1. Introduction

The Children of the 2020s is a national study following the lives of around 8,500 children (and their families) born in England at the start of the 2020s. The study has been commissioned by the Department for Education (DfE) and is being led by University College London (UCL). The independent research organisation Ipsos is carrying out the data collection.

As a longitudinal survey, data collection will be carried out over five waves, when the children are aged 9 months, then at age 2, 3, 4 and 5 years. By following the same families over time, this study aims to answer important questions about children's learning and development, and the findings will be used to improve early education and childcare services.

This report covers the first wave of the study conducted in 2022, when the children were aged 9 months. It aims to give a detailed description of each of the key stages of Wave 1, including the development, implementation, administration and data management.

Though this technical report is comprehensive, there may be some very specific aspects of the study design which are not explicitly addressed by it. If you require such information, please email:

Team.LONGITUDINAL@education.gov.uk

2. Background

The mainstage fieldwork for the first wave of the study took place between June and November 2022 and featured a number of key elements.

Firstly, **an interview with the cohort child's primary caregiver** (defined as the parental figure who spends the most time caring for the child, e.g. feeding them, or changing their nappies). Further details are in Section 6.1. Primary caregiver. As the first wave of a longitudinal survey, the intention was for interviews to be conducted face-to-face to maximise response and build engagement with the study. However, due to the impact and uncertainty of the COVID-19 pandemic, alternative methods were put in place allowing interviewers the option of administering the survey in person (where safe to do so, in line with guidance from the government and the Market Research Society) or administering the survey remotely over MS Teams or telephone. Further details are in Section 4.

As part of the interviewer-administered survey, primary caregivers were asked (where applicable) whether they consented to their child's other caregiver(s) (resident and/or non-resident) being invited to take part in the **online survey for non-primary caregivers**. The primary caregiver had the option of choosing whether they preferred to act as a gatekeeper, who would share the invitation for the online survey on the study's behalf, or whether they were happy to share direct contact details instead. Further details are in Section 6.2. Non-primary caregiver(s).

The surveys asked primary caregivers and non-primary caregivers about linking their survey responses to administrative records held about them and their child by the Department for Education and NHS Digital (a process known as **data linkage**). Further details are in Section 12.

In addition to the surveys, primary caregivers and non-primary caregivers were invited to download and take part in the **BabySteps study app**. This is a free smartphone app that was designed by child development researchers to help parents capture their child's learning and development through questionnaires, comments, photos, and video recordings. The app was introduced as part of the individual survey. Interviewers encouraged primary caregivers to download and register the app during their interview. Non-primary caregivers were given information on how to download and register the app as part of their online survey, and for those who provided an email address, a follow-up email was sent containing their unique login information. Registered users were invited to take part in short monthly research activities. Further details are in the Section 15.

Ethical approval for Wave 1 mainstage was granted by UCL Ethics (ref: 0186.002).

Wave 1 mainstage fieldwork resulted in 8,628 productive interviews with primary caregivers and 2,199 online responses from non-primary caregivers.

3. Pilot

In advance of the main Wave 1 survey, a small-scale pilot was carried out. The pilot aimed to replicate the processes and procedures to be implemented at the mainstage to check they were scalable for the mainstage and to identify areas where these could be made more efficient.

The pilot took place between 4 October and 5 November 2021 across 30 locations in England specifically selected for the purposes of the pilot. In total, 133 primary caregivers completed an interview (69 in-home, 60 telephone, 4 Teams), and 18 non-primary caregivers completed the online survey.

3.1 Scope of the pilot

The key objectives of the pilot were to evaluate:

- The quality of the sample and contact information
- Eligibility, and whether there were any challenges identifying the primary caregiver
- Perceptions and willingness to participate in the study
- Potential barriers to engagement, or common reasons for refusals
- The length of the visit, and the time taken to complete the data collection instruments
- The mode of completion, and whether there were any mode-specific challenges
- The implications of offering in-home interviewing, and the measures taken to ensure the safety of interviewers and respondents in relation to COVID-19
- The design, content and implementation of the data collection instruments
- The response to individual elements (e.g. data linkage, the BabySteps app)
- The training and protocols given to interviewers
 - The fieldwork procedures, management, and materials (e.g. for contacting, engaging, and gaining consent from primary caregivers, and logging contact outcomes appropriately).

To evaluate the pilot, evidence was collected from several sources including:

- Collected by the interviewers:
 - Completing an 'Interviewer feedback form'
 - Recording the outcomes of each contact

- Participating in drop-in sessions during fieldwork
- Participating in a debrief session at the end of fieldwork
- Collected through the survey scripts:
 - Module timings
 - Responses to key questions (e.g. consent)
 - Paradata (e.g. the device type used to complete the online survey)
- Collected through respondents:
 - Queries raised or feedback shared with interviewers
 - Queries raised or feedback shared with the study team
 - Queries raised or feedback shared through the BabySteps app

All were used to refine each element for the mainstage.

A pilot report including recommendations for the mainstage was provided to DfE. This led to improvements for the mainstage, including:

- Reduced interview length in line agreed costs and expectations
- Streamlined interview text, question wording and layout to improve clarity
- Optimisation of interviewer assignments with respect to call pattern, tracing and re-issues
- Augmenting the interviewer training materials and briefing
- Improvements to the participant materials to maximise engagement for both the primary and non-primary informants
- Re-ordering of data linkage and household observation modules within the interview
- Improvements to the collection of contact information and explanation of why contact details are needed
- Enhanced quality checks on the interview data
- Amended timings for sending the automated email invites and reminders to maximise response

4. Impact of COVID-19 on fieldwork

Children of the 2020s was commissioned in Autumn 2020 during the COVID-19 pandemic and during this time in-home fieldwork was suspended by the Market Research Society (MRS) at various points. The suspension was lifted just prior to the pilot which took place in October 2021, and did not affect the mainstage fieldwork which took place from June to November 2022. However, the COVID-19 context was constantly shifting during this period due to increasing and decreasing infection rates, the roll-out of vaccines and changes to government rules and guidance which affected public and interviewer sentiment towards research.

4.1 Measures taken during fieldwork

1. Interviewers were instructed that interviews for this project should be carried out face-to-face (in the home/garden). However, due to COVID-19, remote options were available to use as a back-up for respondents who did not feel comfortable with the face-to-face mode. Interviewers were instructed to prioritise video interviewing (via MS Teams) over telephone interviewing. Also when using Teams they were told to encourage respondents to turn their camera on to make the interview more engaging.

2. In addition before a face-to-face interview could be started a health screener was carried out with respondents to determine whether they were self-isolating, quarantining or limiting social contact for any reason due to their health. If respondents did not pass the health screener a remote interview was offered.

3. Respondents also needed to complete the 'Agile environment assessment' to ensure that the respondent had the following in order for an in-home interview to take place:

- A space where the interviewer and respondent could sit 1 metre apart and be away from an area where people frequently pass through (hallway for example).
- Be able to keep a window/door nearby open.
- Be able to keep all internal doors open so interviewers didn't need to touch anything whilst in the home.

Interviewers were required to wear a mask and keep a safe distance while in the respondent's home. They were also told to regularly sanitise their hands and avoid touching their face. It was recommended they had received two doses of the COVID-19 vaccine.

5. Sampling

The Wave 1 sampling approach was designed to generate a clustered probability sample i) with interviews taking place as close as possible to the date that children turn nine months old, ii) that is statistically efficient, iii) produces manageable interviewer workloads falling within relatively small geographical areas, and iv) flexible enough to include a boost of children from disadvantaged families.

The target age of 9 months was chosen to provide comparability with the Millennium Cohort Study (MCS; Dex and Joshi, 2004¹), which also began when the children were aged 9 months. A starting age of 9 months enables data collection during the child's infancy, while also allowing sufficient time for practical steps such as ensuring the sampling frame is up to date with the population of interest, drawing and processing the sample and recruiting the participants.

The sample for the Children of the 2020s study was selected from HM Revenue and Customs (HMRC) Child Benefit Register (CBR) for all registered births between September and November 2021. The CBR was judged to be the most appropriate national dataset to utilise as the main sampling frame because a high proportion of families register for Child Benefit soon after their child's birth. Alternative sampling frames were considered, such as the Birth Register and NHS records, but were ruled out due to data protection and logistical issues involved in obtaining permission to use details of individual families from these sources for the purposes of inviting them to take part in research.

The sample was selected in three stages. At the first stage a random sample of 746 primary sampling units (PSUs), defined by individual or merged postcode sectors, was selected. At the second stage the months of the births that were to be covered in the sample within each PSU were randomly selected. At the final stage, all births within the sampled PSUs for the selected months were extracted from the Child Benefit records.

The study population for Wave 1 was defined as children eligible and registered for Child Benefit, living in England and aged nine months during the eligibility period. Because the study population was defined by Child Benefit registration, it did not perfectly cover the actual population of nine-month-olds in England. This is because:

(i) some parents do not register for Child Benefit. Some of this under-coverage is related to the High Income Child Benefit Charge (HICBC). However, even prior to the introduction of the HICBC in 2013 there was a relatively small percentage of children who were not registered for a variety of reasons, not necessarily related to income.

1

https://www.researchgate.net/publication/320194950_Millennium_Cohort_Study_First_Survey_A_User's_Guide_to_Initial_Findings

(i) children flagged as sensitive cases on the register were excluded by HMRC prior to drawing the sample. These children fall into the following groups: those taken into care or put up for adoption; those not living at the same address as the claimant; and those whose families are the subject of correspondence between the benefit recipient and the Child Benefit Centre (because the reason for correspondence cannot be ascertained and may be sensitive).

All cases where an interview was achieved at Wave 1 of the study will remain eligible for future waves as long as they are still living in England, although as participation is voluntary some participants may withdraw from the survey over time.

5.1 Sampling the PSUs and Months

The number of registered births for each postcode sector in England for the three months September to November 2021 was extracted by HMRC. Any postcode sectors with fewer than 20 births in the months were then merged to their closest neighbouring postcode sector to form the PSUs. This merging was done repeatedly until every PSU contained at least 20 births registered between September to November 2021 to ensure that each PSU would contain a sufficient number of cases to generate efficient interviewer workloads.

The PSUs were then allocated to one of three size² groups depending on the number of births in the three month period; PSUs with between 20 and 30 births were defined as small, those with between 31 and 50 births as medium and those with 51 or more births as large. This sampling approach controlled the number of births that could be sampled in each PSU. This was done to reduce the impact of clustering – the larger the average number of births in each PSU, the greater the negative impact of clustering on the precision of the estimates.

For the PSUs defined as small, births in all three months would be included in the study; for the medium PSUs births in two of the three months would be included, and for those defined as large only one month would be included. This design limited the number of interviews that would be carried out in each PSU, and hence was more efficient. Every PSU was also defined to be either deprived or not deprived based on the aggregated raw Income Deprivation Affecting Children Index (IDACI) score. The PSUs that contained the 20% of children living in the most deprived areas based on the aggregated IDACI score were allocated to the deprived group. Combining the three groups of the PSU and the two groups for deprivation generated six strata.

² Size refers to the number of births, rather than the geographical size.

The number of PSUs to sample in each of these six strata was determined by first calculating the number that would be required to give an approximately proportion design of children. The number of PSUs in the deprived PSUs was then increased by 50% (and the number in the non-deprived PSUs reduced accordingly) to boost the expected sample of children living in a deprived area by 50% over a proportionate design.

The number of PSUs that were sampled in each stratum, and the resulting expected sample sizes for children are shown in Table 1. Within each stratum, the required number of PSUs was selected as a stratified random sample, with the stratification defined by: region, IDACI quintiles (for the non-deprived strata) and proportion of people in the PSUs from a non-white ethnic group.

Table 1: Population distribution and expected sample size

Strata	Population (N)	Population (%)	#PSUs (N)	#PSUs (%)	Expected sample (N)	Expected sample (%)
Not deprived: small	26,592	26%	164	22%	4,053	22%
Not deprived: medium	44,373	43%	264	35%	6,803	37%
Not deprived: large	11,777	11%	93	12%	1,835	10%
Deprived: small	5,934	6%	63	8%	1,558	9%
Deprived: medium	11,481	11%	117	16%	3,036	17%
Deprived: large	3,280	3%	45	6%	863	5%
Total	103,437		746		18,147	

For the small and medium PSUs, the months to be included within the selected PSUs were also allocated using stratified sampling (with the same stratifiers), so that the sample was balanced across the three months in terms of PSUs covered (Table 2).

Table 2: Number of PSUs included in the sample for each month of birth.

Strata	September	October	November
Not deprived: small	164	164	164
Not deprived: medium	176	176	176
Not deprived: large	31	31	31
Deprived: small	63	63	63
Deprived: medium	78	78	78
Deprived: large	15	15	15
Total	527	527	527

The list of PSUs with the months to be included was sent to HMRC who extracted all the registered births for those months. The size of the sample for each stratum is shown in Table 3.

Table 3: Sample selected in each strata

Strata	Population (N)	Population (%)	Actual sample (N)	Actual sample (%)
Not deprived: small	26,592	26%	3,961	22%
Not deprived: medium	44,373	43%	6,682	37%
Not deprived: large	11,777	11%	1,873	10%
Deprived: small	5,934	6%	1,523	8%
Deprived: medium	11,481	11%	3,004	17%
Deprived: large	3,280	3%	834	5%
Total	103,437		17,877	

5.2 Accuracy of the sample information

The sample received from HMRC Child Benefit records contained:

- Full name of child
- Date of birth of child
- Child Benefit recipient full name
- Child Benefit recipient postal address

The outcome codes recorded by interviewers about the addresses they visited gives us some information about the accuracy of the postal addresses included in the sample file.

Table 4 reports figures for the outcome codes relevant to the accuracy of the sample information.

Table 4 Outcome codes concerning sample information accuracy

Outcome code	Number	Percentage of total sample
Address vacant, demolished/derelict, non-residential, holiday home	180	1
All cohort members deceased	*	<1%
Cohort member has moved abroad	73	<1%
Named child(ren) not of correct age	7	<1%
(Unknown eligibility) No contact with anyone at address (after required visits made)	563	3
Confirmed mover - address not found	901	5
Address inaccessible	77	<1%
Address not found / insufficient address details	89	<1%
Residents refused to confirm whether named child(ren) in household	98	<1%
		<i>Base: 1,991</i>

An asterisk (*) represents fewer than 5 cases in this category.

6. Eligibility

A key initial task for the interviewer was to determine the person eligible to complete the Computer Assisted Personal Interview (CAPI) i.e. the cohort child's primary caregiver. Once identified, the questions in the household grid identified who, if anyone, was eligible to complete the online non-primary caregiver survey.

6.1 Primary caregiver

Primary caregivers were defined as the parental figure who spent the most time caring for the child. Often this was the named Child Benefit recipient, though this wasn't a requirement. The primary caregiver did not have to be somebody with legal responsibility for the child. For example, a step-parent with no legal responsibility for the child could have been eligible if they met the other criteria.

However, the primary caregiver had to be a parental figure. For example, a professional nanny or a grandparent (who has not adopted the child) would not be eligible, even if they are the person who spends the most time caring for the child.

In households where there were two primary caregivers, the interviewer was instructed to ask which caregiver spends the most time with the child. This person would be recorded as the primary caregiver and would complete the CAPI interview. If they both spent the same amount of time with the child, either would be eligible to be a primary caregiver. However, they had to decide between themselves who would do the CAPI interview and this person would be recorded as the primary caregiver.

Primary caregivers were sent an incentive as a thank you for taking part in the CAPI. They received a £20 gift voucher if they lived in London, or a £10 gift voucher if they lived outside London. The reasons for the different amounts are explained in Section 13.

6.2 Non-primary caregiver(s)

Non-primary caregivers were defined as the child's other parental figure(s). To be eligible, they needed to be the primary caregiver's cohabiting partner, the child's other biological parent, or both. There were two types of non-primary caregivers: resident and non-resident.

Resident non-primary caregivers were a parental figure that lived in the same household as both the primary caregiver and the child. They needed to be the primary caregiver's partner, the child's biological parent, or both.

Non-resident non-primary caregivers were the child's biological parent who did not live in the same household as both the child and primary caregiver.

Each household could have had up to two non-primary caregivers – each would have been eligible to complete the non-primary caregiver online survey. Non-primary caregiver eligibility was determined via the CAPI script, which asked primary caregivers a series of questions about household composition to determine the presence of non-primary caregivers in the household that could be invited to complete the online survey.

7. Questionnaire Development

This chapter outlines the questionnaire development work that was carried out prior to the start of the main stage of fieldwork for Wave 1.

Initial questionnaire development focused on the face-to-face interview with primary caregivers. Once this was finalised, a subset of these questions were selected for inclusion in the online interview with non-primary caregivers.

The questionnaire included both scientific content, i.e. questions designed to collect data necessary for the scientific goals of the study, and more process-oriented questions. The development of the scientific content, including the demographic information collected about each household, was led by UCL, in consultation with the DfE as well as the study's Steering group and Technical Advisory Group consisting of advisors with a range of scientific, methodological and policy expertise. The development of process-oriented questions, and the adaptation of the scientific content to the computer assisted face-to-face and online interview environments, was conducted by Ipsos.

Cognitive testing was carried out between 5 July and 9 July 2021. A total of 10 interviews were conducted with parents with a child aged between 8 and 12 months. Questions tested included those deemed sensitive, questions about COVID-19, questions measuring service use and data linkage consent.

Both the primary caregiver and non-primary caregiver questionnaires were piloted in September to October 2021. Feedback from respondents and interviewers who participated in the pilot, as well as analysis of the pilot interview data and further consultation with the DfE and the Steering and Technical Advisory Groups, informed significant changes to the mainstage questionnaire. Further detail about the pilot are discussed in the Pilot chapter.

Finally, several changes were made to the questionnaire during the first few weeks of fieldwork, in response to the average interview time being longer than anticipated and to improve certain questions that the data suggested were being misinterpreted by respondents and/or interviewers.

7.1 Questionnaire content

The primary caregiver questionnaire in its final form, which can be viewed in full in Appendix 2, covered the following topics:

- Demographics

- Primary caregiver's relationship to the cohort child, date of birth, gender, biological sex, ethnicity, religion, income, education, employment status and occupation including Standard Occupational Coding (SOC) and the National Statistics Socio-Economic Classification (NS-SEC), languages spoken at home, housing tenure
- Date of birth, sex, ethnicity of the cohort child
- Household composition, including date of birth, gender, relationship to cohort child and relationship to primary caregiver for each additional member of the household
- Relationships, including length of relationship between primary caregiver and resident partner, and involvement of non-resident biological parents of cohort children
- Pregnancy and birth, including cohort child's birth and current weight
- Child health and development, including visits to Accident and Emergency Services, chronic illness and hospitalisation, and time spent watching television, video or digital content on a screen
- Parental general health and limiting longstanding illness
 - Financial strain
 - Parental leave and childcare, including early care and home learning, what childcare and child services they have used, and any problems accessing services
 - Parent-child interaction
 - COVID-19
 - Parents' level of social support, questions about the strength of their relationships, their mental health, cigarette and alcohol consumption
 - Child temperament
 - Child language
 - Interviewer observations of home environment, completed by interviewer independently after the main interview

Those questions determined to be more sensitive were included in a self-completion module, completed by respondents using the interviewer's tablet (during face-to-face interviews: see Section 7.2. Screener and adaptations in the context of COVID-19 for how this was conducted during remote interviews). In addition, interviewers were able to

code if a respondent was being assisted in completing the interview by a friend or family member, in which case the most sensitive of these were skipped altogether.

In addition to these topics, the questionnaire introduced the BabySteps app and guided respondents through the download and registration process; collected the information necessary for placing the non-primary caregiver online questionnaire; asked for consent to link to other sources of data; and asked for information necessary for ensuring recontact at later waves.

7.2 Screener and adaptations in the context of COVID-19

In addition to the questions collected in the questionnaire, a screening module was developed to establish that the address the interviewer had been supplied with was the correct one, check eligibility, select the most suitable caregiver to take part in the interview, give all the information required for informed consent, and to arrange appointments to interview.

As Wave 1 was conducted in the context of the COVID-19 pandemic, this screener was supplemented with a separate module designed to determine the safety of the household for interviewer and respondent, including questions about symptoms and about the environment in which the interview would take place. Where these questions determined either that a face-to-face interview could not be carried out safely, or that the respondent (or interviewer) was not happy with a face-to-face interview, interviews could be arranged using the same interview script remotely, either *via* Microsoft Teams (preferred) or *via* telephone. Further details can be found in the chapter 'Impact of COVID-19 on fieldwork'.

