### **Monthly Summary**

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of air quality and dust monitoring undertaken in the London Borough of Ealing (LBE) during March 2023 and April 2023 respectively.
- 1.1.2 Figure 1 to Figure 3 in Appendix A indicate the current worksites together with air quality and dust monitoring locations.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report available from <a href="www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2">www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2</a>, which highlights: the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current phase of construction works commenced in October 2019 and is expected to be completed by 2025. The current worksites, as presented in Appendix A, Figure 1 to Figure 3, include:

### Old Oak Common Depot (located in the London Borough of Hammersmith and Fulham)

- Old Oak Common Depot and mobilisation and new site set up for the station works.
- Ground reduction and muck away West Box / East Box;
- Intermediate level dig / D-wall breakdown / Excavation / Steel fixing Station Box;
- Manhole construction Stanford Brook Sewer;
- Site haul roads and public roads adjacent to site cleaning with a road sweeper;
- Formwork installation / concrete pour / ground reduction Crossrail and Station Access Retaining Walls;
- Excavations Satellite Site A / Old Oak common Lane Bridge; and
- Piling works GWML.

### Victoria Road Crossover Box and Flat Iron Site

- · Groundworks;
- Piling operations shaft construction; and
- Conveyor construction.

#### Willesden Euro Terminal

- Excavated material spoil management; and
- Conveyor construction.

#### **Atlas Road**

Piling operations;

Air Quality and Dust Monitoring Summary Report, April 2023 London Borough of Ealing

- Groundworks;
- Conveyor construction; and
- Tunnel entrance construction.

### **Green Park Way Vent Shaft**

- · Groundworks;
- Piling operations;
- Vent shaft construction; and
- Materials management.

#### **Mandeville Road Vent Shaft**

- · Groundworks;
- Piling operations; and
- Materials management.

