - Utility protection works.
 - Installing post and rail fencing to exclusion zones.
 - A429 Kenilworth Road Overbridge (ref.: A429KRO, see plan 2 in Appendix A), where work activities included:
 - Reinforced concrete works.
 - o Cranage.
 - De-watering works.
 - Excavation and compaction of haul roads.

- A46 Compound, (ref.: A46C, see plan 3 in Appendix A), where work activities included:
 - Fencing works.
 - Sweeper pit construction.
 - Drainage works.
- Stoneleigh Park, (ref.: SP, see plan 3 in Appendix A), where work activities included:
 - Compound construction.
 - Top soil stripping.
 - Haul road construction and operation.
 - Fencing.
 - Installing of geographical control stations.
- Cubbington Road (ref.: C, see plan 4 in Appendix B), where work activities included:
 - Installing a hay bale barrier around a tree.
 - Strimming.
- Offchurch Cutting worksite (ref.: OC, see plan 5 in Appendix A), where work activities included:
 - Borehole and ground investigation works.
 - Concrete pouring.
 - Fencing.
 - Excavation and backfill.
 - Embankment works.
 - Use of material transfer conveyor.
 - Lime stabilisation earthworks.
 - Road and car park works.
 - Relocation of cabins and compound adjustment works.
 - Removal of sweeper pit installation and levelling out.

- Fosseway Diversion (ref.: FD, see plan 5 in Appendix A), where work activities included:
 - Yard works (demobilisation).
 - Roadworks (roundabout realignment).
 - Lighting works (adjustments to improve lighting).
- 1.1.4 Further works, where monitoring did not take place, were undertaken at Burton Green Tunnel and Lavender Farm where water main utility works were underway
- 1.1.5 The applicable standards, guidance, and monitoring methodology is outlined in the construction noise and vibration monitoring methodology report which can be found at the following location <u>https://www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2</u>. Noise and vibration monitoring reports for previous months can also be found at this location.

1.2 Measurement Locations

- 1.2.1 Eighteen (18) noise and five (5) vibration monitoring installations were active in August in the WDC area. Table 2 summarises the position of the noise and vibration monitoring installations within the WDC area in August 2022.
- 1.2.2 Vibration monitor BGT-V4 was removed from site following the end of the previous reporting period.
- 1.2.3 Vibration monitor BGT-V8 was installed at Cromwell Lane, Burton Green, in proximity to the Burton Green Tunnel worksite, ref.: BGT, on the 17th of August.
- 1.2.4 Maps showing the position of the noise and vibration monitoring installations are presented in Appendix B.

Worksite Reference	Measurement Reference	Address
Burton Green	BGT-N1	301 Cromwell Lane, Burton Green, Warwick

2 Summary of Results

2.1 Summary of Measured Noise and Vibration Levels

2.1.1 Table 3 presents a summary of the measured noise levels at each monitoring location over the reporting period. The L_{Aeq,T} is presented for each of the relevant time periods averaged over the calendar month, along with the highest single period L_{Aeq,T} that was found to occur within the month.

Table 3: Summary of Measured dB L_{Aeq} Data over the Monitoring Period

Worksite Reference	Measurement Reference	Site Address	Free-Field or Façade Measurement	Weekday Average L _{Aeq,T} (Highest Day L _{Aeq,T})				Saturday Average L _{Aeq,T} (Highest Day L _{Aeq,T})				Sunday / Public Holiday Average L _{Aeq,T} (Highest Day L _{Aeq,T})			
				0700 - 0800	0800 - 1800	1800 - 1900	1900 - 2200	2200 - 0700	0700 - 0800	0800 - 1300	1300 - 1400	1400 - 2200	2200 - 0700	0700 - 2200	2200 - 0700

Note: No data is available for Monitor FD-N2 during the Saturday time periods due to a fault with the monitoring system that prevented data capture during these periods throughout the month.

2.1.2 Table 4 presents a summary of the measured vibration levels at each monitoring location over the reporting period. The highest PPV measured during the monitoring along any axis is presented in the table.

