For each soil and level of compactive effort there is an optimum moisture content for the achievement of maximum density and a slightly higher moisture content for the achievement of minimum permeability. At moisture contents below the optimum, a clay soil becomes increasingly stiff and an increasing amount of compactive effort is required to break down the soil structure. Conversely, at moisture contents above the optimum, a clay soil becomes more difficult to work owing to the build-up of pressure in the water-filled pores.

The optimum moisture content for a particular soil (assumed to be homogeneous) is established by laboratory testing and will determine:

- 1 The minimum permeability that can be achieved given the natural moisture content of the soil on site.
- 2 The extent to which the moisture content of the soil on site should be changed in order to achieve the required level of impermeability.

8.8 DESIGN AND CONSTRUCTION

8.8.1 Design

Earth embankments forming part of a lagoon or bund should be designed in accordance with the requirements specified in BS EN 1997-1:2004 by appropriately qualified and experienced personnel.

Eurocode 7 is concerned with the design of earthworks in general, rather than liquid retaining structures and therefore appropriate allowances for the hydraulic loads which will arise in the event that a lagoon or earth bund fills with liquid (perhaps very rapidly) as a result of an incident should be made. A full consideration of this issue in the context of flood embankments is covered in CIRIA, Ministry of Ecology, USACE (2013).

Details of a typical embankment construction are provided in Appendix A8.

8.8.2 Construction

Site preparation

For lagoons:

- sites should be carefully cleared of all debris, vegetation and top soil, the latter being set aside for reuse
- soft spots or pockets where the soil type or condition have the potential to create areas of higher

permeability should be excavated and filled with soil of the same parameters as elsewhere on the site

- sewers or pipes, which pass under the site or within 10 m of it, should be stopped and sealed, and diverted as required
- drains or watercourses that cross the site should be diverted. Culverting beneath the site should not be used as an alternative.

For earth bund embankments:

- the site of the embankment should be cleared and prepared as for lagoons
- unless cut-off trenches are to be constructed, the embankment site should be loosened to a depth of approximately 300 mm before the first layer of embankment fill is placed.

Placing and compaction of impermeable fill material

The required moisture content of the fill material should be specified based on the results of the ground investigation and laboratory analysis.

The compaction of the fill material can be based either on a performance based specification, ie *in situ* testing of the completed works to ensure the specification is met, or a method specifications such as the *Manual of Contract Documents for Highway Works* (MCHW) (DfT, 199b), which specifies layer thicknesses and number of passes for a particular type of plant and soil type.

So far as is possible, each layer of soil should be placed and compacted along the entire length of the embankment or section of lagoon base in one continuous process. This is to avoid creating discontinuities that could lead to differential settlement and areas of weakness and potential leakage.

The interface between a concrete structure and earthwork bund, for instance where it is proposed to incorporate a valve chamber within the earth bund wall, is a potential area of failure and should be avoided where possible.

Where containment is to be provided by *in situ* reinforced concrete or blockwork bund walls and earth floors the foundations to the bund wall should be keyed into the earth floor (see Appendix A8).

Embankment and lagoon base protection

Unless they are to be covered with a hard pavement or a separate membrane lining, embankment sides and tops should be covered evenly with 150 mm of topsoil and seeded with grass. Grass can aid protection of the embankment by the establishment of a good grass sward together with appropriate forms of reinforcement, if required. Grass should be maintained by mowing or grazing to establish a good sward and prevent the establishment of self-sown trees. Well maintained grass can assist in preventing weather erosion and can also provide protection against damage from firefighting water and wave action. Advice on appropriate seed mixes can be found in Hewlett *et al* (1997).

On no account should shrubs or trees be allowed to establish on embankments, where they would seriously impair stability, or on lagoon floors, where they could create a leakage path.

The banks and base of a lagoon should be adequately protected against scouring at the points where site drains discharge and where, in an emergency, firefighting water would be likely to enter.

Protection from burrowing animals should be provided. This can be in the form of netting or mesh placed under the topsoil layer.

8.9 EMBANKMENT AND LAGOON LININGS

One of the principal differences in the recommendations for class 1 and class 2 and class 3 lagoon and bund construction is that class 2 and class 3 should both incorporate impermeable membrane linings.

There are many types of lining system each with their own advantages and disadvantages when used in the potentially aggressive environment of a containment system.

Where the bund is to contain flammable substances any lining system should be fire resistant or provided with a layer of protective material to ensure its integrity is maintained during an incident. It is therefore important that protection from fire is included in risk assessment for selecting different types of lining systems. The BS 476 series of standards provide a good guide.

A summary of commonly used lining systems is presented at Part 4 of HSE (2009a) and is reproduced at Table 7.2 for reference.

It should be noted that the 'advantages' and 'disadvantages' may vary subject to site conditions. The list is indicative only and not exhaustive. Fire resistance is covered in the table to reflect the current knowledge of performance based on product information, performance in fire incidents and some testing that has been carried out by operators.

Table 8.2 Lining system options (HSE, 2009a)

Option	Advantages	Disadvantages	Fire resistance	Cost*
Synthetic				
Polyethylene (HDPE)	<ul style="list-style-type: none"> resistant to water, hydrocarbon and most chemicals. 	<ul style="list-style-type: none"> requires protective layer potential hidden problems around seals and penetrations base ground to be prepared well, ie remove stones, requires a layer of gravel and sand/geotextile before the liner requires specialist installer to weld joints. 	<ul style="list-style-type: none"> very low burns readily if unprotected 	Medium
Polypropylene (PP)	<ul style="list-style-type: none"> resistant to water and oils easier to lay than HDPE. 	<ul style="list-style-type: none"> limited resistant to fuels requires protective layer potential hidden problems around seals and penetrations base ground to be prepared well, ie remove stones, requires a layer of gravel and sand/geotextile before the liner requires specialists installer to weld joints. 	<ul style="list-style-type: none"> very low burns readily if unprotected 	Medium
Synthetic rubber and EPDM	<ul style="list-style-type: none"> resistant to water. 	<ul style="list-style-type: none"> not resistant to oils and fuels requires protective layer. 	<ul style="list-style-type: none"> very low burns readily if unprotected 	Medium
Polyvinylchloride (PVC)	<ul style="list-style-type: none"> resistant to oils and water. 	<ul style="list-style-type: none"> not resistant to fuels requires protective layer potential hidden problems around seals and penetrations base ground to be prepared well, ie remove stones, requires a layer of gravel and sand/geotextile before the liner requires specialist installer to weld joints. 	<ul style="list-style-type: none"> very low burns readily if unprotected 	Medium
Polyurethane (PU)	<ul style="list-style-type: none"> water resistant 	<ul style="list-style-type: none"> not resistant to oils and fuels requires protective layer 	<ul style="list-style-type: none"> very low burns readily if unprotected 	Medium
Structural				
Concrete	<ul style="list-style-type: none"> proven durability able to cast around penetrations well suited to small congested areas hydrocarbon resistance. 	<ul style="list-style-type: none"> requires joints for construction and movement requires regular maintenance of joint and penetration sealants and cracks can buckle under heat net excavation waste can be high potential for settlement and cracking. 	<ul style="list-style-type: none"> very good joints and penetrations are the weakness 	High

Table 8.2 Lining system options (HSE, 2009a)

Shotcrete (spray applied concrete)	<ul style="list-style-type: none"> ease and speed of installation as concrete is sprayed on plant can be operated from outside the bund if necessary proven durability able to cast around penetrations hydrocarbon resistance. 	<ul style="list-style-type: none"> specialist contractors required requires joints for construction and movement requires regular maintenance of joint and penetration sealants and cracks can buckle under heat. 	<ul style="list-style-type: none"> very good joints and penetrations are weakness 	Low

Mineral				
Bentonite (geosynthetic clay liner) (pre-hydrated or dry bentonite requiring <i>in situ</i> hydration)	<ul style="list-style-type: none"> hydrocarbon resistance lower maintenance self-sealing properties if punctured pre-hydrated can be laid at performance specification required. 	<ul style="list-style-type: none"> requires a protection layer potential hidden problems at penetrations potential for drying out on slopes <i>in situ</i> hydration to dry system to achieve performance specification required can be uncertain. 	<ul style="list-style-type: none"> good as geotextile mat protected by layer of soil/stone 	Medium
Clay	<ul style="list-style-type: none"> inert material that has retained plasticity once in place hydrocarbon resistance. 	<ul style="list-style-type: none"> labour intensive, weather dependent and time consuming activity in spreading and compacting the clay requiring significant vehicle movements may not be safe to carry out installation while tanks are in service due to machinery requirements. 	<ul style="list-style-type: none"> high (non-flammable thick malleable layer) normally covered with top soil layer which provides further resistance 	Medium

Note

* costs are indicative and may vary based on installation issues and scale.

Further, detailed guidance is provided in EI (2012c) that seeks to provide a method for:

- appraising liner design criteria
- appraisal of options
- installation
- operation
- decommissioning.

There are a number of parallels with the waste management industry where landfills are lined with geomembranes to contain leachates that are potentially harmful to the environment. The Environment Agency has produced a number of guidance documents on the specification, installation and testing of geomembranes that can be found on their website (see *Websites* box). EA (2009b) stresses the need for quality control in the manufacture and installation of geomembranes. It also makes it a requirement of the environmental permit for the landfill containment system that a construction quality assurance (CQA) plan is prepared for the works.

Where a liner is to be installed for a class 2 or class 3 lagoon, the works should be completed in accordance with a CQA plan.

8.10 ANCHORAGE AND PROTECTION

Membranes need to be securely anchored and protect from mechanical and UV damage. A typical method is illustrated by Figure 8.5.

Notes

- 1 Impermeable lining membrane.
- 2 150 mm to 300 mm layer of stone-free soil to provide UV protection. Maximum bank slope 1 in 3 for soil stability. Steeper slope possible by placing the soil layer on a synthetic fibre underlay on top of the membrane.
- 3 50 mm sand blinding or geotextile mat to protect membrane.
- 4 Embankment and base soil treated to prevent weed growth.

Figure 8.5 Typical arrangements for protecting and anchoring a membrane liner

A similar detail is provided where an earth-floored containment with *in situ* reinforced concrete bund walls has to be lined (see Figure 8.6).

Figure 8.6 Typical arrangements for anchoring liner to concrete bund wall

Embankments should be sufficiently large and structurally stable to allow for movement of mechanical plant, which may be used for maintenance of the banks. Concrete or hardcore ramps may be required for access into bunded areas and concrete headwalls may be needed for pipe or channel inlets and outfalls. The construction of these elements should be carried out carefully to protect the integrity of impermeable liners, particularly at the joints between concrete and liner. Granular overburden is often provided both to protect a liner and to allow access for machinery. Further detail can be found in CIRIA, Ministry of Ecology, USACE (2013).

8.11 PIPE ENTRIES THROUGH EMBANKMENTS

Unless it is not reasonably practical to do so, embankments should not be penetrated below the design liquid surface level. Where it is necessary for a pipe to penetrate an embankment, a sleeve should be installed through the embankment through which the pipe will pass and be sealed as shown in Figure 8.7.

Figure 8.7 Detail for earth bund wall penetration (HSE, 2009a)

Anti-seepage collars should be provided along the sleeve at a spacing of not more than 10 times the pipe diameter and a flashing piece welded to the liner and secured around the sleeve by stainless steel band clamps or similar (see Figure 8.8).

Note

The pipe is inserted through a purpose made flashing, compatible with and welded to the main liner. Stainless steel outer clamps fix the pipe to the sleeve flashing

Figure 8.8 Arrangement for sealing pipe penetrating a geomembrane liner

8.12 LEAKAGE DETECTION FOR CLASS 3 LAGOONS AND BUNDS

Leakage detection is a requirement for class 3 containment lagoons so that they can be routinely tested for impermeability.

Several systems are used for leakage detection including the following:

- groundwater monitoring by boreholes **external** to the containment would be considered an example of good practice (this will only detect a leakage of contaminant from the containment system)
- resistivity measurement (EA, 2009b). This method is often used to check the integrity of the geomembranes during installation
- monitoring of underdrains or fin drains laid beneath the liner, although these might create a pollutant pathway if not properly capped.

Typical details of leak detection systems are provided in Appendix A3.

8.13 POST-CONSTRUCTION

While site investigation can provide an indication of the *in situ* permeability of soil or the characteristics of imported soil, where possible, cores should be taken of the completed works to confirm the permeability of the as-constructed structure.

8.14 MAINTENANCE

Regular inspection and maintenance helps prevent damage to liners from rodents and other burrowing animals. High tensile steel wire reinforced geosynthetics are available for protection against such attack. Alternatively, fine mesh wire netting may be used. These can also help resist erosion from weathering and/or wave action.

Maintenance of erosion damage caused by weathering and surface wave action may be minimised by the use of revetments or rip-rap placed on the embankment slope.

Depending on the nature and extent of any site damage, and the type of liner, it may be possible to make site repairs by patching. Instructions on repairs should be provided by the liner manufacturer or supplier. On sites with a high hazard or risk rating the entire damaged section should be replaced with undamaged material. Where a liner has deteriorated generally through age, it should be replaced entirely. Guidance on the inspection of liners can be found in EI (2012c).

Systematic regular inspections should be carried out. Vulnerable areas requiring special attention during maintenance inspections include:

- pipe entries, particularly if they penetrate the embankment
- the foot of embankments
- joints and discontinuities, particularly between dissimilar materials.

9 Containment tanks

This chapter provides:

- A definition of a containment tanks and the factors to consider in their design and specification (Section 9.1)
- A review of options for tanks constructed above ground that could be used to provide containment (Section 9.2)
- A review of tanks constructed below ground that could be used to provide containment (Section 9.3)

9.1 INTRODUCTION

Chapters 6, 7 and 8 provide guidance on the design of containment bunds. However, tanks are an alternative means of providing remote containment. Tanks have an advantage over bunds due to their potential greater storage depths and smaller footprint per cubic metre of storage volume. In addition, it is more practical to cover tanks so managing accumulations of rainfall can be avoided.

Containment tanks should be designed, constructed, inspected and maintained to give the same level of integrity as the primary storage vessel. It may be possible to convert a primary containment vessel into a containment tank where there is insufficient space to provide alternative arrangements.

Depending on the site topography and layout, a pumped transfer system may be required. Figure 9.1 illustrates typical arrangements for above ground tanks using either a pumped or by gravity transfer system.

Figure 9.1 Typical arrangements for above ground tank systems

Factors that should be taken into account in selecting a containment tank include:

- site location
- topography
- ground conditions

- access provision
- overall site risk and classification (established in Chapter 2)
- health and safety requirements.

Each situation is likely to be different and so it is not possible to provide generic guidance. However, parameters including retention time, quantity and the nature of the material should be considered when selecting tank type, size, design standards and protective finishes.

9.1.1 Capacity

Where a tank is covered, rainfall can be excluded from the assessment of the containment capacity but rainfall at the source during the incident should be accounted for.

Advice on the required containment capacity is provided in Chapter 4.

9.1.2 Freeboard

A minimum 250 mm freeboard should be provided as buffer capacity for all containment tanks. No overflows are permitted within the freeboard depth.

The most onerous loading conditions should be considered for design purposes, ie the overall (tank-full) depth of the tank, including freeboard, should be taken as the maximum design depth when assessing the static head of contained liquids.

9.1.3 Leak detection

Depending on the class of the containment required, leak detection systems should be incorporated for ground-bearing tanks (see Section 6.3.2).

9.1.4 Inspection

Containment tanks should be subject to periodic examination and testing to ensure their integrity. Advice on a suitable examination and testing regime can be found in EEMUA (2003).

9.1.5 Firefighting water reservoirs

- Containment tank may have a dual use, for example to provide firefighting water during an incident but once depleted, to store contaminated runoff from the fire suppression activities. However, if they are mains-fed, care should be taken to prevent back-syphoning of any stored contaminated water into the mains water supply.
- Installation should comply with Water Supply (Water Fixings) Regulations 1999 or in Scotland with Scottish Water (2004).
- Firefighting water stored in tanks (or lagoons) may, in certain circumstances, be reused as firefighting water. However, such water may contain entrained flammable products that might further fuel the fire if recycled. If there is a risk that entrained flammable products might be present where a firewater lagoon is to be used as additional storage, there should be a mechanism to ensure that firewater does not become contaminated.

9.2 TANKS CONSTRUCTED ABOVE GROUND

9.2.1 Suitable tank systems

The majority of large capacity above ground containment tanks are assembled on site from prefabricated components, although *in situ* reinforced concrete construction is sometimes used where a characteristic

such as robustness is a particularly important factor. The principal categories of tanks suitable for above ground containment of hazardous substances include:

- proprietary cylindrical tanks as used for agricultural wastes
- welded steel tanks as used for oil, petroleum and other liquid products
- sectional steel rectangular liquid storage tanks
- reinforced plastics tanks
- reinforced concrete tanks
- reinforced concrete/masonry tanks.

Other materials sometimes used for above ground tanks include stainless steel, aluminium and plastics, although plastics can have poor fire resistance.

Protection from corrosion and aggressive conditions may be provided by a range of coatings including bitumastic paints, epoxy coatings, and rubber and glass linings. However, it is not possible to generalise on appropriate protective systems as these will depend on the particular circumstances of the site.

Another important aspect in selecting an appropriate tank is its ability to withstand inventory and firefighting water at potentially high temperatures as well as the thermal stresses this may induce in any lining system.

The various aspects of design, specification, fabrication and site works for above ground tanks considered suitable for containment, together with the relevant British Standards and codes of good practice, are summarised in Table 9.1 and in the following sections. Table 9.2 provides a simplified performance comparison for the tanks considered.

Table 9.1 Design standards for common forms of above ground tank construction

Tank construction	British Standard	Nominal capacity range
Cylindrical tanks as used in agriculture, founded at ground level on concrete base: <ul style="list-style-type: none"> ■ lapped and bolted vitreous enamelled steel sheets ■ precast concrete panel ('staves') held together by external hoops ■ corrugated galvanised steel panels ■ section precast concrete. (Section 9.2.2)	BS 5502-50 to BS 5502-22:2003+A1:2013 Class 1 standards (static head only)	Max circa 4000 m ³
Pressed steel sectional rectangular tanks, founded at ground level or on higher level support structure, static head. Recommended maximum depth 4.8 m (Section 9.2.3)	BS 1564:1975 Type 1	Modular tank system can be constructed to virtually any size
Site built, vertical cylindrical, flat bottomed, above ground, welded steel tanks (Section 9.2.4)	BS EN 14015:2004	Fabricated tanks that can be constructed to a wide range of sizes
Rectangular and cylindrical, horizontal and vertical carbon steel above ground oil storage tanks (Section 9.2.5)	BS 799-5:2010	Up to 150 m ³
Glass reinforced plastic tanks and vessels for above ground use (Section 9.2.6)	BS EN 13121-3:2008+A1:2010	The practical size of prefabricated tanks is limited by transportation issues to approximately 100 m ³ , however, modular GRP tanks are available with capacities up to 2000 m ³
<i>In situ</i> reinforced concrete liquid retaining and containing structures (Section 9.2.7)	BS EN 1992-3:2006	Not restricted

9.2.2 Buildings and structures for agriculture – storage tanks and reception pits

BS 5502-22:2003+A1:2013 provides a classification scheme for agricultural buildings/structures based on among other things the distance to a highway or habitable building and minimum design life. Class 1 is the most onerous of the four classes in terms of design requirements with a design life of 50 years.

BS 5502-50:1993+A2:2010 provides recommendations for the design and use of agricultural storage tanks and reception pits for liquid waste (slurry). Tanks constructed to this code used to provide secondary containment should be designed to BS EN 1504-5:2013 class 1 (as defined in that standard) and are restricted to class 1 secondary containment as defined in Chapter 2 of this guidance.

The four most common forms of construction for cylindrical tanks to BS 5502-50:1993+A2:2010.

- 1 Lapped and bolted vitreous enamelled steel sheets.
- 2 Corrugated galvanised steel panels.
- 3 Sectional precast concrete.
- 4 Precast concrete panels ('staves') held together by external steel hoops.

The walls are usually manufactured components of steel or concrete which are then site assembled on an *in situ* reinforced base which forms the tank floor. Walls are designed primarily to withstand circumferential hoop stresses, with no fixity at the base. Containment integrity is therefore dependent on the wall to floor joint and on the permeability of the *in situ* concrete floor. The tank base should be designed and constructed to EN 1992-3:2006.

Further design guidance on these types of tanks is contained in Mason (1992), which provides information on good practice for design, manufacture, installation, operation and maintenance. A revision is being prepared to reflect changes in the SSAFO Regulations expected in 2015.

9.2.3 Pressed steel sectional rectangular tanks

Pressed steel rectangular tanks are generally assembled on site from prefabricated sectional components. The elements are easily transported making the system particularly suited for confined sites and sites with poor access. It is possible to design tanks for future increases in volume and, depending on specifications, the tanks may be used to store a variety of liquids. Specifications should comply with BS 1564:1975 Type One tanks and their use limited to above ground installations.

Figure 9.2 A pressed steel sectional rectangular tank (courtesy of Braithwaite Engineers Limited)

Tank plates are designed with plate thicknesses depending on the density of the liquid and the height of the tank wall. The specification of the sectional plates should take account of the aggressive nature of the stored liquid and it may be necessary to provide a protective coating to the plates and joining material.

Bases may be configured with internally flanged plates allowing even contact with the foundation (sand/bitumen beds are recommended in such cases, but steel grillage can also be used). This allows leakage monitoring by observation of the base/foundation interface and a leakage test should be completed, using water, prior to commissioning the tank.

9.2.4 Site built, vertical cylindrical, flat bottomed, above ground, welded steel tanks

BS EN 14015:2004 covers all aspects relevant to the design of atmospheric storage tanks including:

- design pressure
- materials specification – steel and weld materials
- design loads
- design of tanks components (bottoms, shells, stiffening rings and wind girders, roofs, floating roof seals, attachments etc).

Figure 9.3 A vertically cylindrical welded-steel tank (courtesy M.C. Integ Ltd)

Corrosion protection methods include paints, epoxy coatings, glass liners and rubber liners, which can be specified in accordance with the nature of the stored product and required durability.

Tanks should be tested by filling with water before commissioning under controlled conditions. The performance of the tank and foundations can be monitored during the test.

Foundations of large diameter tanks should be designed to accommodate differential settlement as they are susceptible to damage as a result of foundation settlement.

Foundations can comprise a compacted granular fill sub-base or rigid concrete foundations over which bitumen/sand mix layer is provided to retard corrosion and provide a clean working surface for welding the bottom plates.

Pipes set around the perimeter extending into the granular fill sub-base/concrete foundation and protruding through the bitumen/ sand formation are commonly used to detect bottom plate leakage.

9.2.5 Oil storage tanks to BS 799-5:2010

Subject to durability criteria, tanks constructed to BS 799-5:2010 may be suitable for initial containment

prior to transfer to a larger facility, or at sites requiring only minimal containment capacity. The Standard includes design and fabrication specifications for all types of tank configuration.

9.2.6 Glass reinforced plastic (GRP) tanks and vessels for above ground

GRP tanks are made from glass fibre resin laminates manufactured under carefully controlled conditions using resins specified according to the intended use. The choice of resin affects chemical resistance properties and heat distortion temperature and is therefore an important consideration if reinforced plastic tanks are to be used to provide containment. The chemical resistance requirements are specified in BS EN 13121-2:2003 and the design, fabrication, inspection, testing and verification of GRP tanks in BS EN 13121-3:2008+A1:2010.

Due to the difficulty in achieving proper quality controls, site fabrication is not standard practice and therefore the capacity of a single tank is limited by transportation considerations. In practice, this limits individual tanks to a capacity of 100 m³ maximum although a number of tanks can be linked together.

Proprietary systems have been developed using tanks formed from composites of rectangular glass reinforced plastic (GRP) panels and steel frames and also vertical cylindrical GRP multi-straked tanks. These are similar in concept to the pressed steel rectangular tanks discussed in Section 9.2.3.

A number of thermoplastics lining systems can be specified to increase resistance to aggressive chemicals. Although GRP tanks may be manufactured to tolerate highly aggressive chemicals and effluents, when used above ground they are more susceptible to fire damage than steel or concrete tanks.

9.2.7 *In situ* reinforced concrete tanks

Above and below ground containment tanks can also be constructed using *in situ* reinforced concrete. The design of reinforced concrete structures to retain liquids is discussed in Chapter 7.

9.2.8 Precast concrete tanks

Precast or prestressed reinforced concrete wall panels can be used to form containment tanks. The wall panels can be cantilevered wall sections on suitable foundation or restrained with an external hoop (post-tensioned) and are sometimes referred to as multi-straked tanks. This is a common form of construction used to create slurry stores and filter beds at wastewater treatment works.

Figure 9.4 A precast concrete segmental tank construction (vertically multi-straked tank) (courtesy A-Consult Ltd)

An important consideration in specifying this type of tank is to ensure the joint between panels and between the panels and the base is both liquid tight and the sealant compatible with the inventory (and fire resistant where the inventory is flammable). Alternatively the tank could be lined, or the joints plated (see Figure 12.3).

9.2.9 Reinforced masonry tanks

Above and below ground containment tanks can also be constructed using reinforced masonry. The design of reinforced masonry structures to retain liquids is discussed in Chapter 7.

Table 9.2 Performance comparison for tanks constructed above ground

9.3 TANKS CONSTRUCTED BELOW GROUND LEVEL

9.3.1 Introduction

The design of below ground structures will need to take account of topography, the nature of the ground (geology), the water table and any other factor that may influence the integrity of the construction such as the aggressiveness of the soils. A detailed site investigation will often be an essential pre-require when considering the design of a below-ground structure.

The design of any below ground structure should be to BS EN 1997-1:2004 and BS EN 1997-2:2007:

- BS EN 1997-1:2004 covers the general basis for the geotechnical aspects of the design of buildings and civil engineering works, assessment of geotechnical data, use of ground improvement, ground reinforcement, dewatering and fill. Geotechnical design of spread foundations, piles, retaining structures, embankments and slopes. Calculation rules for actions originating from the ground, eg earth and groundwater pressures.
- BS EN 1997-2:2007 covers requirements for the execution, interpretation and use of results of laboratory tests to assist in the geotechnical design of structures.

For the design of a below-ground tank, it is of particular importance that a ground investigation establishes the following:

- 1 Groundwater level and any significant seasonal fluctuation to ensure the tank will not float (tanks, especially those in class 2 and class 3 should not generally be constructed in or immediately above the groundwater table).

- 2 A high groundwater level will impose a hydrostatic force on the tank when empty that should be considered in its design.
- 3 Bearing capacity of the formation.
- 4 Presence of contaminated soils.
- 5 Properties of the soils to establish design loadings.

BS EN 1997-1:2004 requires that the site investigation and geotechnical and structural design of a below-ground structure should be completed by appropriately qualified and experienced personnel.

9.3.2 Tank systems for use below ground

Many above ground tank systems may be designed and adapted for below-ground installation (manufacturers' specification should be checked to ensure suitability for below-ground use). Small capacity, welded steel and GRP cylindrical tanks are commonly used for below-ground storage of chemicals, fuel, oil and sewage effluent. Common types of structure for large capacity below-ground tanks are *in situ* reinforced concrete, sheet piled walls and deep shaft construction.

9.3.3 *In situ* reinforced concrete below-ground tanks

In situ concrete may be used to provide structural support for tanks made from other materials such as small capacity welded steel or GRP tanks installed below ground. In these circumstances it is not necessary for the concrete to be specified to BS EN 1992-3:2006.

This can serve a dual purpose by acting as additional containment, which will have particular relevance at a class 2 site. At particularly sensitive locations, a further containment system may be required in the form of, for example, a double geomembrane/geotextile incorporating a leakage detection facility that surrounds the enveloping concrete, giving an overall class 3 rating.

9.3.4 Deep shaft tanks

The 'bored shafts' technique describes the method of excavating and forming a vertical cylindrical shaft or tank, the circumference of which is usually concrete lined. After excavation the base of the tank is concreted to provide a watertight seal. Bored shafts are commonly up to five metres in diameter, although it is possible to go to nine metres (Figure 9.5).

Potential uses for bored shaft technique include containment tanks for a variety of substances, water and fire water reservoirs, abstraction well heads, sewage treatment, balancing tanks etc. The small plan area of the tanks gives a number of potential advantages, including minimal site area requirement and siting of full containment close to the source. The small effective diameter makes fire control easier within the tank. The system cannot be used in all ground conditions and the emptying costs are likely to be relatively greater than for a shallow below-ground containment tank.

9.3.5 Tanks formed with embedded walls of steel sheet piling

Continuous steel sheet piling for retaining wall construction can be used to form open storage reservoirs in impermeable soils. Advice on acceptable criteria for impermeable soils is provided in Chapter 8.

Where such a facility is to provide class 2 or class 3 secondary (or tertiary) containment, it should be lined and again advice on lining systems is provided in Chapter 8.

Advice on the design of sheet piled retaining walls is provided in Gaba *et al* (2003).

Figure 9.5 Use of multiple deep shaft tanks to provide containment adjacent to the source

10 Transfer systems

This chapter provides:

- A definition of transfer systems and the factors to consider in their design and specification (Section 10.1)
- Advice on the categorisation of catchment areas (Section 10.2)
- A review of gravity and pumped transfer systems (Section 10.3)
- A suggested classification system for transfer systems (Section 10.4)
- Advice on the design of the various elements of a transfer system (Sections 10.4 to 10.11)

10.1 INTRODUCTION

The term transfer system is used to describe the means for collecting and conveying spillage and contaminated water to the designated containment facility. This would include transfer to a remote secondary facility, or from a secondary to a tertiary facility.

Transfer systems comprise of **catchment areas** in the immediate vicinity of the primary storage vessel to control and channel any polluting materials ready for transfer, and **conveyance systems** to transfer the material from the catchment area to the containment:

- **Catchment areas** may be purpose designed and built with the sole function of intercepting polluting materials resulting from an incident. Alternatively, they may be areas such as roads, hardstandings and paved areas that double as catchment areas in addition to their primary purpose.
- **Conveyance systems** can comprise pipe networks, open channels or culverts. As with catchments, conveyance systems may be designed for the sole purpose of dealing with spillages and other incidents, or they may have a different primary purpose such as on-site roads.

Where 'dual-purpose' areas such as roads are to be used as part of the containment and/or transfer system, there should be a fail-safe mechanism to prevent inventory and firefighting water reaching the outfall of any associated the surface water drainage system.

The essential requirements of any transfer system are that it should be:

- leak proof
- sufficiently strong and durable to perform adequately for the duration of its design life with only routine maintenance
- resistant to fire
- resistant to attack from the materials that may be released from the primary containment
- of sufficient capacity to cope with the worst flow scenario without overflowing
- where the transfer system forms part of a road or access route, the design should not compromise emergency vehicular or pedestrian access and means of escape.

Material collected by the transfer system should be stored treated, where appropriate, and disposed of in a safe manner. Transfer systems should be designed to ensure that, as far as possible, incompatible materials do not come into contact with each other and cause secondary reactions or escalation of the incident. This may require larger sites to be segregated into catchment area zones (eg 'clean' and 'dirty', or 'acid' and alkali') so that the runoff from each may be dealt with separately. If clean water can remain segregated during an incident, the volume of contaminated water that would have to be treated can be minimised.

It should be noted that where an incident results from a catastrophic failure of the primary storage vessel, the principal concern may well be the capacity of the catchment area as it may be impractical to construct a transfer system with sufficient capacity to cater for this almost instantaneous 'surge' flow.

It should be noted that for local secondary containment systems comprising bunds, the transfer system is considered to be the bund floor (see Chapter 7 for concrete bund floors and Chapter 8 for earth or lined bund floors). This chapter is concerned primarily with transfer systems associated with remote and combined containment systems.

For disposal of contaminated materials following an incident, waste legislation is likely to apply. Accredited specialist contractors will have the necessary measures in place to deal with this.

10.2 CATEGORISING CATCHMENT AREAS

10.2.1 Categories of waste

Drainage on the majority of sites can be divided into three categories, commonly referred to as:

- stormwater drainage
- foul drainage
- trade effluent (the semi-solid or liquid by-product of commercial or business activities).

Stormwater drainage

This is designated essentially for clean water, ie surface water runoff generated by rainfall. Stormwater drainage that discharges to a watercourse or soakaway is normally subject to a discharge consent. Stormwater drainage discharging to the public sewer requires the consent of the undertaker, normally the local water utility. It should be noted that the discharge of trade effluent to the stormwater system is not permitted. With such outfalls it is essential that inlets to all stormwater drains are protected against ingress by sewerage and the effluent arising from an unplanned incidents (event effluent) comprising escaped inventory and/or rainwater and/or firefighting and cooling water.

On sites that are designated a moderate or high hazard risk rating, ie class 2 or class 3, all stormwater drainage should be designed to outfall initially to a holding facility (eg lagoon, reception tank or interceptor depending on the capacity required) so that any unplanned entry of polluting material into the system may be dealt with safely. Accumulated surface water runoff will only then be released following testing.

An alternative is to continuously monitor the surface water runoff and provide diversion arrangements to an appropriate containment system if:

- the monitors shows signs of contamination
- the instruments fail
- there is an emergency, in which case it should be possible to divert the flow manually or ideally remotely from the location where the emergency occurs.

Foul water drainage

This deals with sewage from site welfare facilities, canteens etc. and normally discharges to a water utility's wastewater treatment works (WwTW) via the public sewer network. It is important that trade effluent and/or event effluent is prevented from entering foul water drainage systems (unless it has been consented – see *Trade effluent*) as it may cause long-lasting damage to the treatment works process, which could in turn result in the discharge of untreated sewage.

In particular flammable material should be prevented from entering the foul water drainage due to the safety risks.

Trade effluent

Trade effluent is the semi-solid or liquid by-product of commercial or business activities. It may be consented to go to a water utility's WwTW (normally via the public foul sewer) or may have to go to a

dedicated industrial effluent treatment works. Where large volumes of effluent have to be dealt with, holding tanks may be required to buffer the impact on a treatment works.

This guide is not concerned with the management of trade effluent, but rather event effluent. As a general rule, operators should plan to retain the event effluent on site to allow it to be analysed before being sent to an off-site WwTW.

10.2.2 Site zoning

In planning a new transfer system, or assessing the adequacy of existing drainage systems for dealing with unplanned incidents, the site should be divided into catchment areas, each designated as either (clean) stormwater or event effluent or a combination of both. Catchment areas may be hardstandings, roadways, floors of buildings, roofs of buildings or any other areas that may be subject to runoff of rainwater or other material.

An assessment should be made of the amount of runoff likely to occur from any catchments designated as event effluent, or a combination of event effluent and stormwater. The approach described in Chapter 6 should be used to estimate the total event effluent likely to be released from a catchment area. The rate of release, which is the factor that affects the design of the transfer system, should be assessed by means of a detailed consideration of all of the events that could cause a release to each catchment area.

For a catchment area to be designated as solely stormwater there should be no possibility of the catchment becoming contaminated with event effluent during the course of an incident. In general, the higher the site's hazard rating, the more onerous will be the safeguards required to support the designation of a catchment as stormwater only.

Where a zone is designated as event effluent, it is important to identify the types of inventory likely to be released from it as the characteristics of the inventory, as well as its rate of release, will affect drainage design. Where more than one material is involved, consideration should be given to the characteristics of the 'cocktails' that could result. Important characteristics in terms of drainage design are:

- 1 Corrosive effects on materials used for constructing the drainage system.
- 2 Density (in particular whether lighter than water).
- 3 Flammability (liquid and/or vapour).
- 4 Flow characteristics (viscosity and changes in viscosity according to temperature and mixing with other substances or firefighting water).
- 5 Tumescence and possible solidification on burning.
- 6 Ability to segregate contaminated firewater from cleaner cooling water (increasing the chance of being able to recycle cooling water, reducing water use).
- 7 Ability to have staged handling of flammables, ie allowing gravity separation such that less contaminated liquid is transferred to the next stage/zone and reducing risk of incident spreading/escalating. However, there is a need to be mindful that foams inhibit gravity separation so any liquid leaving a separator is likely be contaminated (see Section 10.5.6).

This approach recognises that in some situations it may not be possible to design catchments or conveyance systems for all contingencies (for example, the very rapid release of materials stored in primary containment) but requires that any shortfall in, for example, conveyance capacity, is made explicit and that the consequences are understood and agreed with the regulator.

The output from the catchment assessment is used to design the conveyance system.

10.3 GRAVITY AND PUMPED TRANSFER SYSTEMS

Transfer systems can be designed to operate entirely by gravity, be pumped or a combination of both. The design of the system will depend on the layout of the plant and the topography of the site,

particularly the location of the primary storage areas in relation to the secondary containment. There are advantages and disadvantages associated with both types of system as outlined below:

10.3.1 Gravity systems

Advantages

- Simple and relatively inexpensive.
- Little to go wrong.
- Do not rely on operator intervention or automatic controls to activate.

Disadvantages

- Difficult to control flow rate.
- Pipework usually necessarily underground, making monitoring, inspection and maintenance more difficult.
- Requires human intervention to be available, diagnose and willing to operate.
- Constrained by site layout and topography.

It should be stressed that these notes refer only to transfer systems that are part of a remote or combined containment system. For systems where only local secondary containment is provided, gravity discharge arrangements should not be used.

10.3.2 Pumped systems

Advantages

- More flexibility.
- Pipework can be routed above ground.
- More control over transfer rates.

Disadvantages

- More complicated, so more can go wrong.
- Require reliable power supply and controls.
- Requires back-up system against mechanical and electrical failure.
- Even where there is a reliable power supply with a back-up system, the Fire and Rescue Service have been known to shut the power off for safety reasons.
- More maintenance required.

Many transfer systems are part gravity and part pumped. Ideally a transfer system would be gravity operated but with pipework supported above ground to enable effective monitoring and maintenance. In practice, the benefits of the inherent reliability of gravity systems have usually to be balanced against the convenience and accessibility of pumped systems.

10.4 TRANSFER SYSTEM CLASSIFICATION

Overall containment system classification is dealt with in Chapter 2. Table 10.1 summarises the performance requirements that components of a transfer system should meet to satisfy the overall system classification.

Table 10.1 Performance requirements for transfer system components

Main system component	Class 1	Class 2	Class 3
Catchments Table 10.2	Impermeable and resistant to the inventory and fire Designed to cater for flows arising from a credible scenario		Additional conveyance capacity such as bypass channels and identification of emergency flow paths
Pipes/channels Tables 10.3 and 10.4	Designed to cater for flows arising from a credible scenario		
	Pipes and channels and associated gullies, chambers and manholes to be liquid tight and resistant to inventory	As class 1 plus additional redundancies such as sleeved above ground pipework and alternative flow routes identified in the event of blockage	Pipework to be flexibly jointed (or sufficiently flexible) to cater for subsidence
		Surface water drainage system should not be used a part of the transfer system	
Pumps [†]	Where the transfer system is reliant on pumping, provision for a back-up pump should be made	Dual (duty and stand-by) pumps and controls plus facility to mobilise temporary or additional pump capacity	
Telemetry and monitoring			Telemetry, including flow metering of all pipe runs to detect leakage Regular CCTV inspections of below-ground installations Alarm systems Other technologies may include permanent CCTV surveillance of above ground pipe networks
Construction supervision	Construction works to be independently verified (Section 7.2.1)		
Maintenance	Transfer systems to be regularly inspected (Section 5.2)		

Note

* Where the systems is totally reliant on a working pump, the pump and its controls should be designed to minimise any risk of failure, be accessible for repair and have a back-up in place. This is particularly relevant where fire damage is a possibility. The pump and its controls may be sited away from the bund or sump so that it can be maintained at all times during an incident. Dual (or stand-by) pumps should be considered. Alternatively, or additionally, portable pumps (which should be selected to be suitably ignition protected where they may need to operate in a flammable atmosphere) of an appropriate area classification for the intended duty with a rating equivalent to the fixed pump should be available in the event of an exceptional emergency or failure of the main system.

10.5 CATCHMENT AREA DESIGN

In the absence of a bund, most primary containment areas require an impermeable catchment to intercept spills and other unintended discharges. The area beneath and surrounding the primary storage vessel should be impermeable and contoured, or kerbed, to collect the spillage prior to its transfer by gravity or pumping to the remote secondary containment. Catchments may be constructed using earth (if sufficiently impermeable), or tarmac areas, but more usually they are constructed in concrete.

The effectiveness of a catchment area relies heavily on the ability of the downstream drainage system to transfer the spillage away from the catchment area at a sufficient rate to prevent overflow to surrounding areas that may not be impermeable. The catchment therefore may also have to attenuate the flow of event effluent by providing a degree of containment at the inlet to the transfer system, and effectively local secondary containment.

Catchment areas sometimes serve a dual purpose, eg to provide an impermeable hardstanding (such as a car park) or stable working area. The catchment function may be secondary to the main function, as in the case of roads, which may double as catchment areas. With roads, additional contouring and kerbing is likely to be required to ensure that spillages do not overflow.

For these reasons, where kerbing is to be used to collect spillage, or to direct it to a remote secondary (or tertiary) containment area, a high containment kerb system should be used. These are normally 400 mm high rather than the normal pavement kerbs adjacent to highways. Low points along the crest of the kerb should be avoided as this would reduce the capacity of the transfer system.

Areas of hardstanding and roads are normally drained and in many cases surface water runoff pass through an oil separators prior to discharge to a public sewer, watercourse or soakaway. However, oil separators cannot be relied upon to retain hazardous substances that might enter the surface water drainage system during an incident. For instance light oils might not be retained and firefighting foam can emulsify oil and cause pollutants to carry through gravity separators. It is also the case that unless it has been specifically designed for the particular incident scenario, the potentially high rate of flow through an interceptor may render it ineffective.