### **Westgate Vent Shaft**

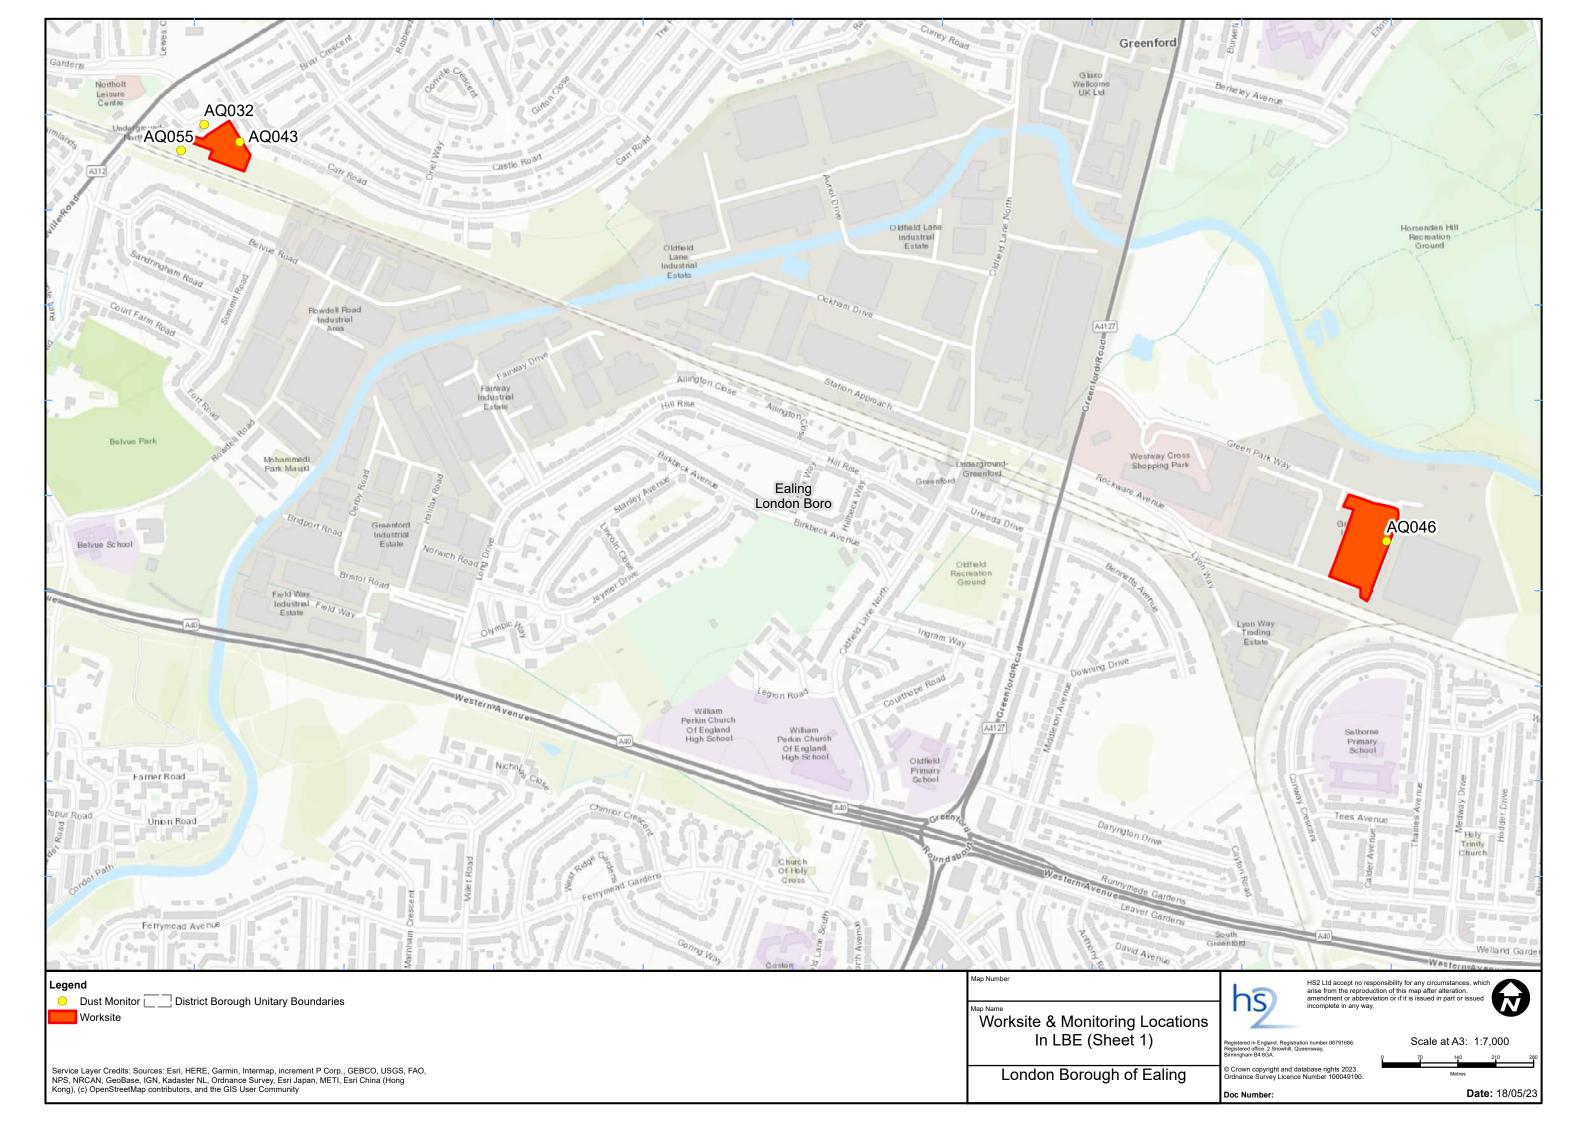

- · Groundworks;
- Piling operations;
- · Vent shaft construction; and
- Materials management
- 1.1.5 Seventeen (17) dust monitors were installed around worksites, where works are underway. These sites returned a medium dust risk rating.
- 1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1, together with line charts of monthly data from each dust monitor, in Figure 4. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.7 The trigger level for  $PM_{10}$  concentrations of 190  $\mu$ g/m<sup>3</sup>, over a 1-hour period, in accordance with the updated guidance document 'Guidance on Monitoring in the Vicinity of Demolition and Construction Sites (October 2018)' has been applied.
- 1.1.8 No (0) dust trigger alert was recorded during the monitoring period (April 2023).
- 1.1.9 Data capture was below 90% for monitor AQ027 in March 2023 due to works in the area requiring the disconnection and subsequent relocation of the monitor.
- 1.1.10 Diffusion tube monitoring of Nitrogen Dioxide (NO<sub>2</sub>) is undertaken at six (6) locations around highways within the LBE as part of the management of air quality where significant effects occur as a result of the scheme.

