All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.7 The trigger level for PM<sub>10</sub> concentrations of 190 µg/m<sup>3</sup>, measured as a 1-hour mean, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (December 2018)*' has been applied.
- 1.1.8 No (0) dust trigger alerts were recorded during the monitoring period (December 2023).
- 1.1.9 Data capture was below 90% for multiple monitors due to a lack of solar charge. Ellesborough Road also had a suspected battery fault. Small Dean Viaduct monitor had a suspected power fault. The School End monitor had a suspected fault. The Twyford monitor had low data capture due to a fault with the solar cable to the monitor. Turweston North had a power fault with the monitor. The monitor was subsequently retrieved on the 8<sup>th</sup> December 2023.
- 1.1.10 There were no (0) complaints received during the reporting period (December 2023).
