

British Glass

[REDACTED]

Would have liked a question on the glass inclusion.

Compaction – assumption that RVMs can break glass into 4/5/6 pieces in the IA. Concerned on this and are not familiar on this. Is this really possible, this technology surely doesn't exist. [REDACTED] – take this away.

WRAP Cymri – report to be published.

International glass standards

Lack of government control

Collection rate vs Recycling rate.

- 5-10 pounds on re-melt, vs 5 pounds aggregate per tonne.
- This balances it out vs

[REDACTED] point on mix up on constancy between collection and recycling. Consistency on the IA.
