This report was prepared by RPS Consulting Services Ltd ('RPS') within the terms of its engagement and in direct response to a scope of services. This report is strictly limited to the purpose and the facts and matters stated in it and does not apply directly or indirectly and must not be used for any other application, purpose, use or matter. In preparing the report, RPS may have relied upon information provided to it at the time by other parties. RPS accepts no responsibility as to the accuracy or completeness of information provided by those parties at the time of preparing the report. The report does not take into account any changes in information that may have occurred since the publication of the report. If the information relied upon is subsequently determined to be false, inaccurate or incomplete then it is possible that the observations and conclusions expressed in the report may have changed. RPS does not warrant the contents of this report and shall not assume any responsibility or liability for loss whatsoever to any third party caused by, related to or arising out of any use or reliance on the report howsoever. No part of this report, its attachments or appendices may be reproduced by any process without the written consent of RPS. All enquiries should be directed to RPS.

1 INTRODUCTION

- 1.1 This Heritage Statement has been prepared by RPS Consulting Services Ltd, part of RPS Group plc, on behalf of Stratera Energy Ltd ('The Applicant').
- 1.2 It is intended that the statement should be used in support of a planning application for a proposed up to 49.9 MW solar photovoltaic (PV) farm and associated infrastructure on land adjacent to Pelham Substation, Park Green Lane, Berden, Essex, centred at NGR 546058, 229125 (TL42NW).

The proposal site

- 1.3 The proposal site comprises 73 ha of agricultural land, currently utilised for arable crop. The site is located 150 m east of the village of Berden, and 8.5 km south of Bishop Stortford, in the county of Essex and it is bound by Ginns Road to the north, hedgerows to the south and east, with an access lane to the west, and a substation in the south-west corner (**Figure 1**).
- 1.4 The underlying basal geology comprises Mudstone, Siltstone, and Sandstone of the Lowestoft Formation, with overlying superficial geological deposits of diamicton (**Figure 2**).
- 1.5 The site slopes from 115 m above Ordnance Datum (aOD) at the north-eastern corner to 127 m aOD at the south-western corner.

2 LEGAL AND PLANNING FRAMEWORK

Legislation

- 2.1 Legislative frameworks provide protection to the historic environment while planning policy guidance provides advice concerning how the historic environment should be addressed within the planning process.
- 2.2 Statutory protection for archaeology is principally enshrined in the *Ancient Monuments and Archaeological Areas Act* (1979) amended by the *National Heritage Act* (1983) and the *National Heritage Act* (2002). Nationally important archaeological sites are listed in a Schedule of Monuments and are accorded statutory protection these are known as Scheduled Monuments.
- 2.3 Historic Parks and Gardens, and Historic Battlefields, have received recognition under the *National Heritage Acts*. Such sites are described on Registers maintained by Historic England on behalf of the Department for Digital, Culture, Media and Sport (DCMS), but such designation does not afford statutory protection.
- 2.4 For other components of the historic environment, the *Planning (Listed Buildings and Conservation Areas) Act* 1990 and the *Town and County Planning Act* 1990 provide statutory protection to listed buildings and their settings, and include provisions in relation to designating and to preserving or enhancing the character and appearance of Conservation Areas.
- 2.5 Section 66(1) of the Planning (Listed Buildings and Conservation Areas) Act 1990 states that 'In considering whether to grant planning permission for development which affects a listed building or its setting, the local planning authority or, as the case may be, the Secretary of State shall have special regard to the desirability of preserving the building or its setting or any features of special architectural or historic interest which it possesses'.

National Policy

- 2.6 The *National Planning Policy Framework* (NPPF; July 2021) includes advice concerning the safeguarding of the historic environment within the planning process.
- 2.7 Paragraph 7 of the NPPF identifies that 'The purpose of the planning system is to contribute to the achievement of sustainable development'. Paragraphs 8-10 go on to demonstrate the overarching objectives for sustainable development, along with the need to avoid potential conflicts and to seek positive improvements.
- 2.8 In Section 12 regarding the requirement for achieving well-designed places, the NPPF (paragraph 126) states that 'Good design is a key aspect of sustainable development, creates better places in which to live and work and helps make development acceptable to communities'.
- 2.9 Section 16 of the NPPF deals specifically with 'Conserving and enhancing the historic environment'. Paragraph 189 identifies that heritage assets 'are an irreplaceable resource, and should be conserved in a manner appropriate to their significance, so that they can be enjoyed for their contribution to the quality of life of existing and future generations'.
- 2.10 Paragraph 194 directs local planning authorities to 'require an applicant to describe the significance of any heritage assets affected, including any contribution made by their setting. The level of detail should be proportionate to the assets' importance and no more than is sufficient to understand the potential impact of the proposal on their significance'.
- 2.11 In Annex 2 of the NPPF, a 'heritage asset' is defined as 'A building, monument, site, place, area or landscape identified as having a degree of significance meriting consideration in planning decisions, because of its heritage interest. Heritage asset includes designated heritage assets

and assets identified by the local planning authority (including local listing)'. In the same Annex, 'significance' (for heritage policy) is defined as: 'The value of a heritage asset to this and future generations because of its heritage interest. The interest may be archaeological, architectural, artistic or historic. Significance derives not only from a heritage asset's physical presence, but also from its setting'.

- 2.12 Paragraph 199 of the NPPF states that 'When considering the impact of a proposed development on the significance of a designated heritage asset, great weight should be given to the asset's conservation (and the more important the asset, the greater the weight should be). This is irrespective of whether any potential harm amounts to substantial harm, total loss or less than substantial harm to its significance'.
- 2.13 The NPPF goes on to state in paragraph 200 that 'Any harm to, or loss of, the significance of a designated heritage asset (from its alteration or destruction, or from development within its setting), should require clear and convincing justification', before identifying that 'Substantial harm to or loss of assets of the highest significance, notably scheduled monuments, protected wreck sites, registered battlefields, grade I and II* listed buildings, grade I and II* registered parks and gardens, and World Heritage Sites, should be wholly exceptional'.
- 2.14 In paragraph 201, the NPPF states that 'Where a proposed development will lead to substantial harm (or total loss of significance of) a designated heritage asset, local planning authorities should refuse consent, unless it can be demonstrated that the substantial harm or total loss is necessary to achieve substantial public benefits that outweigh that harm or loss', before continuing 'Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal' (paragraph 202).
- 2.15 The strong message emerging from the NPPF is that it is the effect of proposed development <u>on the significance of the heritage asset</u> that is the principal concern.

Guidance

- 2.16 The NPPF is supported by the Planning Practice Guidance (PPG). This is a web-based resource subject to regular updates. With regard to the section that deals with *Conserving and enhancing the historic environment*, this was last updated in February 2018 (PPG, ID:18a). The PPG provides advice on specific issues such as 'What is 'significance' and 'What is the setting of a heritage asset and how should it be taken into account'?
- 2.17 Under the heading 'Why is 'significance important in decision-taking', the PPG advises that 'Heritage assets may be affected by direct physical change or by change in their setting. Being able to properly understand the nature, extent and importance of the significance of a heritage asset, and the contribution of its setting, is very important to understanding the potential impact and acceptability of development proposals' (PPG, ID: 18a-009-20140306).
- 2.18 The PPG (ID: 18a-008-21040306) refers to the definition of 'significance' provided in the NPPF (see paragraph 2.11 above), going on to point out that 'In legislation and designation criteria, the terms 'special architectural or historic interest' of a listed building and the 'national importance' of a scheduled monument are used to describe all or part of the identified heritage asset's significance'.
- 2.19 The four levels of interest identified in the final part of the NPPF definition of 'significance' (archaeological, architectural, artistic or historic) broadly tie in with previous guidance from English Heritage expressed in the document *Conservation Principles, Policies and Guidance for the Sustainable Management of the Historic Environment* (EH, 2008). This provided guidance on

understanding heritage values and also included a section (Section 6) advising on how to assess heritage significance.

- 2.20 According to the guidance published by English Heritage (2008), heritage values fall into four interrelated groups:
 - Evidential value the potential of a place to yield evidence about past human activity;
 - Historical value this derives from the ways in which past people, events and aspects of life
 can be connected through a place to the present. This value tends to be illustrative (providing
 insights into past communities and their activities) or associative (association with a notable
 family, person, event or movement);
 - Aesthetic value this derives from the ways in which people draw sensory and intellectual stimulation from a place; and
 - Communal value this derives from the meanings of a place for the people who relate to it, or for whom it figures in their collective experience or memory.
- 2.21 The definition of the setting of a heritage asset is provided in Annex 2 of the NPPF: 'The surroundings in which a heritage asset is experienced. Its extent is not fixed and may change as the asset and its surroundings evolve. Elements of a setting may make a positive or negative contribution to the significance of an asset, may affect the ability to appreciate that significance or may be neutral.'
- 2.22 Further advice regarding the requirement (in the development context) to assess the impact on heritage assets resulting from change within their settings is provided in the PPG (ID: 18a-013-20140306). This advises that 'A thorough assessment of the impact on setting needs to take into account, and be proportionate to, the significance of the heritage asset under consideration and the degree to which proposed changes enhance or detract from that significance and the ability to appreciate it'.
- 2.23 The most recent detailed guidance regarding the settings of heritage assets, and the nature and magnitude of impacts and consequently effects on such settings, is provided in the Historic England document *Historic Environment Good Practice Advice in Planning Note 3: The Setting of Heritage Assets* (2nd edition, December 2017). This guidance provides advice on the definition of setting and the general principles of setting in the context of strategic planning and development control. It states (paragraph 2) that 'the information required in support of applications for planning permission and listed building consent should be no more than is necessary to reach an informed decision, and that activities to conserve or invest need to be proportionate to the significance of the heritage assets affected and the impact on the significance of those heritage assets. At the same time those taking decisions need enough information to understand the issues.'
- 2.24 The Historic England guidance document makes the following points:
 - A setting does not have a fixed boundary as it may change;
 - Extensive heritage assets such as landscapes or townscapes can include many heritage assets and their nested and overlapping settings, as well as having a setting of their own;
 - The setting of a heritage asset may reflect the character of the wider townscape or landscape in which it is situated, whether fortuitously or by design;
 - The importance of a setting of a heritage asset is what it contributes to the significance of the asset;
 - Where the significance of a heritage asset has been compromised in the past by unsympathetic development within its setting, consideration still needs to be given as to

- whether additional change would further detract from (or possibly enhance) the significance of the asset; and
- The contribution made by its setting to the significance of a heritage asset does not depend on public access.
- 2.25 The document deals with the issue of setting and proportionate decision taking. It advises a five-stage approach:
 - Identify which heritage assets and their settings are affected;
 - Assess to what degree these settings make a contribution to the significance of the heritage asset(s) or allow significance to be appreciated;
 - Assess the effects of the proposed development, whether beneficial or harmful, on that significance or on the ability to appreciate it;
 - Explore the way to maximise enhancement and avoid or minimise harm; and
 - Make and document the decision and monitor outcomes.
- 2.26 Although assessments of changes within the settings of heritage assets can involve non-visual issues such as noise, it is more usually the visual aspects of a development that form the major part of the assessment.
- 2.27 The existence of direct lines of sight between the heritage asset and the proposed development is an important factor in judging the visual impact of the development. However, it is possible for changes within the setting to occur even when such a relationship does not exist. For example, views towards a listed building from a frequently visited location, such as a park or a public footpath, may be affected by the presence of a larger development, even if the development is not directly visible from the building itself.
- 2.28 An assessment of visual impacts on the heritage assets and their settings needs to take into account a wide variety of factors including the location of the asset within the physical landscape, its relationship with contemporary and non-contemporary features within that landscape and the location, size and character of the proposed development in relation to these factors.
- 2.29 The assessment then needs to balance the impact of these various considerations on the basis of informed professional judgment. Assessment of visual impacts can be undertaken in accordance with the procedures expressed in the *Guidelines for Landscape and Visual Impact Assessment* (3rd Edition, Landscape Institute, 2013). If there is the potential for changes within the setting of heritage assets due to noise or other impact types then these should also be considered.
- 2.30 There should also be consideration of the sensitivity to change of the setting of a heritage asset. This requires examination of the current setting with regard to identifying elements that contribute to the significance of the asset, elements that make a neutral contribution to the significance of the asset and elements that make a negative contribution to (i.e. detract from) the significance of the asset.
- 2.31 In this Heritage Statement, the contribution that setting makes to the significance of a heritage asset is expressed by means of a 5-point scale: Nil; Limited; Reasonable; Strong; Very Strong. The contribution should be taken as positive unless stated otherwise. The terms used in the 5-point scale are not taken from any specific guidance and are not further defined within this report; the nature of the contribution is described within the accompanying narrative text.
- 2.32 In February 2021 Historic England published their *Advice Note 15: Commercial renewable energy development and the historic environment*. This document aims to describe potential impact on the historic environment that could arise from proposed commercial renewable energy projects which occupy large areas of land or sea.

