## UK Stem Cell Registry

The Steering Committee for the UK Stem Cell Bank must satisfy itself that the stem cell lines used in the UK have been ethically sourced with informed donor consents. The register below lists human embryonic stem cell lines that have been approved by the Steering Committee for import and use in the UK.

**This list does NOT constitute the UK Stem Cell Bank catalogue** which is available via the link below.

Researchers wishing to use/import these cell lines must apply to the Steering Committee for approval of their project and are expected to comply with the Code of Practice for the Use of Stem Cells Lines available on the webpage linked below.
