

Permitting Decisions- Environment Agency Initiated Variation

We have issued an Environment Agency initiated variation for Swindon Clinical Waste Transfer and Treatment Facility operated by Tradebe Healthcare National Limited following a review of the permit in accordance with Environmental Permitting (England and Wales) Regulations 2016, regulation 34(1).

The variation number is EPR/CP3138QD/V002.

Permit Review

This Environment Agency has a duty, under the Environmental Permitting (England and Wales) Regulations 2016 (EPR), regulation 34(1), to periodically review permits. Article 21(3) of the Industrial Emissions Directive (IED) also requires the Environment Agency to review conditions in permits to ensure that they deliver compliance with relevant standards, within four years of the publication of updated decisions on Best Available Techniques (BAT) Conclusions.

We have reviewed the permit for this regulated facility and varied the permit to make a number of changes to reflect relevant standards and best practice. These changes principally relate to the implementation of our technical guidance <u>Healthcare waste: appropriate measures for permitted facilities</u> and the relevant requirements of the <u>BAT Conclusions for Waste Treatment</u>, which have been incorporated into our guidance.

In this decision document, we set out the reasoning for the variation notice that we have issued.

It explains how we have reviewed and considered the techniques used by the operator in the operation and control of the plant and activities of the installation (operating techniques) against our technical guidance.

As well as considering the review of the operating techniques used by the Operator for the operation of the plant and activities of the installation, the consolidated variation notice takes into account and brings together in a single document all previous variations that relate to the original permit issue. Where this has not already been done, it also modernises the entire permit to reflect the conditions contained in our current generic permit template.

Purpose of this document

This decision document provides a record of the decision making process. It:

- explains how the Environment Agency initiated variation has been determined;
- summarises the decision making process in the <u>decision considerations</u> section to show how the main relevant factors have been taken into account;
- highlights key issues in the determination.

Read the permitting decisions in conjunction with the environmental permit and the variation notice.

Key issues of the decision

Table S2.3 The following wastes have been removed at request of operator – 16 03 03*, 16 03 04, 16 03 05*, 16 03 06, 19 02 10, 20 01 01, 20 01 19*.

Wastes 15 02 02* and 15 02 03 have been changed to allow only "commercial, separately collected fractions of absorbents, wiping cloths and protective clothing".

EWC code 15 01 10* has been removed and 15 01 04 will be used to permit lead foils from dental care.

Table S4.1 the reporting period is 12 months in existing permit. Initially it is 6 months due to particulate matter and TVOC.

Environment Agency led variation – permit review

We have carried out an Environment Agency initiated variation to the permit following a permit review as required by legislation to ensure that permit conditions deliver compliance with relevant legislative requirements and appropriate standards to protect the environment and human health.

The Industrial Emissions Directive (IED) came into force on 7 January 2014 with the requirement to implement all relevant Best Available Techniques (BAT) Conclusions as described in the Commission Implementing Decision. Article 21(3) of the IED requires the Environment Agency to review conditions in permits that it has issued and to ensure that the permit delivers compliance with relevant standards, within four years of the publication of updated decisions on Best Available Techniques (BAT) Conclusions.

The BAT Conclusions for Waste Treatment (the BREF) was published on 17 August 2018 following a European Union wide review of BAT, implementing

1/3/2023

decision (EU) 2018/1147 of 10 August 2018. Relevant existing facilities must be in compliance with the BAT Conclusions within 4 years (i.e. by August 2022).

On 13 July 2020, Healthcare waste: appropriate measures for permitted facilities guidance was published on gov.uk. This technical guidance explains the standards that are relevant to regulated facilities with an environmental permit to treat or transfer healthcare waste, providing relevant standards (appropriate measures) for those sites and incorporating the relevant requirements of the BAT Conclusions.

We issued a notice under regulation 61(1) of the Environmental Permitting (England and Wales) Regulations 2016 (a Regulation 61 Notice) on 26/11/2020 requiring the operator to provide information to confirm that the operation of their facility currently meets, or how it will subsequently meet, the standards (appropriate measures) described in our technical guidance.

The notice required that where the revised standards are not currently met, the operator should provide information that:

- Describes the techniques that will be implemented to ensure operations meet the relevant standards and by when, or
- Explains why they are not applicable to the facility in question, or
- Justifies why an alternative technique is appropriate and will achieve an equivalent level of environmental protection to the standards described in our guidance

The standards described in our technical guidance are split into 7 chapters:

- General management appropriate measures
- Waste pre-acceptance, acceptance and tracking appropriate measures
- Waste storage, segregation and handling appropriate measures
- Waste treatment appropriate measures
- Emissions control appropriate measures
- Emissions monitoring and limits appropriate measures
- Process efficiency appropriate measures

We have set emission limit values (ELVs) and monitoring requirements for relevant substances in line with our technical guidance, unless a tighter, i.e. more stringent, limit was previously imposed and these limits have been carried forward.