For this reason, dual purpose catchment areas such as roads should not be used for high hazard or risk situations unless stormwater is routinely collected in holding tanks for sampling prior to treatment (if necessary) and discharge or otherwise appropriately managed.

An alternative may be to provide a pollution control valve on the outfall of the site's drainage system. These valves can be remotely closed in response to the triggering of an alarm, or the detection of pollutants in the surface water runoff. However, reliance on such a system to retain event effluent during an incident should be subject to a risk assessment and discussed with the regulator. Such an arrangement is described in Case study 10.1.

Case study 10.1

Example of the use of a pollution control valve, Shropshire, UK (courtesy Hydro Consultancy)

Ricoh operate a site in Telford, Shropshire that manufactures toners for their copying equipment. The existing site surface water drainage system was identified as a direct pathway for accidental spillages of potentially harmful constituent components to reach sensitive downstream receptors.

To address this potential risk, in a scheme promoted by the Shropshire Wildlife Trust, a remotely activated lock-down valve and an underground off-line containment tank were retrofitted to the drainage system to provide a rapid-response system to spillages. When activated, the system rapidly closes part of the surface water drainage system with the spillage and any runoff diverted to a containment tank to be subsequently removed by tanker.

Analysis confirmed that containment of 100 per cent of the spillage and of any rainfall runoff occurring during an accident would be prohibitively expensive due to the significant storage volumes involved, particularly when considering the more extreme rainfall events and the time taken to deploy tankers.

The volume of the containment tank was optimised using hydraulic modelling by considering a range of response times to provide 100 per cent containment for 99 per cent of rainfall events based on a two hour response time, reducing to 80% of rainfall events for a 24-hour response time.

Further hydraulic analysis using a two dimensional modelling programme considered the fate of overland flows during an event when the containment tank capacity had been exceeded. This indicated that these excess flows could be contained on site within dock loading area.

Forms of catchment construction are summarised in Table 10.2.

Table 10.2 Summary of common forms of catchment area construction

Form of construction	Design issues	Classification
Catchments with an earth base	See Chapter 8	Minimum depth of 1 m of impermeable soils is suitable for class 1 For a greater depth, or if a liner is provided, suitable for class 2 or class 3
Modular paving units and non-reinforced concrete	Modular units generally hand laid on a compacted granular sub-base. An underlying impermeable membrane, which should be able to accommodate deformation and be unaffected by deleterious materials, may be specified As the sub-base is likely to be relatively permeable, the joints of modular units should be sealed, or the units laid over a suitable impermeable liner	Classes 1, 2 or 3 if laid on a suitable impermeable liner and over soils
Reinforced concrete	See Chapter 7. Detailing for pavements should follow the DMRB (DfT, 1999a)	Class 1, 2 or 3
Flexible and rigid pavements	Flexible pavements tend to deform under concentrated loads and extreme temperatures although composite construction provides a superior performance for industrial use. Asphalt and DBM surfaces are susceptible to damage by many solvents and by fire	Class 1

One of the most common and reliable forms of construction for catchment areas is an impermeable *in situ* reinforced concrete base surrounded by a reinforced concrete upstand forming a shallow retaining kerb. Guidance on the design and construction of *in situ* reinforced concrete bund floors is provided in Chapter 7.

10.6 DESIGN FLOW

10.6.1 Failure of the primary storage vessel

The worst scenario is represented by the simultaneous occurrence of the following events:

- 1 The flow arising from the catastrophic failure of the primary storage vessel or any other credible scenario agreed with the regulator (allowing for any attenuation provided by the catchment area or local containment).
- 2 The maximum flow resulting from a one hour duration 10 per cent AEP rainfall event over the **whole** of the catchment drained by the transfer system (this is consistent with the rainfall event used to estimate containment capacity discussed at Chapter 4).
- 3 The maximum rate of application of firefighting water (see Section 4.3.4). Note that this requirement may be relaxed where non-flammable substances are involved.
- 4 Any potentially aggravating occurrences, eg drain blockage.

Point 4 should be considered as part of a HAZOP or similar assessment. When carrying out such an assessment it should be recognised that aggravating occurrences such as blocked drains may not be independent from points 1 and 3 since the released materials, or fire, may themselves encourage drain blockage.

While these scenarios represent the worst case and should be the start point for design consideration, a risk assessment, combined with location specific rainfall data (short- and medium-term) may demonstrate that the risk of a combined occurrence of fire (complete loss of containment with firewater) and worst case rainfall might be sufficiently low to be tolerable. However, this would depend on the scenario, eg if fire was caused by a storm then it could occur at same time as the worst case rainfall assumed.

Normal catchment and drainage design techniques can be used to calculate the design requirements for points 2 and 3.

Although it may often be impracticable to design a transfer system to cope with the highest possible flow rate that could occur on a site, it is important at least to recognise those scenarios where the design flows may be exceeded, particularly on sites with a high hazard or risk rating.

10.6.2 Tanker offloading and loading facilities

As risk assessment should be completed to consider the likely volume and flow rate of inventory that could be spilled during loading and unloading operations.

This should consider the:

- compartment volume(s) of the road or rail tanker
- maximum loading and/or unloading rate
- rate of application of firewater spray from any fire suppression systems installed
- rainfall rate over the catchment area of the unloading facility (the rainfall associated with 10 per cent AEP rainfall event should be allowed for).

Similar storage provision should be made for rail tanker unloading areas.

Ventilated below-ground impermeable sumps or tanks may be used to increase the capacity of the local catchment area if required. Collection tank alarms and automatic shut-off valves at loading and unloading points are desirable on installations with a high hazard or risk rating.

10.6.3 Attenuation

It is unlikely to be practical or economic to construct a transfer system with sufficient capacity to cater for the almost instantaneous 'surge' flow resulting from a catastrophic failure of the primary storage vessel. So, some local secondary containment is likely to be required.

Even if the transfer system has the capacity to cater for the design peak flow, local secondary containment may be required due to head losses at the entry to the system. This can be provided by:

- raised kerbing
- low bund walls
- site levels (dished impermeable surface)
- channel drains
- sumps.

An alternative is to provide a detention tank. In addition to attenuating peak flows, they may also be used for dosing or neutralising harmful substances, for example by pH adjustment, prior to transfer to the remote containment. However, in these circumstances the tank would require either a valved or pumped outlet to retain the event effluent and facilities for dosing and agitation to ensure adequate mixing.

Detention tanks should be designed and constructed to a standard appropriate to the class of containment they are serving (see Chapters 7, 8 and 9).

10.7 OPEN CHANNEL DESIGN

Open channels are used to drain large areas, or for dealing with large flows. On many sites the channels may be formed by contouring and kerbing suitable catchment areas such as roads. The kerb height and width and slope of the catchment determine the flow capacity.

Where there is a risk of blockage, inlets to culverted and piped sections of the transfer system from the open channel should be protected with screens or grills.

Where unlined drainage channels are excavated, flow velocities should be limited to 0.5 to 0.8 ms⁻¹ to prevent scour of fine materials. However, the scour resistance of earth channels can be enhanced by planting with grass. Advice on grass lined channels can be found in Hewlett *et al* (1997).

Manning's formula (Chow *et al* (1988)) is the most commonly used method for determining open channel flow. The flow capacity Q of a channel (in the context of this guide the channel takes the form of a kerbed road) is given by the expression:

$$Q = (A/n)m^{0.67}I^{0.5}$$

Q = discharge (m³)

A = wetted perimeter (m)

m = hydraulic mean depth

I = slope (mm/metre)

n = Mannings coefficient (ranges from 0.0156 for smooth concrete to 0.12 for an earth channel overgrown with weeds, with an average value of 0.030 for a channel lined with short grass).

Manning's formula takes no account of head losses at bends and changes in section, so it is recommended that the hydraulic design of transfer systems should be completed by competent personnel.

10.8 PIPEWORK FOR TRANSFER SYSTEMS

The hydraulic design of pipework for transfer system should be in accordance with BS EN 752:2008.

A number of software packages are available to assist in drainage design, many of which include designs for detention and catchment storage. Further information on the design of piped drainage systems is given in Appendix A9.

Gravity transfer systems should be designed such that the peak design flow (see Section 10.6) can be passed without surcharging and should take account of any flame traps, siphons, restricting valves and meters included in the system.

Allowance should also be made for any change in state of the inventory during an event (see Section 10.2.2). For example, water applied to some flammable substances considerably increases their viscosity.

Pipework materials can suffer attack from:

- discharge of effluent from industrial processes (eg electroplating works)
- discharge of effluent from chemical laboratories
- discharge of sewage, where due to long retention periods septicity occurs
- aggressive groundwaters (eg in contaminated ground)
- less aggressive groundwaters, where there is a convenient drainage path that allows groundwaters to be continually replenished
- deformation of plastic pipes and liners due to hot liquors and aggressive materials.

Table 10.3 summarises the materials and properties of commonly used effluent pipes and Table 10.4 indicates the resistance of a range of pipe and jointing materials to trade effluents.

Pipes and joints in materials referred to in Table 10.4 are generally suitable for use in sewers and drains conveying surface water, foul sewage and trade effluent that can legally be discharged to public sewers. The ground conditions in which the sewer is to be laid can be corrosive to certain pipe and/or jointing materials and this can affect the choice of materials. Where a drain or sewer is liable to carry untreated and corrosive trade effluents, further consideration should be given to possible protective measures. Liquids at elevated temperatures are likely to be significantly more aggressive than those at ambient UK temperatures.

Table 10.5 provides a performance comparison for pipe materials used in transfer systems.

Table 10.3 *Pipework materials, properties and application*

Component material	Description and design references	Characteristics properties	Suggested classification
Clayware	<p>Manufactured diameters up to 1.2 m. Various classes of pipe are defined in BS EN 295-1:2013 depending on crushing strength. Bedding classes are provided in BS EN 1610:1998 and design data including design loads, imposed traffic loads and construction of trench bedding is given in Bedding construction and flow capacity of vitrified pipes (Bland, 1995).</p>	<p>Suitable for non-pressure application and use below-ground. Good internal and external resistance to aggressive chemicals. Buried clayware pipes prone to damage, which is not readily detected below ground. Ground movement may affect joint integrity.</p>	<p>Buried clayware pipes to BS EN 295-1:2013. Disadvantages, including potential loss of joint integrity, brittleness etc, limit recommendation to class 1 only.</p>
Plastic	<p>Two main categories:</p> <ol style="list-style-type: none"> 1 Thermosetting resins. 2 Thermoplastics. <p>Reinforced thermosetting resin pipes included glass reinforced plastics (GRP) and unreinforced sand and resin (RPM). GRP pipes available in diameters up to 4 m and for high pressure use.</p> <p>Polyolefin's: polyethylene (PE), polypropylene (PP), polybutylene (PB). Vinyl's: polyvinylchloride (PVC) acrylonitrile butadiene styrene (ABS). Extruded (PE) pipes made in diameters up to 3 m in welded form. Made in different densities, eg MDPE, HDPE, suitable for pressures up to 12-bar. ABS limited to about 300 mm maximum diameter. PP pipes made in diameters up to about 1.2 m PB pipes available in diameters up to about 600 mm.</p> <p>Detail design and specification data available from pipe manufacturers.</p>	<p>Strength reduces, temperature increases (thermoplastics show significant loss). PP and PB better high performance temperature than PE. Normal maximum operating temperature of most plastics about 200 °C. Categories (1) and (2) have good chemical resistance, which may reduce under stress or strain. Polyolefins can be heat welded. UPVC to BS EN 1452-1:1999 widely used for utility pipelines. UPVC pipes suitable for low pressure installations, careful design is critical for high pressure pipelines. Vinyl's may be solvent welded.</p>	<p>Depending on the nature of the effluent and site conditions, plastic pipes suitable for many above- and below-ground applications, and for some pressurised pipelines. Consideration should be given to potential effects of fire. Depending on various factors, plastic pipes may be considered for class 1 and class 2. Class 3 use depends on redundancies and other precautionary measures, eg dual pipes, sleeves, pipe bunds, and monitoring controls.</p>
Metallic	<p>Non-ferrous metals not commonly used for effluent pipelines.</p> <p>Welded steel and stainless steel pipes used throughout industry for conveying fuels, oil, foodstuffs and many chemicals. With adequate protection may be used from some harmful effluents. Steel pipes are fabricated in all diameters and welded steel is commonly used to form double-skinned pipes and independent sleeves for all types of pipe. Ductile iron is most commonly used metal for effluent pipes. Pipes available up to 1.8 m diameter, with standard bends and fittings to ISO 2531:2009 up to 1 m diameter. Pipe lengths from 6 m to 8 m. Ductile iron pipes for effluents should be specified to BS EN 598:2007+A1:12009. Detail design data provided by manufactures.</p>	<p>Suitability of steel for welding, and high tensile stress, allows fabrication of continuous above- and below-ground pipelines capable for withstanding high pressures.</p> <p>Typical specification for ductile iron pipe for materials with pH in range 4 to 12 would consist of a pipe to BS EN 598:1995 with an external coating of 200g/m² zinc to ISO 8179-1:2004, overlaid with a 250 micron epoxy seal coat. An additional outer skin of polyethylene would help combat aggressive soil conditions. Tape wrapping provides further protection. Internally, pipes typically coated with epoxy and lined with high alumina cement. Exposed end surfaces coated with epoxy. Pipes may be protected internally with polyurethane lining for materials with pH4. High alumina cement liners offer good abrasion resistance at flow rates up to 7 m/sec. Various proprietary joining systems available; specified according to use. Ductile iron pipes may be used above or below ground and for gravity or pressurised pipelines.</p>	<p>Subject to design, specification and construction standards, ferrous pipes should be used for class 2. This applies to above-and-below-ground installation and to gravity and pressurised networks. Class 3 installations require redundancies such as system duplication, together with full monitoring and control of leakage. In class 3 situations, pipes should be above ground level and within sleeves or ducts. Alternatively they should be within concrete ducts to BS EN 1992-3:2006, where located below ground level. Sleeves and ducts to conform to class 3. These provisions allow for easier inspection and maintenance.</p>

Table 10.3 Pipework materials, properties and application (contd)

Cement	Concrete effluent pipes may be unreinforced, steel or fibre reinforced, or prestressed. Principal design performance standards are BS 5911-1:2002+A2:2010 and BS EN 642:1995. Unreinforced pipes, made up to 1.4 m diameter, suited only to gravity flows. Reinforced pipes are up to 3 m diameter and used in some low pressure systems. Pressurised pipes also made in large diameters and used in pressurised systems. Number of proprietary pipe systems manufactured from composites of concrete and reinforced plastic. CPSA (2011) provides guidance on installation of concrete pipes.	Concrete is robust but prone to attack from sulphates in groundwater, acid effluents, sugars and bacteria. Expensive measures needed for protection and these tend to offset initial cost advantages of concrete. Pipe abrasion and erosion governed by material flow and nature. Pipe linings usually applied after manufacture; epoxy or polymer resins commonly used. Linings cannot be prestressed.	Unreinforced concrete pipes should be used for class 1 only. Reinforced and prestressed pipes should be used for class 2. Specifications and site installation controls should be high to warrant class 2. This recommendation applies to pipe components. Additional safeguards will be essential for class 3.
Joint materials	Many joints systems are proprietary or have been developed over the years by various bodies such as WRc. A number of jointing methods are also described in the British Standard for pipes such as BS 5911-1:2002+A2:2010, BS EN 295-1:2013 and BS EN 598:2007+A1:2009.	Most flexible joints rely on a form of spigot and socket. Other methods include double collared joints, sleeved joints and flanged joinings. Welding is used for thermoplastics, steel and some non-ferrous metals. Flexible joints rely on an elastomeric sealing ring or gasket. Ethylene-propylene rubber and styrene butadiene rubber used in preference to natural rubber for normal sewage effluent, since natural rubber subject to biodegradation in sewage. Some aggressive materials may require use of other synthetic polymers.	Since many jointing systems are proprietary, necessary to confirm the classification and agree the specification details with the manufacturer.

Table 10.4 Chemical resistance of pipework materials (from BS EN 752:2008)

Relevant standards	Material or product	Notes
BS EN 206-1	Concrete	Specification, performance production and conformity
BS 8500		Complementary standard to BS EN 206
BS 8110		Specifies structural use of concrete

Table 10.5 Performance comparison for pipework materials

Pipe material		Suitability for			Chemical resistance	Pressure pipeline	Above ground
		Class 1	Class 2	Class 3			
Clayware		✓✓✓	x	x	✓ ¹	x	x
Plastic		✓✓✓	✓✓✓	✓	✓✓✓	✓✓	✓✓✓
Metallic		✓✓✓	✓✓✓	✓	✓ ²	✓✓	✓✓✓
Cements	Unreinforced	✓✓✓	x	x	✓ ²	x	x
	Reinforced and pre-stressed	✓✓✓	✓✓	✓	✓ ²	x	x

Key

- ✓✓✓ = Good
- ✓✓ = Moderate
- ✓ = Poor
- x = Not suitable

Notes

- 1 Joints susceptible to chemical attack.
- 2 Requires internal coating to achieve chemical resistance.

10.9 FLAME ARRESTORS

Where there is a risk of flammable liquids and/or gasses being conveyed by the transfer system, consideration should be given to installing traps in gullies, inspection chambers and tanks etc to prevent the spread of fire.

10.10 SYSTEM TESTING

BS EN 1610:1998 describes procedures for air and water testing of drains and ancillary works for gravity pipe networks. All below-ground pipelines should be tested before and after backfilling.

Testing of pressure pipes should be completed in accordance with BS EN 805:2000.

11 Sacrificial areas and temporary containment

This chapter provides:

- An introduction to sacrificial areas and temporary containment (Section 11.1)
- Examples of sacrificial areas (Section 11.2)
- Advice on the preparation of emergency plans where sacrificial area or temporary containment forms part of the planned response to an incident (Section 11.3)
- Advice on emergency and temporary containment measures (Section 11.4)

11.1 INTRODUCTION

This section illustrates examples of sacrificial and temporary methods of containment that may be used as part of a planned range of measures to manage an incident. These methods should be seen as means of mitigating the failure of secondary containment, rather than a replacement for it.

Sacrificial areas ‘sacrifice’ the soil or other media within which the event effluent is contained whereas temporary containment includes a range of measures where event effluent is contained by the planned installation of temporary measures such as portable barriers and booms.

Where sacrificial areas form part of an emergency plan, the sacrificial soil or media used to retain the pollutant should be contained within a barrier as the release of contaminants would be an offence (see Section 1.5.3).

11.2 EXAMPLES OF SACRIFICIAL AREAS

11.2.1 Car parks, sports fields and other landscaped areas

The method relies on interception of spills and conveying the event effluent to an area designated as a sacrificial site area. Sites that may be designated for this purpose include suitably ‘engineered’ car parks, landscaped areas, sports fields etc.

The sacrificial area contains the spill within a depth of permeable soil or porous media (the sacrificial media), which should have sufficient infiltration capacity to cater for the inflow rate of the event effluent. The event effluent must be prevented from dispersing into other strata or groundwater by an impermeable barrier of clay, or by some other impermeable lining system.

The sacrificial area should be designed to allow infiltration into the sacrificial media to prevent runoff. This requires that the area is provided with adequate under-drainage to cope with percolation of rainfall and that the drainage outfall is capable of being shut off quickly and effectively during an incident.

After the incident, the sacrificial media should be excavated and disposed to a licensed disposal site as soon as possible after the incident. Alternatively the sacrificial media can be treated on site provided the activity is permitted by the regulator.

Areas drained by sustainable drainage systems that rely on infiltration devices such as soakaways and infiltration trenches and sites with a high water table are not suitable as sacrificial areas.

Figure 11.1 illustrates an example of a landscaped area used as a sacrificial area. The source is surrounded by an impermeable catchment for directing spills and rainwater towards the sacrificial area.

The sacrificial media allows infiltration to the percolation drains. In this example, a concrete lined open channel is used to intercept the outlets of the drainage pipes. A sluice is used to close off the outlet of the channel during emergencies. An impermeable liner and leakage detection system is set below the sacrificial media of granular fill.

Effective design of the system will require a site investigation to confirm the requirement for the sacrificial area to be lined and testing of the media to determine if it is suitable and to establish an appropriate size and spacing for any drainage pipes that may be required.

Figure 11.1 Section through a typical surface area using sacrificial media for containment

11.2.2 Areas surrounded by vertical cut-off walls

The most common method for constructing a vertical barrier wall is by excavating a trench under bentonite/cementitious slurry down to impermeable strata. The slurry hardens to form a low permeability, typically 1×10^{-8} to $1 \times 10^{-10} \text{ ms}^{-1}$, barrier with the strength of a stiff clay. Added integrity can be provided by installing HDPE or similar geomembranes vertically within the slurry. An example is shown by Figure 11.2.

Other methods involve excavation under a bentonite slurry followed by injection with a bentonite/cementitious grout.

The design of the cut-off wall should be informed by detailed site investigation to confirm presence and depth of an impermeable strata (aquiclude), any variation in the level of the aquiclude across the site and also the presence of any geological faults, fissures or discontinuities. The investigation should also determine the hydrogeology setting of the site and any physiochemical characteristics that may adversely affect the performance of the barrier wall.

Figure 11.2 Section through barrier wall containment system

Vertical barrier walls may be used to enclose the entire circumference of a site rather than just a specific sacrificial area.

In the absence of an aquiclude, a low permeability horizontal layer can be created by grout injection, however, ensuring the integrity of such a system can be problematic.

As is the case for sacrificial areas, following an incident, the contaminated material within the cut-off wall will have to be either treated *in situ*, or removed to a licenced landfill.

11.3 EMERGENCY PLANS FOR SACRIFICIAL AREAS

The regulator should be consulted on the use of sacrificial areas for dealing with major spills. Sacrificial areas should not be located where they might endanger life or property in the event of an incident.

Where dual purpose areas are used for containment and these areas are provided with clean stormwater drainage facilities, it is essential that all operatives, the Fire and Rescue Service and any other emergency service, are made aware of the correct procedures for using the areas, including the diversion or closure of drains.

Where such areas are to be used for temporary containment, they should be clearly marked and fitted with audible alarms to warn operatives of the potential hazard when brought into use.

11.4 EMERGENCY AND TEMPORARY CONTAINMENT MEASURES

11.4.1 Introduction

Permanent containment facilities such as those described in Chapters 7, 8 and 9 will be provided at most sites as part of emergency planning for controlling hazardous substances. The plan should include incident response strategies and preventative measures for dealing with exceptional events that cannot be dealt with by the permanent facility, or the permanent facilities fail.

The provision of emergency and temporary containment measures should be determined on a case specific basis, depending on risk and the existence of other control measures, in accordance with the pollution prevention hierarchy. Guidance on this can be found within EA, NIEA, SEPA (2011b) and discussed with the regulator.

Where it is proposed to use booms, sand bags, cut-off trenches etc as part of the planned response to an incident, details of the planned response should be determined as far as is practical as part of the contingency planning, rather than trying to plan it during an incident, noting that it takes time for these containment measure to be deployed. Therefore, if they are to be relied upon, the scenario planning should demonstrate that there is adequate time, equipment and competent people available for their deployment at all times. A hierarchical task analysis is a means to demonstrate that this is achievable.

For example, where using booms across a river the following issues should be considered:

- the location of the boom in different event scenarios
- the amount of boom required in each situation
- ensuring that there are anchor points available to secure the boom
- the time needed to get the boom to the required location compared to the time it would take for the event effluent to reach the river
- the availability of resources to deploy the boom in an emergency situation, ie are they available 24/7/52
- ensuring that the personnel who are to install the boom have visited the site and are familiar with the location
- would access be compromised by the incident.

Similarly, if the contingency is for materials to be tankered off site for disposal to reduce volume of containment required on site, then the operator should consider:

- how many tankers are required
- can they reach the site before overtopping occurs
- would access be compromised by the incident

- will they be available 24/7/52
- can the drawdown rate match the rate required to prevent overtopping
- how long is haulage to disposal point/return journey
- how does this affect driving time and rest periods for drivers.

Advice on preparing an emergency plan can be found in PPG 21 (EA, NIEA, SEPA, 2009) and on managing a spill in PPG 22 (EA, NIEA, SEPA, 2011b). Further advice on responding to an incident can be found in Section 3.2 of DCLG (2008).

11.4.2 Temporary containment measures and emergency materials and equipment

Examples of temporary containment measures and emergency materials and equipment are below, and include:

- temporary bunding of car parking areas and other hard standings
- drain pipe seals
- interception/detention pits and trenches
- portable tanks and tankers
- absorbents
- booms.

Temporary bunding of car parking areas and other hard standings

Impermeable yards, roads and parking areas can be converted to temporary lagoons using sandbags, suitable excavated soils or sand from emergency spoil heaps to form perimeter bunds. This is shown schematically in Figure 11.3.

Figure 11.3 Sacrificial car park area showing temporary bunds and drain seals

Liners may be used to help protect the bunding material from contamination and to help improve the permeability of the land surface. Where soil or sand used for bunding becomes contaminated it should be properly disposed of as sacrificial material. Pits can be excavated and lined to form temporary sumps for collecting and pumping pollutants.

An alternative means of creating a temporary bund is the use of a 'barrier boom'. These are part inflatable and part water-filled booms designed to contain liquids on a hard surface and are similar in concept to a floating boom used to contain oil spills on water. A number of Fire and Rescue Services are now equipped with these booms. If reliance is to be placed on a boom as part of incident response planning, it will be important to establish with the Fire and Rescue Service if they would make sufficient available as part of their first response. Alternatively, operators should consider providing their own equipment where deemed necessary by the incident response plan.

All drain inlets such as gullies and manhole covers within the containment area should be sealed to prevent the escape of pollutants. Proprietary equipment for this purpose such as drain mats is available from a number of manufacturers.

Drain pipe seals

Pipe seals can be used within a drainage system to prevent the escape of spillages from the temporary containment area, which can have the added advantage of using the pipe-full storage capacity of the pipe network.

However, before relying on pipe network storage, the layout and condition of the system should be established (see Chapter 5) to prevent inadvertently creating additional pathways.

Seals should be kept in a readily accessible location close to vulnerable drainage runs. Care should be taken in their installation to avoid exposure to hazardous conditions within the drainage system and to ensure that the contained liquid does not overflow into other gullies or drainage systems. Special arrangements will be necessary to empty the system after use.

It is good practice that a record of where and when pipes have been sealed temporarily is maintained and also when they are removed.

It is also good practice that emergency equipment is stored securely, its condition checked periodically and that there are clear protocols for accessing this equipment in an emergency.

Interception/detention pits and trenches

Interception trenches should be used only where other methods have failed and where it is essential to protect life, or where the risk of damage to the environment, or property, outweighs the threat of ground or groundwater contamination. Where the natural ground is relatively impermeable, contamination will be minimised by removing the pollutant as soon as possible after the incident. Liners can be used as temporary barriers to improve impermeability although these cannot be used in fires or for deleterious substances. After the event, contaminated earth should be removed to a disposal site. Pits and trenches may help prevent the spread of burning substances.

Portable tanks and tankers

Portable tanks made from materials resistant to the spilt material can be used to contain small spills and might include IBCs, ISO tanks and stainless steel tanks. In most cases a sump or pit is needed to collect and pump the pollutant into the tank. Although care should be taken when pumping potentially flammable materials that the pump does not provide an ignition source.

Vacuum or similar mobile tankers may also be used for collecting and containing small spills. Where tanks and tankers are part of an emergency plan, these should be in a readily accessible location and maintained in a serviceable condition. However, vacuum tankers when handling anything flammable can exhaust flammable vapour, which if adjacent to unprotected electrical or non-electrical equipment, would constitute an ignition hazard.

Diesel truck engines (or diesel pumps) should be suitably protected to avoid ingesting such flammable vapours. Conventional 'gully suckers' should not be used for such work.

Where tanks and tankers are part of an emergency plan, these should be maintained in a serviceable condition and the time it would take to get them from their storage location factored into the emergency plan as should access under the scenarios considered.

Absorbents

Proprietary absorbents, as well as materials such as sand and sawdust may be used to soak up small spillages provided they will not react with the substance. Stocks of suitable absorbents should be available adjacent to potential spillage sites. The regulator is able to advise on suitable absorbents, including proprietary absorbents.

Contaminated absorbent should be disposed of appropriately under the producer's normal duty of care.

Booms

Floating booms are used to contain spills of oil and similar substances that float on water, to prevent migration and to facilitate clearing operations. As with barrier booms, a number of Fire and Rescue Services are now equipped with these floating booms. If reliance is to be placed on a floating boom as part of incident response planning, it will be important to establish with the Fire and Rescue Service if they would make sufficient available as part of their first response. Alternatively, operators should consider providing their own equipment where deemed necessary by the incident response plan.

Unless mechanically deployed, it is unlikely that a boom could be deployed directly around flammable materials due to the risk to personnel. In such circumstances a boom may have to be placed a safe distance from the spill and the spill allowed to spread to this safe limit. Note that it may simply be unsafe to deploy a boom at all.

12 Repair and upgrading of existing containment facilities

This chapter provides:

- An brief introduction to the upgrading of existing containment facilities explaining the links with other sections of this guidance (Section 12.1)
- Advice on the maintenance and repair of concrete bund walls (Section 12.2)
- Advice on the modification of earth bund (Section 12.3)
- Advice on the modification to existing bund walls (Section 12.4)
- Advice the repair and upgrading of drainage and transfer systems (Section 12.5)
- Advice the repair and upgrading of joints and pipe penetrations (Sections 12.6 and 12.7)
- Advice on upgrading warehouses (Section 12.8)

12.1 INTRODUCTION

This chapter provides advice on the repair and upgrading of existing containment facilities with reference to other chapters in Part 3 as appropriate. Upgrading of an existing containment facility may be required following an assessment described in Section 5.3.

12.2 GENERAL MAINTENANCE AND REPAIR OF CONCRETE BUND WALLS

This section describes the main problems that are likely to affect concrete bund walls and the repair techniques that are available. Concrete is an inherently durable construction material, suitable for a wide range of applications, but it still requires maintenance. Defects can develop when in service due to natural movements such as thermal expansion, or chemical attack or physical damage. Regular inspection by an experienced person familiar with the common deterioration mechanisms is necessary to ensure the asset continues to perform properly in service.

12.2.1 Defects

Defects may be categorised broadly as cracks, local surface deterioration, and general surface deterioration.

Cracks can be caused by stresses:

- at the time of construction (plastic cracking)
- that develop during service due to either thermal or shrinkage movement
- due to overloading such as vehicle impact
- as a result of expansion and heat damage to the concrete and reinforcement following a fire.

In addition, cracking of bund floors may be the result of uneven or inadequate ground support, or heave of the sub-soils.

Cracks that penetrate the full thickness of a wall or slab can compromise the containment if they are of sufficient width and can also lead to corrosion of the reinforcement. For water-retaining reinforced concrete structures, any crack greater than 0.2 mm was traditionally considered to have the potential to seep water, with finer cracks undergoing a process of self-healing when wet, provided the crack has stabilised.

For containment structures there are particular issues that need to be considered:

- low viscosity oils or solvents may penetrate through fine cracks of less than 0.2 mm, which may not self-heal

- acidic water (<pH 5.5) passing through a narrow crack will widen it and increase the rate of leakage
- waters containing halides such as chloride salts will attack reinforcement crossing the crack and result in loss of section (covered later in this section).

Concrete Society (2010) gives useful advice on the causes and interpretation of cracking in concrete structures.

Local surface deterioration may be caused by:

- variability in quality of the laid concrete (eg poor compaction in a particular area, often called honeycombing, which can penetrate deep into the wall or slab)
- local exposure to aggressive agents (eg small spills from a storage tank, sulphates in the ground)
- mechanical abrasion.

Variability in the quality of concrete is often easy to detect, as weaker concrete may remain damp for longer after rainfall and/or be a source of dampness or leakage through a wall or slab. Areas that are particularly prone to poor compaction are construction joints, with the kicker joint normally used to build the wall element off the slab or ground beam. Patches of dampness at the base of a wall just above the horizontal kicker joint may indicate honeycombing of the concrete.

Poorly compacted concrete or concrete that is poorly cured will be more prone to deterioration than well-compacted concrete. This includes increased risk of damage when exposed to freezing and thawing, reduced resistance to carbonation and chloride ion penetration and reduced resistance to acids or other chemicals.

Certain aggressive agents can attack the cement matrix itself (and where present, acid-soluble aggregate, eg limestone) leading to surface damage that, in its early stages, causes the aggregate to be exposed. Eventually the cement matrix may be weakened to the extent that the aggregate falls away, exposing a new surface, which is likely to be more porous and thereby accelerating the deterioration.

Concrete resists many aqueous liquids of pH 5.5 and above, but is primarily affected by sulfates and acids as well as some of the more unusual chemicals such as milk, which generates lactic acid (see Box 12.1). Further information on the resistance of concrete to a range of common chemicals is given in ACI (2013).

With low pH liquids, the reactions will be faster and damage can be severe and expansive, so additional protection is needed (see Section 12.2.3)

Sulphate attack of concrete is a chemical reaction that causes expansion and cracking in the concrete. Sulphates can originate from the soil or groundwater or from sulphates in chemical spillages and if the concrete is not designed to current standards for the level of exposure, severe sulphate expansion can weaken the element and affect the performance of the containment.

Table 12.1 Possible reasons for using surface protection on cementitious surfaces (after Concrete Society, 1997)

Description	Commentary	Action
A joint with a stainless steel waterstop and fire and product resistant sealants	This meets current good practice and no upgrade would be required. It is unlikely to have a significant rate of liquid egress from the joint during an incident, with or without fire.	None
A joint with a plastic waterstop and stainless steel cover plate designed to ensure product and fire resistance to BS 476	This meets current good practice and no upgrade would be required. It is unlikely to have a significant rate of liquid egress from joint although loss of integrity of the plastic waterstop may eventually occur after protracted heat exposure	None
A joint with no waterstop but with a stainless steel cover plate, with product and fire resistant sealants designed to ensure fire resistance to BS 476	This joint may be considered to be fire resistant and would be considered impermeable (liquid tight) whilst the product-resistant sealant remains in good condition. Leakage rate through movement of the joint would also be expected to increase with sealant ageing.	Frequent sealant inspection and replacement routines should be in place to ensure sealants remain in a good condition.
A joint with no waterstop, no cover plate but with product- and fire-resistant sealant	This joint only provides limited fire resistance and is impermeable only when the product resistant sealant remains in good condition. Leakage rate through movement of the joint would be expected to increase with sealant ageing.	As a minimum, this should be upgraded with a stainless steel cover plate and inspection and replacement routines shall be in place to ensure sealants remain in good condition
A joint with product-resistant sealant but no waterstop, no stainless steel cover plate and no fire-resistant sealants	This joint will be impermeable whilst the sealant remains in good condition but is not fire-resistant, and would be expected to leak rapidly following a fire. Leakage rates through movement of the joint would be expected to increase with sealant ageing.	As a minimum, this joint should be upgraded with a stainless steel cover plate and fire-resistant sealants. In addition, inspection and replacement routines shall be in place to ensure sealants remain in good condition.

Physical damage, such as mechanical abrasion, will not only appear unsightly, but the loss of thickness of concrete over the reinforcing bar can accelerate deterioration, leading to corrosion of the reinforcement. As necessary, an additional harder-wearing concrete layer or a surface protection system may need to be added.

General surface deterioration can be the result of:

- exposure to aggressive agents over a wider area
- inadequate specification and/or poor standard of construction
- inadequate curing
- exposure to freezing and thawing cycles
- mechanical abrasion.

Often, the cause of general surface deterioration can be attributed to issues with the original concrete design specification and/or the workmanship used, and is indicative of a general failure of the concrete to resist the prevailing environment. Codes and standards for the design of reinforced concrete have changed significantly over the past 20 years and current requirements have become onerous in terms of strength and composition.

Where unacceptable and widespread deterioration is taking place that could weaken the containment structure, general additional protection may be needed using a surface protection system, or replacement of the affected elements may be justified.

Corrosion of reinforcing bar in a wall or slab can be caused by a variety of different mechanisms. The most common causes are exposure to acidic gases (eg atmospheric carbon dioxide) or halides such as chloride ion from sea spray (eg coastal facilities, chloride-containing spillages).

Corrosion of bars is often first seen in the concrete surface in areas where the concrete quality is poor or the cover thickness is particularly low. Initiated by 'carbonation' of the concrete, or chloride salt penetration, the reinforcing bar begins to rust, resulting in expansion on the bar surface that cracks the concrete and eventually it spalls off. This is not only unsightly, but it will propagate, with the spalling and corrosion getting progressively worse. This will weaken the wall or slab and in severe cases could lead to structural weakening depending on the location (eg the base of walls by the kicker joints is a point of maximum stress under hydrostatic or surge loads).

Corrosion of reinforcement down cracks or at joints due to leakage can result in localised corrosion and loss of bar cross section, so affecting strength and dowel action. Leaking cracks that have either typical white staining from the dissolved salts leaching from of the concrete, or brown staining typical of rust, are warning signs of potential problems.

12.2.2 Repair techniques

Before an appropriate method of repair can be specified, the cause of the damage should be established and if possible, removed or otherwise mitigated. Guidance on the deterioration and repair of concrete structures is given in many publications and most recently in BS EN 1504-9:2008 (see also Grantham, 2011), Institution of Civil Engineers (2009) (which covers concrete mix design, properties, testing and repair) and Concrete Society (2009b).

BS EN 1504-9:2008 provides 11 principles and 43 methods of repair relating to degradation of the concrete matrix or corrosion of the reinforcement. In accordance with Regulation (EU) No 305/2011 (CPR), manufacturers apply to have their products tested and certified for compliance to one or more methods of repair, and have to achieve the minimum performance requirements for the relevant part of BS EN 1504-9:2008 dealing with the method or methods, for which the product receives a CE mark. In selecting an appropriate product, it is therefore important to establish the cause of the defect and choose materials certified to the correct method.

Figure 12.1 summarises the common deterioration processes that affect concrete and reinforced concrete structures, based on BS EN 1504-9:2008.

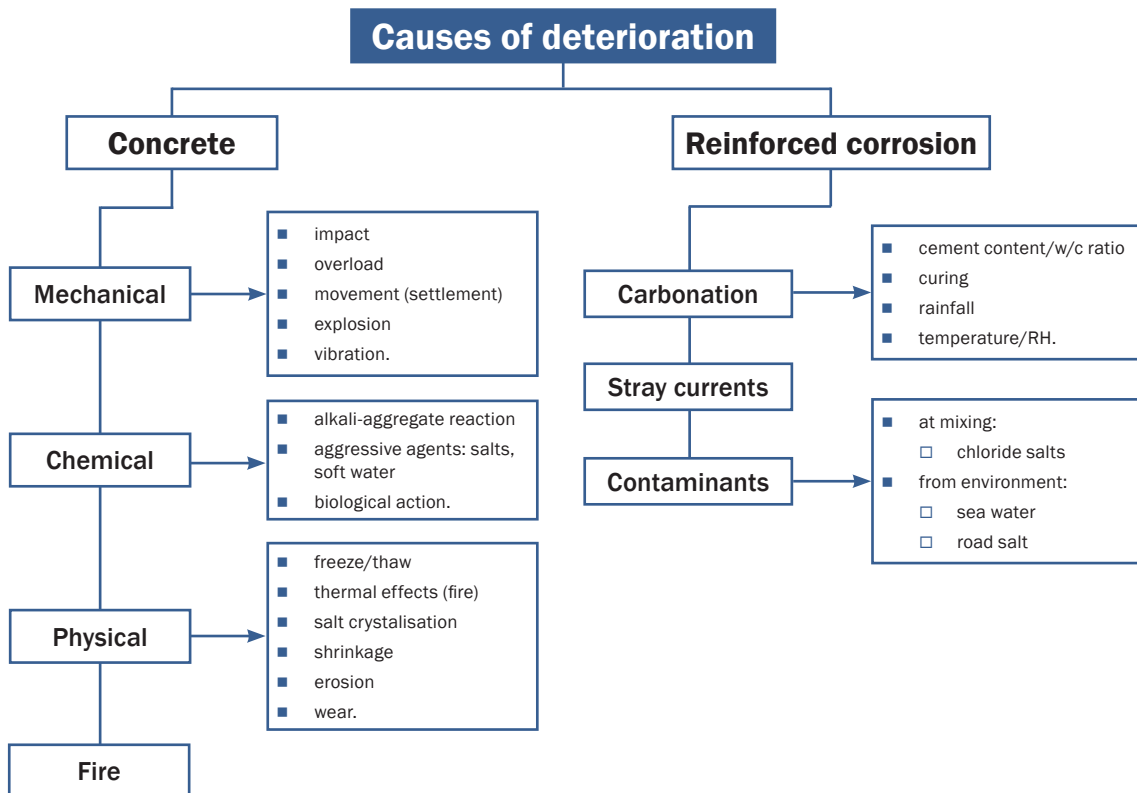

Figure 12.1 Common deterioration processes that affect concrete and reinforced concrete structures (after BS EN 1504-9:2008)

The common repairs that are needed for concrete containment structures, and where specific methods apply, include:

- crack repair
- chemical attack due to spillages
- filling holes/penetrations through walls
- addressing corrosion damage
- modifying walls (see Section 12.3)
- upgrading surface protection (see Section 12.2.3).

A general guide to repair techniques is provided in Appendix A10, which also contains a full listing of principles and methods for repair.

Cracks have a variety of causes and so proper investigation as to their cause is needed before they are treated. Moving cracks that respond to daily or seasonal temperature changes are 'live' and more difficult to address, compared with 'dead' or inactive cracks. Cracks through the full thickness of the wall or slab that leak, should be sealed to prevent leakage and protect the reinforcement using materials approved for BS EN 1504-9:2008 Method 1.5 (filling of cracks).