- 2.33 With regard to solar farms, Historic England Advice Note 15 states 'Assessment of potential heritage impacts of a solar park will typically cover groundworks, such as those from supports for the solar panels, cable trenches and hard-standings for access of equipment. Mitigation may be possible; for example, the use of concrete bases for the panels which entail less disturbance.

 The vehicles and equipment used during construction can also damage archaeological remains' (HE, 2021, paragraph 68).
- 2.34 The advice note also identifies the potential for non-physical impacts: 'Harmful visual impacts on the settings of heritage assets can be avoided or reduced through sensitive design and layout, and mitigation measures such as tree and hedge planting to screen the development. However, care needs to be taken that these measures do not themselves have an adverse impact on the heritage setting or landscape character' (HE, 2021, paragraph 70).

Local Planning Policy

- 2.35 In considering any planning application for development, the planning authority will be mindful of the framework set by government policy, in this instance the NPPF, by current Development Plan Policy and by other material considerations. In this instance the Local Planning Policy for the Site is set by Uttlesford District Council.
- 2.36 The Development Plan Framework (DPF) for Uttlesford is currently provided by the Uttlesford Local Plan which was adopted in January 2005. In December 2007 all policies were saved and then resaved in 2012.

Uttlesford Adopted Local Plan (January 2005)

2.37 The Local Plan, adopted in January 2005 and saved in 2007, continues to provide the district's principal planning policies. It contains the following policy relevant to the historic built environment and this particular application:

Policy ENV2 (Development affecting Listed Buildings)

Development affecting a listed building should be in keeping with its scale, character and surroundings. Demolition of a listed building, or development proposals that adversely affect the setting, and alterations that impair the special characteristics of a listed building will not be permitted. In cases where planning permission might not normally be granted for the conversion of listed buildings to alternative uses, favourable consideration may be accorded to schemes which incorporate works that represent the most practical way of preserving the building and its architectural and historic characteristics and its setting.

Policy ENV4 (Ancient Monuments and Sites of Archaeological Importance)

Where nationally important archaeological remains, whether scheduled or not, and their settings, are affected by proposed development there will be a presumption in favour of their physical preservation in situ. The preservation in situ of locally important archaeological remains will be sought unless the need for the development outweighs the importance of the archaeology. In situations where there are grounds for believing that sites, monuments or their settings would be affected developers will be required to arrange for an archaeological field assessment to be carried out before the planning application can be determined thus enabling an informed and reasonable planning decision to be made. In circumstances where preservation is not possible or feasible, then development will not be permitted until satisfactory provision has been made for a programme of archaeological investigation and recording prior to commencement of the development.

Policy ENV9 (Historic Landscapes)

Development proposals likely to harm significant local historic landscapes, historic parks and gardens and protected lanes as defined on the proposals map will not be permitted unless the need for the development outweighs the historic significance of the site.

- 2.38 Uttlesford District Council takes into account national planning policy and guidance in considering planning applications for solar farms. Particular factors a local planning authority will need to consider, and which are relevant for this assessment include:
 - that solar farms are normally temporary structures and planning conditions can be used to
 ensure that the installations are removed when no longer in use and the land is restored to its
 previous use (see form or condition);
 - great care should be taken to ensure heritage assets are conserved in a manner appropriate to their significance, including the impact of proposals on views important to their setting. As the significance of a heritage asset derives not only from its physical presence, but also from its setting, careful consideration should be given to the impact of large scale solar farms on such assets. Depending on their scale, design and prominence, a large scale solar farm within the setting of a heritage asset may cause substantial harm to the significance of the asset; and
 - the potential to mitigate landscape and visual impacts through, for example, screening with native hedges.

3 METHODOLOGY

- Data regarding known heritage assets (designated and undesignated) have been sought from a number of sources, including the Essex and Hertfordshire Historic Environment Records (HER), and the National Heritage List for England (maintained by Historic England). The Environment Agency LiDAR dataset (1 m DTM) was also consulted.
- 3.2 Site visits were undertaken in February and May 2021 in order to check for the presence of heritage assets within the proposal site that have not been previously recorded and to examine the settings of heritage assets considered within this Heritage Statement.
- 3.3 The overall aim of this heritage assessment is to ensure compliance with paragraph 194 of the NPPF, i.e. to describe the significance of any heritage assets affected by the proposed development, including any contribution made by their setting.

4 THE HERITAGE ASSETS

Timescales used in this report

Prehistoric

Palaeolithic	900,000 -	-	12,000 BC
Mesolithic	12,000 -	•	4,000 BC
Neolithic	4,000 -		1,800 BC
Bronze Age	1,800 -		600 BC
Iron Age	600 -		AD 43

Historic

Roman	AD 43 -	410
Saxon/Early Medieval	AD 410 -	1066
Medieval	AD 1066 -	1485
Post-medieval	AD 1486 -	1799
Modern	AD 1800 -	Present

Introduction

- 4.1 Designated heritage assets within 1.0 km of the site are shown on **Figure 3**, and other identified heritage assets within 1.0 km of the site on **Figure 4**. Further information on these assets is provided in the gazetteer presented as **Appendix 1**. These are not all of the heritage assets identified on the HER and other available sources, rather they are those considered to be relevant to this Heritage Statement. The 1.0 km search area around the site is referred to in this document as 'the defined study area'.
- 4.2 The nature and scale of the proposed development is generally unlikely to affect the significance of heritage assets at a distance of more than 1.0 km. However, examination has been made with regard to designated heritage assets of the highest level of significance (Scheduled Monuments, Grade I and II* listed buildings, Grade I and II* Registered Parks and Gardens) outside the defined study area to ascertain if the proposed development could represent a change within their setting that could adversely affect their significance.
- 4.3 Recourse has been had with regard to the Zone of Theoretical Visibility (ZTV) which has been established for the proposed development (see separate Landscape and Visual Impact Assessment, Figure 4), also consideration has been given to potential views in which the designated heritage assets and the proposed development could both be seen even if there is no direct intervisibility.

Designated Heritage Assets

4.4 There are no designated heritage assets within the proposal site.

Scheduled Monument

4.5 A Scheduled Monument is located *c.* 620 m to the east. This is named on the scheduling description as '*The Crump: a ringwork 600m south of Berden*'. Ringworks are Medieval

fortifications, sometimes built and occupied from the late Anglo-Saxon period, continuing into the later twelfth century. They acted as strongholds for military operations and in some cases as defended aristocratic or manorial settlements.

- 4.6 Ringworks often comprised a small, defended area containing buildings, surrounded or partly surrounded by a substantial ditch and a bank surmounted by a timber palisade or, rarely, a stone wall. There are only 200 recorded examples and less than 60 of them have baileys, which makes "the Crump" one of a limited number of this type of fortification.
- 4.7 The significance of the Scheduled ringfort principally derives from evidential values that accrue from the additional information which may be recovered through further detailed examination of the site's physical remains.
- 4.8 The setting of this Scheduled Monument comprises the agricultural landscape within which it is located. However, the earthworks cannot be seen or experienced as a distinct feature within the wider landscape, as they are located in the garden of Stocks Farm within a wooded area (to the south-east of the site), which currently limits any appreciation of its aesthetic value. Nonetheless, the primarily agricultural setting of the Scheduled ringwork makes a strong contribution to its significance.

Built Heritage

- 4.9 The following built heritage assets are proximate to the Site. These are listed below and divided into geographic groups for analysis:
 - Church of St Nicholas (NHLE: 1170264)
 - Berden Hall Group
 - Berden Hall (NHLE: 1112468)
 - Granary North-East of Berden Hall (NHLE: 1306141)
 - The Crump and Former Barn (Now Room) Adjoining to North-West (NHLE: 1112471)
 - Dewes Green Road Group
 - Rose Lane Cottage (NHLE: 1170320)
 - The Old King's Head (NHLE: 1112473)
 - Berden Group
 - Martin's Green (NHLE: 1170281)
 - The Forge Cottage (NHLE: 1322441)
 - White House Farmhouse (NHLE: 1112469)
 - Post Office and Store (NHLE: 1170276)
 - Rose Cottage (NHLE: 1322442)
 - Brick House Lane Group
 - Rose Garth (NHLE: 1322443)
 - Brick House (NHLE: 1170302)
 - Crabb's Green Group
 - Crabb's Green Farmhouse (NHLE: 1101863)
 - Barn at Crabb's Green Farm (NHLE: 1176566)

- The Cottage (NHLE: 1101862)
- Crabb's Green Conservation Area
- Ginns Road Group
- Bennills (NHLE: 1101865)
- Longcroft (NHLE: 1347751)
- · Crabb's Lane Group
- White Hart Farmhouse (NHLE: 1347752)
- Barn at White Hart Farm (NHLE: 1176596)
- Silver Birches (NHLE: 1176548)
- Cockswood Farm (NHLE: 1176585)
- Rectory Group
- The Old Rectory (NHLE: 1101864)
- Old Rectory Cottage (NHLE: 1176574)
- Stockings Farmhouse (NHLE: 1347750)

Church of St Nicholas (NHLE: 1170264)

4.10 The Church of St Nicholas is a Grade I listed building which was added to the Statutory List on 21 February 1967. The church is constructed from flint rubble with stone dressings. The nave has principally 12th century origins but also includes the remains of Saxon long and short work in the west angle of the nave. The chancel and transepts date to the 13th century, but the chancel was partly rebuilt in the 19th century. The west tower was constructed in the 15th century, it is modest in height and relatively plain, with no buttresses or other architectural detail. The roof of the tower is pyramidal and set behind a castellated parapet. The List Entry records that the church was "Graded for its architectural and historical value". The significance of the building is therefore derived from both its historic and architectural interest, historic due to the age of its construction and the role the church would have played at the heart of the community, and architectural due to the many phases of its construction and evidence of the styles of those periods.

Setting and Contribution to Significance

- 4.11 The immediate setting of the church is formed by its church yard and open views towards The Street along Church Drive. The immediate setting of the church makes a positive contribution to its significance by denoting its use and importance as a place of worship at the heart of the community.
- 4.12 The extended setting of the church is formed by the built form of Berden to the east and north, Berden Hall to the south and open, arable land to the west. The setting of the church to the north and east has changed over time due to the expansion of the village, however, the setting to the south and west remain comparatively unaltered. Immediately west of the church lies the former vicarage, and beyond that grassland meadows (which had been cut for hay at the time of visiting in May 2022). Views looking directly east back to the church can be obtained from this area, but mature hedging and trees screen the majority of the views from the north-west and south-west of the church. Beyond the meadow area lies cultivated arable farmland. Some views can be obtained from this area back towards the church, but due to the low height of the tower, it sits within the tree line and is not prominent in these views.

Contribution of Site to Setting

4.13 The Site comprises the arable land which forms part of the extended setting of the church. Views of the church can be obtained from the northern half of the Site, but from the southern half any potential intervisibility is severed by the mature trees along the western edge of the village. Again, views of the church tower from the northern half of the Site show it within (not rising above) the trees, limiting the prominence of the tower in these views (Fig. 1). The Site nevertheless makes a moderately positive contribution to the setting of the church by virtue of its openness and rural character.

Berden Hall Group

- 4.14 Berden Hall is a Grade II* listed building which was added to the Statutory List on 26 November 1951. The building dates to the 16th century and is a red brick house of two storeys plus attics. The rainwater heads bear the date of 1655. The building comprises a U-plan which has been partially infilled by a 17th century addition to the rear. The windows were also altered at this time. Each side of the building has three gables which have moulded copings and finials. The ground floor retains some of the 17th century mullioned and transomed windows with leaded lights. The significance of the property is derived from its historic interest as the manorial property of the village, and architectural interest as a 16th century high-status dwelling of brick construction.
- 4.15 The granary at Berden Hall is a Grade II listed building which may have had 16th century origins but was either substantially altered or rebuilt in the late 17th century or early 18th century. As with Berden Hall it is constructed from red brick with dovecote opening in the gable. The significance of the building is derived from its architectural and historic interest as a complementary building to the Hall and wider estate, constructed in a similar palate of materials with similar detailing in places.

