1 Introduction

1.1 Audience and purpose

This document specifies the data to be returned to the Department for Education (DfE) during the 2024 school level annual school census (SLASC) for registered independent schools and applies to registered independent schools only.

1.2 Statutory requirement

Completion of the census is a statutory requirement under the [Independent Educational Provision in England \(Provision of Information\) and Non-Maintained Special Schools \(England\) and Independent School Standards \(Amendment\) Regulations 2018](#)

which are made under the [Education and Skills Act 2008](#).

A statutory requirement:

- provides a
 - lawful basis for processing
 - purpose for processingas required by the UK General Data Protection Regulation (UK GDPR)¹
- means that independent schools do not need to obtain staff consent to the provision of information
- ensures independent schools are protected from any legal challenge that they are breaching a duty of confidence to staff.
- helps to ensure that returns are completed by independent schools
- means that all census elements are mandatory unless specifically stated to be voluntary

It should be noted that: where a school proprietor fails to ensure that the school completes the census, such a school can be removed from the register of independent schools. Such de-registration can be the subject of an appeal to the First Tier Tribunal.

¹ The Information Commissioners' Office (ICO) guidance on UK GDPR states: 'Your privacy notice should include your lawful basis for processing as well as the purpose of the processing.' For the data items collected for the purposes of this census, the regulations quoted above provide both a lawful basis and a purpose of such processing. Registered independent schools may have other lawful basis' for collection and other reasons for processing.

1.3 Technical specification

The technical specification for the 2024 collection is comprised of the following documents:

- this MS Word document, containing a narrative together with sample XML messages
- the common basic data set ([CBDS](#)) MS Excel workbook
- the validation rules in an MS Excel workbook

A guide is also produced to inform registered independent schools, in non-technical terms, of the data collection requirements and to advise on what data is to be provided. This documentation is available on the GOV.UK [website](#).

The scope of the census collection (which pupils and data items are included within the census) is defined by this MS Word document and not by the validation rules. The validation rules are provided to assist software suppliers in the development of their systems and to enable a check of the data extracted for the collection.

1.3 Business rationale

The following factors are the business drivers behind this approach:

- it is consistent with the overall vision behind the data sharing protocol of collecting data once and using it many times
- it is based on the principle that schools are expected to hold / manage data or have data held on their behalf so that they can access and extract it

1.4 Assumptions

Assumptions made in creating this specification:

- this specification is for a return using the DfE COLLECT system as the data collection mechanism; this is the DfE's preferred data collection method
- where returns are generated from the school's management information system (MIS), DfE will only accept submissions in XML format
- returns via direct manual input to the COLLECT system may also be made

1.5 Coverage and timings

All registered independent schools are required to return the specified data annually via the DfE COLLECT system. The census date is the third Thursday in January (18 January 2024). The statutory return deadline is 18 February 2024.

1.6 Changes from the 2023 SLASC specifications

The collection includes voluntary data items to collect the aggregate number of pupils who are young carers. (See section 3.6.6)

2 Structure and guidance

2.1 Outline data content

Each return from a school will consist of a header and one or more school modules.

2.2 Message header

A standard XML message header is required for each census file. Annex A of this specification contains a sample XML message header. The data items required within the header are as follows:

Survey Collection Name <Collection> (N00600) will be SLASC. <i>Description: name of the data collection that is: SLASC.</i>
Survey Year <Year> (N00602) will be 2024. <i>Description: the year of the collection.</i>
Survey Reference Date <ReferenceDate> (N000603) will be 2024-01-18. <i>Description: the reference date is normally the day of the census or collection. It is used as the baseline date from which comparisons with other dates in the return can be made.</i>
Source Level <SourceLevel> (N00604) will be S. <i>Description: must be set to S for a school system (local authority level code L is not applicable for this collection).</i>
Local authority <LA>, (N00216) is the local authority number. <i>Description: standard DfE three-digit local authority number.</i>
Estab <Estab>, (N00279) will be mandatory and the tags should be included in the XML. <i>Description: standard DfE four-digit establishment number.</i>
Software Code <SoftwareCode> (N00605) is the code indicating the software supplier. This is allocated by the supplier. <i>Description: software product identification. Suppliers must advise DfE of the code used.</i>
Release <Release> (N00607) is a code / date (or combination) provided by the software supplier to assist in identification. <i>Description: software product identification.</i>
X version <Xversion> (N00608). <i>Description: Version number of the XML / XSLT package provided by DfE if used or “not used” if the software supplier produces their own XSLT.</i>
Serial No <SerialNo> (N00606) will start at 001 and then be incremented by 1 each time a new file is prepared for submission. <i>Description: an incremented number generated by a provider's software. Enables data collection systems to identify re-submissions.</i>
Date / Time <DateTime> (N00609) is the date and time when the file was prepared or generated in CCYY-MM-DDThh:mm:ss format. <i>Description: date and time of generation of the return.</i>

3 Guidance section

3.1 Overall description and scope

The details below describe the 2024 school level annual school census collection for registered independent schools.

3.2 Outline data content

The census return contains a number of modules for each school. All data items included in each of the modules are defined within the common basic dataset ([CBDS](#)).

3.3 Section 1 – general school information

This section contains general information and contact details for the school and which consists of the following elements:

3.3.1 School

a) Direct input via COLLECT

- name
- main school address
- postcode
- telephone number
- headteacher's name (title, forename and surname)
- school email address <Email> (N00220)

b) Either direct input via COLLECT or input via XML from MI system

- census contact email address <ContactEmail> (N00220) – Please note: this uses the same standard as <Email> and therefore uses the same data item number. As there are two email address fields within the same container, the XML tag is amended to provide differentiation.
- contact name (for enquiries) <Contact> (N00232)
- contact telephone number <PhoneNo> (N00231)

3.3.2 Charity

- name <CharityName> (N00502)
- registered number <CharityNumber> (N00503)

Please note: COLLECT is pre-populated with the information shown above and only amendments to the above data are required with the exception of the school contact name, telephone number, school email address and census contact email address. Amendments can only be made manually on COLLECT and therefore are not included within the XML structure. For any such amendments, the XML file is always uploaded first, with any data amendments made subsequently.