The questionnaire was therefore adapted to work remotely (via Teams or as a telephone interview) as well as in a face-to-face interview environment. This involved:

- Adding textfilled interviewer instructions for remote interviews
- Adapting procedures around communicating codes for the BabySteps app and for passing on invite letters for the non-primary caregiver online questionnaire
- Developing an alternative to the self-completion module that maintained the respondent's ability to answer without anybody else in the room being able to hear but which didn't require a computer being left with the respondent. This was achieved by means of showcards, with the question text written at the top of each showcard and the answer categories listed below alongside letters which the respondent could use to answer. Showcards were identified by number, so that the interviewer could follow the routing of the scripted questionnaire and ensure that the correct question was being asked.

7.3 Length of questionnaire

The pilot highlighted a number of areas of the questionnaire that could be improved. However, perhaps the main finding was that the questionnaire was longer than anticipated (50 - 55 minutes), with a mean interview length of 67 minutes. Further, feedback from interviewers who worked on the pilot frequently emphasised the length of the interview, with comments suggesting that the length of the interview was a problem. Interviewers reported children becoming hungry or agitated towards the end of the interview, as well as some primary caregivers losing focus. Interview length informed many of the post-pilot changes discussed in Section 7.4. Post-pilot changes, including some of the changes made during fieldwork.

Since the changes to the questionnaire between the pilot and mainstage were so significant, estimating the interview length for the mainstage presented a challenge. The scale of changes meant that timestamp data from the pilot could not be used to accurately estimate the length of the mainstage interview.

Mainstage interview length was estimated in three ways:

1. Estimates based on different question “types” for expected ‘common’ routes through the interview
2. Timing dummy interviews carried out within the research team, using a paper version of the questionnaire.
3. Close analysis of pilot data to create a more refined version of 1. above drawing from pilot timestamp data.

Each of these methods had its own limitations, and each gave different estimates. It was therefore difficult to estimate precisely how many questions needed to be cut in order to reduce the overall mean interview length to the required 50-55 minutes. It was therefore decided to make the changes outlined in Section 7.4. Post-pilot changes, as a relatively conservative set of cuts, but also to earmark further questions to be cut in the first few weeks of fieldwork if the interview was still too long. It was necessary to implement these further cuts, discussed in Section 7.5. Changes during fieldwork.

7.4 Post-pilot changes

Changes made to the questionnaire aimed at reducing the overall interview length included:

- Dropping a section, included in the pilot, in which respondents were asked to film themselves playing with the cohort child using the video function in the BabySteps app. This section required a significant amount of time, with interviewers required to help respondents navigate the app and set up the necessary environment. This

also broke the flow of the interview, required respondents to get the cohort child who might otherwise have been being looked after by another parent or have been asleep, and was particularly difficult given COVID-19 protocols preventing interviewers from handling respondents' phones.

- Streamlining the COVID-19 screener modules, which at the pilot stage involved several separate scripts and which therefore took time to complete on the doorstep. Although these modules were not included in the interview length calculations, it was hoped that reducing the time spent on these modules would reduce the overall amount of time in which the interviewer was with the respondent.
- Reducing the length of the household grid module, by prioritising what demographic information we needed to collect about each member of the household.
- Moving the household observation module to the end of the script, so that it could be completed as soon as the interviewer left the respondent's home instead of before the interview could start.
- Streamlining the BabySteps placement module, data linkage module, and Computer-Assisted Web Interview (CAWI) placement module to reduce length.
- Removing questions about debt and disadvantage indicators, division of household tasks, and furlough during the COVID-19 pandemic.

Changes made to the questionnaire aimed at improving the quality of the data collected or the interview experience included:

- Adding textfills and loops to be able to include families with multiple cohort members (i.e. twins or triplets).
- Adding logic checks added to the household grid.
- Re-ordering the question modules to emphasise questions about the child and de-emphasise questions about parent demographics in the early parts of the interview, following pilot feedback that respondents often became frustrated with how many questions were about them after being asked to complete an interview about their child.
- Dropping reference to the "red book" in questions about cohort child measurements, as well as removing questions about certain measurements usually collected in it, in response to pilot feedback that many children born during the pandemic had not had these measurements taken.
- Adding questions necessary to derive SOC and NS-SEC codes.

- Changing several of the scales used in the questionnaire, for example replacing the Carey Temperament Scales with a reduced version of The Infant Behavior Questionnaire.
- Improving questions about childcare provision.
- Moving certain questions, including those about financial stability and about COVID-19, into the self-completion module.
- Adding questions on loneliness, in response to advice from the Technical Advisory Group.
- Clarifying question wording for a number of specific questions in response to interviewer feedback.

7.5 Changes during fieldwork

As mentioned in Section 7.3 Length of questionnaire, some questions were earmarked as potential cuts during the first few weeks of fieldwork if the interview was still too long. Unfortunately it was necessary to make these cuts in order to keep the interview to an acceptable length. These cuts included questions on:

- Cohort child's sleep
- The effect of the COVID-19 pandemic on childcare arrangements during
- Use of internet-based groups for parents and babies
- Problems accessing specialist clinics and social workers
- Serious life events and experiences of abuse
- Alcohol consumption (although not all questions on this topic) and vaping/use of electronic cigarettes.
- One of the two practice questions at the beginning of the self-completion module

Some of these topics are likely to be considered for inclusion in future waves of the study.

In addition, analysis of early data suggested that two questions were being misinterpreted and needed to be amended. These are discussed below:

- Data suggested that the question at the beginning of the self-completion module (named Senscheck) was leading interviewers to code too frequently that the respondent was being assisted, leading to too many respondents being routed past the most sensitive questions. This might be because of unclear question

wording, or because interviewers were required to enter the number 2 if the respondent was not being assisted, and 1 if the respondent was being assisted and so needed sensitive questions routed out, when questions of this kind usually require the interviewer to enter 1 in the most common scenario in which no action is required. We therefore amended this question, clarifying the question wording, changing the answer codes (although not the numbers themselves, in order to maintain routing throughout the module), and adding a soft check that was triggered whenever interviewers entered 1 that asked them to confirm their answer.

- While it is impossible to say exactly how many cases were affected by this issue, (since we could not know for sure how many of those coded as being assisted were correctly coded this way), of the 3,067 interviews conducted at the point, the 808 respondents who were identified as potentially miscoded were invited to complete a 10-minute web survey to answer these questions. Of these, 59 cases had either opted out of future contact or had not supplied an email address. For 90 cases we had good reason to believe that they were being assisted as they had been coded as either a proxy interview, the interview was being conducted via a translator, or the primary caregiver had sight problems, or literacy limitations. These were excluded from the re-contact exercise. More details are available in Section 10.5 Follow-up CAWI survey.
- Questions collecting data on the cohort child's weight in kilograms and grams (e.g. MWEIG2a) seemed to be being misinterpreted, leading to an unusual spread of weights in the data. In the original version of the question, weights were entered into two separate boxes, one for kilograms and one for grams. The spread of weights in the early data suggested that this was being interpreted as requiring the first number after the decimal place to be entered into the box for grams, so that a weight of 3.9 kilograms was being entered as a 3 in the kilograms box and a 9 in the grams box, resulting in a weight of 3 kilograms and 9 grams being recorded. The question was therefore changed to require a weight to be entered in a single box as a decimal, with clear instructions added for how to enter different weights to 3 decimal places. Since this error was primarily identified at a macro level once the spread of weights was examined, it is not possible to know which weights were entered correctly and which were not. They have therefore not been edited. Weights collected using the old version of the questionnaire can be identified using the variable DVmweigFlag in the published dataset. 522 interviews were conducted using the original version of the question.

7.6 Non-primary caregiver online questionnaire

The non-primary caregiver online questionnaire contained a subset of those questions asked of primary caregivers, with a few additional questions including those confirming their residency and relationship with the primary caregiver. Those questions included in the non-primary caregiver questionnaire that were cut from the primary caregiver interview during fieldwork, as discussed in Section 7.5. Changes during fieldwork were also cut from the online questionnaire. After this process, the non-primary caregiver contained questions on the following topics:

- Demographics
 - Non-primary caregiver’s living situation and relationship to primary caregiver (if non-resident), age, gender, biological sex, marital status, ethnicity, religion, income, education, employment status and occupation (including SOC and NSSEC), languages spoken at home, housing tenure
- Parental general health and limiting longstanding illness
- Parental mental health
 - Parental leave
 - Parent-child interaction
 - Parents’ level of social support, questions about the strength of their relationships, their mental health, and work-life balance
 - Early care and home learning
 - Three words to describe their child

It also included questions introducing the BabySteps app and explaining how to download and register it; asking for consent to link to other sources of data; and asking for information necessary for ensuring recontact at later waves.

Where necessary, questions were adapted for an online interview environment. This primarily involved:

- Arranging sets of similar questions into a “carousel grid” format, to ease data entry.
- Removing interviewer instructions, and placing additional information in “information buttons” that respondents could access if they had questions but which would not distract from the main question wording.

- Replacing “don’t know” and “prefer not to say” answer codes with responsive codes, which would appear only if the respondent attempted to move to the next page without having entered a valid answer. This largely replicated the way these codes were handled in the CAPI environment, where these answer options were available for interviewers to use but which were not read out or displayed on showcards.

8. Interviewer training

8.1 Briefings

8.1.1 Briefing sessions

Twelve three-hour long interviewer briefing sessions were conducted on MS Teams (due to COVID-19) and usually with groups of around 15 interviewers. Researchers from Ipsos ran the briefings and a researcher from UCL and the Department for Education also attended and presented parts of the briefing. The interviewer briefings sessions took place between 17 May 2022 and 23 June 2022.

The briefings covered the following:

- An introduction to the Children of the 2020s, the background to and purpose of the study
- Examples of previous/current longitudinal studies of babies/young children and their impact
- Expected impact the Children of the 2020s will have
- Immediate interest from prominent people, such as the Duchess of Cambridge, who recognise the importance of early childhood development
- Information about the sample, interview target and fieldwork timeline, and overview of distinct study elements
- Procedures for contacting households, minimum call requirements, booking appointments and tracing movers
- Materials provided to interviewers, what they are for and when to use them
- Achieving a high response rate, avoiding refusals
- Special procedures: translations and interviewing people with disabilities
- Rules for how to establish who is a primary caregiver and its definition
- Information about different types of interview mode available as an alternative to face-to-face
- Screening process on the doorstep
- Incentives strategy
- The primary caregiver questionnaire, different components, information about sensitive
- When and with whom to conduct proxy interviews

- Consents for data linkage and how to address concerns/queries
- Respondent wellbeing, informed consent, confidentiality, and disclosure of harm protocol
- An introduction to the BabySteps app, how to download and register it and the interviewer's role in placing it in the interview
- An introduction to the non-primary caregiver's survey and the interviewer's role in placing it in the interview

The briefings included quiz exercises after each substantial section to capture interviewer learning and some time for questions immediately after the briefing (approximately 20 minutes).

A recording of one of the briefings was shared with all the interviewer attendees in case they had any technical issues during the briefing itself and/or if they wanted to listen to it again.

8.1.2 Briefing packs

Interviewers had the chance to discuss the project as part of their work allocation and to review their briefing pack before they attended their assigned briefing. The briefing pack included example documents that were explained during the briefing. These were:

- Opt out letter (blank copy, no named sample)
- Advance letter (blank copy, no named sample)
- Advance leaflet
- Impact card (double sided A4 page)
- BabySteps information sheet (double sided A4 page)
- Non-primary caregiver information sheet (double sided A4 page)
- Adding other information FAQs
- Change of details card

8.2 Dummy interviews

Once interviewers had been briefed, they were asked to carry out two practice interviews before they could start work, as a mandatory requirement. They were also encouraged to download and test the BabySteps app. Interviewers were provided with a test access code during the briefing in the BabySteps section, and were sent a video tutorial by email on how to download and use the app.

8.3 Interviewer instructions and materials

Interviewers were provided with a range of materials to help them when conducting fieldwork as part of their work pack. These included a set of project instructions which included the information covered in the briefings in more detail and a full list of outcome codes. These were intended as a manual as well as a reference document that interviewers could use if they needed reminding of any fieldwork procedures. Other materials are specified in Table 5.

Table 5: List of interviewer materials

Material	Purpose
Documents to use before making contact with respondents on the doorstep	
Police station letter (laminated)	To register that interviewers are interviewing at a local police station
Address listings and maps	To locate addresses
Documents for use in making contact and arranging appointments	
Covid leaflets	To show on the doorstep, as required
Opt out letter	To show on the doorstep, as required
Advance letter and leaflet (including a laminated advance letter)	To show on the doorstep, as required
Language card (laminated)	To help identify the language of non-English speakers
Impact card (laminated)	To show on the doorstep to promote study. Includes findings from other similar longitudinal studies and real-life impact examples of these in government policies
Appointment cards	To remind respondents of an upcoming appointment, includes space for the interviewers to write date and time
Calling cards	To let households at which interviewers have been unable to make contact know that they have called
Agile environment showcard	To ensure interviewer was able to sit 1 or 2m apart from respondent to do the interview, whether door/window can be left open, whether all internal doors can be left open
Health screener showcard	To check if an in-home interview is possible.
Occupier/tracing letters, envelopes, and stamps	To leave with new occupier asking them to pass on the occupier letter, or to leave with neighbour/other contact to pass on tracing letter, as relevant
Documents for use in carrying out the interview	
MS Teams instructions (interviewer)	To provide interviewer a step-by-step guide on how to use MS Teams to conduct interviews
MS Teams joining instructions (participant)	To provide respondents with details of how to access the showcards, and generally use MS Teams as required
BabySteps information sheet (including a laminated copy)	To explain how to download and use the BabySteps app
Non-primary caregiver invitation letter	To explain how the non-primary caregiver can access the online survey they can take part in – to leave in household
Adding other information FAQs	To explain the data linkage process further, with common questions and answers to address respondents' queries
Support resources	Contains helplines and websites respondents can access for support on sensitive topics
Showcards (single use)	To use in the primary caregiver interview
Change of details cards and pre-paid return envelopes	For respondents to use to let us know if they move address between survey waves
Thank you leaflets	To provide at the end of the interview

8.4 Drop-in sessions

Drop-in sessions were scheduled once a week during fieldwork for interviewers to raise any questions. Additionally, a Q&A document was produced to address any frequently asked questions by the interviewers throughout the briefings and circulated to the interviewers.

9. Household contact, cooperation and engagement

9.1 Opt-out letter

Every sampled address was sent an opt-out letter about a month before the start of fieldwork for each tranche by Ipsos head office. This was a requirement of using Child Benefit Records. The opt-out letter was addressed to the named Child Benefit recipient. This letter explained to respondents that they had been selected to be part of an important new longitudinal study, called Children of the 2020s. It covered how they were chosen, the importance of the study and why they should take part as well as clarifying what taking part would involve, including the length of the survey and the incentive value.

It provided respondents with an opportunity to opt-out of the survey before an interviewer made contact with them.

9.2 Advance letter and leaflet

An advance letter and leaflet was posted to the named Child Benefit recipient around a week before interviewers made contact. The advance letter and leaflet was posted directly from head office to addresses in Tranche 1 but for Tranches 2 and 3 interviewers posted the advance letter and leaflet so they could manage their own assignment of addresses.

9.3 Calling card

Where interviewers were unable to make contact at a given address they left a calling card letting the household know that they attempted to make contact. The calling card emphasised the importance of the survey, and also allowed interviewers to write in their name and number, so that the respondent could call them directly to make an appointment at a suitable time, rather than risk further non-contacts.

9.4 Call patterns

Interviewers were required to make a minimum of six face-to-face calls at each address. They tailored their contact strategy as far as possible to the family's schedule e.g. bearing in mind they were contacting families with at least one child of around 9 months old and potentially other children.

Interviewers made at least six face-to-face visits to each sampled address on separate days with two weeks before the first and last visit. In addition:

- **At least 1** attempt was made on a weekday evening between 5pm and 9pm³.
- **At least 1** was made on a weekend defined as Saturday and Sunday.
- **At least 1** further evening or weekend call was made.

9.5 Doorstep contact process

Interviewers firstly had to identify the primary caregiver (using the 'Primary Caregiver Screener') as the correct person to arrange an appointment with and conduct the interview as this was not necessarily the Child Benefit recipient. Interviewers then completed the 'Mode Screener' to confirm they and the respondent were happy to complete the interview face-to-face (in the home/garden) or by Teams or telephone.

They then completed the 'Health screener' which asked the respondent whether they are self-isolating, quarantining or limiting social contact for any reason due to their health. This screener had to be completed again if the appointment was to be conducted another time. Finally, interviewers completed the 'Agile environment assessment' with the respondent to confirm their home set-up was suitable for an interview bearing in mind COVID-19.

Interviewers gave respondents an appointment card to confirm details of the appointment including the time and date of the interview. The appointment card also suggested to respondents they have another person in the home at the time of the interview if possible to help with the baby should they need support.

If an appointment was made for an MS Teams or telephone interview, interviewers left the appointment envelope with the respondent which contained the materials needed for the interview including showcards, BabySteps information leaflet and further instructions (e.g. MS Teams interview instructions).

9.6 Tracing

Interviewers attempted to trace respondents if they found the named child(ren) was living elsewhere, if they were unsure after multiple contacts whether they were living at the address or if the address was inaccessible, or they couldn't find it.

Individual tracing actions involved:

³ Interviewers were careful about visiting addresses later in the evening given households had a 9-month old and potentially other children.

- Multiple visits to the address of the Child Benefit recipient and named child(ren) with a minimum of six face-to-face visits.
- If the Child Benefit Recipient had moved from the issued address, interviewers asked the current occupier if they could provide a forwarding address.
- If no contact was made with the current occupier, interviewers left an occupier letter at the address.
- If the current occupier or neighbours were reluctant to reveal any details, interviewers left a tracing letter with them to forward on.
- At least two face-to-face visits to two neighbours (tracing letters were used if necessary).

No child(ren) were traced to an institutional setting such as a care home.

If interviewers found a new address for the named child(ren) they made contact at the new address if it was within 15 miles of the original address or if it was closer than the original address to their own home. If this wasn't the case, the address was reallocated to a different interviewer.

9.7 Change of details card

Interviewers left a change of details card at the end of each interview to help keep track of movers. This was included in the 'appointment pack' left with the household before a Teams or telephone interview.

9.8 Participant helpline

Respondents were able to get in touch with the study team via a helpline or email address. These were monitored by the Ipsos telephone unit based in Edinburgh. The team dealing with queries received full instructions and a briefing on the background to the study, the types of queries they may receive and how to deal with them from the research team.

10. Fieldwork and Response

10.1 Allocation of sample to fieldwork tranches

In order to maximise conducting interviews when the cohort children were 8 – 10 months interviewer assignments were divided into three tranches corresponding to the month of birth. Within each tranche interviewers were allocated assignments of around 25 addresses. The starting date for each tranche was staggered giving interviewers 3 weeks to make contact at all their issued cases with subsequent weeks for interviewing and covering any mop-up and re-issues.

Fieldwork dates for each tranche is shown in Table 6

Table 6: Fieldwork dates

Tranche (sub-section of sample)	Month of birth	Fieldwork start date	Fieldwork end date
Tranche 1	September 2021	6 June 2022	31 August 2022
Tranche 2	October 2021	4 July 2022	30 September 2022
Tranche 3	November 2021	1 August 2022	31 October 2022

Fieldwork was extended until 14 November for a handful of remaining cases to ensure the response rate target was met.

10.2 Age of cohort member at interview

95% of all interviews were conducted when the cohort child was within the ideal target birth window of 8 to 11 months old, 3% when the cohort child was 12 months old (and 2% when the cohort child was 13 months old).

Table 7: Age of cohort child at the date of interview

Age (in months) of cohort member at interview	Number	Percentage of total sample
8 to 11 months	8,194	95
8 months	1,544	18
9 months	3,654	42
10 months	1,850	21
11 months	1,146	13
12 months	244	3
13 months	185	2
14 months	*	<1%

An asterisk (*) represents fewer than 5 cases in this category. Includes all full and partial interviews (8,628). One case had missing cohort member date of birth data.

