No: 8411 NFG

Export health certificate for entry into the European Union or Northern Ireland of consignments of:

- semen of ovine and caprine animals collected, processed, and stored in accordance with Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692 after 20 April 2021.
- stocks of semen of ovine and caprine animals collected, processed, and stored in accordance with Council Directive 92/65/EEC before 21 April 2021.
- oocytes and embryos of ovine and caprine animals collected or produced, processed, and stored in accordance with Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692 after 20 April 2021.
- stocks of oocytes and embryos of ovine and caprine animals collected or produced, processed, and stored in accordance with Council Directive 92/65/EEC before 21 April 2021,

and dispatched from a germinal product processing establishment.

NOTES FOR GUIDANCE (NFG) FOR THE CERTIFYING OFFICERS AND EXPORTERS

1. APPLICABLE LEGISLATION

[Commission Decision 2010/472/EU as amended](#)

[Regulation \(EU\) No 2016/429](#)

[Commission Delegated Regulation \(EU\) 2020/692](#)

[Commission Implementing Regulation \(EU\) 2021/403](#)

[Commission Delegated Regulation \(EU\) 2020/686](#)

[Regulation \(EC\) No 999/2001](#)

[Council Directive 92/65/EEC as amended](#)

[Council Directive 91/68/EEC](#)

Further guidance on completion of this certificate can be found in Chapter 4 of Annex I to Commission Implementing Regulation (EU) 2020/2235.

Any EU legislation referenced in the EHC must be complied with and EU legislation can be accessed on the following link:

<https://eur-lex.europa.eu/homepage.html>

Consolidated legislation

Consolidated texts, which integrate the basic instruments of European Union legislation with their amendments and corrections in a single, non-official document, are available. Each consolidated text contains a list of all legal documents taken into account for its construction.

You can search for consolidated texts by using the 'find results by document number' option on the European Commission website. Once you have selected the relevant legislation, click 'document information', and then scroll down to 'all consolidated versions' and select the most recent version.

<https://eur-lex.europa.eu/homepage.html>

Please note that the consolidated text may not contain the latest amendment to the legislation, as it takes several weeks for this to be updated.

Texts provided in this section are intended for information only. Please note that these texts have no legal value. For legal purposes please refer to the texts published in the 'Official Journal of the European Union'.

IMPORTANT

These notes provide guidance to Certifying Officers and exporters. The NFG should have been issued to you together with the relevant export certificate for entry into (and transit through) the European Union or Northern Ireland of consignments of:

- semen of ovine and caprine animals collected, processed, and stored in accordance with Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692 after 20 April 2021.
- stocks of semen of ovine and caprine animals collected, processed, and stored in accordance with Council Directive 92/65/EEC before 21 April 2021.
- oocytes and embryos of ovine and caprine animals collected or produced, processed, and stored in accordance with Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692 after 20 April 2021
- stocks of oocytes and embryos of ovine and caprine animals collected or produced, processed, and stored in accordance with Council Directive 92/65/EEC before 21 April 2021,

and entered the European Union after 20 April 2021, and dispatched from a germinal product processing establishment

We strongly suggest that exporters obtain full details of the importing country's requirements from the veterinary authorities in the country concerned, or their representatives in the UK, in advance of each consignment.

[Please note, policies are being reviewed. NFG will be further amended to provide specific guidance. Traders should look at NFGs regularly for any updates]

2. SCOPE OF THE CERTIFICATE

This export health certificate may be used for entry into the European Union or Northern Ireland of consignments of:

- semen of ovine and caprine animals collected, processed, and stored in accordance with Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692 after 20 April 2021.
- stocks of semen of ovine and caprine animals collected, processed, and stored in accordance with Council Directive 92/65/EEC before 21 April 2021.

- oocytes and embryos of ovine and caprine animals collected or produced, processed, and stored in accordance with Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692 after 20 April 2021,
- stocks of oocytes and embryos of ovine and caprine animals collected or produced, processed, and stored in accordance with Council Directive 92/65/EEC before 21 April 2021,

dispatched from a germinal product processing establishment.

It may also be used for these products transiting the European Union to another third country.