The Regulation 61 notice required the operator to confirm whether they could comply the standards described in each of these chapters. Table 1 below provides a summary of the response received and our assessment of it. The overall status of compliance with the standards (appropriate measures) is indicated in the table as:

NA – Not Applicable

- CC Currently Compliant
- FC Compliant in the future (through improvement conditions set in permit)
- NC Not Compliant

In accordance with Article 22(2) of the Industrial Emissions Directive, the Regulation 61 notice asked the operator to provide a soil and groundwater risk assessment, along with a baseline report or summary report confirming the current state of soil and groundwater contamination, where listed activities are undertaken that involve the use, production of release of relevant hazardous substances.

The Regulation 61 notice also asked the operator to confirm whether they operate a medium combustion plant or specified generator (as per Schedule 25A or 25B of EPR 2016) and whether they had considered how their operations could be affected by climate changes (e.g. through a climate change adaptation plan).

Our assessment of the responses received from the operator regarding soil and groundwater risk assessment, medium combustion plant and specified generators, and consideration of climate change are also summarised in Table 1.

The Regulation 61 notice response from the Operator was received on 12/03/2021.

We considered that the response did contain sufficient information for us to commence determination of the permit review.

Appropriate measures	Compliance status	Assessment of the installation's compliance with relevant standards (appropriate measures) and any alternative techniques proposed by the operator
General management appropriate measures	CC	The operator confirmed that they currently meet the requirements of all appropriate measures in this section. Compliance with the appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.
Waste pre-acceptance, acceptance and tracking appropriate measures	CC	The operator confirmed that they currently meet the requirements of the appropriate measures in this section. Compliance with the appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.
Waste storage, segregation and handling appropriate measures	CC	The operator confirmed that they currently comply with all waste storage and handling appropriate measures. Compliance with the appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.
Waste treatment appropriate measures	CC	The operator confirmed that they currently comply with all waste treatment appropriate measures. Compliance with the appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.
Emissions control appropriate measures	CC	The operator confirmed that they currently comply with all the emissions control appropriate measures. Compliance with the appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.
Emissions monitoring and limits appropriate measures	FC	The operator confirmed that they currently comply with all the emissions monitoring and limits appropriate measures. We have set appropriate limits for emissions from the treatment process, based on Healthcare waste: appropriate measures for permitted facilities guidance, and the BREF. We have also set two improvement conditions: IC3 for the operator to provide an updated emissions inventory for the facility and assessment in accordance with our H1 methodology,

	IC4 for the operator to assess the risk of bioaerosol emissions from the steam vent serving the Rotoclave. This is abated via condenser and carbon filter. Compliance with the other appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.	
Process efficiency appropriate measures	CC The operator confirmed that they currently comply with all the process efficiency appropriate measures. Compliance with the appropriate measures in this section of the guidance has been incorporated into the varied permit through the updated operating techniques listed in Table S1.2.	
Reg 61 requirement	Assessment of response received	
Soil and groundwater risk assessment	Operator confirmed that no hazardous substances are released.	
Medium combustion plant and specified generators	Operator does not operate a medium combustion plant subject to the MCPD. The steam raising plant for the Rotoclave is considered an existing medium combustion plant and remains permitted as a DAA without the MCP conditions, limits and monitoring requirements and will be varied nearer to the relevant MCPD compliance date.	
Climate change	The operator confirmed that operations will not be affected by climate changes, there is no climate plan in place. Action on climate change adaption measures will be through the EMS condition of the varied permit.	
Summary of other changes mad	le to the permit as a result of our assessment of the Reg 61 response	
Change	Reason for change	
Improvement conditions	Existing improvement conditions relating to noise have been retained, with new submission dates:	
	Table S1.3 IC1 requires a detailed assessment of noise to be carried out and submitted to the Environment Agency for approval within 3 months of the permit issue.	
	Table S1.3 IC2 following the completion of IC2, if the noise and vibrations are likely to cause annoyance outside the boundary, then a report shall be submitted to the Environment Agency detailing proposals and timescales for implementing mitigation measures, this will be submitted within 2 months of completing IC1.	

 Table 1 – Summary of our assessment of the operator's Reg 61 response