Worksite Reference	Measurement Reference	Monitor Address	Highest PPV measured in any axis, mm/s
BGT	BGT-V5	33 Broadwell Woods (External), Red Lane, Burton Green, Kenilworth, CV8 1QF	1.12 (Z-axis)
BGT	BGT-V7	33 Broadwell Woods (Internal), Red Lane, Burton Green, Kenilworth, CV8 1QF	2.89 (Z-axis)
BGT	BGT-V8	297 Cromwell Lane, Burton Green, Kenilworth, CV8 1PJ	1.76 (X-axis)
SP	SP-V1	Stoneleigh, Kenilworth	2.47 (Y-axis)
SP	SV-V1	The Barnyard Crewe Ln, Stoneleigh, Kenilworth	0.57 (Z-axis)

Table 4: Summary of Measured PPV Data over the Monitoring Period

2.1.3 Appendix C presents graphs of the noise and vibration monitoring data over the month for each of the measurement locations. Noise data presented consists of the hourly L_{Aeq} values and, where relevant, the L_{Aeq,T} values (where the time period T has been taken to be the averaging period as specified in Table 1 of HS2 Information Paper E23). Vibration data presented consist of hourly PPV values. The full data set for the monitoring equipment can be found at the following location: https://data.gov.uk/dataset/24542ae7-dd44-444f-b259-871c4cc43b5e/environmental-monitoring-data.

2.2 Exceedances of the LOAEL and SOAEL

- 2.2.1 The lowest observed adverse effect level (LOAEL) is defined in the Planning Practice Guidance – Noise (PPG) as the level above which "noise starts to cause small changes in behaviour and/or attitude, e.g. turning up volume of television; speaking more loudly; where there is no alternative ventilation, having to close windows for some of the time because of the noise. Potential for some reported sleep disturbance. Affects the acoustic character of the area such that there is a perceived change in the quality of life".
- 2.2.2 The significant observed adverse effect level (SOAEL) is defined in the 'Planning Practice Guidance – Noise' as the level above which "noise causes a material change in behaviour and/or attitude, e.g. avoiding certain activities during periods of intrusion; where there is no alternative ventilation, having to keep windows closed most of the time because of the noise. Potential for sleep disturbance resulting in difficulty in getting to sleep, premature awakening and difficulty in getting back to sleep. Quality of life diminished due to change in acoustic character of the area."

- 2.2.3 HS2 Phase One Information Paper E23: Control of Construction Noise and Vibration sets out the LOAELs and SOAELs for construction noise.
- 2.2.4 Where reported construction noise levels exceed the LOAEL and SOAEL, relevant periods will be identified. Summary statistics to evaluate ongoing qualification for noise insulation and temporary rehousing are also presented where relevant.
- 2.2.5 Table 5 presents a summary of recorded exceedances of the LOAEL and SOAEL at each measurement location over the reporting period, including the number of exceedances during each time period.

Worksite Reference	Measurement Reference	Site Address	Day (Weekday, Saturday, Sunday, Night)	Time period	Number of exceedances of LOAEL	Number of exceedances of SOAEL
BGT	BGT-N1*	301 Cromwell Lane, Burton Green	All days	All periods	No exceedances	No exceedances
	BGT-N2	33 Broadwell Woods Caravan Park, Red Lane, Burton Green	Weekday	0800 - 1800	1	No exceedances
BC	BC-N1*	Thistle Estate, Red Lane, Burton Green	All days	All periods	No exceedances	No exceedances
A429KRO	A429KRO-N1	Millburn Grange, Coventry Road, Kenilworth	All days	All periods	No exceedances	No exceedances
	A429KRO-N2	Brookview, Milburn Grange, Coventry Road, Kenilworth	Weekday	0800 - 1800	4	No exceedances
	A429KRO-N3	16 Kenilworth Road, Kenilworth	All days	All periods	No exceedances	No exceedances
A46C	A46C-N1*	Kingswood Farmhouse, Dalehouse Lane, Kenilworth	All days	All periods	No exceedances	No exceedances

