Performance Metrics

Assessment of Clinical Trial Authorisation Applications, Clinical Investigations and Amendments

November 2022 – October 2023

Overview

Explanation of the metrics provided

Overview

We have provided metrics for clinical trials assessment performance, as follows.

- Average timelines for assessment of initial clinical trial authorisation (CTA) applications (by month), and substantial amendments for applications submitted from 1 September 2023 onwards. (Since December 2021, applicants have had the flexibility to request additional time to respond to grounds for non-acceptance (GNA); therefore, the average assessment timeline for CTA applications has been divided into ‘first review’ (from receipt of valid application to first opinion letter) and ‘second review’ (from receipt of GNA response to final opinion letter). Before December 2021, applicants were required to respond to all GNA within 14 days.)
- The number of CTA applications received and assessed by month.
- The number of substantial amendment applications received and assessed by month.
- The number of Clinical Investigations for medical devices completed by month.

Summary of changes

Changes compared with the previous month

Summary of changes

Review times for clinical trials applications

Statutory timeframes are being met for all applications submitted after 1 September 2023.

Number of applications

The number of initial clinical trial authorisation (CTA) applications received in October 2023 decreased compared with September 2023 (from 77 to 63 applications), and the number of substantial amendments received decreased (from 490 to 479 amendments). For initial CTAs, the number of applications assessed in October 2023 increased compared with September 2023 (131 compared with 93 initial applications), while the number of substantial amendments assessed decreased (352 compared with 593 amendments).

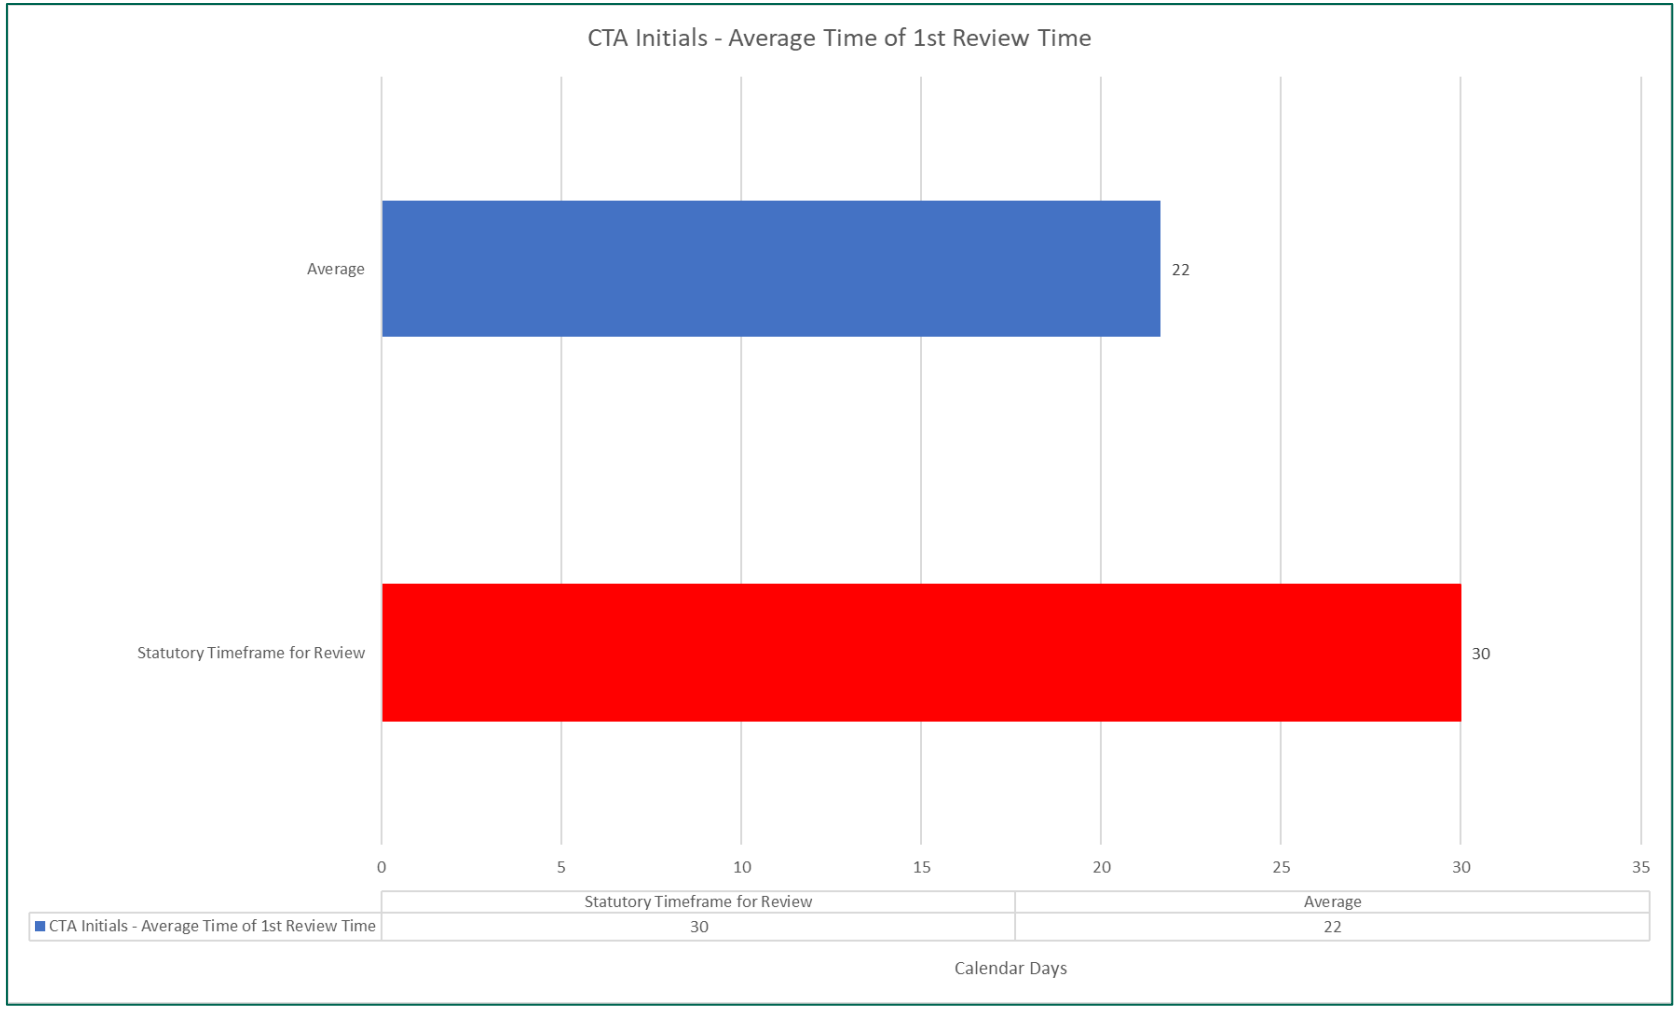
Review times for clinical investigations

We are now publishing data on clinical investigations for medical devices from November 2022.