Setting and Contribution of Site

- 4.16 The Hall and granary are set within an extensive plot including formal and informal gardens, courtyard garden and entrance drive. The property is well set back from The Street with the land east of the Hall (either side of the driveway) having a parkland quality. Mature planting obscures views from The Street. To the north of the Hall lies the church, to the south lies cultivated arable land and to the west are the grassland meadows, with arable land beyond. The Hall is principally experienced within its domestic plot, but glimpsed views are also achieved from the grassland to the west. Longer views from the surrounding landscape cannot be achieved. The setting of the hall makes a positive contribution towards its significance.
- 4.17 The Site is located west of the hall, beyond the grassland meadows which are boarded by mature trees. Due to the extent and maturity of this planting, there is no intervisibility between the Hall and its barn, and the Site (Fig. 1). Historically, the land that forms the Site was in the same ownership as Berden Hall, resulting in an historic connection between the Site and the listed buildings. However, as described above this relationship is not a visual one, and the Site therefore make a limited contribution to the significance of the Hall and barn by virtue of the historic connection between the two and the retained open character of the Site.

The Crump and Former Barn (Now Room) Adjoining to North-West (NHLE: 1112471)

4.18 'The Crump' is a Grade II listed building which was formerly a farmhouse dating from the 16th or 17th century. It is a timber framed and plastered house of one storey plus attics with a thatched roof. The former barn has been converted for residential use and is not physically connected to the main house via a modern extension. The significance of the building is derived from its historic

interest as a vernacular farmhouse and barn group, which retains historic interest despite later alterations.

Setting and Contribution of Site

- 4.19 The Crump sits within a well-defined residential plot. It is surrounded on all sides by arable land and small areas of woodland. This contributes to the rural character of the property and makes a positive contribution towards its significance.
- 4.20 The Site forms part of the arable land to the west of The Crump. Limited long distance views of the roof of the property can be obtained from the Site (Fig. 2), although the property is seen in the context of the electricity pylons which cross the land adjacent to the Site. This allows only a very limited appreciation of the listed building's architectural interest. There is no known historical or functional association between the Site and The Crump, as such, the Site makes a neutral contribution to the setting and significance of The Crump.

Dewes Green Road Group

4.21 Rose Lane Cottage and The Old King's Head are both Grade II listed buildings on Dewes Green Road, west of the village of Berden. Both buildings were added to the Statutory List in February 1980. Rose Lane Cottage is a 17th or 18th century timber framed cottage, and The Old King's Head was an Inn that dates from the same period. Both buildings are thatched. Their significance is derived from their architectural interest as 17th or 18th century vernacular buildings.

Setting and Contribution of Site

- 4.22 The settings of the buildings are formed by their domestic plots which are well enclosed by mature hedging and trees. The buildings are accessed by tracks from Dewes Green Lane, further reinforcing their rural character. The settings of the buildings contribute positively towards their significance.
- 4.23 These assets are separated from the Site by intervening 20th century development, they have no known historical or functional relationship with the Site, nor any intervisibility with it. Therefore, the Site does not form part of their settings and makes no contribution towards their significance.

Berden Group

4.24 These buildings are all listed at Grade II and were added to the Statutory List in February 1967, with the exception of Forge Cottage which was added in February 1980. The buildings are timber framed and plastered and date from the late 16th to the early 18th century. The properties form the historic core of Berden village. The significance of the buildings is derived from their architectural significance as post-medieval vernacular dwellings and their historic interest as forming the historic core of Berden Village.

Setting and Contribution of Site

4.25 The buildings all sit within their own plots fronting onto Ginns Road or The Street. The group is located centrally within the village of Berden and form the village's historic core. There has been expansion of the village in the 20th century which has resulted in residential development to the south-west of the assets, blocking any views between them and the Site. As there is also no known historical or functional relationship between the assets and the Site, the Site does not form part of the setting of this group of assets, nor does it contribute towards their significance.

Brick House Lane Group

4.26 Rose Garth and Brick House are two Grade II listed cottages which date to the late 16th or early 17th century. The cottages are timber framed and plastered but, as the name suggests, Brick House was refaced in brick in 1670. The significance of the cottages is derived from their architectural interest as post-medieval vernacular dwellings.

Setting and Contribution of Site

- 4.27 The cottages sit within well defined residential plots which form their settings. The plots are enclosed by mature treed boundaries limiting any long-distance views from/to them. As such their settings make a positive contribution towards their significance.
- 4.28 The properties are located over 0.5km south-east of the Site and are visually separated by mature tree belts and small areas of woodland. There is also no known historical or functional relationship between the buildings and the Site, as such, it does not form part of the settings of the buildings.

Crabb's Green Conservation Area

- 4.29 The Crabb's Green Group comprises three Grade II listed buildings, all of which are located within the Crabb's Green Conservation Area. No other buildings within the Conservation Area are noted as being of merit within the Conservation Area Appraisal.
- 4.30 The listed buildings all date from the 17th century and are timber framed. The cottage is plastered and thatched while the farmhouse features weatherboarding and tiled roofs. The Barn appears to have been converted as an ancillary residential use and is weatherboarded with a corrugated metal roof. The significance of the properties lies in their architectural interest as post medieval residential and agricultural buildings.

Setting and Contribution of Site

- 4.31 The buildings are all located within their own plots, set around a green which runs east-west. The Cottage is located on the northern edge of the green and the farmhouse and barn are on the eastern side. To the north, east and south, the green and the hamlet are enclosed by substantial mature tree planting, preventing any views out of the hamlet in those directions (Fig. 3). South of the planting lies the Herts and Essex Electrical Transfer Station and east of the planting lies a substation. The settings of the buildings around the green therefore contribute positively to the significance of the buildings.
- 4.32 As discussed above, the hamlet and Conservation Area are well enclosed to the north, east and south by substantial mature tree planning and hedging. This prevents any intervisibility between the Site and the assets, nor is there any functional relationship. As such the Site does not form part of the setting of the listed buildings.
- 4.33 The Conservation Area Appraisal defines the special interest of Crabb's Green Conservation Area as:
- 4.34 A historic hamlet with buildings overlooking a large open green. The surrounding landscape is largely farmland underlining the rural past of the hamlet.
- 4.35 The public realm is of a rural character.
- 4.36 The hamlet is quite visually enclosed by surrounding trees with the important long views being across the green. Views of the surrounding countryside unfold to the west.
- 4.37 This demonstrates how enclosed the Conservation Area is to the east, where the Site is located, preventing any visual relationship between the Site and the Conservation Area (Fig. 3). The Conservation Area is inward focussing and draws its special interest from the green and the

arrangement of the buildings around it, rather from external sources. The Site does not contribute to the significance of the Conservation Area.

Ginns Road Group

4.38 Bennills and Longcroft date to the 18th and 17th centuries, respectively. They are Grade II listed buildings located to the east of Stocking Pelham on Ginns Road. Both buildings are timber framed and rendered, Bennills is thatched and Loncroft is tiled. The significance of the buildings lies in their architectural interest as vernacular dwellings.

Setting and Contribution of Site

- 4.39 The buildings sit within well defined residential plots which are enclosed by mature tree and hedge planting. These plots form their settings, with the enclosure of their plots limiting any longer views along Ginns Road. The settings of the buildings therefore contribute positively to their significance by evidencing their residential use.
- 4.40 The enclosure of the buildings' individual plots, along with the further mature tree and hedge planting along either Side of Ginns Road, prevents any intervisibility between the Site and the assets. Additionally, there is no known historical or functional relationship between the assets and the Site, therefore, it does not form part of their settings or contribute to their significance.

Crabb's Lane Group

4.41 The Crabb's Lane group comprises four Grade II listed buildings within Stocking Pelham, east of the Site. The properties date from the 17th and 18th centuries, all being timber framed and finished in a mixture of render and weatherboarding. The roofs of the buildings are finished in a variety of materials, including thatch, plain tiles and, unusually for this area, slate. The significance of the buildings lie in their architectural interest as vernacular residential and agricultural buildings.

Setting and Contribution of Site

- The buildings all sit within well-defined, spacious plots, with White House Farmhouse and barn adjacent to each other within the same plot, and therefore sharing group value. These plots are enclosed by mature planting limiting views of the properties to being achieved from Ginns Road/Crabb's Lane only and not from the surrounding countryside. As such, their settings are limited to their plots and relationships with these roads, which make a positive contribution to their understanding.
- 4.43 The Site is located to the east of the group, with several well treed boundaries between the assets and the Site. As such, there is no visual relationship between the assets and the Site. The county boundary between Hertfordshire and Essex also lies between the Site and the assets, and also appears to have been an historic field boundary. There is no known historical or functional relationship between the assets and the Site, as such, the Site does not form part of their settings.

Rectory Group

4.44 The Old Rectory is a former rectory, dating to the 17th century with 18th century additions which sits on a partially moated site. The building is timber framed and plastered with a part tile and part slate roof. Rectory Cottage is an 18th century cottage which is timber framed and finished in combination of plaster, weatherboard and brick. The significance of the buildings lies in their architectural interest as vernacular dwellings.

Setting and Contribution of Site

- The buildings sit adjacent to each other in their own plots. The buildings share intervisibility, but their combined plot is well defined and bound by mature trees and hedging. This combined plot comprises the settings of the buildings and contributes positively to their understanding as residential dwellings.
- 4.46 The buildings are located in the north of Stocking Pelham, north of Ginns Lane. As such they are separated from the Site by intervening development and substantial belts of mature tree planting. As such there is no visual relationship between the Site and assets, nor is there any known historical or functional relationship. Therefore, the Site does not form part of the setting of the assets, nor contributes to their significance.

Stockings Farmhouse (NHLE: 1347750)

4.47 Stockings Farmhouse is a Grade II listed building located to the north-west of the Site. The building dates to the 17th century and is timber framed over a brick plinth, finished in decorative plasterwork. The roof is half hipped and finished in plain tiles. There is a modern addition to the north of the building which is of a matching design with a projecting gable. The significance of the building is derived from its architectural interest as a post-medieval vernacular farmhouse.

Setting and Contribution of Site

- The farmhouse sits within a substantial plot which is open to the north and east but enclosed by mature trees to the south and west, terminating any views in those directions. There are some agricultural buildings immediately east of the farmhouse. The setting of the farmhouse contributes positively to its significance by evidencing its rural domestic character in association with an agricultural use.
- The Site is located just under 0.5km south-east of the listed building, with many mature tree belts in between the two, in addition to the built form of Stocking Pelham. As such, there is no intervisibility between the two, nor is there any known historical or functional relationship between the two. As such, the Site does not form part of the setting of the listed building, nor contribute to its significance.

Non-designated heritage assets

- 4.50 There are no non-designated built heritage assets proximate to the site.
- 4.51 Previous work within the defined study area has identified archaeological potential for deposits from a range of periods as illustrated in the HER (**Appendix 1**).
- Activity dating to the Palaeolithic period is often ephemeral, and *in situ* deposits tend to be associated with specific geological deposits such as river terrace gravels. Evidence dating to the Mesolithic period is similarly ephemeral, and generally associated with hunter-gatherer patterns of land use. The Neolithic and Bronze Age periods are associated with the establishment of farming and more permanent settlement, with large scale woodland clearances occurring in the Bronze Age.
- There are few finds dating from the earlier Prehistoric periods confirmed in the designated search area. A water-worn Palaeolithic ovate handaxe was found between the Rivers Ash and Stort at Stocking Pelham by W H Penning of the Geological Survey in 1872, depicted in the HER (1760) c. 200 m to the west of the site, and a Bronze age beaker burial was found in 1907 under the main entrance of the Berden Wesleyan Chapel by workmen in digging foundations (3863), c. 410 m to the north-east of the site.

