

Statistical release

The latest provisional monthly energy production, trade, consumption and prices statistics produced by the Department for Energy Security and Net Zero were released on 30 March 2023.

Energy production, trade and consumption statistics are provided in total and by fuel and provide an analysis of the latest 3 months data compared to the same period a year earlier. Energy price statistics cover domestic price indices, prices of road fuels and petroleum products and comparisons of international road fuel prices.

Energy production, trade and consumption

Highlights for the 3-month period November 2022 to January 2023, compared to the same period a year earlier include:

- **Primary energy consumption in the UK on a fuel input basis fell by 6.5%, with higher energy prices a key factor in reduced consumption levels. On a temperature adjusted basis consumption fell by 7.0%. ([table ET 1.2](#))**
- **Indigenous energy production fell by 4.4%, due to falls in oil production as a result of maintenance and nuclear due to outages. ([table ET 1.1](#))**
- **Russian imports have ceased. The UK has not imported any Russian gas since March 2022, and there have been no Russian oil imports since December 2022; in the latest 3 months Russian oil imports accounted for just 0.1% of total oil imports, down from 12.4% last year. ([table ET 4.4](#) and [table ET 3.14](#))**
- **Gas exports up significantly; the UK has been playing a key role in supplying gas to Europe as it looks to move away from Russian gas. ([table ET 4.3](#))**
- **Electricity generation by Major Power Producers down 3.5%, with coal down 28%, gas down 13%, nuclear down 10% but renewables up 12% due to increased capacity and more favourable weather conditions, with total wind and offshore wind generation at record 3 monthly high levels, and offshore wind at a record high monthly level in January 2023.* ([table ET 5.4](#))**
- **Renewables provided 43.8% of electricity generation by Major Power Producers, with gas at 37.6%, nuclear at 15.6% and coal at 2.2%.* ([table ET 5.4](#))**
- **Low carbon share of electricity generation by Major Power Producers up 4.8 percentage points at 59.4%, whilst fossil fuel share down 4.8 percentage points at 40.1%.* ([table ET 5.4](#))**

*Major Power Producers (MPPs) data published monthly, all generating companies data published quarterly.

Energy prices

Highlights for March 2023 compared to February 2023:

- **Petrol down 1.1 pence per litre and diesel down 2.7 pence per litre. ([table QEP 4.1.1](#))**

Data periods and coverage

Statistics on monthly production, trade and consumption of coal, electricity, gas, oil and total energy include data for the UK for the period up to the end of January 2023.

Statistics on average temperatures, heating degree days, wind speeds, sun hours and rainfall include data for the UK for the period up to the end of February 2023.

Statistics on energy prices include retail price data for the UK for February 2023, and petrol & diesel data for March 2023, with EU comparative data for February 2023.

Next release

The next release of provisional monthly energy statistics will take place on Thursday 27 April 2023.

Data tables

To access the data tables associated with this release please click on the relevant subject link(s) below. For further information please use the contact details provided.

Please note that the links below will always direct you to the latest published data tables. If you are interested in historical data tables, please contact DESNZ (kevin.harris@beis.gov.uk).