Where cracking is non-structural, due to thermal or shrinkage stresses, the crack width may be substantial (over 1 mm) if the design or construction was inappropriate. To be effective, the crack should be sealed by injecting a rigid material into the full thickness of the element, as this will protect the material from sunlight or the effects of heat if there were a fire. Surface treatments pointed into chases in the surface will be more prone to failure.

Where the crack is actively opening and closing in response to temperature, the materials used must be ductile as well as leak-resistant. Guidance on the performance of materials for sealing live and dead cracks is given in BS EN 1504-5:2013. If the movement is excessive and beyond the range of the injection materials, then the crack will need to be detailed as a proper joint that will accommodate movement yet remain leak-resistant (see Section 12.6).

Where wide cracks are forming and opening under applied loadings, eg at the foot of the walls of a bund during a hydrostatic or load test (see Chapter 5) to assist with assessing the structural integrity of the wall, this may indicate structural deficiency due to the design being inadequate for the intended loads. If so, it may be necessary to structurally strengthen the wall by injecting the cracks with a structural injection product and to:

- reduce future loadings (while the volume of primary inventory could be reduced, there is no guarantee that during an incident the bund could not be completely filled with firefighting and or cooling water. Therefore an overflow would have to be introduced to reduce the depth of liquid that could be retained)
- strengthen or prop the walls.

Alternatively, it may be necessary to reconstruct the wall.

If a bund floor is cracked, this may be the result of inadequate or uneven support and the subgrade will need to be treated and stabilised before the slab is repaired, otherwise the problem will recur. This may require breaking out the damaged slab, although there are techniques available to inject beneath slabs to strengthen and support them.

Chemical attack causing localised damage to a bund floor can be addressed by cutting out the affected material back to sound concrete and using a bonded thin-layer repair mortar or concrete to BS EN 1504-9:2008 Method 6.3 (adding mortar or concrete) that complies with BS EN 1504-3:2005 to restore the profile. Depending on the cause of the localised damage, the repair may need to use a resin rather than cementitious binder to combat particular chemicals. Alternatively, the bund may need application of a surface protection system to BS EN 1504-9:2008 Method 6.1 (see Section 12.2.3).

Filling holes/penetrations through walls or slabs is often required as a result of changes to pipe routings, identification of deficiencies (eg tie-bolt holes) or other causes. Repairs can be completed using materials complying with BS EN 1504-9:2008 Methods 3.1 and 3.2 that are suitable for the intended size of repair. In all cases, the hole should be cleaned and any lining material removed (eg plastic sleeve).

Tie-bolt holes in walls that are less than 50 mm diameter can best be plugged with a stiff, dry mortar forced into the full depth of the hole to form a complete seal.

Larger holes (eg core holes and pipe penetrations) require the sides to the inner face to be cut back and roughened to provide a tapering hole that will form a wedge against hydrostatic pressure, before they are filled with trowel-applied repair mortar or a flowing concrete (which for walls will need formwork fixed in place).

Large openings, typically where the smallest dimension (width or height) is greater than 0.5 m, particularly those located at the tops of walls that could be subjected to heat from a pool fire, should include reinforcement that is either lapped, welded or suitably anchored (BS EN 1504-9:2008 Method 4.2) to the existing wall to form a proper reinforced repair, preventing the 'plug' of concrete from detaching.

Corrosion damage to the wall can be repaired by one of many methods listed under Principles 7 to 11 in BS EN 1504-9:2008, but patch repair (BS EN 1504-9:2008 Method 7.2) is the most common. This method requires identification of the cause of corrosion (eg low cover, carbonation, chloride penetration) and then requires contaminated concrete to be removed, reinforcement cleaned and then new material added to restore the passive (non-corroding) state of the affected bars. If significant section loss has occurred to the reinforcement, then additional bar may need to be added to restore the structural capacity in critically loaded structural situations (eg base of walls).

A general guide to repair techniques is provided in Appendix A10.

12.2.3 Surface protection

Containment needs can change, particularly with changes in ownership, but concrete bunds remain a flexible and adaptable means of containment and can be upgraded to provide additional surface protection to the concrete.

As discussed earlier, various chemicals can attack the unprotected concrete surface. Concrete Society (1997) provides practical guidance on the selection, application and workmanship required for the successful application of surface protection systems to concrete. ACI (1985) gives a particularly detailed summary of the effect of chemicals on concrete.

Guidance on specification of products and systems for surface protection systems is given in BS EN 1504-2:2004. This gives performance requirements for products and systems to protect concrete against physical (BS EN 1504-9:2008 Method 5.1) and chemical (BS EN 1504-9:2008 Method 6.1) exposure. Requirements for the preparation of the concrete, application and quality control of the works are set out in BS EN 1504-10:2003

Careful consideration needs to be given to joint design to ensure enhanced surface protection is maintained across joints and any cracks in the concrete, which will often need to be specially reinforced to prevent reflective cracking through the paint film.

12.3 GENERAL MAINTENANCE AND REPAIR OF EARTH BANKED CONTAINMENT BASINS, EARTH BUNDS AND EARTH FLOORS

12.3.1 Defects

Defects to earthworks can occur for a number of reasons:

- Slumping or slope failure – the face or slope of the earth embankment becomes unstable (slips) due to changes in loading and/or moisture content.
- Settlement – weight of the embankment causing consolidation of the underlying soils.
- Subsidence – decrease in moisture content causing the underlying soils to shrink (this is generally confined to clayey soils).
- Heave – increase in moisture content causing the underlying soils to swell (this is generally confined to clayey soils and is most likely to affect earth-floored lagoons).
- Desiccation – soils dry out sufficiently to crack.
- Erosion.
- Animal burrows.

With the exception of erosion and animal burrows, these defects are generally symptomatic of flaws in the geotechnical design of the earthworks and the design of any remedial works should be completed by a competent person.

12.3.2 Repair techniques

Where an earth embankment has slumped, it should be reconstructed. If there are no apparent reasons why the embankment has failed, eg it has been subjected to greater loading than anticipated, the design should be reviewed before reconstruction (see Section 8.2).

If the crest of the embankment has settled over a relatively short period of time (several months) after construction and has then halted, then it is possible that no further consolidation will occur and the crest can simply be raised using the same soils and method of construction as for the original works. However, if the settlement is ongoing over a considerable period of time, it is likely that the embankment will have to be redesigned and replaced.

Subsidence and heave are fundamental properties of the underlying soils and if these occur, specialist geotechnical advice should be sought.

Where soils become desiccated, the only likely remedies are to prevent moisture loss by covering with a liner, or a suitable thickness of soils that are not prone to desiccation.

Erosion of soils by wind and rain can be minimised by ensuring that a good sward of grass cover is maintained. Where erosion is caused by vehicular or pedestrian movements, these movements should be prevented, or the embankment protected by providing a formally paved surface, or using a proprietary reinforcement product such as Grasscrete or similar products.

Burrowing animals should be deterred by protecting the faces of the embankment (see Section 8.8).

Where a section of embankment has to be replaced, it should be constructed using the same soils and method of construction as for the original works and tied into the existing bund as shown in Figure 12.2.

Figure 12.2 Tying into existing earthworks

12.4 MODIFICATIONS TO EXISTING BUND WALLS

Where a facility is to be extended, the construction of any new sections of bund wall that may be required should follow the guidance in Chapters 7 or 8 as appropriate.

Increasing the capacity of a containment facility can be achieved by raising the bund wall. However, for reinforced concrete and blockwork walls, the overall height should not exceed 1.5 m for the safety reasons set out in Section 6.3.1. Bund volume can also be increased by expanding bund area using a new section of bund. However, this can increase fire risk if it increases potential pool size, but the risk can be minimised by retaining a dividing wall between old and new bund areas. All such modifications must be designed to the same standards as the rest of the construction and built by an appropriately experienced contractor to ensure the works follow the guidance in this publication.

Before raising the crest of an existing reinforced concrete and blockwork wall, it should first be established that the wall has sufficient strength to cater for the additional loading that would be applied. For an earth embankment wall, slope stability issues should first be considered.

The additional height of wall should be tied into the existing reinforced concrete or blockwork wall by grouting in reinforcement 'starter' or 'dowel' bars at appropriate centres and anchorage depths. Anchoring resins should comply with BS EN 1504-6:2006 (BS EN 1504-9:2008 Method 4.2) and the crest of the existing walled should be scabbled and cleaned to facilitate a good bond. It may be appropriate to use a bonding agent specified in accordance with BS EN 1504-4:2004 (BS EN 1504-9:2008 Method 4.4).

12.5 DRAINAGE AND TRANSFER SYSTEMS

In situ repair techniques for pipelines can be found in WRc (2001):

- glassfibre concrete and glass reinforced plastic linings, which are bonded to the interior of existing pipes
- non-bonded lining systems such as PE pipes or thermosetting resin and other plastic liners inserted within the old pipe
- lightweight GRP or resin plastic liners used as annular formwork for injected grout.

It is important to note that these *in situ* repairs can reduce the capacity of the pipeline, however, the loss of capacity is often offset at least in part by the improved flow characteristics (reduced roughness) of the lining system.

Lining a pipe with a chemically resistant lining system can provide a means of upgrading the class of a transfer system.

The advice of a specialist contract should be sought on techniques appropriate to the nature of the site and the condition of the existing system.

12.6 JOINTS

Assuming that the bund wall has sufficient strength to cater for the design loading, it is likely to be the fire resistance of the joints, waterstops and penetrations that give rise to the greatest concern with respect to the performance of the containment system during an incident involving flammable inventory. The failure of the joints and issues with pipe penetrations were identified by HSE (2009a) as contributing factors to the loss of containment.

Waterstops should have been installed in all new walls built to CIRIA R164 and BS 8007:1987 standards. They should be installed in the centre of walls across movement joints, with rear-facing waterstops installed beneath slab joints, to provide the most effective way of minimising leakage from bund joints.

As set out in Section 5.6.1, where an existing facility is assessed and joints are shown not to comply with the guidance, then measures are needed to upgrade the performance of the joints. Even where a burning inventory is not a risk, successful containment of liquids will require waterstops across movement joints, as mastic sealants cannot be relied upon as a sole line of defence for the joint. Even if the sealant installation is to a high standard, the cyclic movement of the joint will lead to failure of the sealant over time, in itself demanding regular and careful inspection and replacement of sealants. Some form of flexible waterstop is required in addition to the sealant.

It is an easier task to provide a retrofitted flexible waterstop system across movement joints that will not be subject to fire. Flexible sheeting can be bonded to the concrete surface across the joint to provide a watertight and chemically-resistant seal. In areas subject to trafficking, the seal will need protection against damage.

Where there is a current or future risk of escape accompanied by fire, then where practicable, existing joints should be upgraded to provide fire resistant waterstops (normally metal) within the concrete and/or fireproof joints. However it is recognised that retrofitting waterstops to existing bund wall joints is not a simple task and may ultimately degrade the joint integrity.

Table 12.1 lists a range of possible existing bund wall joint arrangements and reviews product resistance, fire resistance and upgrade options for each arrangement drawn from HSE (2009a). This applies principally to the containment of potentially flammable inventory.

A typical detail of a plated joint is provided in Figure 12.3.

Figure 12.3 Wall plate joint detail (from HSE, 2009)

Table 12.1 Upgrade options for joints (from HSE, 2009)

Description	Commentary	Action
A joint with a stainless steel waterstop and fire and product resistant sealants	This meets current good practice and no upgrade would be required It is unlikely to have a significant rate of liquid egress from the joint during an incident, with or without fire	None
A joint with a plastic waterstop and stainless steel cover plate designed to ensure product and fire resistance to BS 476-10:2009	This meets current good practice and no upgrade would be required It is unlikely to have a significant rate of liquid egress from joint although loss of integrity of the plastic waterstop may eventually occur after protracted heat exposure	None
A joint with no waterstop but with a stainless steel cover plate, with product and fire resistant sealants designed to ensure fire resistance to BS 476-10:2009	This joint may be considered to be fire resistant and would be considered impermeable (liquid tight) while the product-resistant sealant remains in good condition Leakage rate through movement of the joint would also be expected to increase with sealant ageing	Frequent sealant inspection and replacement routines should be in place to ensure sealants remain in a good condition
A joint with no waterstop, no cover plate but with product- and fire-resistant sealant	This joint only provides limited fire resistance and is impermeable only when the product resistant sealant remains in good condition. Leakage rate through movement of the joint would be expected to increase with sealant ageing	As a minimum, this should be upgraded with a stainless steel cover plate and inspection and replacement routines shall be in place to ensure sealants remain in good condition
A joint with product-resistant sealant but no waterstop, no stainless steel cover plate and no fire resistant sealants	This joint will be impermeable while the sealant remains in good condition but is not fire resistant, and would be expected to leak rapidly following a fire Leakage rates through movement of the joint would be expected to increase with sealant ageing	As a minimum, this joint should be upgraded with a stainless steel cover plate and fire resistant sealants. In addition, inspection and replacement routines shall be in place to ensure sealants remain in good condition

12.7 PIPE PENETRATIONS

12.7.1 Introduction

Pipes should not penetrate through the slab and all such configurations should be re-routed over the bund walls and the holes through the slab sealed (see Section 12.2.2).

Typical penetrations at existing sites include a 'straight through', 'puddle flange' and 'sleeved' arrangement (see Figure 12.4).

Figure 12.4 Typical bund penetrations (from HSE, 2009a)

The upgrading of existing pipe penetrations to provide a liquid tight, fire proof corrosion free joint is difficult to achieve. Any upgrade should be carefully reviewed to ensure that the upgraded penetration does not affect pipe flexibility and integrity, or that excessive forces are not exerted on the wall by

expanding pipework. Any proposal to upgrade an existing penetration should be assessed against the duty holder's obligation to reduce risk sufficiently to satisfy the law and in discussion with the regulator.

Where such an assessment considers the existing joints not to be fire resistant or leak tight, several upgrade options are provided in the following sections.

12.7.2 Straight through

Where existing pipes run through bund walls there is a possibility that corrosion crevices exist between the pipe and the wall.

One option is to bolt a steel fire protection plate (split for installation) sealed with fire/chemical resistant sealant. This is similar in principle to the steel plates for expansion joints covered in the next section. Split plates can be installed by cold methods without the need for removing the pipeline from service for modification and welding (see Figure 12.5).

Figure 12.5 Steel split fire protection plate (from HSE, 2009a)

A second upgrade option is to reduce the pipe size (only local to the penetration) and use the existing pipe as a sleeve, which can then be sealed using a fire resistant sealant and protected on the inside face with a steel protection ring (see Figure 12.6).

Figure 12.6 Sealed sleeve upgrade option (after HSE, 2009a)

Provided it was installed correctly, the puddle flange is inherently leak and fire proof. However, because it anchors the pipe to the wall, it can result in significant loads on the wall or tank during an incident, or buckling forces in pipes and joints, due to thermal expansion. Additional pipe block anchors may be needed to prevent long lengths of pipe generating high pressures.

12.7.3 Sleeved

Existing sleeved penetrations can be upgraded if required to include a fire resistant sealant and a split fire protection plate (see Figure 12.6).

12.8 WAREHOUSES

A significant proportion of pollution incidents involve fires in warehouses resulting in the release of inventory and/or contaminated firefighting water into the environment. This section provides advice on how the fabric of an existing warehouse can be modified to enhance containment.

In many cases the fabric of the building, ie the floor slab and the walls, has the potential to contain spillages of inventory. However, warehouse walls (if present) will be normally constructed from blockwork or brickwork and therefore would only be suitable for class 1 containment. Where class 2 or class 3 containment is required, bund walls, either internal, or external, to the warehouse will have to be constructed in accordance with Chapter 7.

Clearly, bunding the entire perimeter of a warehouse will potentially compromise access. Where the containment volume (see Chapter 4) is low enough, 'rollover' ramps (similar to speed humps may provide a solution. However, where this is not practical, bunds local to the stored inventory may be required. Internal bunds within a warehouse can also help limit the spread of spillages.

In addition to doorways, potential pathways should be identified and sealed. These might include:

- internal drainage (floor gullies, internal downpipes etc)
- defects in the floor slab
- service penetrations.

Where potentially corrosive inventory is stored, floor slabs might require protective coating. Where combustible inventory is required, floor joints may require upgrading (see Section 12.6).

Escape of inventory down the internal face of cladding from a jetting failure or similar of the primary containment can be prevented by installing splash guards/deflector plates to direct spillage to within the containment.

Where it is impractical to provide sufficient containment within the warehouse, it may be possible to provide remote secondary and/or tertiary containment by permanent or temporary bunding of external areas of hardstanding, eg car parks. The practicality of this option will depend on a number of issues including topography and availability of land (see Section 11.2).

Case study 12.1 is an example of how an existing warehouse was adapted to provide both secondary and tertiary containment.

Case study 12.1
Adaption of an existing warehouse, UK

Abbey Metal Finishing Company Ltd (Amfin) provides a metal surface finishing service to the aerospace and general industrials sectors. The 40 finishing operations include plating, anodizing treatments, painting, and plasma spraying involving a number of chemicals that are potentially hazardous to the environment. The site falls within the scope of COMAH 1999.

In April 2010, a large fire broke out at the premises. Fire crews attended and used a considerable amount of water to fight the fire. However, despite the best efforts of the Fire and Rescue Service using pollution prevention equipment (PPE), much of this firefighting water was contaminated with a cocktail of hazardous substances used in metal treatment that had entered the adjacent River Anker.

The incident resulted in approximately 27 000 fish deaths along a 6 km stretch of river and Amfin was subsequently charged for failing to take measures to prevent major accidents and limit their consequences to the environment. They had earlier pleaded guilty at Nuneaton Magistrates' Court. In particular, the emergency plan had failed as there were inadequate arrangements on site to contain the firewater, and no prior arrangements to access the sewerage system for emergency storage or tanker contaminated water off site.

Rather than rebuild the premise, a new site was sought that could be developed to provide a comprehensive containment strategy.

All chemical processing and undiluted process chemistry now used and stored within an internal secondary containment bund. The bund is epoxy coated to withstand chemical degradation, has no connection with foul of surface drainage and is permanently sealed. Quarterly preventative maintenance checks have been instigated on the site and repairs are carried out on the bund when issues are found. This bund has been designed to contain 125 per cent of the entire process chemistry within it and provides a secondary containment volume of 143 000 litres.

In addition, the external tertiary containment bunds have been constructed around the perimeter boundary to contain firefighting water and surface water runoff within the lower part of the sloping site. The external bund provides tertiary containment for 360 000 litres of firefighting water and has 538 000 litres of surface water runoff (based on the estimated depth of rainfall assuming a one per cent AEP event occurs during an incident). The total site containment available is some 981 000 litres.

Surface water runoff from the site, including the tertiary containment area, is drained to the Harrow Brook, which flows beyond the site boundary. During an incident, the tertiary containment is mobilised by the automatic activation of surface water shut-off valves triggered by a fire alarm, a power cut or by manual activation remote from the valve location. Foul sewer and surface water covers within the tertiary containment area are permanently sealed to prevent unauthorised release of firefighting water or stormwater into these systems.

In addition, an emergency contract has been taken out with Veolia Environmental that provides the attendance of tankers on site within an hour to pump out accumulated firefighting water and/or rainwater from within the secondary or tertiary containment bunds.

Appendices

A1 Summary of UK and European legislation and international guidance relevant to containment

It should be noted that the information presented in Tables A1.1 and A1.2 is not exhaustive. This high level summary presents the key regulations and guidance available at the time of publishing this guide and is intended to help the reader navigate to the most relevant regulatory instruments.

Table A1.1 UK and European legislation relevant to containment

Statutory Instrument	Detail	Description	Link
Council Directive 96/82/EC Directive 2003/105/EC (The Seveso II Directive)	Control of Major Accident and Hazards (COMAH) Regulations 1994 as amended	Places a duty on duty holders to ensure that major hazards have been addressed and all practicable steps have been taken to limit the probability and consequences of major accident hazards. Requires COMAH designated facilities to take all measures necessary with regard to the containment of hazardous liquids. * at the time of writing these Regulations are currently being updated to implement the Seveso III Directive (which will be implemented by 2015).	www.hse.gov.uk/comah/index.htm
Classification, labelling and packaging of substances and mixtures regulations	Regulation (EC) No 1272/2008	There are new scientific criteria used to assess the hazardous properties of chemicals including environmental hazards. This allows users to identify the environmental hazards specific to each material. * these Regulations will be fully enforced on 1 June 2015. This regulation is related to The Chemicals (Hazard Information and Packaging for Supply) Regulations 2009 and the European REACH Regulations 2007, which detail the requirements for material safety data sheets.	ec.europa.eu/enterprise/sectors/chemicals/classification/index_en.htm
The Environmental Permitting (England and Wales) Regulations 2010 The Pollution Prevention and Control (Scotland) Regulations 2012		This statutory instrument implements the IED Directive 2010/75/EU, which replaced a number of EU directives including Directive 2008/1/EC in January 2013. They are the principle regulations under which the process industry including power, oil refineries, iron and steel, metal finishing, chemical production, waste food and drink, farming, water abstraction and discharges etc are regulated. It covers all storage systems associated with these industries. It requires operations within its scope to obtain an Environmental Permit, under which the operation is regulated. One of the regulations requirements is that operators use BAT to prevent or minimise pollution from the operation of the installation, such that significant pollution will not be caused. The EU produces guidance on what represents BAT in a series of BREF notes, which are reviewed periodically. As well as sector BREF notes, there is a BREF note on emissions from storage commonly referred to as the Storage BREF Note (European Commission, 2006), which is currently scheduled to be reviewed in 2018.	www.environment-agency.gov.uk/business/topics/permitting/32320.aspx
Pollution Prevention Act Control Act 1999	Directive 2010/75/ EU (integrated pollution prevention and control)	The Pollution Prevention and Control Act 1999 is an enabling Act of Parliament under which regulations and Statutory Instruments controlling pollution can be made. The Environmental Permitting Regulations 2010 were made under this act.	www.environmentagency.gov.uk/business/regulation/109813.aspx
Pollution Prevention and Control (Scotland) (PPC) Regulations 2012		PPC 2012 permit and regulate many industrial activities that may pollute our environment. It came into force on 7 January 2013. These Regulations implement the requirements of Directive 2010/75/EU.	www.sepa.org.uk/air/process_industry_regulation/pollution_prevention__control.aspx
The Control of Pollution (Oil Storage) (England) Regulations 2001		These Regulations require anyone in England who stores more than 200 litres of oil, to provide more secure containment facilities for tanks, drums, intermediate bulk containers (IBCs) and mobile bowisers. This is to prevent oil escaping into the environment.	http://webarchive.nationalarchives.gov.uk/20140328084622/http://www.environment-agency.gov.uk/business/topics/oil/default.aspx

Table A1.1 UK and European legislation relevant to containment (contd)

<p>The Control of Pollution (Oil Storage) Regulations (Northern Ireland) 2010</p>		<p>The Regulations apply to above ground oil storage facilities on industrial, commercial and institutional residential sites. They also extend to companies who refine or distribute oil. The Regulations set minimum design standards for new and existing above ground oil storage facilities, codifying existing good practice to ensure that above ground oil storage facilities are adequately constructed. A key requirement of the Regulations is for the storage container to have a secondary containment system to ensure that any leaking or spilt oil is contained and does not enter the aquatic environment.</p>	<p>www.doeni.gov.uk/index/protect_the_environment/water/oil_storage.htm</p>
<p>The Water Environment (Oil Storage) (Scotland) Regulations 2006</p>		<p>The regulations apply to both new and existing oil storage tanks. The regulations set design standards for above-ground oil storage facilities: Where oil is stored in any portable container with a storage capacity of less than 200 litres, the container must be of sufficient strength and structural integrity to ensure that it is unlikely to burst or leak in its ordinary use. Where the container has a storage capacity of 200 litres or more, the regulations require provision of a secondary containment (a bund or drip-tray) to ensure that any leaking or spilt oil cannot enter the water environment.</p>	<p>www.sepa.org.uk/water/water_regulation/regimes/pollution_control/oil_storage.aspx</p>
<p>The Water Resources (Control of Pollution) (Silage, Slurry and Agricultural Fuel Oil) (England) (Amendment) Regulations 2010 (No. 1094)</p>		<p>These Regulations aim to prevent water pollution from stores of silage, slurry and agricultural fuel oil. They set out requirements for the design construction and maintenance of new, substantially reconstructed or substantially enlarged facilities for storing these substances. The regulations detailed the requirement that storage facilities should be sited at least 10 m from inland freshwater or coastal water and have a 20 year life expectancy. Guidance on how to comply with the Regulations is available from Defra (2010) and Welsh Assembly Government (2010).</p>	<p>www.environment-agency.gov.uk/business/sectors/118798.aspx</p>
<p>The Control of Pollution (Silage, Slurry and Agricultural Fuel Oil) (Scotland) Regulations 2003</p>		<p>The regulations require that suitably sited, designed and constructed facilities are put in place to collect, store and manage manures and slurries. They also set minimum standards for new, substantially reconstructed, or enlarged structures, such as silos and slurry stores and the consideration of secondary containment measures.</p>	<p>www.sepa.org.uk/land/agriculture/agricultural_regulation.aspx</p>
<p>The Plant Protection Products (Sustainable Use) Regulations 2012</p>		<p>Set out the regulations in relation to the use of pesticides and insecticides that are plant protection products and includes guidance on use and storage of plant protection products.</p>	<p>www.plantprotection.info/UKPGOnline/Home.aspx</p>
<p>Waste Management Licencing (Northern Ireland) 2003</p>		<p>The waste regulation authorities issue licences for waste treatment, storage and disposal activities which generally include conditions on the storage of waste materials.</p>	<p>www.doeni.gov.uk/niea/waste-home/authorisation/license.htm</p>
<p>Contaminated Land (England) Regulations (2012)</p>		<p>The objectives of these Regulations are to provide an improved system for the identification and remediation of land where contamination is causing unacceptable risks to health or the environment. Such risks are to be assessed in the context of the current use and circumstances of the land in accordance with the Government's "suitable for use" approach. In the context of this document the regime is likely to focus on the assessment and remediation of sites where contamination may have entered soils as a result of containment failures.</p>	<p>www.defra.gov.uk/environment/quality/land</p>

Table A.1.1 UK and European legislation relevant to containment (contd)

<p>The Town & Country Planning Act (Assessment of Environmental Effects) Regulations 1999</p>	<p>(51/1988/1199)</p>	<p>These Regulations were developed in response to a European Directive requiring an assessment of the impact on the environment of projects likely to have significant effects. It applies to all planning applications for an EIA development as defined by the act. The act prohibits the granting of planning permission without first considering the status of the environmental information supplied. The EIA has become a vital tool used by local authorities to determine planning consent and permission. Note that for new installations or 'changes' to existing premises requires the assessment of materials on the environment and the identification whether control measures such as containment systems are required to minimise the potential impact on the environment.</p>	<p>www.legislation.gov.uk/uksi/2011/1824/introduction/made</p>

The substances are selected from lists, including The EC Classification Packaging and Labelling Regulations, The EC 'Black' and 'Grey' substances, the UK DOE 'Red' list and the USA and Canada Priority Pollutants List	www.rsc.org/Publishing/CurrentAwareness/DOSE/index.asp

A2 List of hazardous substances

Lists of hazardous substances are available from many sources, including UK and EC legislation, international conventions, national priority pollutants from non-EC countries etc. The source documents generally aim to protect surface or groundwater, fish or shellfish, or water for human consumption.

Other legislation has generated lists of hazardous chemicals; for example, the CIMAH regulations or the classification, packaging and labelling regulations. Their prime aim may be health and safety, consumer protection, or transportation rather than environmental protection. It is beyond the scope of this report to comment upon them.

Although all substances which are hazardous in the aquatic environment must be fully considered in any risk assessment procedure, it is likely that the statutory authorities will be particularly interested in measures to reduce the likelihood of spills of the most dangerous materials. It is generally agreed that the most dangerous substances are those on the Water Framework Directive (WFD) Priority substances list. The WFD priority substances list is given in Box A2.1. Annex VIII of the WFD also gives an indicative list of the main pollutants, which is given in Box A2.2.

Box A2.1 WFD priority substances

- | | |
|--|--|
| ■ Alachlor. | ■ Lead and its compounds. |
| ■ Anthracene. | ■ Mercury and its compounds. |
| ■ Atrazine. | ■ Naphthalene. |
| ■ Benzene. | ■ Nickel and its compounds. |
| ■ Brominated diphenyletheriv. | ■ Nonylphenols. |
| ■ Pentabromodiphenylether (congener numbers 28, 47, 99, 100, 153 and 154). | ■ (4-nonylphenol). |
| ■ Cadmium and its compounds. | ■ Octylphenols. |
| ■ Chloroalkanes, C10-13 iv. | ■ (4-(1,1',3,3'-tetramethylbutyl)-phenol). |
| ■ Chlorfenvinphos. | ■ Pentachlorobenzene. |
| ■ Chlorpyrifos. | ■ Pentachlorophenol. |
| ■ (Chlorpyrifos-ethyl). | ■ Polyaromatic hydrocarbons. |
| ■ 1,2-Dichloroethane. | ■ (Benzo(a)pyrene). |
| ■ Dichloromethane. | ■ (Benzo(b)fluoranthene). |
| ■ Di(2-ethylhexyl)phthalate (DEHP). | ■ (Benzo(g,h,i)perylene). |
| ■ Diuron. | ■ (Benzo(k)fluoranthene). |
| ■ Endosulfan. | ■ (Indeno(1,2,3-cd)pyrene). |
| ■ Fluoranthenevi. | ■ Simazine. |
| ■ Hexachlorobenzene. | ■ Tributyltin compounds. |
| ■ Hexachlorobutadiene. | ■ (Tributyltin-cation). |
| ■ Hexachlorocyclohexane. | ■ Trichlorobenzenes. |
| ■ Isoproturon. | ■ Trichloromethane (chloroform). |
| | ■ Trifluralin. |

Box A2.2 *Indicative list of the main pollutants*

- | | |
|--|---|
| <ul style="list-style-type: none">■ Organohalogen compounds and substances that may form such compounds in the aquatic environment.■ Organophosphorous compounds.■ Organotin compounds.■ Substances and preparations, or the breakdown products of such, which have been proved to possess carcinogenic or mutagenic properties or properties which may affect steroidogenic, thyroid, reproduction or other endocrine-related functions in or via the aquatic environment.■ Persistent hydrocarbons and persistent and bioaccumulable organic toxic substances. | <ul style="list-style-type: none">■ cyanides.■ metals and their compounds.■ arsenic and its compounds.■ biocides and plant protection products.■ materials in suspension.■ substances which contribute to eutrophication (in particular, nitrates and phosphates).■ substances that have an unfavourable influence on the oxygen balance (and can be measured using parameters such as BOD, COD). |
|--|---|

Other lists of substances or generic groups of substances are contained in:

- List I (Black List) and List II (Grey List) of the EC Directive 76/464.
- List I and List II of the Oslo and Paris Conventions.
- List I and List II of the Groundwater Directive.
- EC priority candidate list.
- First priority candidate red list.
- North Sea Conference list of banned or restricted pesticides.
- North Sea Conference of priority hazardous substances.
- North Sea Conference reference list of substances.
- Schedule 5 of SI 1991 No 472 (prescribed substances to water).

Edwards (1992) contains lists of the specific substances from the above sources. IMO (2014) has published a list of maritime pollutants, and the German water hazard class system (WGK) is an equivalent listing (UBA, 1999), and as already mentioned, many other lists of dangerous chemicals have been produced for a variety of purposes.

Most of the substances in the lists in Box A2.1 and A2.2 were selected on the basis of specific selection criteria. The most commonly used criteria are:

- toxicity
- persistence
- bioaccumulation
- carcinogenicity (although mutagenicity and teratogenicity are also important).

Boxes A2.1 and A2.2 indicate those substances that have long-term widespread effects in water and target organisms including man, eg heavy metal and chlorinated hydrocarbons, or short-term acute effects, such as highly toxic and biologically active pesticides. They do not include the very wide range of materials, which are likely to have equally severe effects at least in the short-term and in the vicinity of the discharge point. An indication of the broad classes that these materials fall into is given in Box A2.3.

Box A2.3 *Broad classes of materials with the potential to pollute water*

A9 Hydraulic pipe design

Figure A9.1 Discharge capacities of drains conveying water running full (from HM Government, 2010)

This chart is appropriate for clay or plastic pipework or a material with a similar roughness. Allowance has also to be made for head losses at bends, manholes and chambers.

Hydraulic design of drainage systems is commonly completed using a drainage analysis and design computer program. Available packages include WinDes® (MicroDrainage), xpswmm® (XP Solutions), and InfoWorks® (Innovyze).

A10 Concrete repair techniques

For more information readers should refer to BS EN 1504-9:2008.

Figure A10.1 Concrete repair using resin injection (from Shaw, 1984)

Figure A10.2 Patch repair to concrete (from Shaw, 1984)

(a) Mark out square or rectangular area around defect

(b) Chase out delineating groove around perimeter of repair

(c) Remove defective concrete from within repair area

(d) Thoroughly dampen area with water and/or apply primer as required

(e) Place and thoroughly compact repair material

(f) Apply surface texture and cure immediately

Figure A10.3 Thin surface bonded repair to concrete (from Shaw, 1984)

Single-sided repair

Double-sided repair

Mark out affected area

Chase around affected area and saw locating groove

Remove all unsound concrete from within repair area and clean out

Securely fix joint former in locating groove to prevent bridging across crack.
Top 12 mm of former must be removable for application of joint sealer

Thoroughly dampen area with water and/or apply primer as required

Place and thoroughly compact repair material

Cure immediately

After 24 hours remove top 12 mm of former to provide groove for sealant.
When concrete is mature, apply joint sealant on top of a bond breaker.

Figure A10.4 Thin surface bonded repair to concrete (from Shaw, 1984)

June 2014

This guide has been developed to assist owners and operators of industrial and commercial facilities storing substances (inventories) that may be hazardous to the environment.

It provides guidance on identifying the hazards, assessing the risks and mitigating the potential consequences of a failure of the primary storage facility and/or the combustion of its contents. A three-tier risk assessment methodology is introduced with recommendations for different 'classes' of construction for each.

It is applicable to the containment of a wide range of inventories and to all sizes of site from small commercial premises with a single storage tank, through to large chemical or petrochemical sites. It also applies to warehouses storing hazardous inventories.

Information is provided on the design, and construction of new secondary containment systems and the also the inspection, maintenance, repair, extension and upgrading of existing installations.

Permitting Decisions – Bespoke Permit

Document recording our decision-making process following the requirement for waste and wastewater sewerage treatment activities permitted as an installation subject to Chapter II of the Industrial Emissions Directive under the Environmental Permitting (England & Wales) Regulations 2016 (as amended)

We have decided to grant the permit for Reading Sludge Treatment Centre operated by Thames Water Utilities Limited.

The permit number is EPR/MP3338LU/V004.

Purpose of this document

On 2 April 2019, the Environment Agency confirmed to the Water and Sewerage Companies (WaSCs) operating in England that their sewage sludge anaerobic digestion (AD) facilities needed to comply with the Industrial Emissions Directive (IED).

The IED entered into force on 6 January 2011 and was transposed into UK law on 20 February 2013. The IED recast the Directive on integrated pollution prevention and control (IPPC) and introduced a revised schedule of industrial activities falling within the scope of its permitting requirements. The schedule of waste management activities includes the recovery of non-hazardous waste with a capacity exceeding 75 tonnes per day involving biological treatment, but excludes activities covered by the Urban Waste Water Treatment Directive (UWWTD).

In July 2014 we deferred the need for the WaSCs to submit permit applications for these facilities to allow for further consideration of whether they were already covered under the UWWTD. All the UK environmental regulators subsequently concluded this was not the case, and therefore they come within the scope of the IED.

The IED seeks to achieve a high level of protection for the environment, taken as a whole, from the harmful effects of industrial activities. It does so by requiring each of the industrial installations to be operated under a permit with conditions based around the use of best available techniques (BAT).

The IED set a deadline of 7 January 2014 for existing installations to obtain an environmental permit. Therefore, the implementation of this aspect of the IED

had been delayed for over five years at the point of our confirmation to the WaSCs on 2 April 2019.

The BAT Conclusions for Waste Treatment was published on 17 August 2018 following a European Union wide review of BAT, implementing decision (EU) 2018/1147 of 10 August 2018. BAT applies to new waste sewage sludge treatment not covered by the UWWTD. The installation operations at Reading Sludge Treatment Centre are existing but will be brought under environmental regulation for the first time and are required to operate using BAT.

Given the delay in implementing the IED in England, we subsequently have sought to ensure that all sewage sludge AD facilities obtain and operate under an environmental permit in as short a timescale as can reasonably be achieved. We asked the WaSCs to provide a definitive list of all facilities used to carry out biological treatment of sewage sludge. A submission schedule was provided to the WaSCs, allowing applications for these facilities to be submitted to us in stages between 1 April 2021 and 1 October 2022. This application is part of this programme of work.

This application was due to be submitted on 1/7/2021 and was received on 30/06/2021, however this application could not be duly made and a new application was submitted on the 10/07/2022.

The application is for the consolidation of the existing combustion plant activities currently permitted and adds a Section 5.4 A(1) (b) (i) Recovery or a mix of recovery and disposal of non-hazardous waste with a capacity exceeding 75 tonnes per day (or 100 tonnes per day if the only waste treatment activity is anaerobic digestion) involving biological treatment. The existing engines currently permitted are now directly associated activities (DAA) to the Section 5.4 anaerobic digestion activity. Other DAAs now part of the permit include;

- Raw materials storage
- Digestate storage and treatment
- Emergency flare operation
- Gas storage
- Physical treatment of waste (including screening, pressing, thickening, centrifugation / dewatering)
- Steam and electrical power generation utilising biogas produced on site.
- Uncontaminated surface water collection for reuse, and discharge
- Air collection and treatment prior to release to the atmosphere.

The application also requested the addition of a waste activity for the receipt of waste to the head of works.

We consider in reaching this decision that we have taken into account all relevant considerations and legal requirements and that the permit will ensure that the appropriate level of environmental protection is provided.

This decision document provides a record of the decision-making process. It:

- summarises the decision making process in the [decision considerations](#) section to show how the main relevant factors have been taken into account
- highlights [key issues](#) in the determination
- shows how we have considered the [consultation responses](#)

Unless the decision document specifies otherwise, we have accepted the operator's proposals.

This permitting decision should be read in conjunction with the environmental permit.

Key issues of the decision

Best Available Techniques (BAT)

Article 3(12) of the IED defines BAT conclusions as:

a document containing the parts of a BAT reference document [BREF] laying down the conclusions on best available techniques, their description, information to assess their applicability, the emission levels associated with the best available techniques, associated monitoring, associated consumption levels and, where appropriate, relevant site remediation measures.

The *emission levels associated with the best available techniques* (BAT-AELs) in IED BAT conclusions are mandatory emission levels. These are generally numerical limits on point source emissions to water and air. We recognise that many sludge treatment facilities were constructed prior to the current permitting requirements and their design may not be readily compatible with the best available techniques as described in the BREF and BAT conclusions. Where this is the case, risk assessments and alternative proposals can be used to demonstrate that an equivalent level of environmental protection is being or can be achieved. Where an operator is not yet compliant with relevant BAT conclusions, we may accept an application where the operator describes how they will meet the required BAT conclusion within an acceptable timeframe. The Waste Treatment (2018) BREF provides a minimum standard of operation across the waste industrial sector. Alongside BAT-AELs, the BREF outlines general BAT conclusions, which apply to all waste sectors. It also contains BAT conclusions specifically for waste sectors which waste water treatment works operate within,

namely; the biological treatment of waste and the treatment of water-based liquid wastes.

Thames Water Utilities Limited (referred to in this document as the ‘operator’) provided supporting information with their application to demonstrate that their methods of operating are in accordance with the relevant BAT conclusions. We have assessed these documents. In this *Key issues* section, we provide a commentary of the following areas which helped determine how the operator will operate in accordance with the relevant BAT conclusions:

- Secondary containment (BAT conclusion 19)
- Inventory of waste waters (BAT conclusion 3)
- Point source emissions to water – indirect emissions (BAT conclusions 7 and 20)
- Odour management (BAT conclusion 12)

Where this document does not discuss a BAT conclusion in detail, we have accepted the operators supporting information and justifications that they are compliant with the respective BAT conclusion.

Bespoke permit conditions

The technical determination of this application identified key issues where the operator struggled to show how they would meet the relevant BAT conclusion requirements. These are standard pieces of information and evidence which would be expected upon receipt of a new bespoke permit application for a new anaerobic digestion installation facility. In this application, we identified that the operator was unable to provide detailed supporting evidence that key issues would achieve BAT conclusion requirements. These key issues were:

- Sufficient secondary containment measures (permit conditions 3.2.3 and 3.2.4).
- Preventing waste water emissions to the waste water treatment works during storm overflow (permit conditions 3.2.9 and 3.2.10).

We have performed an assessment of these aspects during the permit determination. A detailed account of these assessments is outlined in the sections below. Where we have not been able to fully assess the operator’s proposals to meet BAT conclusion requirements but have received commitments to implement BAT, we have set time sensitive improvement conditions alongside backstop bespoke permit conditions.

Improvement conditions alone would not contain sufficient legal certainty to require an operator to have BAT in place. However, we acknowledge that this application is for an existing activity which has been operating for several years

and we recognised that a pragmatic approach was needed to bring this unpermitted installation activity into environmental regulation.

To issue permits without agreeing that an activity fully meets BAT is in essence a permitted local enforcement position (LEP). LEPs are used by the Environment Agency for activities operating outside of a permit. This method will be implemented by setting prescriptive bespoke conditions in the permit for the outstanding BAT issue. These bespoke conditions include the definitive requirement plus a deadline for those techniques to be implemented – a backstop. We have also set improvement conditions for the timely submissions of detailed plans. Should an operator not comply with an improvement condition, a bespoke condition will be in place for the Environment Agency to enforce against.