Table 5 - Summary of Exceedances of LOAEL and SOAEL

Worksite Reference	Measurement Reference	Site Address	Day (Weekday, Saturday, Sunday, Night)	Time period	Number of exceedances of LOAEL	Number of exceedances of SOAEL
SP	SP-N1	Stoneleigh, Kenilworth	All days	All periods	No exceedances	No exceedances
	SP-N2	Stoneleigh Park, Kenilworth	All days	All periods	No exceedances	No exceedances
	SV-N1	The Barnyard Crewe Ln, Stoneleigh, Kenilworth	All days	All periods	No exceedances	No exceedances
	SV-N2	5 Birmingham Rd, Stoneleigh, Coventry	All days	All periods	No exceedances	No exceedances
	SV-N3	5 Walkers Orchard, Stoneleigh, Coventry	All days	All periods	No exceedances	No exceedances
С	C-N1	Wychwood, Cubbington Road, Lillington Spa	All days	All periods	No exceedances	No exceedances
ос	OC-N1*	Welsh Road, Offchurch, Leamington,	All days	All periods	No exceedances	No exceedances
	OC-N2*	Valley Fields, Hunningham Road, Offchurch, Leamington	Weekday	All periods	No exceedances	No exceedances
	OC-N3	Brickyard Cottage, Welsh Road, Offchurch,	All days	All periods	No exceedances	No exceedances
FD	FD-N1	Farmers Tyre, Leamington	Weekday Night	1900-2200 2200-0700	2 5	No exceedances
	FD-N2	Welsh Road, Leamington	Night	2200-0700	3	2

* Note: A distance correction has been applied while calculating exceedances of the LOAEL and SOAEL.

2.2.6 LOAEL exceedances were recorded at four (4) monitoring locations. These exceedances were recorded during weekday and night-time periods.

- 2.2.7 Two (2) night-time SOAEL exceedances were recorded at the FD-N2 monitoring location during night works.
- 2.2.8 For the purpose of assessing eligibility for noise insulation or temporary rehousing, multiple exceedances of the SOAEL in a 24-hour period would be counted as a single exceedance during that day. Over the reporting period, the overall number of SOAEL exceedances at each measurement location is shown in Table 6 and may be lower than the total sum of individual exceedances reported in Table 4 for each location.

Table 6 - Summary of Total Exceedances of SOAEL

Worksite Reference	Measurement Reference	Monitor Address	Total of SOAEL exceedances in the month
FD	FD-N2	Welsh Road, Leamington Spa	1

2.3 Exceedances of Trigger Level

2.3.1 Table 7 provides a summary of exceedances of the Section 61 trigger noise levels determined to be due to HS2 related construction noise measured during the reporting period, along with the findings of any investigation.

Table 7 - Summary of Exceedances of Trigger Levels

Complaint Reference Number (if applicable)	Worksite Reference	Date and Time Period	ldentified Source	Results of Investigation (including noise monitoring results)	Actions Taken
-	-	-	-	-	-

2.4 Complaints

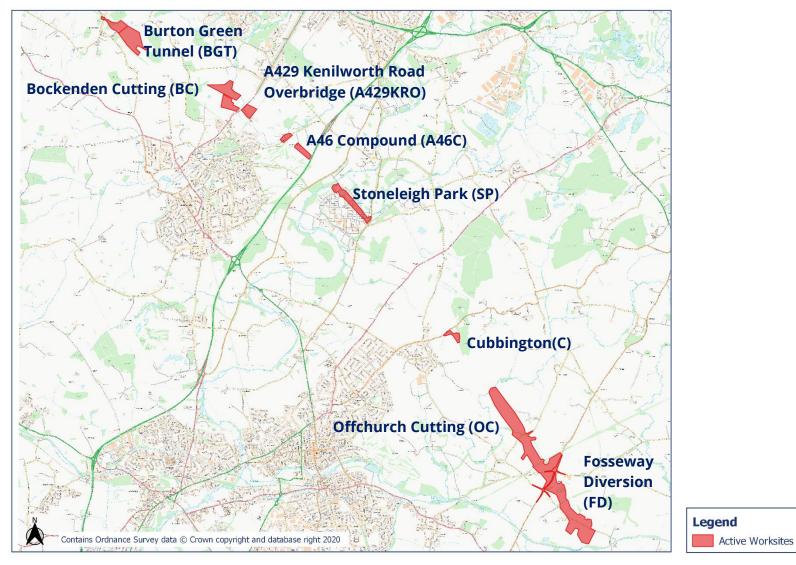

2.4.1 Table 8 provides a summary of complaint information related to noise and vibration received during the reporting period, along with the findings of any investigation.