The semen, ova and/or embryos must be collected from ovine and caprine animals from holdings that meet the requirements of Regulation 2020/692 or Directive 92/65/EC depending on the time of collection. Certifying veterinarians must be familiar with the provisions of this Regulation.

Ovine and caprine embryos dispatched to the EU or NI must meet the requirements in Chapter H of Annex IX of Regulation (EC) No 999/2001.

This certificate is to be completed according to the notes for the completion of certificates provided for in Chapter 4 of Annex I to Implementing Regulation (EU) 2020/2235.

(Please note, where the germinal product was collected/produced, processed and stored prior to 1st January 2021, the certificate should follow the relevant format outlined in Chapters 31 and 32 and Chapters 34 to 37 of Annex 1 to Regulation (EU) 2021/403, as referred to in Annex IX to Regulation 2021/404 (as amended).

3. CERTIFICATION BY AN OFFICIAL VETERINARIAN (OV)

In **England, Scotland and Wales**, this certificate must be signed by a Government Veterinary Officer (e.g. APHA, FSA or FSS employed veterinary officers) or by an Official Veterinarian (OV) appointed by the Animal and Plant Health Agency on behalf of Ministers in Defra, the Scottish Government or the Welsh Government and who hold the appropriate Official Controls Qualification (Veterinary) (OCQ (V)) authorisation.

OVs must sign and stamp, with the OV stamp, the health certificate in ink of a different colour to that of the printing of the Export Health Certificate (EHC). There is no requirement to sign and stamp in a specific colour.

The OV should keep a copy of the signed certificate and any supporting documents for at least two years after signature or receipt/dispatch of the consignment, whichever is later. These can be electronic copies.

The RCVS Certification principles must be complied with.

<https://www.rcvs.org.uk/setting-standards/advice-and-guidance/code-of-professional-conduct-for-veterinary-surgeons/supporting-guidance/certification/>

EHC in foreign language/s of the EU Member States (MSs).

EHC should be in English and the foreign language of the Border Control Post (BCP) of entry in the EU. The original copy of the required EHC must accompany the consignment to the BCP of entry.

Listing of the EU MS BCPs can be found here: https://ec.europa.eu/food/animals/vet-border-control/bip-contacts_en

The foreign language certificate as received from the APHA Centre for International Trade at Carlisle or via the Export Health Certificates Online system (EHCO) and bearing the same unique reference number as the English certificate, should be considered an official and accurate translation of the English, as published in EU legislation.

The (sub-) paragraphs / options and how they are numbered and formatted is identical in the English and foreign language editions and to the legislation published by the European Commission. Therefore, the same phrases/sentences in the foreign language versions as in the English version should be struck through and these deletions should be stamped and initialled in both versions. Both versions must also be signed (as opposed to being initialled) and stamped by the OV, the foreign language certificate is deemed to be a genuine and properly authorised translation of the English version.

This also applies to any instructions in the guidance notes to strike out certain paragraphs or to certify statements that the country is free of certain notifiable diseases etc.

Additional information can be found in APHA Vet Gateway:

http://apha.defra.gov.uk/External_OV_Instructions/Export_Instructions/Certification_Procedures/index.htm

SIGNING AND STAMPING

When signing a certificate, the CO should ensure that the certificate contains no deletions or alterations, other than those which are indicated on the certificate to be permissible and any corrections to permitted entries, subject to such changes being initialled and stamped (in the margin) by the CO. Permissible deletions are normally indicated in the 'Notes' section at the end of the certificate, with the instruction 'Keep as appropriate' or 'delete if not applicable'.

- Where the certificate contains optional or contextual statements, the statements which are not relevant shall be crossed out, individually initialled, and stamped by the CO, or completely removed from the certificate.
- Permitted paragraphs and sections may be crossed out by applying a 'Z' across the section or paragraph rather than crossing out line by line.
- There is no requirement for a date and time to accompany each stamp. The date is only entered at the required entry field in Part I of the certificate, and at the end where the CO signs, stamps and dates that action.
- We are aware of some BCPs demanding that all handwritten information in Part 1 of the EHC is initialled and stamped, including handwritten scoring out of otherwise blank boxes. There is no legal requirement in EU legislation that all the hand-written information entered in the certificate must be signed and stamped. It is only in the case of correction, in any part of the certificate, or in the case of statements to be crossed out, that the certifier must add signature (or initials) and stamp. This has been

confirmed by the European Commission. The Commission noted however, in the case of a hand-written certificate, it is expected that the same one person completes the document. If not, the BCP might suspect that empty boxes were completed by another person after the certificate has been signed by the official.

