National Physical Laboratory,  
Teddington, Middx.

Dear ██████████,

I am returning herewith the paper by ██████████ and ██████████ relating to the blood changes at low dose levels. I have shown this to ██████████ here and the general opinion is that this work is probably not very firmly based. It should be noted that certain of the blood changes followed are a matter of subjective judgement, and you may be interested in the following two comments which were made:-

"I think this paper is an example of the wizardry of mathematical physicists."

and "I fear that blood counting is almost on a par with astrology for diversity of interpretation of signs and portents."

We have found this interesting reading but are not convinced any real effect has been discovered.

Yours sincerely,

██████████

Dictated by ██████████ but signed in his absence.