Application timeframes

Clinical Trial Authorisation Applications

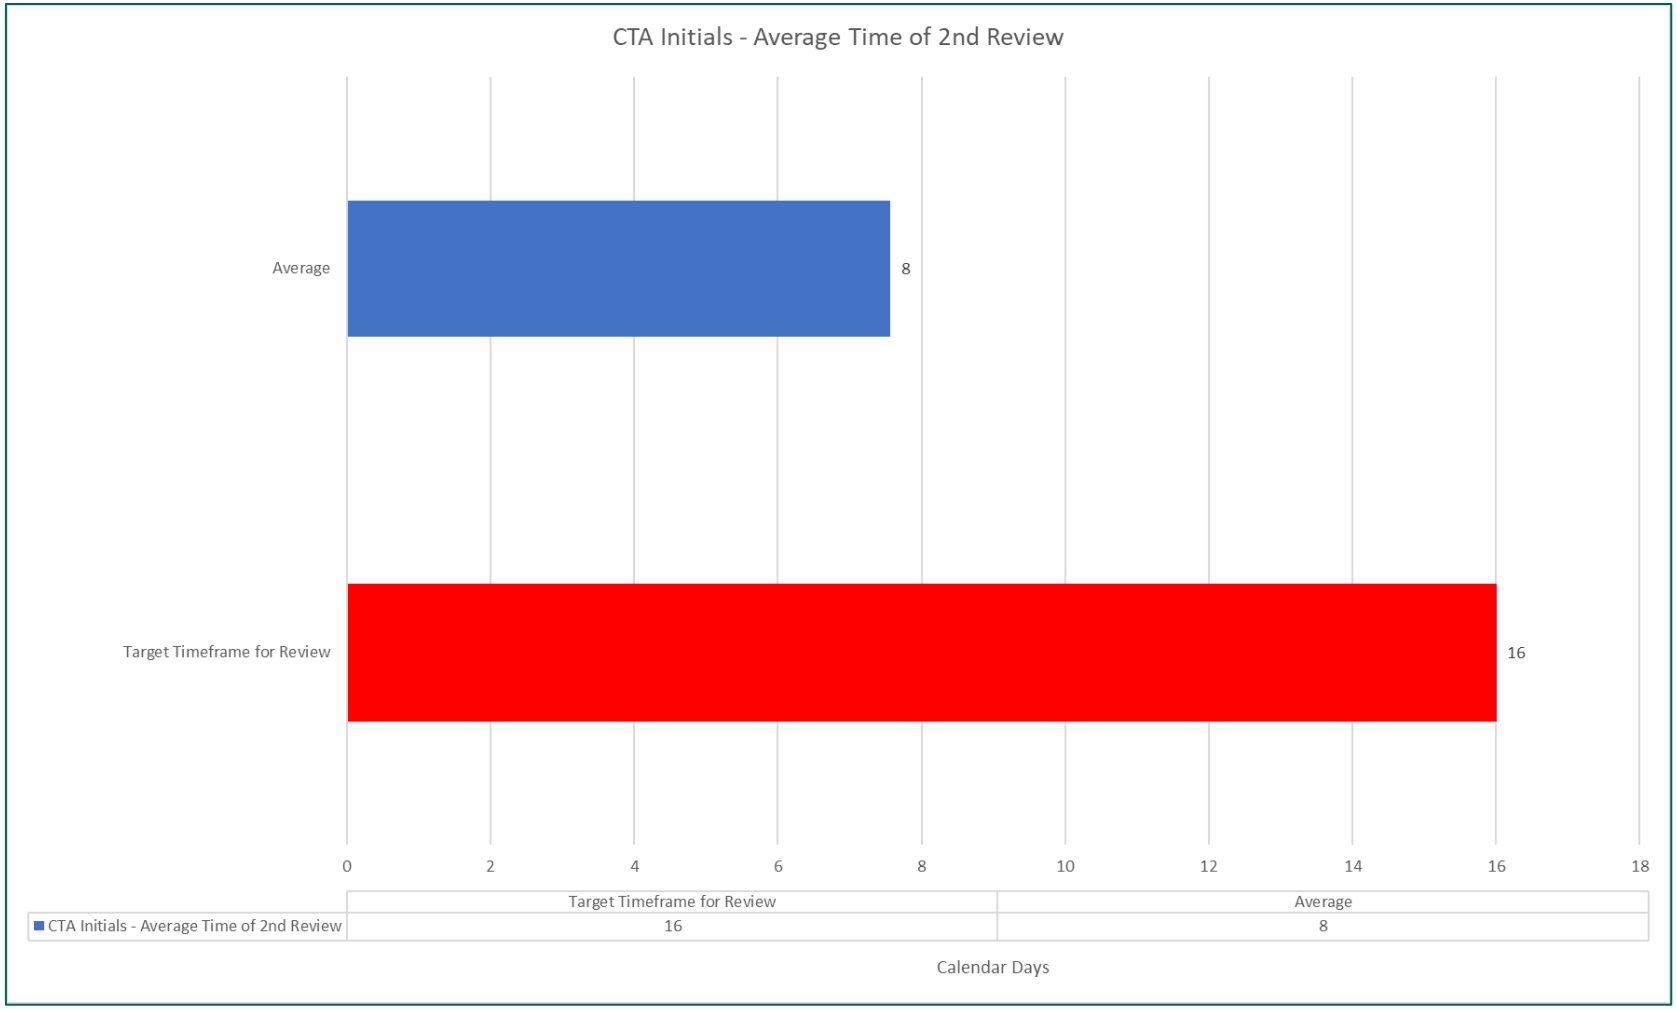
Figure 1. Average timeline (calendar days) for assessment of clinical trial applications received from 1 September 2023 onwards: initial clinical trial authorisation (CTA) application first review (from receipt of valid application to first opinion issued (statutory timeframe for first review is day 30)).



Key features

Figure 1 shows the average time taken for MHRA assessment of initial clinical trial applications. The average represents clinical trials which were received from 1 September 2023 onwards and the first review; from receipt of valid application to first opinion issued (statutory timeframe for first review is day 30) for initials.

