Notes: The 'Not fully vaccinated' numbers are calculated by subtracting the number of vaccinated children (according to the requirements of their age cohort) from the total number of children in their age cohort. All the data is taken from published **annual reports**, except age one, which is the sum of 4 quarters from the **2021 to 2022 quarterly reports** (2021 to 2022 annual data has not yet been published). From age 6 and above, the data is taken from the 5 year age cohort. These show more children as 'Not fully vaccinated', because they are eligible for the pre-school booster (DTaP/IPV) and vaccine coverage for this fourth dose is always lower than for the 3 doses of the primary course (DTaP/IPV/Hib/HepB).
