How much would you say you know about the following low carbon heating systems?

- a. **Air source heat pumps** - these extract heat from the outside air to heat your home and water.
 - b. **Ground source heat pumps** - these extract heat from pipes buried in the ground to heat your home and water.
 - c. **Hybrid heat pumps** - these combine heat pump and standard gas boiler technology to heat your home and water.
 - d. **Heat networks (also known as communal or district heating)** – these take heat from a central source and distribute it to multiple customers in a building or across several buildings.

LCHEATKNOW5-8 (*GRID*)

And how much would you say you know about the following low carbon heating systems?

- e. **Biomass boilers** - these work in a similar way to standard gas boilers to heat your home and water but instead use a renewable material such as wood pellets as fuel.
 - f. **Solar thermal panels** - these capture heat from the sun to provide hot water, typically in a storage tank. This is **not the same as solar panels** which use energy from the sun to produce electricity.
 - g. **Hydrogen boilers** - these work in a similar way to standard gas boilers to heat your home and water, but use hydrogen rather than natural gas as fuel. This technology is not currently available in the UK.