- **Internal Movement Certificates** that are certified by the veterinarian of the centre/team (or other **official certificates/documents**) and any **accompanying schedules** must be checked by the Official Veterinarian and stamped and initialled once individually on each page by the Official Veterinarian.
- You should consider checking with the specific BCP regarding their preference when it comes to the stamping and initialling of handwritten scoring out of otherwise blank boxes in Part I of the EHC.
- **Clarification from the European Commission means that all pages (as opposed to sheets of paper) are signed and stamped once individually in place of fan stamping and in addition to any permitted alterations. There is no requirement to fan stamp.**
- COs are reminded to consult the Notes for Guidance prior to the certification of each EHC. NFG will be updated with this new information in due course.

Further Information, COs should make sure they are familiar with all relevant guidance and other documents relating to EHCs and that they discuss requirements with exporters in advance.

See <http://apha.defra.gov.uk/official-vets/Guidance/exports/ehc-online.htm>

You can also contact the Animal and Plant Health Agency's Centre for International Trade (CIT) on 03000 200 301.

PART I: DETAILS OF THE CONSIGNMENT

All boxes in Part I of the certificate must be completed. When a box is not applicable/optional, and not filled, please score it through.

Please use schedule to be attached to the certificate if there is not enough space to fill the information. See Section 'Addition of Schedules' below.

Please complete all the boxes in Part I of the certificate in accordance with the guidance laid down in Chapter 4 of Annex I to Commission Implementing Regulation (EU) 2020/2235 that can be accessed via this link:

<https://eur-lex.europa.eu/legal-content/EN/TXT/?uri=CELEX:32020R2235>

- Box I.17 refers: The official document(s) or certificate(s) accompanying the germinal product from the approved centre/team to the processing establishment should be the certificate(s) which provide the same or equivalent conditions to the relevant EU model certificate(s) referenced in II.2.2 of the 8411EHC.
- The European Commission have confirmed that this box is mandatory, even where the processing centre and collection centre or embryo team at which the germinal products was collected/produced are both in Great Britain.

- Exporters should make arrangements, to enable this information to be provided. These individual official document(s) or certificate(s) or officially endorsed copies thereof must be attached to the 8411EHC.

The Harmonised System (HS) Code is a commodity classification system used as a basis for customs tariffs and for international trade statistics.

It is the exporter's responsibility to ensure that the HS code is entered correctly and accurately reflects the product(s) being consigned.

Further information on HS Codes can be found online at:

<https://www.gov.uk/trade-tariff/sections> and

<http://madb.europa.eu/madb/euTariffs.htm>

PART II: CERTIFICATION

II.1 Health information

The semen/oocytes/embryos must meet the conditions in Chapter (I), (II) and Chapter (III) of Annex D to Directive 92/65/EEC, and Regulation (EU) 2016/429 and Delegated Regulation (EU) 2020/692, depending on time of collection/production/processing.

In the case of embryos, the semen used for conception must have been collected in an EU approved semen collection centre that is located in the UK, an EU Member State or a listed third country.

The donor animals must have been kept on holdings meeting the requirements for classical scrapie.

The Official Veterinarian may require, where appropriate, support certification and/or evidence from the authorised team/centre veterinarian due to their knowledge of the operations of the establishment, to facilitate certification of the certificate.

II.1 - Keep as required.

II.1.1.1 – This may be certified based on GB being listed in Annex X to Regulation (EU) 2021/404 (as amended) as a third country permitted to export semen, oocytes and embryos of ovine/caprine animals to the European Union.

II.1.1.2 - The first option should be certified based on notifiable disease clearance (see section below). Care should be taken when certifying older stocks of germinal products as regards Foot and Mouth Disease.