For these improvement conditions, we have set a final deadline of 31 December 2024. It should be noted that the implementation date for operators to be compliant with the Waste Treatment BAT conclusions was 17 August 2022. Our deadline specified in the improvement condition provides a sufficient timeframe in which the operator can produce detailed plans to meet BAT and a timetable for their implementation. Where operators do not satisfy the requirements of the improvement condition by 31 December 2024, the Environment Agency may commence enforcement action against the WaSC. Failure of the WaSCs to achieve BAT or failure to take steps to implement BAT by the backstop will be at the operator's risk.

Secondary containment

Secondary containment is a fundamental principle of pollution prevention at industrial sites and waste management facilities. We assess secondary containment provision when determining permit applications. Secondary/tertiary containment is an appropriate protective measure and is a standard requirement of an environmental permit. The Waste Treatment BREF includes BAT conclusion 19 which identifies several relevant techniques *to prevent or, where that is not practicable, to reduce emissions to soil and water*.

WaSC anaerobic digestion facilities store and treat significant volumes of waste sludge and liquids that have the potential to cause pollution to land, air and water and to impact detrimentally on any nearby sensitive habitats or areas of human occupation (also known as sensitive receptors). These facilities are co-located with wastewater treatment works (WwTW) and, by the nature of these operations, are usually located near to watercourses. They have tended to have little in the way of secondary containment, such as impermeable surfacing or bunding, that would protect the environment in the event of a loss of containment.

The most common receptors we consider could be impacted by a loss of containment include groundwater (aquifers), water courses, designated conservation areas (such as Sites of Special Scientific Interest (SSSI), Special Areas of Conservation (SAC), Special Protection Areas (SPA) and Ramsar sites),

the adjacent WwTW and nearby human receptors such as residential and commercial premises.

Given the number, significance and complexity of the WaSC's sludge AD facilities, we have provided advice on what they should have regard to when assessing their facilities. We consider that this advice, and the timescales afforded to the WaSCs to submit information in support of their permit applications, is above and beyond that which would typically be given to permit operators.

We advised the WaSCs to provide two main components of assessment aimed at clearly identifying where a facility has sufficient measures in place to protect sensitive receptors, and where improvements may need to be implemented.

The two components were:

- Containment assessment against the recommendations of CIRIA C736 guidance - *Containment systems for the prevention of pollution: Secondary, tertiary and other measures for industrial and commercial premises* (2014).
- Completion of the ADBA tool to identify sources, pathways and receptors, and risks.

We also advised operators to submit spill modelling as supporting evidence to demonstrate the effectiveness of current containment measures and assess any identified necessary improvements.

We advised the WaSCs (including the operator) of the requirements of containment assessments on multiple occasions, including:

- At a workshop held by Water UK in February 2020 (Water UK members are UK water and wastewater service suppliers for England, Scotland, Wales and Northern Ireland, the operator is a member of Water UK) – Presentation Title: Permitting Overview – Including section on containment – Surfacing, bunding and capacity, presented by a Senior Permitting Officer of the Environment Agency National Permitting Service.
- Written advice sent in March 2021 by us including.
 - Sector specific pre-application advice note.
 - BAT gap analysis template tool.
- Presentation on 14 July 2021, delivered to Water UK, titled, *IED Permitting TaF + Spill Modelling*, which the operator attended, in which spill modelling was specifically discussed, along with a reiteration of application requirements. Spill modelling seminar presented by a Member of the Project Steering Group of CIRIA C736.

There are also various additional references to containment in guidance that is widely disseminated in the industry including:

- Waste Treatment BAT Conclusions.
- *Environmental permitting guidance on the control of emissions* (gov.uk).
- *How to comply with your environmental permit. Additional guidance for: Anaerobic Digestion* Reference LIT 8737 Report version 1.0 dated November 2013.
- *Appropriate measures for the biological treatment of waste* – consultation document and response comments.
- *Biological waste treatment: appropriate measures for permitted facilities - Guidance - GOV.UK* (www.gov.uk)
- *Emissions control - Non-hazardous and inert waste: appropriate measures for permitted facilities* - This is not directly applicable to biological treatment but will be replicated in the appropriate measures as mentioned in the above bullet point.
- *SR2021 No 10: anaerobic digestion of non-hazardous sludge at a waste water treatment works, including the use of the resultant biogas*. This specifically applies to sludge AD facilities.

CIRIA C736

CIRIA C736 is considered the industry containment assessment standard of choice and is based on the source-pathway-receptor approach to risk assessment. It provides a clear methodology for demonstrating BAT, appropriate measures and compliance with permit conditions.

It is applicable for identifying and managing the risk of storing substances which may be hazardous to the environment and applies to activities ranging from small commercial premises to large chemical facilities. It primarily considers the potential consequences of tank failure and provides a risk assessment methodology to support a classification system for containment, providing different levels of performance for different risks. The aim is to break the pathway between source and receptor.

The guidance provides containment options and examples of good practice, but it is not prescriptive and there may be circumstances where it could be appropriate to use other methods where at least an equivalent level of environmental protection is provided.

Due to the nature of sewage sludge, waste cake or waste liquors, it is clear that this would be considered to be both a short and long-term hazard to the environment if released. Given the locations of sites that deal with these materials generally, it is reasonable to conclude that any major tank failure at an individual site will have the potential to cause significant damage to sensitive receptors.

Where CIRIA C736 measures are not considered to be relevant or appropriate for a specific facility, an explanation should be provided using a risk-based approach. For existing facilities where measures cannot easily be achieved, we expect alternative measures to be proposed which achieve at least an equivalent standard to provide at least the same level of environmental protection. It should be recognised however that CIRIA C736 includes specific guidance for operators who need to implement secondary containment provisions at existing facilities.

Newly built facilities and assets should be designed and built to CIRIA C736 report recommendations or to at least an equivalent approved standard. Newly built facilities and assets not designed and built to CIRIA C736 report recommendations, or to at least an equivalent approved standard would not be considered to provide suitable primary and secondary containment, and as such would not comply with BAT. Existing facilities may be unlikely to be compliant with CIRIA C736 due to the viability of retrofitting to meet the recommendations. However, the same containment assessments are still required, and improvements should be proposed to demonstrate at least equivalent appropriate measures of environmental protection.

ADBA tool and guidance

The ADBA tool and guidance have been specifically designed as a guide for secondary containment for anaerobic digestion. The guide states “Both the guide and the classification tool draw upon the principles and methodologies within CIRIA C736. The principles within CIRIA C736 are generally accepted as good practice in the design and construction of containment systems. The principles of CIRIA C736 are distilled into this accessible guide, which attempts to draw out the parts relevant to the AD sector”.

The tool itself is clearly set out to provide an inventory of sources, pathways and receptors and aligns with the containment system class types in CIRIA C736. It provides risk ratings and allows mitigation measures to be considered.

Alternative assessment methods

Where our guidance refers to CIRIA C736 it also allows for other equivalent approved standards. This does provide operators with the option of using other approved standards, but they must offer at least the same level of environmental protection.

Where CIRIA C736 and ADBA tool assessments, or equivalent approved standards, are not provided, it is difficult or impossible to satisfactorily assess permit applications for compliance with BAT, appropriate measures or an environmental permit.

Assessment of this facility

The operator did submit an assessment which has given regard to CIRIA C736, including proposals for improvements.

- The operator did submit a completed ADBA tool.
- The operator did submit spill modelling.
- The operator provided initial secondary containment proposals in accordance with Environment Agency guidance, [Control and monitor emissions for your environmental permit](#).
- Detailed secondary containment design will be provided to the Environment Agency in response to improvement conditions IC9.

The containment options proposed by Reading Sludge Treatment Centre (STC) included the installation of bund walls, and impermeable surfacing at modelled locations in order to prevent a loss of containment beyond the Reading STC and adjacent WWTW. The spill model is based upon the failure of a primary digester, the largest process vessel by capacity. The proposed solution met the requirements of section 4.2.1 of CIRIA 736 that requires “Where two or more tanks are installed within the same bund, the recommended capacity of the bund is the greater of:

- 1) 110% of the capacity of the largest tank within the bund.
- 2) 25% of the total capacity of all the tanks within the bund, except where tanks are hydraulically linked in which case they should be treated as if they were a single tank.

The final containment volume provided 25% of the total capacity of all the tanks within the bund.

Reasons for accepting secondary containment proposals

The Environment Agency recognises that the operator’s proposals for secondary containment measures at the installation are not complete. Our established environmental permitting process outlines that where information is missing or insufficient, that information can be requested. Where information is unsatisfactory, we may proceed to return an application as not duly made or refuse a duly made application. Our processes state that we generally don’t set improvement conditions that require BAT to be demonstrated at some date after the permit application has been consulted on and determined. Generally, we should be satisfied whether operations will use BAT at the appropriate time, and we should make that assessment at the time we issue any permit or variation.

However, we recognise that this industrial activity is already existing and being undertaken and consider it appropriate, where possible, to bring these activities into environmental regulation as an installation. While the current operations are a pollution risk, the operator is not introducing new risks to the environment. It is important to note that any applications including new plant and bulk tanks would require a demonstration that secondary containment is designed in line with CIRIA C736 (or possible equivalent alternative) before a permit could be issued.

While detailed secondary containment infrastructure design was not supplied, the proposals describe what they plan to implement and follow the primary requirements for bund design (as outlined in our guidance [Control and monitor emissions for your environmental permit](#)). The operator has also confirmed that the secondary containment measures will be designed in compliance with CIRIA C736 by a qualified structural engineer. We have received an effective risk assessment which demonstrates the extent and impact of bulk tank failure on the receiving environment. This was via a spill modelling assessment Reading STC – Containment Options Report, dated May 2023 based on the failure of worst-case tanks. These risk assessments/spill models show that the proposed containment strategies would contain effluent/digestate on site.

The section, *Bespoke permit conditions* of this document, provides a general explanation why we have issued this permit without a full determination of various key issues with the application.

We have included an improvement condition in the permit for the operator to progress the proposals submitted within the application and to provide additional details as they are developed and implemented. We require that the proposals must be implemented by 31 December 2024.

Emissions to air – Combustion

Biogas generated through the anaerobic digestion of waste contains a high quantity of methane and is often used to provide energy to onsite operations. Biogas is commonly combusted within on-site combined heat and power engines (CHP) or boilers. CHP engines produce heat and electricity. Heat is used to provide energy in the form of steam or hot water and is directed to the anaerobic digestion plant processes, while electricity can be utilised to power other plant on site.

Combustion of biogas or other fuels such as natural gas produces waste gas emissions which are discharged to the atmosphere via a stack. The combustion of biogas releases the following products of combustion; oxides of nitrogen (expressed as NO₂), sulphur dioxide (SO₂), carbon monoxide (CO) and volatile organic compounds (VOC).

While the WaSC anaerobic digestion activity has not until now been regulated under the Environmental Permitting (England and Wales) Regulations 2016 (EPR) as an installation, across the sector, the combustion plant may have been permitted. Some combustion plant in this sector will already have permits as standalone medium combustion plant. If emissions have previously been assessed, our approach is not to undertake any additional assessment unless there is a site-specific reason to do so. If emissions had not been previously assessed, or there had been subsequent changes, we would require a WaSC to undertake a new quantitative air risk assessment during determination.

This installation uses combustion plant to provide power and heat to the plant and anaerobic digestion process. Reading STC is authorised to combust biogas from two combined heat and power (CHP) engines with a thermal input of 1.344 MWth each, and three dual fuel boilers with a thermal input of 0.837MWth each.

The CHP engines produce heat and electricity as a result of combustion. Heat is used to provide energy in the form of steam or hot water which is directed to the AD plant processes, while electricity can be utilised to power other plant on site or in some cases can be exported to the electricity grid. Reading STC utilises electricity produced on-site and can export offsite if required. The boilers provide additional heat support to the AD process when required.

The emissions from the combustion plant at Reading STC, has been previously assessed and we are not aware of any subsequent changes to plant. Therefore, we have not carried out any further assessments.

We have ensured that individual combustion plant is subject to the required emission limit value (ELV) as stated in the permit. This includes those required by the Medium Combustion Plant Directive (MCPD) which have a future effective date. See Table S3.1 in the permit.

We have included improvement condition IC12 in the permit which requires the Operator to assess methane slip resulting from the combustion of biogas via the CHP engines. Following an assessment of the data, the Environment Agency shall consider whether emission limits for volatile organic compounds are applicable for this installation.

Indirect emissions of waste water

AD installations produce a series of liquid wastes. These waste waters (also known as 'liquid digestate' or 'liquors') are discharged to the adjacent WwTW. As explained at the start of this document, WwTW are regulated under separate legislation, the Urban Waste Water Treatment Directive (UWWTD) and does not form part of this installation. The discharge of waste waters to the WwTW is therefore a point source emission and classed under the Waste Treatment BREF as an indirect emission to water. This AD has been in operation for several years but previously unpermitted as an installation as explained above. The activity at this facility was previously regulated as a waste operation.

The waste water discharged to the WwTW is not currently subject to monitoring or control. Waste waters, after discharge to the WwTW and treatment under UWWTD are discharged to surface waters (rivers, streams) or in some cases direct to the sea. Across the sewage sludge industry, a wide variety of incoming wastes, trade effluents and indigenous sewage sludges are treated via anaerobic digestion (combined they are subject to regulation under the EPR). Once discharged into the main WwTW, any pollutants within the discharge will be diluted with no control over the level of pollutants emitted to the works. This means that across the sewage sludge industry, there is no knowledge of the

extent of pollutants entering the main works for treatment. This lack of knowledge means that WaSCs do not know if their WwTW are capable of treating the waste waters produced at an AD installation.

Description of waste water discharge

Effluent is generated on site through the dewatering and thickening of indigenous and imported sludges prior to the anaerobic digestion process, the dewatering of digestate following the anaerobic digestion process, the production of biogas condensate and from Odour control liquor

The waste waters are discharged to the adjacent Reading WwTW. Any treatment of this effluent once it arrives at the WwTW is currently regulated under the UWWTD process, not under control of an environmental permit. However, the effluent being discharged from the WwTW is controlled by a permit. As the UWWTD waste water is discharged to a watercourse, we consider the effluent generated through the AD process, biogas condensate and OCU liquors, constitutes an indirect discharge to water.

As such operators of an installation must establish and maintain inventories, including information about the characteristics and composition of waste waters in accordance with BAT conclusion 3 of the Waste Treatment BREF. BAT conclusion 3 states:

In order to facilitate the reduction of emissions to water and air, BAT is to establish and to maintain an inventory of waste water and waste gas streams, as part of the environmental management system, that incorporates all of the following features which are identified for waste water as:

Information about the characteristics of the waste water streams, such as:

- *average values and variability of flow, pH, temperature, and conductivity;*
- *average concentration and load values of relevant substances and their variability (e.g. COD/TOC, nitrogen species, phosphorus, metals, priority substances / micropollutants);*
- *data on bioeliminability (e.g. BOD, BOD to COD ratio, Zahn-Wellens test, biological inhibition potential (e.g. inhibition of activated sludge))*

The operator did not have this data prior to submitting their application for a bespoke installation permit. The Environment Agency has found that across the waste water sector, WaSCs have not undertaken a comprehensive analysis of their emissions from the installation activities to the WwTW. In general, WaSC installations accept trade effluents (via consented discharges in the catchment), indigenous sludges and separate waste streams via road tanker. The waste materials treated via the AD plant are potentially diverse and the composition of the feedstock and treated digestates could contain significant variation in pollutants.

Operators of installations under the Waste Treatment BREF must establish an emissions inventory. The operator should be compliant with this BAT conclusion requirement at the point of submitting a permit application. The waste water emissions inventory informs treatment methodologies, environmental risk assessments and monitoring requirements. However, across the sector, this information is not available. The Environment Agency recognises that the operators emissions discharged to the WwTW have never been fully quantified, and therefore, accept that emissions to the WwTW have not been subject to a quantitative risk assessment. In addition, the operator also cannot demonstrate that they are compliant with BAT AELs for indirect discharges to water (as specified within BAT conclusion 20 of the Waste Treatment BREF).

The waste water discharged to the WwTW is treated via the requirements under the UWWTD. However, this approach may not effectively treat all the pollutants that could enter the WwTW after discharge from the installation. For example, characteristic treatment methods at WwTW do not typically treat and remove heavy metals or other specified pollutants from the waste water.

We understand and recognise that this industrial activity is already existing and consider it appropriate, where possible, to bring these activities into environmental regulation as an installation. While the operations are a pollution risk, the operator is not introducing new risks to the environment. It is important to note that any applications including a new emission to water would require a demonstration that emissions would not adversely impact any receiving waters, or breach relevant BAT AELs before a permit could be issued.

Our guidance, [Surface water pollution risk assessment for your environmental permit](#), indicates that establishing a representative composition of the waste water streams requires a number of samples over a long period (12 – 36 samples). The scope of pollutants to be identified in the waste water depends on what substances are likely to be within the waste water at the point it is discharged from the installation. To determine what is in the waste water, the operator will need to examine and have a good understanding of the inputs to the installation.

To establish a waste water inventory and to facilitate a quantitative risk assessment from this indirect emission point, we have set improvement conditions. Our processes state that we generally don't set improvement conditions that require BAT to be demonstrated at some date after the permit application has been consulted on and determined. Generally, we should be satisfied whether operations will be BAT at the appropriate time, and we should make that assessment at the time we issue any permit or variation. However, for the reasons set out above, this assessment is not possible due to the lack of data in this area across the WaSC sector. We consider setting improvement conditions as a pragmatic approach to identify what is in the waste water to then implement future improvements.

The permit includes improvement conditions IC11a, IC11b and IC11c. There are three stages to this improvement programme. The first (IC11a) requires the operator to submit and carry out a sampling and analysis program and gather the relevant data on the waste water. In accordance with the Waste Treatment BREF, the IC requires the operator to determine the composition of the pollutants which have BAT-AELs (these include heavy metals). Due to the variety of inputs to the waste treatment process and the unknown composition of the waste waters proposed for discharge to the WwTW, we cannot consider this effluent as straightforwardly a 'biodegradable waste'. Therefore, the IC also sets the requirement on the operator to establish an inventory of pollutants of 'all relevant substances'. The scope of pollutants the operator must identify depends on what substances are likely to be within the waste water at the point it is discharged from the installation. To determine what is in the waste water, the operator will need to examine and have a good understanding of the inputs to the installation. This installation accepts waste inputs from indigenous and imported sludges. Due to this variety of inputs and the requirements for a minimum of 12 samples, we have specified that this monitoring period be for at least a year to determine a representative understanding of the discharge.

The Environment Agency recognises that 12 months is a long period but establishing the composition of the waste water will facilitate long term improvements and ensure that all potential pollutants are able to be controlled.

On completion of IC11a, IC11b requires the operator to undertake a full assessment of the results providing a summary of the sample results, a completed H1 risk assessment(s) and detailed modelling (where necessary) with an assessment made against the parameters specified in the relevant environmental standards as specified within our guidance. We also require the operator to submit proposals and/or additional measures required to prevent or minimise any significant emissions from the installation along with timescales for implementation. IC11c requires the implementation of any relevant improvements identified.

The operator has provided written confirmation that it will initiate a sampling programme to determine the composition of the waste water.

The overarching aim of the improvement programme is to establish comprehensively what the operators of AD installations discharge to WwTW and to drive long term improvements. The lack of existing data across the industry means that the Environment Agency, rather than refusing environmental permit applications, facilitates a process for WaSC operators to achieve BAT and to meet environmental standards for long term environmental protection.

Odour management

The Waste Treatment BREF outlines techniques for minimising the impact from odour pollution from operations which are likely to cause odour. Anaerobic digestion and the handling/storage of various waste sludges and organic wastes can be highly odorous. The Waste Treatment BREF includes general BAT conclusions which operators must implement (BAT 10 and 12 where odour nuisance at sensitive receptors is expected and/or has been substantiated). These include:

- BAT 10 – Monitoring of odour emissions
- BAT 12 – Odour management plan
- BAT 13 – Techniques to reduce odour emissions
- BAT 14 – Reduce diffuse emissions to air

Odour and BAT

BAT requires that processing and treatment of odorous wastes be carried out in a sealed system. This means that tank(s)/vessel or area(s) must be connected to an odour abatement system. Odorous gas streams are to be directed to the abatement plant to be treated prior to release to the atmosphere via emission stack(s).

BAT-associated emission levels (BAT-AELs) for the treatment of water based liquid wastes (the dewatering and thickening activity identified as a directly associated activity of the AD process) are identified as Hydrogen chloride (HCl), Ammonia (NH₃), and Total volatile organic compounds (TVOC), however the monitoring only applies when the substance concerned is identified as relevant in the waste gas stream based on the inventory mentioned in BAT 3. As the operator has not provided evidence to demonstrate that these substances are not present in the emission, we have specified these limits in the permit as, not more than 5mg/m³ for HCl, not more than 20mg/m³ for TVOC and no more than 20 mg/Nm³ for NH₃.

For the biological treatment of waste relating to the AD process we require that odour concentrations are limited to less than 1,000 ou_E/Nm³ at the point of release or, in the case of an ammonia release, no more than 20 mg/Nm³. The upper BAT-AEL limit for ammonia is specified in the permit.

The odour abatement technology at Reading consist of a single stage wet scrubber and single stage stand-by carbon filter. The stand-by carbon filter is in parallel to the wet scrubber. With 1 stack from the Odour control unit. The odour control unit serving the acceptance and dewatering process prior to anaerobic digestion, and the dewatering process post AD.

This odour control technology meets the requirement of BAT 34 and 53 which identifies relevant appropriate techniques for the reduction of odour as Wet scrubbing and adsorption.

Odour management plan

The site is required to have an odour management plan in place that details the measures and procedures to prevent or otherwise minimise, odour releases from the site. The plan forms part of the permit.

To verify the effectiveness of the odour management systems in place at Reading STC, we have requested that the operator carry out a review of the abatement plant on site, to determine whether the measures have been effective and adequate to prevent and where not possible minimise emissions released to air including; but not limited to odour, NH₃, TVOC and HCl. The required review is included in the permit in the form of an improvement condition which is part of the improvement programme detailed in table S1.3.

Odour conclusions

Based upon the information in the application we are satisfied that the appropriate measures will be in place to prevent or where that is not practicable to minimise odour and to prevent pollution from odour.

Bioaerosols

Site-specific bioaerosols risk assessments (SSBRA) are required where:

- The operational area (including abatement plant) is located within 250 metres of sensitive receptors: or
- Where area or point source emissions may pose a risk to the nearest sensitive receptor's location.

SSBRAs demonstrate that the process and/or abatement measures adequately prevent, or where this is not possible, significantly reduce the risk of bioaerosols release, and that the resulting activity will be unlikely to expose the nearest sensitive receptor to elevated concentrations of bioaerosols.

There are external site operational processes within 250 metres of a sensitive receptor.

We consider it appropriate to insert the bioaerosols monitoring requirements in the permit in accordance with our guidance TGN M9 Environmental monitoring of bioaerosols at regulated facilities (version 2, July 2018). The operator is required to comply with the new monitoring requirements from the date of permit issue.

Improvement conditions

Primary tank/vessel condition

We recognise that many sludge storage and treatment vessels were constructed prior to the current permitting requirements and their design may not be compatible with BAT as described in the relevant BREF documents. The operator provided an inventory of their tanks and described the condition of those assets.

Comprehensive evidence was not provided to assess the condition of the tanks and determine whether they are suitable for containing potentially polluting wastes and waste waters. However, as these tanks are already existing and perform an ongoing industrial operation, we have set an improvement condition in the permit to address any potential deficiencies in the existing site's primary containment.

IC10 requires the operator to review (undertaken by an appropriately qualified engineer) the physical condition of the primary containment and establish a program of works to implement any necessary individual measures to ensure that the primary containment is fit for purpose. The Environment Agency will review these submissions with regard to the guidance, *CIRIA C736 Containment systems for the prevention of pollution*.

Methane slip and Leak detection and repair (LDAR)

We have included improvement condition IC12 in the permit which requires the operator to assess methane slip resulting from the combustion of biogas via the CHP engines. Following an assessment of the data, the Environment Agency shall consider whether emission limits for volatile organic compounds are applicable for this installation.

Effectiveness of abatement systems

The installation includes industrial processes which produce waste gas and odour emissions that are discharged to air via vents or stacks. BAT conclusion 14 of the Waste Treatment BREF states that emissions from diffuse sources should use techniques like, *collecting and directing the emissions to an appropriate abatement system via an air extraction system and/or air suction systems close to the emission sources*. This installation includes the storage and treatment of wastes in tanks and vessels. To prevent diffuse emissions of pollutants such as odour, ammonia and VOCs, emissions are extracted and treated by an air abatement system. The abatement technology used at Reading STF is a wet scrubber with adsorption. The treated air stream is then discharged to atmosphere via a stack. This meets the requirements of BAT 34 and BAT 53.

Additionally, to verify whether existing measures have been effective and adequate to prevent and/or minimise emissions released to air, we have set an improvement condition IC13. Where further improvements are identified, the operator is required to implement these measures. The improvement condition requires the operator to demonstrate via determining the composition of waste gas emissions, monitoring and additional risk assessment that the existing abatement system effectively treats the emissions to air.

Head of works

This permit also allows a further bespoke waste operation relating to the import of industrial sludge and liquid waste to the *head of works* (HoW). HoW means the discharge location where separately imported wastes are discharged into the WwTW. The waste operations associated with the head of works is either via the direct discharge of tankered waste into the WwTW or the temporary storage (and blending) of waste in a storage tank before discharge of the waste liquids into the WwTW. Once the discharged wastes enter the WwTW, this emission leaves regulatory control of The Environmental Permitting (England & Wales) Regulations 2016. The discharged waste is mixed with liquids in the WwTW and is regulated separately under the requirements of the Urban Waste Water Treatment Directive. The HoW activity undertaken at Reading STF involves the acceptance of tankered waste at the import point and direct discharge into the WwTW. The discharge from the HoW is therefore classed as an indirect emission to water. This activity is not related to the on-site anaerobic digestion installation.

The operator applied for this as an additional regulated activity as part of the IED permitting process. This variation ensures that the activity reflects up-to-date permit conditions.

Across the waste water treatment sector, existing HoW permits allow for the reception and discharge of waste into the WwTW without the appropriate controls for a point source emission to sewer. The imported wastes discharged to the WwTW is treated via the requirements under the UWWTD. However, this approach may not effectively treat all the pollutants that could enter the WwTW after discharge from HoW activity.

We understand and recognise that this industrial activity is already existing and consider it appropriate, where possible, to bring these activities into up-to-date environmental regulation. While the operations are a pollution risk, this permit does not introduce new risks to the environment. The operator submitted a list of waste codes for discharge to sewer as part of the HoW activity. We requested that the operator indicate which wastes are currently accepted and those codes which would be newly requested as part of the HoW activity. To ensure that this HoW is not introducing new environmental risks we have restricted the waste codes accepted to the HoW activity to those already accepted. A quantitative environmental risk assessment was not submitted to determine the impact from the discharge of the new codes to the River after passing through the WwTW. As the operator provided no evidence of the environmental impact from the new codes, we are not able to approve this aspect of their application. A list of the rejected codes can be found in the *Decision considerations* section of this document.

It is important to note that any applications adding new waste codes would change the emission to sewer and would require a demonstration that emissions would not adversely impact any receiving waters, or breach relevant environmental standards before a permit could be issued.

This variation ensures that the HoW activity and associated discharge are permitted to modern standards by implementing the following:

- Included the HoW activity as a bespoke waste operation within the new IED permit.
- Added an emission point for the discharge of HoW waste to the main wastewater treatment works (WwTW). This will facilitate sampling and monitoring of the discharge. This discharge is classed as an indirect emission to water.
- Included all the HoW waste codes applied for where already accepted.
- Added improvement conditions requiring the operator to determine the composition¹ of the wastewater stream discharged into the WwTW (monitoring over 12 months). It will also require the operator to perform a quantitative risk assessment of the impact of this wastewater downstream at the main river and implement improvements to prevent pollution to the watercourse.

As similarly outlined in the Key issues section, *Indirect emissions to waste water*, this application does not include a demonstration that the existing indirect discharge via the HoW to the River Kennet is not causing pollution. Across the WaSC sector, there is little or no data available to determine the impacts from HoW activities. Therefore, to establish a waste water inventory and to facilitate a quantitative risk assessment from this indirect emission point we have set improvement conditions. Our processes state that we generally should perform risk assessments at the time we issue any permit or variation. However, for the reasons set out above, we consider setting improvement conditions as a pragmatic approach to identify what pollutants are present in the HoW discharge to then implement future improvements.

The permit includes improvement conditions IC13a, IC13b and IC13c. There are three stages to this improvement programme. The first (IC13a) requires the operator to submit and carry out a sampling and analysis program and gather the relevant data on the waste water discharge. In accordance with our guidance, Non-hazardous and inert waste: appropriate measures for permitted facilities - Guidance - GOV.UK (www.gov.uk), the IC requires the operator to determine the composition of the discharge. The scope of pollutants the operator must identify depends on what substances are likely to be within the incoming waste at the HoW. Due to the variety of industrial wastes accepted and the requirements for a

¹ 'Composition' means:

- Average values and variability of flow, pH, temperature and conductivity.
- Average concentration and load values of all relevant substances and their variability.
- Data on bioeliminability.

minimum of 12 samples, we have specified that this monitoring period be for at least a year to determine a representative understanding of the discharge.

The Environment Agency recognises that 12 months is a long period but establishing the composition of the discharge from the HoW will facilitate long term improvements and ensure that all potential pollutants are able to be controlled.

On completion of IC13a, IC13b requires the operator to undertake a full assessment of the results providing a summary of the sample results, a completed H1 risk assessment(s) and detailed modelling (where necessary) with an assessment made against the parameters specified in the relevant environmental standards as specified within our guidance. We also require the operator to submit proposals and/or additional measures required to prevent or minimise any significant emissions from the installation along with timescales for implementation. IC13c requires the implementation of any relevant improvements identified and may require the operator to limit wastes accepted at the HoW.

The operator has provided written confirmation that it will initiate a sampling programme to determine the composition of the waste water. The lack of existing data across the industry means that the Environment Agency, rather than refusing an environmental permit application, facilitates a process for WaSC operators to understand their emissions and to meet environmental standards for long term environmental protection. This process will enable the Environment Agency to set environmental limits on the discharge for substances of concern. In addition, implementing permit conditions and establishing that the movement of waste from the HoW to the WwTW is a point source emission, corrects historic irregular permitting arrangements.

Decision considerations

Confidential information

A claim for commercial or industrial confidentiality has not been made.

The decision was taken in accordance with our guidance on confidentiality.

Identifying confidential information

We have not identified information provided as part of the application that we consider to be confidential.

The decision was taken in accordance with our guidance on confidentiality.

Consultation

The consultation requirements were identified in accordance with the Environmental Permitting (England and Wales) Regulations (2016) and our public participation statement.

The application was publicised on the GOV.UK website.

We consulted the following organisations:

- Local authority Environmental Protection Department – No response received
- Food standards agency – No response received
- Health and Safety Executive – No response received
- UK Health Security Agency (Previously Public Health England) and the relevant Director of Public Health – See consultation responses section.

The comments and our responses are summarised in the [consultation responses](#) section.

Operator

We are satisfied that the operator (now the operator) is the person who will have control over the operation of the facility after the grant of the permit. The decision was taken in accordance with our guidance on legal operator for environmental permits.

The regulated facility

We considered the extent and nature of the facility at the site in accordance with RGN2 'Understanding the meaning of regulated facility', Appendix 2 of

RGN2 'Defining the scope of the installation', Appendix 1 of RGN 2 'Interpretation of Schedule 1', guidance on waste recovery plans and permits.

The extent of the facility is defined in the site plan and in the permit. The activities are defined in table S1.1 of the permit.

The site

The operator has provided a plans which we consider to be satisfactory.

The plans show the location of the part of the installation to which this permit applies on that site.

The plan is included in the permit.

Site condition report

The operator has provided a description of the condition of the site, which we consider is satisfactory. The decision was taken in accordance with our guidance on site condition reports and baseline reporting under the Industrial Emissions Directive.

Nature conservation, landscape, heritage and protected species and habitat designations

We have checked the location of the application to assess if it is within the screening distances we consider relevant for impacts on nature conservation, landscape, heritage and protected species and habitat designations. The application is within our screening distances for these designations.

We have assessed the application and its potential to affect sites of nature conservation, landscape, heritage and protected species and habitat designations identified in the nature conservation screening report as part of the permitting process.

We consider that the application will not affect any site of nature conservation, landscape and heritage, and/or protected species or habitats identified.

We provided an assessment of the habitats which we provided to Natural England for information only.

The decision was taken in accordance with our guidance.

Environmental risk

We have reviewed the operator's assessment of the environmental risk from the facility.

The operator's risk assessment is unsatisfactory and required additional Environment Agency assessment.

The operators risk assessment was unsatisfactory and required additional Environment Agency assessment. Please see the key issues for more information. We were unable to fully assess all elements of the operators' risk assessment during determination of the variation. The facility is, however, already existing and has not been regulated as an installation prior to this application. We have included conditions in the permit that require the operator to provide additional information as part of an improvement programme. The improvement programme requires that the operator provide updated risk assessments including but not limited to the following elements:

- Secondary containment – The improvement programme requires the operator to submit a finalised containment solution in compliance with CIRIA C736, fully worked up and signed off by competent individuals. The improvement programme requires the submission of timeframes for the implementation of any additional containment measures identified as being necessary as part of the risk assessment. This requirement is to ensure that the site meets the requirements of BAT conclusions for containment namely BATc 19 of the Waste Treatment BREF.
- Discharge of process wastewater to a WwTW – Effluent is produced at different stages of the sludge treatment operations at Reading STF. At the time of application, an analysis of the effluent streams had not been undertaken or submitted. To ensure that the wastewater streams are fully characterised and an analysis of any pollutants of concern is carried out, we have included improvement conditions (IC11a, b and c) requiring a sampling programme, analysis, and proposals for any additional measures required to prevent or minimise any significant emissions from the installation along with timescales for implementation, for Environment Agency approval, with measures to be implemented as approved. The BAT associated emission levels (BAT-AEL) have been applied to the emission points S1, S2 and S3 on the permit. The limits only apply if a pollutant of concern is identified in the waste water characterisation. The emission limits can be found in table S3.3
- Discharge of waste to the HoW – Waste is currently accepted and discharged to the HoW. At the time of application, an analysis of the impact of acceptance of these wastes had not been undertaken or submitted. To ensure that the fate of the impact on receiving water bodies is assessed, we have included improvement conditions requiring a sampling programme, analysis, and proposals for any additional measures required to prevent or minimise any significant emissions from the receipt of waste to the HoW along with timescales for implementation, for Environment Agency approval, with measures to be implemented as approved.

General operating techniques

We have reviewed the techniques used by the operator and compared these with the relevant guidance notes and we consider them to represent appropriate techniques for the facility.

Where there are measures approaching BAT, we have where appropriate implemented an improvement programme. The improvements set out in table S1.3 must be completed by the times stipulated in that table or the backstop conditions identified in the permit.

We have reviewed the techniques against the Best Available Techniques (BAT) Reference Document for Waste Treatment (BAT conclusions), Biological waste treatment: appropriate measures for permitted facilities - 1. When appropriate measures apply - Guidance - GOV.UK (www.gov.uk) and Non-hazardous and inert waste: appropriate measures for permitted facilities.

The operating techniques that the operator must use are specified in table S1.2 in the environmental permit.

Operating techniques for emissions that do not screen out as insignificant

The combustion plant at this facility remains unchanged from the existing permit EPR/ FB3809MM /V002. The engines and boilers will not change as a result of this permit variation.

We consider that the emission limits included in the installation permit reflect the BAT for the sector.

National Air Pollution Control Programme

We have considered the National Air Pollution Control Programme as required by the National Emissions Ceilings Regulations 2018. By setting emission limit values in line with technical guidance we are minimising emissions to air. This will aid the delivery of national air quality targets. We do not consider that we need to include any additional conditions in this permit.

Odour management

We have reviewed the odour management plan in accordance with our guidance on odour management.

We consider that the odour management plan is satisfactory and we approve this plan.

We have approved the odour management plan as we consider it to be appropriate measures based on information available to us at the current time. The operator should not take our approval of this plan to mean that the measures in the plan are considered to cover every circumstance throughout the life of the permit.

The operator should keep the plans under constant review and revise them annually or if necessary sooner if there have been complaints arising from operations on site or if circumstances change. This is in accordance with our guidance 'Control and monitor emissions for your environmental permit'.

While we consider that the plan is satisfactory, we have included an improvement condition (IC13) to review the effectiveness of the abatement system. The improvement condition is included in order to determine whether existing measures have been effective and adequate to prevent and/or minimise emissions released to air. Where further improvements are identified, the operator is required to implement these measures in accordance with Environment Agency approval.

Use of conditions other than those from the template

Based on the information in the application, we consider that we need to include conditions other than those in our permit template. See the Key issues section for more details on the bespoke permit conditions we have set in this permit.

Raw materials

We have specified limits and controls on the use of raw materials and fuels.

Waste types

We have specified the permitted waste types, descriptions and quantities, which can be accepted at the regulated facility.

We are satisfied that the operator can accept these wastes for the following reasons:

- they are suitable for the proposed activities
- the proposed infrastructure is appropriate; and
- the environmental risk assessment is acceptable.

We have excluded the following wastes for the following reasons:

A quantitative environmental risk assessment was not submitted to determine the impact from the discharge of the new codes to the River Aire after passing through the WwTW. As the operator provided no evidence of the environmental

impact from the new codes, we are not able to approve this aspect of their application. A list of the rejected codes is provided below.

19	Wastes from waste management facilities, off-site waste water treatment plants and the preparation of water intended for human consumption and water for industrial use
19 09	wastes from the preparation of water intended for human consumption or water for industrial use
19 09 02	sludges from water clarification
19 13	wastes from soil and groundwater remediation
19 13 08	Aqueous liquid wastes and aqueous concentrates from groundwater remediation

Improvement programme

Based on the information on the application, we consider that we need to include an improvement programme. See the Key issues section for more details on the bespoke permit conditions we have set in this permit

Emission Limits

Emission Limit Values (ELVs) and equivalent parameters or technical measures based on Best Available Techniques (BAT) have been added for emissions to air and indirect discharges of waste water to surface waters.

Emission limit values are derived from:

- Waste Treatment BREF for BAT associated emission limits.
- Schedule 25A of the Environmental Permitting (England and Wales) (Amendment) Regulations 2016.

Emissions to air

Odour abatement system

There are discharges of emissions to air from odour control units (channelled emissions to air from abatement plant) and combustion appliances (combined heat and power plant and boilers). The odour control plant discharges emissions to the air via a stack. BAT requires that BAT-AELs of 20 mg/Nm³ for Ammonia (NH₃) be applied when biological treatment of waste is carried out. Anaerobic digestion is a biological process therefore the limit is included in the permit.

The Waste Treatment BREF provides examples of wastes that would be considered as water-based liquid wastes. These include wastes under the category '19 08 wastes from waste water treatment plants not otherwise

specified' as there are channelled emissions of odorous air from the treatment of these wastes, we have included BAT-AELs of 5 mg/Nm³ Hydrogen Chloride (HCL) and 20 mg/Nm³ of Total Volatile Organic Compounds (TVOC). It should be noted that the limits for HCL and TVOC only apply when the substances of concern are identified in the waste gas streams characterised in BAT conclusion 3. Improvement condition IC13 requires full investigation and characterisation of waste gas streams within 12 months of issue of the permit. A full characterisation of waste gas streams was not available at the time of submission of the application.

Combustion appliances

Biogas is produced as a result of the AD process. Combustion of the produced biogas takes place in two combined heat and power (CHP) engine and boilers. The engine produces heat and electricity that may be used to power on site processes while boilers provide additional heat to the AD processes. The boilers also utilise gas oil as a backup fuel. Combustion of biogas discharges pollutants to the air via stacks and exhausts. We have therefore applied emission limits to the following substances;

- Nitrogen oxides
- Sulphur dioxide
- Carbon monoxide

For further detail of emission limits, refer to table S3.1 of the permit.

Emissions to water

There are no emissions of waste waters direct to a receiving water body. The operator will discharge waste waters to the waste water treatment works prior to discharge to River Kennet. The Waste Treatment BREF specifies BAT AELs for indirect emissions to a water body. Where non-hazardous wastes are imported for storage, blending or treatment prior to discharge into the wastewater treatment works, the permitted waste operation ceases once the waste is mixed with the waste waters in the WwTW. BAT AELs or emission limits will be applied to the discharge into the wastewater treatment works for substances of concern.

The BAT AELs are appropriate for the activity defined under the BREF as 'Treatment of water-based liquid waste'. The BREF provides examples of wastes that would be considered as water-based liquid wastes. These include wastes under the category '19 08 wastes from waste water treatment plants not otherwise specified'. The treatment of this waste including dewatering, thickening treatment through AD and the subsequent discharge to the waste water treatment works will be subject to the BAT AELs specified within BAT conclusion 20 (Table 6.2 of the Waste Treatment BREF).

As outlined within the Key issues section, *Indirect emissions of waste water*, the operator did not provide a composition of the waste water (in line with BAT conclusion 3), therefore, all BAT AELs have been applied. We have set improvement condition (IC11a) for the operator to determine the composition of the waste in a waste inventory. The limits will only apply when the substance concerned is identified as relevant in the waste water inventory.