- 4.54 By the Iron Age, the landscape had been mostly cleared of its woodland cover and was being farmed and settled. Cropmarks of three distinct enclosures, a ring-ditch and field boundaries are recorded at Crabb's Green in the HER (46423), partly overlapping with Archaeologically Alert Area EH_39 (to the south-west of the site see below). The cropmark of a possible enclosure (46420) is recorded at Arnold's Spring, adjacent to Archaeologically Alert Area EH_25 (to the north-west of the site see below). These may date from the late Prehistoric period onwards.
- There are three finds recorded by the Portable Antiquities Scheme (PAS) within the designated search area dating to the Iron-Age to Romano-British period (51504, 55311, and 55317), and an area of cropmarks of a multi-ditched rectilinear enclosure of possible later Prehistoric date is recorded at Parsonage Lane (47949).
- 4.56 Within the site itself, the PAS records the find of a fourth century AD Roman coin within the north-east (55307), and a Medieval coin of late thirteenth to early fourteenth century date roughly centrally in the site (52153); however, the PAS locations depicted in the HER cannot be confirmed as accurate.
- 4.57 Further archaeological investigations have been undertaken within the site boundary in order to inform this assessment of archaeological potential. These consist of an assessment of historic aerial photography (March 2022, **Appendix 2**) and a geophysical survey of the site (May 2022, **Appendix 3**).
- 4.58 The aerial photography assessment of the site identified evidence for:
 - a likely Prehistoric to Roman ditched enclosure, eroded and visible only as a crop mark 99 m by 60 m with no internal features or visible entrances recorded in the HER within the northwest of the site (47982);
 - post-Medieval field systems, some of which may possibly derive from pre-Medieval land use.
 Linear features also identified through geophysical survey (see below) in the southern portion
 of the site have been interpreted as a field system, although it was difficult to attribute a date.
 This field system is also recorded in the HER (19562), and identified as a possible moated
 site; and
 - a ringwork motte (see below), partially within the redline boundary at the east. This feature is
 very residual, but archaeological deposits are likely present in the top and subsoils, as
 evidenced by their appearance as marks in soil there the buried features are brought to the
 surface by the plough.
- 4.59 The detailed gradiometer survey of the site identified additional features to those above; specifically, an area of settlement activity in the north of the site. The settlement activity appears to present as multi-phased occupancy. There is an area which may be enclosed by a ditch system, similar to a banjo enclosure in character, and has a distinct entrance way to the south-east. This leads towards an inner, focal area of increased activity. The characteristics of the features imply an Iron Age or Romano-British date, making it possibly contemporary with the cropmarks in the north-east of the site.
- 4.60 There are more regular linears in the centre and south of the site (see above) which suggest a separate phase of occupation, most likely later, possibly Anglo-Saxon through to Medieval, and possibly associated with the Scheduled 'Ringwork' fortification to the south-east of the site.
- 4.61 The Scheduled ringwork is dated to the twelfth century through finds from an excavation conducted by the owner in the 1950's (122). Its bank and outer ditch enclose a saucer-shaped area, measuring *c*. 53 m overall in diameter. The ditch is 1.5 m deep, waterfilled on the west. The east arm is dry but originally was wet. The bank is 2.9 m above the base of the ditch. Within, from the base of the `saucer' to the top of the bank, measures *c*. 1 m. The bank and ditch are massive enough for defence, the bank being the more important feature. The only break in the bank is in

the south side but there appears to be no contemporary causeway across the ditch. The ringwork appears to be isolated from centres of population (past or present). Ringworks and mottes were usually built in an existing settlement or else form the nucleus of one.

- A strong circular feature is apparent from the results of geophysical survey within the east of the site. This is noted on historical maps from the eighteenth to the mid-twentieth century as a ring pond with trees in the centre (**Figures 7** to **14**, EEX13885). However, it would appear this may be a moated enclosure of similar construction dimensions to the Scheduled 'Ringwork'. The ringwork partly within the east of the site is also identified in the HER (3854) and named as "The Rookery" in a field historically known as "Cumber Hills".
- 4.63 This monument was part excavated by G M Knocker in 1954 (EEX13884, EEX52369), who recorded a "motte" surrounded by a U-shaped ditch with an overall diameter c. 55 m, and a central area 22 m across. The ditch was 1.5 to 1.8 m deep, filled with c. 0.6 m of wet silt. Finds included a twelfth century pot in the make-up of the bank, and a thirteenth century pot in the central hearth. This earthwork had been ploughed out by 1966, although as mentioned above, cropmarks indicate that subsurface deposits survive.
- 4.64 In the wider designated search area, four Archaeologically Alert Areas are identified in the Hertfordshire HER, primarily relating to clusters of Medieval settlement to the west of the site:
 - EH_25 Cropmarks of an extensive area of rectilinear ditches and enclosures approximately 5.5 ha in size to the north-west of the site at Brent Pelham, probably represent field systems and associated enclosures (7648). The ditches and enclosures are aligned both with the parish boundary immediately to the south and the county boundary immediately to the east, and with Historic Landscape Character defined as pre-eighteenth century irregular enclosure.
 - EH_39 As area of scattered building material and pottery, and a watercourse which appears to be the remains of a Medieval moat (4535) to the south-west of the site at Furneux Pelham, and a wider area of cropmarks, largely those of historic field boundaries, but also some fainter features which may be of ditched enclosures, of unknown date (31148).
 - EH_64 Medieval moat to the west of the site (1971) of trapezoidal form now the site of the Old Rectory in Stocking Pelham, drained and partly infilled in the mid-nineteenth century and largely restored in the twentieth century.
 - EH_68 A further Medieval moated site at Stocking Pelham Hall (4520), close to the Medieval Church of St Mary (4348) and a variety of shallow earthworks in pasture east of the moat (1639).
- 4.65 A further possible Medieval moated site is recorded in the Hertfordshire HER at Crabbs Green Farm in Stocking Pelham (11865), and another moated site is recorded in the Essex HER at Battles' Wood (3875).
- 4.66 Medieval settlement is also evidenced in ecclesiastical buildings in the designated search area, including the Church of St Nicholas in Berden, c. 200 m to the east of the site, with a nave of twelfth century date (however, noting that the west angle has Saxon long and short work on the quoins, indicating a possible earlier date) (35477), and Berden Priory (3906), located on the site of the twelfth century hospital or priory of St John the Evangelist, of the Augustinian canons (3905). A series of Medieval fishponds near Dewes Green Farm set into a gently sloping clay soil adjacent to a stream (now dry), were probably connected with Berden Priory (3930).
- 4.67 Several anomalies have been identified in the geophysical survey results that relate to the recent agricultural past of the site. These include area of probably post-Medieval ridge and furrow, a former field boundary, and a backfilled pond. A series of positive linear features identified across the central and southern portion of the site appear to be drainage associated with the former pond.

- 4.68 A programme of Historic Landscape Characterisation (HLC) has been undertaken for this area (Figure 5). HLC is an aspect of more general landscape characterisation that seeks to provide an additional element of 'time-depth', allowing the historic evolution of the landscape to be perceived and understood.
- The broad HLC Type for most of the site has been recorded as 'Piecemeal Style Parliamentary Enclosure' (HEX14161 eighteenth century or later) of the former open fields, extending eastwards to Berden in the north-east and the Scheduled Ringfort to the south-east. The central eastern field (within which the ringwork is located) is identified as 'Post 1950 Boundary Loss' (HEX14159), which represents the removal in the latter part of the twentieth century of field boundaries dating back to the enclosure in order to establish larger fields.
- This HLC description is consistent with the development of the site as depicted in historic maps, which depicts the relict boundaries in the 1800 OS (Figure 8), although the slightly earlier 1783 parish map (Figure 7) depicts the removal of a number of internal boundaries. That parish map also depicts a large, wooded area occupying part of the south-west and south of the site until the 1877 OS (Figure 10). From 1877 a footpath is also depicted entering the site from the east, and turning south roughly in the centre, which by the time of the 1896-98 survey (Figure 11) had been extended to cross the site north to south. As mentioned above, the ringwork feature in the east of the site had been ploughed out in the 1960s and is no longer depicted from the 1981 OS (Figure 15) onwards.
- 4.71 Satellite imagery (**Figure 17**) shows that the west and north of the site have been sub-divided, and that it has been in agricultural (arable) use throughout the twenty-first century. Satellite imagery also illustrates some of the cropmark areas identified in historic aerial photography, LiDAR and geophysical survey, including the ringwork at the east of the site.

5 ASSESSMENT

- The Block Plan and Planting Plan for the proposed development are presented in **Appendix 4**. These show the areas proposed for solar PV panels along with associated infrastructure, and landscape mitigation.
- 5.2 The proposals consist of:
 - 1. Installation of photovoltaic solar panels mounted on tables which will have a front edge at around 0.9m above ground and the rear edge 2.5m (a twenty-degree slope). Rows will run west to east, following the existing contours of the ground with the panels facing south. Spacing between rows will vary between 7.9m and 9.8m, depending on topography.
 - Ten inverter units distributed among the panels and accessed via a combination of existing and proposed farm tracks (formed from crushed stone). Inverter units are typically the size of standard shipping containers.
 - 3. A small substation protected with a palisade fence will be built in the southwest corner, adjacent to the battery storage facility. It will be accessed via the internal track network from the main access to the solar farm on the Pelham Road.
 - 4. Deer fencing around each field to exclude large mammals and humans from the facility. Gates to allow the passage of small mammals such as badgers and foxes will be provided at intervals along the fence.
 - 5. Existing footpaths will be retained along their same routes, typically within corridors 10 15 m wide between existing hedge lines and the proposed deer fence. A hedge will be planted in front of the deer fence to reduce the visual impact of the solar farm from view, reducing the corridor by 3 m (allowing for growth of the hedge).
 - 6. A permissive path will be established just inside the landholding on the south side of the Stocking Pelham Road. This path will establish a pedestrian link between Stocking Pelham and Berden (currently there is no footway along the highway).
 - 7. One hectare of community woodland will be created in the northeast corner of the Site. As well as providing recreational and wildlife benefits it will also screen the solar farm from a residential area of Berden which lies immediately to the north. The permissive path will pass through the woodland. The remaining area of arable field (2.7 hectares) will be sown as a wildflower meadow.
 - 8. 2.4 hectares of woodland will be planted elsewhere, providing screening, landscape and wildlife benefits.
- 5.3 No trees or hedges will need to be removed to build of the solar farm.
- When decommissioning, at the end of its operational life or as set by a planning condition, the solar farm will be removed including all fencing, piles and underground cabling and the access tracks (apart from those that will assist in the ongoing agricultural management of the land). The substation and inverters will be removed, and the land returned to agriculture. The trees, hedges and woodland planted as part of the development will be retained, forming a beneficial long-term legacy, enhancing landscape character, sequestering carbon and increasing ecological biodiversity.
- 5.5 There will be indirect impacts from the proposals on the setting of several designated assets (reversible), and direct impacts on archaeological deposits within the site (irreversible).
- 5.6 There is no intervisibility between the Scheduled Monument and the site. **Viewpoint 7** of the **Landscape and Visual Impact Assessment (LVIA**, separate document prepared in support of

the application for the proposed development) illustrates the view from the road to the west of the Scheduled ringwork towards the application site. Views from the Scheduled Monument itself are restricted by mature trees and hedgerows, however, **Figure 10.7** of the **LVIA** shows a view across The Street and the open fields which separate the site from the Scheduled ringwork, and which does afford some glimpses of the site these open fields. The closest (eastern) part of the site lies beyond a low hedge with gaps, within a dip in topography, and so is not particularly visible. Furthest (western) parts of the site are visible through gaps in the internal hedge and tree cover (winter cover).

- 5.7 The **LVIA** sets out the proposed mitigation as planting native hedge along the easter edge of the solar farm, on the far side of the existing hedge gaps. This planting will, once established to a height of 2.5 m, screen the panels within the nearest field. The internal hedges within the site will be strengthened with new planting and new hedges will be planted alongside the existing public footpaths through the site (**Appendix 4**). Once established this planting will screen the solar panels from view (largely in winter and completely in summer).
- The presence of the solar panels would represent a change in the setting of the Scheduled ringwork, and this change would be noticeable from a location relatively proximal to the monument, but in a relatively small area of countryside which is already significantly influenced by electrical infrastructure. The change in the setting would not wholly prevent that same appreciation and understanding, and the change would be fully reversible no field boundaries would be removed in order to construct and operate the proposed development. Overall, the level of harm to the significance of the Scheduled Monument as a result of the change within its setting would be 'less than substantial' and nuanced towards the lower end of the scale of 'less than substantial'.
- There is potential for archaeological deposits of all periods to be present within the site, and in particular, there may be deposits associated with late Iron Age to Roman occupation in the north of the site, and early Medieval to Medieval and later in the south and east.
- 5.10 Whilst the potential for archaeological deposits has been confirmed through desk-based assessment, itself informed by analysis of historic aerial photography and geophysical survey of the site, the significance of any archaeological deposits that may survive will also depend on their condition. This condition can only be ascertained through further (intrusive) evaluation.
- 5.11 The equipment plans and sections are illustrated in Figure 8 of the LVIA. This includes details of installation of solar panels, the proposed Inverter and Transformer Units and fencing / gates. Although individual impacts of each component are limited, the presence of archaeological deposits of unknown depth across some areas of the site could also be impacted by the installation and decommissioning activities.
- 5.12 A Written Scheme of Investigation will be prepared setting out a programme of archaeological evaluation in areas of archaeological potential as identified in this assessment. This evaluation would be undertaken ahead of the construction of the proposed development.
- 5.13 Should areas of significant archaeological remains be identified as a result of this further work, options to avoid or reduce any impact on such remains could include the use of concrete bases as a means of fixing the panels to the ground rather than a more intrusive foundation design. This approach would be in line with the guidance provided by Historic England (HE, 2021, paragraph 68).
- 5.14 Specifically with regards to the 'ringwork' cropmark feature in the east of the site, the proposals are for an area of "New Woodland Planting" (**Appendix 4**), and detailed planting design for this area will take account of any requirements for preservation *in situ*, whilst retaining the ability to provide the desired screening in the landscape design. The requirement for preservation *in situ* of this asset will be determined though evaluation of the extent and condition of survival of the part of this monument which falls within the site boundary.