II.1.1.3 - May be certified based on notifiable disease clearance (see section 4 below). Keep as required.

II.1.1.4 - Vaccination against the diseases listed is not permitted within the UK. Vaccination against the diseases is currently prohibited for imports into GB. GB import requirements can be found on gov.uk: <https://www.gov.uk/government/collections/health-certificates-for-animal-and-animal-product-imports-to-great-britain>

II.1.2 and 1.1.3 - The establishment should be listed on gov.uk and also listed as an Approved Germinal Product Storage centre on the European Commission website.

EU website: https://food.ec.europa.eu/animals/semens-oocytes-embryos_en

Gov.uk: <https://www.gov.uk/government/publications/livestock-and-equine-semen-collection-approved-premises>

This may also be certified based on personal knowledge of the operation of the processing centre in accordance with the Regulation 2020/686 or certified based on evidence or information from centre/team veterinarian responsible for the germinal product processing establishment.

II.2. - Keep as required

II.2.1 - May be certified based on approval of the centre or team. Where germinal product has been imported the OV must obtain proof of legal importation from listed countries (Annex X to Regulation 2021/404) or EU member states (i.e. copy of health certificates and other supporting evidence from the centre/team veterinarian).

II.2.2 - This may be certified on receipt of the relevant certificates listed in the 8411EHC (or equivalent certificates with conditions at least as strict as the relevant model certificate). The original health certificates or officially endorsed copies must be attached to this certificate. For movement of germinal products (semen, oocytes, embryos) within Great Britain to the processing establishment, an Internal Movement Certificate (IMC) published on [gov.uk EHC form finder](#) should be certified and attached to 8411EHC.

However, for ovine/caprine semen exports, the European Commission have advised to Defra and EU member states that Internal Movement Certificates may not be required if the Processing Centre is linked to and falls under the same license approval as the Semen Collection Centre where the semen was collected. The centre veterinarian must ensure there are protocols in place describing how the semen is transported for processing within the particular semen collection centre. In order to exercise this advice, it is recommended to contact the EU BCP for agreement before export, to minimise the risk of issues at the EU border. The OV must review the protocols and any further evidence/information from the centre vet that the semen is compliant with the relevant certificate, before certification of this attestation. Documentary evidence (e.g. the approval license) of the official link between both premises maybe required by the BCP to provide the evidence that the supplying collection centre was/is approved in accordance with 88/407 alongside the processing facilities.

If germinal products are moved from a Semen Collection Centre or Embryo Collection/Production Team that is not linked to the Processing Centre within Great Britain, then an Internal Movement Certificate is still required.

II.2.3, II.2.4, II.2.5 - These statements may be certified on the basis of evidence or support certification provided by the centre veterinarians/collection teams, approval of establishment and statements of compliance to [Delegated Regulation \(EU\) 2020/686](#) and [Delegated Regulation \(EU\) 2020/692](#) for ID marking.

The ID marking of the straws or other packages must refer to: date of collection or production of oocytes/embryos; species and ID number of donor animals; unique approval number of the establishment as listed on the EU website; and any other relevant information.

Note, the species reference on the straws or other packages maybe referred to by species code, e.g. 'OVI' for ovine or 'CAP' for caprine. There is flexibility in presenting the species information.

II.2.6. and II.2.7 - May be deleted if not applicable see footnotes (7) and (8). This may be certified based on the OV's own knowledge of the establishment or will need to be provided with a declaration by the centre/team veterinarian responsible for the germinal product processing establishment.

4. NOTIFIABLE DISEASE CLEARANCE

Some export certificates for animals and animal products will include statements that will require the OV to certify that specified zones or the entire country of origin are free from certain diseases.

COs must check the following sources of disease information for the United Kingdom immediately prior to certification, to ensure disease freedom statements can be certified:

- the Notifiable Disease Occurrence List for Great Britain (ET171) available on the [Exports > Certification Procedures](#) page of the APHA Vet Gateway
- the UK Status for Non-Notifiable Diseases Relevant to Export Certification (ET152) available on the [Exports > Certification Procedures](#) page of the APHA Vet Gateway.