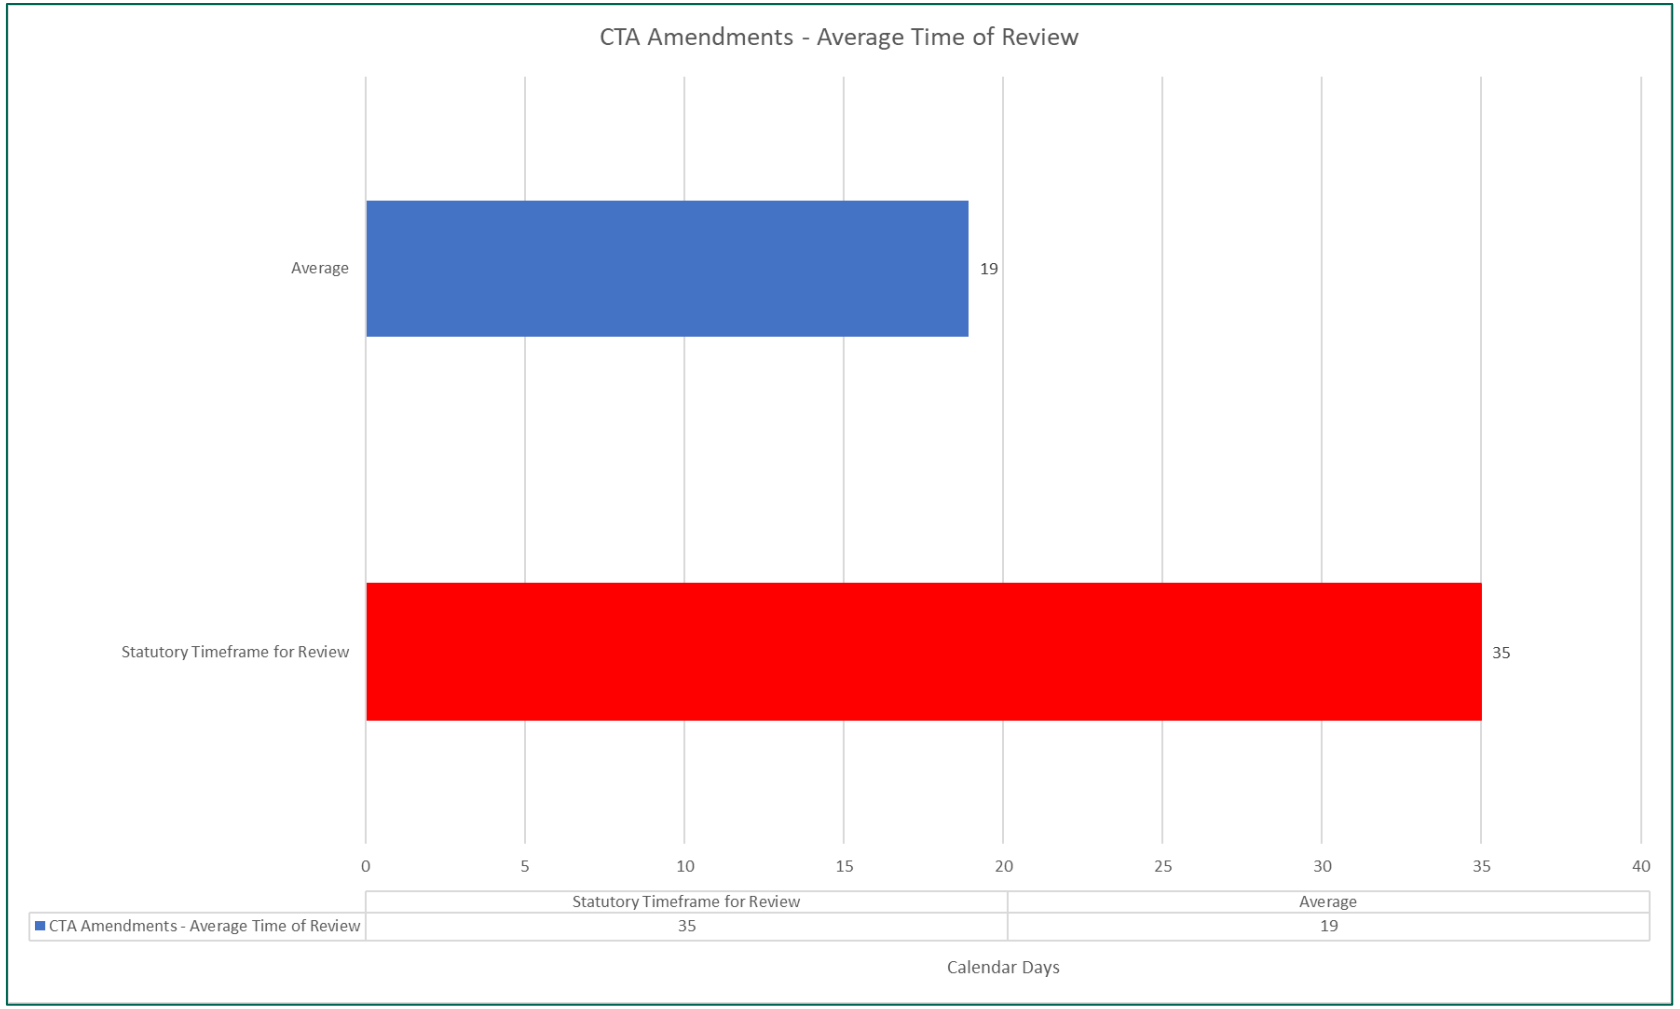
Figure 2. Average timeline (calendar days) for assessment of clinical trial applications received from 1 September 2023 onwards: initial clinical trial authorisation (CTA) application second review (from receipt of applicant's response to Grounds for Non-Acceptance to outcome issued).



Key features

Figure 2 shows the average time taken for MHRA assessment of initial clinical trial applications. The average represents clinical trials which were received from 1 September 2023 onwards and the second review; from receipt of applicant's response to Ground for Non-Acceptance to outcome issued for initials.

Figure 3. Average timeline (calendar days) for assessment of clinical trial applications received from 1 September 2023 onwards: amendment clinical trial authorisation (CTA) application review (from receipt of valid application to outcome issued (statutory timeframe for review day 35)).