- The overall significance of archaeological deposits within the site will depend on their condition, however, it is anticipated that they would be of no more than local (low) evidential value overall, with the ringwork in the east of possibly higher evidential value by association with the Scheduled ringwork to the south-east, depending on its condition. Harm to the significance of archaeological deposits within the proposal site is therefore unlikely to be a serious concern within the planning process.
- 5.16 There would be some change to the character of the historic landscape as described within the HLC process. The broad HLC Types affected ('Piecemeal Style Parliamentary Enclosure' and 'Post 1950 Boundary Loss') are relatively common in this part of the county, and any change would be fully reversible as no current hedgerows or other field boundary types would be removed.
- 5.17 With regard to built heritage, the Site does not form part of the settings of the following groups of listed buildings. Additionally, the proposed additional planting proposed would serve to further separate the Site and the assets, strengthening the existing visual barriers. Therefore, the proposed development of the Site with PV Panels will have no impact on their significance:
 - Berden Hall Group
 - Dewes Green Road Group
 - Berden Group
 - Brick House Lane Group
 - Crabb's Green Group
 - Ginns Road Group
 - Crabb's Lane Group
 - Rectory Group
 - Stockings Farmhouse
- 5.18 The following heritage assets share a limited degree of intervisibility with the Site and the proposed development has the potential to affect their settings and significance. The potential effects are assessed below.

Church of St Nicholas (NHLE: 1170264)

As discussed at 4.13 above, the Site makes a moderately positive contribution to the setting of the church by virtue of its openness and rural character. The proposed planting plan shows the additional planting proposed within the Site, including the new hedge and tree line along the eastern edge of the PV parcels and new species rich meadow in the part of the Site closest to the Church. While these views are extremely limited at present and the church is typically experienced amongst mature planting which restricts views, the additional planting will serve to largely screen any intervisibility between the Site and the Church, however, it must be remembered that setting is not solely defined by a visual relationship. Nevertheless, as the openness of the Site will be retained, it is considered that overall, the proposals would have a neutral impact on the significance of the church.

Berden Hall Group

As discussed at 4.17, the Site makes a very limited contribution to the significance of the Berden Hall group by virtue of its shared historical ownership and retained openness and rural character. There is currently no visual relationship between the two, which would not be altered by the proposals. While the arable character of the Site would change as a result of the proposed

development, its openness would not be altered and overall, it is considered that that the proposals would have a neutral impact on the significance of the Berden Hall Group.

The Crump and Former Barn (Now Room) Adjoining to North-West (NHLE: 1112471)

5.21 As discussed at 4.20 above, the Site makes a neutral contribution to the significance of The Crump. The additional planting proposed would provide some additional screening, nevertheless, the Site would continue to make a neutral contribution to the significance of The Crump. The proposed installation of PV Panels on the Site would retain the sense of openness and the verdant nature of the Site, which are the factors which contribute positively to the understanding and appreciation of The Crump. Overall, the proposals would have a neutral impact on the significance of The Crump.

Examination against legislation and national planning policy

- The identified 'less than substantial' harm to the significance of the Scheduled Monument ('The Crump: a ringwork 600m south of Berden') means that the application should be considered against the balancing process identified in paragraph 202 of the NPPF, which states: 'Where a development proposal will lead to less than substantial harm to the significance of a designated heritage asset, this harm should be weighed against the public benefits of the proposal....'. The public benefits are clearly identified in the Planning Statement submitted in support of the application and the balancing process is also presented within that document.
- 5.23 The changes within the setting of the listed buildings identified above, along with the assessed neutral impact on the significance of these heritage assets, do not require the planning decision-maker to engage duties under Section 66(1) of the Planning (Listed Buildings and Conservation Areas) Act (1990).
- The identified (reversible) change to the character of the historic landscape, along with the potential limited harm to the significance of below-ground archaeological deposits, means that the application should be considered against the balancing process identified in paragraph 203 of the NPPF, which states: 'The effect of an application on the significance of a non-designated heritage asset should be taken into account in determining the application. In weighing applications that directly or non-directly affect non-designated heritage assets, a balanced judgement will be required having regard to the scale of any harm or loss and the significance of the heritage asset'.

6 SUMMARY

- 6.1 A Heritage Statement has been prepared with regard to a proposed development at land in the vicinity of Berden in the county of Essex. The statement identifies the legislation, planning policy and guidance that are relevant to heritage issues regarding the proposal site.
- The report has been prepared with regard to appropriate guidance and in accordance with paragraph 194 of the NPPF. Section 4 of this report identifies those heritage assets that could be affected by the proposed development and describes their significance, including any contribution made by their setting. In Section 5 of the report, the impacts and effects (of the current application) on the significance of the heritage assets are assessed, along with the subsequent level of harm that may occur.
- No designated heritage assets would be physically impacted by any part of the proposed development. There would be 'less than substantial' harm to the significance of one Scheduled monument, as a result of change within its setting. The harm would be fully reversible. The application should therefore be considered against the balancing process identified in paragraph 202 of the NPPF.
- The proposed development would result in change to the character of the historic landscape, although such change would be fully reversible and the recorded HLC types are not rare in this part of the county.
- There is also the possibly of impacts on archaeological deposits, although archaeological investigation is proposed and any such impacts would be limited due to the nature of the scheme. The application should therefore be considered against the balancing process identified in paragraph 203 of the NPPF.
- As discussed in Section 5, the significance of the majority of the built heritage assets proximate to the Site will not be affected by the proposed development. There are two built heritage assets which may be affected by the proposals, The Crump and Former Barn (Now Room) Adjoining to north-west (NHLE: 1112471) and the Church of St Nicholas (NHLE: 1170264). However, due to the limited contribution of the Site towards the significance of these assets and that the Site will retain its open character, combined with the additional planting proposed within the Site the proposals are considered to result in a neutral impact on the significance of these two assets.

igure 7	LiDAR Hillshade visualisation 1m DTM 2019

Summary

- S1. This assessment of aerial imagery considers land between Stocking Pelham and Berden in Essex, to inform archaeological mitigation in advance of development of a solar farm. The Site is centred at UK National Grid Reference TL 460290, coordinates 546000,229000.
- S2. The object of this assessment is to provide information on the location and nature of buried and upstanding archaeological features which are visible on historic aerial photographs, modern aerial and satellite imagery and visualised Airborne Laser Scan (ALS) which is also known as Light Detection and Ranging (LiDAR) data to assess the topographic and micro topographic features within the site.
- S3. This assessment identified and mapped fifteen areas of archaeological interest in the site redline and 50mm buffer area.
- S4. Six of these areas, **APS_04, 05, 07, 08, 09** and **15** lie within, or partially within, the redline boundary. The remainder lie within 500m of the redline boundary and are mapped to provide landscape context.
- S5. The Site contains evidence for a likely prehistoric Roman ditched enclosure, which is eroded and visible only as a crop mark.
- S6. Post-Medieval field systems are visible, and some of these fields may possibly derive from pre-Medieval land use.
- S7. A ringwork motte, **APS_07**, lies partially within the redline boundary to the south of Berden. This feature is very residual, but remain will be present in the top and subsoils, as evidenced by their appearance as marks in soil there the buried features are brought to the surface by the plough.
- S8. LiDAR survey indicates minimal residual topography over pre-Medieval sites and some very residual 'microtopographic' features in some places.

S9. It is highly likely that there will be further archaeological features within the site, as crop marks usually show only a portion of the buried features in this environment.

1. Introduction

- 1.1. This assessment considers land adjacent to Pelham Substation, north of Park Green Lane, between Stocking Pelham and Berden in Essex. The assessment was undertaken to inform mitigation strategy over the site of a proposed solar farm, in response to an advisory brief issued by Place Services, Essex County Council (Lee-Smith 2021) in July 2021. The Site is centred at UK National Grid Reference TL 460290, coordinates 546000,229000.
- 1.2. The object of this assessment is to provide information on the location and nature of buried and upstanding archaeological features which are visible on historic aerial photographs, modern aerial and satellite imagery and visualised Airborne Laser Scan (ALS) which is also known as Light Detection and Ranging (LiDAR) data to assess the topographic and micro topographic features within the site.

Sources of data

- 1.3. This assessment systematically examined the following sources of data:
 - All vertical and specialist oblique aerial photographs, taken between 1946 and 2015,
 listed under Historic England (HE) Enquiry number 131862;
 - Open source Environment Agency (EA) and EA National LiDAR Programme (NLP)
 visualised LiDAR data captured in 2007 at 50cm resolution and 2019 at 1m resolution;
 - The Cambridge University Collection of Aerial Photographs (CUCAP) is closed for digitisation during the timescale of this assessment. The cover search, available by searching the online database at indicates that there are specialist obliques, BEN68-71, taken in 1970, to the south of Berden. These were downloaded as lower resolution images, along with their published metadata, to inform the assessment with permission from CUCAP;
 - Aerial and satellite images displayed at all the timelines at and aerial imagery at in December 2021;

- Historic England (then the Royal Commission on the Historic Monuments of England,
 RCHME) Essex National Mapping Programme (NMP) undertook survey between 1993
 and 2003. These data are shown at
 and no NMP data has been recorded over the core of the Site, whilst some is reflected
 in our report in the northwest part of the wider area;
- First Edition Ordnance Survey (OS) 6" to one mile map sheet Essex XIII; and
- Essex and Hertfordshire Historic Environment Records (EHER and HHER) data provided as shapefiles for GIS and as Portable Document Format (PDF) files by the Essex and Hertfordshire HERs.

Limitations of the data

1.4. It is important to note that aerial imagery usually only shows part of the horizontal and vertical extent of buried and upstanding features. Their capacity to reveal features as crop marks, vegetation marks, soil marks or as shadows cast by banks, ditches and walls, depends upon a number of environmental, lighting and agricultural factors prevalent at the time of the photographic survey.

Figure 1 Location of the Site

Assessment of Aerial Photographs, Satellite Imagery and LiDAR Data Imagery for Archaeology
© Air Photo Services Ltd

Aims and objectives

- 1.5. This assessment aimed to provide information on the location and nature of buried and upstanding archaeological features visible on historic aerial photographs, modern aerial and satellite imagery and visualised LiDAR data to assess the buried, topographic and micro topographic features within the Site; and
- 1.6. The objective of this report is to identify the potential for heritage asset presence and preservation through the assessment of aerial imagery, LiDAR data and satellite imagery.

2. Interpretation and mapping

- 2.1. All photos, satellite images and LiDAR data visualisations were interpreted and mapped at a level compatible with a 1:2500 scale base map.
- 2.2. Aerial photographs were closely examined by eye and under 1.5x and 3x magnification and interpreted with the aid of a mirror stereoscope where appropriate, or in detail on screen when consulted as digital files.
- 2.3. Aerial photographs and satellite images were digitally rectified to an OS base map using the QGIS rectification tool. This was done to remove perspective distortion and ensure correct rectification of aerial photographs to the OS map (Scollar 2002 and 2014). Images from Google Earth were also interpreted and rectified to OS map bases and used in accordance with observations made by Scollar and Palmer, 2008.
- 2.4. In all transformations prepared for this assessment, the mean mismatches were less than ± 2.5m where possible. The rectified files were set as background layers in QGIS where features were interpreted and drawn over the rectified photographs.
- 2.5. Layers from the final drawing have been used to prepare the illustration for this report and are provided digitally for import to a Geographic Information System, in ESRI Shapefile format.
- 2.6. LiDAR data were downloaded, visualised and imported to QGIS and ArcGIS for interpretation and mapping. These data were downloaded and visualised in accordance with standards and techniques set out by Bennett et al (2010), Hesse (2010), Historic England (2018) and Stular et al (2012).

3. Environment and previously recorded heritage assets

3.1. The nature of the environment has a complex effect on both the preservation and visibility of both buried and upstanding features from the air. Many factors combine to influence very marked seasonal and temporal limitations to visibility of cropmarks¹ soil marks² and earthworks³ land use, agricultural regimes, weather, geology and soil types are all major contributing factors to the visibility of heritage assets from airborne and satellite-derived sources.

Topography and Land Use

- 3.2. The site, **Figure 1,** is situated between Stocking Pelham, Cock Common and Berden, to the north of Park Green, in Essex.
- 3.3. The land lies between 115 and 125m Above Ordnance Datum (AOD) and is under arable cultivation with some small areas of deciduous woodland.