Until the operator has completed IC11a, the permit specifies limits for:

- Hydrocarbon oil index (HOI) (mg/l).
- Free cyanide (CN⁻) (mg/l).
- Adsorbable organically bound halogens (AOX) (mg/l).
- Metals and metalloids; arsenic (expressed as As), cadmium (expressed as Cd), chromium (expressed as Cr), hexavalent chromium (expressed as Cr(VI)), copper (expressed as Cu), lead (expressed as Pb), nickel (expressed as Ni), mercury (expressed as Hg), zinc (expressed as Zn) (µg/l).

Monitoring

We have decided that monitoring should be carried out for the parameters listed in the permit, using the methods detailed and to the frequencies specified.

We made these decisions in accordance with the waste treatment Best available techniques BAT conclusions.

Based on the information in the application we are satisfied that the operator's techniques, personnel and equipment have either MCERTS certification or MCERTS accreditation as appropriate.

Reporting

We have specified reporting requirements in the permit. We imposed these requirements in accordance with the Waste Treatment BAT conclusions.

Management System

We are not aware of any reason to consider that the operator will not have the management system to enable it to comply with the permit conditions.

The decision was taken in accordance with the guidance on operator competence and how to develop a management system for environmental permits.

A full review of the management system is undertaken during compliance checks.

Technical Competence

Technical competence is required for activities permitted.

The operator is a member of the CIWM/WAMITAB scheme

We are satisfied that the operator is technically competent.

Previous performance

We have assessed operator competence. There is no known reason to consider the operator will not comply with the permit conditions.

We have checked our systems to ensure that all relevant convictions have been declared.

Relevant convictions were found and declared in the application. We considered relevant convictions as part of the determination process.

Financial competence

There is no known reason to consider that the operator will not be financially able to comply with the permit conditions.

Growth duty

We have considered our duty to have regard to the desirability of promoting economic growth set out in section 108(1) of the Deregulation Act 2015 and the guidance issued under section 110 of that Act in deciding whether to grant this permit.

Paragraph 1.3 of the guidance says:

“The primary role of regulators, in delivering regulation, is to achieve the regulatory outcomes for which they are responsible. For a number of regulators, these regulatory outcomes include an explicit reference to development or growth. The growth duty establishes economic growth as a factor that all specified regulators should have regard to, alongside the delivery of the protections set out in the relevant legislation.”

We have addressed the legislative requirements and environmental standards to be set for this operation in the body of the decision document above. The guidance is clear at paragraph 1.5 that the growth duty does not legitimise non-compliance and its purpose is not to achieve or pursue economic growth at the expense of necessary protections.

We consider the requirements and standards we have set in this permit are reasonable and necessary to avoid a risk of an unacceptable level of pollution.

This also promotes growth amongst legitimate operators because the standards applied to the operator are consistent across businesses in this sector and have been set to achieve the required legislative standards.

Consultation Responses

The following summarises the responses to consultation with other organisations, and the way in which we have considered these in the determination process.

Responses from organisations listed in the consultation section:

Response received from UK Health Security Agency

Brief summary of issues raised:

The main emissions of potential concern are emissions of bioaerosols and odorous emissions. The application indicates that the installation has mitigation measures and management plans in place such that off-site risks are anticipated to be insignificant.

Based on the information contained in the application supplied to us, UKHSA has no significant concerns regarding the risk to the health of the local population from the installation.

This consultation response is based on the assumption that the permit holder shall take all appropriate measures to prevent or control pollution, in accordance with the relevant sector guidance and industry best practice

Summary of actions taken:

We have set limits for the emission of pollutants to air in accordance with BAT or have set limits that are appropriate for the biowaste treatment sector. Limits include; nitrogen oxides, sulphur dioxide for engines and boilers and ammonia limits for odour abatement plant discharging emissions to air. We have set action trigger limits and monitoring of bioaerosols to further control potential emissions of airborne pollutants from processes that may release them.

Response received from Reading Borough Council

Brief summary of issues raised:

Reading Borough Council has been trying to resolve odour issues emanating from Reading STW affecting residents at Kennet Island and Green Park Village. During our investigations it became clear that the odour control units in the inlet room and the sludge room were not operational as they had been allowed to deteriorate over a number of years without receiving the maintenance that the service records show was required. These issues are in the process of being

fixed now, but to date I have not received reassurance that anything has changed to stop the same happening again. I would like to see some conditions added to the permit requiring a reporting mechanism to be in place to ensure maintenance issues are raised and resolved within a set acceptable time frame.

Summary of actions taken:

We have set limits for the monitoring of odour control units on site in accordance with BAT. Limits include; Ammonia, Hydrogen Chloride and TVOC. Site will also provide results for hydrogen sulphide and odour. We have implemented IC13 to demonstrate the effectiveness of the odour control units implemented and have approved the sites odour management plan to ensure the effective maintenance and provision of odour control system. Odour conditions will be included in the permit should the activities give rise to odour beyond the site boundary. As a result, the operator would be required to submit for approval within a specified period, a revised odour management plan which would look to identify and minimise any risk of odour.

No other responses were received to our consultation exercise.

Secondary containment and credible scenarios

Thames text in black, EA response in blue

BAT 19 is the relevant BAT conclusion when considering the need for secondary containment.

BAT 19 requires operators to *prevent or, where that is not practicable, to reduce emissions to soil and water*. BAT 19d lists a number of techniques which can be used in combination to *“reduce the likelihood and impact of overflows and failures from tanks and vessels”*. These include impermeable surfacing, overflow detectors, and the location of tanks for liquids in *“a suitable secondary containment; the volume is normally sized to accommodate the loss of containment of the largest tank within the secondary containment”*. This aligns well with the already well established 110/25% rule which has been applied in other regulated facilities for over 30 years.

Page 38 Under Section 4.2.1 – The “110 per cent” and “25 per cent rules”, the guidance suggests that *“The basis for much industry practice in the past has been the 110 per cent and 25 per cent rule. Although not following the risk-based approach recommended in this guide, this practice has been in use for many years”*.

We interpreted this to suggest that the previous 110/25 percent rule was not recommended but was recognised as an historically accepted practice.

On the contrary the guide is simply recognising that the 110/25% rule, an established industry standard, doesn't follow the risk-based approach recommended in other sections of the guide. In other words the requirement for secondary containment is not dependent on a risk assessment; the requirement cannot be risk assessed away, nor can volumes be reduced. This is also made clear by figure 4.3.

Credible scenarios

Section 4.2.1 helpfully explains the assumptions behind the 110% and 25% rule. For the 25% rule the assumption is that not all the tanks within the secondary containment are expected to fail at the same time. However there could be credible scenarios where this assumption might not hold, such as an explosion damaging multiple tanks, implying that for some credible scenarios you may conclude that containment needs to be increased above the standard 25% of total tank volume. The guide does not anticipate an equivalent argument whereby the containment volume could be reduced. It is entirely credible to foresee a situation where human error results to the loss of the entire contents of a tank (there have been examples of this) and virtually impossible to eliminate that risk so the standard 110/25% is applied as a minimum.

Figure 4.3 reinforces this point. It shows credible scenarios to be relevant only if the contents of a tank are combustible, presumably because the loss of more than one tank is unlikely unless there is a fire or explosion. Again the implication is that credible scenarios can result in the required containment volume being increased but not decreased.

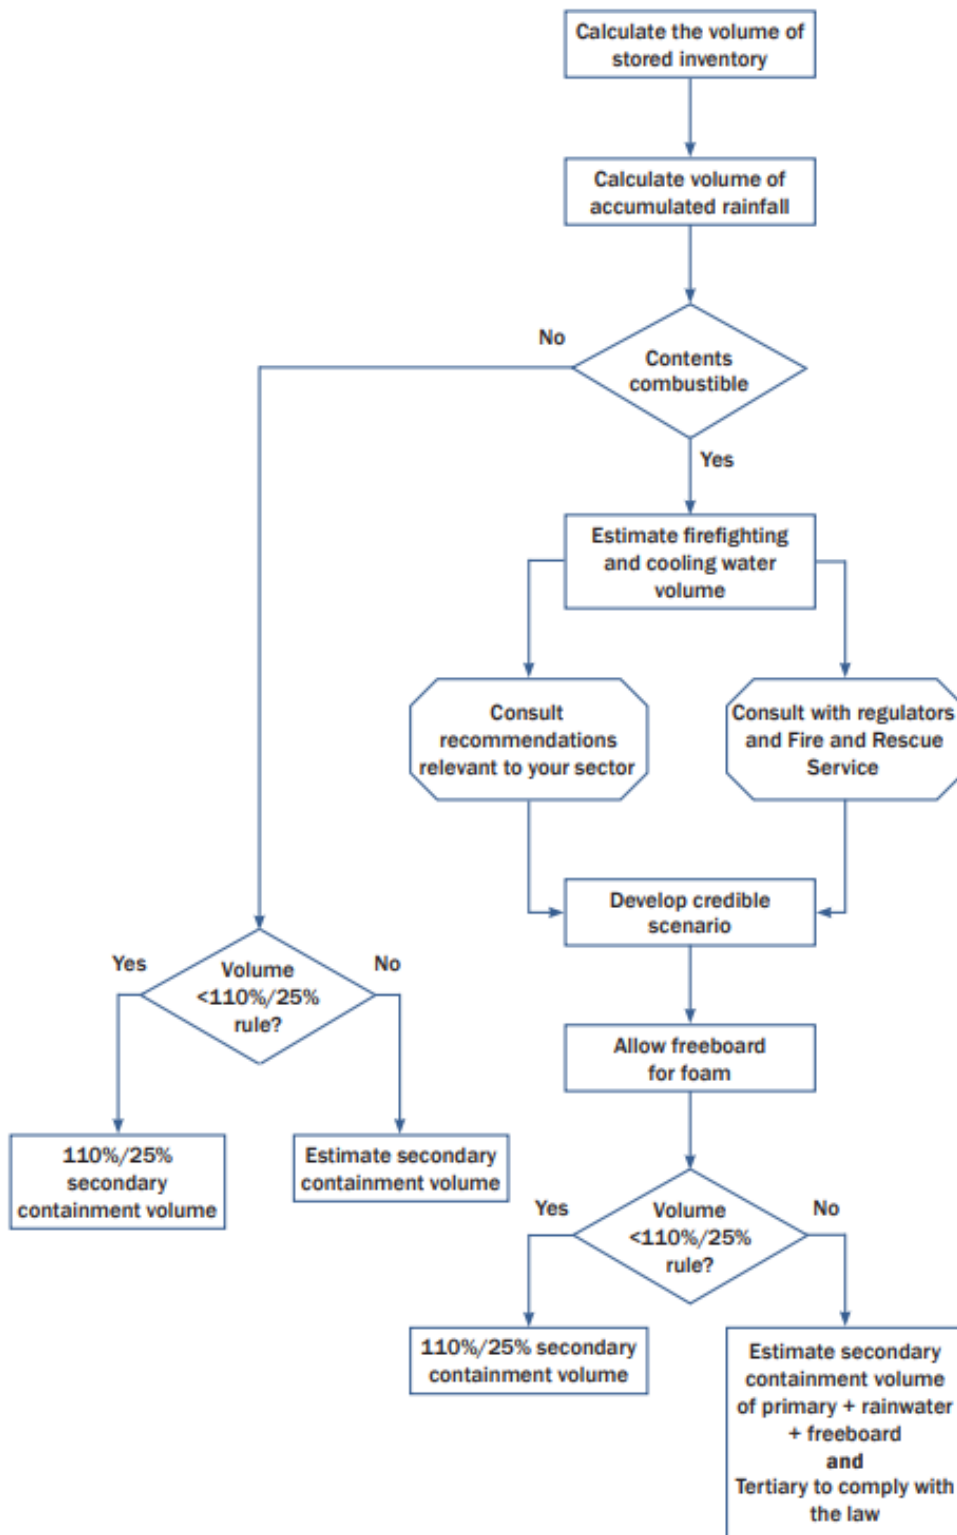

Figure 4.3 Process for estimating containment capacity

Page 43, Section 4.3 Method for Assessing Containment Capacity then refers to a recommended approach which references “...the containment should be capable of retaining:

- *The total volume of inventory that could be released during a credible incident*
- *The maximum rainfall that would be likely to accumulate within the containment before, during and and/or after an incident.....”*

“In determining containment requirements, the volume of substance should be based on the loss from a credible scenario.....”

As above the suggestion is that credible scenarios could result in some of the assumptions which form the basis of the 110/25% rule breaking down, such as an explosion damaging multiple tanks, in which case it would be necessary to increase the total containment volume above the standard 25%. This may be particularly pertinent for COMAH sites where there is a risk of fire or explosion.

Hopefully, this provides context as to the further point of clarification I raised at the end of the meeting. In some cases the consideration of a “credible scenario” could reduce the scale of secondary containment and align more to a risk-based approach. Given the CIRIA736 guidance document – we therefore wanted to explore whether the approach outlined in Section 4.3 was one that the EA would consider or whether we have previously misunderstood your references to the 110/25 percent rule.

Whilst we do not consider that the concept of ‘credible scenarios’ offers an opportunity to reduce secondary containment capacity we remain open to receiving proposals where it can be demonstrated that deviation from the 110/25% rule is possible without compromising the level of environmental protection.

Attachments: Comments on Assumptions in Slide 3.docx; Credible Scenarios Thames Water.docx

Hi Steve

Yes earlier this week I received feedback from colleagues and lawyers on credible scenarios as appears in CIRIA 736 – attached for information.

I was also tasked with commenting on the slides you presented at our earlier meeting and I've focused on slide 3 – see attached.

Thanks for the update I've made some notes in red below. You should also be receiving feedback from the Water UK IED Task and Finish Group which met earlier today where we worked through the remaining elements of the 46 technical queries received in September.

I have been speaking to Area colleagues about the ongoing discussion regarding extensions to improvement condition deadlines in the Reading permit. We should be able to agree an extension to the liquor sampling and analysis ICs as we've identified some technical challenges that need to be bottomed out. I'm visiting the ALS lab in Coventry next Tuesday to talk to the company. I'm less convinced by the case for an extension to the secondary containment IC and support the Area's decision to reject the proposal for deploying temporary defences in the event of a loss of containment.

I'm also concerned to learn that over 50% of the biogas produced at Didcot is being flared off rather than being used to generate power. Not only is this a waste of a valuable energy source it is not possible to issue a permit for the site unless an acceptable solution is proposed. Please can you update me on your plans for Didcot.

You don't often get email from steve.spencer@thameswater.co.uk. [Learn why this is important](#)

Clive, I was wondering whether you had any feedback on the query I raised regarding secondary containment.

As an update following the workshop we have been able to progress the following key actions, (and by way of an update for all), is allowing us to reshape our IED programme.

- Tank Covering – we are developing an integrated, delivery plan aligning with the need to maintain throughput across our 25 Sludge Treatment Centres and our digester refurbishment programme. This will allow us to share a “deliverable/best endeavours” investment programme. Our aim is to share this with you, so that we can agree appropriate timescales for improvement conditions. **For clarity... the ICs will all have a 31 March 2025 deadline, and best endeavours will be considered after that date should the conditions not be complied with. Best endeavours will be your principal mitigation if deadlines are not met. It will be for Area operational teams to decide whether and what enforcement action is appropriate.**
- Cake Barns – we have recognised that this investment will no longer be needed in AMP8 and will be revisited in AMP9 as appropriate. **Thank you**
- Waste acceptance and return liquor monitoring – your guidance and subsequent input from the local EA team, is allowing us to significantly reduce our sampling programme, and we are finalising our approach which we will share with the local EA team as part of the ongoing permit application process. **Please note that we are working on a national solution which recognises the technical limitations of analysing particularly dirty samples such as AD return liquors. I'm meeting Area colleagues tomorrow to update them on progress.**

The final element is the secondary containment. Currently we are drafting an option to follow CIRA C736 which recommends a risk based approach, but would welcome confirmation this indeed is acceptable to the EA. Also, I can confirm we have received confirmation from the local EA team that containment does not necessarily need to be via concrete structures, and alternative can be considered. **Please see comment above about temporary defences.**

Our aim is to confirm as much of the above at the “wrap up” session planned for 25th January.

If you have points of clarification or queries please don't hesitate to drop me a line.

Subject: RE: IED/Defra Call Slides

You don't often get email from steve.spencer@thameswater.co.uk. [Learn why this is important](#)

Clive, many thanks for the clarification and feedback, which is extremely useful and will allow us to review our costs accordingly. I will discuss with our permitting and technical teams and if we have any follow up queries I will drop you a note.

We also promised to provide some information on the back of the workshop regarding secondary containment and clarity regarding the CIRIA C736 guidance – Containment systems for the prevention of pollution.

The document is over 17MB, so difficult to email. I have therefore extracted below the elements where we understood that undertaking a risk assessment and determining a credible failure scenario was an option when sizing the requirements for secondary containment. Primarily linked to the recommendations in “Section 4 – containment system capacity”.

Page 38 Under Section 4.2.1 – The “110 per cent” and “25 per cent rules”, the guidance suggests that “*The basis for much industry practice in the past has been the 110 per cent and 25 per cent rule. Although not following the risk based approach recommended in this guide, this practice has been in use for many years*”.

We interpreted this to suggest that the previous 110/25 percent rule was not recommended, but was recognised as an historically accepted practice.

Page 43, Section 4.3 Method for Assessing Containment Capacity then refers to a recommended approach which references “*...the containment should be capable of retaining:*

- *The total volume of inventory that could be released during a credible incident*
- *The maximum rainfall that would be likely to accumulate within the containment before, during and and/or after an incident.....”*

“In determining containment requirements, the volume of substance should be based on the loss from a credible scenario.....”

Hopefully, this provides context as to the further point of clarification I raised at the end of the meeting. In some cases the consideration of a “credible scenario” could reduce the scale of secondary containment and align more to a risk based approach. Given the CIRIA736 guidance document – we therefore wanted to explore whether the approach outlined in Section 4.3 was one that the EA would consider or whether we have previously misunderstood your references to the 110/25 percent rule.

Many thanks for your offer to look into this matter and provide clarification.

Regards

Steve Spencer

Dear Steve

I'm writing in relation to the action taken by the EA at our meeting yesterday.

EA: By COP 14 Dec To confirm waste acceptance position to Thames in writing. Copy in Defra and Ofwat.

Waste Acceptance

Assumptions	Evidence
<ul style="list-style-type: none"> - Instructed to develop a proposal for a waste acceptance procedure that meets the requirements of Appropriate Measures - Characterisation of wastes imported - requirement to testing at MCERTS or UKAS accredited labs - Visually inspect every load (to visually inspect, some sort of sample needs to be taken to visualise it) - Every import to be sampled and analysed to confirm pre-acceptance checks - Procedure to be the same for inter-site as for third party imports 	<p>11) Final Opportunity Letter for Camberley from T Wager received 12th Oct 2022 to visually inspect every load, MCERT or UKAS accredited labs, inter[1]site to be subject to the same level of compliance as third-party wastes</p> <p>12) Final Opportunity Letter for Camberley from T Wager received 31/05/2023 – meet the requirements of ‘Appropriate Measures’. Key areas include but not limited to non-conformance/rejection, sampling, and visual assessment</p>

Our response

Despite being given multiple opportunities you failed to provide information to demonstrate compliance with BAT 2. The sludge can be expected to be of reasonably consistent quality, and where this is the case we would normally expect the producer to characterise the waste and rely on this evidence for multiple loads. You claimed to have a cradle to grave knowledge of the inter-works sludges but could only provide analysis results dating back to 2000 and 2009. The Pre-acceptance and Acceptance Procedures available to us at the time (version 2) and your responses to questions were incomplete or otherwise inadequate. Despite requests we received no amended procedures in respect of operations at Camberley. Tommy’s letters presented you with the default requirements which were considered necessary if you failed to present us with proposals for less onerous alternatives and supported this with evidence.

Comments in the 2 referenced letters have now been superseded by the requirements in the permit which was issued in early November. This references in *Table S1.2 'Operating Techniques'* an updated Pre-acceptance and Acceptance Procedure (version 3) originally received for your Reading sludge treatment facility. For clarity, this new procedure does not propose the sampling and analysis of each load. Instead and as recommended it commits you to conducting a sludge characterisation exercise, the results of which will form the basis for acceptance of inter-works sludges at Camberley. This exercise will need to be repeated periodically or when there is a significant change in operations likely to alter the nature of the sludge.

The cost of this periodic characterisation of sludge will be substantially less than the cost of sampling and analysing every load. You should therefore recalculate your costs against the permit requirements and apply this across each of your sludge sites.

Regards

Clive

Michael, here are some introductory slides – if you can circulate to all attendees that would be great.

Our proposal is to talk through the assumptions on slide 3 – as it is our understanding of these assumptions that is driving the scope and costs.

During the session we have slides that will answer many of the questions you posed in your email – and we have site by site detail if required. (And will share a deep dive on Rye Meads).

PS Attendees at our end on the call – we are all in a single room at our Reading Offices.

Michael, thank you for the positive feedback. We also felt it was a successful meeting - between all parties, we identified actions that could make a material difference to the chemicals programme.

We will be taking a similar approach to IED. We will be laying out the assumptions in our plan at a high level, and the rationale for those assumptions. To help ensure we can clear up any misunderstandings we will also identify the correspondence with the EA, that has led us to our conclusions.

We will then discuss options which could significantly reduce the investment requirements – subject to EA review and ensuring we have understood the BAT conclusions correctly.

We also have all the details available site by site, including a deep dive into Rye Meads.

We are aiming to try and get some information pulled together and distributed as soon as possible.

Hi Steve,

You should have received an updated question sheet for tomorrow. The Chemicals call was successful today in large part because Thames identified flexibilities and any barriers ahead of time. Would you and your colleagues be able to replicate this format for IED tomorrow?

Michael

1. Introduction

AtkinsRéalis were tasked to undertake a high level BAT assessment for secondary containment at Reading STC and the provisions within 'Best Available Techniques' (BAT) for waste treatment under the Industrial Emissions Directive (IED) [1] with specific regard to BAT 19 and CIRIA C736 [2]. This could be used to inform whether the provisions for secondary containment within the existing permit for Reading STC could be re-visited as part of the updated BAT assessment.

The EU's Industrial Emissions Directive (IED) [1] takes an integrated approach to controlling pollution to air, water and land, and sets challenging industry standards for the most polluting industries. The IED aims to prevent and reduce harmful industrial emissions, while promoting the use of techniques that reduce pollutant emissions and that are energy and resource efficient.

Applicable facilities are required to use 'Best Available Techniques' (BAT) to prevent or minimise emissions and impacts on the environment. 'Techniques' include both the technology used and the way the installation is designed, built, maintained, operated and decommissioned. BAT reference documents (BREFs) [3], informed by BAT Conclusions, contain emission limits associated with BAT, which must not be exceeded unless agreed.

This Technical Note seeks to identify the relevant provisions within the BAT conclusions, BAT reference document for waste treatment, other guiding documents and CIRIA, and therefore identify what the storage volumes of secondary containment need to be and how this applies to Reading STW to assess / inform whether the provisions for secondary containment within the existing permit for Reading Sludge Treatment Centre could be re-visited.

2. Applicable provisions for secondary containment

2.1 Waste Treatment BREF document

The published Waste Treatment documents [4] cover:

- common waste treatments such as the temporary storage of waste, blending and mixing, repackaging, waste reception, sampling, checking and analysis, waste transfer and handling installations, and waste transfer stations.
- biological treatments of waste such as aerobic/anaerobic treatments and mechanical and biological treatments.
- physio-chemical treatments of waste such as dewatering, filtration, oil/water separation, precipitation, solidification and stabilisation.

Specifically, the sections of BREF that detail how secondary containment should be managed:

- Section 2.3.11 Techniques for the prevention and reduction of soil and water contamination
 - Having in place **containment measures to prevent wastes from escaping**. All bunds, humps, vessels, tanks, pipes, containers are sound, and maintained and checked as required.
 - Providing and then maintaining the **surfaces of operational areas**, including applying **measures to prevent or quickly clear away leaks and spillages**, and ensuring maintenance of drainage systems and other subsurface structures.
 - **Depending on the risks** posed by the waste in terms of soil and/or water contamination, making the **surface of the whole waste treatment areas** (e.g., waste reception, handling, storage, treatment and dispatch areas) **impermeable** to the liquids concerned.
 - **Depending on the risks** posed by the liquids in terms of soil and/or water contamination, ensuring that the areas where **liquids are transferred are banded** and that the bund is resistant to stored materials. The bund is designed so that in the event of an accident the liquid can be contained until security measures are in place. The **bund has sufficient capacity** to cope with any spillage and firefighting water (it is **normally sized to accommodate the loss of containment of the largest tank** within the secondary containment) and is used to ensure containment of wastes and raw materials.
- Section 6.1.5 Emissions to Water (BAT19)
 - Technique D - Techniques to reduce the likelihood and impact of overflows and failures from tanks and vessels - **Depending on the risks posed** by the liquids contained in tanks and vessels in terms of soil and/or water contamination, this includes **techniques such as**:
 - overflow detectors.
 - overflow pipes that are directed to a contained drainage system (i.e., the relevant secondary containment or another vessel).
 - tanks for liquids that are located in a suitable secondary containment; the volume is normally sized to accommodate the loss of containment of the largest tank within the secondary containment.
 - isolation of tanks, vessels and secondary containment (e.g., closing of valves).

TECHNICAL NOTE

- Technique H - Design and maintenance provisions to allow detection and repair of leaks - Regular monitoring for potential leakages is risk-based, and, when necessary, equipment is repaired. The installation of **secondary containment for underground piping may be limited in the case of existing plants.**
- Emissions from Storage (guidance for BAT implementation) [5] specifies that secondary containment must be coated with an impermeable material and have the same height as the maximum liquid level, **a total capacity 25% greater than the capacity of the associated tank or sufficient capacity to accommodate the loss of containment of the largest tank** within the area covered as applicable.

2.2 Control of Major Accident Hazards Regulations (COMAH)

The main aim of the Control of Major Accident Hazards Regulations [6] is to prevent and mitigate the effects of those major accidents involving dangerous substances that can cause serious damage/harm to people and/or the environment. COMAH ensure that businesses and duty holders:

- take **all measures necessary** (AMN) to prevent major accidents involving dangerous substances,
- limit the consequences to people and the environment of any major accidents that do occur.

AMN must be in place **'so far as is reasonably practicable'** (SFAIRP) to prevent environmental harm and in particular a 'major accident to the environment' (MATTE). AMN are interpreted to require use of good practice for pollution prevention, and these are deemed to be in place when the risks are demonstrated to be either 'broadly acceptable' or ALARP. The HSE definition states:

*"ALARP, 'as low as reasonably practicable', [enables the regulator] to set **goals** for duty-holders, **rather than being prescriptive**. This flexibility is a great advantage, but it has its drawbacks too. Deciding whether a risk is ALARP can be **challenging because it requires operators and regulators to exercise judgement**. In essence, making sure a risk has been reduced **ALARP is about weighing the risk against the sacrifice needed to further reduce it.**" [7]*

2.3 Environmental Permitting Regulations

The Environmental Permitting Regulations (England and Wales) [8] recognises the potential harm that can be caused by accidental releases from primary containment vessels and a condition of the permit will be the **provision of secondary containment or other appropriate measures** to prevent or minimise leakage from the primary container.

No specific recommendation is made on containment capacities, however, where there is potential for significant pollution to occur an emissions management plan is required informed by an environmental risk assessment. The outcome of the risk assessment determines the containment or other measures that may be required.

2.4 Biological waste treatment: appropriate measures for permitted facilities.

This guidance [9] explains the standards (appropriate measures) that are relevant to permitted waste management facilities that handle organic waste, also known as biowaste. The guidance explains that there is overlap between best available techniques (BAT) for waste installations and necessary measures for waste operations. The Environment Agency uses the term 'appropriate measures' to

TECHNICAL NOTE

cover both sets of requirements. The guidance sets out what you **must** consider when assessing the appropriate measures for a facility, it also allows alternative measure to be proposed but they must achieve the same level of environmental protection and provide the evidence to support this.

Section 4.2 provides guidance on primary and secondary containment and states:

Existing sites

16. Operators of existing sites **must use a chartered engineer** to carry out a detailed **assessment of primary and secondary containment** where it has not previously been validated to industry recognised standards.
17. You **must assess containment structures against CIRIA 736**. This is a risk-based assessment. Where you have not used CIRIA 736, the assessment must be an equivalent approved standard. Where improvements are identified, you must propose an improvement programme or process monitoring to make sure there are no uncontrolled process releases.
18. You **should monitor underground pipe work** or ducting and drainage to make sure there is no leakage.
19. **Underground tanks should have secondary containment**. You **must implement a method of inspection and leakage detection** as a minimum.

2.5 CIRIA C736 Guidance Document

CIRIA C736 [2] was published in 2014 to provide practical guidance on containment systems around best practices on spill prevention, mitigation, and response following several incidents including the Buncefield Fire. The guidance advocates a risk-based approach to managing the storage of inventory appropriate to the regulatory regime within which a site or facility is operating.

Secondary containment minimises the consequences of a failure of the primary storage by preventing the uncontrolled spread of the inventory. Secondary containment is achieved by equipment that is external to and structurally independent of the primary storage, for example concrete or earth bunds around storage tanks, or the walls of a warehouse storing drums.

Clause 1.3.3 states that “*The application of this guidance to existing facilities should be **based on risk**, and any upgrades completed to reduce risk sufficiently to satisfy the law and to be in accordance with guidance under the relevant legislative regime. Upgrades may be subject to as **low as reasonably practicable (ALARP) and/ or best available techniques (BAT) ‘tests’ and supporting cost-benefit analyses (CBA)** depending on the legislative regime (COMAH, EPR etc). It is, however, recognised that **the costs of upgrading existing facilities might outweigh the environmental benefits**, and therefore not be viable, or that other equally effective risk reduction measures to those suggested in this guidance may be implemented*”.

Details on estimating containment capacity for local systems can be found in 7.Appendix A.

2.6 WINEP – Options Development Guidance

Introduction of the Industrial Emissions Directive [1], as transposed into the Environmental Permitting Regulations [8], is not seen by the Environment Agency as a new obligation arising from environmental legislation. As such this is not included within the Water Industry National Environment Programme (WINEP) [10].

However, if IED provision had been included in the WINEP for PR24 the industry would have had to follow the WINEP Methodology. The WINEP options development guidance [10] sets out the 6 principles water companies should follow when developing the WINEP options:

- Environmental net gain – **quantifiable benefits** to the environment and society.
- Natural capital approach.

TECHNICAL NOTE

- Catchment and nature-based solutions – where feasible.
- Proportionality - **options** to address the environmental risks and issues ensuring the full range of benefits and opportunities are identified.
- Evidence - **evidence based** and transparent.
- Collaboration - collaborative approach with regulators to understand the environmental risks.

It also sets out the evidence required to support the options development and sets out how to evaluate **costs and benefits** of WINEP options to support consistency across water companies.

A **best value plan** is one that considers factors alongside **economic cost** and seeks to achieve an outcome that increases the overall **benefit to customers, the wider environment and overall society**. A best value plan should be efficient and affordable to deliver, legally compliant and account for the range of legislation that applies to it.

In developing the best value plan the methodology requires development of a fully unconstrained list of options, which are then screened against:

- Expected to meet statutory obligation(s) or meet non-statutory requirements.
- Contribute to the WINEP wider environmental outcomes.
- Be technically feasible.
- Be deliverability.

This short-list is then further assessed to leave a list of feasible options. Importantly this stage requires a whole life calculation of costs and benefits (including environmental benefits and dis-benefits using natural capital metrics) calculated over 30 years considering opex and capex to be completed.

From the feasible options a preferred, lowest cost and up to 2 alternative options are submitted for review and consideration by the EA.

3. CIRIA C736 - Risk Assessment and Containment Classification Approach

3.1 Risk Assessment

Risk is a combination of **consequence** and the **likelihood** (or probability of occurrence) of that consequence. Consequence can be further defined in terms of the extent of harm and the severity of harm.

CIRIA C736 [2] recognises the fact that there is always a finite risk of a loss of primary containment, for example error in design, structure behaviours differently than expected, construction error etc as well as changes over the asset life due to O&M issues.

The general framework for the risk assessment is a three-step approach:

- Step 1 applies the source– pathway–receptor model to the site to assess the hazard presented by the inventory to the surrounding environment.
- Step 2 considers the likelihood of a loss of containment. This will depend on several factors such as the reliability of the operations and inspections undertaken on site, the conditions of the primary storage vessels and the degree they are protected from impact damage etc.
- Step 3 uses the likelihood of a loss of containment and combined with the site hazard rating which leads to a recommendation for an appropriate class of containment.

The **Source** considers such things as:

- The inventory being contained and its potential impact as a pollutant if released,
- Environmental Harm Index (EHI) – a function of the sensitivity of the receptor, severity of the impact, extent of the impact and duration it could last for.
- Toxicity Hazard Assessment

Pathway considers the means by which a substance would reach the receptor and looks at the topography, geology and hydrogeology of a site and the proximity of receptors. In addition, climatic conditions are considered as these can impact the way and speed that substances can reach receptors.

Receptors includes humans, animals, fish, plants and biota, watercourse or body, groundwater or soils that would be affected (directly or indirectly) by the escape of the inventory. A receptor could also be a downstream process such as a WwTW, which could be impacted if the substance overloads that process.

The three factors are now combined to obtain an overall **site hazard rating** designated as high, moderate or low.

To assess the risk, it is necessary to consider the events that may lead to the release of inventory from the primary containment and the likelihood that this would occur.

The potential failures and the reasons for failure are stated to include:

- operational failures, such as failure of plant, or human failure by operators
- shortfalls in design – lack of alarms and fail-safe devices
- structural failure – materials, components, detailing, corrosion or when exposed to heat and flame.

TECHNICAL NOTE

- abuse – inappropriate change of use or other misuse
- impact, e.g., from a vehicle
- vandalism, terrorism, force majeure etc
- flood, fire or explosion
- geological factors -subsidence etc
- ageing or deteriorating assets/sub-components.

By analysing the events and circumstances that may affect a site it is possible to arrive at an assessment of the probability of a loss of containment and release of inventory expressed as low, medium or high. It is unlikely to be possible to precisely estimate the probability of a failure of the primary containment due to the inherent uncertainties involved, and as such the guidance gives the following probabilities outlined in Table 3-1:

Table 3-1: CIRIA C736 Containment risk probabilities

Loss of containment risk	Annual Probability
High	Greater than 1% (1 in 100)
Medium	Between 1% (1 in 100) and 0.001% (1 in 1 million)
Low	Less than 0.001% (1 in 1 million)

The loss of containment risk is combined with the source– pathway–receptor risk to give an overall site hazard risk outlined in Table 3-2:

Table 3-2: CIRIA C736 Site Hazard Risk Categorisation

Site Hazard Risk	Combined risk (containment loss/S-P-R)
High	HH, HM, MH
Medium	MM, HL, LH
Low	LL, ML, LM

An alternative method that CIRIA C736 refers to combines EHI with likelihood of occurrence (frequency) and has three zones showing where mitigation would be required:

TECHNICAL NOTE

Figure 1: Risk / frequency model from CIRIA C736

3.2 Containment Classification System

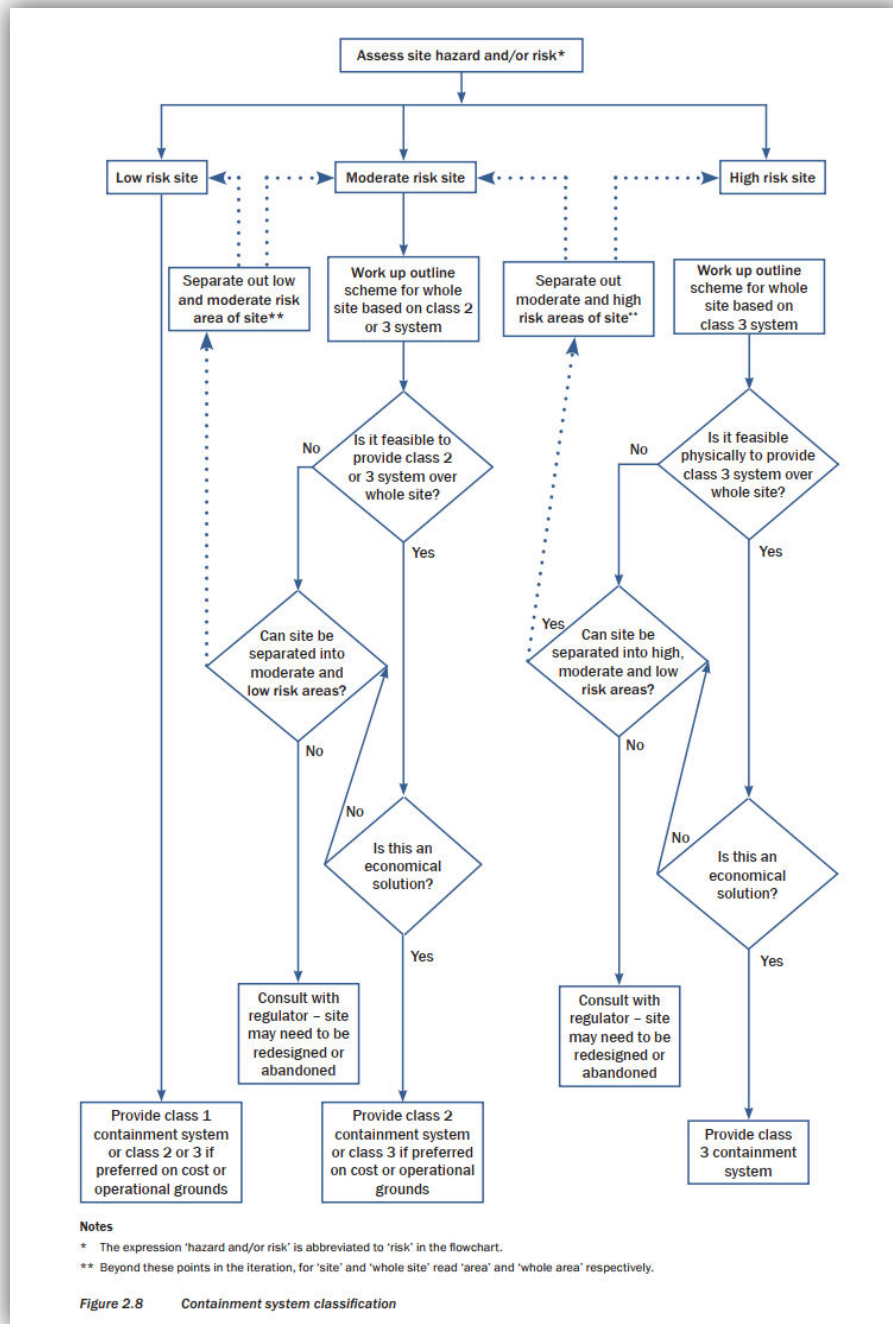

Based on the results of the risk-based assessment, the guide then provides specific recommendations for managing the assessed level of risk appropriate to the class of containment. Recommendations cover design, construction and performance considerations with increasing requirements corresponding to the three classes in terms of design and construction integrity:

- low overall site risk containment type class 1, i.e., base level of integrity,
- moderate overall site risk containment type class 2, i.e., intermediate degree of integrity,
- high overall site risk containment type class 3, i.e., highest degree of integrity.

The site classification uses a flowsheet (Figure 2) to identify the containment class that should be provided at a site.

Figure 2: CIRIA C736 Containment System Classification

TECHNICAL NOTE

Class 2 and Class 3 containment systems, located on sites classified as relatively medium and high overall risk, respectively, include more detailed recommendations compared to Class 1 containment systems which are located on sites classified as low overall risk. The guide further provides increased requirements for classes 2 and 3 in terms of testing, inspection, and maintenance of the containment system to ensure ongoing integrity.

The guide recommends that the risk assessment and capacity requirements of secondary containment should be routinely reviewed in accordance with the specific methodology set out in the report, but as minimum this should be undertaken every five years or where *'there are any modifications made to the primary or secondary containment; the volume of material in the primary containment is increased; the nature of the material in the primary containment is change/reclassified; or the potential pathways and/or receptors have changed.'*

TECHNICAL NOTE

Once the class secondary containment system has been validated, it is recommended that a gap analysis exercise be conducted to identify any deficiencies in the system's design or operation against criteria that are specific to its containment class. This exercise also includes determining the necessary improvements to ensure that the identified risks have been managed sufficiently to comply with the law. Where the class of a secondary containment facility has not been determined (e.g., for pre-1994 and small sites) the guidance stipulates that a baseline asset survey should be completed by competent personnel to identify and evaluate the effectiveness of existing control measures, irrespective of class, to then allow classification by the CIRIA C736 risk-based methodology.

3.3 Containment system capacity

Where the site hazard assessment shows that there is a risk to receptors from loss of containment, secondary containment systems are required. The size of the containment system has to be sized on a most likely credible failure scenario so that it is efficient (i.e., economic in terms of resources) and adequate (i.e., has the required capacity to store the spill).

3.3.1 The '110%' and '25%' rules

Within CIRIA there is reference to a simplified sizing method has been used as an industry 'rule of thumb' historically, however this **does not follow the CIRIA recommended risk-based approach** (see CIRIA C736 section 4.2.1 paragraph 1). This method employs:

- Where a single bulk liquid tank is banded, the recommended minimum bund capacity is 110% of the capacity of the tank.
- Where two or more tanks are installed within the same bund, the recommended capacity of the bund is the greater of:
 - 110% of the capacity of the largest tank within the bund.
 - 25% of the total capacity of all of the tanks within the bund, except where tanks are hydraulically linked in which case they should be treated as if they were a single tank.