Note: Tables in the main research report are produced with weighted data. Tables in the technical report use unweighted data. This may lead to some disparity in the percentages.

10.3 Profile of achieved sample

The issued sample was 17,898. Overall, 8,568 complete and 60 partial primary caregiver interviews were conducted during the wave 1 mainstage fieldwork, giving a total of 8,628 responses.⁴ The eligible sample was 17,064, equating to a response rate of 50.6%.

7,273 interviews (84%) were completed face-to-face, with 99 (1%) being completed via MS Teams and 1,256 (15%) by telephone.

Table 8 shows the full fieldwork outcomes for Wave 1, by tranche.

⁴ A 'complete' is defined as reaching the end of the CAPI interview. A 'partial' is defined as answering questions at least as far as the household grid.

Table 8: Primary caregiver Wave 1 fieldwork outcomes

	N	% of issued sample	Tranche 1	Tranche 2	Tranche 3
Issued	17,898	100%			
Ineligible (all categories inc. opt outs)					
Opt outs ⁵	398	2%	135	143	120
Address vacant, demolished/derelict, non-residential, holiday home	180	1%	66	72	42
ALL cohort members deceased	*	<1%	*	*	*
Cohort member has moved abroad	73	<1%	33	27	13
Named child(ren) not of correct age	7	<1%	2	2	3
Duplicate address	0	<1%	0	0	0
Other	128	1%	65	29	34
All ineligible case	789	4%	302	274	213
Eligible (all categories)					
Number of completed primary caregiver interviews	8568	48%	2920	3101	2547
Number of partial primary caregiver interviews	60	<1%	19	26	15
Refusals	6102	34%	2236	1941	1925
Other non-response (eligible but recorded as non-response (e.g. primary caregiver unable to respond due to illness/language barrier), unrecoverable cases, data deletion requests)	528	3%	250	156	122
Non-contact after 6+ calls (e.g. confirmed mover)	901	5%	295	293	313
Unknown eligibility (UE)	950	5%	270	345	335
All eligible cases	17109	95%	5990	5862	5257
Response rate (of eligible sample)		50.1%			

An asterisk (*) represents fewer than 5 cases in this category.

⁵ This category includes those who contacted the office to opt-out during the opt-out period and during fieldwork.

The following tables show the demographic profile of primary caregivers who were interviewed as part of wave 1 mainstage fieldwork. This information was collected as part of the interview. These tables include information for partial and complete interviews.

Table 9: IMD of achieved W1 Primary Caregiver sample

Index of Multiple Deprivation (IMD) deciles	Completed primary caregiver interviews (%)	Total issued sample (%)
1 most deprived	18%	18%
2	13%	14%
3	11%	12%
4	10%	10%
5	10%	10%
6	8%	9%
7	8%	8%
8	8%	8%
9	7%	7%
10 least deprived	6%	6%

* Includes all full and partial interviews (8,628).

Note. Tables in the research report are produced with weighted data. Tables in the technical report use unweighted data. This may lead to some disparity in the percentages. Base includes partial interviews that got as far as the relevant ethnicity question (8,599 cases, of which 7,257 face-to-face, 99 Teams, 1,243 telephone)

10.4 Interview length

The mean interview length was 51.7 minutes (against a target of 50–55 minutes). The mean interview length in Tranche 1 (53.7 minutes) was longer than both Tranche 2 (50.6 minutes) and Tranche 3 (50.7 minutes).⁶

Mean interview length was relatively consistent between face-to-face (51.4 minutes) and telephone (52.6 minutes) modes. However, MS teams interviews were longer (63.7 minutes).

The mean interview length in single birth households (with only one cohort child) was 51.6 minutes. The interview for households with twins was longer (mean: 61.2 minutes) because some questions were repeated for each individual child.

Table 14 shows average interview length, overall and by module, for Wave 1. This is presented by tranche and interview mode.

Table 14: Wave 1 interview length by tranche and mode of interview

Total CAPI interview length	Total	Tranche 1	Tranche 2	Tranche 3	Face-to-face	MS Teams	Phone

* Excludes partial cases. Base: 8568

10.5 Follow-up CAWI survey

During Wave 1 primary caregiver fieldwork we identified an error with the CAPI script (see Section 7.5. Changes during fieldwork). The script was incorrectly routing some respondents out of some of the self-completion questions in module I (CASI module). In order to rectify this and obtain responses from those who ‘missed’ these questions, we sent out a short online CAWI survey.

We identified cases affected by this CAPI script error to be contacted (808 out of 3,067 cases). We excluded from this sample those we had reason to believe were accurately coded as being assisted during the interview (90 cases had earlier been coded as either a

⁶ The longer interview length in Tranche 1 may be due to the longer interview length at the start of fieldwork before the implementation of in-field cuts (see Section 7.3. Length of questionnaire) and also interviewers becoming more familiar with the script by Tranche 2 and 3.

proxy interview, or having a translator, or sight problem, or literacy limitations). We also excluded those who we did not have an email address for, as we would not be able to send them an email invitation to the follow-up survey and lastly, we cross-checked the sample against our file of respondent communications and excluded anyone that had complained or it would not have been appropriate to re-contact (59 cases). This left us with a sample of 808 primary caregiver respondents to be contacted for the CAWI follow up.

We sent these respondents an email invitation to the online survey on 25/08/2022. They were also sent two reminder emails; one sent a week after the email invite was sent, and one a week after the first reminder. In the email invitations, we explained to respondents that there was an error in the script during their interview and we would be very grateful if we they could answer a few questions online for us. We explained that some people may find that these are more sensitive questions and they do not have to answer any questions they don't want to. Respondents were offered a £5 incentive on completion of the survey.

The CAWI follow-up survey was approximately 10 minutes long. The survey contained the questions from the following topics in module I of the CAPI questionnaire:

- Parent-child interaction
- Parental stress
- Disadvantage indicators
- Couple relationship
- Parental mental health
- Parent alcohol and smoking

The CAWI follow-up survey was closed on 26 September /2022. In total, 413 complete responses were collected, resulting in a response rate of 51%. This leaves a total of 395 cases who we could not contact to collect data.

11. Informed consent

Overall consent to take part in the study was collected verbally from the primary caregiver by the interviewer. At the start of the CAPI script the interviewer then recorded that the primary caregiver agreed to participate in the survey, understood they would be contacted to take part in surveys when their child was aged 2, 3, 4 and 5, and understood that participation in each of these surveys was voluntary.

Non-primary caregivers were asked for their consent at the start of their online survey. They were presented with similar information to the primary caregiver about the study in order to provide informed consent.

12. Data linkage

12.1 Primary caregiver

Children of the 2020s is a study commissioned by the Department for Education to improve understanding of children's development and their needs. Therefore, during the interview primary caregivers were informed that their and their child's education records will be added to their survey answers as a standard part of the study. If the primary caregiver did not want this to happen, they were able to let the research team know using the contact details provided in their advance leaflet/letter/on the study website.

They were informed that education records included information collected by the Department for Education about what children's services are being used and how children are progressing at school. They were also told that they hold information about the primary caregiver's educational background such as exam results and participation in further education.

The option to opt out of data linkage to education records for the cohort child was only given to primary caregivers with legal responsibility for the child. If they were not the legal parent/guardian they were only asked about linkage to their own education records.

Fewer than five primary caregivers opted out of the data linkage to education records for either themselves or their child.

The primary caregiver was also asked about adding information from their and their child's NHS records to the answers they give in the survey. As these records are held outside DfE by NHS England, the primary caregiver was required to give explicit consent for this linkage to take place.

The primary caregiver was informed that NHS records included information such as admissions or attendances at hospital, visits to a GP or other health professional (e.g. midwife), specific conditions and prescriptions given.

The primary caregiver was able to provide permission for their child's health records to be linked only if they were the child's legal parent/guardian. If they were not this question was skipped. They were asked for linking their own records regardless of whether they were the child's legal parent/guardian or not.

The Table 15 shows the percentage of primary caregivers providing permission for linking their and their child's NHS records to their survey answers.

Table 15: Agreement to linkage to NHS records

	Cohort child's records (%)	Primary caregiver's records (%)
Provided permission for linkage to NHS records	91	89
Did not provide permission for linkage to NHS records	10	11
Not applicable	*	*
<i>Base: All primary caregivers who are the child(ren)'s legal parent/guardian</i>	8,567	8,569

An asterisk (*) represents fewer than 5 cases in this category

12.2 Non-primary caregiver

The same approach was used for linking the non-primary caregiver's DfE and NHS records, which were asked about in their online survey.

No non-primary caregivers opted out of permission for linkage to their own education records. Table 16 shows the percentage of non-primary caregivers providing permission for linking their NHS records to their online survey answers.

Table 16: Non-primary caregiver agreement to linkage to NHS records

	N	%
Provided permission for linkage to NHS records	1,598	73%
Did not provide permission for linkage to NHS records	401	18%
Not applicable	200	9%
<i>Base: All non-primary caregivers (2,199)</i>		

12.3 Stable contacts

Stable contacts were collected from primary caregivers (if possible) to help with reaching them for future surveys in case they change address. Stable contacts were a friend, neighbour or family member (who doesn't live with them). Primary caregivers were asked to let the stable contact know they have been nominated as a 'stable contact' for the

purposes of re-contacting the primary caregiver and their contact details would only be used for this purpose.

The following details were collected (if possible):

- Name
- Stable contact’s relationship to primary caregiver
- Landline telephone number
- Mobile telephone number
- Email address

Table 17: Willingness to provide stable contact details

Is there someone you would be happy for us to contact in the future, if needed?	%
Yes	41
No	59
<i>Base: All primary caregivers (8,569)</i>	

As shown in the Table 18, primary caregivers were also asked if they were planning to move in the next 12 months and to provide a new address if possible.

Table 18: Plans to move in the next 12 months

Are you and your family planning to move from this address in the next 12 months?	%
Yes, new address given	2
Yes, no new address given	13
No, not planning to move	85
<i>Base: All primary caregivers (8,569)</i>	

13. Incentives

Primary caregivers were sent an incentive as a thank you for taking part in the CAPI. They received a £20 gift voucher if they lived in London, or a £10 gift voucher if they lived outside London. The rationale for this differential incentive is based on evidence from other surveys which shows that those living in London are particularly difficult to survey. For instance, for the 2018 Childcare and Early Years Survey of Parents (CEYSP) the overall response rate was 50.9%, but the response rate in London was the lowest of all regions by some margin, at 41.9%. A differential incentive has worked well in three waves of the British Election Study to draw in more of these “harder to reach” participants and subsequently increase the response rate. The response rate for Children of the 2020s Wave 1 by region is shown in the table below.

Table 19: Response rate (of all eligible sample) by region

Region	%
North East	51
North West	50
Yorkshire and the Humber	58
East Midlands	51
West Midlands	54
East of England	53
London	44
South East	47
South West	50
All	50
<i>Base: All primary caregivers (8,569)</i>	

Respondents were offered the option to choose whether they wanted their voucher by post or email, and they could spontaneously refuse their voucher. If they chose to receive their incentive by email and did not provide an email at the start of the interview, the interviewer notified the respondent that they would get a voucher by post instead.

Vouchers by post were ‘Love2Shop’ gift vouchers that could be used at a variety of shops. E-voucher codes were administered by Ipsos via email (e-codes were provided to Ipsos by a supplier). Respondents could redeem their e-codes into e-vouchers that could be used at a variety of shops.

In Wave 1, non-primary caregivers were not offered an incentive for completing the CAWI survey. This was because the CAWI survey was much shorter than the primary caregiver's CAPI interview.

Respondents who completed eligible research activities in the BabySteps app were also offered incentives at the household level to encourage ongoing participation and engagement. Please see chapter 'BabySteps app' for further information.

14. Non-primary caregiver online survey

14.1 Overview

All eligible non-primary caregivers were invited to take part in an online survey, which could be completed in their own time. As there were no contact details available for non-primary caregivers in the Child Benefit Record sampling frame, the study relied on primary caregivers to provide access to eligible non-primary caregivers. As part of the main interview, the primary caregiver was therefore asked whether they consented to the placement of the online survey for the eligible non-primary caregiver(s). To take into consideration that family dynamics can be sensitive and challenging to navigate, the primary caregiver had the option of choosing whether they would prefer to act as a gatekeeper (i.e., taking responsibility for sharing the online survey with the eligible non-primary caregiver), or whether they would be happy for the study team to directly contact the non-primary caregiver. Where consent was given, the primary caregiver was asked to confirm the non-primary caregiver's email address and home address, allowing the study team to send communications by email or post.

As part of their invitation to the study, non-primary caregivers were told that the online survey should take around 20 minutes to complete and could be completed on a device of their choice (smartphone, tablet, laptop, or desktop computer). They were also informed that the survey would:

- ask questions about their family life.
- ask whether they consented to information that is held about them in government administrative records being added to their survey responses.
- invite them to download 'BabySteps', a smartphone app that has been designed by academics to help parents capture their child's learning and development.

Where direct contact details were available, reminders were sent to non-primary caregivers who had not yet completed the survey.

Overall, 2,135 non-primary caregivers took part in the online survey. 1,867 full responses and 268 partial responses were submitted during Wave 1 mainstage fieldwork.

14.2 Eligibility

The eligibility of non-primary caregivers was determined by the primary caregivers' CAPI script, which asked questions on household composition. All eligible non-primary caregivers were eligible to be invited to complete the same online survey. Please see the 'Eligibility' chapter for a full explanation of the eligibility of non-primary caregivers.

The study relied on the primary caregiver providing access to any eligible non-primary caregiver(s) in order for them to be invited to the study. Only if the primary caregiver was happy for a non-primary caregiver to be contacted, either directly by the study team or by them passing on an invitation, could a non-primary caregiver be invited to take the online survey.

In total there were 8,126 households with at least one eligible non-primary caregiver (94% of households with a complete or partial CAPI interview). Table 20 outlines the number of households with eligible non-primary caregivers, by tranche and CAPI interview mode.

Table 20: Wave 1 households with eligible Non-primary caregivers by tranche and mode of interview

	N	% of achieved CAPI interviews	Tranche 1	Tranche 2	Tranche 3	F2F	Teams	Phone
Households with an NPC	8126	94%	2761	2946	2419	6895	95	1136
Households with Resident NPC	6899	80%	2352	2489	2058	5887	89	923
Households with Non-resident NPC	1227	14%	409	457	361	1008	6	213

14.3 Placement of the online survey

The placement of the online survey occurred near the end of the CAPI script. Primary caregivers were first asked for consent to invite the non-primary caregiver to take part in

the online survey and then asked if the non-primary caregiver could be contacted directly. Non-primary caregivers were then invited via the direct or gatekeeper approach.

If a household contained a resident and non-resident non-primary caregiver this process was repeated, first for the resident and then the non-resident non-primary caregiver. Consent and type of contact collected was collected individually for each non-primary caregiver.

14.3.1 Placement rates

In total, 6,241 primary caregivers consented to the non-primary caregiver(s) being invited to take part in the online survey, 77% of eligible households.

Table 21 shows the overall number of primary caregivers who consented to the placement of the online survey for eligible non-primary caregivers.

Table 21: Overall placement rate of the online survey for non-primary caregivers

	Total	Resident NPC	Non-Resident NPC
Households with an eligible NPC	8126	6899	1227
Agreed to CAWI placement	6241	5627	614
Placement rate	77%	82%	50%

Table 22 shows the chosen modes of contact by primary caregivers, by interview mode and tranche.

Table 22: Contact approach chosen by primary caregivers (PC)

	N	% of those agreeing to CAWI placement	% of eligible NPCs
Resident NPC			
Agreed to the CAWI placement	5627	100%	82%
Consent to contact directly	2039	36%	30%
Email to PC to pass on	3134	56%	45%
Letter to PC to pass on	454	8%	7%
Non-Resident NPC			
Agreed to the CAWI placement	614	100%	50%
Consent to contact directly	136	22%	11%
Email to PC to pass on	406	66%	33%
Letter to PC to pass on	72	12%	6%

14.4 Contact strategy

If the primary caregiver consented for a non-primary caregiver(s) to be contacted, they were given the following contact options:

- Consent to contact directly
- Email sent to primary caregiver to forward on
- Letter to be posted/Letter given to the primary caregiver to pass on

14.4.1 Direct contact

If consent to contact directly was selected, the primary caregiver was asked to share the non-primary caregiver's mobile number and email address. If their email address was shared, the non-primary caregiver was sent an email invitation with a link to the online survey once the CAPI interview had been completed. This link was unique to them, so they did not need to enter a log-in code when they clicked on this link in the email.

Where the email address was not shared, the non-primary caregiver was given an invitation letter containing a link to the online survey and their unique log-in code. If the CAPI interview was conducted face-to-face, and the non-primary caregiver was a resident, the invitation letter was left in the household. If the interview was being conducted remotely (via Teams or telephone), or if the non-primary caregiver was non-resident, the letter was posted directly to the non-primary caregiver. For this, the primary caregiver was asked to provide the non-primary caregiver's postal address.

If the non-primary caregiver was invited directly, they were sent up to three reminders. The first reminder was in the form of an email, sent 7 days after the primary caregiver's CAPI interview. The second reminder was a SMS text, sent 15 days after the primary caregiver's CAPI interview. Email and text reminders were run on a rolling basis, at 9am on weekdays and 6:30pm on the weekend. The third reminder was in the form of a letter, sent 20 days after the primary caregiver's CAPI interview. Letter reminders were sent every Monday for those eligible in the last week (previous Monday to Sunday).

Non-primary caregivers received reminders corresponding to the type of contact details we had for them. If we had their email address, mobile number and postal address, they were sent all three reminders. If we only had email and postal addresses, they were sent reminder 1 (email) and reminder 3 (letter), and so on.

This reminder strategy was the same for resident and non-resident non-primary caregivers.

14.4.2 Gatekeeper approach

The primary caregiver could otherwise opt to pass on an email or letter invitation to the non-primary caregiver (the 'gatekeeper' approach). The primary caregiver would receive either an email or letter addressed to the non-primary caregiver that they were asked to forward on to them.

Email invitations were the same format as those sent directly to the non-primary caregivers and were sent out to the primary informants once they had completed the CAPI interview.

Letter invitations provided a survey link and unique log-in code for non-primary caregivers to put into a web browser to access the survey. If the CAPI interview was being conducted face-to-face, and the non-primary caregiver was a resident, the letter was left behind at the household for the primary caregiver to pass on. During the CAPI interview, the script would display the unique login code and the primary caregiver would write this on to the letter to pass on. If the interview was being conducted remotely (via Teams or telephone), or if the non-primary caregiver was non-resident, a letter was sent to the primary caregiver to pass on or post to the non-primary caregivers. This mailing also included a cover letter asking the primary caregiver to pass the invitation letter on. These letter invitations were sent out on a weekly basis.

For those invited via the 'gatekeeper approach', only one reminder was sent. These took the form of a letter, were and sent 20 days after the primary caregiver's CAPI interview. Letter reminders were sent every Monday for those eligible in the last week (previous Monday to Sunday).

14.5 Survey completions

14.5.1 Overall response

Overall, 1,867 complete and 268 partial non-primary caregiver surveys were completed during Wave 1 mainstage fieldwork, giving a total of 2,135 responses. As 6,241 surveys were placed, this equates to a survey response rate of 34%. Sixty-four responses were removed from the dataset; In 63 cases, it was identified that the primary caregiver had completed the survey and in one case someone who was not a non-primary caregiver had responded.

Table 23 Overall response rate, for complete and partial responses, by type of non-primary caregiver (resident/non-resident)

	Total	Resident NPC	Non-Resident NPC
Agreed to CAWI placement	6241	5627	614
Complete or partial response	2135	2025	110
Response rate (of agreeing to placement)	34%	36%	18%
Proportion of eligible participants responding	26%	29%	9%

Table 23 shows the response rate by contact approach.

Table 23: Response rate by contact approach

	N	Response rate
Resident NPC	2025	36%
Consent to contact directly	709	34%
Email to PC to pass on	1191	38%
Letter to PC to pass on	125	28%
Non-resident NPC	110	18%
Consent to contact directly	23	16%
Email to PC to pass on	81	20%
Letter to PC to pass on	6	8%

14.5.2 Break-offs

In total there were 268 partial responses to the non-primary caregiver online survey, where respondents accessed the survey but did not complete it.

Table 24 shows the last question the respondents submitted before ending the survey.