Geology and soils

3.4. The site lies on chalky till substrate, which gives rise to deep loamy soils⁴ in the northwest part of the site, which are free draining, and slowly permeable calcareous deeper clay⁵ in the main part of the site, (Cranfield University 2021, British Geological Survey (BGS) 2021). The extent, type and location of these two soil types is shown on **Figure 2**.

Topography, geology and soils conclusion

3.5. This site lies over a well-drained chalky bedrock, but the clay soils in the majority of the site have impeded drainage at times, However, crop marks have been recorded

¹ Where crops grow differentially over buried features such as ditches banks and walls and reveal the pattern of past sites and landscape in the colour and density of their growth.

² Differently coloured and toned soil which is part of buried features which are being directly brought to the surface by ploughing or erosion and are visible in contrast to the surrounding soil.

³ Upstanding ditched and embanked features which show from the air *via* their shadows or *via* the differential topography revealed by visualised LiDAR data.

⁴ MELFORD soil association, soil map symbol 5710

⁵ HANSLOPE soil association, soil map symbol 411d

extensively on clays and are visible over buried features within the site under favourable environmental conditions.

Previously recorded heritage assets

- 3.6. The EHER and HHER demonstrate that the redline boundary ('the Site') and the wider environs and the site contain previously recorded undated but likely prehistoric Roman cropmarked ditched enclosures and associated ditches. A later prehistoric enclosure is recorded within the site at White Hart Farm, EHER 47982, MonUID MEX1040815.
- 3.7. The Site and environs also contain Medieval and Post-Medieval moated sites. Within the Site, The Rookery, or Cumber Hills, (EHER 3854, MonUID MEX13883) is a Medieval 'ringwork motte' which was till extant but tree covered in the 1940s, and was indicated as an upstanding enclosing ditched feature on the 1881 First Edition OS 6" map sheet Essex XIII. The motte is now ploughed out and visible only as crop and soil marks and as micro topography recorded *via* visualised LiDAR data.
- 3.8. The Crump, a 'ringwork⁶' south of Berden, is a Scheduled Monument (SM) which is included in the National Heritage List for England as entry 1009308. The site was Scheduled in 1954 and the Scheduling amended in 1992, as:
- 3.9. Post-enclosure, and maybe earlier, field systems are visible as crop marks in places.

lived.

⁶ Extract from NHLE 1009308: Ringworks are medieval fortifications built and occupied from the late Anglo-Saxon period to the later 12th century. They comprised a small defended area containing buildings which was surrounded or partly surrounded by a substantial ditch and a bank surmounted by a timber palisade or, rarely, a stone wall. Occasionally a more lightly defended embanked enclosure, the bailey, adjoined the ringwork. Ringworks acted as strongholds for military operations and in some cases as defended aristocratic or manorial settlements. They are rare nationally with only 200 recorded examples and less than 60 with baileys. As such, and as one of a limited number and very restricted range of Anglo-Saxon and Norman fortifications, ringworks are of particular significance to our understanding of the period. Despite limited excavation, The Crump ringwork is well preserved and will retain archaeological information pertaining to the occupation of the site and environmental evidence relating both to the economy of its inhabitants and the landscape in which they

3.10. Findspots recorded by the HHER and EHER indicate a background presence of prehistoric to Post Medieval settlement and activity in this area.

221 12 02 Pelham Solar Farm Assessment of Aerial Photographs, Satellite Imagery and LiDAR Data Imagery for Archaeology © Air Photo Services Ltd

Baseline heritage assets conclusion

3.11. Overall, the HHER and EHERs demonstrate the range of known archaeological resources in the area and have informed this assessment, which has confirmed and expanded on its data in the redline boundary of the site and some parts of its environs.

4. Results

- 4.1. The results from the interpretation and mapping are presented in **Table 1**. **Figure 3** shows features which were recorded on the site and within 500m of the redline boundary. **Figure 4** shows features within the redline boundary only. **Figure 5** compares the mapping to the 1881 First Edition OS.
- 4.2. Fifteen individual features or groups of features were recorded within the site and the buffer area. Six of these areas, APS_04, 05, 07, 08, 09 and 15 lie within, or partially within, the redline boundary. The remainder lie within 500m of the redline boundary and are mapped to provide landscape context.
- 4.3. The detailed sources and condition notes are recorded in the Shapefiles which accompany and inform this report.

4.4. **Figure 4** shows the Site in its environs, with detailed mapping by the NMP which indicates the complexity of prehistoric and Roman remains which are recorded as marks in the Site and its wider area.

Features within the redline area.

Prehistoric and Roman periods

- 4.5. The Site contains the cropmarked remains of a buried ditched enclosure at White Hart Farm which may be a prehistoric or Roman settlement or stock management area. This site is recorded as **APS_09**, and by the EHER as 47982, MonUID MEX1040815.
- 4.6. Undated ditches to its south at **APS_05** may be prehistoric, but this is uncertain without intrusive investigation.
- 4.7. The relict Post-Medieval field systems in this area seem to connect into a cohesive agricultural landscape which in the area to the east and south of **APS_05** may have an earlier origin.

Medieval and Post-Medieval/Undated periods

- 4.8. The area has been ploughed heavily in modern times and there are no traces of Medieval open fields.
- 4.9. The remainder of the redline area contains evidence for a cohesive system of former post-enclosure field boundaries, some of which were removed in the later 20th Century. Others show only as marks in crops and soil over their embankments and former hedging ditches. Mapping of these features was undertaken largely from historic aerial photos. **Figure 5** shows the close correlation of this field system to the First Edition 6 inch to one mile OS map, Essex sheet XIII. Some features are not indicated on the OS mapping and may be the remains of earlier boundaries.
- 4.10. The site contains the plough-eroded remains of a 'ringwork motte' with surrounding boundaries or drains. The area, a The Rookery, or Cumber Hills, is recorded in the EHER as a Medieval ringwork, EHER 3854, MonUID13883.

4.11. The 'ringwork' was shown as an extant curvilinear enclosure with a cut feature on its north side, and vegetation within, on the First Edition OS mapping which was surveyed in 1881 (**Plate 1**). The feature was recorded on RAF aerial photos in the 1940s and 1960s, when it was still extant as a vegetated enclosure, shown on **Plate 2**.

Plate 1 Essex OS sheet XIII 6" to one mile 1881 (source: National Library of Scotland)

Plate 2 Part of RAF 106G UK 1635 frame 5248 ©Historic England Archive, taken in 1946, with the site redline boundary which bisects the feature.

- 4.12. The site was again recorded in 1970, by Dr JK St Joseph at CUCAP, when the features had been ploughed out and were visible as a clear mark in soil over the residual motte and surrounding boundaries and drains.
- 4.13. Oblique aerial photographs BEN68-71 were taken in the afternoon of the 11th April 1970, and are available to view as lower resolution thumbnails on the CUCAP online catalogue. **Plate 3** shows part of BEN68, which clearly shows the ploughed out mound and its surrounding features. It was not possible to rectify this image for mapping as it is very oblique, but is an instructive illustration. Features within the area have been mapped from additional sources.

Plate 3 Cambridge University Collection of Aerial Photography © copyright reserved

4.14. **Plate 4** shows the site when it was recorded in 2003 as a soilmark by Maxar Technologies satellite imagery, as shown at Google Earth.

Plate 4 Map data, Google: Maxar Technologies, October 2003

4.15. By 2019, The site is visible as a microtopographic feature *viα* visualised LiDAR data which is shown over the page at **Plates 5** and **6**.

Plate 5 EA NLP LiDAR 1m DTM SLRM visualisation showing the residual feature partially within the redline boundary in comparison to the extant Scheduled moated site outside the redline.

Plate 6 the Hillshade visualisation does not show the very residual topography at the ringwork motte.

4.16. Visualised LiDAR data shown at **Figures 6** and **7** indicates the levels of erosion over the features mapped within the site and environs.

The buffer area and environs

4.17. The buffer area contains further evidence for buried ditched enclosures, field systems and moated sites which are part of a much wider buried multi period archaeological and historic landscape.

5. Summary and Conclusion

- 5.1. This assessment has mapped 15 areas of archaeological interest in the wider environs of the site.
- 5.2. Six of these areas, APS_04, 05, 07, 08, 09 and 15 lie within, or partially within, the redline boundary. The remainder lie within 500m of the redline boundary and are mapped to provide landscape context.
- 5.3. The site contains evidence for a likely prehistoric Roman ditched enclosure, which is eroded and visible only as a crop mark.
- 5.4. Post-Medieval field systems are visible, and some of these fields may possibly derive from pre-Medieval land use.
- 5.5. A ringwork motte, **APS_07**, lies partially within the redline boundary to the south of Berden. This feature is very residual, but remain will be present in the top and subsoils, as evidenced by their appearance as marks in soil there the buried features are brought to the surface by the plough.
- 5.6. It is highly likely that there will be further archaeological features within the site, as crop marks usually show only a portion of the buried features in this environment.

Summary

A detailed gradiometer survey was conducted over land at Pelham Solar Farm, Berden, Essex (centred on NGR 546497 229766). The project was commissioned by RPS Consulting Services Ltd with the aim of establishing the presence, or otherwise, and nature of detectable archaeological features in support of a planning application for the development of the site as a solar farm.

The site comprises arable fields located south-west of Berden, covering an area of 73 ha. The geophysical survey was undertaken on 28 March – 13 April. The detailed gradiometer survey has demonstrated the presence of a substantial number of anomalies of potential archaeological interest across the site.

An area of settlement activity has been identified in the north of the site. The settlement activity appears to present as multi-phased occupancy. There is an area which may be enclosed by a ditch system, similar to a banjo enclosure in character, and has a distinct entrance way to the south-east. This leads towards an inner, focal, area of greater activity. The characteristics of the features imply an Iron Age or Romano-British date.

However, there are more regular linear features which suggest an alternative phase of occupation, most likely later, possibly Anglo-Saxon through to medieval. There is known 'Ringwork' fortification to the south-east of the site, dated as late Anglo-Saxon to 12th century date. This 'Ringwork' may be associated with later phase activity on this site. Linear features in the southern portion of the site have been interpreted as a field system. Again it is possible that multiple phases of activity are present within the field system, making it difficult to attribute a date.

Further to the 'Ringwork', a strong circular feature is apparent in the east of the site. This is noted on historical OS maps as a ring pond with trees in the centre. However, it would appear this may be a moated enclosure of similar construction dimensions to the 'Ringwork' towards the south-east.

Several anomalies have been identified that relate to the recent agricultural past of the site. These include area of probably post-medieval ridge and furrow, a former field boundary, and a backfilled pond. A series of positive linear features identified across the central and southern portion of the site appear to be drainage associated with the former pond.

The remaining anomalies are thought to be modern or natural in origin. The modern anomalies are mostly associated with ferrous debris.

Acknowledgements

Wessex Archaeology would like to thank RPS Consulting Services for commissioning the geophysical survey. The assistance of Nikki Cook is gratefully acknowledged in this regard.

The fieldwork was undertaken by Pamela Warne, Callum Jervis, Jo Instone-Brewer and Jake Bishop. Brett Howard processed and interpreted the geophysical data, wrote the report, and prepared illustrations. The geophysical work was quality controlled and managed on behalf of Wessex Archaeology by Tom Richardson.

Pelham Solar Farm, Berden, Essex

Detailed Gradiometer Survey Report

1 INTRODUCTION

1.1 Project background

1.1.1 Wessex Archaeology was commissioned by RPS Consulting Services Ltd to carry out a geophysical survey at Berden, Essex (centred on NGR 546497 229766) (**Figure 1**). The survey forms part of an ongoing programme of archaeological works being undertaken in support of a planning application for the development of the site as a solar farm.

1.2 Scope of document

1.2.1 This report presents a brief description of the methodology followed by the detailed survey results and the archaeological interpretation of the geophysical data.

1.3 The site

- 1.3.1 The site is located 150 m east of the village of Berden, and 8.5 km south of Bishop Stortford, in the county of Essex.
- 1.3.2 The survey comprises 73 ha of agricultural land, currently utilised for arable crop. The site is bounded by Ginns Road to the north, hedgerows to the south and east, with an access lane to the west, and a substation in the south-west corner.
- 1.3.3 The site is on an incline slope from 115 m above Ordnance Datum (aOD) at the north-eastern corner to 127 m aOD at the south-western corner.
- 1.3.4 An electrical substation is present in the south-western corner of the site.
- 1.3.5 The solid geology comprises Mudstone, Siltstone, and Sandstone of the Lowestoft Formation, with overlying superficial geological deposits of diamicton (BGS 2022).
- 1.3.6 The soils underlying the site are likely to consist of argillic brown earths of the 571o (Melford) association, and typical calcareous pelosols of the 411 d (Hanslope) association (SSEW SE Sheet 3 1983). Soils derived from such geological parent material have been shown to produce magnetic contrasts acceptable for the detection of archaeological remains through magnetometer survey.