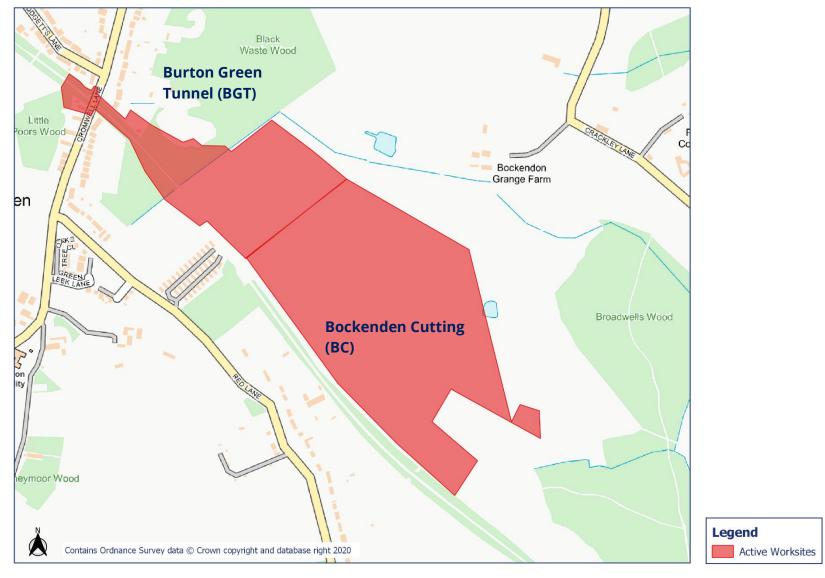

Table 8 - Summary of Complaints

Complaint Reference Number	Worksite Reference	Description of Complaint	Results of Investigation	Actions Taken
HS2-22-43855-C N/A		Noise commencing at 08:00 on Sunday and 07:00 on Monday	Works to divert overhead line to underground	Stakeholder advised that consent was in place for work to commence at 08:00 to 19:00 with 1- hour either side for set up/shut down.