The largest proportion of respondents broke off the survey at question P_APPDL2 (16% of breakoffs), which displayed participant's login code for the BabySteps app.

Table 24 shows the number and percentage of breakoffs that occurred in each module. The highest proportion of breakoffs occurred within module C (parenting), at 43%. Modules D (about you) and G (BabySteps) accounted for 28% and 18% of breakoffs respectively.

Table 24: Breakoffs by module

Module	N	% of breakoffs
Module A: Intro	*	<1%

14.6 Questionnaire content and timings

14.6.1 Overview of questionnaire content

The non-primary caregiver online survey asked respondents about their family life, including questions on their employment, education, health and wellbeing, and the types of activities they do with their child.

Non-primary caregivers informed that their education records will be added to their survey answers as a standard part of the study. If the non-primary caregiver did not want this to happen, they were able to let the research team know using the contact details provided in their invitation letter/email/on the study website. Non-primary caregivers were also asked whether they gave permission for their survey responses to be linked their NHS health records. Information about data-linkage was signposted in the non-primary caregiver's invitation letter or email. This allowed respondents to read about the data linkage process in advance of taking part in the survey. Respondents could take part in the non-primary caregiver online survey whether they did or did not give consent to data linkage.

In addition, non-primary caregivers were asked to provide their contact details where possible (email address, phone number, postal address) so they could be contacted directly about future waves of the survey. They were also asked if they were planning to

move from their current postal address in the next 12 months, and if so to provide their new address and move-in date.

Lastly, non-primary caregivers were invited to download and complete tasks in the BabySteps smartphone app. If respondents were happy to take part in the app, the online script provided instructions on how to download and register on the app. It also provided respondents with their unique app login code; respondents were asked to make a note of or take a photo of the screen containing this login code.

14.6.2 Length of questionnaire and timings

The minimum time taken to complete the non-primary caregiver online survey was 5.7 minutes. The maximum recorded time taken was 918.8 minutes (15 hours).

The only timing data we have available for the online survey is session length data, i.e., the total time between when the respondent started the survey to when they submitted it. Respondents could start the survey, do another task, and return to the survey to complete it at a later time. They would be timed for this whole duration.

Therefore, to account for this we have excluded what we deem to be implausible survey lengths (>60 minutes) from mean and median calculations. These are likely respondents who started the survey and resumed it later after a significant length of time had elapsed. In total 166 respondents were considered outliers, having an interview length greater than 60 minutes. Once these outliers had been excluded, the maximum interview length was 59.8 minutes.

Table 28 summarises the time taken for the non-primary caregiver online survey, for complete responses only. Please note this table excludes outliers.

Table 28: Time taken to complete the online survey

	Time (minutes)
Min	5.7
Max	59.8
Mean	26.2
Median	23.0
<i>Base: 2,135</i>	

Based on the length of the script, it was estimated that the survey would take non-primary caregivers with one cohort child 20 minutes to complete. As such, this was the

survey length communicated in the invitation and reminder mailings. Non-primary caregivers with more than one cohort child were expected to take longer to complete the survey. Table 29 outlines the minimum, maximum, mean and median time taken by number of cohort children. Please note outliers have also been excluded from this table.

Table 29 Time taken to complete the online survey per number of cohort children

Number of cohort children	1	2	3
Min	5.7	14.5	-
Max	59.8	58.1	-
Mean	26.2	28.7	-
Median	23.0	22.2	-
Base: 2,135			

There were no families with three cohort children who completed the online survey, and therefore there is no data to report for this category

15. BabySteps app

15.1 Overview

Primary caregivers and non-primary caregivers were invited to download and take part in the **BabySteps app**. This is a free smartphone app that was designed for the Children of the 2020s study by child development researchers at UCL³ to help parents capture their child's learning and development through questionnaires, comments, photos, and video recordings. BabySteps data collection started on 6 June 2022 and is expected to continue until the end of the Wave 5 (provided sufficient numbers of participants continue to engage with it). It is both a study engagement platform and a data collection tool.

15.2 App content

The app encompasses a variety of features designed to facilitate data collection as well as engage participants in the study. These features include:

Remote inter-wave data collection: The application offers the capability for remote data collection through short monthly research activities. These activities consist of mini questionnaires and video data collection, which participants can conveniently complete in their own time. By participating in these activities, users accumulate reward points within the app that can be redeemed for e-vouchers. Participants receive notifications within the app to alert them when a research activity becomes available. These activities primarily involve responding to concise questionnaires, typically comprising 20 to 28 questions, covering topics related to child development.

Engagement enhancements: Beyond the data collection functionalities, the app features engagement-focused components to enhance user experience. These components include:

- **Daily Sleep and Milestone Trackers:** Caregivers have access to tools within the app, such as sleep and milestone trackers. These enable caregivers to monitor their child's learning and developmental progress systematically.
- **Baby Diary:** Respondents can utilise a dedicated baby diary section, which empowers them to document cherished moments through written entries, photographs, and videos. This feature serves as a personalised repository of memories.
- **News Articles:** The app provides a repository of news articles, offering users the opportunity to stay informed about ongoing developments within the study and novel insights emerging from the realm of child development science.

15.3 Placement and downloading the app with the primary caregiver

All primary caregivers were introduced to the BabySteps app during their interview. They were informed that it included many unique features, including a set of short monthly activities that they could do to help the Children of the 2020s study capture a more complete picture of family life and child development between the five main annual surveys. The interviewer also clarified that for each research activity they completed they would gain a reward point worth £1. Respondents were informed that each time they completed 5 activities, they would receive a £5 e-voucher by email, and that depending on how many research activities they completed over the first wave of the study, they could receive approximately £10 in e-vouchers. Respondents were informed that anything shared within the app would be kept confidential and stored securely. Their data would not be passed on to any third party. Participants could find more information in the FAQs and Privacy Notice in the app and the study website.

If respondents had twins or triplets, we regretfully informed them that the BabySteps App research activities could not accommodate multi-birth families because the functionality was restricted to one child. We apologised for this and still welcomed caregivers to download the app to keep in touch with the research team and to use the 'Baby Diary' to record memories of their children as they grow and develop. They were also invited to browse the 'News and Articles' section of the app where they could stay up to date with the progress of the Children of the 2020s study and find regularly updated articles on the science of child development.

Following the introduction, primary caregivers were asked for permission to be guided through downloading the app during their interview. Interviewers were asked to encourage respondents to download the app however the respondents could choose not to do this – they could choose to download it later, or not at all. Four in five primary caregivers opted to download the app during the interview (79%, N = 6825), whereas 17% (N = 1456) spontaneously said they would prefer to download the app later and 4% (N=331) said they did not want to download the app at all.

Of the 6825 respondents who agreed to download the app during the interview, 99% (6780) noted their login code correctly. Very few respondents were unable to note their code (0.2%, N=17) or the code did not display on the laptop correctly (0.4%, N=26). Amongst the respondents who opted to download the app later, 98% (N=1417) noted their login code correctly and again very few respondents were unable to do so (1%, N=21), or the login code did not display correctly on the laptop (1%, N=16). Note that interviewers could still access the respondents' codes on their Electronic Contact sheet (ECS) if the code was not displayed correctly in the script.

Almost all respondents who agreed to download the app during the interview respondents successfully did so (95%, N=6441); 5% did not (N=339).

See Table 30 for the reasons respondents gave for wanting to download the BabySteps app later and Table X for reasons respondents gave for not wanting to download the app at all or were unable to.

Table 30 Reasons why primary caregivers opted to download BabySteps later

Reason why primary caregivers opted to download BabySteps later	Number of respondents	Percentage
Not enough time today	951	65%
Using their smartphone to complete the interview (telephone/MS Teams)	139	10%
Would prefer to download with the assistance of another household member	87	6%
Doesn't have the storage space to download the app at this time	76	5%
Would prefer to speak to partner first, before agreeing	75	5%
Phone unavailable	26	2%
Phone on charge / needs charging	24	2%
Respondent has concerns about sharing information through the app	17	1%
Issues logging in	13	1%
Phone not working	8	1%
I will do it later (unspecified)	7	1%
Poor internet connection	5	<1%
Other	24	2%
No data	*	<1%
Base: 1454		

An asterisk (*) represents fewer than 5 cases in this category

Table 31 Reasons why respondents did not want to or were unable to download BabySteps

Reason why <u>primary caregivers</u> did not want to download BabySteps	Number of respondents	%
Not enough time/busy with home or work	397	60%
It feels too personal/intrusive	85	13%
Lacks appropriate technology (e.g., doesn't have a smartphone)	37	6%
Doesn't have the storage space to download the app	37	6%
Doesn't trust giving information to apps	31	5%
Unable due to English literacy	35	5%
Doesn't download or participate in apps	26	4%
Lacks technical capability/skills to participate in apps	19	3%
Issues setting up/logging in	20	3%
Using phone for interview	16	2%
Not interested	8	1%
Phone not at hand/out of battery	7	1%
Will download later	8	1%
Unable due to sickness, disability, etc.	*	<1%
Not eligible for activities because twins/triplets	6	<1%
Already have too many apps	*	<1%
Other	5	<1%
		Base: 670

An asterisk (*) represents fewer than 5 cases in this category

If respondents were willing to download the app, the interviewer offered them a BabySteps information sheet⁴. The BabySteps information sheet described step-by-step how to download the app⁵ and get started, along with a description of what taking part involved, how they could earn e-vouchers (if single birth household), BabySteps specific data protection information and UCL study team's contact details.

After handing over the BabySteps information sheet to respondents, the interviewer asked the primary caregiver to write their own name at the top of the information sheet, and their unique 7-digit login code in the appropriate space on the back of the sheet.

Once this was done, the interviewer checked the login code was written correctly by asking the respondent to read it back to them and correct them if necessary. Then interviewers went on to assist respondents in downloading the app.

Once the app was downloaded, respondents were asked to turn notifications on. Respondents with more than one cohort child were reminded that research activities could not accommodate twins and triplets. If they had a partner living with them, then we also let them know that they would also be invited to complete research activities in the app to receive further e-vouchers. Interviewers caveated that they would get their personal login code during their online survey.

If the respondent encountered any difficulties, the interviewer would feedback the 'respondent has been unable to set their app account up.' Interviewers were briefed to refer any technical issues, such as those preventing willing respondents from downloading the app, to the office after the interview and to let the respondent know that a member of the Children of the 2020s team would be in touch.

15.4 Placement and downloading the app with the non-primary caregiver

Towards the end of the CAWI survey, all non-primary caregivers were introduced and invited to take part in the app (see Appendix 4 for the questionnaire). They were presented with the same information as primary caregivers were (see section: Placement and downloading the app with the primary caregiver) and were asked if they were happy to take part in the BabySteps app: 55% said yes and 45% said no.

Those who said no to taking part in the app provided reasons shown in Table 32.

Table 32: Reasons why non-primary caregivers did not want to download BabySteps

Reason why non-primary caregivers did not want to download BabySteps	Number of respondents	%
Not enough time/busy with home or work	553	62%
I have done enough already	86	10%
It feels too personal/intrusive	55	6%
Doesn't download or participate in apps	41	5%
I didn't enjoy the online survey	32	4%
Doesn't trust giving information to apps	39	4%
Doesn't have the storage space to download the app	29	3%
Lacks appropriate technology (e.g., doesn't have a smartphone)	13	2%
Lacks technical capability/skills to participate in apps	8	1%
Unable due to English literacy	7	1%
Not eligible for activities because twins/triplets	5	1%
Unable due to sickness, disability, etc.	*	<1%
Other	172	19%
		Base: 891

An asterisk (*) represents fewer than 5 cases in this category

For those who said yes to taking part in the app, the script recommended that they download the app after completing the survey by going to their smartphone's app store or Google Play and search "BabySteps - Children of the 2020s study". The script showed an image of the app icon to help respondents identify which app to select. Additional guidance was also made available by sharing a link to the BabySteps information sheet pdf at the end of the survey and on the study website.

The script explained that after downloading the app non-primary caregivers would need to set up their own account using their email address and a unique login code – which was displayed within the CAWI survey. Respondents were advised to either note it down or take a screenshot as they wouldn't be able to access the app without it.

Again, if non-primary caregivers had more than one cohort child, they were reminded they that should not complete the research activities. Non-primary caregivers were

directed to UCL's study team if they had any questions or required assistance with the app by email and freephone at the end of the BabySteps section in the script.

As non-primary caregivers were asked to download the app after the survey, data on successfully downloading the app was not collected in the survey.

15.5 Registrations

The steps required to self-register on the app were outlined on the BabySteps information sheet. Most primary caregivers were guided through these steps during the interview whereas the non-primary caregivers were encouraged to register on the app after their online survey. They consisted of:

1. Selecting 'Join Study' on the initial screen shown that introduces BabySteps
2. Reading and signing the consent page – this included a privacy notice
3. Add a signature to confirm they were happy to take part
4. Complete the registration form – this included providing their name, the cohort child's (children's) name(s), the cohort children's date of birth, their relationship to the cohort child (children), confirming their username and password.
5. Enter the unique 7-digit login code and click 'Submit'
6. Follow the instruction in the app pop-up to enable BabySteps to send notifications

15.5.1 Primary caregivers

Amongst the primary caregivers who successfully downloaded the app during the interview, 97% (N=6270) said they set up their app account and 3% (N=171) said they did not.

According to the app data, between 1st June 2022 and 30th June 2023 a total of 6334 primary caregivers registered an account on the app; of which 93% had registered on the app (i.e. set up their account) during the interview.

Of the 1499 who had opted to download the app later, 31% successfully registered an account on the app.

15.5.2 Non-primary caregivers

Between 1st June 2022 and 30th June 2023, a total of 578 resident non-primary caregivers and 8 non-resident non-primary caregivers registered an account on the app.

15.6 Research activities engagement

In total 15 research activities were scheduled to be released across the Wave 1 to Wave 2 inter-wave period. These research activities were released approximately once a month according to the child's age and were typically available for two months (with the exception of the first and second activities). After the availability period, the research activity expired and was no longer available for completion. Completion of research activities accrued participants reward points which were exchangeable for e-voucher incentives (see Section 15.7. E-vouchers).

The research activities involved answering short questionnaires (typically around 20-28 questions long) on topics related to child development. Table 33 describes each activity and summarises their availability periods.

Table 33a: Summary of each BabySteps activity, the month of age during which the tasks became available and its availability period

Research Activity	Description	Start	Availability period
1 – Do you use greenspaces?	11 questions on the types of greenspaces the caregiver uses with their child, what activities they do there, how long they spend in greenspaces and the quality of greenspaces in their area. (see Appendix 5 for the specification).	8 months	1 month and 21 days
2 - Help us study baby's milestones!	24 questions from a standardised questionnaire on infant milestones.	9 months	3 months
3 - How your baby explores!	12 questions from a standardised questionnaire on infant temperament.	10 months	2 months
4 - How do you use smartphones!	7 questions from a standardised questionnaire about infant sleep and 9 questions from a standardised questionnaire on how parents use their smartphones around their children.	11 months	2 months
5 - Your baby's attention!	28 questions from a standardised questionnaire about infants' executive functioning	12 months	2 months
6 - Your baby's emotions!	19 questions from a standardised questionnaire about infant emotional wellbeing.	13 months	2 months
7 – What do toddlers get up to?	21 questions about which activities children undertake in their daily lives and how much time they spend on those activities.	14 months	2 months

Research Activity	Description	Start	Availability period
8 – Milestones updates	20 questions from a standardised questionnaire on infant milestones (an update from the 9 month task).	15 months	2 months
9 - Language updates	A list of 40 words for which caregivers mark whether their infant says and/or understands the word	16 months	2 months
10 - Update your toddler's attention	28 questions from a standardised questionnaire about infants' executive functioning (update from 12 months)	17 months	2 months
11 – Your home!	15 questions about the home environment and routines in the home of the infant	18 months	2 months
12 – Toddlers sleep habits	7 questions from a standardised questionnaire about infant sleep and a further 7 on feedback about the app.	19 months	2 months
13 – Interactions and behaviours	28 questions from a standardised questionnaire about how the child interacts with other people	20 months	2 months
14 – Looking after you toddler	16 questions from a standardised questionnaire about the parent/carers own parenting	21 months	2 months
15 – Update us on your toddlers' milestones!	25 questions from a standardised questionnaire on toddlers' milestones.	22 months	2 months

Table shows description of tasks and availability.

Source: COT20s BabySteps Wave 1 to 2 interwave period.

As of 30 June 2023, the first six research activities had reached the end of their availability period for all BabySteps users. Table 33 shows the number of completions for each of the first six research activities.

Table 33b: Summary of the number of activity completions by caregiver type

Research Activity	Frequency of completions (Percentage of registrations)		
	Primary caregivers	Non-primary resident caregivers	Non-primary non-resident caregivers
1	1508 (24%)	82 (14%)	3 (38%)
2	4765 (75%)	382 (66%)	4 (50%)
3	815 (60%)	284 (49%)	3 (38%)
4	539 (56%)	282 (49%)	4 (50%)
5	3121 (49%)	246 (43%)	3 (38%)
6	3067 (48%)	238 (41%)	3 (38%)
Base	334 (100%)	578 (100%)	8 (100%)

Base: BabySteps Registrations per caregiver type
Table shows column frequencies and %.

Source: COT20s BabySteps interwave period 1-2

Note that the first research activity, 'How do you use greenspaces?', was only available until the child was 9 months and 21 days. This was because initially the activity was to be available only during the children's 8th month of age due to the relevance of topic to this age. However, upon review, completion rates were below expected (estimated to be 1000 completions at the end of the availability period), therefore the age for which the task was available was extended up to 9 months and 21 days.

Some interviews took place when the child was older than this. In fact, 57% (N = 3989) of BabySteps users registered on the app after the availability of this activity, therefore the first research activity was available to only 2784 primary caregivers, 161 non-primary resident caregivers, and 5 non-resident non-primary caregivers. All other research

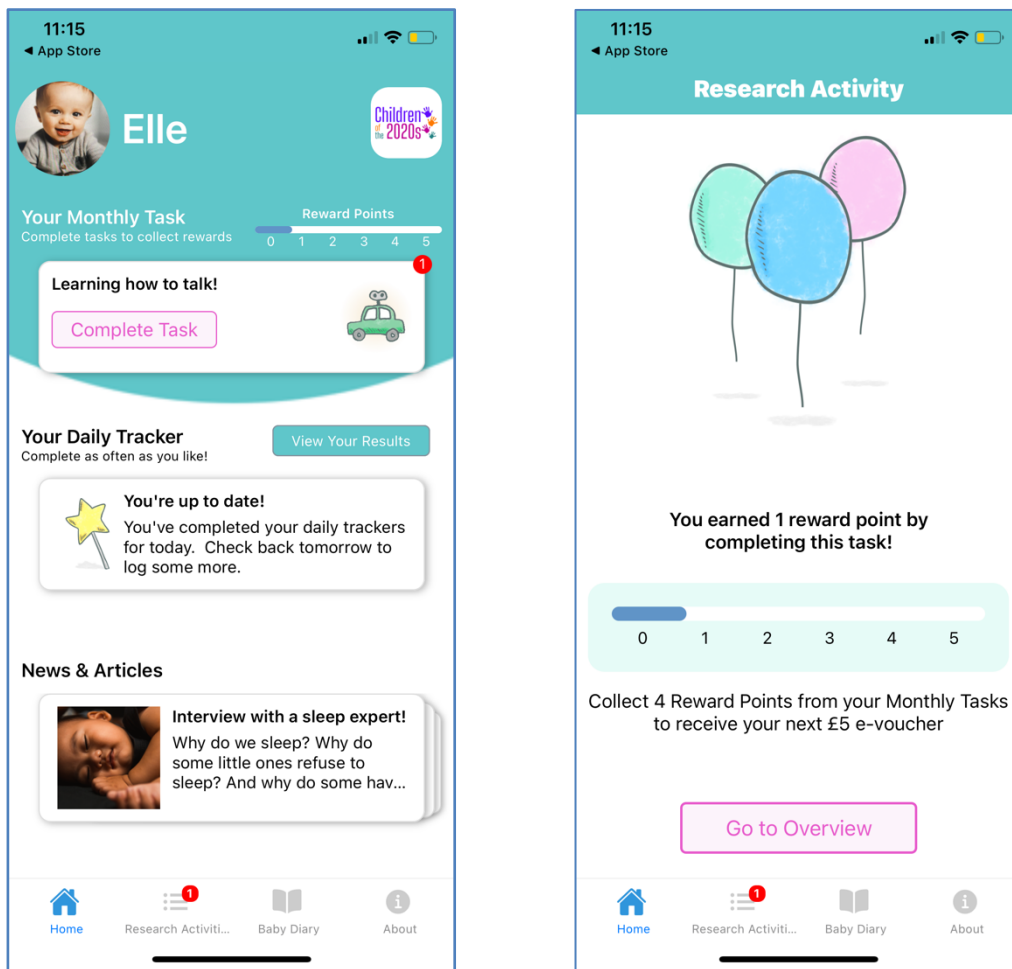

activities were available to >95% of BabySteps accounts (the <5% account for late registrations who missed the availability period of certain tasks).