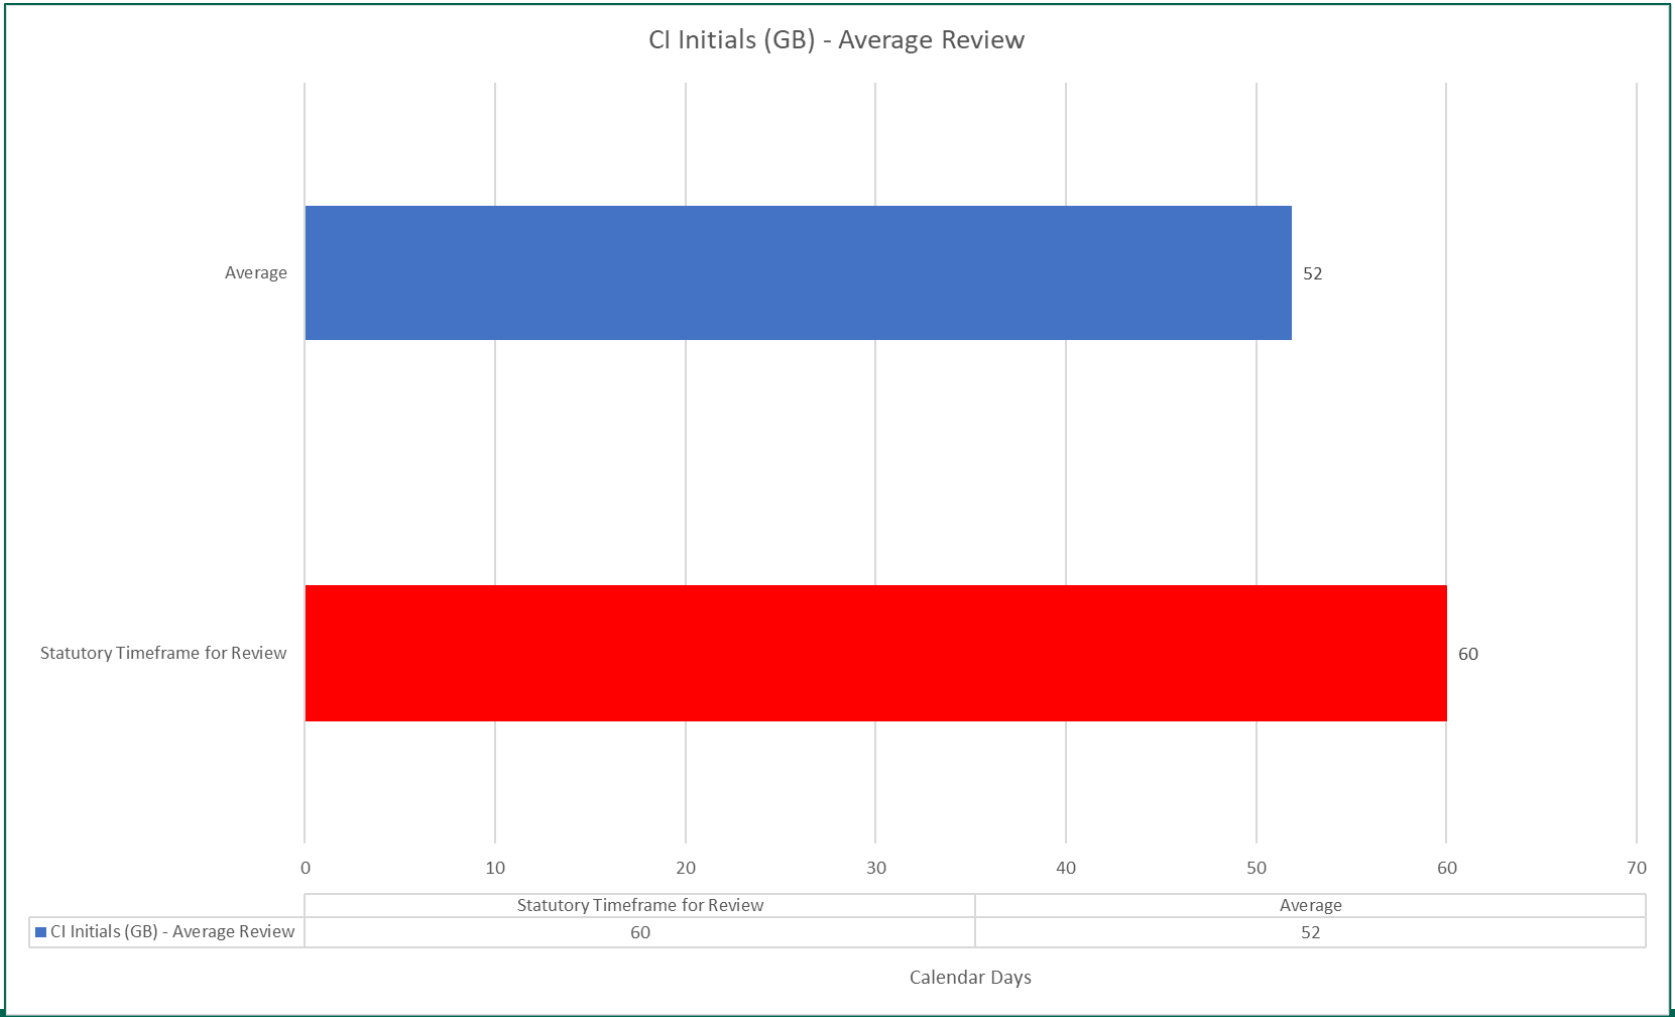
Key features

Figure 3 shows the average time taken for MHRA assessment of amendment clinical trial applications. This represents clinical trials which were received from 1 September 2023 and the outcome; from receipt of valid application of substantial amendment to outcome issued (statutory timeframe for first review day 35) for amendments.

