

**FOI 23/082**

2<sup>nd</sup> March 2023

Dear

Thank you for your email.

Please find below answers to the question you have raised on question one below. We confirm that question 2 is currently being worked on.

1) Please provide the minutes of the referenced EWG meeting on Monday 7th June 2021 where cases of myo/preicarditis were presented.

We confirm that the meeting on the 7th did not include any such discussion. However, there was an item on the 4th related to this, and do you wish to see those minutes?

2) Your previous response to my request of 1st November (main response PDF attached) did not detail the EBGm signal detection procedures requested. To clarify, the EBGm is a mathematical algorithm/procedure. I am requesting a precise definition of the algorithm used, sufficiently detailed that someone could execute the same algorithm on an identical set of data and obtain the same result. Note this does not require original computer code, just the mathematical definition with any controlling input parameters other than the data itself.

We apologise you have not received a response to this question and we confirm this is currently in hand with our Safety and Surveillance group and we hope to respond to you as soon as we can. We will keep you updated.

Kind Regards
