

Air Quality and Dust Monitoring Monthly Report – September 2022 London Borough of Camden

Department for Transport

High Speed Two (HS2) Limited has been tasked by the Department for Transport (DfT) with managing the delivery of a new national high speed rail network. It is a non-departmental public body wholly owned by the DfT.

High Speed Two (HS2) Limited,
Two Snowhill
Snow Hill Queensway
Birmingham B4 6GA

Monthly Summary

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of air quality and dust monitoring undertaken in the London Borough of Camden (LBC) during August 2022 and September 2022 respectively.
- 1.1.2 Figure 1 to Figure 5 in Appendix A indicate the current worksites together with air quality and dust monitoring locations.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report available from www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2, which highlights: the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current phase of works commenced in December 2017 and is expected to be completed by 2025. The current and planned worksites, as presented in Appendix A, Figure 1 to Figure 5, include:

Skanska Costain Strabag Joint Venture (SCSjv)

Adelaide Road Vent Shaft

- Piling operations; and
- Groundworks.

Euston Scissor Cut –

- Groundworks;
- Piling operations; and
- Materials management.

Euston Throat Retained Cut –

- Groundworks;
- Piling operations; and
- Materials management.

Hampstead Road Bridge

- Utilities diversion works.

Euston Cavern

- Piling operations;
- Groundworks; and
- Materials management.

Mace Dragados Joint Venture (MDjv)

Utilities

- Drummond Street – carried out 1no excavation to identify gas main and further ground investigation.
- Site clear and works finished.
- Euston Road – trial holes ongoing to identify position and depth of TW main. Works ongoing.
- Zone 2 & 5 – Barhale backfilled area outside NTH and removed props. Barhale set up compound in zone 5. Barhale commencing Hampstead road crossing works this week, with excavation commencing tomorrow.
- TSS/Cobourg Street – 2no tree removal, including TM installation.
- Site clear and works finished.

Zone 5

- JFH complete all scope of building the piling mat and taking out obstructions. JFH demobilised off site.

NTH

- CemSkan continue test piling

TSS

- Completed 1st lift liner walls & 90% of 2nd lift
- Start steelfixing around the tunnel eye
- Start erecting decking for B2 slab
- JGL snagging & Mastic jointing
- JGL demob from site

ITR

- Piling works completed with 4 remaining (not drilled due to obstructions)
- Attenuation tank excavation
- Blinding to attenuation tank
- Expose pile caps ready for cropping
- Muck away of arisings
- Hoarding removal started

Two Towers

- Demo works to North East corner
- Demo basement & vertical elements
- L shaped blocks installed to utilities corridor
- Backfill to L shaped blocks

1.1.5 Twenty (20) dust monitors are installed around worksites, where works are underway. These sites returned a medium to high dust risk rating.