15.7 E-vouchers

The completion of one qualifying research activity accrued eligible caregivers one reward point. Upon completion, respondents were notified of the number of reward points earned on the 'activity completion confirmation page'. The total number of reward points accrued was displayed in the reward point meter shown on the app's home page.

Respondents became eligible for a £5 e-voucher each time they accrued five reward points. At the beginning of each month, UCL securely transferred the details of those eligible to receive a £5 voucher to Ipsos who administered the voucher codes by email. Voucher codes were purchased from an external supplier.

Image 1. a) Example confirmation page displayed in the app to participants upon the completion of a research activity; b) reward point meter in the top right corner of the app’s homepage

Note. All photographs include in the image above are stock images (not children participating in the study).

As of 30 June 2023, a total of 5612 e-vouchers had been accrued. Of this, 3627 were where the users accrued their first £5 voucher and a further 1985 were where the users accrued their second £5 voucher.

15.8 Encouraging ongoing engagement with app

Ongoing engagement with the BabySteps app throughout the inter-wave period was encouraged using both direct communications with participants (e.g., app notification and email reminders) as well as the implementation of a number of engagement features in the app designed specifically to be enjoyable and interesting to participants.

During registration, users could opt to receive notifications from the app. A total of 86% (n = 5962) of BabySteps users allowed the app to send them notifications. These

notifications were automatically sent by the app and alerted users to the availability of a new activity to encourage completion. One activity notification was sent per week, with up to 4 notifications per activity. Notification wording can be found in a BabySteps activity specification in Appendix 2 of the technical report appendix.

Alongside the app notifications, participants were alerted to the expiration of a research activity via email reminders. The reminders were sent to participants in batches in the week before a research activity was due to expire (i.e., a minimum of 7 days or a maximum of 14 days before the task was due to expire).

The app also included several non-research features to encourage the ongoing use of the app. These included:

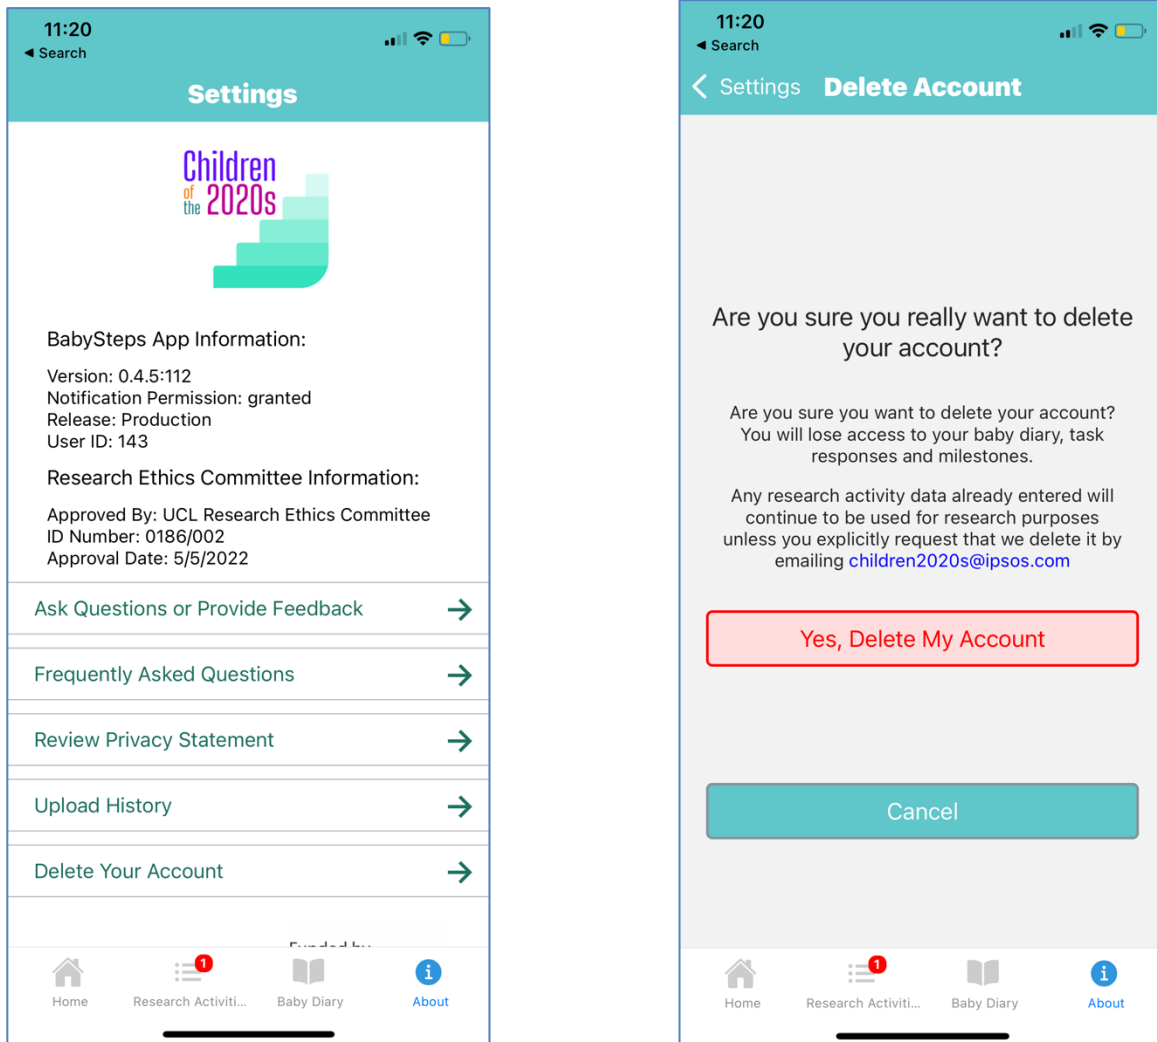

- The BabySteps Baby Diary that users could use to document their child's early life. The Baby Diary allowed users to add entries to their diary where they could write a description of a milestone, event or experience and/or upload videos and pictures. Anything added to the diary was for the participants to keep. This diary included a share function whereby entries could be messaged to friends and family or shared via social media. As of 30 June 2023, 452 BabySteps users made at least one entry to the baby diary entry.
- A 'News & Articles' section where BabySteps users can find articles about either the science of child development, interesting summaries of the study's findings, or updates about the progress of the study. These articles were released every 2-4 weeks from the day of registration and were available to read on the app. Upon the release of a new article, one notification was sent via the app.
- Daily trackers allowed participants to monitor their child's sleep and milestones each day and to view their progress by selecting 'view your results' in the home page of the app. 74% of users had completed at least one daily sleep tracker, and 63% had completed at least one milestones tracker.

15.9 App account deletion

From the 30th June 2022, Apple required that all apps released in the App Store that involved the creation of user accounts had to allow users to initiate deletion of their account from within the app. Therefore, BabySteps included a function that allowed users to initiate the deletion of their account by selecting 'Delete Your Account' on the apps About page, and then selection of 'Yes, delete my account' after reading the delete account confirmation on delete account page in the app (see Image XX). The delete account confirmation message explained to participants that by deleting their account they will lose access to the app functions, but that any research activity data already

entered in the app will continue to be used unless they explicitly requested it to be deleted.

Image 2. BabySteps About page highlighting the “Delete Your Account” function, and the delete account page demonstrating the confirmation message.

As of 30 June 2023, 42 BabySteps users had requested to delete their account, none of which requested for their BabySteps data to be deleted.

16. Data processing

Data processing for the primary caregiver face-to-face interview and the non-primary caregiver online questionnaire was conducted by Ipsos. Data processing from the BabySteps app was led by UCL.

Data processing for Children of the 2020s can be seen as consisting of the following stages:

- Data checks during fieldwork
- Coding
- Data checking
- Data editing
- Production of derived variables

16.1 Data checks during fieldwork

Given concerns around the length of the primary caregiver interview (discussed in the chapter on Questionnaire Development), early data checking included extensive analysis of timestamp data to calculate how long the interview was taking on average. This analysis excluded outliers on a module-by-module basis, to account for interviews that may have been paused during a particular module, and enabled the study team to examine which sets of questions were taking longer than expected, informing decisions about necessary cuts.

General data quality checks were also carried out to identify any problems either in the script or in how questions were being interpreted. This highlighted two issues: data collected about cohort member weights in kilograms suggested that these were being entered incorrectly; and a question at the beginning of the self-completion module about whether the respondent was being assisted by a friend or family member, which resulted in the most sensitive questions being routed out, had a higher than expected number of people being coded as being assisted. These problems were addressed in the first few weeks of fieldwork. See Section 7.5. Changes during fieldwork and Section 10.5. Follow-up CAWI survey.

As well as these general checks, several checks were run regularly throughout the fieldwork period at an interviewer level, in order to identify any patterns of behaviour that might suggest that individual interviewers were misunderstanding something in the interview. These included:

- Check for interviewers coding that respondents were being assisted during the self-completion module more than would be expected, to flag any interviewers that were misunderstanding this question.
- Check for interviewers coding that the respondent would prefer to download the BabySteps app later rather than during the interview more often than would be expected, to flag any interviewers who might be attempting to cut down on interview length by encouraging this.
- Check for any interviewers regularly entering the same answer for each of the words listed in the question on what words the cohort child understands or says, which would suggest that this question was not being asked correctly.
- Check for any interviewers entering unusual family situations more often than would be expected, which would suggest that the household relationships question was not being asked correctly.

Only the first of these checks flagged any issues. Once the changes to the questionnaire (discussed in the chapter on Questionnaire Development) had been made, interviewers were sent information about answering this question correctly, and any interviewers still raising concern as a result of this check were spoken to individually.

For the non-primary caregiver questionnaire, data checks during fieldwork focused on interview length and on general checks to identify any script errors, none of which were found.

16.2 Coding

Many questions in both the primary and non-primary caregiver questionnaires had “other (specify)” answer codes, where respondents could enter their answer in an open text box. These text answers were coded by Ipsos’s coding team. Where the answer given reflected a pre-existing answer code, these were “back coded” to the pre-existing code; where it did not, new answer codes were created.

The Ipsos coding team used the Ascribe coding system to code all free-text responses. As standard, five per cent of coded responses were validated by the Team Manager/Team Leader to ensure coding quality.

In the published dataset, original answer codes (including simply a numeric value for all those selecting “other (specify)”) are included, alongside separate variables for coded data (variables ending in “_coded”) and a combined variable containing data from both the original variable and the coded variable (ending in “_comb”).

16.3 Data checking and editing

Extensive post-fieldwork data checking was conducted on both the primary and non-primary caregiver datasets. Data for every variable in the datasets was compared to the data for those questions involved in its routing, such that any case that should have been asked a question but did not have a response, or any case that should not have been asked a question but did have a response, was identified.

16.3.1 Checks carried out on the primary caregiver data

In checks carried out on the primary caregiver data, this process identified some responses at questions where there should not have been. This was a result of off-path data being saved, which can occur when respondents go back in the interviewing script to change a previous answer, and as a result are routed along a different “path.” In such cases, any data which had been recorded in off-path questions (i.e. those questions which were no longer relevant given the respondents’ revised responses at earlier questions) were edited to be “not applicable.” It also identified a few minor errors in the primary caregiver interview script. These were:

- A routing error at MRESPBIRTHSEX, affecting one case, the result of which was that when they reported at MGEND6 that their resident partner’s gender was “other (specify)” they did not get asked what sex they were registered with at birth.
- MAPPREF, which collected respondents’ reasons for not wanting to download the BabySteps app, was intended to be a multicode question, but was in fact scripted as a single code question.
- MWORK14, which asks about how the respondent’s job was different from before their child was born, was mistakenly asked of some who were not currently in work. Data for this question for these people has been removed from the published dataset.
- MDISP and MDISF, which ask respondents how often they disagree over issues relating to bringing up their cohort child with their partner/the child’s other parent, was mistakenly asked of some people without a partner/other involved parent. Data for this question for these people has been removed from the published dataset.

Finally, a few checks flagged inconsistencies as a result of data change requests made by respondents after the interview.

Further checks were carried out for logical inconsistencies in the household relationship data. This identified a number of clear data entry errors. Where other data made clear what the mistake was, for example a reversed relationship, coding a parent of x as a child of x, this data was edited; where there were clearly mistaken relationships but the

nature of the true relationship was unknowable from other data this was deleted and recorded as -97 “Miscoded data” in the dataset. This process also identified a number of duplicate entries, most commonly people entering the cohort child as an additional member of the household. This duplicate data was deleted.

Finally, checks were carried out of the derived variables computed by the interview script. This identified a problem with the derivation of age if the interview took place on the respondent’s birthday, which has been amended in the final dataset.

16.3.2 Checks carried out on the non-primary caregiver data

Checks of this kind carried out on the **non-primary caregiver** data uncovered no issues that required editing.

16.4 Production of derived variables

The published dataset contains a number of derived variables drawing on the interview data. These will be listed in the User Guide to the dataset (forthcoming) alongside the questions they are derived from and any pertinent notes on their derivation.

16.5 Weighting primary caregiver data

The approach for weighting for the Children of the 2020s primary caregiver data had three stages:

- selection weighting to correct for the over-sampling of families in the most deprived quintile of areas;
- non-response weighting to adjust the responding sample so that its profile more closely matched that of the issued sample, and by extension the profile of the population; and
- calibration weighting to ensure that the weighted profile of the responding sample perfectly matched the population estimates for the three birth months of the study.

16.5.1 Selection Weights

The sample for the study was designed to boost the sample in the most deprived quintile of the PSUs based on the aggregated Income Deprivation Affecting Children Index (IDACI) scores for Lower Super Output Areas (LSOA). The first stage of the weighting was to correct for this disproportionate sampling by generating selection weights.

The sample of PSUs was selected within strata defined by the number of births in the PSU over the three-month birth period (split into three groups: small, medium and large) and whether the PSU was in the most deprived quintile of PSUs or not (two groups). This therefore gave six sampling strata for the PSUs. The selection weights are calculated as the total number of births in each strata in the three-month birth period divided by the number⁷ of families issued in each.

Table 34: Selection weights

Sampling strata	Births: Population	Births: Sampled	Selection Weight
Not deprived: small	26,592	3,958	6.72
Not deprived: medium	44,373	6,681	6.64
Not deprived: large	11,777	1,872	6.29
Deprived: small	5,934	1,522	3.90
Deprived: medium	11,481	3,001	3.83
Deprived: large	3,280	834	3.93

16.5.2 Non-Response Weights

The second stage of weighting was to generate non-response weights which adjusted the achieved sample to match the issued sample. This was done by running a stepwise logistic regression model with whether the family responded or not as the outcome measure and a range of external measures, including deprivation, urban/rural and estimates derived from the 2011 Census as the potential covariates. The model was then used to calculate an estimate of the propensity to participate for each family. The non-response weights for the participating families were then calculated as the reciprocal of those estimated propensities. That means that a family that had characteristics associated with a lower chance of taking part in the study was given a higher weight.

The non-response model was fitted applying the selection weights, scaled to have mean 1, to ensure that the relationships in the model were not skewed towards the families that lived in the more deprived PSUs which had been over-sampled. The parameters for the non-response model are shown in Table 35.

⁷ This does not include the 21 families that requested that their data be deleted. As their data was removed from the dataset, they were not included in the weighting.

Table 35: Non-response model

⁸ Acorn is a segmentation of residential neighbourhoods in the UK by postcode. It classifies each postcode into one of 62 types aggregated to 5 categories at the top level.

The values of the non-response weights ranged from 1.44 to 3.69. Given that this is a relatively narrow range, the non-response weights did not need to be trimmed.

16.5.3 Calibration Weights

The third and final stage of the weighting was to calibrate the combined weights from the first two stages to population estimates from the Child Benefit records which were supplied by HMRC for the three-month birth period. These were counts of: gender by region, and the number of children aged 0 to 15 in the household by region. More than one child could be included in the calibration weighting for the same household to allow for multiple births.

The starting weights for the calibration were calculated by multiplying the selection weights by the non-response weights and then rescaling the combined weights so that they summed to 1 within each region. This was done so that the calibration weighting adjusted to the proportions in each group within region rather than to the counts themselves (Table 3); note that it makes no difference to the final weights whether proportions or counts are used.

Table 36: Population proportions for calibration

Number of children in household	1	2	3	4+	Male	Female
Region						
North East	0.439	0.363	0.128	0.070	0.507	0.493
North West	0.432	0.364	0.131	0.073	0.509	0.491
Yorkshire & The Humber	0.435	0.359	0.137	0.069	0.516	0.484
East Midlands	0.449	0.373	0.121	0.057	0.520	0.480
West Midlands	0.403	0.369	0.142	0.086	0.518	0.482
East of England	0.437	0.385	0.120	0.057	0.509	0.491
London	0.441	0.345	0.133	0.082	0.517	0.483
South East	0.447	0.377	0.121	0.056	0.514	0.486
South West	0.452	0.382	0.113	0.053	0.514	0.486

The adjustment that the calibration weighting made to the initial weights ranged from 0.75 to 2.67. Again, this is such a narrow range that no trimming of the weights was required.

As the weights were scaled for proportions within each region, they were re-scaled within each region so that the weighted profile by region matched the population counts. These grossing weights were then re-scaled again (but across the full sample) to have mean one as is standard for weighting.

The efficiency of the final weights is 93.5%. A component of that is due to the disproportionate sampling by the deprivation of the area. If we take that into account then the efficiency is 97.2%.

16.6 Weighting Non-Primary Caregiver Data

The approach for weighting for the NPC CAWI data had three components:

- the final weights from the main Children of the 2020s CAPI survey;
- weights to adjust for whether a respondent agreed to be recontacted or not in the main COT2020s; and
- weights to adjust for participation or not in the NPC CAWI survey.

16.6.1 The final COT2020s survey weights

The weights from the main W1 sample were carried forward for all families that reported having an NPC in the main survey. These weights adjusted the final W1 CAPI participating sample so that it was representative of the population of all families with a child born in the three-month birth period (September to November 2021).

Details of how this weight was produced are in Section 16.4.1. The final COT2020s survey weights.

16.7 Weights for permission to re-contact

The second stage of weighting was to generate weights which adjusted for whether the participants in the Wave 1 CAPI survey gave permission to be re-contacted or not. This was done by running a stepwise logistic regression model, but only including those families with a non-primary caregiver – families without a non-primary caregiver were excluded from the weighting process as they were not eligible for this survey. The outcome code was whether permission was given to recontact the household, and the covariates were a combination of the measures used for the Wave 1 CAPI weighting and measures from the survey itself. The model was then used to calculate an estimate of the

propensity for giving permission to recontact for each family. The weights were then calculated as the reciprocal of those estimated propensities.

The model was fitted applying the Wave 1 CAPI weights, scaled to have mean 1. The parameters for the non-response model are shown in Table 37.

The values of the non-response weights ranged from 1.04 to 10.96. Given that this was a fairly wide range, these weights were trimmed at the 1% and 99% percentiles (1.05 and 3.24 respectively).

16.7.1 Weights for participation to the non-primary caregiver CAWI survey

The third stage of weighting was to generate weights which adjusted for whether the non-primary caregiver participated in the survey or not. This was done by running a stepwise logistic regression model for non-primary caregivers that were issued for the survey. The outcome code was whether the non-primary caregiver participated or not, and the covariates were a combination of the measures used for the Wave 1 CAPI weighting and measures from the survey itself. The model was then used to calculate an estimate of the propensity of responding for each non-primary caregiver. The weights were then calculated as the reciprocal of those estimated propensities.

The was fitted applying the combined Wave 1 CAPI weights and the trimmed permission to re-contact weights, scaled to have mean 1. The parameters for the non-response model are shown in Table 2.

