Dear Steve,

Further to our conversation today I have reviewed your addendum to the waste recovery plan and can confirm that we need several points addressing before we can move forward with the application. Principally we need to know where the existing waste has been deposited on the site and exclude this from the waste recovery plan and site boundary. As discussed this is easiest where the waste has been placed in a discrete area of the site, but we acknowledge that it may have been tipped as a planar feature. Please provide a response to the following:

- Confirm whether waste has been placed in discrete locations or across the site as a planar feature. If the former please provide a revised site plan excluding the areas of the site already tipped.
- Confirm the total volume of waste tipped to site and the remainder required to complete the scheme as originally agreed under the WRP.

Please note that there may be additional questions raised regarding your risk assessment. I will aim to get these to you w/c 18 September.

Regards,

**Anthony Watts**