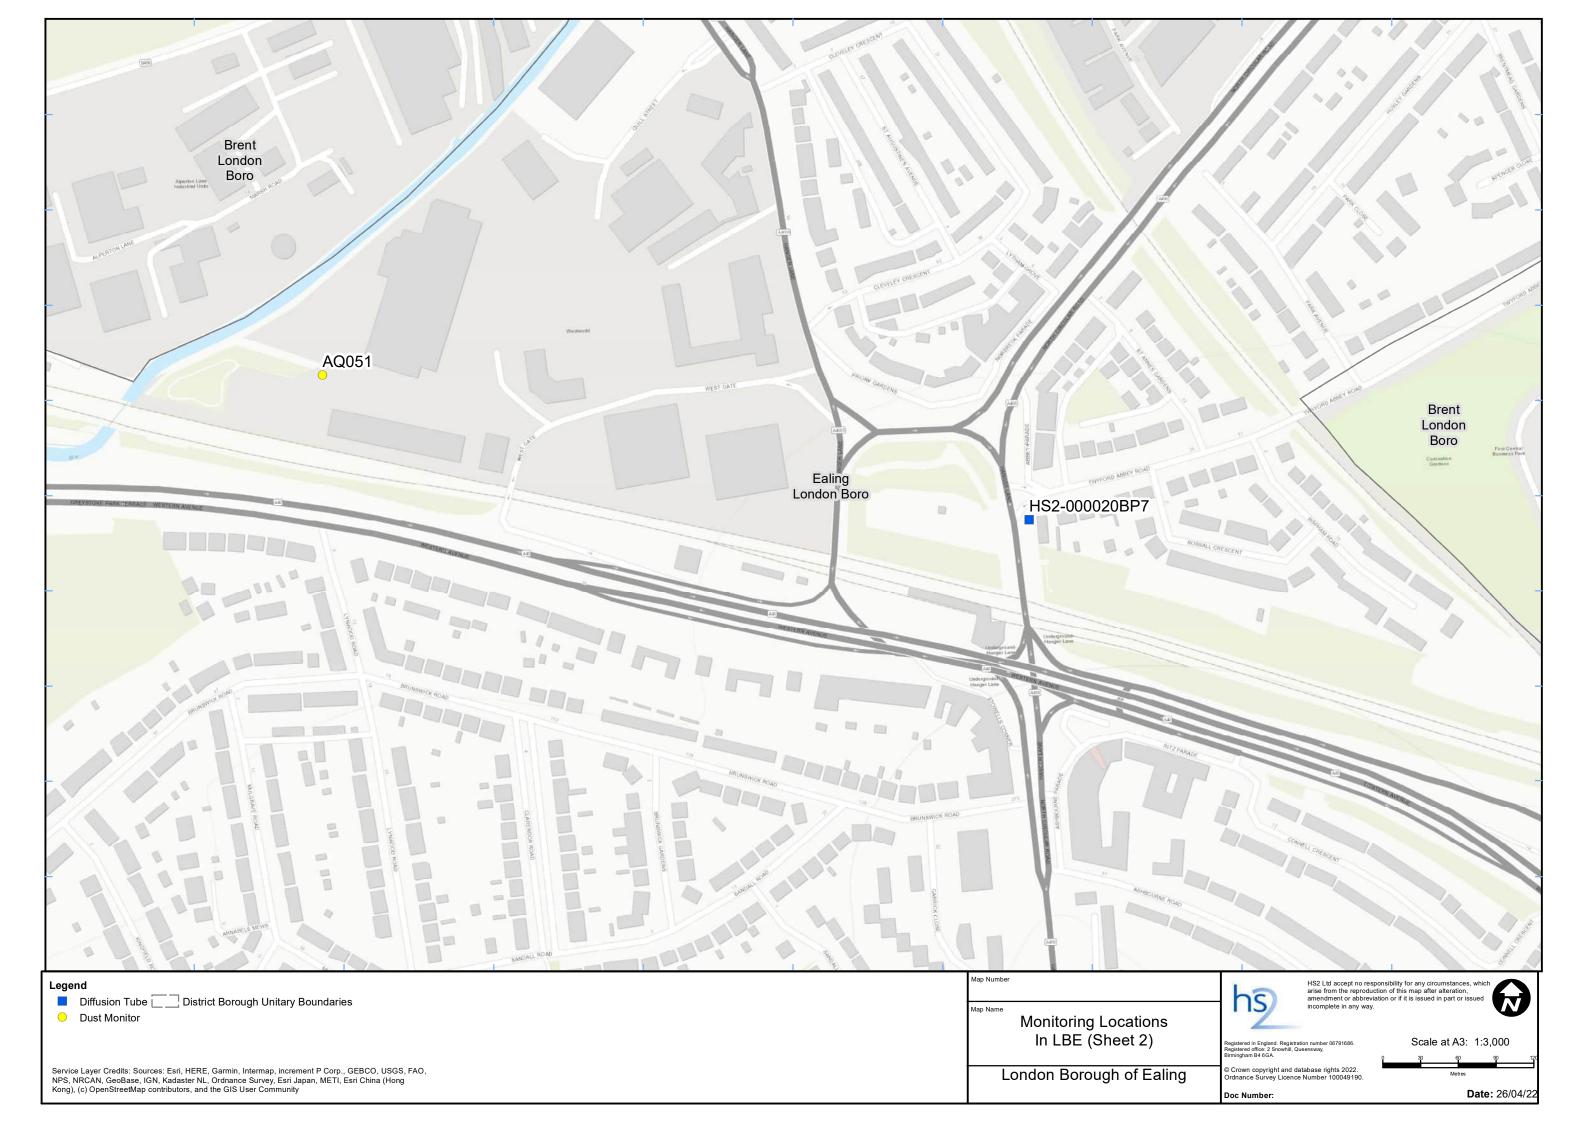

Air Quality and Dust Monitoring Summary Report, April 2023 London Borough of Ealing