3.3.2 CIRIA C736 Recommended Approach

The CIRIA C736 recommendations on estimating capacity for local systems (designated areas surrounding primary storage vessel to contain spills) can be summarised as follows:

- Allowance based on risk assessment of a credible spill scenario while accounting for tertiary containment (measures for additional level of spill protection such as diversion tanks and lagoons) and where applicable fire-fighting waters.
 - For single-tank installations minimum capacity of 100% of the primary containment volume.
 - For multi-tank installation capacity based on risk assessment around credible scenario
- Allowance for total volume of accumulated rainfall with annual exceedance probability (AEP) of 10% (if uncovered) with a minimum retention period of eight days.
- Minimum freeboard (increased height to account for uncertainty factors) of 100 mm for firefighting agents (e.g., foams).
- Freeboard allowance for dynamic effects which varies depending on the type of containment structure e.g., 250 mm for secondary containment tanks.

Additional allowances, such as the provision of sufficient capacity to manage firefighting and cooling water, are also included in containment capacity estimates for remote systems (designated areas

TECHNICAL NOTE

located away from spilling or leaking equipment) and combined systems, which contain elements of both local and remote systems along with the means of collecting and transferring spills.

The CIRIA C736 further states:

“The designer of the containment system should take into account the probability of a number of events occurring simultaneously. The worst-case scenario for containment is represented by the design return period rainfall (e.g., the rainfall that is likely to occur, e.g., once in 10 years) coinciding with the sudden and total loss of primary containment and a fire involving applied firefighting water. At low-risk sites or sites where it can be demonstrated that the probability of a simultaneous occurrence of events is sufficiently low, it may be possible to apply less stringent capacity requirements. Such relaxations should be subject to the designer’s and site operator’s discretion and the agreement of the various regulatory bodies in the light of the particular circumstances.”

Which implies that if the designer can demonstrate that the risk of worse-case scenario is low then a lower level of containment could be proposed.

4. Discussion point

The EA have stated that they expect relevant guidance (e.g., CIRIA C736) be adhered to for new and existing facilities and have advised that adherence to the more conservative 110%/25% rule is expected rather than a risk-based approach.

BREF states that secondary containment should be able to accommodate the total volume from the largest tank within the containment area, and a risk-based approach should be followed to assess the impacts of containment failure.

Whilst CIRIA C736 discusses the 110%/25% rule it doesn’t recommend this as a blanket approach and suggests a site-specific risk assessment is more appropriate to ensure that secondary containment is efficient and adequate.

The CIRIA C736 approach (e.g., 110%/25% rule) may result in costs greater than those if only BREF requirements (largest tank volume) were met. However, it should be noted that CIRIA C736 was developed prior to BREF being released and was based on UK containment experiences and as such does go further than the later recommendations of BREF. The EA have used CIRIA C736 in their interpretation of BREF requirements at a national level for all new permit applications, as they have done historically.

Whilst CIRIA C736 has wide applicability, Section 1.2 of the guidance describes issues that are not covered in the guide. This specifically states that “sewage and sewage effluents, farm waste and related materials” are excluded as “Stored inventory”.

The guidance also notes in Section 1.1.3 that the “costs of upgrading existing facilities might outweigh the environmental benefits, and therefore not be viable, or that other equally effective risk reduction measures to those suggested in this guidance may be implemented”.

As such there is precedence within BREF and CIRIA C736 that suggests site specific risk assessment should be carried out to ascertain the most cost beneficial secondary containment solution, while providing an acceptable level of environmental protection. Neither document state that the solution must provide total environmental protection, rather as low as reasonably practical.

5. Findings

The review of the relevant documents detailed in Section 2 and following the Risk Assessment and Containment Classification approach in Section 3, the impacts at Reading on the most credible primary containment failure are detailed in Table 5-1 below. This shows that it is unlikely that there will be a catastrophic failure of the largest storage vessels due to their construction, age and condition. However, there is a medium risk that a lower level of containment loss (leak) or a slower release (failure of a pipe penetration) could occur. In addition, the arrangement of these tanks would unlikely cause a cascade failure of other tanks. As such the 'rule of thumb' consideration of 25% of total tank volume is not a credible solution and worse case would be 100% loss of the largest tank.

Furthermore, this risk is low and could be managed via more local secondary containment around the higher risk pipe penetration areas. The remaining area around the tanks could be laid to hardstanding fed to a drainage system back to the adjacent WwTW should minor leakage occur from the entire tank. A full risk assessment based on CIRIA C736 methodology can be seen in Section 7.Appendix A Reading Site Specific Risk Assessment.

The failure mode analysis using the CIRIA C736 recommended risk-based approach suggests that the site is MEDIUM risk and therefore a lower level of containment might be acceptable to offer the same level of environmental protection. Furthermore, a review of the credible failure modes shows that the failure of multiple assets simultaneously is unlikely and therefore a secondary containment system of 110% of the largest single tank, in line with BREF, is more appropriate.

Table 5-1 - Risk Assessment and Containment Classification

	Failure at a penetration (pipe or mixer)	Fire and/or explosion	Overflow/spill	Adverse pressure build-up (burst or negative pressure collapse/inwards buckling)	Corrosion	Leak	Mechanical (physical) failure	Equipment failure	Tank impact (e.g., vehicle)	Operator / human error
Impact at Reading	There are low level penetrations into the tanks for the feed pipe and the mixing system. These were cast during the construction of the insitu reinforced concrete tank with correctly designed thrust and water stops. On the glass fused to steel tanks, these were all installed during manufacture/construction and have the correct level of strengthening around the opening. The stub pipes have bolted flanges attached to isolation valves. The orientation of the pipes is away from the bank of tanks, thus reducing risk of jetting adversely impacting/damaging other tanks. The tanks have been in service for 20-years and have not shown any sign of failure of these penetrations. Visual inspection is carried out during site walk-arounds to look for sign of damage, missing bolts, leakage and none have been identified.	Biogas is contained in separate gas holders protected by catenary lightning conductors to reduce risk of explosion/fire from lightning strikes. Robust procedures in place to avoid risk of biogas release and working in zoned areas is controlled by Permit to Work system	Overflow from tanks is monitored by level protection inside tank and for the primary digesters there are pressure release valves on roof. Both are monitored and alarmed to the site control room and remote operations centre. Other tanks on site are fitted with high level overflows to drains that return to the WwTW, these are also monitored with high level alarms and process inhibits to upstream pumping.	Pressure monitoring on pumps and tanks to mitigate risks.	Concrete tanks - so unlikely within life of assets. Glass fused to steel tanks are potentially prone to corrosion if the glass gel coat is damaged (such as through impact damage or scour due to process fluids) Regular inspections are carried out to look for surface pitting that if left unchecked could lead to panel failures. Damaged panels are replaced when identified.	Potential risk around joint failures, especially of construction mastic. Periodic replacement and resealing and monitoring for visual indication	Insitu reinforced Concrete tanks - so unlikely within life of assets Glass fused to steel tanks are potentially prone to corrosion if the glass gel coat is damaged (such as through impact damage or scour due to process fluids) Regular inspections are carried out to look for surface pitting that if left unchecked could lead to panel failures. Damaged panels are replaced when identified. Impact of failure of tank on adjacent tanks is negligible due to construction (e.g., RC, low pressure, slow release and orientation of most likely damage locations)	Potential risk around mechanical plant (pumps and valves) but generally low volume release	Very Low probability and protective barriers (armaco, kerbs etc) in place where there is a perceived risk	Potential for operator error, but online instrument and monitoring should identify process parameters before failure occurs
Likelihood	MEDIUM	LOW	LOW	LOW	LOW	MEDIUM	LOW	LOW	LOW	MEDIUM
Mitigation	- Frequent inspection of penetrations - Online instruments to protect against vibration/load - Design undertook full HAZOP study to understand failure modes	Fire alarms and containment in place already; Lightning protection to current standards	Not a risk due to arrangement of tanks	Not a risk due to arrangement of tanks	Not a risk due to arrangement of tanks	- Periodic inspection of tanks - Proactive repair of surface cracks and replacement of sealant	Not a risk due to arrangement of tanks - impact on adjacent tanks is negligible due to construction and orientation.	Proactive maintenance of ancillary equipment	Impact protection already installed	Proactive maintenance of ancillary and monitoring equipment Operator training
Potential containment solution(s)	Local hardstanding to road drainage; temporary spill containment systems; gully sucker to clean up spills	No additional works	NONE	NONE	NONE	hardstanding around tank	Challenge to 125% of total volume as negligible likelihood of multiple tank failures. Single tank failure possible due to failure of ancillary equipment but this would only lose containment of single vessel. Therefore, recommend that 110% of single tank for overall secondary containment	NONE	NONE	NONE

6. Secondary Containment Solutions

Containment solution	CIRIA C736 Class	Strength	Weakness	Reading consideration
Full concrete bund wall around tank area	Class 3	<ul style="list-style-type: none"> Local to tanks. Fully engineered containment system. 	<ul style="list-style-type: none"> Will need to be emptied to remove rainwater. Access into bund area will need stairs and lifting facility to move plant/machinery into area. Hinders easy operation of site as vehicle access not possible. Construction will interfere with ongoing operation. 	No, adverse impact on existing operation
Accessible concrete bund wall around tank area	Class 2/3	<ul style="list-style-type: none"> Local to tanks. Fully engineered containment system. Access into bund area provided by vehicle gates. 	<ul style="list-style-type: none"> Will need to be emptied to remove rainwater. Access gates will need to be automated to avoid operator error in leaving them open. 	Yes, mitigates permanent issues with access/egress
Earth bund around lagoon (impermeable surfaces)	Class 2	<ul style="list-style-type: none"> Remote from tank area so construction may not impact operation. Fully engineered containment system. 	<ul style="list-style-type: none"> Will need to be emptied to remove rainwater. Transfer system required from tank area, thereby needed small local bund to tanks or around penetrations to capture initial spill. 	No, topography difficult to provide this option
Earth bund around diffuse spill area (impermeable surface or sacrificial land)	Class 1/2	<ul style="list-style-type: none"> Remote from tank area so construction may not impact operation. Engineered solution. 	<ul style="list-style-type: none"> Initial spill allowed to flow across natural surface area and contained within topography of site. Extended clean up following spill. 	Yes, earth bunding to reduce risk of spill leaving site, with containment utilising topography of site, sites roads,

TECHNICAL NOTE

			<ul style="list-style-type: none"> Some of spill will enter local drainage system 	car parks and/or sacrificial grassed area.
Temporary bunding system (CIRIA C736 section 11.4)	Class 1	<ul style="list-style-type: none"> Remote from tank area so construction may not impact operation. No permanent installation to hinder operation 	<ul style="list-style-type: none"> Initial spill allowed to flow across natural surface area and topography of site. Relies on operator intervention to install barriers after initial spill occurs 	No, not a permanent engineering solution

7. Conclusion

The review demonstrates that a risk-based approach at Reading would still need secondary containment but smaller than the current permit requirements and further consideration of local containment and/or with operational intervention.

The current permit application process has been issued based on a single feasible solution, which is based on the worst case failure scenario. A cost benefit analysis of alternative options, which might provide the same degree of environmental protection but at a lower cost has not been accepted at this time as they were not submitted with the initial permit application. This is contrary to the WINEP methodology, and the risk-based approach recommended in CIRIA C736.

Analysis of the site using the '110%/25%' Rule has demonstrated that an engineering solution can be provided but it is not cost effective and potentially provides more storage than the site requires. As such, using the CIRIA recommended approach shows that the site is medium risk and could provide the required environmental protection by only containing the largest tank volume.

In addition, the most credible failure mode is not a catastrophic tank failure, but rather a slower escape of material over time, due to leakage or a failure of pipe penetration. This could facilitate an operational solution whereby the spill is managed by temporary bunding directed to tertiary containment or controlled return to the adjacent WWTWs – whilst it is appreciated this is not in line with BAT/CIRIA, spill modelling over time could provide evidence that a spill at Reading could be managed without the need for permanent concrete bunding.

Provision of capacity for firefighting water is not required as the contained material is not flammable and therefore only consideration of the stored capacity and management of rainwater needs to be considered.

Appendices

Appendix A. Reading Site Specific Risk Assessment

A.1 Site Hazard Rating

Type of failure modes	1 Failure at a penetration (pipe or mixer)	2 Fire and/or explosion	3 Overflow/spill	4 Adverse pressure build-up (burst or negative pressure collapse/inwards buckling)	5 Corrosion	6 Leak	7 Mechanical (physical) failure	8 Equipment failure	9 Tank impact (e.g., vehicle)	10 Operator / human error
Typical factors to facilitate the failure mode	Pipe stub at the penetration breaks/shears as a result of excess vertical loading: - Design deficiency results in pipe/ancillaries all hanging off the stub rather than being supported elsewhere - Mechanical plant affixed to the stub generates fatigue due to significant vibration (failing bearings or the like) - Valve on outlet fails to operate to provide isolation. - incorrect detailing in original design	Ignition source - examples include - electrical issues with failure of component or fire in adjacent facility. - Gas and air mixture to ignite - unauthorised hot work in the vicinity of the zoned area - lightning strike	Overflow operation and discharge requires inflow to continue, and other exit routes being blocked	- Pressure relief valves blocked - Foaming is a typical element contributing to PRV failure - Failure of level instrument leading to overflowing and lifting of roof structure - Blockage of inlet but outlet pump continues to draw down volume	- Corrosion on internal surfaces (such as through scour from grit) results in water path to external surface. Corrosion exacerbates a weakness in the surface - external mechanical damage to glass coating on steel tank (such as through stone chips from grass cutting) can create corrosion path	- Pipework joint - relaxation of fittings or gasket position or gasket age - incorrect re-assembly of joint after maintenance - failure of joint sealant in construction joints - thermal cracking of concrete	-Corrosion of structural elements (e.g., post tension steel cables, carbonation/sulphite attack of concrete and rebar, loss of gas coating on steel tanks, unwinding of plastic tanks) - Gas holder (raising bell on guide) failure when guide mechanism failed, resulting in misalignment and gas escape. - Gas membrane brittleness leading to fabric cracking	- Failure of control system (monitoring and control instruments) - Valve failure on pipeline linked to tank - Pipe rupture (pressure impacts, erosion, corrosion, UV attack)	- Proximity to road - Driver error/failure to have vehicle leaving road at speed - Incorrectly designed protection barriers	- Incorrect operation of plant - driver failing to detach pipe from tanker discharge - shift handover failing to pass on communication of issues - Lack of training / inexperience
What type of tank / asset is this likely to occur on? (e.g., RC or glass coated steel?)	All tanks. - Glass coated steel more susceptible as has both the connection to the tank as well as the flange, and the tank shell is thinner. - Note that failures, occur when attached equipment not properly supported or a tank is modified, and the design not correctly assessed	Gas holders (membrane or steel bell type)		Glass coated steel tanks as excess pressure gives seeping at panel joints Negative pressures induce buckling. Concrete tanks have sufficient strength that walls not impacted	More likely on Glass Coated Steel tanks	All tanks	All tanks	All tanks	All tanks but glass coated steel tanks more susceptible due to thinner structural elements	All tanks
Age of tank? (any, over a certain age or asset condition?)	Risk will increase with age	Risk will increase with age - electrical assets over 20-yrs old likely to have higher probability of fire due to break down of electrical insulation	Risk will increase with age	Risk will increase with age	Risk increases with age - concrete tanks designed for a 60-year asset life whereas glass coated steel tanks have a nominal life of 20-years	Risk increases with age	Risk will increase with age - membrane gas holders have a nominal life of 15-yrs before deterioration of fabric	Risk increases with age		
Where on the tank / asset is it likely to fail?	- Failure location indicated by the penetration position. Tanks frequently fed at low level and drawn-off at high level - Failure due to the applied loading on the pipe rather than location on the tank	Explosion will lead to loss of containment of biogas, but tank containment not lost Fire examples are where external items caught fire and the fire spread - this is likely to lead to a stoppage of the process (especially if control panels are involved) but not a loss of containment within tanks	Tank does not catastrophically fail as overflow protects from excess loadings, but material will spill until overflow condition is stopped.	Any location where the pressure exceeds the safe working pressure in the system.	Both at the lower margin where potential construction impacts more likely and at the upper margins where fluid levels may vary allowing combined gas/liquid interaction	Any location	Any location	Any location	Generally, towards base of structure	Any location
What would size of failure likely be that would allow spilling? (circular aperture and diameter, crack and crack width-length, etc)	Typical 300-400 mm dia opening is common. May get an initial crack around two thirds of the pipe but failure could be rapid after crack formation	As above - does not impact the tank walls	Not a loss of primary containment	Opening of panel joints	Pin hole escapes in Glass Coated Steel tanks and weeping at fine cracks in concrete	Pin hole escapes in Glass Coated Steel tanks and weeping at fine cracks in concrete	Escape of gas rather than liquid containment		Generally, a catastrophic failure would incur if damage significant enough to impact structural integrity.	
What loss of liquid waste would we get spilling from the tank? How would it be lost? Volume, rate and risk to adjacent tanks?	- Potential for release of 90%+ of tank contents is real from lower penetrations. - Rate of discharge depends upon depth of liquid in the tank. Rate could be in range 500-700 l/s for the likely orifice size. - Risk is low due to rate of flow, time for tank to empty and directional nature of flow. - Risk to adjacent structures depend on pressure behind the flow and the direction of impact on adjacent structures - unlikely to have any impact on concrete structures only glass coated tanks	Volume of loss of biogas is dependent on the scale of the damage to the system, range from a minor emission to full catastrophic loss	Discharge of flow commensurate with the rate of inflow Does not threaten adjacent tanks	Leakage at joints - low rate of escape	Low rates of escape flow and low volumes escaping	Low rates of escape flow and low volumes escaping	Volume of loss is dependent on the scale of the damage to the system, range from a minor emission to full catastrophic loss	Low rates of escape flow and low volumes escaping	Generally deemed a catastrophic failure and loss of content of entire tank. Unlikely to have impact on adjacent structures as energy dissipated around vehicle	Low rates of escape flow and low volumes escaping
Impact on adjacent process tanks - would the failed tank be connected to other tanks? - How are they	Site specific - but generally tanks are not hydraulically linked as process fluid often pumped between them or set as	Fire may result in loss of process capacity but not loss of containment	Discharge of flow commensurate with the rate of inflow Does not threaten adjacent tanks	Site specific - but generally tanks are not hydraulically linked as process fluid often pumped between them or set	Site specific - but generally tanks are not hydraulically linked as process fluid often pumped between them or set	Site specific - but generally tanks are not hydraulically linked as process fluid often pumped between them or set as spill/fill, so largest loss would be 1 tank volume	Site specific - but generally tanks are not hydraulically linked as process fluid often pumped		Unlikely to have impact on adjacent structures	

TECHNICAL NOTE

connected? - Are there valves and/or bypasses?	spill/fill, so largest loss would be 1 tank volume			as spill/fill, so largest loss would be 1 tank volume	as spill/fill, so largest loss would be 1 tank volume		between them or set as spill/fill, so largest loss would be 1 tank volume			
Early warning indication what signs would we get of the failure? Visual, sensors? How long in advance? How could we monitor for these? And how regularly?	- Visual site tours looking for movement around penetrations or damage to pipe/valves, settlement around tanks - clear markers could help operatives notice changes - online instrumentation of flows and vibration monitors Weekly recorded inspection and more thorough annual external inspections	- Fire alarms in relevant locations (e.g., within CHP unit housing) - Condition checks on fuel lines and firebreaks - level indication in fuel sumps - Lightning protection systems in working order (site wide) - catenary wire system over gas holders -	Level sensor in tank giving overflow level and alarm	- Feed/draw off pumps fitted with pressure protection that will be set below safe working pressure in tanks - Pressure sensor would give ability to respond to issue and arrange isolation of flow. - Pressure relief valves fitted to digesters - Pressure test (water test) included as part of 5/10 year inspection for tanks	Visual inspection and NDT testing undertaken during 10-yr inspections	Visual inspection	Visual inspection - check on alignments	Visual inspection	Catastrophic event - no prior warning	Catastrophic event - no prior warning
Likelihood of this failure mode - HSE Ref. Failure Rate and Event Data for use within Land Use Planning Risk Assessments Is there a Reference/source of data? COMAH, CDOIF	Potential weak point of the system 6 failures recorded across (what would be the total number of tanks???? Say 100,000 in the UK) over a 8-9 year period (2010-2018)- so a likelihood of 6/ (800,000)	Electrical equipment installed into these areas is suitably rated (Ex). Low likelihood for this equipment failing. Tank contents at STW are not flammable. Risk of gas gives explosion, but materials do not burn.	Low - particularly when level controls in place as needing instrument failure and control failure	Newer tanks have multiple PRVs - increasing small probability	Tanks designed for appropriate asset life and inspected both internally and externally at prescribed intervals to identify issues.	Low volumes escape and are generally fixable before progressive failure occurs. Normally seen as seepage in joints or failed sealants both of which are patch repairable	Not typical for the sludge tank mechanisms - floating digester roofs are being replaced.	Routine maintenance and condition-based monitoring	Very Low probability and protective barriers (armaco, kerbs etc) in place where there is a perceived risk	Correct training and periodic refresher courses. Rotation of staff to know issues at other sites to cover shift rota's
Impact at Reading	There are low level penetrations into the tanks for the feed pipe and the mixing system. These were cast during the construction of the insitu reinforced concrete tank with correctly designed thrust and water stops. On the glass fused to steel tanks, these were all installed during manufacture/construction and have the correct level of strengthening around the opening. The stub pipes have bolted flanges attached to isolation valves. The orientation of the pipes is away from the bank of tanks, thus reducing risk of jetting adversely impacting/damaging other tanks. The tanks have been in service for 20-years and have not shown any sign of failure of these penetrations. Visual inspection is carried out during site walk-arounds to look for sign of damage, missing bolts, leakage and none have been identified. Impact of failure of tank on adjacent tanks is negligible due to construction (e.g., RC, low pressure, slow release and orientation of most likely damage locations)	Potential risk around mechanical plant (pumps and valves) but generally low volume release	Very Low probability and protective barriers (armaco, kerbs etc) in place where there is a perceived risk	Potential for operator error, but online instrument and monitoring should identify process parameters before failure occurs
Likelihood	Medium	LOW	LOW	LOW	LOW	Medium	LOW	LOW	LOW	Medium
Mitigation	- Frequent inspection of penetrations - Online instruments to protect against vibration/load - Design undertook full HAZOP study to understand failure modes	Fire alarms and containment in place already; Lightening protection to current standards	Not a risk due to arranging of tanks	Not a risk due to arranging of tanks	Not a risk due to arrangement of tanks	- Periodic inspection of tanks - Proactive repair of surface cracks and replacement of sealant	Not a risk due to arrangement of tanks - impact on adjacent tanks is negligible due to construction and orientation.	Proactive maintenance of ancillary equipment	Impact protection already installed	Proactive maintenance of ancillary and monitoring equipment Operator training
Potential containment solution(s)	Local hardstanding to road drainage; temporary spill containment systems; gully sucker to clean up spills	No additional works	NONE	NONE	NONE	hardstanding around tank	Challenge to 125% of total volume as negligible likelihood of multiple tank failures. Single tank failure possible due to failure of ancillary equipment but this would only lose containment of single vessel. Therefore recommend that 110% of single tank for overall secondary containment	NONE	NONE	NONE

The site hazard rating, looking at credible failure modes of the primary containment system has shown that there is unlikely to be a catastrophic failure of a tank, and consequential impact on other tanks due to the most likely failure will have negligible impact – therefore this scenario would be deemed a LOW risk. However, operator error and gradual deterioration of assets over time resulting in leaks could happen which would raise the site hazard to **MEDIUM** risk.

TECHNICAL NOTE

A.2 C736 Containment risk probabilities

Table 7-1: CIRIA C736 Containment risk probabilities

Loss of containment risk	Annual Probability
High	Greater than 1% (1 in 100)
Medium	Between 1% (1 in 100) and 0.001% (1 in 1 million)
Low	Less than 0.001% (1 in 1 million)

Based on the credible failure modes above and an understanding of historic performance of the site where there have been negligible spills in the 20-years that the site has been in operation, the loss of containment risk is deemed as **MEDIUM**.

A.3 CIRIA C736 Site Hazard Risk Categorisation

Table 7-2: CIRIA C736 Site Hazard Risk Categorisation

Site Hazard Risk	Combined risk (containment loss/S-P-R)
High	HH, HM, MH
Medium	MM, HL, LH
Low	LL, ML, LM

Taking the Containment loss risk (medium) and Site Hazard Rating (medium), the overall Site Hazard Risk based on CIRIA C736 is **MEDIUM**.

Using the flowsheet from CIRIA C736 to assess the type of containment system required and the flood risk assessment modelling previously carried out for a catastrophic tank failure (using the 110%/25% Rule) the secondary containment system for the site is uneconomic to provide that for the entire permitted area. Therefore, the methodology recommends separating the area into medium and low risk areas and considering these separately.

TECHNICAL NOTE

Notes

* The expression 'hazard and/or risk' is abbreviated to 'risk' in the flowchart.

** Beyond these points in the iteration, for 'site' and 'whole site' read 'area' and 'whole area' respectively.

Addressee only

Date: 18 March 2024

Chris Weston, CEO Thames Water Utilities Ltd
Email: chris.weston@thameswater.co.uk

Dear Chris

Implementation of the Industrial Emissions Directive

Further to my letter of 7 June 2023 I am writing to update you on the current position regarding the implementation of the Industrial Emissions Directive (IED) to help ensure you remain clear about your environmental permitting obligations.

The original deadline for compliance with the requirements of the IED was July 2015 but due to legal challenges implementation was delayed. This was resolved, and in April 2019 water and sewerage companies were informed of the need to obtain permits and comply with the standards detailed in the Waste Treatment Best Available Techniques (BAT) reference document (the BREF) by August 2022.

This deadline passed and to provide operators additional time to complete their implementation actions we initially extended the date to December 2024 and are now extending this deadline to 31 March 2025, providing consistency across the sector and additional time for planning and implementing necessary improvements. This means you will have had, a full six years to obtain permits and comply with the Waste Treatment BAT conclusions.

To ensure that those who have already received their permits are not disadvantaged we will provide the option of not complying in full with improvement conditions until 31 March 2025. Any interim deadlines contained within improvement conditions, typically for the submission of plans or proposals, will remain unchanged and we will expect you to meet these deadlines.

In September 2023 Defra set companies a deadline of 20 December 2023 to provide any additional information they judged necessary to support their permit applications. The team dealing with water company IED applications has recently been doubled in

size and these submissions are currently being assessed. Any minor deficiencies or clarifications in the applications will be dealt with by information notices, but major deficiencies will result in applications being returned as not being capable of determination or refused. In such instances the facility will be treated as unauthorised and referred to local operational teams to consider the most appropriate action consistent with our enforcement and sanctions policy.

Notwithstanding that you have been aware of the position since April 2019, it is apparent from the information submitted with permit applications that many facilities in the sector are yet to achieve the standards of operation required by the IED. Where this is the case, your permits will include improvement conditions that require compliance with best available techniques by 31 March 2025.

To help you to make the improvements necessary to achieve these standards we are giving advance notice of improvement conditions that we will use where appropriate to deliver the standards required. These conditions can be found in the appendix to this letter. There is already widespread knowledge of these conditions across the industry because they are being shared across Water UK groups such as the Waste and Recycling Network.

The permitting team will continue to process applications throughout the coming year. If you do not currently operate to the BAT standard or equivalent, you should be taking immediate steps to comply do so regardless of whether you have received your permit.

Despite the time that has elapsed we understand that some companies believe that they are unable to implement all the changes and complete the works required to comply with BAT by 31 March 2025. Should you find yourself in this position there is significant risk of enforcement action. In keeping with standard practice we have advised that you should look to document and provide evidence that you have taken all available measures to achieve compliance by the earliest possible date. We have described this as demonstrating 'best endeavours'.

I am sure you will understand that as the regulator we cannot fetter our discretion, putting forward mitigation does not ensure that you will avoid enforcement, but it can be taken into account when deciding the appropriate level of regulatory response. Demonstrating best endeavours requires you to strive to be compliant before the March 2025 deadline and to take all available measures to do so. You do not need to try to demonstrate you have used best endeavours before this deadline.

In any event I would encourage you to continue to work with our permitting team to enable them to issue you with permits, and with your local area team for any site-specific matters arising after the permit has been issued.

Yours sincerely

A handwritten signature in black ink, appearing to read 'G Collins', is centered within a light gray rectangular box.

Georgina Collins
Director, Regulated Industry

Appendix – Improvement Conditions

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
Improvement condition for secondary containment design		
ICX	<p>The operator shall submit a written ‘secondary containment implementation plan’ and shall obtain the Environment Agency’s written approval to it. The plan shall contain the finalised designs and an implementation schedule for the identified secondary containment systems proposed in the document [insert containment report title “xxxxxxxxxxx”, [date]]. The finalised design(s) and specifications shall be produced by appropriate competent individuals (qualified civil or structural engineer), in accordance with the risk assessment methodology detailed within CIRIA C736 (2014) guidance. The plan shall include but not be limited to the following components:</p> <p>An updated BAT assessment with specific regard to BAT 19 of the Waste Treatment BREF.</p> <p>An assessment of the suitability for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure.</p> <p>Finalised designs and specifications of the proposed secondary containment proposal completed by appropriate competent individuals.</p> <p>A program of works with timescales for the commissioning of the secondary containment systems to comply with CIRIA C736 (2014) guidance, or equivalent.</p> <p>An updated site and infrastructure plan.</p> <p>A preventative maintenance and inspection regime.</p> <p>The plan shall be implemented in accordance with the Environment Agency’s prior written approval.</p>	<p>DD/MM/YYYY [6 months of permit issue] or such other date as agreed in writing with the Environment Agency</p> <p>Implementation of all required and approved containment improvements must be completed by 31/03/2025.</p>
Improvement conditions for enclosure of tanks storing (or treating) sewage sludge (pre-AD) [Abatement proposed]		
ICX	<p>Drafting note: Where there are open tanks pre-primary digestion, BAT is to contain and abate these tanks. This IC should be implemented if OCU type and emissions points have been identified and</p>	<p>DD/MM/YYYY [6 months of permit issue] or such other date as agreed</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>emissions and monitoring requirements have been updated as per the permit template requirements.</p> <p>The operator shall submit a written 'enclosure and abatement plan' and obtain the Environment Agency's written approval to it.</p> <p>The plan shall contain the final designs and an implementation schedule for the installation of enclosures/covers and associated emission abatement systems in line with BAT 14 and BAT 53 for storage and treatment tanks pre-anaerobic digestion identified as [insert tank names], and emission points [insert OCU emission points] on the site plan in schedule 7.</p> <p>The report shall include evidence that the tank enclosures/covers will be designed and installed in accordance with guidance Biological waste treatment: appropriate measures for permitted facilities, and provide evidence to demonstrate why the OCUs will be effective and meet the requirements of BAT 53. The report shall include as a minimum:</p> <p>The final designs and an implementation schedule for the installation of enclosures/covers and associated abatement.</p> <p>Full investigation and characterisation of the waste gas streams emitted to points [insert OCU emission points].</p> <p>Evidence that the pollutants of the waste gas stream will be controlled and/or abated either by the abatement plant or by the proposed abatement systems.</p> <p>Abatement stack monitoring results (including but not limited to odour, ammonia, hydrogen chloride and total volatile organic chemicals).</p> <p>Abatement process monitoring results (including but not limited to odour, ammonia, hydrogen chloride and total volatile organic chemicals).</p>	<p>in writing with the Environment Agency</p> <p>Implementation of all required vessel cover improvements and abatement must be completed by 31/03/2025</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>Details of air quality quantitative impact assessment including modelling and a proposal for site-specific “action levels” (including but not limited to odour, ammonia, hydrogen chloride and total volatile organic chemicals).</p> <p>Odour monitoring results at the site boundary.</p> <p>Records of odour complaints and odour related incidents.</p> <p>Recommendations for improvement including the replacement or upgrading of the abatement plant.</p> <p>The plan shall be implemented in accordance with the Environment Agency’s prior written approval.</p>	
Improvement conditions for enclosure of tanks undertaking AD		
ICX	<p>The operator shall submit a written ‘Primary anaerobic digestion vessel cover’ plan and obtain the Environment Agency’s written approval to it. The plan shall contain the final designs and an implementation schedule for the installation of covers for vessels undertaking anaerobic digestion in the [insert number and name of tanks]. The plan shall also contain a detailed description of the proposed gas utilisation plant, gas storage infrastructure for the biogas produced during anaerobic digestion, pressure relief valves and gas pipe-work. The plan shall include but not be limited to the following components:</p> <p>Evidence that the vessel covers, gas utilisation plant and ancillary equipment have been designed by appropriately qualified engineers.</p> <p>Evidence that the vessel covers, and gas utilisation plant will be designed and installed in accordance with guidance, Biological waste treatment: appropriate measures for permitted facilities.</p> <p>An updated Hazard and Operability Study (HAZOP) and DSEAR risk assessment.</p>	<p>DD/MM/YYYY or such other date as agreed in writing with the Environment Agency</p> <p>Implementation of all required vessel cover improvements must be completed by 31/03/2025</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>An assessment of gas storage capacity and gas utilisation capacity including proposals for additional gas utilisation plant.</p> <p>A program of works with timescales for the commissioning of the vessel covers, gas utilisation infrastructure and ancillary equipment.</p> <p>The plan shall be implemented in accordance with the Environment Agency's prior written approval.</p>	
Improvement conditions for enclosure of tanks storing (or treating) stable and unstable digestate		
ICXa	<p>Drafting note: where there are open tanks post primary digestion, it's possible that the digestate produced and stored in these tanks are producing biogas and emitting to atmosphere. We understand that most WaSC sites treat waste for a limited period which is less than the typical residence times for anaerobic digestion. This means that the digestate produced and stored in the open tanks could still be producing biogas. If the applicant has not provided evidence to show that the digestate is stable, then they will need to prove this. This is to inform whether the digestate storage should be enclosed and connected to the site gas management infrastructure or is suitable for standard waste storage requirements in an enclosed tank with air discharged by a suitable abatement system. Include for any open tanks. This IC is a mechanism to determine the type of enclosure required, not a mechanism to justify the tanks remaining open.</p> <p>The operator shall submit a written report, with supporting evidence, on the stability of digestate stored within the [insert name of existing open tank(s)] tank[s] and obtain the Environment Agency's written approval to it. The report shall assess whether an effective digestion process has taken place within the anaerobic digestion tanks and whether biogas emissions from post digestion storage or treatment are minimised. The report shall</p>	<p>DD/MM/YYYY</p> <p>[6 months of permit issue] or such other date as agreed in writing with the Environment Agency</p> <p>Implementation of all required vessel cover improvements must be completed by 31/03/2025</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>assess digester stability and the potential for biogas production. The report shall include but not be limited to:</p> <p>An assessment of residual biogas potential in accordance with the OFW004-005 [N6] methodology specified by BSI PAS 110: Producing Quality Anaerobic Digestate or an equivalent methodology for assessing residual biogas potential of the digestate stored within the [insert name of existing open tank(s)] tanks(s).</p> <p>An assessment of the stability of the digestion process in the [insert name of anaerobic digester tanks], to be undertaken in accordance with BAT 38 of the Waste Treatment BREF. The assessment shall be supported by process monitoring data recorded using an automatic and/or manual monitoring system (and sampling of the digester feed) [replace automatic with manual if they do not use a SCADA system] for the following parameters over a period of one month:</p> <p>pH and alkalinity of the digester feed digester operating temperature hydraulic loading rate organic loading rate volatile fatty acids concentration ammonia liquid and foam levels in the digester</p>	
ICXb	<p>Unless the report approved under [ICXa] concludes that the digestion process is stable and the digestate has minimal potential for biogas production, the operator shall submit a written 'anaerobic digestion vessel cover' plan and obtain the Environment Agency's written approval to it. The plan shall contain the final designs and an implementation schedule for the installation of covers for vessels undertaking anaerobic digestion and storing or treatment of unstable digestate [insert name of tank/vessel(s)]. The plan shall also contain a detailed description of the proposed gas utilisation plant, gas storage infrastructure for the biogas</p>	<p>DD/MM/YYYY [6 months of the Environment Agency's written approval of [ICXa] or such other date as agreed in writing with the Environment Agency</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>produced during anaerobic digestion, pressure relief valves and gas pipe-work. The plan shall include but not be limited to the following components:</p> <p>Evidence that the vessel covers, gas utilisation plant and ancillary equipment have been designed by appropriately qualified engineers.</p> <p>Evidence that the vessel covers, and gas utilisation plant will be designed and installed in accordance with guidance, Biological waste treatment: appropriate measures for permitted facilities.</p> <p>An updated Hazard and Operability Study (HAZOP) and DSEAR risk assessment.</p> <p>An assessment of gas storage capacity and gas utilisation capacity including proposals for additional gas utilisation plant.</p> <p>A program of works with timescales for the commissioning of the vessel cover(s), gas utilisation infrastructure and ancillary equipment.</p> <p>The plan shall be implemented in accordance with the Environment Agency's prior written approval.</p>	<p>Implementation of all required vessel cover improvements must be completed by 31/03/2025</p>
ICXc	<p>Should the report approved under [ICXa] conclude that the digestion process is stable and the digestate has minimal potential for biogas production, the operator shall submit a written 'waste water and digestate storage enclosure plan' and obtain the Environment Agency's written approval to it. The plan shall contain the final designs and an implementation schedule for the installation of enclosures/covers (and associated waste gas abatement systems) for waste water/stable digestate storage tanks identified as: [insert name of tank/vessel(s)].</p> <p>The report shall include evidence that the tank [and lagoon] enclosures/covers will be designed and installed in accordance with guidance, Biological waste treatment: appropriate measures for permitted facilities.</p>	<p>DD/MM/YYYY [6 months of the Environment Agency's written approval of [ICXa] or such other date as agreed in writing with the Environment Agency</p> <p>Implementation of all required vessel cover improvements must be</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	The plan shall be implemented in accordance with the Environment Agency's prior written approval.	completed by 31/03/2025
Improvement conditions for primary containment tanks		
ICX	<p>The operator shall submit a written 'primary containment plan' and shall obtain the Environment Agency's written approval to it. The plan shall contain the results of an inspection and program of works undertaken by an appropriately qualified engineer and shall assess the extent, design specification and condition of primary containment systems (including associated pipework) where polluting liquids and solids are being stored, treated, and/or handled.</p> <p>The plan shall include, but not be limited to: An assessment of the physical condition of all primary containment systems (storage and treatment vessels and associated pipework) using a Written Scheme of Examination and their suitability for providing primary containment when subjected to dynamic and static loads. A program of works with timescales for the implementation of individual improvement measures necessary to demonstrate that the primary containment is fit for purpose or alternative appropriate measures to ensure all polluting materials will be contained on site. A preventative maintenance and inspection regime.</p> <p>The plan shall be implemented in accordance with the Environment Agency's written approval.</p>	DD/MM/YYYY [12 months of permit issue] or such other date as agreed in writing with the Environment Agency.
Improvement conditions for operational storage buffer capacity		
ICX	The operator shall submit a written "waste water and digestate buffer storage plan" and shall obtain the	DD/MM/YYYY [6 months of

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>Environment Agency's written approval to it. The plan shall contain the results of a review of the current storage of waste water and digestate produced from site operations. The review shall propose and describe site contingency arrangements to provide appropriate storage capacity or other appropriate measures to prevent or minimise emissions of waste water or digestate being discharged off site during any occasions when the receiving wastewater treatment works is in storm overflow operating conditions.</p> <p>The storage plan shall include but not be limited to: Proposals for additional storage capacity with secondary containment within the site boundary for wastewater and/or other digestate during any occasions when the receiving wastewater treatment works is in storm overflow operating conditions. Procedures to cease discharges during these conditions. Calculation of a reasonable contingency capacity of waste water and/or other digestate during any occasions when the receiving wastewater treatment works is in storm overflow operating conditions. A description and design specification of the buffer storage infrastructure and secondary containment measures. The design shall be completed by an appropriately qualified engineer and secondary containment shall be designed in line with CIRIA C736. A program of works with timescales for the implementation and construction of the buffer storage. A preventative maintenance and inspection regime.</p> <p>The plan shall be implemented in accordance with the Environment Agency's prior written approval.</p>	<p>permit issue] or such other date as agreed in writing with the Environment Agency</p> <p>Implementation of all required containment improvements must be completed by 31/03/2025</p>
<p>Improvement conditions for establishing an inventory of liquid waste water discharged from anaerobic digestion and associated activities (ARX – ARX) [include activities which are relevant to the AD activity]</p>		

