## Emergency Department Syndromic Surveillance System Bulletin (England) 2023 Week 8

## Key messages

## Data reported to: 26 February 2023

'COVID-19-like’ ED attendances remained stable nationally during week 8, but there were further increases noted in adults aged over 65 years. Gastroenteritis attendances remain below seasonally expected levels nationally, but attendances also increased in the 65+ years age group. ED attendances for scarlet fever continued to decrease during week 8 but remain above seasonally expected levels.

Please note: Remodelled EDSSS baselines were refitted during week 6 to account for post-COVID-19 changes in health care seeking behaviour.

## Syndromic indicators at a glance

Table 1: The current trend (based on previous weeks, not only the current week) and the level (compared to the expected baseline), of each indicator included in this bulletin.

| Indicator | Trend $^{1}$ | Level |
| :--- | :--- | :--- |
| Total attendances (Figure 1) | No trend | No baseline |
| COVID-19-like (Figure 2) | No trend | No baseline |
| Acute respiratory infections (Figure 3) | Decreasing | Similar to baseline |
| Acute bronchiolitis or bronchitis (Figure 4) | Decreasing | Similar to baseline |
| Influenza-like illness (Figure 5) | No trend | Similar to baseline |
| Pneumonia (Figure 6) | Increasing | Above baseline |
| Asthma (Figure 7) | Decreasing | Similar to baseline |
| Gastroenteritis (Figure 8) | No trend | Below baseline |
| Cardiac (Figure 9) | No trend | Similar to baseline |
| Myocardial ischaemia (Figure 10) | No trend | Similar to baseline |
| Acute alcohol intoxication (Figure 11) | No trend | Similar to baseline |
| Mental health (Figure 12) | Increasing | No baseline |
| Scarlet fever (Figure 13) | Decreasing | Above baseline |
| Impact of cold (Figure 14) | No trend | Similar to baseline |

${ }^{1}$ trend reports on the trend seen over most recent and earlier weeks

## About this syndromic surveillance system

This bulletin presents data from the UK Health Security Agency (UKHSA) emergency department syndromic surveillance system.

Syndromic surveillance can be used to:

- assess current trends
- assess current trends and levels compared to historical baselines
- compare trends between age groups/areas

Syndromic surveillance should not be used to:

- estimate total burden or number of 'cases' of a condition (see Notes and caveats
- compare levels between age groups/areas

Fully anonymised, daily ED data are analysed and reported here, to identify and describe trends for a variety of syndromic indicators:

- syndromic indicators include groupings such as acute respiratory tract infections, gastroenteritis and myocardial ischaemia
- syndromic indicators are based on:
- the primary diagnosis for each attendance
- other diagnoses may be recorded, but are not used for indicator grouping
- diagnoses are based on signs/symptoms (not laboratory confirmed)
- Key messages describes any notable trends nationally (England), by age group and/or by geographical area (based on UKHSA Regions)
- the full list of syndromic indicators reported here, along with their current level and trend, are summarised in Table 1
- charts are provided for each syndromic indicator, on a national basis, by age group and by geographical area (UKHSA Region). Each chart includes a year of data with:
- 7-day moving averages (adjusted for weekends and bank holidays) to aid in the identification of trend
- statistical baselines (where available) to aid in the assessment of level compared to historical expectations

For further information please see Notes and caveats
Previous weekly bulletins from this system are available here.

## Data quality issues of note this week

No issues identified. See Table 2 and Table $\mathbf{3}$ for the numbers of EDs included this week.
Remodelled EDSSS baselines have been refitted to surveillance data during week 6 to account for post-COVID-19 changes in health care seeking behaviour.