For Great Britain:

In the absence of a specific Notifiable Disease Clearance (618NDC) from CITC: COs may certify that GB has disease free status or region free status for those diseases mentioned in the health certificate, once they have checked the disease list(s) for the last occurrence of the disease, and have ensured it complies with the time frames in the certificate.

In the event of a disease outbreak that affects a CO being able to obtain their own disease clearance, CITC will notify COs to make it clear which disease freedom statements should not be certified and where necessary, will issue a 618NDC notifiable disease clearance if the EHC can continue to be issued for certain regions that retain free status.

In the event of a disease outbreak after the EHC has been issued that affects the disease clearance, COs must not certify the EHC and must contact CITC immediately for advice on whether certification can still take place. If a disease outbreak affects the disease clearance procedures for this EHC, a 618NDC will be reinstated by CITC which will be issued with the EHC until a time when disease clearance can be reinstated.

NOTE: This does not apply to Transmissible Spongiform Encephalopathies (TSEs) or Bovine Tuberculosis (TB) freedom statements.

FMD was reported in the UK in February 2001 and then again in August 2007. Its freedom was restored in January 2002 and December 2007, respectively, by the WOAH.

Bluetongue was reported in Great Britain on 3 August 2007. Great Britain was declared free again on 5 July 2011 until 10 November 2023.

Bluetongue serotype 3 was reported in Great Britain on 11 November 2023 and Great Britain is currently no longer recognised as Bluetongue free.

5. COLLECTION OF EVIDENCE

Certification Support Officers may not be utilised for gathering evidence relating to this certificate.

6. UK APPROVED ESTABLISHMENTS ELIGIBLE TO EXPORT TO THE EU

The exporting establishment must be listed as a 'UK approved establishment' and a list of UK approved establishments for import of germinal products to the EU, can be found on the European Commission's list of approved establishments' link below:

https://ec.europa.eu/food/animals/semen-oocytes-embryos_en

Please note that the list is updated regularly and ONLY establishments on the list are approved to export to the EU, and this does not include establishments with pending applications for approval.

If the final product contains germinal products from other establishments, then these establishments should also be listed as UK and/or EU approved establishments.

7. CONSIGNMENTS OR PARTS OF THE CONSIGNMENT ORIGINATING FROM NI, EU MEMBER STATES OR FROM THIRD COUNTRIES (TRIANGULAR TRADE). [WHEN APPLICABLE]

NI origin:

For Northern Ireland origin raw materials which have then been processed into a final product in GB, or are presented in their original state and bearing a UK(NI) identification mark, the CO can certify certain matters relating to EU compliance at a national level.

Where the EHC refers to EU approval status of the premises of origin or manufacture in NI, this can be certified under the terms of the EU-UK Withdrawal Agreement and the Northern Ireland Protocol (NIP). The NIP treats NI as if it is in the EU SPS zone (which includes the EEA/EFTA states). Approved and registered premises in NI continue to implement the full requirements of Regulation (EC) Nos. 852/2004 and 853/2004 and Regulation (EU) No. 2017/625 and all relevant supporting EU legislation as set out in Annex 2 to the Protocol. This compliance is indicated by the presence of the EU oval health and identification marks applied to the products.

Some examples, but not a complete list, of how assurance can be established at national level are listed below.

Compliance with the microbiological criteria set out in Regulation (EC) No. 2073/2005 can be certified if the products originate in an EU approved premises in NI and bearing the EU oval ID mark.

Public health statements referring to compliance with EU requirements for testing for residues as set out in Regulation (EU) No. 2017/625, Directive (EC) Nos 96/22 and 470/2009 can be certified by the CO on the basis of a national residue surveillance programme implemented in NI under The Animals and Animal Products (Examination for residues and

maximum Residues Limits) Regulation (NI) 2016. This forms part of the UK national surveillance programme.

With regards to controls for Transmissible Spongiform Encephalopathies, guidance provided in this document relating to statements about the method of slaughter of animals in GB also applies to animals slaughtered in NI and can be certified by the CO on that basis.

Disease clearance for animals or products originating in NI can be completed using auto-clearance NDC found here:

<https://www.daera-ni.gov.uk/articles/notifiable-diseases-northern-ireland>

Where regional or local level disease clearance is required, this can be certified upon request on the basis of information from NI in the form of a declaration or a supporting health attestation.