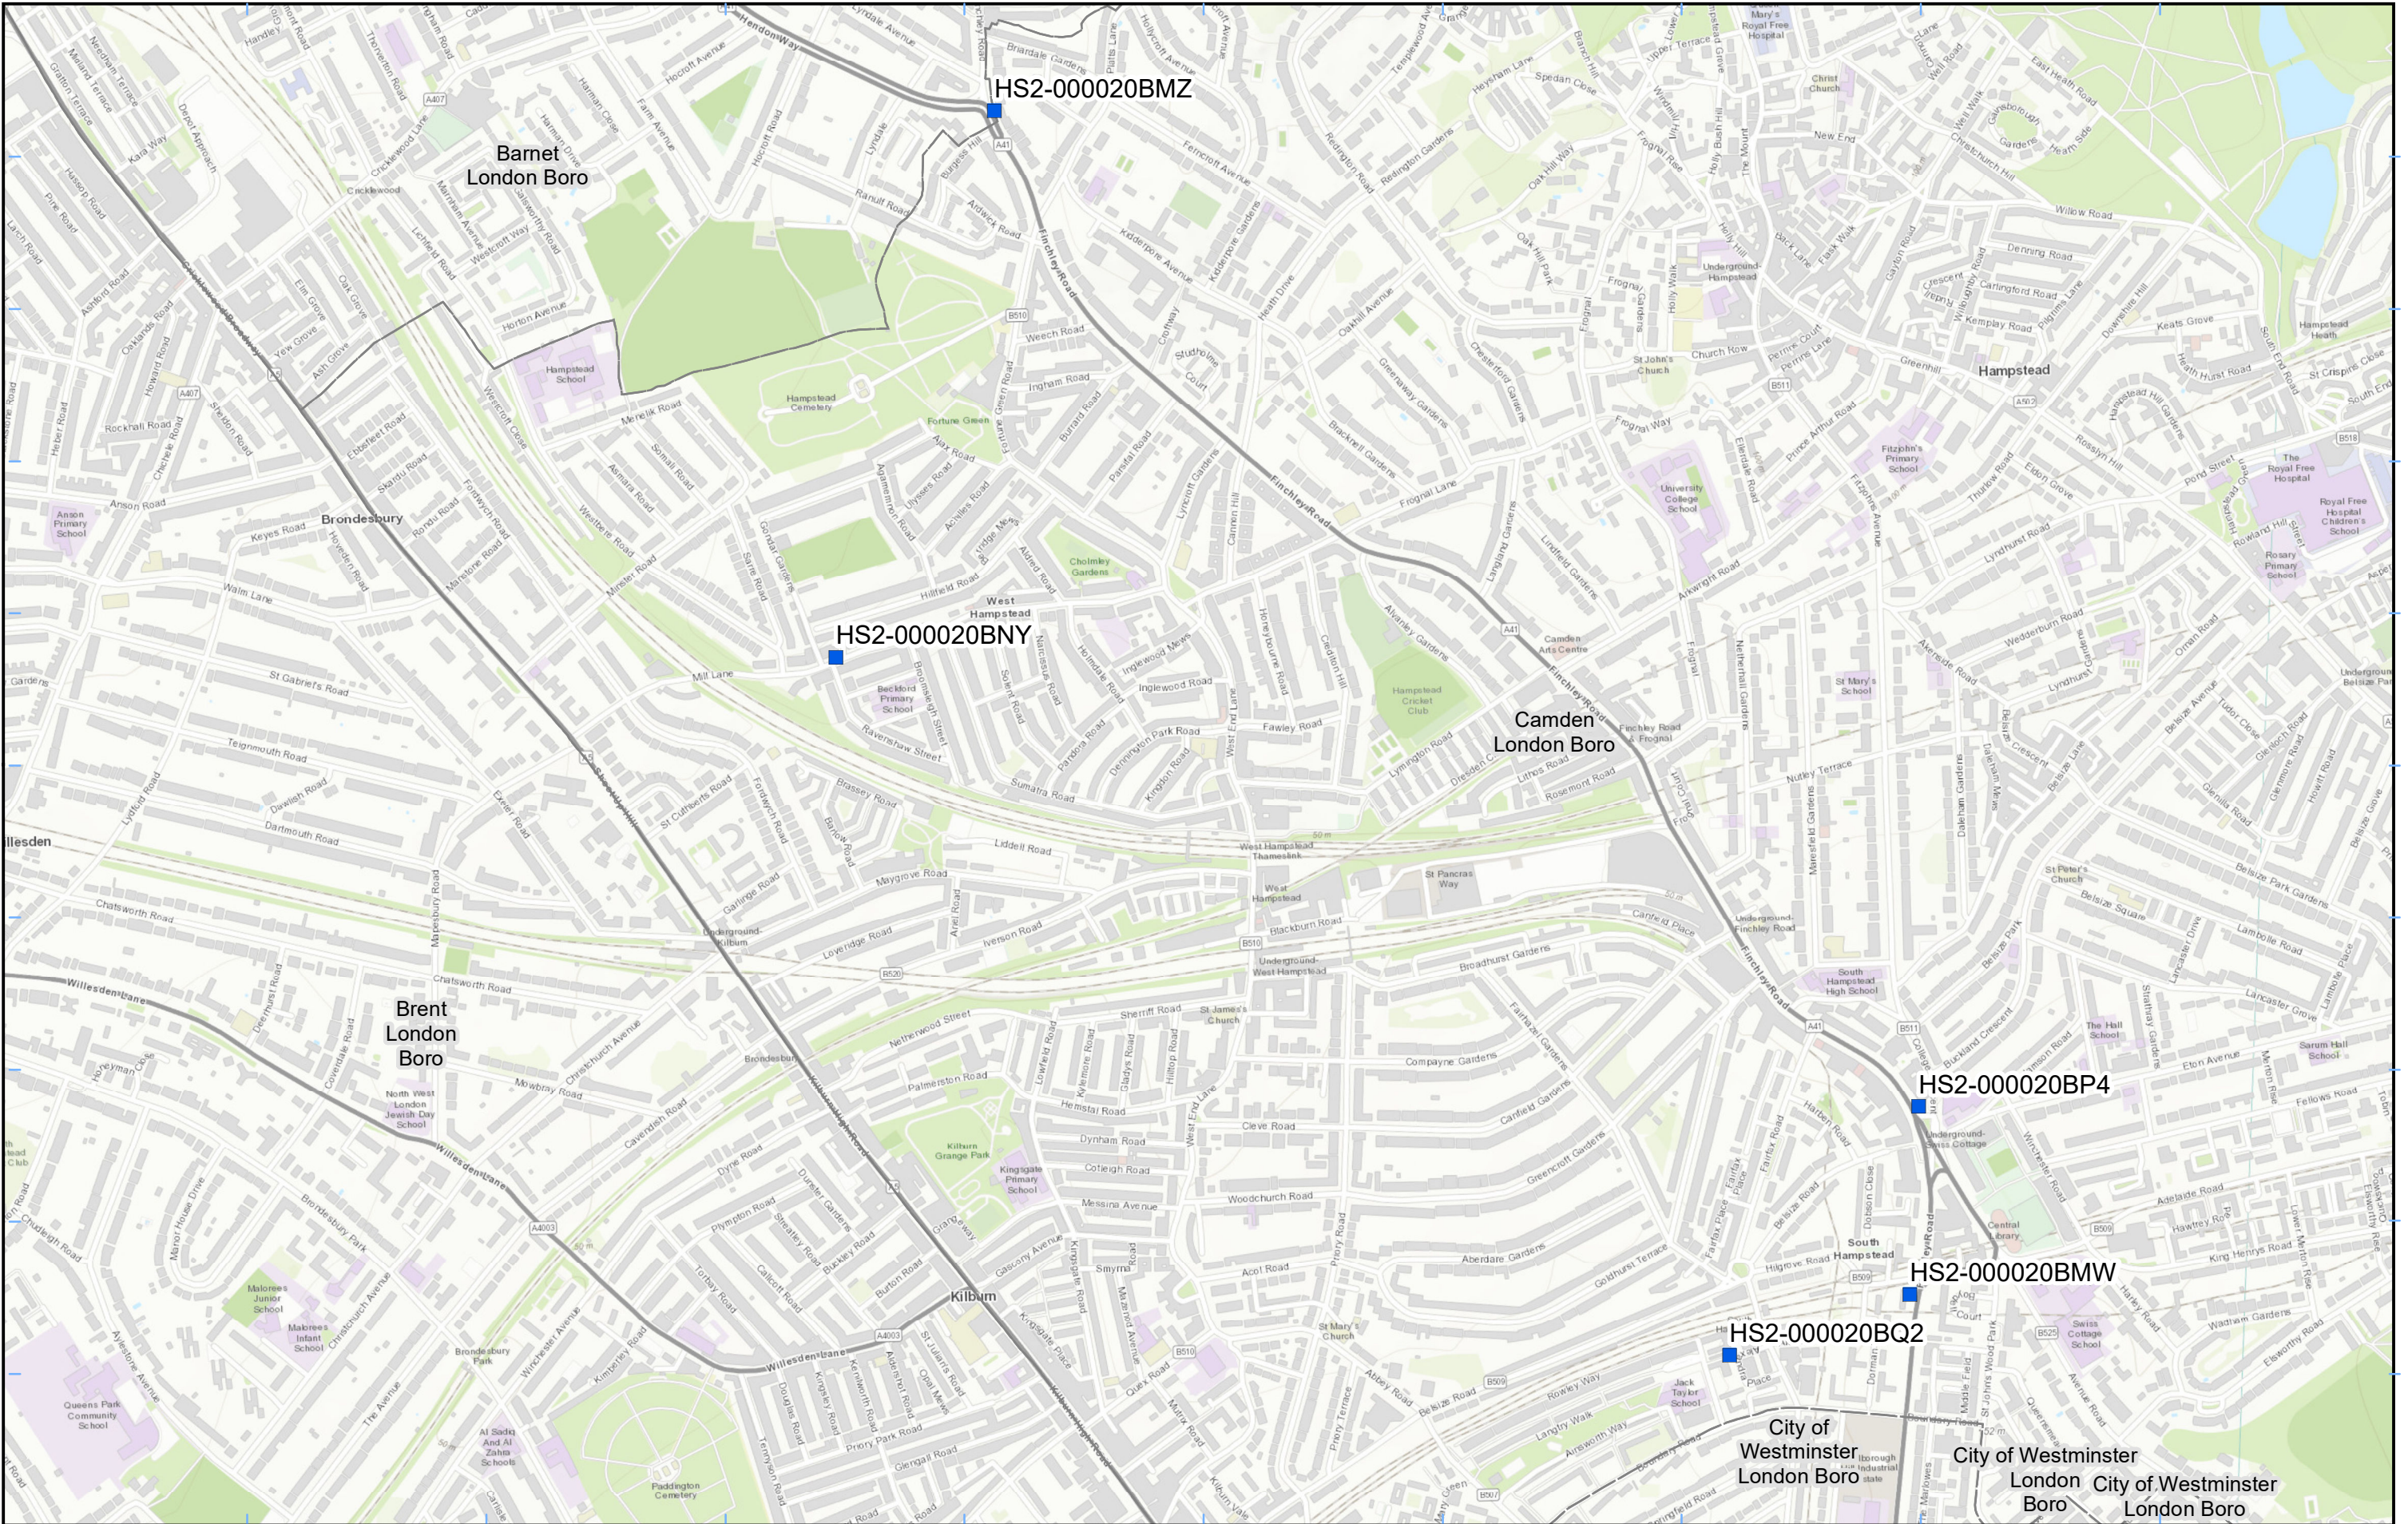

1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1, together with line charts of monthly data from each dust monitor in Figure 6. All continuous dust

monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.

- 1.1.7 The trigger level for PM₁₀ concentrations of 190 µg/m³, over a 1-hour period, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (October 2018)*' has been applied.
- 1.1.8 Dust trigger alerts were recorded during the monitoring period (September 2022) and are reported in Appendix B, Table 2.
- 1.1.9 Data capture was below 90% for multiple monitors in September 2022 due to communications issues, which are being investigated.
- 1.1.10 Diffusion tube monitoring of Nitrogen Dioxide (NO₂) is undertaken at sixty-four (64) locations around highways within the LBC as part of the management of air quality where significant effects may occur as a result of the scheme.
- 1.1.11 Diffusion tube monitoring results are as provided from the laboratory analysis, and therefore still require various analysis and adjustments to be undertaken. Final corrected results will be presented and described in the annual report. However, based on the results to date, no unexpected values were recorded during the monitoring period.
