

Air Quality and Dust Monitoring Monthly Report – April 2023

Three Rivers District Council

Department for Transport

High Speed Two (HS2) Limited has been tasked by the Department for Transport (DfT) with managing the delivery of a new national high speed rail network. It is a non-departmental public body wholly owned by the DfT.

High Speed Two (HS2) Limited,

Monthly Summary

- 1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High-Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of dust monitoring undertaken in the Three Rivers District Council (TRDC) during April 2023.
- 1.1.2 Figure 1 in Appendix A indicates the current worksite together with the dust monitoring locations for April 2023.
- 1.1.3 This summary should be read in conjunction with the overview monitoring report available from www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2, which highlights the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.
- 1.1.4 The current worksites as presented in Appendix A, Figure 1, include:
- General Plant: wheel washers, generators and site-wide support plant;
 - Earthworks and Drainage: soil strip, excavation, filling, subgrade and ground stabilisation;
 - Civils: platforms, accommodation and slabs;
 - I&M Installation: site-wide;
 - Stockpiling: INNS stockpile management and storage of excavated materials from CV pile arisings and vent shaft sites in SP10 and West Hyde Embankment;
 - Site Wide Fencing-Phase D & F Fencing and STP Acid Storage Fencing;
 - Batching Plant 1, 2 and 3: collection of concrete for activity at vent shaft sites and batching plant 1, 2 & 3 - deliveries and operation;
 - Tunnel Precast Factory: factory NB2 production and factory NB1 production;
 - Viaduct Precast Factory;
 - Western Valley Slope Cake Placement: earthworks chalk cake placement;
 - Tunnelling Works (Surface Support);
 - CVV Jetty Pre-Cast Yard Operation;
 - Concrete Breaking Activities;
 - Pugmill Plant Operation;
 - South Portal Civils Works: permanent works and porous works;
 - Surface Water Management;
 - CVV Formwork Assembly;
 - Road and Hardstanding: surfacing, grading and excavation; and
 - CVV Bridge Parapet Mock-up Works.

- 1.1.5 Four (4) dust monitors are installed around the worksite, where works are underway. These sites returned a medium dust risk rating.
- 1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1, together with a line chart of monthly data from each dust monitor, presented in Figure 2. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.7 The trigger level for PM₁₀ concentrations of 190 µg/m³, measured as a 1-hour mean, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (December 2018)*' has been applied.
- 1.1.8 There were no (0) dust trigger alerts recorded during the monitoring period (April 2023).
- 1.1.9 Data capture was below 90% for SP-AQMP3 due to technical issues and/or loss of power due to insufficient sunlight/wind for monitors using solar/wind power.
- 1.1.10 No (0) complaints were received during the reporting period (April 2023).