The values of the non-response weights ranged from 1.53 to 16.54. Given that this was a fairly wide range, these weights were trimmed at the 1% and 99% percentiles (1.68 and 8.05 respectively).

The final weights were a combination of the Wave 1 CAPI final weights, the trimmed permission to re-contact weights and the trimmed responding to the non-primary caregiver CAWI survey weights. The combined weights were then scaled to have mean 1. The efficiency of the non-primary CAWI weights was 72.5%.

Children of the 2020s

Wave 1

Technical report appendices

Appendix 1 – ECS screener

Objective: To confirm who the primary caregiver is to complete the main interview, and to confirm whether the named child/children are in the household

Scripter: Please label as 'Screener' in ECS.

[note: scripted screener produced from v7 plus a document about additional derived variables. V8 combines v7 and the relevant parts of the derived variables document.]

CONSENT

{ASK ALL}

SINGLE CODE

Hello. I am an interviewer from Ipsos, my name is ... and I am currently working on the Children of the 2020s study. We recently wrote to you (or someone in your household) to share the news that your household has been chosen to take part in this study.

As a reminder:

- The study will help the Department for Education understand children's development and families' lives better so that families can be better supported in the early years.
- The research is being led by University College London (UCL), and we are helping collect the data.
- Any information you share will be kept confidential and used for research purposes only.
- The interview will last up to an hour, and as a thank you for your time, you will receive a voucher.
- Should you not feel comfortable being interviewed in your home, this is of course fine. We can arrange for you to take part by Teams or telephone instead.

ADD IF NECESSARY: We have selected a sample of families with children born between September and November 2021, completely at random from HMRC's Child Benefit Records. Participation in this study will not affect any benefits you receive now or in the future.

If you are asked about what happens if you or they subsequently find out they have COVID-19: Please hand them the leaflet with the attachment

IF ASKED YOUR *VACCINATION STATUS*, IT IS ENTIRELY UP TO YOU WHETHER YOU WISH TO DISCLOSE THIS INFORMATION.

MINTROSCREEN1

{ASK ALL}

- The Children of the 2020s study is being led by University College London, and run by Ipsos, on behalf of the Department for Education.
- We will be contacting the same families when their child is 9 months, and then again when they turn 2, 3, 4 and 5 years.
- The information you provide us will help us understand how to better support families in England from a wide range of communities and circumstances during the early years.
- It will take around an hour.
- It is up to you whether you take part and you can change your mind at any time.
- The research is being carried out in accordance with data protection regulations and the Market Research Society Code of Conduct.
- All the information you give us remain confidential, and used for research purposes only. Anonymised data will be made available securely to suitably qualified researchers. Any information that identifies you will never be shared outside of the research team.
- More information about the study, data protection procedures, and your rights can be found on the study leaflet and on the website.

CONSENT FOR PRIMARY CARER SURVEY

MINTROSCREEN2

{ASK ALL, SINGLE CODE}

The survey you complete today will ask questions about your family life, including about your {MCHILD} born between 1st September and 30th November 2021. You may skip any question you do not wish to answer.

Please confirm which of the following statements you agree with:

1. I agree to participate in the survey and to being contacted to see if I would like to take part in another survey when my child is aged 2, 3, 4 and 5. I can decide whether or not I want to take part each time.
2. I don't want to take part [CLOSE INTERVIEW].

Module E - DOWNLOAD BABYSTEPS APP AND FIRST ACTIVITY

Primary caregiver app placement

TimeStampStartModuleE

APPINT

{DISPLAY TO ALL}

INTERVIEWER: YOU ARE NOW IN THE BABYSTEPS APP PLACEMENT MODULE.

MAPPCON

{ASK ALL, SINGLE CODE}

I'd now like to ask you to download a free smartphone app called BabySteps, which you can use in your own time. The app was designed by scientists to help parents/carers, like you, track their child's learning and development, and to capture precious memories through comments, photos, and videos.

{TEXTFILL: IF NMULTIHH FROM ECS>1 "Unfortunately, the BabySteps App research activities cannot accommodate twins and triplets, because it only allows you to enter information about one child. We sincerely apologise for this, and we still welcome you to download the app to keep in touch with the research team and to use the 'Baby Diary' to record memories of your children as they grow and develop. You are also welcome to browse the 'News and Articles' section of the app where you can stay up to date with the progress of the Children of the 2020s study and find regularly updated articles on the science of child development.

Your data will be processed and stored securely. Any information, photos or videos you share with the app will be kept confidential. Your data will not be passed on to any third party and the phone does not send you advertising or track you at all. You can find more information about how your data is looked after in the FAQs and Privacy Notice in your app and on the study website.";

IF NMULTIHH FROM ECS=1 "

In the app, you'll find many unique features, including a set of short monthly activities that you can do to help the Children of the 2020s study capture a more complete picture of family life and child development between the times that we see you. The activities are quick and easy, and by completing them you'll gain reward points, which are worth £1 each. Each time you complete 5 tasks, you will receive an e-voucher of £5 via email. Depending on how many you complete over the first year of the study, that would come to approximately £10 in e-vouchers.

Anything shared with the app will be kept confidential and stored securely. Your data will not be passed on to any third party.

You can find more information in the FAQs and Privacy Notice in your app and on the study website.”}

Are you ok for me to guide you through downloading the app now?

INTERVIEWER: PLEASE ENCOURAGE PARTICIPANTS TO DOWNLOAD THE APP NOW

- 1 Yes
- 2 SPONTANEOUS: No, I would prefer to download the app later
- 3 No, I do not want to download the app

MAPPLET

{ASK IF MAPPCON = 1, SINGLE CODE}

{TEXTFILL: IF MINTMODE = 1 “INTERVIEWER: HAND THE RESPONDENT A COPY OF THE BABY STEPS INFORMATION SHEET (“DOWNLOAD THE BABY STEP APP”).”;

IF MINTMODE = 2 or 3 “INTERVIEWER: ASK THE RESPONDENT TO GET THEIR BABY STEPS INFORMATION SHEET (“DOWNLOAD THE BABY STEPS APP”). THIS DOCUMENT WAS INCLUDED IN THEIR APPOINTMENT PACK.”}

PLEASE CONFIRM WHETHER THE RESPONDENT HAS THEIR INFORMATION SHEET.

- 1 Yes
- 2 No

MAPPSTPS

{DISPLAY IF MAPPLET = 2}

INTERVIEWER: THE INSTRUCTIONS FOR DOWNLOADING THE APP ARE ALSO AVAILABLE ON THE “KEY DOCUMENTS” PAGE OF THE STUDY WEBSITE, THE ADDRESS FOR WHICH CAN BE FOUND ON THE LETTERS AND LEAFLET WE HAVE SENT YOU: <https://children2020s.ipsos-mori.com/keydocuments/>

PLEASE ASK RESPONDENT TO FOLLOW YOUR GUIDANCE (USING THE INSTRUCTIONS ON YOUR/THIER COPY OF THE INFORMATION SHEET).

MAPPID

{ASK IF MAPPCON = 1, SINGLE CODE}

INTERVIEWER: BEFORE ASKING THE RESPONDENT TO FOLLOW THE INSTRUCTIONS, PLEASE ASK THEM TO WRITE THEIR NAME AT THE TOP OF THE INFORMATION SHEET, AND THEIR LOGIN CODE IN THE SPACE PROVIDED ON THE BACK OF THE SHEET.

Their login code is: **[TEXTFILL]**

INTERVIEWER: CHECK THEY HAVE WRITTEN THEIR LOGIN CODE DOWN CORRECTLY BY ASKING THEM TO READ IT BACK TO YOU.

IF THEY DO NOT HAVE AN INFORMATION SHEET, PLEASE ASK THEM TO WRITE IT DOWN SOMEWHERE ELSE

IF THERE ARE ANY ISSUES, PLEASE CONTACT THE OFFICE AFTER YOUR INTERVIEW AND LET THE RESPONDENT KNOW WE WILL BE IN TOUCH.

1. Yes, respondent has written login code correctly
2. No, the login code did not display correctly
3. No, respondent was unable to write down their login code

MAPPDL

{ASK IF MAPPID = 1, SINGLE CODE}

INTERVIEWER: ASK/HELP RESPONDENTS TO FOLLOW THE STEP-BY-STEP INSTRUCTIONS ON THE INFORMATION SHEET.

PLEASE CONFIRM WHETHER THE RESPONDENT HAS DOWNLOADED THE APP.

1. Yes
2. No

MAPPID2

{ASK IF MAPPCON=2, SINGLE CODE}

When you're ready to download the app, please follow the instructions provided on your information sheet.

ADD IF NECESSARY: You can also find a copy of these instructions on the study website.

To register your app, you will need to enter your login code.

Your code is: **[PCAPPLOGIN]**

INTERVIEWER: CHECK THEY HAVE WRITTEN THEIR LOGIN CODE DOWN CORRECTLY BY ASKING THEM TO READ IT BACK TO YOU.

PLEASE CONFIRM WHETHER THE RESPONDENT HAS CORRECTLY WRITTEN DOWN THEIR LOGIN CODE.

IF THERE ARE ANY ISSUES, PLEASE CONTACT THE OFFICE AFTER YOUR INTERVIEW AND LET THE RESPONDENT KNOW WE WILL BE IN TOUCH.

1. Yes, respondent has written login code correctly
2. No, the login code did not display correctly
3. No, respondent was unable to write down their login code

MAPPNDL

{SHOW IF MAPPID=2,3 OR MAPPCON =2}

{MAPPID2 = 2 OR MAPPID=2, TEXTFILL: "I will let the office know that there have been some technical issues. They will contact you directly to provide further assistance."};

IF MAPPID=3 OR MAPPID2=3, "INTERVIEWER: PLEASE ARRANGE TO SEND THE LOGIN DETAILS TO THE RESPONDENT IN SOME OTHER WAY, OR CONTACT THE OFFICE TO DO SO ."

We hope you enjoy using the app once your account is set up.

MAPPREG

{ASK IF MAPPDL = 1, SINGLE CODE}

INTERVIEWER: ONCE THE APP IS DOWNLOADED, RESPONDENTS SHOULD CONTINUE TO FOLLOW THE INSTRUCTIONS TO SET THEIR ACCOUNT UP, INCLUDING **TURNING NOTIFICATIONS ON**.

{TEXTFILL: IF NMULTIHH FROM ECS=1

"ADD IF NECESSARY: We recommend that you turn BabySteps notifications on so you don't miss any new research activities that will count towards your e-voucher."}

{TEXTFILL: IF NMULTIHH FROM ECS>1

"On the registration page, in the box that asks you to provide the study child's first name, please enter all your children's names separated by an '&' symbol (for example, 'Tom & Tim & John')."

After the interview, you can also add a picture of your children to personalise the app. Here you can add one photo of your children together.”}

INTERVIEWER: PLEASE CONFIRM WHETHER THE RESPONDENT HAS SET UP THEIR APP ACCOUNT.

IF THE RESPONDENT EXPERIENCES ANY DIFFICULTIES, PLEASE CONTACT THE OFFICE AFTER YOUR INTERVIEW AND LET THE RESPONDENT KNOW WE WILL BE IN TOUCH.

- 1 Yes, respondent has set their app account up
- 2 No, respondent has been unable to set their app account up

MAPPACT

{SHOW IF MAPPREG= 1 AND MMULTIHH FROM ECS>1}

Thank you for downloading the BabySteps app and completing the set-up process. Please remember that research activities cannot accommodate twins and triplets, and we request you no to complete these. We sincerely apologise, and we hope you enjoy exploring the many other features in the app and find it an enjoyable way to document and look back on your child’s development.

MAPPRTNR

{SHOW IF MAPPCON = 1 or 2 AND IF MRELAT=1 or 2 FOR MFNAME1 WITH ANY OTHER HH MEMBER}

Just to let you know, your partner can also download the app {TEXTFILL: IF NMULTIHH FROM ECS=1: “and complete research activities to receive e-vouchers”}. They will get their personal login code during their online survey.

Primary caregiver – reason for not downloading the app

MAPPREF

{ASK IF MAPPCON = 2, MULTICODE}

INTERVIEWER: ASK AND CODE REASONS WHY RESPONDENT WOULD PREFER TO DOWNLOAD THE APP LATER.

CODE ALL THAT APPLY.

MBACKINTRO

{SHOW ALL}

To understand children's development researchers need to also have a good understanding of the family circumstances of babies born in the 2020s. So, the next questions are about your {TEXTFILL: IF MRESP=1 "and your partner's"} employment, education and finances.

Home ownership

NOTE: MCS housing tenure question to be used to capture the nuance of different living arrangements.

Source: MCS7

MTENURE

{ASK ALL, SINGLE CODE}

Do you {TEXTFILL: if RESP=1 "and your partner {MRESPNAME}"} own or rent your home or have some other arrangement?

INTERVIEWER: ALL RENT PAID BY HOUSING BENEFIT IS NOT "RENT FREE"

SHOWCARD F1

1. Own outright
2. Own with a mortgage/loan
3. Part rent/part mortgage (shared equity)
4. Rent from local authority
5. Rent from Housing Association
6. Rent privately
7. Live with parents

8. Live rent free
 9. Live with friends/ in hostel/ temporary accommodation
 10. Squat
 11. Other (SPECIFY) [variable label "MTENUREO"]
- 99 Don't know
- 98 Prefer not to say

Parental occupation

Parental occupation questions cover:

- Current employment status (if on maternity leave, interviewer should code what they were doing before maternity/what they are going back to)
- When their current activity (e.g. employment, joblessness) started
- Job title, industry description
- Qualifications or training needed for job
- Managerial/supervisory duties
- Whether currently on maternity/paternity leave
- If on maternity/paternity when it ends and whether they are planning to go back to work
- Whether other parent took maternity/paternity leave and if so for how long

SOURCE: MCS7 adapted

MWORK1

{ASK ALL, SINGLE CODE}

Which of these best describes what you are currently doing?

If you are in paid work, please state that you are employed or self-employed regardless of the number of hours or what else you are doing.

ADD IF NECESSARY: If you are on parental/maternity/paternity leave, please state what you were doing prior to your leave.

INTERVIEWER: LOOKING AFTER FAMILY INCLUDES CARING FOR FAMILY MEMBERS, INCLUDING FULL TIME CARERS, OR LOOKING AFTER THE CHILD/CHILDREN

SHOWCARD F2

1. Employee – in paid work
2. Self-employed
3. In unpaid voluntary work
4. Looking after family

Self completion questions

SENSINTRO

{SHOW IF NOT FACE-TO-FACE, MINTMODE<>1}

I now have some questions which are a bit more personal than the questions I asked you so far.

If there's a question that you don't want to answer just let me know and we can skip it. All the answers you give will remain confidential and any information that identifies you will never be shared outside of the research team.

SELFCOMP

{SHOW IF INTERVIEW IS FACE-TO-FACE, MINTMODE = 1}

I now have some questions that are a bit more personal, for you to answer by yourself on the computer.

Try to answer each question as truthfully as you can. There are no right or wrong answers and no-one else will be able to find out what you have said, including me. If you come to a question that you don't want to answer or can't answer, you can skip it.

Instructions about which keys to press will be shown on the computer screen. If you press the wrong key I can tell you how to change your answer.

If you would like to stop or take a break, please let me know. Do not select the 'stop' button at any point, as we will be unable to continue with the interview.

INTERVIEWER CODE: HAS THE RESPONDENT ACCEPTED THE SELF-COMPLETION?

IF THE RESPONDENT WILL CARRY OUT THE SELF-COMPLETION BUT **SOMEONE ELSE** IS HELPING THEM ANSWER THE QUESTIONS, CODE 1 AND RECORD THIS AT THE FOLLOWING QUESTION

IF RESPONDENT UNABLE OR UNWILLING TO COMPLETE USING TABLET, CODE 2 OR 3, THE SAME QUESTIONS WILL BE ASKED USING SHOWCARDS

1. Accepted as self-completion
2. Refused to self complete using the computer
3. Not able to self complete using the computer

[Don't know and REF not allowed]

SENSCHECK

{ASK ALL}

INTERVIEWER: PLEASE CODE **CAREFULLY** HOW THE NEXT SET OF QUESTIONS ARE BEING ANSWERED.

USE **CODE 2** IF RESPONDENT IS ANSWERING **ON THEIR OWN OR WITH YOUR HELP ONLY**.

USE **CODE 1** IF **SOMEONE ELSE** IS HELPING RESPONDENT ANSWER THE QUESTIONS I.E. PROXY, TRANSLATOR OR FOR SOME OTHER REASON E.G. DISABILITY, HEALTH CONDITION OR LITERACY REASONS.

1. **SOMEONE ELSE** IS HELPING RESPONDENT ANSWER THE QUESTIONS
2. RESPONDENT IS ANSWERING **ON THEIR OWN OR WITH YOUR HELP ONLY**

{No DK/REF}

SENSCHECK_CHECK

{ASK IF SENSHECK = 1, SOFT CHECK}

{note to scripiter: could we please have this soft check as a temporary question, so that it doesn't appear in the data and disrupt the data structure.}

INTERVIEWER: **ARE YOU SURE THAT IS CORRECT?** THIS CODE SHOULD NOT BE USED VERY OFTEN.

YOU HAVE CODED THAT **SOMEONE ELSE** IS HELPING RESPONDENT ANSWER THE QUESTIONS. **THIS CODE SHOULD ONLY BE USED** IF RESPONDENT HAS A PROXY, TRANSLATOR OR HELP FOR SOME OTHER REASON E.G. DISABILITY, HEALTH CONDITION OR LITERACY REASONS.

YOU MUST ONLY USE THIS CODE WHEN IT IS **NOT POSSIBLE** FOR RESPONDENT TO COMPLETE THIS SECTION ON THEIR OWN OR WITH YOUR HELP ONLY.

PLEASE CONFIRM

1. THIS IS AN ERROR RETURN TO PREVIOUS QUESTION AND AMEND
2. THIS IS CORRECT

{IF SENSHECK_CHECK = 2, CONTINUE; IF SENSHECK_CHECK = 1, ROUTE TO SENSHECK}

SCRF

[Ask if refused self-completion SELFCOMP = 2 // MULTICODE]

INTERVIEWER: PLEASE CODE REASON(S) WHY RESPONDENT REFUSED.

PLEASE CODE ALL THAT APPLY

1. Didn't like computer
2. Child crying/needed attention etc.
3. Worried about confidentiality
4. Concerned because someone else was present
5. Couldn't be bothered
6. Interview taking too long/ ran out of time
7. Other (SPECIFY – variable "SCRFO")

SCUN

[Ask if not able to self-complete SELFCOMP = 3 // MC]

INTERVIEWER: PLEASE CODE REASON(S) WHY RESPONDENT UNABLE TO COMPLETE SELF COMPLETION.

PLEASE CODE ALL THAT APPLY

1. Eyesight problems
2. Reading/literacy problems

3. Language problems
4. Other health problems or disability
5. Other (SPECIFY – variable “SCUNO”)

SHOWCHECK

{ASK IF MINTMODE=2,3 OR (MINTMODE=1 AND SELFCOMP<>1, SINGLE CODE}

INTERVIEWER: SOME SENSITIVE QUESTIONS IN THIS SECTION WILL BE ASKED USING SHOWCARDS, WITH THE QUESTION WRITTEN AT THE TOP OF THE SHOWCARD.

FOR THESE QUESTIONS YOU WILL NOT NEED TO READ OUT THE QUESTION – JUST DIRECT THE RESPONDENT TO THE CORRECT SHOWCARD AND RECORD THEIR ANSWER.

IF THE RESPONDENT IS UNABLE TO ACCESS THE SHOWCARDS, OR IS UNABLE TO READ OR USE THEM, PLEASE CODE 2

1. ABLE TO ACCESS AND USE SHOWCARDS
2. NOT ABLE TO ACCESS AND USE SHOWCARDS

SHOWCHECK2

{ASK IF SHOWCHECK=2}

INTERVIEWER: SINCE THE RESPONDENT IS UNABLE TO ACCESS/USE SHOWCARDS, PLEASE CONTINUE TO READ OUT ALL QUESTIONS AND ANSWER CATEGORIES.

IF THERE ARE ANY QUESTIONS THAT THE RESPONDENT IS UNCOMFORTABLE ANSWERING, CODE -98 Prefer not to say.

SCIN

[Ask if self-completion accepted SELFCOMP = 1]First, a practice question to help you get used to the computer.