- 1.1.12 NO₂ monitoring locations and results are presented in Appendix C, Table 3, together with the 2022 running mean.
- 1.1.13 There were no (0) complaints received during this reporting period.

Table 2: Summary of exceedances of trigger level in September 2022

Monitoring site ID	Period exceeding trigger level	Investigation	Outcomes / Resolution / Remedial measures implemented
AQ011	05/09/2022 09:00 - 10:00; 214.5 µg/m ³	At the time of the trigger alert wooden shuttering was being cut and installed in advance of forthcoming concrete works. The works are directly adjacent to the monitor. Beyond the immediate area a crane lifting a pile cage into the nearby recently bored pile, but this was not a dusty operation. Sawdust was being generated during the works but not considered to be excessive at the time. On receipt of the trigger the works were immediately stopped. Over the same period the nearby monitor, AQ012 at the rear of Coniston House, measured no elevated levels, so it is considered the monitor was picking up levels from the immediate activities.	Dust suppression was deployed, the area swept and the team undertaking the work were again re-briefed prior to works re-commencing. Dust suppression was ready and maintained in the area for the remainder of the works.
AQ011	22/09/2022 08:00 – 09:00; 285.4 µg/m ³	At the time of trigger there were no activities taking in the area that could've caused the trigger. It was considered that the trigger was due to loose debris in the inlet and not due to dusty site activities. Over the same period the nearby monitor, AQ012 at the rear of Coniston House, measured no elevated levels	The monitor is due its quarterly service at the beginning September.

¹ Note: to aid interpretation and conform with best practice, the monthly measurements in this table are reported rounded to the nearest whole number. The annual mean presented here is calculated based on laboratory data to 4 significant figures, rounded to a whole number, and therefore may differ slightly to a mean derived from averaging the rounded monthly measurements in the table.