3.4 Section 2 - school accommodation

Data item <SchoolAccommodationChange> (N00305) records, via a 'Yes' / 'No' query, whether there have been any changes to the school's accommodation which have not yet been notified to DfE. Where the answer is 'Yes' full details must be provided using <SchoolAccommodationChangeDetails> (N00306).

3.5 Section 3 - annual fees

The annual fees charged by the school are recoded using the following data items:

- lowest annual day fees <LowestAnnFeeDayPups> (N00307)
- lowest annual boarding fees <LowestFeeBoardingPups> (N00308)
- highest annual day fees <HighestAnnFeeDayPups> (N00309)
- highest annual boarding fees <HighestAnnFeeBoardingPups> (N00310)

3.6.6 Pupils who are carers

Number of young carers	
Number of young carers identified by parent or guardian <CarerParent> (N00789)	
Number of young carers identified by school – including where the pupil self declares <CarerSchool> (N00790)	

This identifies young carers in independent schools at an aggregate level. The young carer indicators (N00789) & (N00790) records the number of children on roll who have been identified as a young carer and if so, by whom.

These items are voluntary in the 2024 collection

Section 17ZA of the Children Act 1989 says a young carer is a person under 18 who provides or intends to provide care for another person (which isn't to a contract or voluntary work).

Young carers show immense commitment in providing care and support to family members at home; but their own needs may remain 'hidden' from wider view. The increased pressures young carers have faced due to the pandemic has further highlighted the need to improve formal identification of this cohort in schools, understand their needs and to provide early help as outlined in statutory guidance [Keeping children safe in education 2021](#)

[Working Together to Safeguard Children](#) also outlines how school and college staff should be particularly alert to the potential need of early help for students who have taken on caring responsibilities.

3.7 Section 5 - pupils with special educational needs (SEN)

Where schools have pupils with SEN, the numbers of pupils are recorded by SEN registration type. Where a school does not have pupils with SEN, the field is filled with a zero.

4 Data return formats

A submission file from the school is to be provided in a XML file structure as described in Annex A of this specification. Where an optional item is not included then the associated XML tag should also be omitted. Where a mandatory item is omitted then an error will be generated.

4.1 Special notes for XML returns

The standard XML entity references should be used for the following special characters:

Character	Entity reference
Ampersand (&)	&
Left angle bracket (<)	<
Right angle bracket (>)	>
Single quote / apostrophe (')	'
Double quotes (")	"

For special characters such as é use a character reference such as é. This produces a generic XML file which can be viewed as such in a suitable browser. Details of all such characters are found within the XML standard documentation; see for example [Extensible markup language \(XML\) 1.0 \(fifth edition\)](#) section 2.

It is expected that all numeric data will be supplied as integers.

5 Data validation rules

This section specifies validation rules that are applied to the data by DfE, using COLLECT. They should also be applied, as far as possible, by schools prior to loading the data into the COLLECT system and any issues resolved before continuing with the upload to COLLECT. Those data items included in the specification but not appearing in the validation rules, that is: those not shown in the validation rules as must be present - should be supplied where available. The rules also show which validations are errors and which ones are queries. An error is a failed validation check that must be corrected. A query is one which must be investigated, and potentially corrected or explained, as it identifies data that we would not usually expect and may be invalid.

Syntax:

- validation checks are expressed as conditions that must be true (errors) or that should be true (queries). The error message shows what is displayed if the condition fails
- data items are indicated using the XML tag with the CBDS number in parentheses where this number is available. Many data items do not have CBDS numbers. CBDS tends mostly to cover individual data items not aggregate sums of pupil numbers against certain characteristics
- data groups are indicated using the XML tag only
- single dates or date ranges are sometimes defined in relation to the <ReferenceDate> (N00603), which is taken from the XML header

6 Resubmission guidance

When resubmissions are required the serial number in the header must be incremented by the provider's software. Only a whole file can be resubmitted therefore a resubmission will delete and replace all of the data contained in the previous submission.

7 Valid values

Valid item values must be in the list or range specified in the common basic dataset, ([CBDS](#)).

7.1 Local authority codes

Local authority codes [CBDS number (N00216), codeset CS003] for this collection only covers local authorities in England. Coverage also excludes local authority codes:

- 001, 003, 167;
- codes starting with 6 and 7;
- XXX, MMM and NAA.

7.2 Establishment number

Establishment number [CBDS number (N00279)] for this collection only covers the following ranges:

- 6000-6899 Independent

8 General notes

XML file generic naming conventions

The following file naming conventions apply: the file extension will be XML. The file name shall be constructed from the following components:

- origin identifier consisting of the local authority number followed by the establishment number (7 digits) – such as: '8016000'
- census / data extraction type where 'IND1' indicates that it is an independent school file containing aggregated school level data relating to the January school level annual school census (SLASC)
- destination identifier where the first three characters are the local authority number, fourth / fifth characters are 'LL' and the sixth / seventh characters are the last two digits of the year (7 characters) – such as: '801LL24'
- serial number (3 digits) – such as: '001'
- The components should be separated by underscore characters (_).

An example of an 'IND SLASC' file:

- 8016000_IND1_801LL24_001.XML

The total file name length equals 28 characters.
