

# NOIDs WEEKLY REPORT

## STATUTORY NOTIFICATIONS OF INFECTIOUS DISEASES

in ENGLAND and WALES

WEEK 2023/28 week ending 16/07/2023

### CONTENTS

Table 1	Statutory notifications of infectious diseases in the past 6 weeks with totals for the current year compared with corresponding periods of the 2 preceding years
Table 2	Statutory notifications of infectious diseases for diseases for WEEK 2023/28 by UKHSA region, county, local and unitary authority including additional diseases notifiable from 6 April 2010

Registered Medical Practitioner in England and Wales have a statutory duty to notify a Proper Officer of the local authority, often the CCDC (Consultant in Communicable Disease Control), of suspected cases of certain infectious diseases:

Acute encephalitis	Haemolytic uraemic syndrome *	Rubella
Acute infectious hepatitis	Infectious bloody diarrhoea *	SARS *
Acute meningitis	Invasive group A Streptococcal disease	Scarlet fever **
Acute poliomyelitis	Legionnaires disease *	Smallpox
Anthrax	Leprosy	Tetanus
Botulism *	Malaria	Tuberculosis
Brucellosis *	Measles	Typhus
Cholera	Meningococcal septicaemia	Viral haemorrhagic fever
Covid-19	Monkeypox	Whooping cough
Diphtheria	Mumps	Yellow fever
Enteric fever (typhoid or paratyphoid)	Plague	
Food poisoning	Rabies	

#### \* Notifiable from 6 April 2010

Notifications of infectious diseases, some of which are later microbiologically confirmed, prompt local investigation and action to control the diseases. Proper officers are required every week to inform the UK Health Security Agency (UKHSA) (formerly the Registrar General) anonymised details of each case of each disease that has been notified. UKHSA has responsibility of collating the weekly returns from proper officers and publishing analyses of local and national trends.

#### \*\* See appendix A for details about Scarlet Fever reporting

**Table 1 Statutory notifications of infectious diseases in the past 6 weeks, with totals for the current year compared with corresponding periods of the preceding 2 years.**

**England and Wales**  
including Port Health Authorities

## **Appendix A - Scarlet fever and group A streptococcus reporting**

The sharp increase in scarlet fever and other group A streptococcus infections and increased awareness and vigilance amongst clinicians has led to a significant rise in scarlet fever notifications in recent weeks. This means that notifications of cases of scarlet fever are taking longer to appear in our published data after being processed.

On 20 December 2022, NOIDs were updated to include an additional 9,945 scarlet fever notifications. These were reported between 7 November and 11 December 2022, with the vast majority of notifications occurring since 5 December 2022. Data on invasive group A streptococcus, the more serious infection, is not impacted. There is no impact on clinical management of cases relating to this delay in reporting and public health actions were taken where necessary at the time.

Our teams are working at pace to ensure published data reflects all formal notifications received in recent weeks and local authority data will be updated once full data entry has occurred.

Any public health action, where necessary, is taken when UKHSA is informed of a case of scarlet fever, irrespective of whether it has been entered into NOIDs. UKHSA teams continue to manage outbreaks and have carried out all necessary public health interventions needed to reduce further transmission in outbreaks, especially in vulnerable settings such as schools and nurseries.