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
ICXa	<p>The operator shall submit a sampling programme in relation to waste water streams and shall obtain the Environment Agency's written approval to it. The sampling programme shall be designed to fully characterise the waste waters discharged to [insert name of WwTW] wastewater treatment works (WwTW) from emission points [insert emission point references e.g. S1, S2, SX] in (table S3.3 of this permit).</p> <p>The programme shall include but not be limited to a methodology for a minimum of one 24-hour flow proportional sample a month, for each emission point, for a period of 12 months. The programme shall detail the sampling methods/standards used. Sampling methods shall be in accordance with BAT conclusion 20 of the Waste Treatment BREF. The programme shall include the National Grid Reference (NGR) of the sampling point(s) location(s).</p> <p>The programme shall establish the characteristics of the liquid waste water streams and shall include as a minimum for each emission point: Average values and variability of flow, pH, temperature and conductivity. Average concentration and load values of all relevant substances and their variability. Data on bioeliminability.</p> <p>The programme shall sample for all relevant substances and must include: Hydrocarbon oil index (HOI) (mg/l) Free cyanide (CN-) (mg/l) Adsorbable organically bound halogens (AOX) (mg/l) Metals and metalloids; arsenic (expressed as As), cadmium (expressed as Cd), chromium (expressed as Cr), hexavalent chromium (expressed as Cr(VI)), copper (expressed as Cu), lead (expressed as Pb), nickel (expressed as Ni), mercury (expressed as Hg), zinc (expressed as Zn) (µg/l)</p>	<p>Within 2 months of issue of this permit</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>The operator shall submit the collected monitoring data in writing to the Environment Agency according to agreed reporting periods.</p> <p>The sampling programme shall be produced in accordance with Environment Agency guidance:</p> <p>Specific substances and priority hazardous substances – Surface water pollution risk for your environmental permit Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk).</p> <p>Monitoring discharges to water: guidance on selecting a monitoring approach Monitoring discharges to water: guidance on selecting a monitoring approach - GOV.UK (www.gov.uk)</p> <p>The monitoring programme shall be carried out and the monitoring data submitted in accordance with the Environment Agency’s written approval.</p>	
Improvement conditions for indirect discharges to water discharged from anaerobic digestion and associated activities (ARX – ARX) [include activities which are relevant to the AD activity]		
ICXb	<p>The operator shall submit a report for approval by the Environment Agency, following completion of the sampling programme approved under ICXa. The report shall include but not be limited to; a summary of the sample results, a completed H1 risk assessment(s) and modelling outputs where appropriate.</p> <p>The operator shall provide conclusions on whether the waste waters discharged from [insert emission point references e.g. S1, S2, SX] will have any adverse impact on the receiving waters once discharged from [insert name of WwTW]. An assessment shall be made against the parameters specified in the relevant environmental standards as specified within Environment Agency guidance as follows:</p>	<p>Within 12 months of the Environment Agency’s written approval of the sampling programme submitted under ICXa or such other date as agreed in writing with the Environment Agency</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>Specific substances and priority hazardous substances – Surface water pollution risk for your environmental permit Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk).</p> <p>Sanitary substances – H1 annex D2: assessment of sanitary and other pollutants in surface water discharges 1076_14 H1 Annex D2 - Assessment of sanitary and other pollutants within Surface Water Discharges (publishing.service.gov.uk)</p> <p>The report shall include any proposals and/or additional measures required to prevent or minimise any significant emissions from the installation along with timescales for implementation.</p>	
ICXc	The operator shall implement any improvements identified within the report approved under ICXb in accordance with the Environment Agency’s written approval and provide written confirmation to the Environment Agency that the improvements have been completed.	Within 12 months of the report in relation to ICXb being approved by the Environment Agency or such other date as agreed in writing with the Environment Agency
Improvement conditions for biogas upgrading plant		
ICX	The operator shall carry out a monitoring study to verify the assumptions made in the application in relation to the releases of pollutants to air. The study shall include the monitoring of point source releases to air from the biogas upgrading plant emission point xx during normal operation, having regard to the Environment Agency technical guidance, Monitoring stack emissions: environmental permits and to MCERTS standards. As a minimum, two separate	DD/MM/YYYY [6 months of permit issue] or such other date as agreed in writing with the Environment Agency

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>monitoring campaigns in a year shall be completed (one monitoring survey six months following commissioning of the biogas upgrading plant).</p> <p>The pollutants to be monitored shall include: Total volatile organic compounds. Hydrogen sulphide.</p>	
ICX	<p>Following the completion of ICX [insert correct IC number], the operator shall undertake an emissions impact assessment of point source releases to air from point xx, using the information obtained through the emissions monitoring. The emissions impact assessment report and all associated monitoring reports and assessments shall be submitted in writing to the Environment Agency for review.</p> <p>The emissions impact assessment shall, as a minimum, include: Reports showing details of the monitoring undertaken and the results obtained. Results of the assessment of long and short-term impacts from the emissions in accordance with Environment Agency Guidance – Air emissions risk assessment for your environmental permit. A completed H1 assessment software tool.</p> <p>If the H1 assessment shows potential long or short-term impacts from the emissions, the operator shall propose an action plan to reduce the impacts of the substances identified.</p>	DD/MM/YYYY [6 months of permit issue] or such other date as agreed in writing with the Environment Agency
Improvement condition to address methane slip emissions from gas engines burning biogas		
ICX	<p>The operator shall establish a site-specific leak detection and repair (LDAR) programme to detect and mitigate the release of volatile organic compounds, including methane from diffuse sources. The plan shall include but not be limited to a diffuse emissions source inventory and associated</p>	Within 6 months of issue of this permit or as agreed in writing with the

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	monitoring arrangements. The plan shall be submitted to the Environment Agency for approval.	Environment Agency
ICX	The operator shall establish the methane emissions in the exhaust gas from engines burning biogas and compare these to the manufacturer's specification agreed in writing with the Environment Agency. The operator shall, as part of the methane leak detection and repair (LDAR) programme, develop proposals to assess the potential for methane slip and take corrective actions as soon as practicable where emissions above the manufacturer's specification are identified.	<p>Within 12 months of the Environment Agency's written approval of the LDAR programme submitted under ICX or such other date as agreed in writing with the Environment Agency [use above text if inserting IC for a new LDAR programme]</p> <p>Within 12 months of issue of this permit or as agreed in writing with the Environment Agency</p>
Improvement condition for review of effectiveness of abatement plant		
ICX	The operator shall carry out a review of the abatement plant [include names of abatement plant and emission point] on site, to determine whether the measures have been effective and adequate to prevent and where not possible minimise emissions	DD/MM/YYYY [6 months of permit issue] or such other date as agreed in writing with

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	<p>released to air including but not limited to odour and ammonia.</p> <p>The operator shall submit a written report to the Environment Agency following this review for assessment and approval.</p> <p>The report shall include but not be limited to the following aspects:</p> <p>Full investigation and characterisation of the waste gas streams.</p> <p>Evidence that the pollutants of the waste gas stream will be controlled and/or abated either by the abatement plant or by the proposed abatement systems.</p> <p>Abatement stack monitoring results (including but not limited to odour and ammonia).</p> <p>Abatement process monitoring results (including but not limited to odour and ammonia).</p> <p>Details of air quality quantitative impact assessment including modelling and a proposal for site-specific “action levels” (including but not limited to odour concentration, hydrogen sulphide and ammonia).</p> <p>Odour monitoring results at the site boundary.</p> <p>Records of odour complaints and odour related incidents.</p> <p>Recommendations for improvement including the replacement or upgrading of the abatement plant.</p> <p>Timescales for implementation of improvements to the abatement plant.</p> <p>The operator shall implement the improvements in line with the timescales as approved by the Environment Agency.</p>	the Environment Agency
Improvement condition for establishing an inventory of liquid waste water discharged from the Head of works waste operation/installation activity (ARX) [include activities which are relevant to the HoW activity]		
ICXa	The operator shall submit a sampling programme in relation to waste water streams and shall obtain the Environment Agency’s written approval to it. The sampling programme shall be designed to fully characterise the waste waters discharged to [insert	Within 2 months of issue of this permit

	<p>assessment for your environmental permit - GOV.UK (www.gov.uk).</p> <p>Monitoring discharges to water: guidance on selecting a monitoring approach Monitoring discharges to water: guidance on selecting a monitoring approach - GOV.UK (www.gov.uk)</p> <p>The monitoring programme shall be carried out and the monitoring data submitted in accordance with the Environment Agency's written approval.</p>	
Improvement conditions for indirect discharges to water discharged from the Head of works waste operation/installation activity (ARX) [include activities which are relevant to the HoW activity]		
ICXb	<p>The operator shall submit a report for audit and approval by the Environment Agency, following completion of the sampling programme referred to in ICXa. The report shall include but not be limited to; a summary of the sample results, a completed H1 risk assessment(s) and modelling outputs where appropriate.</p> <p>The operator shall provide conclusions on whether the waste waters discharged [to/from] [insert emission point references e.g. S1, S2, SX] will have any adverse impact on the receiving waters once discharged from [insert name of WwTW]. An assessment shall be made against the parameters specified in the relevant environmental standards as specified within our guidance as follows:</p> <p>Specific substances and priority hazardous substances – Surface water pollution risk for your environmental permit Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk).</p> <p>Sanitary substances – H1 annex D2: assessment of sanitary and other pollutants in surface water discharges 1076_14 H1 Annex D2 - Assessment of sanitary and other pollutants within Surface Water Discharges (publishing.service.gov.uk).</p> <p>The report shall include any proposals and/or additional measures required to prevent or minimise</p>	<p>Within 12 months of the Environment Agency's written approval of the sampling programme submitted under ICXa or such other date as agreed in writing with the Environment Agency</p>

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
	any significant emissions from the installation along with timescales for implementation.	
ICXc	The operator shall implement the improvements identified within the report approved under ICXb in accordance with the Environment Agency's written approval and provide written confirmation to the Environment Agency that the improvements have been completed.	Within 6 months of the report in relation to ICXb being submitted to the Environment Agency or such other date as agreed in writing with the Environment Agency

Operator:	Thames Water Utilities Limited
Permit Ref:	EPR/MP3338LU/003
Site:	Reading Sludge Treatment Centre
Date:	6/1/2022

[Full Waste Treatment BREF](#)

[Waste Treatment BAT Conclusions](#)

This document has been compiled as a tool to help clearly identify where there may be gaps in complying with the Waste Treatment BAT conclusions.

The information contained only relates to:

General BAT conclusions

General BAT conclusions for the biological treatment of waste

BAT conclusions for the aerobic treatment of waste

BAT conclusions for the anaerobic treatment of waste

BAT conclusions for the mechanical biological treatment (MBT) of waste

BAT conclusions for the physico-chemical treatment of solid and/or pasty waste

Additional BAT conclusions may apply depending on the operations carried out.

It can be used by applicants/operators or EA officers but is not a substitution for the official BAT documents or other official Environment Agency guidance.

BAT No.	Topic	Brief Description	BAT	Applicable BAT- AEL	Compliant now?	Derogation needed?	Provide brief comments on how compliance with BAT is (or will be) achieved Where "N/A" or "other" is given, please explain why
General BAT conclusions							
1	Overall performance	EMS <i>Applicability</i> The scope (e.g. level of detail) and nature of the EMS (e.g. standardised or non-standardised) will generally be related to the nature, scale and complexity of the installation, and the range of environmental impacts it may have (determined also by the type and amount of wastes processed).	In order to improve the overall environmental performance, BAT is to implement and adhere to an environmental management system (EMS) that incorporates all of the following features:				
			i) commitment of the management, including senior management;		Yes		The EMS has received sign-off from Senior Management and the Thames Water Environmental Governance Board. In addition Thames Water operate several steering groups attended by Senior Managers where procedures can be highlighted and issues raised.
			ii) definition, by the management, of an environmental policy that includes the continuous improvement of the environmental performance of the installation;		Yes		Thames Water's EMS includes a commitment to continuous improvement.
			iii) planning and establishing the necessary procedures, objectives and targets, in conjunction with financial planning and investment;		Yes		Procedures are in place to identify and control environmental issues arising from company activities. This includes an Asset Planning System and Project Stage Gate Process for supporting investment decisions. Thames Water are regulated by OFWAT and financial investment is governed through the Price Review process and agreement of performance commitments.
			iv) implementation of procedures paying particular attention to: (a) structure and responsibility, (b) recruitment, training, awareness and competence (c) communication, (d) employee involvement, (e) documentation, (f) effective process control, (g) maintenance programmes, (h) emergency preparedness and response, (i) safeguarding compliance with environmental legislation;		Yes		Thames Water operates a SharePoint-based EMS with procedures linked from across the organisation. Procedures cover items (a) to (i) and include documents such as Site Operating Manuals and Asset Standards for design and operation of plant, EMS Standards, planned and preventative maintenance programmes and corporate incident response procedures.
			v) checking performance and taking corrective action, paying particular attention to: (a) monitoring and measurement (see also the JRC Reference Report on Monitoring of emissions to air and water from IED installations – ROM), (b) corrective and preventive action, (c) maintenance of records, (d) independent (where practicable) internal or external auditing in order to determine whether or not the EMS conforms to planned arrangements and has been properly implemented and maintained;		Yes		Thames Water's EMS includes procedures allow for checking of performance and preventative and corrective actions. Monitoring checks are completed as necessary and records are maintained, including use of SCADA and SAP systems for electronic records. Periodic inspections of sites are carried out internally to monitor compliance with EMS procedures. Electronic systems are in place to assign ownership, and track the progress of, any corrective actions resulting from internal or external inspections.
			vi) review, by senior management, of the EMS and its continuing suitability, adequacy and effectiveness;		Yes		The EMS has received sign-off from Senior Management and the Thames Water Environmental Governance Board. In addition Thames Water operate several steering groups attended by Senior Managers where procedures can be highlighted and issues raised.
			vii) following the development of cleaner technologies;		Yes		Thames Water has an Asset Management System that is accredited to ISO55001. Included in the associated policy is a commitment to work to providing and delivering high-performing, sustainable and efficient asset base to achieve our commitments, including net zero operational carbon by 2030 which requires us to look at reducing our use of fossil fuels and look at low carbon alternatives.
			viii) consideration for the environmental impacts from the eventual decommissioning of the plant at the stage of designing a new plant, and throughout its operating life;		Other (explain)		Thames Water has an Asset Management System that is accredited to ISO55001. Our Asset Standards consider the assets from design through to operation and some include decommissioning, these include consideration of environmental impacts and regulatory requirements. We are currently developing an overarching decommissioning asset standard which will include consideration of environmental impacts.
			ix) application of sectoral benchmarking on a regular basis;		Yes		Thames Water are an active members of the WaterUK Management System Forum (and other Water UK Network groups) and meet industry colleagues on an ad-hoc basis to compare approaches.
			x) waste stream management (see BAT 2);		Other (explain)		This is requirement is broadly met - see BAT 2
			xi) an inventory of waste water and waste gas streams (see BAT 3);		Yes		A site-specific inventory of waste water and waste gas streams will be included as part of the Residues Management Plan which is submitted alongside the permit application.
			xii) residues management plan (see description in Section 6.5);		Yes		A site-specific Residues Management Plan which covers the management of raw materials, waste water and biogas used or generated as part of the permitted activities is included and submitted alongside the permit application.

			xiii) accident management plan (see description in Section 6.5);		Yes		Thames Water operates a SharePoint-based Accident Management Plan and Environmental Risk Assessment. Information includes; Incident management arrangements, EMS essential standards, H&S procedures, Thames Water wide contact details, Site specific information (Site Operating Manual), permit, site plans, vulnerable receptors).
2	Overall performance	Improvement of overall environmental performance	In order to improve the overall environmental performance of the plant, BAT is to use all of the techniques given below.				
			a) Set up and implement waste characterisation and pre-acceptance procedures		Other (explain)	Thames Water has a Biorecycling Management System that is certified to ISO14001 and accredited under the Biosolids Assurance Scheme (BAS). The scheme covers the sludge recycling process including inputs into sites, the treatment process right through to the recycling of biosolids as fertiliser to land. In addition our Commercial Operations Scheme carry out Duty of Care checks on third-party companies delivering waste to the head of the works prior to issuing of access to data logger key fobs. Sludge received is also subject to information recording for each deposit. Thames Water are updating our waste pre-acceptance (and acceptance) procedures taking account of BAT and plan to implement them across our Sludge Treatment Centres.	
			b) Set up and implement waste acceptance procedures		Other (explain)	Thames Water has a Biorecycling Management System that is certified to ISO14001 and accreditation under the Biosolids Assurance Scheme (BAS). All third-party waste accepted at the HoW is recorded by TWUL data logger system which records information for each deposit including; Time, date, place of transfer, Volume of transaction, Vehicle Registration, Customer / Waste Holder name, Waste description / EWC. Waste deliveries can be monitored at all sites, by our Commercial Operations Team, using webcams. Sludge received is also subject to information recording for each deposit. Thames Water are updating our waste pre-acceptance (and acceptance) procedures taking account of BAT and plan to mplement them across our Sludge Treatment Centres.	
			c) Set up and implement a waste tracking system and inventory		N/A (explain)	Item c is broadly not met, due to the nature of the operations on site. Waste tracking is not undertaken as imported materials are not stored or held separately on site. The imported waste (excluding UWWTD derived waste from the sewer system) is tracked through the pre-acceptance process and to which discharge point it was discharged into the process. Retention times within the process are understood, and digestate outputs are tracked to land via BAS.	
			d) Set up and implement an output quality management system		Yes	Outputs are subject to the requirements of the Sludge Use in Agriculture Regulations 1989 (SUiAR), and in accordance with the Biosolids Assurance Scheme (BAS). Digested sludge cake output is subject to regular testing and corrective action plans to manage non-compliance.	
			e) Ensure waste segregation		N/A (explain)	Item e) does not apply to this site. Waste is only accepted by the site for biological treatment following waste pre-acceptance and waste acceptance procedures. There is no segregation of waste.	
			f) Ensure waste compatibility prior to mixing or blending of waste		Yes	Thames Water accept a limited number of waste types. Waste is only accepted by the site for biological treatment following waste pre-acceptance and waste acceptance procedures. This ensures compatibility prior to mixing or blending activities.	
			g) Sort incoming solid waste		N/A (explain)	Item g does not apply to this site. Solid waste is not received by the site	
3	Overall performance	Inventory <i>Applicability</i> The scope (e.g. level of detail) and nature of the inventory will generally be related to the nature, scale and complexity of the installation, and the range of environmental impacts it may have (determined also by the type and amount of wastes processed).	In order to facilitate the reduction of emissions to water and air, BAT is to establish and to maintain an inventory of waste water and waste gas streams, as part of the environmental management system (see BAT 1), that incorporates all of the following features:		Yes		As far as is reasonably practicable
			(i) information about the characteristics of the waste to be treated and the waste treatment processes, including: (a) simplified process flow sheets that show the origin of the emissions; (b) descriptions of process-integrated techniques and waste water/waste gas treatment at source including their performances;		Yes	All sites have block flow diagrams for their operations available within the EMS, and plant performance is monitored through the site SCADA system. Output quality is monitored at various points (cake quality; biogas quality). Plant performance measures are checked regularly for digester health and H ₂ S levels, amongst other key operational parameters.	
			(ii) information about the characteristics of the waste water streams, such as: (a) average values and variability of flow, pH, temperature, and conductivity; (b) average concentration and load values of relevant substances and their variability (e.g. COD/TOC, nitrogen species, phosphorus, metals, priority substances/micropollutants); (c) data on bioeliminability (e.g. BOD, BOD to COD ratio, Zahn-Wellens test, biological inhibition potential (e.g. inhibition of activated sludge)) (see BAT 52);		Yes	Waste waters generated from waste treatment are subject to monitoring inline with OFWAT guidance and the sampling programme included within the main application document. The scope of monitoring broadly aligns with BAT and the characteristics identified within this clause.	

			(iii) information about the characteristics of the waste gas streams, such as: (a) average values and variability of flow and temperature; (b) average concentration and load values of relevant substances and their variability (e.g. organic compounds, POPs such as PCBs); (c) flammability, lower and higher explosive limits, reactivity; (d) presence of other substances that may affect the waste gas treatment system or plant safety (e.g. oxygen, nitrogen, water vapour, dust).		Yes		Gas quality is measured continuously for certain parameters through the biogas management system and, if required, appropriate clean up equipment installed to control levels, e.g. siloxane filters. Overall gas quality is monitored live on line via electronic means by a dedicated specialist team. Additional sampling is undertaken periodically and sent off for laboratory analysis. Systems such as SCADA and Cockpit are used to monitor site processes; provide trending and then inform any required corrective action.
4	Overall performance	Techniques for storage of waste	In order to reduce the environmental risk associated with the storage of waste, BAT is to use all of the techniques given below.		Yes		Thames Water is compliant as far as practicable.
			a) Optimised storage location		N/A (explain)		Item A is generally applicable directly to new plants. However, compliance is pre-defined due to the locational constraints of existing sites and infrastructure within the existing works for storage.
			b) Adequate storage capacity		Yes		Item B is controlled through the retention times within the biological treatment system, including the use of any holding tanks installed with known capacities. Should capacity be an operational issue, imports will be diverted to other Thames Water sites.
			c) Safe storage operation		Yes		Only the first consideration in Item (c) applies to the site and is controlled through the provision of site transfer pipework for tanker offloading and loading. There is labelling for different waste inputs at the waste import points. There is a design standard for these waste import assets, and the discharge of waste is controlled by activation fobs which allows access to the correct discharge point
			d) Separate area for storage and handling of packaged hazardous waste		N/A (explain)		Item (d) does not apply to the wastes handled at the site as no packaged waste is accepted.
5	Overall performance	Techniques for handling and transfer of waste	In order to reduce the environmental risk associated with the handling and transfer of waste, BAT is to set up and implement handling and transfer procedures.		Yes		Thames Water is fully compliant with the requirements of this BAT. All staff are appropriately trained in site procedures, with a TCM in place and all waste management procedures are covered by the EMS. Spill kits are available on site and staff trained to use them. Waste transfers are carried out only using vacuum transfer lines at dedicated disposal points.
6	Monitoring	Waste water - Monitor key parameters	For relevant emissions to water as identified by the inventory of waste water streams (see BAT 3), BAT is to monitor key process parameters (e.g. waste water flow, pH, temperature, conductivity, BOD) at key locations (e.g. at the inlet and/or outlet of the pretreatment, at the inlet to the final treatment, at the point where the emission leaves the installation).		Yes		Emissions to a water body are indirect, via site drainage to the inlet of a sewage works controlled by the applicant. Therefore Thames Water complies with this requirement at the outfall with monitoring at key locations completed and the sampling programme included within the main application document. Output quality is monitored automatically for the biogas system. Cake quality is monitored in line with BAS requirements, including pathogen level and moisture content, which shows how both the digestion and dewatering processes are operating. Returns of liquors to the works inlet are not currently sampled, however, BOD and NH4 will be sampled in future. Future sampling that aligns with the requirements in BAT will be undertaken by the applicant and analysed by MCERTS accredited providers.
7	Monitoring	Waste water - Monitoring frequencies and standards	BAT is to monitor emissions to water with at least the frequency given below, and in accordance with EN standards. If EN standards are not available, BAT is to use ISO, national or other international standards that ensure the provision of data of an equivalent scientific quality.	See 'Water emissions tables' tab	Yes		There are no direct emissions to water from the permitted operations. As the statutory undertaker, all liquids are transferred from the permitted area to the wider sewage treatment works for treatment and discharge via the site drainage. There are no direct emissions to water from these processes. Indirect emissions to water will be monitored and monitoring will be undertaken to meet the requirements for biological treatment of waste.
8	Monitoring	Channelled air emissions - Monitoring frequencies and standards	BAT is to monitor channelled emissions to air with at least the frequency given below, and in accordance with EN standards. If EN standards are not available, BAT is to use ISO, national or other international standards that ensure the provision of data of an equivalent scientific quality.	See 'Air emissions tables' tab	Yes		Thames Water comply with this requirement for the following substances, which are applicable to their processes: H ₂ S; NH ₃ ; Odour. H ₂ S is monitored within the biogas system. NH ₃ is subject to spot monitoring within the biogas system.
9	Monitoring	Diffuse emissions - Monitor organic compounds	BAT is to monitor diffuse emissions of organic compounds to air from the regeneration of spent solvents, the decontamination of equipment containing POPs with solvents, and the physico-chemical treatment of solvents for the recovery of their calorific value, at least once per year using one or a combination of the techniques given below.		N/A (explain)		These activities are not applicable to this site.
			a) Measurement		N/A (explain)		These activities are not applicable to this site.
			b) Emissions factors		N/A (explain)		These activities are not applicable to this site.
			c) Mass balance		N/A (explain)		These activities are not applicable to this site.

10	Monitoring	<p>Odour - Monitor emissions</p> <p><i>Applicability</i> The applicability is restricted to cases where an odour nuisance at sensitive receptors is expected and/or has been substantiated.</p>	<p>BAT is to periodically monitor odour emissions.</p> <p>(The monitoring frequency is determined in the odour management plan (see BAT 12).)</p>		Yes		Thames Water carries out odour monitoring in accordance with BAT 10 requirements. Monitoring of OCUs is carried out monthly and quarterly for various parameters including hydrogen sulphide. Our contractors undertake hydrogen sulphide monitoring typically using Draeger or Gastec analysis tubes widely used in the waste water industry. Where applicable, OCUs may also have online hydrogen sulphide monitoring.
11	Monitoring	<p>Monitor annual consumption and generation of waste outputs</p>	<p>BAT is to monitor the annual consumption of water, energy and raw materials as well as the annual generation of residues and waste water, with a frequency of at least once per year.</p>		Yes		Thames Water meets this BAT requirement through annual monitoring of key process parameters (biogas production; energy consumption and export; raw material use; waste produced). Pre and Post AD process returns back to the sewage works are monitored in order to ensure control and optimisation of the works. For returns from the digestion process to the treatment works – drainage, waste process water, condensate, dirty washwater. This can be sampled but are not routinely monitored see response to BAT 6.
12	Emissions to air	<p>Odour Management Plan</p> <p><i>Applicability</i> The applicability is restricted to cases where an odour nuisance at sensitive receptors is expected and/or has been substantiated.</p>	<p>In order to prevent or, where that is not practicable, to reduce odour emissions, BAT is to set up, implement and regularly review an odour management plan, as part of the environmental management system (see BAT 1), that includes all of the following elements:</p> <ul style="list-style-type: none"> — a protocol containing actions and timelines; — a protocol for conducting odour monitoring as set out in BAT 10; — a protocol for response to identified odour incidents, e.g. complaints; — an odour prevention and reduction programme designed to identify the source(s); to characterise the contributions of the sources; and to implement prevention and/or reduction measures. 		Yes		The site has an odour management plan which is subject to regular monitoring and periodic updating.
13	Emissions to air	Odour reduction techniques	<p>In order to prevent or, where that is not practicable, to reduce odour emissions, BAT is to use one or a combination of the techniques given below.</p> <p>a) Minimising residence times</p>		Yes		Thames Water complies with this BAT requirement
			<p>b) Using chemical treatment</p>		Yes		Waste storage time is minimised prior to digestion and untreated sludge is only stored within closed tanks and vessels. All sludge handling and processing takes place within enclosed buildings, with the exception of the anaerobic digestion which is fully enclosed within digesters.
			<p>c) Optimising aerobic treatment</p>		N/A (explain)		H ₂ S levels are controlled through chemical dosing outside of the installation boundary. Odour control assets are designed in accordance with Asset Standards, the current Asset Standard requires construction to WIMES 8.05. Aerobic treatment is not utilised within the installation
14	Emissions to air	Diffuse emission reduction techniques	<p>In order to prevent or, where that is not practicable, to reduce diffuse emissions to air, in particular of dust, organic compounds and odour, BAT is to use an appropriate combination of the techniques given below.</p> <p>Depending on the risk posed by the waste in terms of diffuse emissions to air, BAT 14d is especially relevant.</p>		Other (explain)		Thames Water operates a number of existing facilities, entering IED for the first time. As such, existing plant and equipment may not be fully compliant with the requirements of this item.
			<p>a) Minimising the number of potential diffuse emission sources</p>		Yes		Use of gravity transfer over pumping and appropriate design of piping layout is carried out as far as practicable within the organisations design codes. Site has a vehicle speed limit.
			<p>b) Selection and use of high- integrity equipment</p>		Other (explain)		Applicability of item b) is restricted due to existing operability requirements of the plant.
			<p>c) Corrosion prevention</p>		Yes		Construction materials specified are based on the operational requirements, e.g. stainless steel used in biogas pipework to prevent corrosion.
			<p>d) Containment, collection and treatment of diffuse emissions</p>		Yes		Storage of wastes and materials that may generate diffuse emissions takes place within enclosed tanks within buildings at Reading STC. Treatment of waste sludges takes place within enclosed tanks, some of which are within enclosed buildings. There is limited handling of wastes and materials as this is mainly transferred automatically by pumps or conveyors. Digested sludge cakes is automatically deposited into lorries for removal from site via screw conveyors. Emissions are directed as appropriate to odour control units to treat emissions. Targeted monitoring of releases from open top tanks, including at different pressures, is now being programmed in for collection using a specialist methodology. Any proposed solutions, such as coverings and collection systems, will be subject to the EA Cost benefit methodology with deliverability informed by health & safety considerations
			<p>e) Dampening</p>		N/A (explain)		Item e) is not relevant to Thames Water's operations
<p>f) Maintenance</p>		Other (explain)		Routine maintenance is the responsibility of site staff who complete day-to-day activities with the support of approved contractors. Maintenance activities and regular checks are recorded electronically. Access to potentially leaky equipment may be restricted in the case of pre-existing facilities.			

			g) Cleaning of waste treatment and storage areas		Yes		Cleaning and regular maintenance of all plant and equipment will be completed on the time scale specified by the equipment manufacturer. Spillages are cleaned up as required making use of available spill kits.
			h) Leak detection and repair (LDAR) programme		Yes		A leak detection and repair (LDAR) plan has been prepared for the site and is included within the main application document.
15	Emissions to air	Flare use minimisation techniques	BAT is to use flaring only for safety reasons or for non-routine operating conditions (e.g. start-ups, shutdowns) by using both of the techniques given		Yes		Use of the flare is minimised in order to obtain best value from the biogas generation at the site
			a) correct plant design		Yes		Site is equipped with sufficient biogas storage capacity and multiple outlets for its use with high-integrity relief valves only used in emergency situations and not to control biogas volumes
			b) Plant management		Yes		Plant is managed to optimise biogas production for economic use. Multiple outlets are available to make use of biogas and imports of waste can be reduced in order to reduce biogas generation during planned maintenance on key plant.
16	Emissions to air	Flare emissions minimisation techniques	In order to reduce emissions to air from flares when flaring is unavoidable, BAT is to use both of the techniques given below.		Yes		Thames Water complies with this BAT requirement.
			a) Correct design of flaring devices		Yes		Thames Water specify ground mounted flares for use when flaring is unavoidable.
			b) Monitoring and recording as part of flare management		Yes		Thames Water monitors the hours of operation of the flare, in line with the standard requirements of environmental permits issued by the Environment Agency, that is only carrying out emissions monitoring should the flare operate over 10% of annual hours.
17	Noise and vibrations	Noise management plan <i>Applicability</i> The applicability is restricted to cases where a noise or vibration nuisance at sensitive receptors is expected and/or has been substantiated.	In order to prevent or, where that is not practicable, to reduce noise and vibration emissions, BAT is to set up, implement and regularly review a noise and vibration management plan, as part of the environmental management system (see BAT 1), that includes all of the following elements:		N/A (explain)		Thames Water does not routinely prepare noise and vibration plans for sites due to a lack of noise and / or vibration issues at nearby sensitive receptors. There is no history of substantiated noise or vibration complaints against the wider site. In accordance with the applicability criteria for this BAT item, Thames Water is therefore compliant.
			i) a protocol containing appropriate actions and timelines;		N/A (explain)		Although not applicable to this site, Thames Water's EMS contains protocols including for appropriate actions and timelines in the event of feedback from stakeholders.
			ii) a protocol for conducting noise and vibration monitoring;		N/A (explain)		Although not applicable to this site, Thames Water's EMS contains protocols for conducting noise and vibration monitoring.
			iii) a protocol for response to identified noise and vibration events, e.g. complaints;		N/A (explain)		Thames Water's EMS contains protocols for managing feedback from stakeholders.
			iv) a noise and vibration reduction programme designed to identify the source(s), to measure/estimate noise and vibration exposure, to characterise the contributions of the sources and to implement prevention and/or reduction		N/A (explain)		Although not applicable to this site, a noise and vibration reduction programme would be implemented as a result of substantiated claims.
18	Noise and vibrations	Noise and vibration reduction techniques	In order to prevent or, where that is not practicable, to reduce noise and vibration emissions, BAT is to use one or a combination of the techniques given below.		Yes		Thames Water meet the requirements of this BAT requirement as far as practicable, considering their existing infrastructure and constraints on site layout.
			a) Appropriate location of equipment and buildings		Yes		For existing plant appropriate locations and building openings/exits is restricted to plant design but where possible plant and openings are located away from sensitive receptors. Where this is not possible, doors are kept closed to minimise noise and vibration emissions.
			b) Operational measures		Yes		While the avoidance of night operations is not possible as works must operate 24 hours per day, where possible noise is minimised during these periods. Plant and equipment is maintained at the time scale specified by the equipment manufacturer to minimise noise and vibration emissions. Activities at the site are completed by competent and trained staff.
			c) Low-noise equipment		Yes		Item c) is met through design standards for the organisation for new plant and equipment.
			d) Noise and vibration control equipment		Yes		Item d) is met through design standards for the organisation for new plant and equipment.
			e) noise attenuation		Yes		Item e) is implemented on new plant and equipment on a risk assessed basis.
19	Emissions to water	Water management techniques	In order to optimise water consumption, to reduce the volume of waste water generated and to prevent or, where that is not practicable, to reduce emissions to soil and water, BAT is to use an appropriate combination of the techniques given below.		Other (explain)		Thames Water is currently not in full compliance with this BAT requirement. However, a CIRIA 736 assessment of containment has been carried out and is presented in the main application document.
			a) water management		N/A (explain)		Item a) is not carried out at sites, because Thames Water is also responsible for the treatment of any waste water generated. Where possible, final effluent from the UWWTD works is utilised for cleaning operations in place of potable water and roof guttering is diverted to surface water drainage on new builds.
			b) water recirculation		N/A (explain)		Item b) is not carried out at sites, because Thames Water is also responsible for the treatment of any waste water generated to the adjacent sewage treatment works. Where possible, final effluent from the UWWTD works is utilised for cleaning operations in place of potable water and roof guttering is diverted to surface water drainage on new builds.

			c) impermeable surface		Other (explain)		Item c) is not met for all operational areas although the majority of activities do take place on impermeable surfaces, e.g. sludge dewatering activities and pasteurisation. However, the surfacing around the buildings and surfacing surrounding the primary digester tanks may not be impermeable to materials within the tank. The whole site is bunded with pumps that return site drainage to the sewage treatment works within the same location.
			d) Techniques to reduce the likelihood and impact of overflows and failures from tanks and vessels		Other (explain)		Item d) is not complied with for the primary digester tanks or digested sludge cake silos. While these tanks are equipped with level alarms and the digesters are monitored for foaming, tanks are not routinely equipped with secondary containment. Isolation valves and pump inhibitors are installed at appropriate points to allow for tanks and vessels to be isolated. The sludge building provides a level of containment to the holding tanks located within this building. The whole site is bunded with pumps that return site drainage to the sewage treatment works within the same location, so this could capture spillages.
			e) Roofing of waste storage and treatment areas		Yes		Item e) is met for all tanks at Reading STC.
			f) Segregation of water streams		Yes		The site is bunded and has a single drainage system, which returns water to the head of the works for full treatment via the UWWTD route, using three sets of pumps.
			g) Adequate drainage infrastructure		Yes		The site has a single drainage system, which returns water to the head of the works for full treatment via the UWWTD route, using three sets of pumps.
			h) Design and maintenance provisions to allow detection and repair of leaks		Yes		Tanks and vessels are generally above ground structures and subject to routine visual inspection. Some of the tanks within the sludge building are located within the basement but accessible to routine visual inspection. Primary digesters have a planned schedule of emptying and cleaning during which they are inspected for integrity and any necessary repairs carried out. Where visual checks identify issues with tanks or vessels these are actioned for addressing, however, replacement of tanks may be limited through the OFWAT regulated process.
			i) Appropriate buffer storage capacity		Yes		Item i) is accounted for in the overall process design, based on a combination of the population equivalence for the overall works and a specified level of storm event. In the event of a capacity issue during normal operational periods, excess sludge is transferred to another appropriate digester site for treatment
20	Emissions to water	Water emission reduction techniques	In order to reduce emissions to water, BAT is to treat waste water using an appropriate combination of the techniques given below.	See 'Water emissions tables' tab	Other (explain)		Liquors from the installation are returned to the inlet of the adjacent sewage treatment works, controlled by the installation operator. Liquors are subject to processing in a mixture with UWWTD materials, through a series of process which meet the requirements of BAT 20. Process liquors will have elevated levels of BOD, suspended solids, and ammonia. pH will be close to that of the incoming separated sludge
			a) equalisation		N/A (explain)		n/a as there are no direct emissions to water
			b) neutralisation		N/A (explain)		n / a as pH is similar to UWWTD materials
			c) Physical separation, e.g. screens, sieves, grit separators, grease separators, oil- water separation or primary settlement tanks		Other (explain)		Liquors enter at the inlet, which then goes through degritting, grease separators and into primary settlement tanks
			d) adsorption		N/A (explain)		n/a as there are no direct emissions to water
			e) distillation/rectification		N/A (explain)		n/a as there are no direct emissions to water
			f) precipitation		N/A (explain)		n/a as there are no direct emissions to water
			g) chemical oxidation		N/A (explain)		n/a as there are no direct emissions to water
			h) chemical reduction		N/A (explain)		n/a as there are no direct emissions to water
			i) evaporation		N/A (explain)		n/a as there are no direct emissions to water
			j) ion exchange		N/A (explain)		n/a as there are no direct emissions to water
			k) stripping		N/A (explain)		n/a as there are no direct emissions to water
			l) activated sludge process		Other (explain)		The wider sewage works uses this technology to treat the compounds within the liquor.
			m) membrane bioreactor		N/A (explain)		n/a as there are no direct emissions to water
			n) Nitrification/denitrification when the treatment includes a biological treatment		Other (explain)		ammonia is removed through the sewage treatment process at the adjacent works
			o) coagulation and flocculation		Other (explain)		n/a as there are no direct emissions to water
			p) sedimentation		N/A (explain)		n / a - not appropriate to liquor components
			q) Filtration (e.g. sand filtration, microfiltration, ultrafiltration)		Other (explain)		Sand filtration is used for final polishing of effluent from the works
			r) floatation		N/A (explain)		n / a - not appropriate to liquor components

21	Emissions from accidents and incidents	Prevention and limitation techniques	In order to prevent or limit the environmental consequences of accidents and incidents, BAT is to use all of the techniques given below, as part of the accident management plan (see BAT 1).		Yes	Thames Water has considered accidents and incidents and developed site specific accident management plans. DSEAR assessments have been undertaken on sites and appropriate zoning designated.
			a) protection measures		Yes	Site employs physical site security to prevent unauthorised access to the site which is manned 24/7. Physical protection methods including fencing, bollards and kerbing are in place around some assets. Fire detection and automatic safety features are fitted to biogas systems.
			b) Management of incidental/accidental emissions		Yes	Site has an Accident Management Plan which includes spill prevention steps for trained staff to clean up spillages using suitable spill response kits. Site drainage system is suitably sized to handle firefighting waters. Safety features are connected to site SCADA system which is monitored 24/7 with additional visual checks completed by site staff.
			c) Incident/accident registration and assessment system		Yes	All accidents and incidents are logged within the company wide management system. Sensitive receptor risk assessments have been undertaken for all sites.
22	Material efficiency	Material efficiency <i>Applicability</i> Some applicability limitations derive from the risk of contamination posed by the presence of impurities (e.g. heavy metals, POPs, salts, pathogens) in the waste that substitutes other materials. Another limitation is the compatibility of the waste substituting other materials with	In order to use materials efficiently, BAT is to substitute materials with waste.		Yes	Thames Water comply with this BAT requirement as far as they are able. However, the installation has a low level of raw material consumption in the process and there is limited opportunity to substitute waste products for materials in the process. The process also has specific requirements for specific applications, e.g. use of polymer to aid digested sludge cake production, use of oil in the biogas combustion plant. In addition, substitution of materials with waste is currently seen as non-compliant with SUIAR, as it is deemed codigestion.
23	Energy efficiency	Energy efficiency techniques	In order to use energy efficiently, BAT is to use both of the techniques given below.		Yes	Thames Water comply with this BAT requirement.
			a) energy efficient plant		Yes	Thames Water have an ISO 50001 accredited Energy Management System. All CHP engines are accredited under the Combined Heat and Power Quality Assurance Scheme. Included within the EMS is an energy efficiency plan for the business in order to optimise energy consumption and to plan for improvements, e.g. increased insulation to reduce heat losses in transmission from CHP engines to digesters. Use of the flare is monitored and minimised as far as possible and energy efficient plant and equipment specified during asset replacement schemes. Imports of waste are planned to optimise biogas generation and can be diverted to other sites to meet shortfalls or plan for decreases in storage/generation capacity from planned maintenance.
			b) energy balance record		Yes	Thames Water monitor energy consumption used by the installation in processing the waste and export from their sites from generation within CHP engines, in order to maximise the value of biogas generated within the sites. Monitoring is completed for all fuel sources.
24	Reuse of packaging	Reuse of packaging <i>Applicability</i> Some applicability restrictions derive from the risk of contamination of the waste posed by the reused packaging.	In order to reduce the quantity of waste sent for disposal, BAT is to maximise the reuse of packaging, as part of the residues management plan (see BAT 1).			Thames Water complies with this BAT requirement. There is limited packaging used on site with all wastes are delivered by tankers, which is inherently a reuse activity. Where possible, bulk deliveries are made by tanker eliminating the need for packaging, or containers from chemicals used on site, are rinsed and returned to the supplier for reuse. Other containers are sent offsite for recovery or recycling as appropriate.

Notes

These notes do not form part of this notice.

Please note that we charge £1,200 where we have to send a third or subsequent information notice in relation to the same issue. We consider this to be the first notice on the issues covered in this notice.

The notes in italics that appear after information requests in the attached schedule do not form part of the notice. The notes are intended to assist you in providing a full response.