Application timeframes

Clinical Investigation Applications

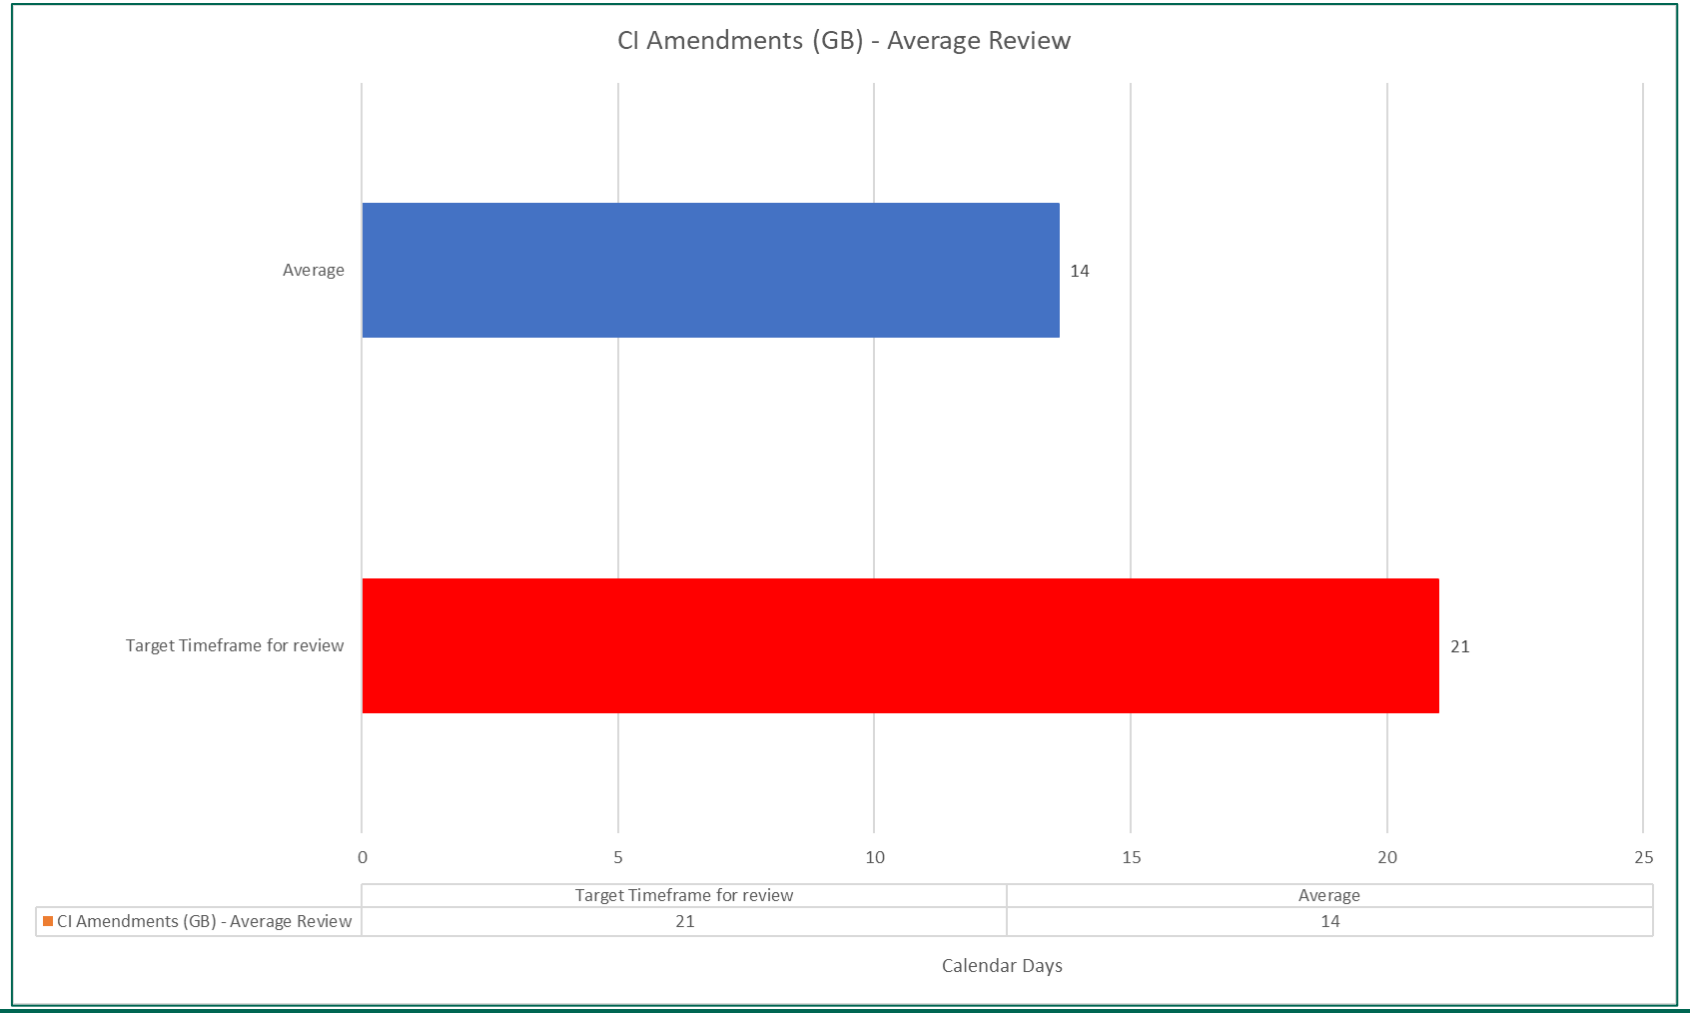
Figure 4. Average timeline (calendar days) for assessment of clinical investigation applications received from 1 November 2022 onwards for clinical studies carried out in GB: application review (from receipt of valid application to outcome issued (statutory timeframe for review day 60)).



Key features

Figure 4 shows the average time taken for MHRA assessment of initial clinical investigation applications. The average represents clinical investigations assessed for studies in GB (Great Britain); from receipt of valid application of clinical investigation to outcome issued (statutory timeframe for review day 60).

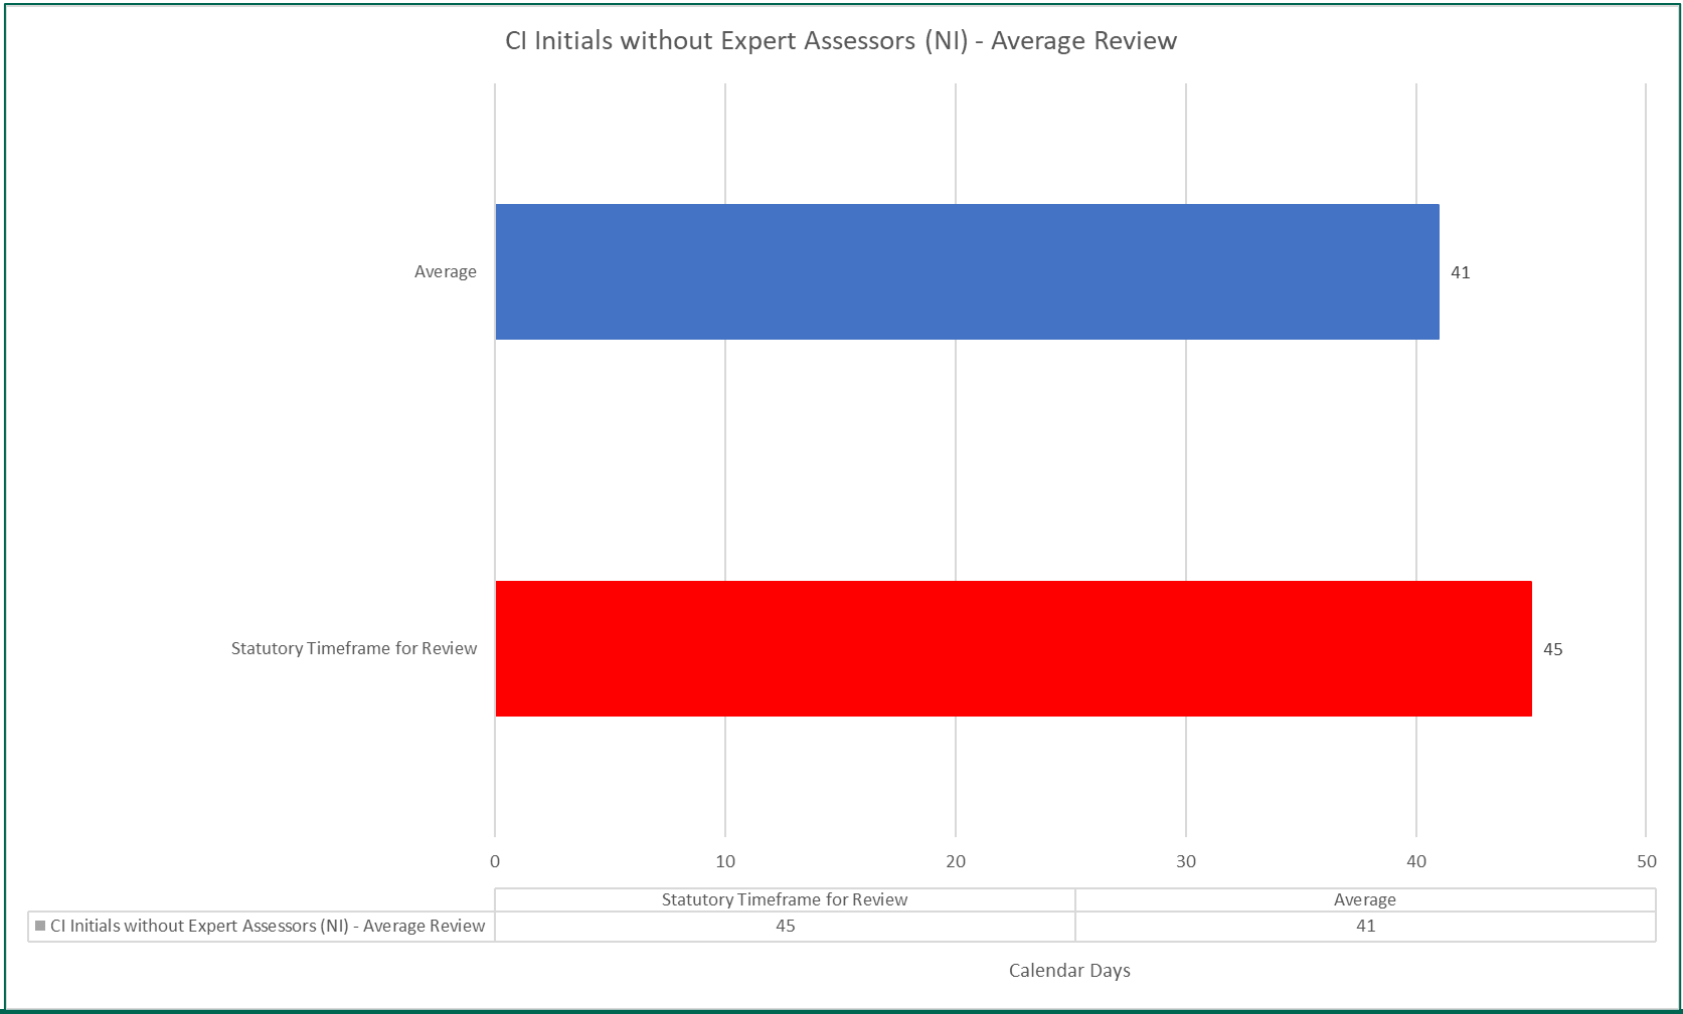
Figure 5. Average timeline (calendar days) for assessment of clinical investigation amendment applications received from 1 November 2022 for clinical studies carried out in GB: application review (from receipt of valid application to outcome issued (target for review day 21)).