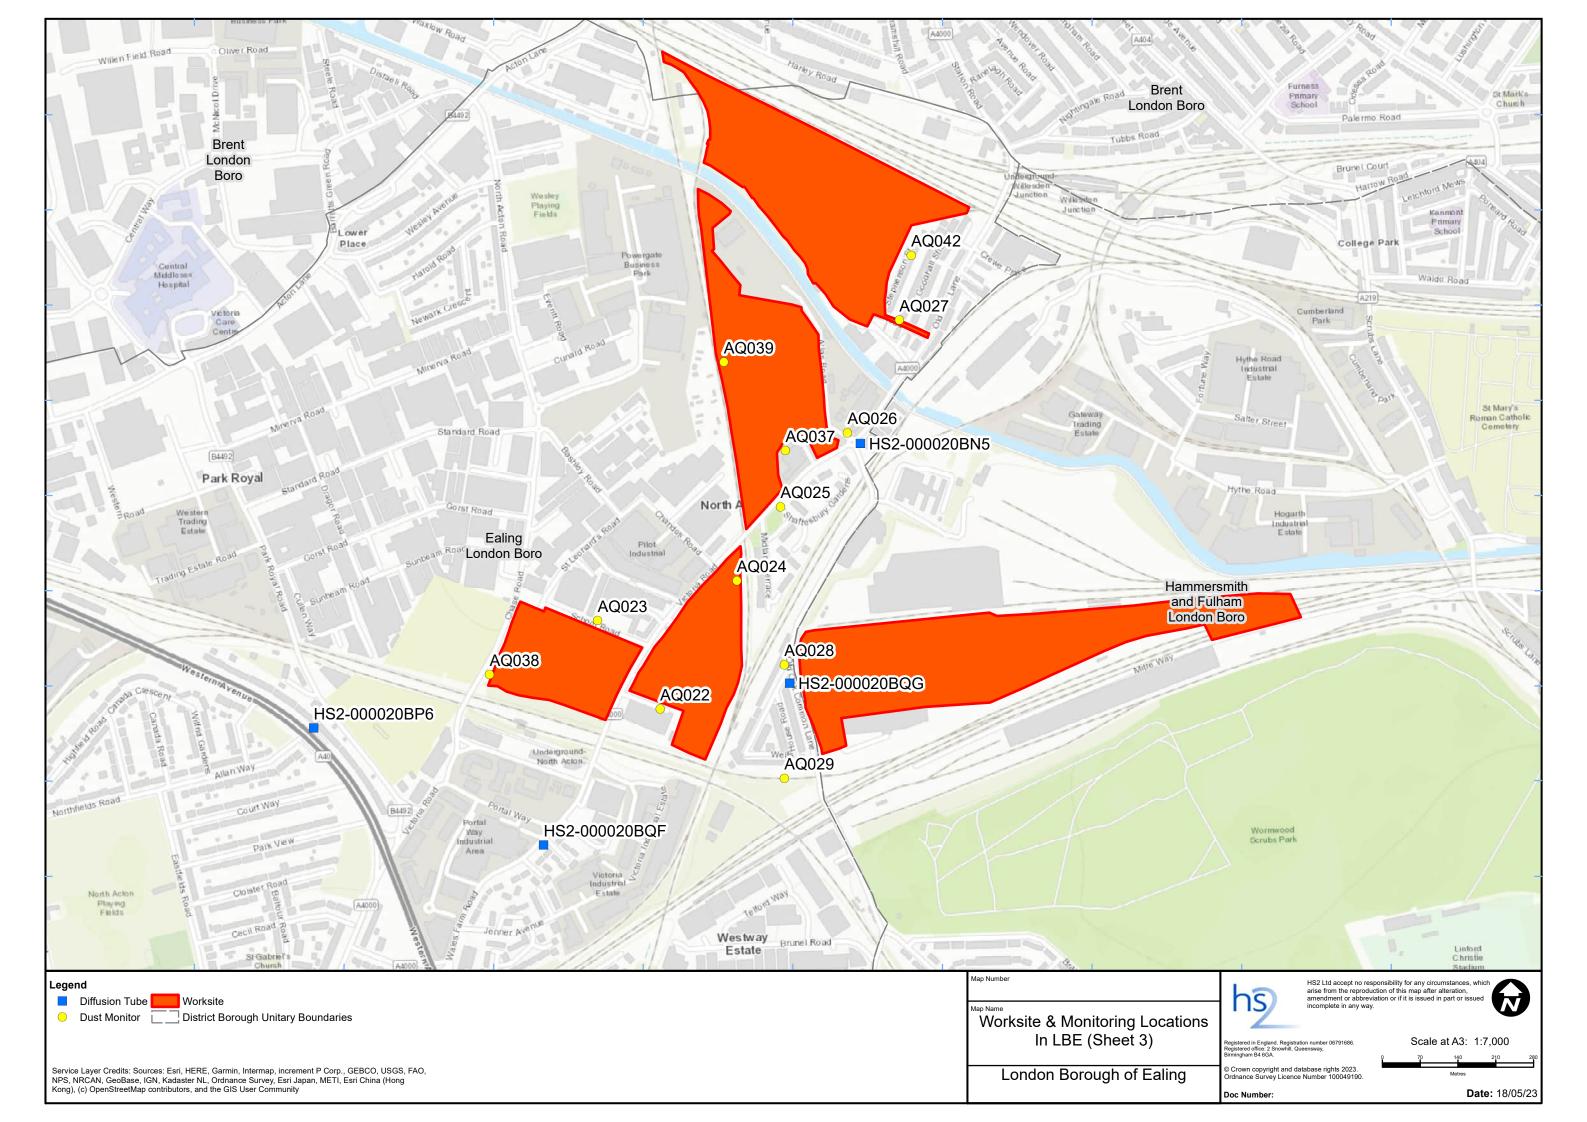

- 1.1.11 Diffusion tube monitoring results are as provided from the laboratory analysis, and therefore still require various analysis and adjustments to be undertaken. Final corrected results will be presented and described in the annual report. However, based on the results to date, no unexpected values were recorded during the monitoring period.
- 1.1.12 NO $_2$  monitoring locations and results are presented in Appendix C, Table 3, together with the 2023 running mean.
- 1.1.13 There were no (0) complaints received during this reporting period (April 2023).

# **Appendix A - Worksites and Monitoring Locations**

HS2-000020BP6	Triplicate site next to the Ealing, Western Avenue Acton roadside automatic monitoring station	520430, 181950	44	49	37										43
HS2-000020BP7	Triplicate site next to the Ealing, Hangar Lane Gyratory roadside automatic monitoring station	518537, 182708	71	63	57										64

<sup>&</sup>lt;sup>1</sup> Note: to aid interpretation and conform with best practice, the monthly measurements in this table are reported rounded to the nearest whole number. The annual mean presented here is calculated based on laboratory data to 4 significant figures, rounded to a whole number, and therefore may differ slightly to a mean derived from averaging the rounded monthly measurements in the table.