Appendix C Data

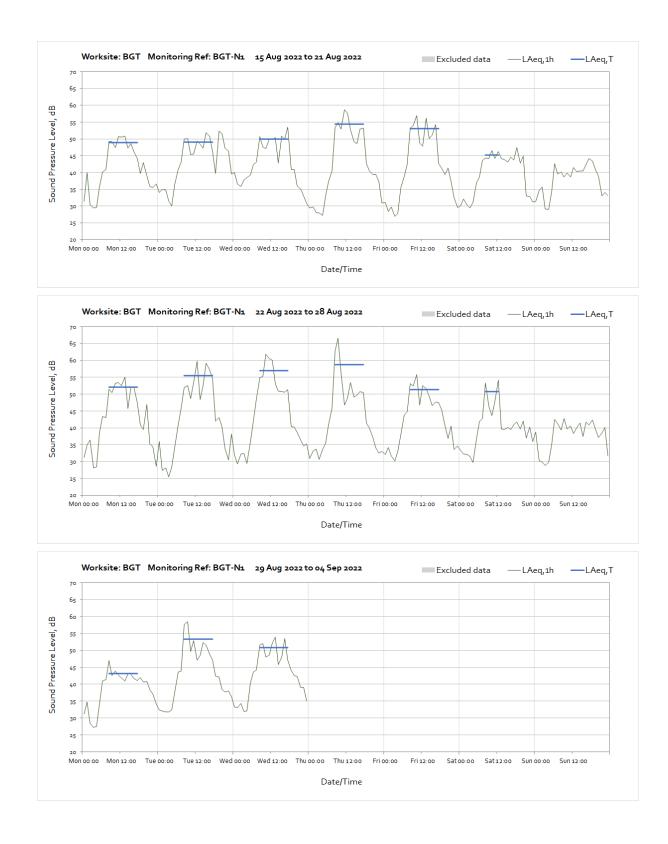

Noise

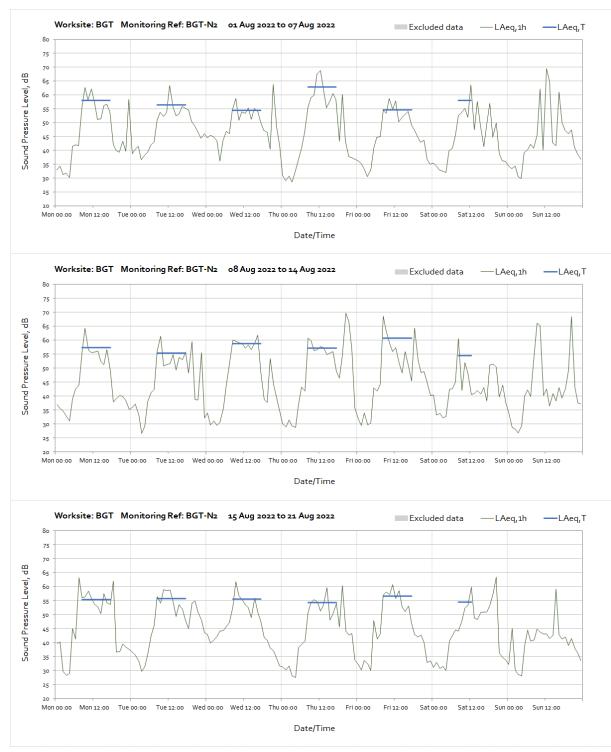

The following graphs show the hourly measured ambient noise level LAeq,1h and, where relevant, the averaged noise level $L_{Aeq,T}$ values, where the time period T is as specified in Table 1 of HS2 Information Paper E23. Periods with adversely weather affected noise levels are greyed out and have been excluded from the calculation of the LAeq,T values in Table 3 of the main report.

Note: Missing data from the 4th of August to the end of the month is due to a monitoring fault that corrupted the data.

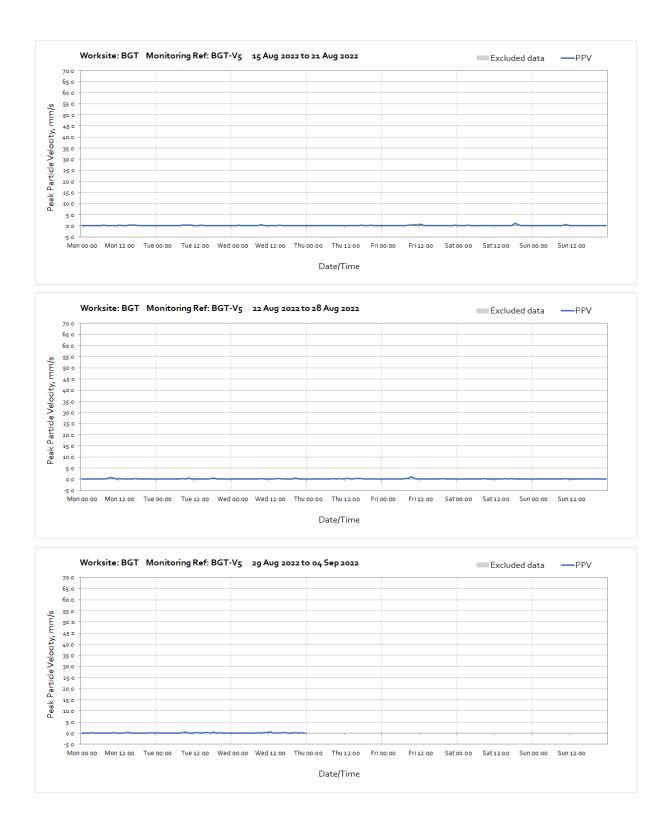

Vibration

The following graphs show the hourly measured peak particle velocity PPV recorded during the monitoring period. The graphs show the resultant PPV due to vibration components on three orthogonal axes x, y and z. Where resultant PPV data is not available, the highest vibration component in either of the three axes is presented for each 1hr measurement period respectively. Where high values of PPV were caused by local interference with the vibration monitor, which are not representative of HS2 construction works, these values have been greyed out in the following charts and have been excluded to calculate values in Table 4 of the main report.