Key features

Figure 5 shows the average time taken for MHRA assessment of clinical investigation amendment applications. The average represents clinical investigation amendment applications assessed for studies in GB (Great Britain); from receipt of valid application of clinical investigation amendment to outcome issued (target timeframe for review day 21).

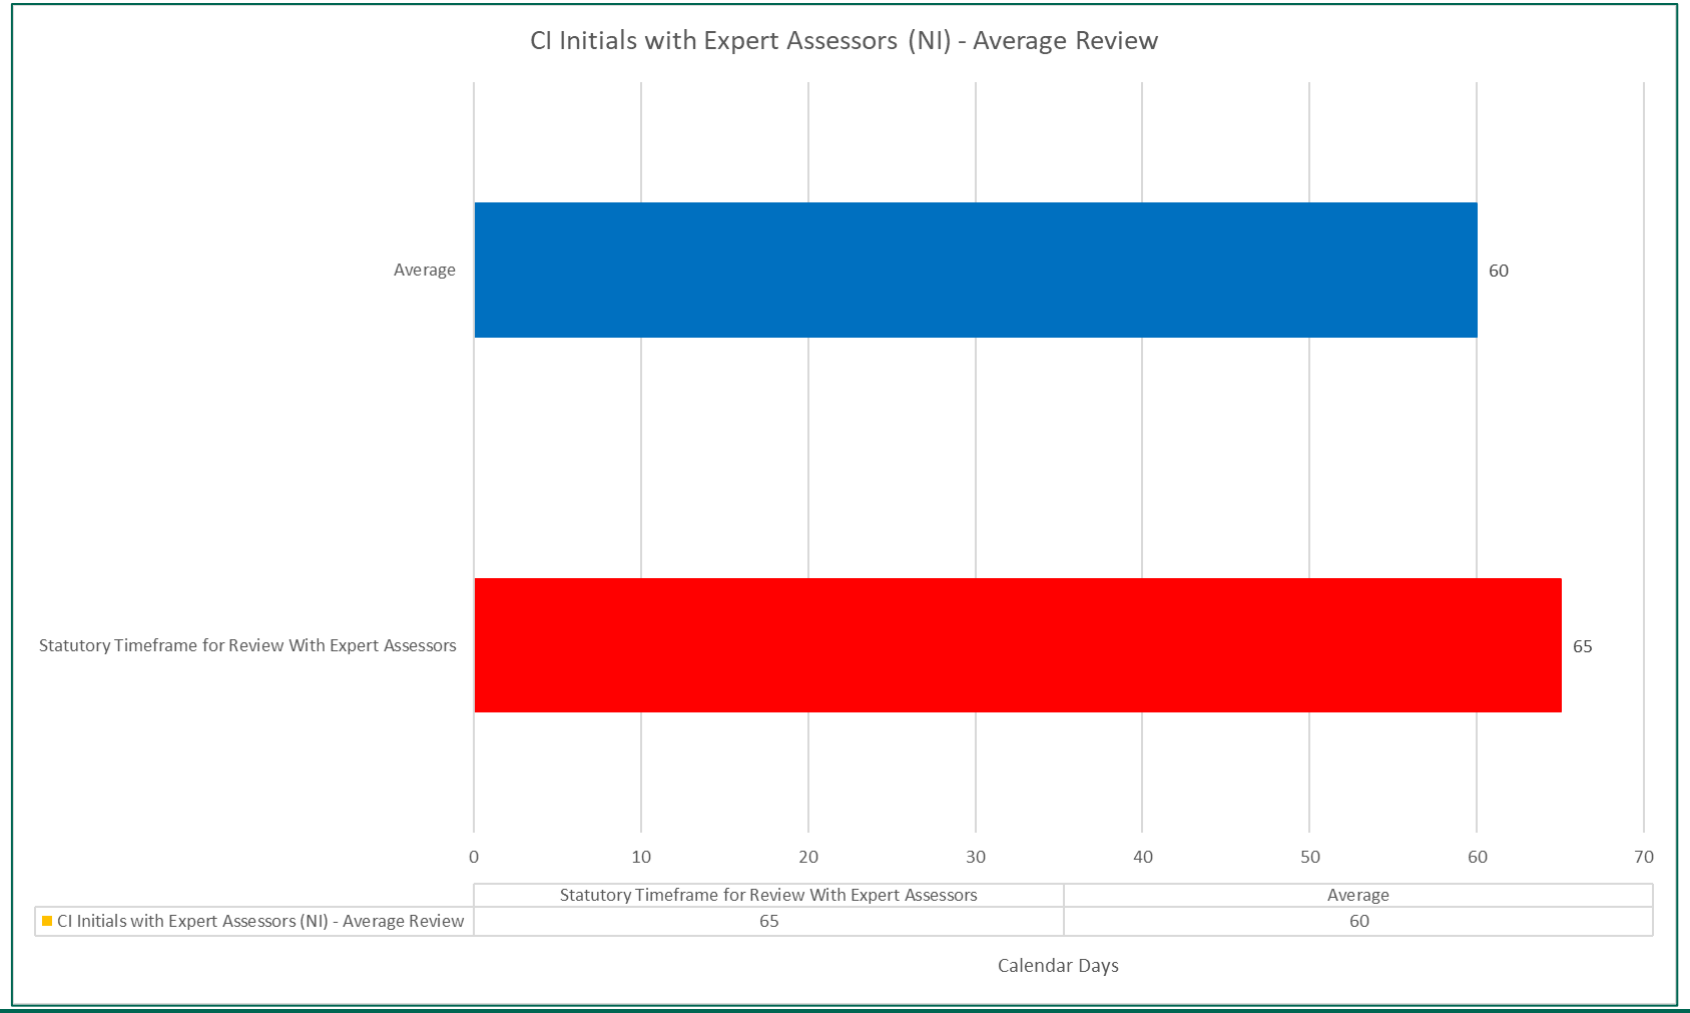
Figure 6. Average timeline (calendar days) for assessment of clinical investigation initial applications without expert assessors received from 1 November 2022 onwards for clinical studies carried out in NI: application review (from receipt of valid application to outcome issued (statutory timeframe for review day 45)).