Animal health statements which refer to the prohibition of certain vaccination programmes e.g. against FMD or CSF or ASF can be certified at a national level by the CO on the basis that NI also enforces a ban on such vaccinations in accordance with EU regulations.

Statements relating to implementation of a national system for identification and registration of bovine animals can be certified on the basis of the requirement to register all bovine animal births, moves and deaths on the DAERA database.

Animal welfare statements can be certified by the CO on the basis that relevant inspections, monitoring and controls are implemented in NI through The Welfare of Animals at the Time of Killing Regulations (NI) 2014 as amended, in compliance with Regulation (EC) No. 1099/2009.

Animal By-Products are handled in accordance with EU Regulation 1069/2009, which is implemented by the EU Implementing Regulation 142/2011, and ABP statements for materials originating in NI, can be certified on that basis.

When the certificate requires specific information to be included, such as the date of slaughter or the date of introduction into NI, the GB exporter/CO must request this information from the NI exporter. This NI exporter may forward the request to the relevant NI CO to provide this information. This supporting information must be in writing and kept by the GB CO. The GB CO is not required to attach it as a supporting document to the EHC, unless requested by the EU Border Control Post or told otherwise.

EU origin:

It is possible that some consignments may contain animal products that are of EU origin and were imported into GB on a Commercial Document or EU Intra-Trade Animal Health Certificate (ITAHC). The Commercial Document may not contain enough information to allow the CO to sign an EHC.

In such cases, the CO will need further information from the EU member state regarding particular attestations on the EHC that cannot be signed by the CO without support documentation. Thus, the GB exporter must request from the EU exporter an attestation or written declaration from a EU registered vet, The GB exporter may wish to obtain these directly from the EU vet who has inspected the animal products before export from the EU.

When the certificate requires specific information to be included, such as the date of slaughter or the date of introduction into the EU, the GB exporter/CO must request this information from the EU exporter. This EU exporter may forward the request to the relevant EU vet to provide this information. This supporting information must be in writing and kept by the GB CO. The GB CO is not required to attach it as a supporting document to the EHC, unless requested by the EU Border Control Post or told otherwise.

Third country origin:

It is also possible that some consignments may contain POAO that have been imported to GB from non-EU countries and further processed in GB, which GB exporters intend to export to EU (known as Triangular Trade). In these cases, COs may obtain a copy of the EHC for the import of such commodity from the Third Country to the GB.

GB COs are not required to attach a copy of the Third Country EHC as a supporting document to the EHC, unless requested by the EU Border Control Post or specifically instructed in the NFG.

It is the GB exporter's ultimate responsibility to obtain any necessary support documents (from the EU member state exporter/Third Country exporter), to enable GB COs to be able to certify the products in good time before the export to the EU.

8. ANIMAL HEALTH SCHEME

Scrapie Statement

Relevant Scrapie text can be certified on the basis that the UK implements a Scrapie Monitoring Scheme (SMS), provided by the SAC Consulting: Premium Sheep and Goat Health Schemes (part of Scotland's Rural College (SRUC)). Scrapie is a notifiable disease in the UK and Scrapie control is enforced under the TSE Regulation 2018 (England and Wales) and TSE Regulation 2010 (Scotland).

Holdings with Controlled or Negligible Risk of Classical Scrapie are listed on the SAC and along with a valid certificate of membership, provides robust evidence that the holding complies with the requirements at point 1.2 of Section A of Chapter A of Annex VIII to Regulation (EC) No 999/2001.

ARR/ARR genotype sheep, can be certified if the sheep are of the ARR/ARR prion protein genotype as defined in Annex I to Commission Decision 2002/1003/EC and their holding of origin is not subject to any official e.g. CSFS restrictions for classical scrapie. If such restrictions are in place, certification of ARR/ARR sheep for trade is not allowed. If unsure as to whether the holding is under such restrictions, the OV may contact the local APHA office or CIT Carlisle.