2 ARCHAEOLOGICAL BACKGROUND

2.1 Introduction

2.1.1 The following background was produced using in-house, and online resources. The background is not exhaustive, but is summarised information considered relevant to the interpretation of the geophysical survey data. A search radius of 1 km was used for the archaeological context.

2.2 Summary of the archaeological resource

2.2.1 White Hart Farm is an enclosure identified from cropmarks, which is present in the north-west portion of the site. It is described as a rectangular enclosure 99 m by 60 m, with no visible internal features or entrances. It is of unconfirmed date but has been categorised as later prehistoric.

- 2.2.2 A series of cropmarks, noted of possible later prehistoric or Romano-British are recorded 390 m north of the site.
- 2.2.3 A find spot of a Bronze Age inhumation, accompanied by a Developed Southern Beaker, was discovered in 1907, 410 m to the north-east of the site.
- 2.2.4 A scheduled monument, named The Crump (NHLE: 1009308), is located 620 m east of the site. The Crump is classified as a 'Ringwork', which is a medieval fortification in use from the late Anglo-Saxon period to the latter half of the 12th century.
- 2.2.5 There are a total of 1 Grade I, 3 Grade II*, and 31 Grade II listed buildings within the 1 km search radius.
- 2.2.6 The Church of St. Nicholas (NHLE: 1170264) is a Grade I listed building, located 200 m east of the site. The nave is of 12th century origin, with 13th century chancel and transepts.
- 2.2.7 Berden Hall (NHLE: 1112468), is a 16th century red brick Grade II* listed building, 130 m east of the site. Berden Priory (NHLE: 1112470) is a late 16th century timber framed Grade II* listed building, 500 m north of the site. Well House and Treadmill (NHLE: 1170289) is a 17th century timber framed building Grade II* listed building, 570 m north of the site.
- 2.2.8 The further 31 Grade II listed buildings are arranged around the site, with concentrations in Berden and Stocking Pelham.

3 METHODOLOGY

3.1 Introduction

- 3.1.1 The geophysical survey was undertaken by Wessex Archaeology's in-house geophysics team between the 24 March 2022 and 14 April 2022. Field conditions were mixed with periods of heavy rain. An overall coverage of 67.2 ha was achieved, with reductions attributable to water-logged ground conditions.
- 3.1.2 The methods and standards employed throughout the geophysical survey conform, and guidance outlined by the Chartered Institute for Archaeologists' (ClfA 2014) and European Archaeologiae Consilium (Schmidt *et al.* 2015).

3.2 Aims and objectives

- 3.2.1 The aims of the survey comprise the following:
 - To determine, as far as is reasonably possible, the nature of the detectable archaeological resource within a specified area using appropriate methods and practices; and
 - To inform either the scope and nature of any further archaeological work that may be required; or the formation of a mitigation strategy (to offset the impact of the development on the archaeological resource); or a management strategy.
- 3.2.2 In order to achieve the above aims, the objectives of the geophysical survey are:
 - To conduct a geophysical survey covering as much of the specified area as possible, allowing for on-site obstructions;
 - To clarify the presence/absence of anomalies of archaeological potential; and

 Where possible, to determine the general nature of any anomalies of archaeological potential.

3.3 Fieldwork methodology

- 3.3.1 The cart-based gradiometer system used a Leica Captivate RTK GNSS instrument, which receives corrections from a network of reference stations operated by the Ordnance Survey (OS) and Leica Geosystems. Such instruments allow positions to be determined with a precision of 0.02 m in real-time and therefore exceeds European Archaeologiae Consilium recommendations (Schmidt *et al.* 2015).
- 3.3.2 The detailed gradiometer survey was undertaken using four SenSys FGM650/3 magnetic gradiometers spaced at 1 m intervals and mounted on a non-magnetic cart towed by an ATV. Data were collected with an effective sensitivity of ±8 µT over ±1000 nT range at a rate of 100 Hz, producing intervals of 0.02 m along transects spaced 4 m apart.

3.4 Data processing

- 3.4.1 Data from the survey were subjected to minimal correction processes. These comprise a 'Destripe' function (±5 nT thresholds), applied to correct for any variation between the sensors, and an interpolation used to grid the data and discard overlaps where transects have been collected too close together.
- 3.4.2 Further details of the geophysical and survey equipment, methods and processing are described in **Appendix 1**.

4 GEOPHYSICAL SURVEY RESULTS AND INTERPRETATION

4.1 Introduction

- 4.1.1 Results are presented as a series of greyscale plots and archaeological interpretations at a scale of 1:5000 for greyscale and interpretation overviews (**Figures 2** and **3**), and at a scale of 1:2000 for detailed greyscale and interpretations (**Figures 4** to **13**). The data are displayed at -2 nT (white) to +3 nT (black) for the greyscale images.
- 4.1.2 The interpretation of the datasets highlights the presence of potential archaeological anomalies, ferrous responses, burnt or fired objects, and magnetic trends (**Figure 5**, **7**, **9**, **11**, and **13**). Full definitions of the interpretation terms used in this report are provided in **Appendix 2**.
- 4.1.3 Numerous ferrous anomalies are visible throughout the dataset. These are presumed to be modern in provenance and are not referred to, unless considered relevant to the archaeological interpretation.
- 4.1.4 It should be noted that small, weakly magnetised features may produce responses that are below the detection threshold of magnetometers. It may therefore be the case that more archaeological features may be present than have been identified through geophysical survey.
- 4.1.5 Gradiometer survey may not detect all services present on site. This report and accompanying illustrations should not be used as the sole source for service locations and appropriate equipment (e.g. CAT and Genny) should be used to confirm the location of buried services before any trenches are opened on site.

4.2 Gradiometer survey results and interpretation

- 4.2.1 The geophysical survey identified features likely to be associated with archaeological remains. These are situated across the site, and are associated with linear and curvilinear ditch features, pit features, areas of ridge and furrow, areas of increased magnetic response, and former field boundaries.
- 4.2.2 The densest concentration of anomalies is located in the north of the site at **4000** (**Fig. 9**, **11**, and **13**). A positive curvilinear anomaly forms an oval with an open west side, delineating a concentration of positive linear, curvilinear, and discrete anomalies. The oval anomaly covers 90 m east west by 60 m north south and may extend west beyond the surveyed area. The southern side forms a straighter edge with a 17.5 m gap that may relate to an entrance. This is indicative of an enclosure ditch and has a width of 2.5 m 4.5 m. Within this several smaller ditch-like anomalies may form internal divisions or separate phases of activity. There are also several positive discrete anomalies that may relate to storage or refuse pits.
- 4.2.3 Within the south of the enclosure a 7 m diameter dipolar anomaly has been identified at **4001**. This moderately strong response is indicative of burning activity. This may relate to a hearth associated with settlement activity within the enclosure.
- 4.2.4 Given the dense concentration in this area, the enclosure may form the focus of settlement activity in the area. The form of the features suggest a late prehistoric, possibly Iron Age, date; however, it is likely that several phases are present. This is clear in the south-west corner of the enclosure where an arrangement of linear anomalies appear to cross the enclosing ditch at 4002. The anomalies form a fork extending 41 m north-west and 31 m west. This is indicative of two ditch features that may relate to boundary or enclosure ditches. It is not possible from the geophysical data alone to determine whether they are earlier or later than the enclosure at 4000.
- 4.2.5 A series of positive curvilinear anomalies have been identified to the south (4003) and east (4004) of the enclosure. The anomaly at 4003 extends 100 m east west with a 50 m diameter crescent at its western end. At the southern end it turns south for 42 m. The anomaly at 4004 extends 233 m north south with a 63 m westerly projection and 108 m easterly projection at its northern end. Together these anomalies appear to form a wider enclosing ditch around the settlement activity at 4000. However, the function of the crescent shaped ditch at the west of 4003 is unclear. It is possible that it once formed a circular enclosure. The ditches may form the remnants of an Iron Age banjo enclosure with the entrance to the south-east. The entrance way may extend to the south-east at 4005 (Fig. 7 and 11) where two parallel linear anomalies are seen on the same projected alignment. However, it is not possible to confirm this relationship from the geophysical data alone due to the presence of modern field boundaries creating a 70 m gap.
- 4.2.6 Within the entrance way of the potential bajo enclosure are two parallel positive linear anomalies at **4006**. These are 72 m and 62 m long respectively on a north-west to south-east alignment, similar to that of the entrance, and separated by 7 m. These are indicative of ditch features and may relate to the entrance way or an earlier iteration of it.
- 4.2.7 Within the east of the possible banjo enclosure, an 'R' shaped positive anomaly is evident at **4007** (**Fig. 9, 11** and **13**). This anomaly is 31 m south-east to north-west and 19 m north-east to south-west. Central to the curvilinear portion of the anomaly, is a discrete positive anomaly 2 m in width. These anomalies indicate an enclosure, or dwelling, with a central pit feature, associated with archaeological settlement activity. There is no evidence of burning to suggest a kiln or similar feature.
- 4.2.8 To the north of the possible banjo enclosure is a positive curvilinear anomaly at **4008**. It encloses and area of 100 m south-east to north-west by 75 m north-east to south-west and

- appears to extend west from the ditch feature at **4004**. The anomaly is 4 m wide and likely forms an enclosure. It is not clear what, if any, relationship this has with the settlement activity immediately to the south. A linear positive anomaly (**4009**) partially bisects the enclosure. This anomaly is 56 m on a north-east to south-west orientation and is 4 m in width. While this may relate to an internal division, it more likely represents a separate phase of activity.
- 4.2.9 Further linear and rectilinear anomalies are evident within the discussed settlement activity, but their characteristics suggest a different phase of activity. A strong positive partial rectilinear anomaly is evident at **4010**. This 4 m wide anomaly is 105 m north-east to southwest, before turning 80 degrees to the west and continuing for 65 m. This anomaly intersects with several linear and curvilinear anomalies already discussed, and shows no contemporary relation with them, suggestive of a different phase of activity.
- 4.2.10 Immediately to the north-west of **4010**, is a positive rectilinear anomaly at **4011**. The anomaly is 30 m east west, 39 m north south, and is 2 m wide. A discrete positive anomaly is evident within the rectilinear anomaly which is 4 m in diameter. These anomalies indicate an enclosure ditch with a potential pit within. The enclosure is of similar characteristics as **4010** and may form the same phase of activity.
- 4.2.11 To the west of the settlement activity is a positive rectilinear anomaly at **4012** (**Fig. 9**). This shares a similar north-east to south-west alignment as the anomalies at **4010** and **4011**. The anomaly is 108 m by 48 m, with a linear width of 3 m. A 49 m break in the rectilinear is evident at the north-western corner of the anomaly. This anomaly indicates a separate phase of activity to the likely Iron Age settlement, and may date from the Romano-British to early medieval period. This anomaly has also been identified previously from cropmarks and is recorded as later prehistoric enclosure.
- 4.2.12 Throughout the area of settlement in the north of the site are numerous weak positive linear and curvilinear anomalies at 4013 4015. While most likely archaeological, these are generally weaker or more sinuous, so interpreted with a lower degree of confidence. At 4013 and 4014 the anomalies are generally longer and more linear, with 4013 forming a 117 m north-west to south-east aligned anomaly. These most likely relate to land divisions or boundaries of unknown date. To the south at 4015 the anomalies are smaller and more curvilinear, possibly relating to smaller enclosures or settlement activity. These anomalies have little alignment with surrounding anomalies and appear to cross others suggesting a separate phase or phases of activity of unknown date.
- 4.2.13 Two circular anomalies have been identified within the area of settlement. The first is on the eastern periphery at **4016**. This is 21 m in diameter, with an anomaly with of 2 m. The second is to the south at **4017**. This is smaller at 13 m diameter and is open on the south-eastern side. These indicate ring ditches and could relate to round houses or barrows. However, their weak nature makes confident interpretation difficult, and they could equally be natural.
- 4.2.14 Across the south of the site a series of positive linear anomalies have been identified at 4018 4027 (Fig. 5, 7, and 9). It is thought that these form a field system of unknown date, which may be associated with one or multiple phases of the settlement activity to the north. Two of the linear anomalies (4018 and 4020) extend south from the settlement activity, parallel to each other with a 27 m separation. These may form a drove way into the field system which likely extends east and west beyond the survey extents.
- 4.2.15 A rectilinear anomaly (**4022**; **Figure 17**) is located at the south-eastern corner of the site. This anomaly is 51 m east west and 16 m north south. This may relate to a small enclosure forming part of the wider field system. However, it could equally be the intersection of different phases of land division.