## Total attendances

Figure 1: Daily number of ED attendances (and 7-day moving average adjusted for bank holidays) recorded in this sentinel syndromic surveillance system in England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: total attendances 27/02/2022 to 26/02/2023

(b) EDSSS: total attendances by age (years) 27/02/2022 to 26/02/2023

(c) EDSSS: total attendances by region 27/02/2022 to 26/02/2023

Table 2: The number of emergency department (ED) attendances and number with a diagnosis code included in surveillance each day during the most recent week.

| Date | Total attendances $^{2}$ | Diagnoses included $^{2}$ |
| :---: | :---: | :---: |
| 20 February 2023 | 37,454 | 22,692 |
| 21 February 2023 | 35,008 | 21,485 |
| 22 February 2023 | 34,327 | 21,200 |
| 23 February 2023 | 33,249 | 20,874 |
| 24 February 2023 | 33,290 | 20,767 |
| 25 February 2023 | 30,542 | 19,432 |
| 26 February 2023 | 31,046 | 20,442 |

Table 3: The number of EDs in total and in each UKHSA Region included in surveillance each day during the most recent week.

| UKHSA Region | Number of EDs ${ }^{2}$ |
| :--- | :---: |
| North East | 4 |
| North West | 26 |
| Yorkshire and Humber | 16 |
| West Midlands | 19 |
| East Midlands | 9 |
| East of England | 12 |
| London | 18 |
| South West | 15 |
| South East | 20 |
| Total | 139 |

${ }^{2}$ only attendances from Type 01 EDs meeting the weekly reporting criteria are included in this report, see Notes and caveats
for further details

## Respiratory conditions

## COVID-19-like

Figure 2: Daily number of COVID-19-like ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: covid-19-like 27/02/2022 to 26/02/2023

(b)

EDSSS: covid-19-like by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: covid-19-like by region 27/02/2022 to 26/02/2023

## Acute respiratory infections

Figure 3: Daily number of acute respiratory infection ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: acute respiratory infection 27/02/2022 to 26/02/2023

Black line is 7 day moving average adjusted for bank holidays.
Black dotted line is baseline. Grey columns show weekends and bank holidays.
(b)

EDSSS: acute respiratory infection by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: acute respiratory infection by region 27/02/2022 to 26/02/2023

## Acute bronchiolitis/bronchitis

Figure 4: Daily number of acute bronchiolitis/bronchitis ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: acute bronchiolitis 27/02/2022 to 26/02/2023

(b)

EDSSS: acute bronchiolitis by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: acute bronchiolitis by region 27/02/2022 to 26/02/2023

## Asthma

Figure 7: Daily number of asthma ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: asthma 27/02/2022 to 26/02/2023

(b)

EDSSS: asthma by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: asthma by region 27/02/2022 to 26/02/2023

## Gastrointestinal conditions

## Gastroenteritis

Figure 8: Daily number of gastroenteritis ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: gastroenteritis 27/02/2022 to 26/02/2023

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.
(b) EDSSS: gastroenteritis by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: gastroenteritis by region 27/02/2022 to 26/02/2023

## Cardiac conditions

## Cardiac

Figure 9: Daily number of cardiac ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: cardiac conditions 27/02/2022 to 26/02/2023

(b) EDSSS: cardiac conditions by age (years) 27/02/2022 to 26/02/2023

Emergency department syndromic surveillance system (England) bulletin
(c) EDSSS: cardiac conditions by region 27/02/2022 to 26/02/2023

## Myocardial ischaemia

Figure 10: Daily number of myocardial ischaemia ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: myocardial ischaemia 27/02/2022 to 26/02/2023

(b)

EDSSS: myocardial ischaemia by age (years) 27/02/2022 to 26/02/2023

(c) EDSSS: myocardial ischaemia by region 27/02/2022 to 26/02/2023

## Other conditions

## Acute alcohol intoxication

Figure 11: Daily number of acute alcohol intoxication ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: acute alcohol intoxication 27/02/2022 to 26/02/2023

(b)

EDSSS: acute alcohol intoxication by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: acute alcohol intoxication by region 27/02/2022 to 26/02/2023

## Mental health

Figure 12: Daily number of mental health ${ }^{3}$ ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
${ }^{3}$ mental health attendances reported here are those with a primary diagnosis in the ECDS mental health diagnosis grouping. Attendances where the primary diagnosis relates to overdose, alcohol use or self harm are not included.
(a)