The genotyping must be either carried out at a APHA laboratory or SAC / SRUC OR the individual sheep must have a genotyping certificate issued under the National Scrapie Plan (NSP) or the Compulsory Scrapie Flocks Scheme (CSFS) by a laboratory which is / was authorised by the government to carry out genotyping under the plan/scheme.

Any such genotyping certificates issued under the scheme/plan before it/they closed remain valid, but the OV must ensure that the identification of the animal as recorded on the genotyping certificate correlates with the official ear tag on the animal as recorded on the

EHC; if only the electronic identification number is recorded on the genotyping certificate, then the OV must scan and check the electronic identification of the sheep to confirm correlation between the certificate, the sheep and the official ear tag number on the Certificate. Unless genotyping was carried out officially under the NSP or CSFS, all blood samples for genotyping must be taken by a veterinary surgeon.

9. ADDITION OF SCHEDULES

When the space in Part I or Part II of the certificate is insufficient to accommodate full details of the consignment a schedule may be used. In the relevant section of the certificate the CO should annotate the certificate 'see attached schedule'. A new schedule should be created (typed or clearly written) containing the same information as that required in the certificate. The schedule must include the certificate reference number on each page and must be signed, dated, and stamped by the CO in a colour other than the printed text on each page and under the last entry. The schedule forms part of the certificate. All pages of the certificate, including the schedule, must be sequentially numbered. Any blank spaces in the schedule or the certificate should be struck through with diagonal lines.

Further guidance is available here:
http://apha.defra.gov.uk/External_OV_Instructions/Export_Instructions/Certification_Procedures/index.htm

10. CERTIFIED COPIES OF EXPORT HEALTH CERTIFICATES

When completing export certification, the CO and, if applicable, FCCO must make photocopies of, or scan and save all documents they certify. OVs must retain copies of certification documents in accordance with RCVS Certification principles.

<https://www.rcvs.org.uk/setting-standards/advice-and-guidance/code-of-professional-conduct-for-veterinary-surgeons/supporting-guidance/certification/>

COs must retain copies of all export documentation for a period of two years. A certified copy of this EHC does not need to be returned to the APHA CITC. For the purposes of completing routine Quality Assurance checks on export certification, CITC may request certified copies of certification from COs.

Further details on Post Certifying Procedures, 'certified copies' of certification and the types of documents that should be retained by COs can be found on the [APHA Vet Gateway](#).

11. LEGAL STATEMENT

The existing EU legislation that the UK complied with prior to the end of the Transition Period has been incorporated into our domestic law as "retained EU law" under the European Union (Withdrawal) Act 2018. References in our guidance and certification to such EU instruments should be taken to be references to this "retained EU law". The EU standards that this legislation includes continue to remain in force, without substantive amendment, as part of UK domestic law (apart from corrections to make the EU legislation fully operable.

12. DISCLAIMER

This certificate and NFG are provided on the basis of information available at the time and may not necessarily comply fully with the requirements of the importing country. It is the exporter's responsibility to check the certificate against any relevant import permit or any advice provided by the competent authority in the importing country. If these do not match, the exporter should contact the Animal and Plant Health Agency (APHA) in Carlisle.

Version History: NFG

Version 4 Published 27 Nov 2023

Notifiable Disease Clearance: Information about Bluetongue serotype 3, reported in Great Britain on 11 November 2023 is added. Great Britain is currently no longer recognised as Bluetongue free.

Part detail of Consignment: 1.17 further information about accompanying documents/certificates to have same or equivalent conditions as per II.2.2 of the EHC 8311.

II.1.1.2 - Care should be taken when certifying older stocks of germinal products as regards Foot and Mouth Disease.

Part II Certification: II.1.1.4: Further information is added about the GB requirements for vaccination against diseases for imports of the product.

II.1.2 and II.1.3: Websites links are added for the establishments on Gov.uk and approved establishments on the EU commission website.

II.2.2 Certificates should be listed as per II.2.2 (or equivalent certificates with conditions at least as strict as the relevant model certificates). Further information is added about when to use the Internal Movement certificate (IMC).

Information about exemption in a case if processing centre and semen collection centre is linked then IMC may not be required is added. However, BCP might request for the evidence to proof that both processing centre and collection centre are linked.
