BIOSECURITY MEASURES PLAN

Template Version: BMPMASTER.2023.0001

1. BIOSECURITY MEASURES PLAN SITE INFORMATION

Site/Business Name	
Authorisation Number (EW/CW)	

Biosecurity Manager

Name	
-------------	--

BMP Approval (Operator)

I hereby agree to the declarations made within this biosecurity measures plan. I understand that failing to comply to the conditions agreed may result in enforcement action being taken against me.

Biosecurity Manager Signature (a typed name is acceptable)		Date	
--	--	-------------	--

BMP Approval (Inspector)

Inspector Approval Stamp

 Centre for Environment Fisheries & Aquaculture Science

SITE PLAN

The plan must clearly show details of water supply (for all APB's other than inter-tidal/offshore farms), location of any regulation 23/ epidemiologically isolated facilities for importers (the entire site if this is the case), discharge and drainage (for all APB's other than inter-tidal/offshore farms), screens, physical biosecurity measures etc. All waters/ holding systems should be numbered, named or otherwise clearly described on the plan. If the site maintains separate bio-security zones as detailed below, please ensure these are clearly visible and labelled.

SITE DETAILS – RECORD KEEPING

As detailed within the authorisation certificate an APB must maintain certain records. Please detail how these records are kept below. If prescribed format is not used, please state why in the “Format Used” section.

Record Type	FHI Prescribed Format	Format Used (How recorded)
Movements	FHI online (http://lfm.cefas.co.uk/)	
Mortalities	N/A	
Medicine records	N/A	
Transport records	N/A	

Please provide information for all bio-security zones/areas: Epidemiologically separate zones will only be recognised if there are agreed and continually maintained biosecurity measures in place. These can include but are not limited to clear physical barriers, separate equipment for each zone (unless bio-security measures in place and described), appropriate site plan with zones identified, movement records kept and maintained between zones etc. Ensure all information is representative of the site plan and provide as much detail as appropriate. If the whole site is a singular bio-security zone, please state this. The FHI will regularly review bio-secure zones and reserves the right to recognise changes to their status if agreed biosecurity measures are not maintained or adequate.

Zone / Bio-secure area name/number	Separation measures utilised
<i>E.G. "Zone 1: "Hatchery"</i>	<i>E.G.: "Zone 1: "Hatchery" is contained solely within a separate room, and demonstrated in the site plan, it is accessible by lockable door, and access only granted to certain members of staff as detailed in the BMP, all equipment that is to be used ONLY within zone 1 can be identified by the use of yellow colouring, Fish only to be taken in and out of zone 1 with permission of the management of that zone, in case of zone 1 this is Joe Bloggs or Joanna Bloggs in his absence etc."</i>

2. BIOSECURITY RISK ASSESSMENT

Identify how your business could contract and/or spread a disease through site activities. Detail the risk limitation methods, how you will monitor and record these measures if appropriate. An example has been given, please include other relevant examples to your site/farming practices.

Site Activity / Operation	Risk Identified	Risk Limitation Measures & Recording
<i>Fish movements</i>	<i>Transfer of disease through fish movements on/off and within site</i>	<i>Movements recorded within FHI online, mortality records kept. Serious and/or unexplained mortalities will be notified to the FHI. Good animal husbandry maintained. Internal movements recorded if fish moved between epidemiological zones/units. Ponds sufficiently screened to prevent the ingress and escape of fish.</i>

Site Activity / Operation	Risk Identified	Risk Limitation Measures & Recording