EDSSS: mental health 27/02/2022 to 26/02/2023

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.
(b)

EDSSS: mental health by age (years) 27/02/2022 to 26/02/2023

## Scarlet fever

Figure 13: Daily number of scarlet fever ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
(a)

EDSSS: scarlet fever 27/02/2022 to 26/02/2023

(b)

EDSSS: scarlet fever by age (years) 27/02/2022 to 26/02/2023

Emergency department syndromic surveillance system (England) bulletin
(c)

EDSSS: scarlet fever by region 27/02/2022 to 26/02/2023

## Seasonal environmental conditions

During set periods of the year the Met Office operates both heat and cold weather watch systems, in association with UKHSA. Syndromic indicators are used to monitor the impact of both extreme hot and cold weather in England during these periods and will be included below (where an appropriate syndromic indicator is available).

Cold weather alert period: 1 November to 31 March
Heat-Health Alert period:1 June to 15 September

Highest weather alert level during the current reporting week:
Level 1 - Winter preparedness and action

## Impact of cold

Figure 14: Daily number of impact of cold ${ }^{4}$ ED attendances (and 7-day moving average adjusted for bank holidays), England (a) nationally, (b) by age and (c) by UKHSA Region.
${ }^{4}$ impact of cold attendances reported here are restricted to female attendances, with a primary diagnosis of fracture of the femur/wrist/forearm plus cold specific diagnoses of hypothermia, or cold injuries.
(a)

EDSSS: impact of cold 27/02/2022 to 26/02/2023

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.
(b)

EDSSS: impact of cold by age (years) 27/02/2022 to 26/02/2023

(c)

EDSSS: impact of cold by region 27/02/2022 to 26/02/2023

## Notes and caveats

The following additional caveats apply to the UKHSA emergency department syndromic surveillance system:

- the data presented are based on a national syndromic surveillance system:
- should be used to monitor trends not to estimate numbers of 'cases'
- an automated daily transfer of anonymised ED data is received from NHS Digital, from the Emergency Care Data Set (ECDS)
- not all EDs currently provide data on a daily basis, EDs are eligible for inclusion in this report only where:
- data relates to attendances at a type 01 ED
- data for 7 of the 7 most recent days was received
- data for those days was received within 2 calendar days of the patient arrival
- when an ED meets these criteria, all historical data from that ED is included
- EDs included each week is likely to change, which will affect the historical data inclusion
- national coverage each week is included in Table 2,
- the number of EDs in each region area is described in Table 3
- individual EDs will not be identified in these bulletins
- some syndromic indicators are hierarchical:
- acute respiratory infections includes:
- COVID-19-like . influenza-like illness
- acute bronchitis or bronchiolitis
- pneumonia
- other and non-specific acute respiratory infections
- cardiac conditions includes:
- myocardial ischaemia
- other and non-specific cardiac conditions
- baselines:
- were last remodelled January 2023
- are constructed from historical data since April 2018
- represent seasonally expected levels of activity
- take account of any known substantial changes in data collection, population coverage or reporting practices:
- the COVID-19 pandemic period is excluded, to show seasonally expected levels if COVID-19 had not occurred
- may be remodelled to include the impacts seen during periods of the COVID-19 pandemic if/when appropriate due to introduction of large scale public health interventions which may affect ED attendance levels

## Acknowledgements

We are grateful to the clinicians in each ED and other staff within each Trust for their continued involvement in the EDSSS.

We thank the Royal College of Emergency Medicine, NHS Digital and NHS England for their support in the development of national EDSSS, using anonymised data collection from ECDS.

## About the UK Health Security Agency

UKHSA is responsible for protecting every member of every community from the impact of infectious diseases, chemical, biological, radiological and nuclear incidents and other health threats. We provide intellectual, scientific and operational leadership at national and local level, as well as on the global stage, to make the nation heath secure.

UKHSA is an executive agency, sponsored by the Department of Health and Social Care.