- 4.2.16 While the anomalies at **4018 4026** all share similar characteristics in terms of magnetic signature and being 2 m wide, it is not clear how many phases of activity are present. There are areas, such as at **4021** and **4023**, where the boundaries appear to cross at points not consistent with a field system. This suggests that there are at least two phases of agricultural land division across the south of the site; however, the dates of these phases are not clear.
- 4.2.17 The anomalies at **4000 4026** represent a focus of settlement with surrounding agricultural land spanning multiple phases of activity, likely covering the Iron Age to the early medieval period. There are several areas of weaker anomalies or slightly removed areas that may be associated with this activity at **4027 4032**.
- 4.2.18 The most complex collection of these anomalies is identified in the north-west of the site at 4027 (Figure 9). These anomalies cover an area of 133 m north-south and 127 m east-west, all with an approximate width of 2 m. These anomalies likely indicate a small central enclosure, with linear enclosure ditches or boundaries radiating from it. The weak nature of these anomalies makes confident interpretation difficult, and they could equally relate to natural variation in the underlying bedrock.
- 4.2.19 In the south-west of the site at **4028** is a positive rectilinear anomaly. This extends 75 m north-east before turning south for 79 m and is 2.5 m wide. While this is seen close to the field system identified across the south of the site, it is more angular in form suggesting another function. It is possible this relates to an enclosure feature, but it is not possible to determine its date from the geophysical data alone.
- 4.2.20 In the east of the site a weak positive semi-circular anomaly (4029) and circular anomaly (4030) have been identified (Figure 7). The anomaly at 4029 is 38 m in diameter, with a break towards the north-east, and has an anomaly width of 2 m. The anomaly at 4030 is 20 m in diameter and 2 m wide. These indicate ditches that may relate to enclosures. Where the anomaly at 4030 forms a clearer circle it has the potential to relate to a prehistoric round barrow. However, due to the weak character this may be a product of modern agricultural practices or variation in natural geology.
- 4.2.21 Also in the east of the site, a weak positive linear anomaly is evident at **4031**. The anomaly is 123 m in length and 2 m in width. This indicates a ditch feature that may be part of the surrounding field system. However, due to the weak character this may be a product of modern agricultural practices or variation in natural geology.
- 4.2.22 Further to the east a sinuous linear anomaly has been identified at **4032**. This is 220 m long by 2 m wide and may relate to the field system identified across the south of the site. However, there is no direct relationship in the data due to modern field boundaries and the shape of the survey area. It is possible this anomaly relates to a natural feature.
- 4.2.23 At the eastern boundary of the site a strong dipolar circular anomaly has been identified at 4033 (Figure 11). The anomaly is 45 m in diameter, with a protrusion toward the north measuring 32 m by 32 m. This anomaly indicates an area backfilled with foreign material with an increased magnetism. The anomaly may relate to a moated enclosure and is evident on OS maps from 1898. A similar feature is noted in the wider landscape from the archaeological background and provides dates between the late Anglo-Saxon to 12th century.
- 4.2.24 Numerous discrete positive anomalies have been identified from across the site, an example is identified at **4034** (**Fig. 5** and **7**). These anomalies indicate pit features and may be archaeological, such as refuse or extraction pits. However, it is equally possible that these anomalies are a product of modern agricultural practices, or variation in the local geology.

- 4.2.25 An area of increased magnetic response has been identified in the west of the site at 4035 (Figure 5). This is 77 m in diameter and corresponds to a backfilled pond recorded on OS maps from 1862 to 1896.
- 4.2.26 A weak positive linear anomaly is present to the east of the site at **4036** (**Fig. 7**, **11**, and **13**). The anomaly is 246 m in length, bisecting the eastern land parcel broadly north to south, and is 6 m in width. This anomaly corresponds to a former field boundary identified on OS maps from 1862 to 1896.
- 4.2.27 Weak positive parallel linear anomalies are evident across the site but are most prominent in the south-west at 4037 (Figure 5). These anomalies are interpreted as ridge and furrow ploughing due to the wide, consistent nature and spacing of the lines. The straight and regular nature suggests a post-medieval date. It is also possible that these anomalies relate to drainage features.
- 4.2.28 Multiple positive linear anomalies have been identified towards the centre of the site (4038 to 4042; Fig. 5, 9, and 11). Due to their interaction with a former pond, it is likely these are drains.
- 4.2.29 Weak positive amorphous anomalies are evident in the north-eastern portion of the site, at **4043** (**Figure 13**). This has been identified as an area of variation in the superficial geology.
- 4.2.30 Numerous weak positive linear and curvilinear anomalies have been identified across the site. These anomalies are too weak to provide interpretational evidence, and so have been marked as trends.

5 DISCUSSION

- 5.1.1 The detailed gradiometer survey has identified extensive archaeological features across the site. A complex arrangement of linear and curvilinear ditch features dominates the central and southern portions of the site. These have been interpreted as enclosure features, related to an intense area of settlement activity.
- 5.1.2 The settlement activity appears to present as multi-phased occupancy. There is an area which may be enclosed by a ditch system, similar to a banjo enclosure in character, and has a distinct entrance way to the south-east. This leads towards an inner, focal, area of greater activity. The characteristics of the features imply an Iron Age or Romano-British date.
- 5.1.3 However, there are more regular linear features which suggest an alternative phase of occupation, most likely later, possibly Anglo-Saxon through to medieval. There is known 'Ringwork' fortification to the south-east of the site, dated as late Anglo-Saxon to 12th century date. This 'Ringwork' may be associated with later phase activity on this site. The linear features in the southern portion of the site have been interpreted as a field system. Again it is possible that multiple phases of activity are present within the field system, making it difficult to attribute a date.
- 5.1.4 Further to the 'Ringwork', a strong circular feature is apparent in the east of the site. This is noted on historical OS maps as a ring pond with trees in the centre. However, it would appear this may be a moated enclosure of similar construction dimensions to the 'Ringwork' towards the south-east.
- 5.1.5 Weaker anomalies are present across the site, with clusters in the north-west and adjacent to the stronger archaeological settlement features. These have been interpreted as further potential settlement activity, likely associated with another phase of occupation.
- 5.1.6 Numerous discrete positive anomalies were identified across the site. These were interpreted as potential archaeological pit features, such as refuse or extraction pits.

- Equally, however they may be a product of modern agricultural activity, or variation in local geology.
- 5.1.7 Several anomalies have been identified that relate to the recent agricultural past of the site. These include area of probably post-medieval ridge and furrow, a former field boundary, and a backfilled pond. A series of positive linear features identified across the central and southern portion of the site appear to be drainage associated with the former pond.
- 5.1.8 The remaining anomalies are thought to be modern or natural in origin. The modern anomalies are mostly associated with ferrous debris.

APPENDICES

Appendix 1: Gradiometer Survey Equipment and Data Processing (Sensys)

The magnetic data for this project were acquired using a non-magnetic cart fitted with four SenSys FGM650/3 magnetic gradiometers. The instrument has four sensor assemblies fixed horizontally 1 m apart allowing four traverses to be recorded simultaneously. Each sensor contains two fluxgate magnetometers arranged vertically with a 0.6 m separation and measures the difference between the vertical components of the total magnetic field within each sensor array. This arrangement of magnetometers suppresses any diurnal or low frequency effects.

The gradiometers have an effective resolution of $\pm 8~\mu T$ over $\pm 1000~n T$ range. All of the data are then relayed to a CS35 tablet, running the MONMX program, which is used to record the survey data from the array of FMG650/3 probes at a rate of 20 Hz. The program also receives measurements from a GPS system, which is fixed to the cart at a measured distance from the sensors, providing real time locational data for each data point.

The cart-based system relies upon accurate GPS location data which is collected using a Leica Captivate system with rover and base station. This receives corrections from a network of reference stations operated by the Ordnance Survey and Leica Geosystems, allowing positions to be determined with a precision of 0.02m in real-time and therefore exceed the level of accuracy recommended by European Archaeologiae Consilium recommendations (Schmidt *et al.* 2015) for geophysical surveys.

Data may be collected with a higher sample density where complex archaeological anomalies are encountered, to aid the detection and characterisation of small and ephemeral features. Data may be collected at up to 0.01 m intervals along traverses spaced up to 0.25m apart.

Post-processing

The magnetic data collected during the survey is downloaded from the system for processing and analysis using both commercial and in-house software. This software allows for both the data and the images to be processed in order to enhance the results for analysis; however, it should be noted that minimal data processing is conducted so as not to distort the anomalies.

Typical data and image processing steps may include:

- GPS DeStripe Determines the median of each transect and then subtracts that value from
 each datapoint in the transect within the defined window. May be used to remove the striping
 effect seen within a survey caused by directional effects, drift, etc.
- Discard Overlaps Intended to eliminate a track(s) that have been collected too close to one
 another. Without this, the results of the interpolation process can be distorted as it tries to
 accommodate very close points with potentially differing values.
- GPS Base Interpolation Sets the X & Y interval of the interpolated data and the track radius (area around each datapoint that is included in the interpolated result).

Typical displays of the data used during processing and analysis:

- Greyscale Presents the data in plan view using a greyscale to indicate the relative strength
 of the signal at each measurement point. These plots can be produced in colour to highlight
 certain features but generally greyscale plots are used during analysis of the data.
- XY Plot Presents the data as a trace or graph line for each traverse. Each traverse is displaced down the image to produce a stacked profile effect. This type of image is useful as it shows the full range of individual anomalies.

Appendix 2: Geophysical Interpretation

The interpretation methodology used by Wessex Archaeology separates the anomalies into four main categories: archaeological, modern, agricultural, and uncertain origin/geological.

The archaeological category is used for features when the form, nature and pattern of the anomaly are indicative of archaeological material. Further sources of information such as aerial photographs may also have been incorporated in providing the final interpretation. This category is further subdivided into three groups, implying a decreasing level of confidence:

- Archaeology used when there is a clear geophysical response and anthropogenic pattern.
- Possible archaeology used for features which give a response, but which form no discernible pattern or trend.

The modern category is used for anomalies that are presumed to be relatively modern in date:

- Ferrous used for responses caused by ferrous material. These anomalies are likely to be of modern origin.
- Modern service used for responses considered relating to cables and pipes; most are composed of ferrous/ceramic material although services made from non-magnetic material can sometimes be observed.

The agricultural category is used for the following:

- Former field boundaries used for ditch sections that correspond to the position of boundaries marked on earlier mapping.
- Ridge and furrow used for broad and diffuse linear anomalies that are considered to indicate areas of former ridge and furrow.
- Ploughing used for well-defined narrow linear responses, usually aligned parallel to existing field boundaries.
- Drainage used to define the course of ceramic field drains that are visible in the data as a series of repeating bipolar (black and white) responses.

The uncertain origin/geological category is used for features when the form, nature and pattern of the anomaly are not sufficient to warrant a classification as an archaeological feature. This category is further sub-divided into:

- Increased magnetic response used for areas dominated by indistinct anomalies which may have some archaeological potential.
- Trend used for low amplitude or indistinct linear anomalies.
- Superficial geology used for diffuse edged spreads considered to relate to shallow geological deposits. They can be distinguished as areas of positive, negative, or broad bipolar (positive and negative) anomalies.

Project description		A complex arrangement of linear and curvilinear ditch features dominates the central and southern portions of the site. These have been interpreted as enclosure features, related to an intense area of settlement activity. The settlement activity appears to present as multi-phased occupancy. There is an area which may be enclosed by a ditch system, similar to a banjo enclosure in character, and has a distinct entrance way to the south-east. This leads towards an inner, focal, area of greater activity. The characteristics of the features imply an Iron Age or Romano-British date. There is a known 'Ringwork' fortification to the south-east of the site, dated to Late Anglo-Saxon to 12th century date. This 'Ringwork' may be associated with later phase activity on this site. The linear features in the southern portion of the site have been interpreted as a field system, most likely associated a later phase of occupation. A strong circular feature is apparent toward the east of the site. This is noted on historic OS maps as a ring pond with trees in the centre. However, it would appear this may be a moated enclosure of similar construction dimensions to the 'Ringwork' towards the south-east. Weaker anomalies are present across the site, with clusters in the north-west and adjacent to the stronger archaeological settlement features. These have been interpreted as further potential settlement activity, likely associated with the earlier phase of occupation. Numerous discrete positive anomalies were identified across the site. These were interpreted as potential archaeological pit features, such as refuse or extraction pits. Equally, however they may be a product of modern agricultural activity, or variation in local geology. An area of increased magnetic response was identified toward the central south-western portion of the site. This corresponds to a pond noted on historic OS maps. A former field boundary was noted to the east of the site. This is evident on historic OS maps. A reas of multiple weak positive pa