Key features

Figure 6 shows the average time taken for MHRA assessment of clinical investigation initial applications for studies in NI (Northern Ireland). The average represents clinical investigation initial applications assessed for studies in NI from receipt of valid application of clinical investigation initial to outcome issued (statutory timeframe for review day 45).

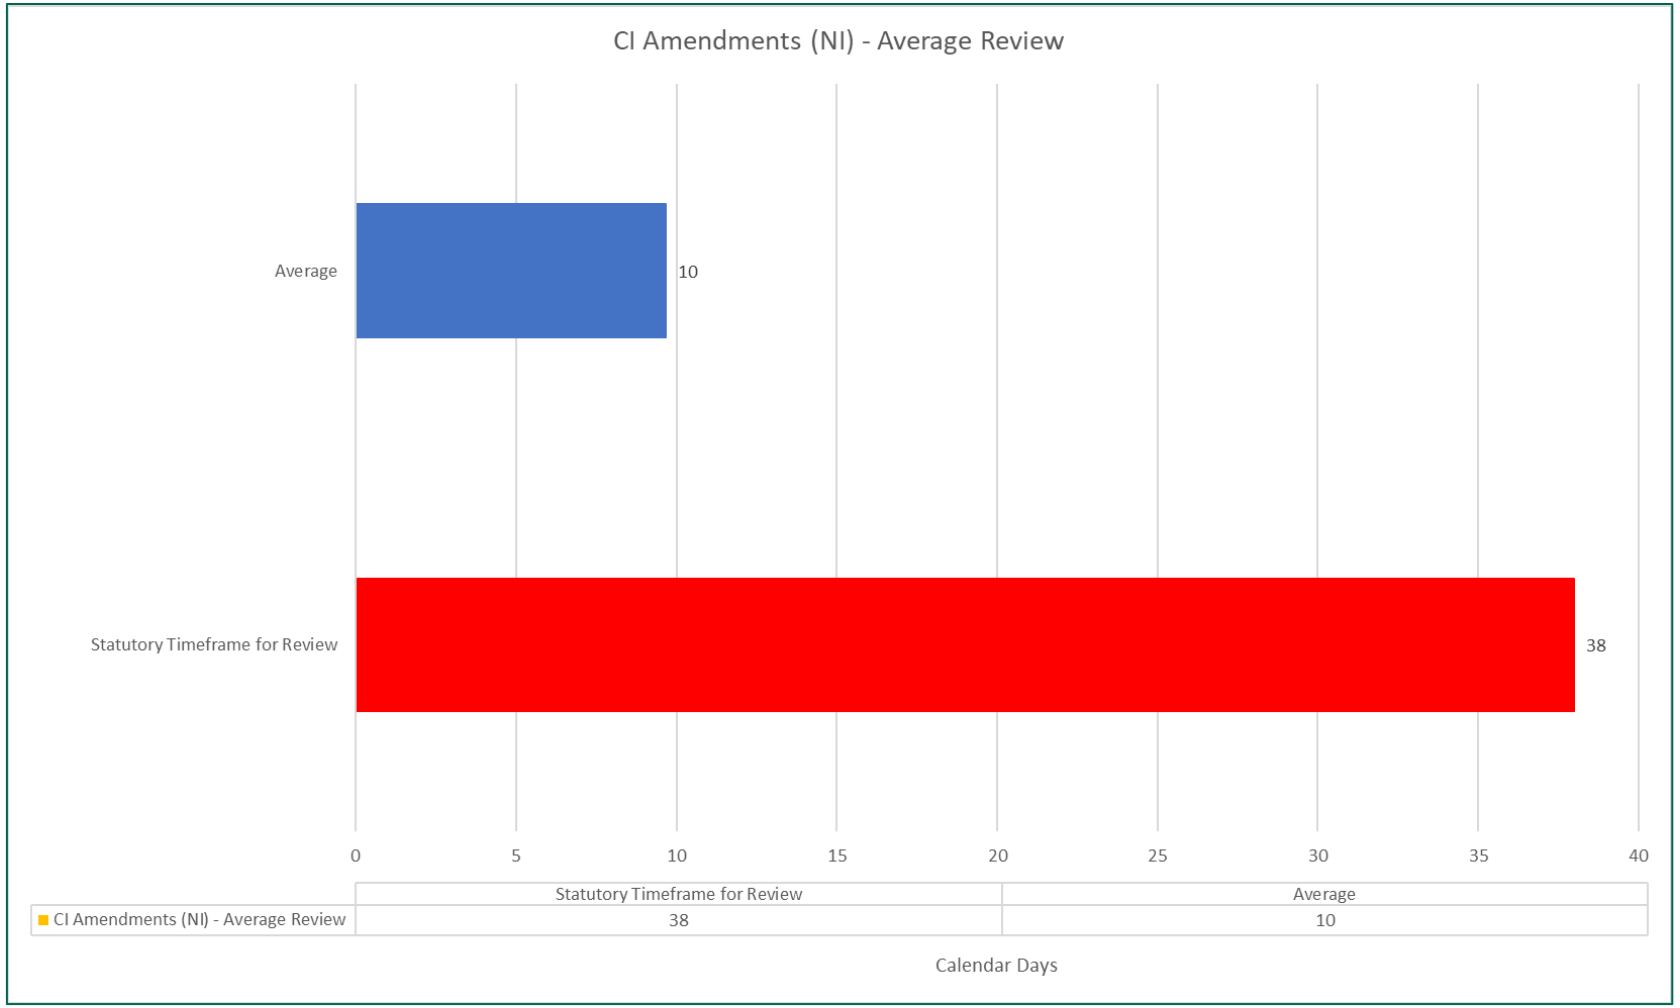
Figure 7. Average timeline (calendar days) for assessment of clinical investigation initial applications with expert assessors received from 1 November 2022 onwards for clinical studies carried out in NI: application review (from receipt of valid application to outcome issued (statutory timeframe for review day 65)).