INTERVIEWER: PLEASE PASS THE TABLET TO THE RESPONDENT, HELP THEM ANSWER THE TEST QUESTION AND ENSURE THEY KNOW HOW TO MOVE ONTO THE NEXT SCREEN.

TEST2 “I like using computers”

1. Strongly agree

2. Agree
3. Disagree
4. Strongly disagree
5. Don't know
6. Don't want to say

Please remember that all your answers are confidential and that no-one will know how you have answered these questions.

Just choose 'prefer not to say' for any questions you do not want to answer.

MCAREY1

{ASK IF NCHILD1 IN ECS=1, SINGLE CODE}

The following questions are about {MBABYNAMEX}.

Please indicate how often {MBABYNAMEX} did the behaviours described during the LAST WEEK (the past seven days).

Please select your answer from SHOWCARD J1. These numbers indicate how often you observed these behaviours during the last week.

The “Does Not Apply” option (number 8) should be used when you did not see the baby in the situation described during the last week. For example, if the situation mentions the baby having to wait for food or liquids and there was no time during the last week when the baby had to wait, choose option number 8.

“Does Not Apply” is different from “Never” (option number 1). “Never” should be used when you saw the baby in the situation but the baby never engaged in the behaviour

listed during the last week. For example, if the baby did have to wait for food or liquids at least once but never cried loudly while waiting, choose option number 1.

When tossed around playfully how often did {MBABYNAMEX} laugh?

SHOWCARD J1

1. Never
 2. Very Rarely
 3. Less Than Half the Time
 4. About Half the Time

MLINK1

{SHOW ALL}

As you know, Children of the 2020s is a study being run for the Department for Education to understand children's development so better policies can be introduced to improve families' lives.

{TEXTFILL: IF RELATIONSHIP OF PCG (MNAME5) TO COHORT CHILD/CHILDREN (MNAME1-4) IS MRELAT=8,9 OR MPCGRELAT=1 OR MLEGAL=1 "The Department for Education already collects information about what children's services are being used and how children are progressing at school. They also hold information about your educational background, such as exam results and participation in further education. They will combine this information about you and your {MCHILD} with data collected in this study to build a much rounder picture of families' lives. For example, researchers can look at things like how children's experiences when they are very young affect how they do when they start school. Individual children and families will never be identified in this work."};

ELSE: "The Department for Education may already hold information about your educational background, such as exam results and participation in further education. If so, they will combine this information with data collected in this study to build a fuller picture of families' lives. Individual families will never be identified in this work."}

If you did not want this to happen, you can let us know using the contact details in the study leaflet. You can also contact the team to ask any questions you may have. You will also find further information about adding data from your records and how to tell us to stop doing this in the leaflet and in the 'Adding other information FAQs' on the study website

.

MLINKNHS

{SHOW ALL}

The NHS also collects information about all of us to help them provide the services we need. We would like to add information from { TEXTFILL: IF RELATIONSHIP OF PCG (MNAME5) TO COHORT CHILD/CHILDREN (MNAME1-4) IS MRELAT=8,9 OR MPCGRELAT=1 OR MLEGAL=1 "your {MCHILD} and"} your NHS health records such as admissions or attendances at hospital, visits to a GP or other health professional (e.g. midwife), specific conditions and prescriptions given. This information can be very valuable in maximising what we can learn about children and families from the data we collect as part of the study, without asking you lots of extra questions.

As these records are held outside The Department for Education by NHS Digital we need to ask your permission to add this information.

Because this study is trying to understand how children get on in the long term, we would like to add these health and education records on an ongoing basis. You can tell us to stop doing this at any point without giving us a reason. If you do want us to stop adding information from your records, any data already added will continue to be used unless you ask us to delete it. This information will remain confidential, and used for research purposes only. It will be anonymised and made available securely to suitably qualified researchers. Any information that identifies you will never be shared outside of the research team.

Further information about adding data from your records and how to tell us to stop doing this can be found in the leaflet and in the 'Adding other information FAQs' on the study website.

MPNREMAIL3

{ASK IF MPNREMAIL = 1, SINGLE CODE}

The email address you have given is [text-fill email address: “MPNREMAIL1@MPNREMAIL2”].

Is this correct?

1. Yes, correct

2. No, incorrect

MPAUSE

{IF NO, INCORRECT: MPNREMAIL3 = 2}

PLEASE REDO

{GOTO MPNREMAIL1}

MLETNOW

{ASK IF MINTMODE=1 AND MMODCONP=1 AND MPNREMAIL3=1, SINGLE CODE}

INTERVIEWER: RESIDENT PARTNER/OTHER PARENT WILL RECEIVE AN INVITE EMAIL IN A FEW DAYS.

IF THEY ARE AVAILABLE NOW AND WOULD LIKE TO TAKE PART IN THE ONLINE SURVEY STRAIGHT AWAY, CODE 1 TO GIVE THEM A LETTER WITH THEIR LOGIN DETAILS.

1. YES – PARTNER/OTHER PARENT WOULD LIKE TO COMPLETE ONLINE SURVEY STRAIGHT AWAY
2. NO - CONTINUE

If gatekeeper accepted (email or post) or if direct contact selected but no email address given

[MMODEMAIL1, MMODEMAIL2, MMODLET, MMODADD MOVED AND AMENDED]

MMODEMAIL1

{ASK IF MMODCONP = 2 AND MZEMM1=1, OPEN}

We will use the email address you have already shared to send you a separate email to forward on to them. This email will include some information about the study, and a direct link to the online survey. Each link is unique, so please check you are sending the email on to the right person.

MMODEMAIL2

{ASK IF MMODCONP = 2 AND MZEMM1<>1, OPEN}

INTERVIEWER: RESPONDENT DID NOT PROVIDE EMAIL ADDRESS AT START OF INTERVIEW.

WE WILL NEED TO SEND/GIVE A LETTER INSTEAD OF AN EMAIL - PLEASE GO BACK A SCREEN AND CODE 3.

If consent to pass on a letter, script will either route to an instruction to pass this on (if F2F) at MMODLET, or will let participants know we will use their postal address to send them a letter (if remote) at MMODADD.

MMODLET

{SHOW IF MINTMODE = 1 AND (MMODCONP = 3 OR MLETNOW=1 OR (MMODCONP = 1 AND MPNREMAIL3<>1))}

{TEXTFILL: IF MMODCONP=1 “I would like to leave a letter for {TEXTFILL: IF MPARENTNOTPART=1 “{MNOTPARTNAME}”, ELSE “your partner”} inviting them to take part in the online survey.”}

INTERVIEWER: GIVE THE PARTICIPANT A COPY OF THE NON-PRIMARY CAREGIVER LETTER (“Take part in the Children of the 2020s study”, WITH LOGIN INFORMATION IN A BOX).

ASK THE PARTICIPANT TO WRITE {TEXTFILL: IF MPARENTNOTPART=1 “{MNOTPARTNAME}”, ELSE “{MRESPNAME}”}'S NAME AND THE LOGIN CODE IN THE SPACES PROVIDED.

THE LOGIN CODE IS: [ADD RESIDENT PARENT/PARTNER CODE FROM SAMPLE FILE]

CONFIRM THE PARTICIPANT HAS WRITTEN THIS DOWN CORRECTLY BY ASKING THEM TO READ IT BACK TO YOU.

MMODADD

{ASK IF MINTMODE = 2 OR 3 AND MMODCONP = 3, SINGLE CODE}

We will send you a separate letter to pass on to them. This letter will include information about the survey, and how they can access it to take part.

MPNRLET2

{SHOW IF REMOTE AND AGREES FOR DIRECT CONTACT WITH PARTNER AND DOES NOT GIVE EMAIL ADDRESS: MINTMODE=2,3 AND MODCONP = 1 AND MPNREMAIL3<>1}

We will send your partner an invitation letter for the online survey to your address. This will include information about the survey, and how they can access it to take part.

Online survey placement – Non-resident parent not in household

MNONRPAR

{ASK IF THERE IS A NON-PRIMARY NON-RESIDENT PARENT INVOLVED WITH THE CHILD: MOTHP = 1 }

SINGLE CODE

As part of this study, I would also like to invite your {MCHILD}'s other birth/biological parent, {MNONRESPN}, to take part in the short online survey. This survey will ask similar questions to ensure we have a fully-rounded view of children's development. The survey will take around 30 minutes to complete, and it will be completely up to them whether they choose to take part.

ADD IF NECESSARY: The survey will ask similar questions to understand their experience of parenthood. This will include asking whether they agree to their administrative records being added to their survey responses, and they will also be given the opportunity to download the BabySteps app. The information you have provided is strictly confidential and will not be given to them under any circumstances.

We can contact them directly to invite them to take part in the online survey, or if you prefer, we can share details for you to pass on.

Are you happy for your {MCHILD}'s other parent to be invited take part in the online survey?

1. Yes
2. No

MMODCONO

{ASK IF CONSENT GIVEN TO PLACE WITH NON-RESIDENT PARENT: MNONRPAR = 1}

SINGLE CODE

INTERVIEWER: ASK AND CONFIRM PREFERRED MODE OF CONTACT

1. Consent to contact child's other parent directly
2. Email sent to primary caregiver to forward on

{IF MINTMODE = 2 or 3, TEXTFILL: "Letter to be posted"; IF MINTMODE = 1, TEXTFILL: "Letter given"} to the primary caregiver to pass on

-98 Unable/unwilling to

If consent to directly contact the non-resident parent, script will collect their mobile number, email address and postal address.

MNRPMOB

{ASK IF MMODCONO = 1}

SINGLE CODE

Are you happy to share their mobile phone number?

We will only ever contact them about Children of the 2020s. We will never pass on their phone number to anyone else.

CODE AS APPROPRIATE

1. Yes
2. No
3. I don't have a mobile phone number

MNRPMOB1

{ASK IF AGREES TO GIVE MOBILE PHONE NUMBER: MNRPMOB= 1}

ENTER MOBILE TELEPHONE NUMBER

ALL TELEPHONE NUMBERS SHOULD HAVE 11 DIGITS. DO NOT LEAVE A SPACE
E.G. 07712345678

MOBILE TELEPHONE NUMBERS SHOULD USUALLY BEGIN WITH 07

NUMERIC: 1024

CHECK

{IF NUMBER DOES NOT BEGIN WITH 07: MNRPMOB1<> BEGIN WITH 07}

PAUSE

INTERVIEWER:

MOST MOBILE NUMBERS SHOULD BEGIN WITH 07. THE MOBILE NUMBER YOU ENTERED DOES NOT. IS THIS CORRECT?

1. Yes {continue}
2. No {go to MNRPMOB1}

MNRPEMAIL

**{ASK IF AGREES FOR DIRECT CONTACT WITH NON-RESIDENT PARENT:
MMODCONO = 1}**

SINGLE CODE

We'd like to invite your child's other parent to take part in the online survey by sending them an email with a direct link to the survey.

Are you happy to share their email address? It will only be used for this purpose.

1. Yes
2. No

MNRPEMAIL1

**{ASK IF AGREES TO SHARE NON-RESIDENT PARENT'S EMAIL ADDRESS:
MNRPEMAIL = 1}**

SINGLE CODE

Please tell me the first part of the address before the @ sign

Module L - INTERVIEWER OBSERVATIONS POST-INTERVIEW

The Home Environment

Notes:

SOURCE: This is the Short Form of the HOME, taken from MCS WAVE 2 (Questions taken from subscales in the 0-3 and 4-6 versions of the questionnaire – some response options were adapted to align with the DISCORD scale).

One additional item from the DISCORD scale and another from the CHAOS scale.

To be coded by fieldworker.

Timing: Completed post-interview, so no direct impact on interview length

{fieldworker to code after main questionnaire complete}

Source: Home Observation for Measurement of the Environment scale (Caldwell & Bradley, 1984) - adapted

TimeStampStartModuleO

MHOMEINTRO

{SHOW IF MINTMODE = 1}

THE FOLLOWING QUESTIONS ARE FOR YOU TO COMPLETE AFTER THE MAIN INTERVIEW IS COMPLETED. TO BE SELF-COMPLETED BY INTERVIEWER NOT ASKED TO RESPONDENT.

MHOME1

{SHOW IF MINTMODE = 1, SINGLE CODE}

Child's in-home play environment seemed safe.

1. Yes
2. No

MHOME2

{SHOW IF MINTMODE = 1, SINGLE CODE}

Parent provided toys during visit.

1. Yes
2. No
3. Baby not present during interview

MHOME3

{SHOW IF MINTMODE = 1, SINGLE CODE}

Parent kept child in vision (don't count occasions when the baby is with someone else)

1. Yes, always
2. Yes, most of the time
3. No, quite often the baby was out of sight
4. Baby not present during interview

MHOME5

{SHOW IF MINTMODE = 1, SINGLE CODE}

Interior of home dark.

1. Yes
2. No

Source: Question wording: HOME – adapted; response options: DISCORD Scale (Whitesell et al., 2015, *Journal of Family Psychology*)

MHOME6

{SHOW IF MINTMODE = 1, SINGLE CODE}

House/flat was clean.

1. Very clean
2. Moderately clean
3. More dirty than clean

MHOME7

{SHOW IF MINTMODE = 1, SINGLE CODE}

House/flat cluttered.

1. Very little clutter
2. Moderate clutter

3. Clutter impedes movement throughout home

Source: DISCORD Scale (Whitesell et al., 2015, *Journal of Family Psychology*)

MHOME8{SHOW IF MINTMODE = 1, SINGLE CODE}

Electronic intrusions (TV, radio, cell phone, computer)

1. None/Very few
2. Some (e.g. TV on, other electronic background noise) family not overly distracted
3. TV, radio, cell phone, computer interruptions fairly constant that distract the family

Source: CHAOS Scale (Matheny et al., 1995, *Journal of Applied Developmental Psychology*)

MHOME9

{SHOW IF MINTMODE = 1, SINGLE CODE}

Calmness vs Commotion

1. The atmosphere in the home was calm
2. The atmosphere in the home was a little noisy and/or chaotic
3. The atmosphere in the home was very noisy and/or chaotic

INT_MODE

Appendix 3: Follow-up primary caregiver CAWI questionnaire

Landing page

Welcome to Children of the 2020s short follow-up survey

Please take part in this short follow-up survey to help us rectify a mistake that was made during your in-home interview. You were not asked some important and potentially sensitive questions. Your answers to these missed questions will be treated in the strictest confidence and added to your main interview answers.

The findings will be used to help understand children's development and families' lives better so that families can be better supported in the early years.

As a thank you for your time you will receive a £5 voucher.

You can complete this survey on a desktop, laptop, tablet or smartphone. The survey should take around 10 minutes to complete. You do not have to complete it in one sitting. You can exit the survey at any point and return to the same question (using the same link).

If you require any help, please contact us at children2020s@ipsos.com

PINTRO

{SHOW ALL}

The Children of the 2020s study is being led by University College London (UCL), and Ipsos is running this survey.

- This survey will help researchers studying child development and the Department for Education understand what life is like for families with young children, so they can improve early years and childcare services in the future.
-
- For this web survey to ask you the right questions, it will need to confirm you are the same person as the one who completed the main interview. Please do not proceed if it was not you who completed the main interview with one of our interviewers.
-
- Please think of your child(ren) born between September and November 2021 while answering these questions.
-

- These are potentially sensitive questions. They may not all apply to you. However, for some people they are an important part of the experience of raising a family, which is why it is important for us to ask. Please ensure you have full privacy while answering. If you come to a question that you don't want to answer or can't answer, you can skip it.
-
- All the information you give us will remain confidential, and used for research purposes only. Anonymised data will be made available securely to suitably qualified researchers. Any information that identifies you will never be shared outside of the research team.
-
- The research is being carried out in accordance with data protection regulations and the Market Research Society (MRS) Code of Conduct.
-
- You can find more information about how your data will be protected by clicking on the 'Privacy Notice' link at the bottom of the screen.
-
- It is up to you whether you take part, and you can change your mind at any time. If at any point you do wish to withdraw all you need to do is contact us. Our contact details are below and can also be found on the study website. Any data already collected will continue to be used unless you ask us to delete it.
-
- If you have any questions, please contact children2020s@ipsos.com
-

By selecting 'next' you agree to participate in this survey.

Welcome to the Children of the 2020s study

You have been invited to take part in this short online survey to help the Department for Education build a more complete picture of what life is like for families with young children. The findings will be used to help understand children's development and families' lives better so that families can be better supported in the early years.

You can complete this survey on a desktop, laptop, tablet or smartphone. The survey should take around 20 minutes to complete. You do not have to complete it in one sitting. You can exit the survey at any point and return to the same question (using the same login). **To start the survey, please enter the password from your invitation letter or email below.**

Please enter your 6-digit password:

[6-digit text-box – validate against list of logins]

Please note that your password is case sensitive – please copy it exactly as it appears.

[Start survey button]

If you have lost your password or require any help, please contact us at children2020s@ipsos.com

Module A - Introduction & consent

PINTRO

{SHOW ALL}

The Children of the 2020s study is being led by University College London (UCL), and Ipsos is running this survey.

- **This survey will help researchers studying child development and the Department for Education understand what life is like for families with young children**, so they can improve early years and childcare services in the future.
- For this web survey to ask you the right questions, it will need to ask some questions that were already asked in the interview with the child's other parent.
- The research is being carried out in accordance with data protection regulations and the Market Research Society (MRS) Code of Conduct.
- All the information you give us will remain confidential and used for research purposes only. Anonymised data will be made available securely to suitably qualified researchers. Any information that identifies you will never be shared outside of the research team.
- You can find more information about how your data will be protected by clicking on the 'Privacy Notice' link at the bottom of the screen.
- It is up to you whether you take part, and you can change your mind at any time. If at any point you do wish to withdraw all you need to do is contact us. Our contact details are below and can also be found on the study website. Any data already collected will continue to be used unless you ask us to delete it.
- If you have any questions, please contact children2020s@ipsos.com

By selecting 'next' you agree to participate in this survey.

Module B - Background

Child's details

Living situation

NPC Relationship

NPC's details

ADD START TIMESTAMP HERE

PCHILDNUM

Before we begin, we want to confirm how many children born around 9 months ago you have, that would be between September and November 2021.

- 1.I have one child born between September and November 2021
- 2.I have twins born between September and November 2021
- 3.I have triplets born between September and November 2021
- 4.I have quadruplets born between September and November 2021
- 5.I have more than one child born between September and November 2021 but they are not twins/triplets/quadruplets

PCHILDSELECT

{SHOW IF PCHILDNUM=5}

Unfortunately, the interview is only able to ask about multiple children who are twins/triplets/quadruplets.

We will only be asking questions about one of your children born between September and November 2021. Please think of your child whose name comes first alphabetically when answering the questions. We may contact you again asking you to complete a separate survey about your other child/children of this age.

PCHILDNAME1

{ASK ALL

Firstly, please tell us the first name of your child who was born around 9 months ago, that would be between 1st September and 30th November 2021.

{If PCHILDNUM= 2: Because you have twins it is really important that we know which child you are referring to in your answers”}

{If PCHILDNUM= 3: Because you have triplets it is really important that we know which child you are referring to in your answers”}

{If PCHILDNUM= 4: Because you have quadruplets it is really important that we know which child you are referring to in your answers”}

[TEXTBOX – up to 30 characters]

HARDCHECK: If text box is left blank: “Please provide your child’s name. If you would prefer to give an initial or nickname, this is fine.”

PCHILDNAME2

{ASK if PCHILDNUM= 2 or 3 or 4}

Please tell us the first name of your second child.

[TEXTBOX – up to 30 characters]

HARDCHECK: If text box is left blank: “Please provide your child’s name. If you would prefer to give an initial or nickname, this is fine.”

PCHILDNAME3

{ASK if PCHILDNUM= 3 or 4}

Please tell us the first name of your third child.

[TEXTBOX – up to 30 characters]

HARDCHECK: If text box is left blank: “Please provide your child’s name. If you would prefer to give an initial or nickname, this is fine.”

PCHILDNAME4

{ASK if PCHILDNUM= 4}

Please tell us the first name of your fourth child.

[TEXTBOX – up to 30 characters]

HARDCHECK: If text box is left blank: “Please provide your child’s name. If you would prefer to give an initial or nickname, this is fine.”

Name textfill:

Play and activities

{NEW SCREEN, SHOW ALL}

We'd like to start by getting to know [TEXTFILL: "PCHILDNAME"] and the things you do together. The first set of questions are about activities with [TEXTFILL: "PCHILDNAME"].