Key features

Figure 6 shows the average time taken for MHRA assessment of clinical investigation initial applications for studies in NI (Northern Ireland). The average represents clinical investigation initial applications assessed for studies in NI from receipt of valid application of clinical investigation initial to outcome issued (statutory timeframe for review with expert assessor day 65).

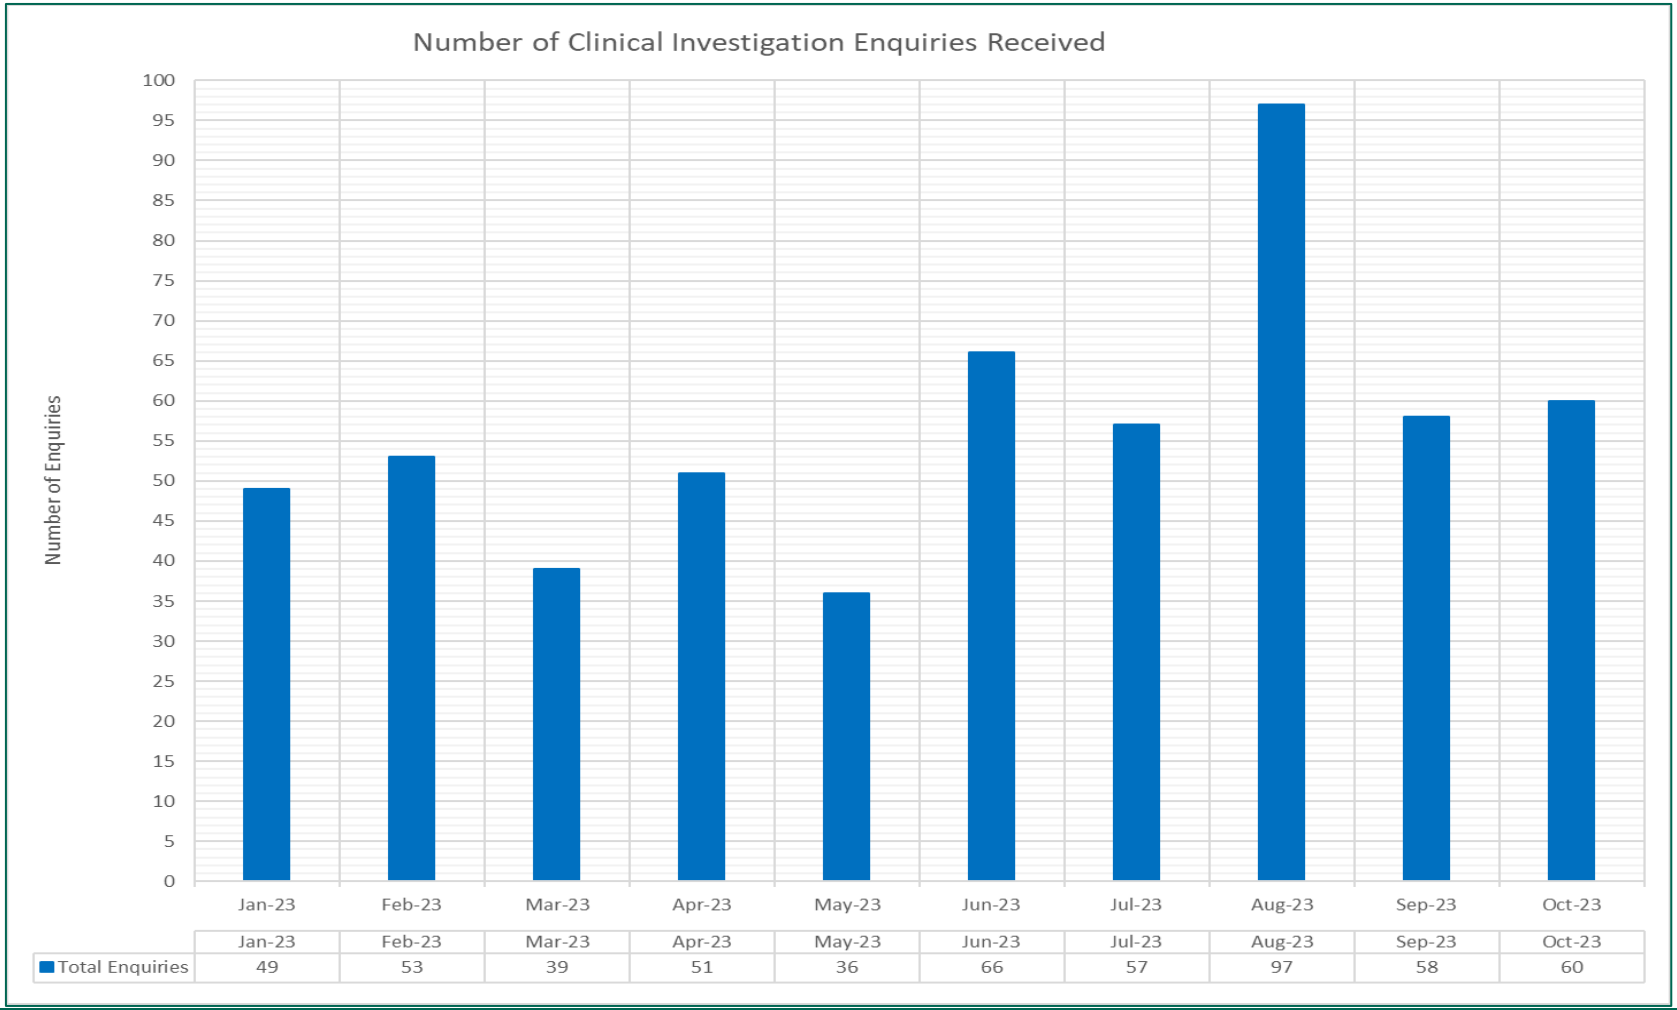
Figure 8. Average timeline (calendar days) for assessment of clinical investigation amendment applications received from 1 November 2022 for clinical studies carried out in NI: application review (from receipt of valid application to outcome issued (statutory timeframe for review day 38)).



Key features

Figure 7 shows the average time taken for MHRA assessment of clinical investigation amendment applications for studies in NI (Northern Ireland). The average represents clinical investigation amendment applications assessed for studies in NI from receipt of valid application of clinical investigation amendment to outcome issued (statutory timeframe for review day 38).

Figure 9. Number of clinical investigation enquiries received per month



Key features

Figure 8 shows the number of clinical investigation enquiries received per month for the year to date.