PPLAYFa-i

{ASK AS CAROUSEL GRID, NO BOXES ABOVE STATEMENTS}

SINGLE CODE

SOURCE: (Ahmadzadeh et al 2020 and ALSPAC);Cuddle item added from Life study.

How often do you do these activities with {PCHILDNAME}?

Please select your answer from the list below.

STATEMENTS

PPLAYFa Physical play—for example, lifting or swinging your child, throwing up in the air, rough and tumble

PPLAYFb Play with toys

PPLAYFc Pretend games—for example, make a toy dog bark, talk on toy telephone, move a wooden block as if it is a car

PPLAYFd Turn-taking play without toys/other objects—for example, peek-a-boo, pat-a-cake, 'where's baby's eyes? ', 'I spy'

PPLAYFe Show {PCHILDNAME} pictures in books

PPLAYFf Read {PCHILDNAME} stories

PPLAYFg Noisy play—for example, banging saucepans, child instruments

PPLAYFh Sing to {PCHILDNAME}—for example, singing nursery rhymes

PPLAYFi Take {PCHILDNAME} outside for a walk or to play in the garden, a park, or a playground

PPLAYFj Talk to {PCHILDNAME} about what you, or they, are doing?

PPLAYFk Cuddle [PCHILDNAME]?

RESPONSE OPTIONS

1. Never
2. Less than once a week
3. Once or twice a week
4. Several times a week
5. Once or twice a day
6. Several times a day

-98 Prefer not to say

NEW SCREEN

Now, thinking about other activities...

PHE106a-i

{ASK AS CAROUSEL GRID, NO BOXES ABOVE STATEMENTS}

SINGLE CODE

(SOURCE ECLS-B 9 month father survey and Bronte-Tinkew et al., 2008)

In the **past month**, how often did you do the following things with {TEXTFILL: "PCHILDNAME"}?

Please select your answer from the list below.

STATEMENTS

PHE106a Change [TEXTFILL: "PCHILDNAME"]'s nappies?

PHE106b Prepare [TEXTFILL: "PCHILDNAME"]'s meals or bottles?

PHE106c Feed [TEXTFILL: "PCHILDNAME"] or give [TEXTFILL: ""PCHILDNAME"] a bottle?

Temperament

Source: The Infant Behavior Questionnaire - adapted

{START LOOP – LOOP FOR EACH COHORT CHILD, I.E. ASK ALL FOR PCHILDNAME1; THEN ASK ALL FOR PCHILDNAME2 if not blank; ETC.}

PIBQa-n_X

{ASK ALL, ASK AS CAROUSEL GRID NO BOXES ABOVE STATEMENTS}

SINGLE CODE

The following questions are about {PCHILDNAME_X}.

Please indicate how often {PCHILDNAME_X} did the behaviours described during the LAST WEEK (the past seven days).

Please select your answer from the below options.

The “Does Not Apply” option should be used when you did not see the baby in the situation described during the last week. For example, if the situation mentions the baby having to wait for food or liquids and there was no time during the last week when the baby had to wait, choose “Does not apply”.

“Does Not Apply” is different from “Never” . “Never” should be used when you saw the baby in the situation but the baby never engaged in the behaviour listed during the last week. For example, if the baby did have to wait for food or liquids at least once but never cried loudly while waiting, choose “Never”.

STATEMENTS

- a. When tossed around playfully how often did {PCHILDNAME_X} laugh?
- b. When introduced to an unfamiliar adult, how often did {PCHILDNAME_X} cling to a parent?
- c. How often during the last week did {PCHILDNAME_X} play with one toy or object for 5-10 minutes?
- d. When put into the bath water, how often did {PCHILDNAME_X} laugh?
- e. When it was time for bed or a nap and {PCHILDNAME_X} did not want to go, how often did s/he whimper or sob?

- f. After waking up from asleep, how often did {PCHILDNAME_X} cry if someone doesn't come within a few minutes?
- g. During a peekaboo game, how often did {PCHILDNAME_X} laugh?
- h. How often did {PCHILDNAME_X} seem angry (crying and fussing) when you left her/him in the crib?
- i. How often during the last week did {PCHILDNAME_X} look at pictures in books and/or magazines for 5 minutes or longer at a time?
- j. How often did {PCHILDNAME_X} smile or laugh when given a toy?
- k. When hair was washed, how often did {PCHILDNAME_X} vocalize (e.g. babbling, laughing)?
- l. When introduced to an unfamiliar adult, how often did {PCHILDNAME_X} refuse to go to the unfamiliar person?
- m. When you were busy with another activity, and {PCHILDNAME_X} was not able to get your attention, how often did s/he cry?
- n. How often during the last week did {PCHILDNAME_X} stare at a mobile, crib bumper/cushion or picture for 5 minutes or longer?

Personal income

Same questions as for main parent, covering only personal income (not partner's income, household benefit receipt, or household debt)

PBENREC

{ASK ALL }

MULTI-CODE

The next few questions are about your income and any state benefits or tax credits that you may receive.

Which of these, if any, do you [IF PRELAT=1: "and your partner"] receive? Please select all that apply.

1. Free school meals
 2. Universal credit
 3. Pension credit
 4. Income support or Job Seeker's Allowance
 5. Working Tax Credit or Child Tax credit
 6. Employment and Support Allowance
 7. Statutory sick pay
 8. Housing benefit
 9. Council tax support or reduction
 10. Carers allowance, Personal independence payments, or Disability Living Allowance
 11. None [EXCLUSIVE]
- 98 Prefer not to say [REACTIVE ONLY]

PINCPERIOD

{ASK ALL }

SINGLE CODE

Over what period would you find it easiest to provide an estimate of your **total** household income **after** deductions such as income tax or National Insurance? [IF PRELAT=1: "Please include your partner's income too."] Think about what comes into your bank account(s) or the value of your pay packet.

1. Annually
2. Monthly/every four weeks
3. Weekly
4. Not applicable – no income

-99 Don't know

-98 Prefer not to say [REACTIVE ONLY]

PINCBANDA

{ASK IF ANNUAL PREFERRED, PINCPERIOD = 1}

SINGLE CODE

Thinking about all sources of income [IF PRELAT=1: "including your partner's"], which of the following represents your **total** annual household income **after any deductions such as income tax or National Insurance**? Think about what comes into your bank account(s) or the value of your pay packet.

[INSTRUCTION UNDER QUESTION STEM: If you don't know precisely, please provide your best estimate.]

1. Less than £6,500
2. £6,500 to less than- £10,500
3. £10,500 to less than £13,000
4. £13,000 to less than £15,000
5. £15,000 to less than £17,000
6. £17,000 to less than £19,000
7. £19,000 to less than £21,000
8. £21,000 to less than £23,000
9. £23,000 to less than £25,500
10. £25,500 to less than £27,500
11. £27,500 to less than £30,000
12. £30,000 to less than £32,500
13. £32,500 to less than £35,000
14. £35,000 to less than £38,000

Module E - Data linkage

ADD START TIMESTAMP HERE

PLINKED

{ASK ALL}

SINGLE CODE

As you know, Children of the 2020s is a study being run for the Department for Education to understand children's development so better policies can be introduced to improve families' lives.

The Department for Education may already hold information about you and your educational background, such as exam results and participation in further education. If so, they will combine this information with data collected in this study to build a fuller picture of families' lives. [INFO]

If you did not want this to happen, you can let us know using the contact details on the study website. You can also contact the team to ask any questions you may have. You will also find further information about adding data from your records and how to tell us to stop doing this in the 'Adding other information FAQs' on the study website (found at <https://children2020s.ipsos.com/otherinformation/>).

[INFO BUTTON]: The records include information such as participation in the school, further and higher education, exam results, vocational training and qualifications, higher education applications and offers.

PLINKHEALTH

{ASK ALL}

SINGLE CODE

The NHS also collects information about all of us to help them provide the services we need. We would like to add information from NHS health records such as admissions or attendances at hospital, visits to a GP or other health professional (e.g. midwife), specific conditions and prescriptions given. This information can be very valuable in maximising what we can learn about children and families from the data we collect as part of the study, without asking you lots of extra questions. [INFO]

As these records are held outside DfE by NHS Digital we need to ask your permission to add this information.

Because this study is trying to understand how children get on in the long term, we would like to add these health and education records on an ongoing basis. You can tell

us to stop doing this at any point without giving us a reason. If you do want us to stop adding information from your records, any data already added will continue to be used unless you ask us to delete it. This information will remain confidential, and used for research purposes only. It will be anonymised and made available securely to suitably qualified researchers. Any information that identifies you will never be shared outside of the research team.

Further information about adding data from your records and how to tell us to stop doing this can be found in the 'Adding other information' pages of the study website (found at <https://children2020s.ipsos.com/otherinformation/>).

Do you give permission for information held by NHS Digital about you to be added to your survey answers?

1. Yes
2. No

[INFO BUTTON]: These records include admissions or attendances at hospital, visits to your family doctor or other health professional (e.g. midwife), specific conditions and prescriptions given.

PDOBDL

{ASK THOSE WHO GIVE DATA LINKAGE CONSENT, PLINKED = 1 OR PLINKHEALTH = 1}

ADD START TIMESTAMP HERE

PCONT

{SHOW ALL}

You are coming to the end of this survey. To help us understand how children learn and develop, we would like to follow up with families when their child is aged 2, 3, 4 and 5. It will be completely up to you whether you take part in any of these surveys, and you can change your mind at any time.

If you are willing to remain part of the study your participation will continue to provide invaluable data to help inform the main study, which in turn, will help families be better supported in the early years in the future.

P_NAME

{ASK ALL}

ADD TIMESTAMP HERE

PAPPINFO

{DISPLAY TO ALL}

Finally, we'd like to ask you to download a **free** smartphone app called BabySteps, which you can take part in during your own time. The app was designed by scientists to help parents like you track their child's learning and development, and to capture precious memories through comments, photos and videos.

{TEXTFILL: If PCHILDNUM = 2 or 3 or 4 "Unfortunately, the BabySteps App research activities. cannot accommodate twins and triplets, because they only allow you to enter information about one child. We sincerely apologise for this limitation in the app, and we still welcome you to download the app to keep in touch with the research team and to use the 'Baby Diary' to record memories of your children as they grow and develop. You are also welcome to browse the 'News and Information' section of the app where you can stay up to date with the progress of the Children of the 2020s study and find regularly updated articles on the science of child development.

Your data will be processed and stored securely. Any information, photos or videos you share with the app will be kept confidential. Your data will not be passed on to any third party and the phone app does not send you advertising or track you at all. You can find more information about how your data is looked after in the FAQs and Privacy Notice in your app and on the study website.";

IF PCHILDNUM = 1 or 5 "It also allows the study team to get a better understanding of how the children in the study are getting along in between the times that we see them.

In the app, you'll find many unique features, including a 'Baby Diary' to record memories of your child as they grow and develop and a 'News and Information' section where you can stay up to date with the progress of the Children of the 2020s study and find regularly updated articles on the science of child development.

You'll also find a set of short activities that you can do to help the Children of the 2020s study capture a more complete picture of family life and child development. The activities are quick and easy to do. By completing these short activities you'll gain reward points in the app, which are worth £1 each. Each time you complete 5 tasks, you will receive an e-voucher of £5 via email. Depending on how many you complete over the first year of the study, that would come to approximately £10 in e-vouchers. These short activities will be released monthly and you can read more about this in the app

Your data will be processed and stored securely. Any information, photos or videos you share with the app will be kept confidential. And only data submitted as a research

activity will be used for research purposes. Your data will not be passed on to any third party and the phone app does not send you advertising or track you at all.

You can find more information about these activities, receiving e-vouchers and how your data is looked after in the FAQs and Privacy Notice in your app and on the study website.”}

[INFO]

[INFO BUTTON]: The information you provide through the app will be stored in a highly secure system provided by Amazon Web Services. Amazon will not have access to any of your information, nor will anyone else outside the study team. Any information, photos or videos you share with the app will be kept confidential, and will be used for research purposes only. Your data will not be passed on to any third party. For more information, please see the study website.

SINGLE CODE

To access it, you will need a login code which will be unique to you.

Are you happy to take part in the BabySteps app?

1. Yes
2. No

P_APPREF

{ASK IF DECLINES TO TAKE PART IN THE BABYSTEPS APP: P_APPDL = 2}

MULTI-CODE

Please can you indicate why you have chosen not to take part in the BabySteps app?
Select all that apply.

1. I don't have enough time/busy with home or work
2. I have done enough already
3. I didn't enjoy the online survey
4. It feels too personal/intrusive
5. I don't have the appropriate technology
6. I don't have the storage space to download the app
7. I don't have the technical skills to participate

8. I don't trust sharing information with apps
9. I don't download or participate in apps
10. I'm unable to take part due to sickness or disability
11. I'm unable to take part due to my literacy skills
12. I won't be eligible for the activities as I have twins/triplets/quadruplets
13. Another reason (please specify – variable "P_APPREF_12")

NP_APPDL1

{SHOW IF CONSENTS TO TAKE PART IN THE BABYSTEPS APP: NP_APP = 1}

We recommend that you download the app after you have completed this survey. You will find the BabySteps app on your smartphone's App Store/Google Play. Search "**BabySteps - Children of the 2020s study**" and select the following app:

[LOGO IMAGE -TO BE PROVIDED SEPARATELY "cot2020s_appicon"]

If you would like some further guidance on how to download the app, you can find instructions on the study website at children2020s.ipsos.com/assets/children-of-the-2020s-download-the-babysteps-app.pdf.

P_APPDL2

{SHOW IF CONSENTS TO TAKE PART IN THE BABYSTEPS APP: P_APP = 1}

Once you have downloaded the app to your smartphone, you'll need to set up your own account. As part of this process, you will be asked to enter your login code and email address, and to set up your password.

Your login code for the app is: [TEXT FILL FROM SAMPLE – VAR "LOGINID"]

Please write this code down for your reference, or take a photo of it on your phone. You cannot access the app without this.

PAPP_OUTRO

{SHOW IF CONSENT TO TAKE PART IN THE BABYSTEPS PAPP: NP_APP = 1}

Once you have set up your account on the app, you will have access to the app's special features, including creating a unique record of your child's learning and development.

{TEXTFILL IF PCHILDNUM = 1 or 5 "You can find a list of all the available activities on your 'Research Activities' tab. To take part, simply click on the activity and follow the instructions on-screen. The more activities you complete, the more complete the picture of family life collected in the app will be. "}

{TEXTFILL IF PCHILDNUM = 2, 3 or 4 “Please remember that that research activities cannot accommodate twins and triplets, and we request you not to complete these. We sincerely apologise, and we hope you enjoy exploring the many other features in the app and find it an enjoyable way to document and look back on your child’s development.”}

Please click the ‘About’ tab in your app for further guidance, or the study website. for more information (including contact details).

Appendix 5: BabySteps Research activity: Do you use greenspaces?

Title: Do you use greenspaces?

Age: 8 months to 9 months + 21 days

Notification: We are keen to hear about how, when and why you and your baby spend time in outdoor, green and natural spaces. Let us know to earn 1 reward point!

Research Activity

Introduction: We are interested in how families spend time in outdoor, green and other natural spaces. This includes private and communal gardens, as well as green spaces in towns and cities (such as your local park or playground), the countryside and coast.

The first questions are about how often you and your baby spend time in outdoor, green and natural spaces, and what you do there.

Q1. *How often, on average, do you spend time in outdoor, green and natural spaces **with your baby**?*

Response: Single code

- a) Every day
- b) More than twice a week, but not every day
- c) Twice a week
- d) Once a week
- e) Once or twice a month
- f) Less often
- g) Never

Q2. *In the last month, which of the following outdoor spaces have you **and your baby** visited or used together?*

Response: multicode

- a) Garden, patio or balcony (private or communal)
- b) Local park, playground, common or playing field

- c) Countryside
- d) Woodlands or forests
- e) Wetlands, rivers, lakes and canals
- f) Coastal areas
- g) Other green and natural spaces
- h) No visits in the last month

Q2.1. If you selected “other green and natural spaces” to the question above please specify.

Response: text

Q3. *Thinking about the last outdoor space you **and your baby** visited (excluding any private/communal gardens, patios or balconies), how much time did you spend there?*

Response: Single code

- a) Up to 30 minutes
- b) Over 30 minutes and up to an hour
- c) Over 1 hour and up to 2 hours
- d) Over 2 hours and up to 3 hours
- e) Over 3 hours and up to 5 hours
- f) Over 5 hours
- g) No visits in the last month

Q4. *Thinking about the outdoor spaces you visited together with your family (i.e., members of your household) in the last month (excluding any private/communal gardens, patios or balconies), what sorts of activities were the adults or children in your family doing there? (please select all that apply)*

(please select all that apply)

Response: multicode

- a) Playing games
- b) Playing on swings, slides, sandpit etc.
- c) Climbing rocks or trees
- d) Walking (including with child in pram/buggy or carrier)

- e) Doing other exercise
- f) Eating meals/picnics/BBQs
- g) Exercising a dog
- h) Relaxing
- i) Getting fresh air
- j) Socialising with friends/family
- k) Enjoying scenery and/or wildlife
- l) Attending an organised children's activity
- m) Attending community events
- n) Exploring somewhere new
- o) Doing something creative (e.g. photography or painting)
- p) Other
- q) No visits in the last month

Q4.1. If you selected "other" to the question above please specify.

Response: text

The next questions are about the accessibility and quality of the outdoor, green and natural spaces in your local area.

Q5. *Excluding any private/communal gardens, patios or balconies, how long does it take to walk to the nearest outdoor, green or natural spaces from where you live?*

Response: Single code

____ minutes

Q6. *Overall, how satisfied or dissatisfied are you with the amount of outdoor, green and natural spaces in your local area?*

Response: Single code

- a) Very satisfied
- b) Fairly satisfied
- c) Neither satisfied nor dissatisfied
- d) Fairly dissatisfied
- e) Very dissatisfied

Q.7 Overall, how satisfied or dissatisfied are you with the different types of outdoor, green and natural spaces in your local area?

Response: Single code

- a) Very satisfied
- b) Fairly satisfied
- c) Neither satisfied nor dissatisfied
- d) Fairly dissatisfied
- e) Very dissatisfied

Q8. And overall, how satisfied or dissatisfied are you with the quality of the outdoor, green and natural spaces in your local area?

Response: Single code

- a) Very satisfied
- b) Fairly satisfied
- c) Neither satisfied nor dissatisfied
- d) Fairly dissatisfied
- e) Very dissatisfied

Q9. Which of the following statements apply to the outdoor, green and natural spaces in your local area? (please select all that apply)

Response: Multicode

- a) They are within easy walking distance
- b) They are of good quality
- c) They are safe
- d) They are easy to get into and around
- e) They are good places for children to play
- f) They are accessible to everyone in my local area
- g) None of the above

Q10. And to what extent do you agree, or disagree, with the following statements?

Response: Single code per statement

- a) Having outdoor, green and natural spaces close to where I live is important to me.
- b) Spending time with my baby in outdoor, green and natural spaces is important to me.
- c) Being in outdoor, green and natural spaces helps support mine and my family's **physical health**.
- d) Being in outdoor, green and natural spaces helps support me and my family's **mental health and wellbeing**.

Strongly agree

Tend to agree

Neither agree nor disagree

Tend to disagree

Strongly disagree

*Q11. What, if anything, generally stops you from spending more time in outdoor, green and natural spaces **with your baby**?*

Response: Multicode

- a) Bad weather
- b) Poor mental health
- c) Poor physical health, illness or disability
- d) Caring or other responsibilities at home
- e) Lack of time due to work
- a) Prioritising other leisure activities
- b) Concerns about crime or anti-social behaviour (including physical and/or verbal abuse)
- c) General safety concerns about getting hurt or injured
- d) I do not have access to child-friendly outdoor spaces
- e) Not feeling welcome/feeling out of place/judged by others
- f) Not knowing where to go/lack of information
- g) Not interested in spending time in outdoor, green and natural spaces
- h) Lack of suitable outdoor, green or natural spaces nearby

- i) Issues accessing outdoor, green or natural spaces nearby (e.g., lack of public/accessible toilets or baby changing facilities, hard to access with buggy/pushchair).
- j) Other
- k) Nothing

Q11.1. If you selected “other green and natural spaces” to the question above, please specify.