Schedule

Section 1 – Best Available Techniques (BAT)

The [Best Available Techniques \(BAT\) Reference Document for Waste Treatment](#) provides standards to which facilities should comply with. In line with this guidance we require responses to the following questions:

1. Confirm that the waste pre-acceptance and acceptance procedures detailed in the previous Schedule 5 Notice response have been formally implemented. If any of the procedures have been amended prior to implementation, then you must submit the amended procedures in response to this notice.
2. Ensure the following points have been addressed in a revised pre-acceptance procedure:
 - i) Explain how you take into account the age of waste received.
 - ii) Include a process for ensuring that waste composition is based on representative samples, taking into account the nature of the material, how it arises and any potential variation within it, for example, taking account of seasonal variations.
 - iii) Explain your process for verifying if waste is to be accepted at the facility, and who will be responsible for carrying this out.
 - iv) Explain how your waste pre-acceptance process will characterise the feedstock in order to understand its effect on the biological treatment process. [Appropriate measures for the biological treatment of waste - consultation draft \(publishing.service.gov.uk\)](#) advises that this includes understanding, for example; particle size distribution and physical contaminants, total solids and volatile solids, biochemical methane potential, total organic carbon (TOC), nutrient analysis, calorific value, fibre content, pH and alkalinity, volatile fatty acids (VFA), ammonia and total nitrogen content - carbon to nitrogen (C to N) ratio, heavy metals and potentially toxic elements (PTEs), carbohydrates and lipids
 - v) Explain what wastes are likely to contaminate your process, and how these will be addressed within your pre-acceptance process.
 - vi) Explain how you will re-assess information required at the pre-acceptance stage if the waste changes, the process giving rise to the waste changes or waste received does not confirm to the pre-acceptance information.
 - vii) Explain how you will take into account the wastes potential odour and emission impacts as part of your pre-acceptance process.
 - viii) Explain how you will decide and record what parameters will be checked at waste acceptance stage, and how the criteria for non-conformance or rejection will be undertaken.
 - ix) Explain your sampling approach, including your sampling methodology and frequency for your waste pre-acceptance process taking into account potential variations.
 - x) Explain who will carry out sampling, and to what standard i.e. UKAS or MCERT.
3. Ensure the following points have been addressed in a revised acceptance procedure:
 - i) Explain the criteria for rejecting of non-conforming wastes.
 - ii) Explain your procedure for recording, reporting and tracking non-conforming wastes, including notifying the relevant customer or waste producer and the Environment Agency
 - iii) Explain how staff will be trained to carry out waste acceptance checks to effectively identify and manage any non-conformances in the loads received.
 - iv) Explain who will carry out waste acceptance checks.

- v) Explain how you will carry out periodic audits of the accepted waste against pre-acceptance and duty of care criteria, and at what frequency this will be carried out.
- vi) Explain how you will undertake representative samples when sampling from tankers.
- vii) Explain your sampling and analysis procedure for waste acceptance, and to what standard i.e. UKAS or MCERT this will be carried out.

Reason for question

Under BREF guidance BAT conclusion 2 you must set up and implement waste characterisation, pre-acceptance and acceptance procedures. In your previous response you have detailed the procedures that cover BAT 2 requirements, however in the schedule 5 notice response letter received 15/03/2022 you have advised “As Camberley, is a newly permitted site we propose to update and formalise our waste acceptance and pre-acceptance procedures by the end of June 2022 and implement in line with BAT.” It is important that these procedures are fully implemented prior to the issue of the permit. If these procedures have been amended in the interim period between your schedule 5 response and full implementation you will need to provide them again in response to this schedule 5 notice as a separately written document.

On assessment of the application and the previous schedule 5 Notice response we can see that the proposed acceptance and pre-acceptance procedure does not adequately cover all of the key points listed above. You have also advised in your schedule 5 notice response that “Thames Water procedures also reflect the EA document ‘Draft appropriate measures for the biological treatment of waste’ which states in Section 79 that acceptance sampling is not required for sewage sludge and septic tank sludge” Under guidance [Appropriate measures for the biological treatment of waste - consultation draft \(publishing.service.gov.uk\)](#) “Acceptance sampling” where a sample is not required, you must still visually check the waste and carry out periodic audits of the waste against pre-acceptance and duty of care criteria. This process should be clearly set out.

Section 6 of guidance the appropriate measures consultation draft document “Waste pre-acceptance, acceptance and tracking appropriate measures” sets out the requirements for pre-acceptance and acceptance, in conjunction with [Sector Guidance Note S5.06: recovery and disposal of hazardous and non-hazardous waste - GOV.UK \(www.gov.uk\)](#). S5.06 defines that pre-acceptance procedures should be put into place to ensure wastes suitability for the proposed treatment route, stating that pre-acceptance checks must be carried out before any decision is made to accept a waste. On assessment of your procedure in the previous schedule 5 notice response you have advised that for waste characterisation “The characteristics of these materials have been assessed significantly under various studies, and ranges of typical constituents have been published in publications such as Metcalf and Eddy (2003). Wastewater Engineering—Treatment and Reuse, 4th Ed which has extensive data on the characteristics of various sludge types”. Waste characterisation is part of the pre-acceptance procedure and should be carried out prior to acceptance on site. Your procedure should be updated to clearly reflect/define waste pre-acceptance and acceptance.

4. Provide a revised copy of the Residue Management Plan and Principal Emission Points Site Plan to include the following:

- i) A summary of the sampling and analysis methodology of the effluent discharged and specify the likely pollutants in the effluent (guidance [Monitoring discharges to water: guidance on selecting a monitoring approach - GOV.UK \(www.gov.uk\)](#) and [Surface water pollution risk assessment for your environmental permit - GOV.UK \(www.gov.uk\)](#)).
- ii) A written statement with a commitment to undertake the sampling and analysis in line with BAT3.
- iii) A written statement with a commitment that those undertaking the sampling and analysis will be by accredited to [MCERTs](#) or provide evidence of equivalent standards.
- iv) A revised plan which identifies the effluent sampling point(s) and emission point for the effluent discharge from the installation.

Reason for question

Under the BREF guidance BAT conclusion 3 you must establish and maintain an inventory of waste water and waste gas streams. On assessment of your application, you have advised that site drainage to works inlet includes filtrate, condensate and return liquors from the sludge dewatering and cake maturation processes via a liquor pumping station. Effluent discharged to the head of the works is a point source emission to sewer. BAT conclusion 3 requires operators to have an emissions inventory for the effluent. We acknowledge that applicants may not hold this information in order to inform a quantitative risk assessment for existing discharges. A commitment to undertake the sampling and analysis in accordance with the points above is required.

On assessment of the Residue Management Plan (section 12) you have stated "Where drainage leaves the permit boundary, it may include waste waters from within areas of the site which sit outside of the permit boundary, due to the design and configuration of the drainage system within the works." The inclusion of waste waters from areas outside of the permitted boundary for the emission point T1, would suggest that sampling from this area of the site would not be appropriate. Whilst it may be appropriate to identify this area as an emission point where effluent leaves the permitted boundary, alternative sampling point(s) should be identified in addition to this.

- 5. Provide a written statement confirming that the overflow volumes from the digester 'fill and spill' operation represent a returned point source emission to the head of the works.**
- 6. Submit a revised Residue Management Plan to include the above emission in section 11 waste water streams.**
- 7. Submit a revised process flow diagram to include the above emission.**
- 8. Submit a revised Principle emission point plan to include the above emission point if separate to the currently identified emission point T1.**

Reason for question

On assessment of your response to question 6i in the previous schedule 5 notice you have advised that "Overflow volumes are returned back to the STW process and discharges via this route are monitored via the high-level alarms in each tank." This would indicate that fill and spill overflow volumes are returned to the head of works as an emission. If this is the case then you will need to update the relevant documents detailing waste water returns to include this waste water stream.

- 9. Provide a Leak Detection Repair Plan (LDAR) for fugitive emission to air that includes:**
 - i) A map of the site processes that identifies all known locations (point and area sources) for potential emissions, for example seals, flanges, valves, pumps, connections, pipework, tanks.**
 - ii) Methods for locating unknown emission sources.**
 - iii) Estimates of the type and volume of the potential emission at each leak location.**
 - iv) Prioritised locations (from highest risk to lowest risk) based on potential quantity of release and environmental impact.**
 - v) A risk-based LDAR programme of work for monitoring and controlling emissions in line with BAT requirements.**
 - vi) Identification of monitoring methods and frequency of monitoring to quantify significant emissions where possible.**
 - vii) Possible mitigation measures.**

Reason for question

Under the BREF guidance BAT conclusion 14, when emissions of organic compounds are expected a LDAR programme should be set up and implemented using a risk-based approach. This approach should consider in particular the design of the plant and the amount and nature of the organic compounds concerned in order provide a structured approach to reduce fugitive emissions of organic compounds by detection and subsequent repair or replacement of leaking components. Further guidance on what is expected to be included in LDAR plans can be located in [Appropriate measures for the biological treatment of waste](#). On assessment of your application you have advised that there is currently no formal LDAR programme at the site but leak detection and prevention are embedded in the wider management approach. In order to achieve BAT 14h a formal LDAR programme is expected to be in place.

Section 2 – Odour Management Plan (OMP)

Odour Management plans should be completed in line with guidance [Environmental permitting: H4 odour management](#) and [Best Available Techniques \(BAT\) Reference Document for Waste Treatment](#). Revise the OMP addressing the questions below:

10. For your choice of odour control unit (OCU), update your OMP to include an explanation of how you will control the process and maintain process parameters to ensure effectiveness. This should include but not be limited to:

- i) Optimum flow rate through the system to allow for effective treatment.**
- ii) The trigger levels/ranges for action if processes monitoring parameters are breached/ outside optimal parameters.**
- iii) Odorous components in the gas stream and concentrations of emissions**
- iv) Physical properties of the air stream at point of control i.e., humidity, optimum temp, pH for effective odour control**

11. Based on the above information provided in question 9:

- i) Explain why the abatement system has sufficiency capacity and is appropriately designed to effectively treat the odorous air stream(s).**

Reason for question

These questions were originally positioned in a previous schedule 5 Notice (Question 18 and 19), whilst we consider the questions partially answered specifically 18ii, 19ii and 19iii the other questions 18i, 18iii, 18iv, 18v and 19i remained unanswered. On assessment of the schedule 5 notice response, we cannot see any information regarding; optimum flow rate; trigger levels/ranges for action; odorous components and physical properties of the air stream relating to question 18.

In regard to question 19i your previous schedule 5 notice response you advised that “Asset Standards are in place for the design and operation of OCUs. OCUs would have been constructed in accordance with the Asset Standard in place at the time of construction. The current Asset Standard specifies that OCUs should be constructed in accordance with WIMES 8.05.” however this does not provide any information relating to appropriate odour treatment capacity neither does it confirm that the abatement system has been appropriately designed only that it ‘would’ have been designed in accordance with the asset standard at the time of construction. As we are not aware of the asset standards in place (or at the time of construction) we have no frame of reference to qualify this response.

12. Provide a description of your alternative technique for the control of diffuse emissions from all open tanks, demonstrating how this will provide a level of environmental protection that is equivalent to techniques specified in BAT conclusion 14.
13. Provide a cost benefit analysis of the proposed alternative method.

Reason for question

Under the BREF guidance BAT conclusion 14 you must ensure that diffuse emissions are contained. This includes techniques such as storing, treating and handling waste and material that may generate diffuse emissions in enclosed buildings and/or equipment, and collecting and directing the emissions to an appropriate abatement system. On assessment of your application, you have advised that the secondary digesters are open topped tanks. No details of how diffuse emissions will be contained has been provided.

Section 9 (Fugitive (Diffuse) emission to air) of guidance [Appropriate measures for the biological treatment of waste - consultation draft \(publishing.service.gov.uk\)](#) specifies that you must use appropriate measures to prevent emissions of odour, ammonia, dust and particulates, minimising releases where possible. It further provides that where possible you must contain, collect, extract and direct emissions from plant, equipment and processes to a suitably designed and engineered abatement system or gas recovery system in line with the requirements of BAT 14.

Section 7 of guidance [Appropriate measures for the biological treatment of waste - consultation draft \(publishing.service.gov.uk\)](#) specifies that you must cover lagoons and tanks used to store dirty water, digestate, slurries and other liquids and sludges, with covers designed to prevent odour, emissions such as ammonia and rainwater ingress. Further guidance on what is defined as a cover can be located in [intensive farming environmental permitting guidance](#). Where sites are existing, floating covers such as clay balls may be acceptable on lagoons used to store digestates and on existing storage vessels, however coverage must be sufficient to minimise fugitive emissions and using them must not compromise the integrity of plant and equipment.

Based on this we would expect that tanks carrying out processes that include biological activity would form part of the installation process and you must contain, collect, extract and direct emissions from plant, equipment and processes in line with BAT 14, where tanks are used for the storage of digestate that is predominantly biologically inactive we would accept alternative measures to minimise fugitive emissions, examples of proposals we would expect as part of the permit application can be found in appendix 9 of guidance [Covering Slurry Lagoons \(publishing.service.gov.uk\)](#).

14. Update 'table 4.1 - Odorous materials for Sludge Treatment Centre Permit' to include the following odorous sources:

- i) Raw Materials
- ii) Odorous gases - both diffuse and point source emissions to air (open tanks, OCUs etc)

Reason for question

On assessment of the OMP you have provided an inventory of odorous materials table 4.1. The table fails to identify key odour sources including raw materials and Odorous gas sources both diffuse and point source emissions to air such as the OCUs and open tanks.

15. Update your OMP to include a section which outlines the proposed monitoring for each of the odour point sources identified in in the OMP as required by BAT point 10 of the BREF waste

Treatment Guidance. The section must demonstrate that the EN standards or alternative techniques that will be applied to each point source emission in line with BAT 10 to periodically monitor either odour concentration or exposure.

Reason for question

*We consider that the previous response to this question (referenced as question 24 in the previous schedule 5 notice) provided 15th March 2022 is insufficient. **We consider this question's inclusion in this notice to represent the second time we have requested the necessary information to allow us to fully assess your application.***

Your OMP does not identify the monitoring requirements which are required by BAT 10. This BAT point is considered applicable because the site has odorous waste for which odour is expected. The previous schedule 5 response letter states "Thames Water carries out odour monitoring in accordance with BAT 10 requirements, only on sites with a history of substantiated recent odour complaints, in accordance with the applicability criteria. This site does not currently require odour monitoring to the required standard.". We disagree with this statement on the basis that the applicability criteria states 'The applicability is restricted to cases where an odour nuisance at sensitive receptors is expected and/or has been substantiated.' In this case the receptors identified in table 2.1 as cross referenced with the sensitive receptor map included in Appendix 4 clearly show receptors located within a reasonable distance to the site to constitute an expectation of odour nuisance.

On assessment of the previous schedule 5 notice response to question 24, you have not demonstrated a commitment to carry out monitoring inline with BAT 10. The response does not provide any clarification of the EN standards you would be using, or an alternative technique applied to each odour point source emission.

16. Update your OMP to address the odour process control monitoring addressing the following points:

- i) Explain for each odorous activity identified in the OMP what process parameters (e.g. temperature, flow concentrations, storage durations and amounts) will be monitored and what triggers (e.g. max threshold above which odour will be an issue) are used to ensure odour on site is minimised.**
- ii) Outline the actions to be taken if the processes identified in the OMP are outside their optimum process parameters, or trigger levels are not met.**
- iii) Include time scales for rectification of trigger actions identified, and responsibilities for who will carry out the actions identified.**

*We consider that the previous response to this question (referenced as question 26 in the previous schedule 5 notice) provided 15th March 2022 is insufficient. **We consider this question's inclusion in this notice to represent the second time we have requested the necessary information to allow us to fully assess your application.***

H4 guidance states that appropriate monitoring must be undertaken for every stage of process control (i.e., emissions, dispersion and impacts). The interpretation of monitoring results should be considered in advance and, where appropriate, monitoring trigger values should be specified for the implementation of contingency measures. Your OMP Table 4.4 and 4.5, describe Intermittent (Int),

abnormal (Ab), and emergency (E) events for assets under EPR that cover some of the site process failures, however the operational mitigation appears to represent notifying maintenance teams and reference to the site operating manual only. This does not describe any specific measures that would be taken. Furthermore, it does not relate to trigger levels or tie in with odour monitoring to establish the 'acceptable ranges' of excessive emissions. This also does not address potential cessation of operations, cessation of accepting waste and information on where waste could specifically be diverted to. Section 4.6 Emergency Response

and Incident Response Procedures describes some of the scenarios however it relates to a security and risk management document not available due to these being company confidential documents. This is not acceptable as the information regarding contingency measures could be reasonably extracted from these documents with an omission made to sensitive data and drafted into the OMP.

On assessment of the previous schedule 5 notice response to question 26, provided 15th March 2022, you have not demonstrated for each odorous activity the process parameter monitoring triggers and you have not outlined any actions to be taken should these triggers be met including the timescales for rectification.

Section 3 – Secondary Containment

Secondary Containment Assessment Reports should be completed in line with CIRIA 736 guidance: Containment Systems for the Prevention of Pollution, ADBA Secondary Containment at AD Plants: An Industry Guide and [Best Available Techniques \(BAT\) Reference Document for Waste Treatment](#). Revise the secondary containment report and any relevant supporting documents addressing the questions below:

- 17. Submit a revised spill model in the Camberley IED assessment report to assess the impact from a catastrophic tank failure. Your revised model must assess the impact of spill volumes using 110% of the largest tank or 25% of all tanks within a bunded area (whichever is greater) as opposed to a 'credible' spill volume.**

Reason for Question

BAT conclusion 19d states "tanks for liquids that are located in a suitable secondary containment; the volume is normally sized to accommodate the loss of containment of the largest tank within the secondary containment". Upon assessment of your application, we can see you have detailed in the report 'credible spill volume' of the largest secondary digester 2000m³ that falls short of the 110% and 25% rule outlined in the CIRIA 736 guidance, section 4.2.1. The additional 10% spill is considered to account for potential rainfall during a catastrophic tank failure incident and should be included in a revised spill model.

- 18. Update the Containment Assessment Report to with a full list of all the sensitive receptors including groundwater receptors and receptors located outside of the permitted boundary. Ensure you have included a detailed analysis of each receptor based on sensitivity, distance and environmental impact resulting from a potential pollution event.**

Reason For Question

We consider that the previous response to this question (referenced as question 34 in the previous schedule 5 notice) provided 15th March 2022 is insufficient. **We consider this question's inclusion in this notice to represent the second time we have requested the necessary information to allow us to fully assess your application.**

We are unable to fully assess the Containment Assessment Report due to lack of information regarding the receptors. CIRIA 736 guidance – section 2.3.3 states "A receptor includes humans, animals, fish, plants and biota, watercourse or body, groundwater or soils that would be affected (directly or indirectly) by the escape of the inventory. A receptor could also be a downstream process such as a WwTW". For us to fully assess the impact to receptors you would need to demonstrate that all of the sensitive receptors that could be impacted are considered in this report.

On assessment of the response to the previous Schedule 5 notice you have provided only 3 examples of receptors in the Containment Assessment Report. This is inconsistent with the receptor list contained in the

supporting containment classification assessment. Ensure that you have fully listed all of the sensitive receptors as outlined in section 2.3.3 of the CIRIA Guidance.

- 19. Submit a proposal for a programme of improvements to bring the site into adherence of BAT 19 and in line with recommendations outlined in the conclusion of the CIRIA 736 assessment. Considerations should be taken to ensure all the relevant options have been considered, including information on cost, timescales, on site safety impacts and how effective the secondary containment options would be in protecting receptors in the event of a catastrophic tank failure.**

Reason for Question

*We consider that the previous response to this question (referenced as question 39 in the previous schedule 5 notice) provided 15th March 2022 is insufficient. **We consider this question's inclusion in this notice to represent the second time we have requested the necessary information to allow us to fully assess your application.***

Under BREF guidance BAT conclusion 19 tanks for liquids must be provided with suitable secondary containment, and a detailed assessment of site infrastructure should be provided (e.g. LIT 11958 V2 6 secondary containment, tank specification, surfacing, storage lagoon etc.) as per the previous questions in this section of the schedule 5 notice. The site infrastructure should be compared with the relevant industry/construction standards (e.g. CIRIA guidance C736 for secondary containment and C535 for above-ground tanks etc.). The proposal should reflect the physical condition of primary containment systems (storage and treatment vessels), secondary containment (bunds), loading and unloading areas, transfer pipework/pumps, temporary storage areas and liners underlying the site. It should take into account the suitability for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure. Where the relevant containment standards are not met, a demonstration that their design and construction will achieve equivalent protection should be provided, along with an explanation of any work required to ensure compliance with the industry standards or equivalent. Your proposal should also include a preventative maintenance and inspection regime for site infrastructure identified.

You have not submitted any supporting documents outlining improvements, and associated timescales, you will make to ensure your containment measures are BAT compliant. Therefore, we do not currently have sufficient information to assess your application adequately. You have indicated in previous communications that the timescale for just preparing a proposal would take up to 18 months. This timescale is unacceptable. We recognise that capital works to make the improvements to secondary containment would likely be subject to longer timescales. However, we cannot accept the current proposed timescale for the internal decision-making process and subsequent proposal considering the options for containment outlined in the report.

On assessment of the response to the previous Schedule 5 notice you have provided a timescale for when detailed optioneering, including a full engineering review of the options outlined in the containment report would be provided as 31/01/2023. This timescale is not acceptable as the report should detail options that are fully informed by a qualified structural engineer necessary for the assessment of containment against BAT requirements.

- 20. Submit a revised version of the Camberley IED assessment report to include a site plan to show areas of impermeable and permeable surface following implementation of secondary containment.**
- 21. Provide revised spill modelling demonstrating the effectiveness of the bunding/embankments/surfacing used as containment mitigation measures with the scenario of a catastrophic tank failure. Your revised model must assess the impact of spill volumes using 110% of the largest tank or 25% of all tanks within a bunded area (whichever is greater) as opposed to a 'credible' spill volume.**

Reason for Question

Under BREF guidance BAT conclusion 19c, depending on the risks posed by the waste in terms of soil and/or water contamination, the surface of the whole waste treatment area (e.g. waste reception, handling, storage, treatment and dispatch areas) must be made impermeable to the liquids concerned. We require the inclusion of a site plan that clearly defines the areas of permeability and those that are impermeable to fully assess the effectiveness of any mitigation methods that have been recommended in the report and/or proposed as part of a programme of improvements. The site plan should include a clear outline of the locations and dimensions of any bunding/embankments/surfacing relating to the proposed secondary containment supported by spill modelling demonstrating the effectiveness of the mitigation measures. Importantly, any proposed design for containment measures must be informed by experienced structural engineers.

- 22. Submit a revised version of the Camberley IED assessment report to include a description which specifies what critical parts and chemicals are maintained on site to ensure availability in the event of a catastrophic failure.**
- 23. Submit a revised version of the Camberley IED assessment report Assessment to include a procedure which describes the inspections and maintenance undertaken for the impermeable surface and drainage system.**
- 24. Submit a revised version of the Camberley IED assessment report to include a statement which explains how leak detection and maintenance is carried out for underground tanks and pipes to ensure that contamination to groundwater and soil is prevented.**

Reason for Question

Under BREF guidance BAT conclusion 19 tanks for liquids must be provided with suitable secondary containment, and a detailed assessment of site infrastructure should be provided as per the previous questions in this notice. The site infrastructure should be compared with the relevant industry/construction standards (e.g. CIRIA guidance C736 for secondary containment). The proposal should reflect the physical condition of primary containment systems (storage and treatment vessels), secondary containment (bunds), loading and unloading areas, transfer pipework/pumps, temporary storage areas and liners underlying the site. It should take into account the suitability for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure. Where the relevant containment standards are not met, a demonstration that their design and construction will achieve equivalent protection should be provided, along with an explanation of any work required to ensure compliance with the industry standards or equivalent. Your proposal should also include a preventative maintenance and inspection regime for site infrastructure identified.

Introduction

Thames Water Utilities Limited (Thames Water) is required to assess and apply the principles of the Industrial Emissions Directive (IED) which will be incorporated into new Environmental Permits across its sludge treatment centres (STC) at sewage treatment works (STW). To support the Environmental Permit application for the sludge assets at the STW, there is a requirement to undertake a detailed assessment of the site infrastructures against industry standards such as CIRIA C736.

Jacobs Engineering U.K. Limited (Jacobs) was retained to undertake the IED Containment Assessment of sludge assets at 25 Thames Water STWs.

The current assessment identified gaps between the existing condition of the sludge assets in Reading STW and the requirements to meet the industrial standard (i.e., CIRIA C736 and The Anaerobic Digestion and Bioresources Association Limited (ADBA)). Site-specific risks, credible failure scenario and design containment volume for the Reading STW were identified through a desktop study, Light Detection and Ranging (LiDAR) analysis and a site visit.

Reading STW (Figure i), is located south of Reading, close to the A33 which links the town with the M4 motorway. To the south of the site, separated by a dual carriageway road, is the Green Park business park which consists of commercial office properties. To the west and south of the site there is agricultural land and to the west and north a local council household waste and recycling centre, closed landfill, and the local council waste transfer station. To the north of the site there are commercial properties and immediately to the east of the site there is derelict land and the A33. The STW serves a population equivalent of 264,000 taking in sewage from Reading and the surrounding area.

Figure i Satellite view of Reading Sewage Treatment Works

Chapter 1 outlines the site-specific risks at Reading for sludge holding and digestion assets, presents the uncontained spill event and the containment classification.

Chapter 2 determines the design containment volume based on a credible failure scenario and describes the uncontained spill map and flow paths.

Chapter 3 discusses the risks to the site from external flooding and jetting flows

Chapter 4 presents the main options for containment.

Chapter 5 presents the main conclusions of the containment assessment.

1. Site Specific Risks at Reading STW

To model the event of a credible and catastrophic tank failure which would result in loss of containment of sludge at Reading, the assets on site must be evaluated to identify the most significant failure events. There are **14 tanks** containing sludge with the total operational sludge volume is approximately **11,660 m³**.

The principal sludge holding and digestion tanks at Reading contained within the IED permitted area are detailed below:

Table 1. Principal sludge holding and digestion tank capacity and construction details

Tank Purpose	Number	Operational Volume (m ³)	Total Volume (m ³)	Construction
Raw Sludge Tank	2	1,200	2,400	Concrete
Sludge Blending Tank	2	500	1,000	Concrete
Small Pasteurisation Reactor	2	30	60	Steel
Large Pasteurisation Reactor	2	100	200	Steel
Primary Digester Tank	4	1,775	7,100	Concrete
Digested Sludge Buffer Tank	2	450	900	Concrete

For clarity, in each case the capacities given above refer to the total tank capacity, i.e., the maximum volume that a particular tank could hold. In practice the operational volumes are less due to freeboard and headspace, but the maximum volume is used to represent worst case scenario.

The site-specific risk factors that were identified at Reading are as follows:

- The overall number of large tanks of concrete and the individual tank capacities.
- Groundwater vulnerability is ranked as “Medium-High” in MAGIC by Defra.
- The site is at low risk of Pluvial (Incident Rainfall) and Fluvial (Rising river levels) flooding during extreme weather. It is surrounded by a flood zone.
- Proximity to busy A33 on the east, Hilton Hotel and Kennet Island Housing.
- The STW’s effluent channel is located at the northeast of the STW. This effluent channel is discharging to the Foudry Brook, of the River Kennet, a Thames tributary.

Table 1.1 Designated site review

Site Name	Designation	Direction from site	Distance from site
Thames Basin Heaths	Special Protection Area (SPA)	Southeast	8,150 m

The topography of the site (see Figure 2.2) is such that in a loss of containment event, liquid sludge would flow under gravity and therefore the provision of additional containment measures is required to prevent flow into the water systems and sites (Ground water, River Kennet, Foudry Brook, A33, residential and commercial such as Hilton hotel).

The plan below indicates the boundary of the permitted IED area, and the assets contained within.

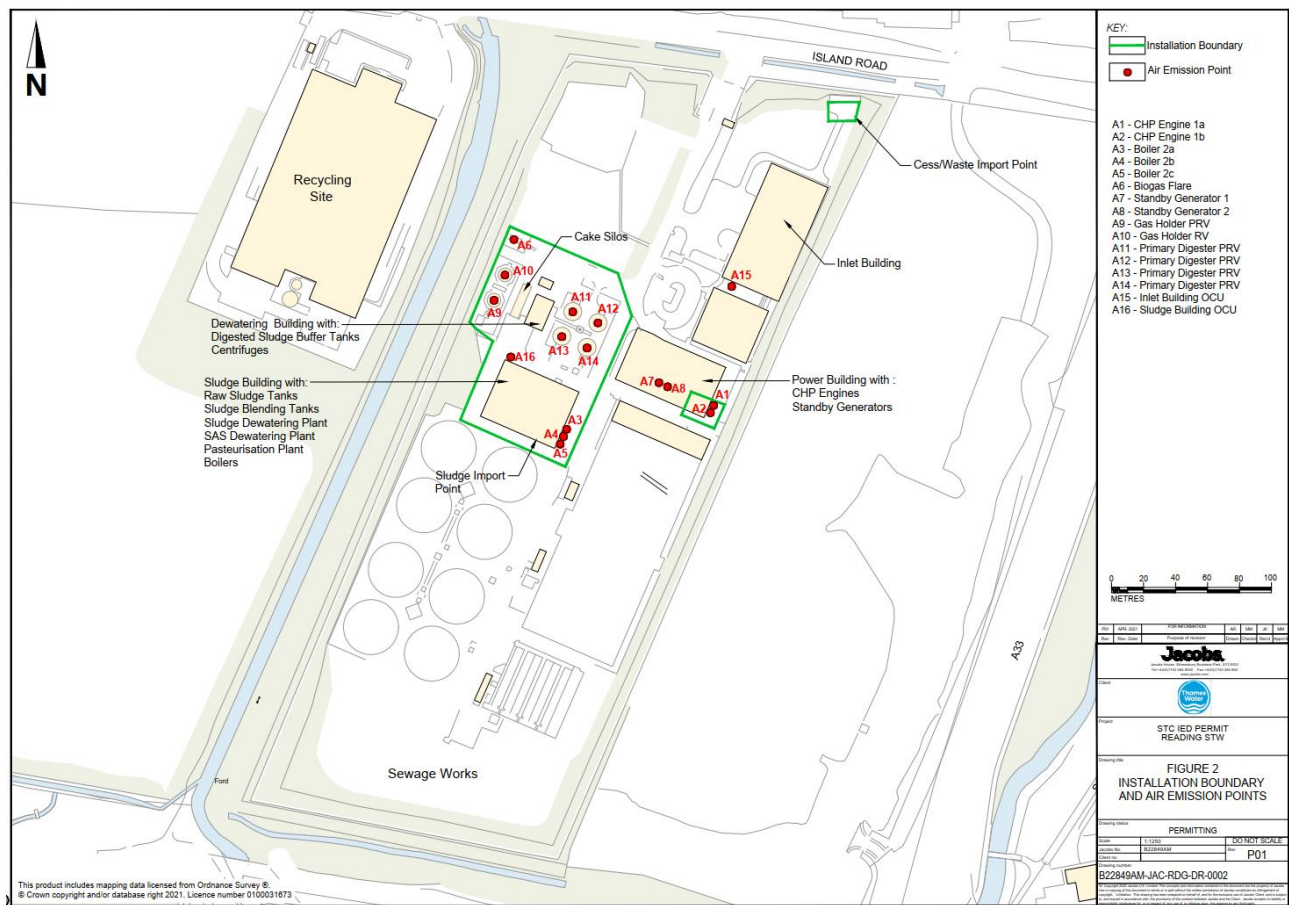

Figure 1.1 Boundary of the permitted IED area and the assets contained within Reading STW.

1.1 Containment Classification Assessment

ADBA Industry Guidance and CIRIA C736 state how the site hazard rating of the site risk and classification are to be calculated. A summary of the hazard risks for Reading STW are as follows:

Source – There are two sources that have been identified:

1. Domestic and trade effluent Wastewater sludges, both in a raw, semi treated and treated state.
2. Polyelectrolyte chemicals for sludge thickening.

The Source Hazard rating was determined as **High**.

Pathway – There are three pathways that have been identified:

1. The process and site drains take any liquid to the head of the works which would negatively impact the process stability on site and would eventually impact on the receiving watercourse.
2. There are several areas where a sludge spill could pass over permeable ground.
3. The river Kennet and Foudry Brook to the north and east can impact downstream.
4. The site inventory has a runoff time of 15 minutes.

Consequently, the Pathway Hazard rating was determined as **High**.

Receptor – There are several potential receptors which have been identified:

1. The site drainage system and the head of the works.
2. There is a “Medium-High” groundwater vulnerability in this location.
3. The River Kennet and its stream to the north and west of the site, at a lower elevation and Foudry Brook to the east, also at a lower elevation.
4. The A33 to the east at a lower elevation.
5. The Hilton hotel (commercial) and Kennet Island Housing (residential) across the A33.
6. The Amazon and DHL warehouse immediately north of the site.

The Receptor Hazard rating was determined as **High**.

Likelihood – For the purpose of this assessment the likelihood for mitigated and unmitigated risks was calculated based on the assumption that the likelihood hazard rating is medium.

Pre-mitigation measures, operational failures were highlighted as a high risk, shortfalls in design (provision of alarms and monitoring) together with structural failure were highlighted as a medium risk.

Post-mitigation measures operational failures were re-scored as a medium risk, the previous two medium risk items remained as medium.

Therefore, the final Likelihood Hazard rating was determined as **Medium**.

Based on the information above the overall site risk rating was calculated to be high which means that Class 3 secondary containment is required.

<u>Source Risk</u>	<u>Pathway Risk</u>	<u>Receptor Risk</u>	<u>Site Hazard Rating</u>	<u>Likelihood</u>	<u>Overall Site Risk Rating</u>
High	High	High	High	Medium	High (Class 3)

2. Flow Paths

2.1 Site Characterisation

The state-of-the-art open-source LiDAR (Light Detection and Ranging) imaging data was used utilised from the Environment Agency (EA) National LiDAR Programme in this work, on 1m pulse laser beam intervals and 1km grid tiles across the whole site. ArcGIS 10.8.1 modelling software was used to analyse LiDAR Digital Surface Model (DSM)/Digital Terrain Model (DTM) and formulate coloured hill shading and contour models. The DSM was used with aerial imagery to locate any buildings or tanks within the site so these could be removed from the process. The 1m resolution DTM uses the last return of the LiDAR pulse, classified as the ground, and as part of the EA National Programme has been manually filtered to improve accuracy of the ground model.

Figure 2.1 Labelled image of Reading Sewage Treatment Works

Figure 2.1 shows the site annotated with the sludge and digestion tanks and significant buildings. The effluent channel for the STW (Figure 2.2), which is discharging to Foudry Brook, is located 300 meters away in the northeast direction to the STW. Considering the topography of the sludge area, the high-resolution contouring revealed that the digesters and the surrounding areas are at a similar elevation. However, the contouring results showed that to the northeast of the digesters, the elevation increases and therefore, it is expected that in the event of catastrophic failure of one of the digesters, sludge would flow in any other direction except for the north east side of the digester area.

There is only one designated habitat site within the relevant distances of the site – the Thames Basin Heaths Special Protection Area (SPA) is approximately 8.15 km to the south-east of the site. There are no Local Nature

Reserves or Sites of Special Scientific Interest (SSSI) within 2 km of the site and no Special Areas of Conservation, Ramsar sites or Marine Protection Areas within 10 km of the site. The site is directly adjacent to DHL and Amazon warehouses to the north. Both warehouses use the Island Road bordering the site for access.

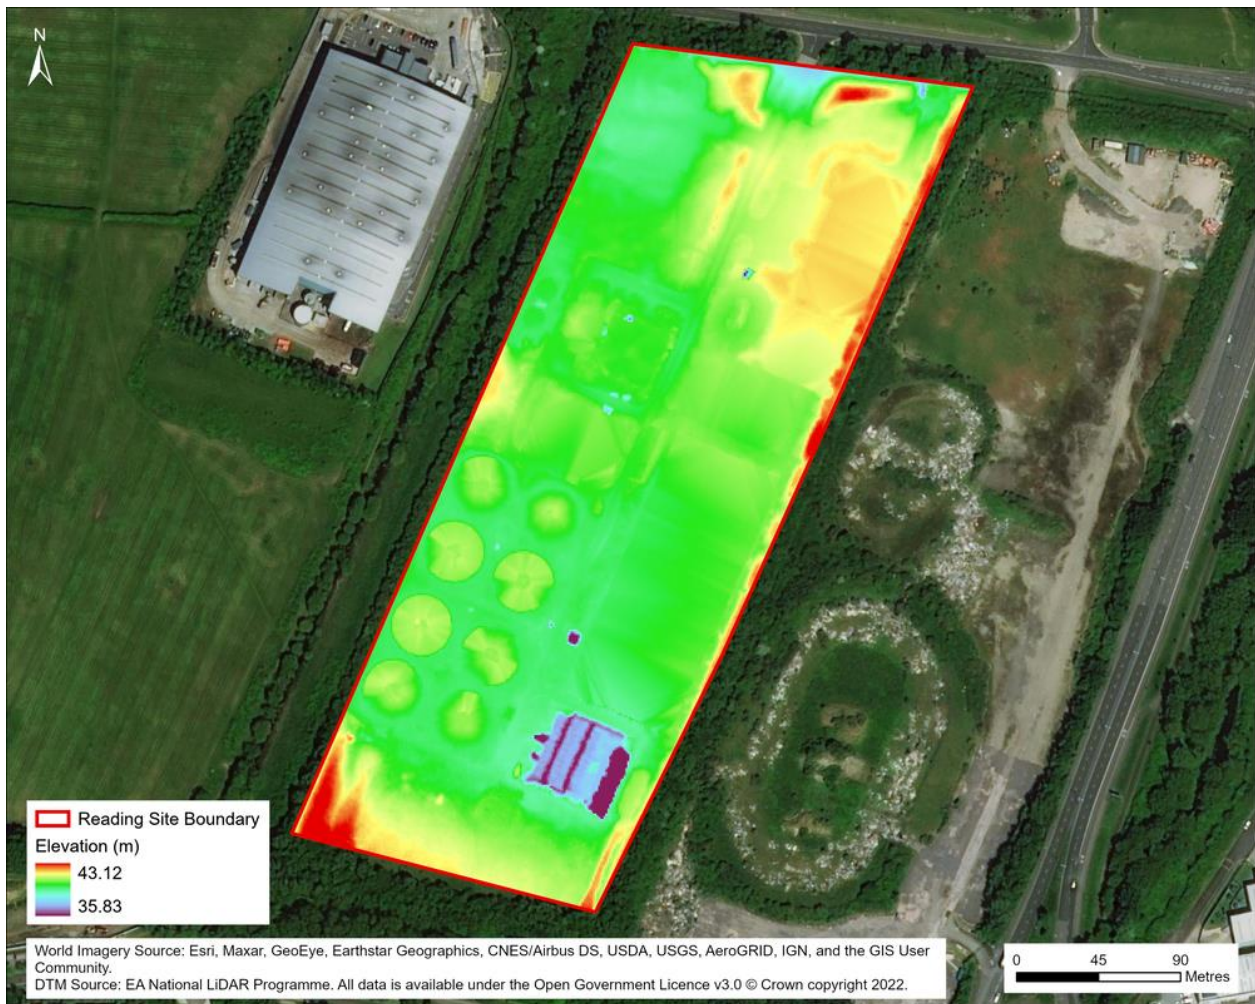

Figure 2.2 Digital Terrain Model of Reading Sewage Treatment Works

2.2 Loss of stock from most credible failure scenario

CIRIA C736 states that when considering a loss of containment of sludge, the volume of substance should be based on the loss from a *credible scenario*, this need not necessarily involve the *entire* site inventory.

None of the tanks are hydraulically linked, so rupture would affect only one digester or tank. Therefore, the volume from a credible failure scenario is the maximum capacity of the largest tank, which at Reading is the largest Primary Digester of 1,775 m³.

2.3 Uncontained spill mapping and flow paths

Hydraulic modelling has been applied to assess the uncontained spill following a catastrophic failure of the largest digester tank within the site only (1,775 m³), without rainfall contribution. The 2D model generated uses the TUFLOW software package (Version 2020-10-AC), which can be used for simulating depth-averaged, one and two-dimensional free-surface flows exhibited with floods and tides. TUFLOW's implicit 2D solver, solves the full two-dimensional, depth averaged, momentum and continuity equations for free-surface flow using a 2nd order semi-implicit matrix over a regular grid of square elements. Furthermore, it includes the viscosity or sub-grid scale turbulence term that other mainstream software omit.

The Digital Terrain Model (DTM) used in the model was of 1m resolution and the footprints of buildings and tanks were omitted from the model. The dimensions of the tank were used to calculate a constant flow of liquid in all directions from the circumference until it was emptied. Areas with different roughness coefficients were delineated using aerial imagery e.g., liquid would flow more easily over roads and paths as opposed to vegetated ground. The model outputs are 2m resolution with a timestep of one second. The model was run until the liquid front was no longer moving. Default parameters were used in the simulation and the model was stable with a mass balance error below the acceptable 1%.

Figure 2.3 shows the sludge spill mapping of an uncontained event at Reading STW. The modelling results showed that a potential sludge spill from the one of the digesters will not be self-contained within the site and therefore passive containment needs to be implemented to safeguard the nearby receptors. According to the model the spill will leave the site boundary (the northwest site boundary) in approximately 15 minutes following failure of one of the digesters.

The spilled content will initially spread within the sludge and digester area including the Dewatering and Sludge Buildings and the Power building containing the Combined Heat and Power engines. It is expected that the flow will further travel north bound and overflow the site's carpark space some sludge will partially spill over to adjacent grassland next to RE3 Waste Management Site, northwest of the site boundary. Most of this sludge will then spread to the road entering the site and will eventually spill onto Island Road, north of the site boundary which could potentially prevent access to the nearby Amazon and DHL warehouses. The spill will also travel south of the digesters within the STW; however, this run-off will not spill over the southern site boundary and therefore will be contained within the southern side of the Reading STW.

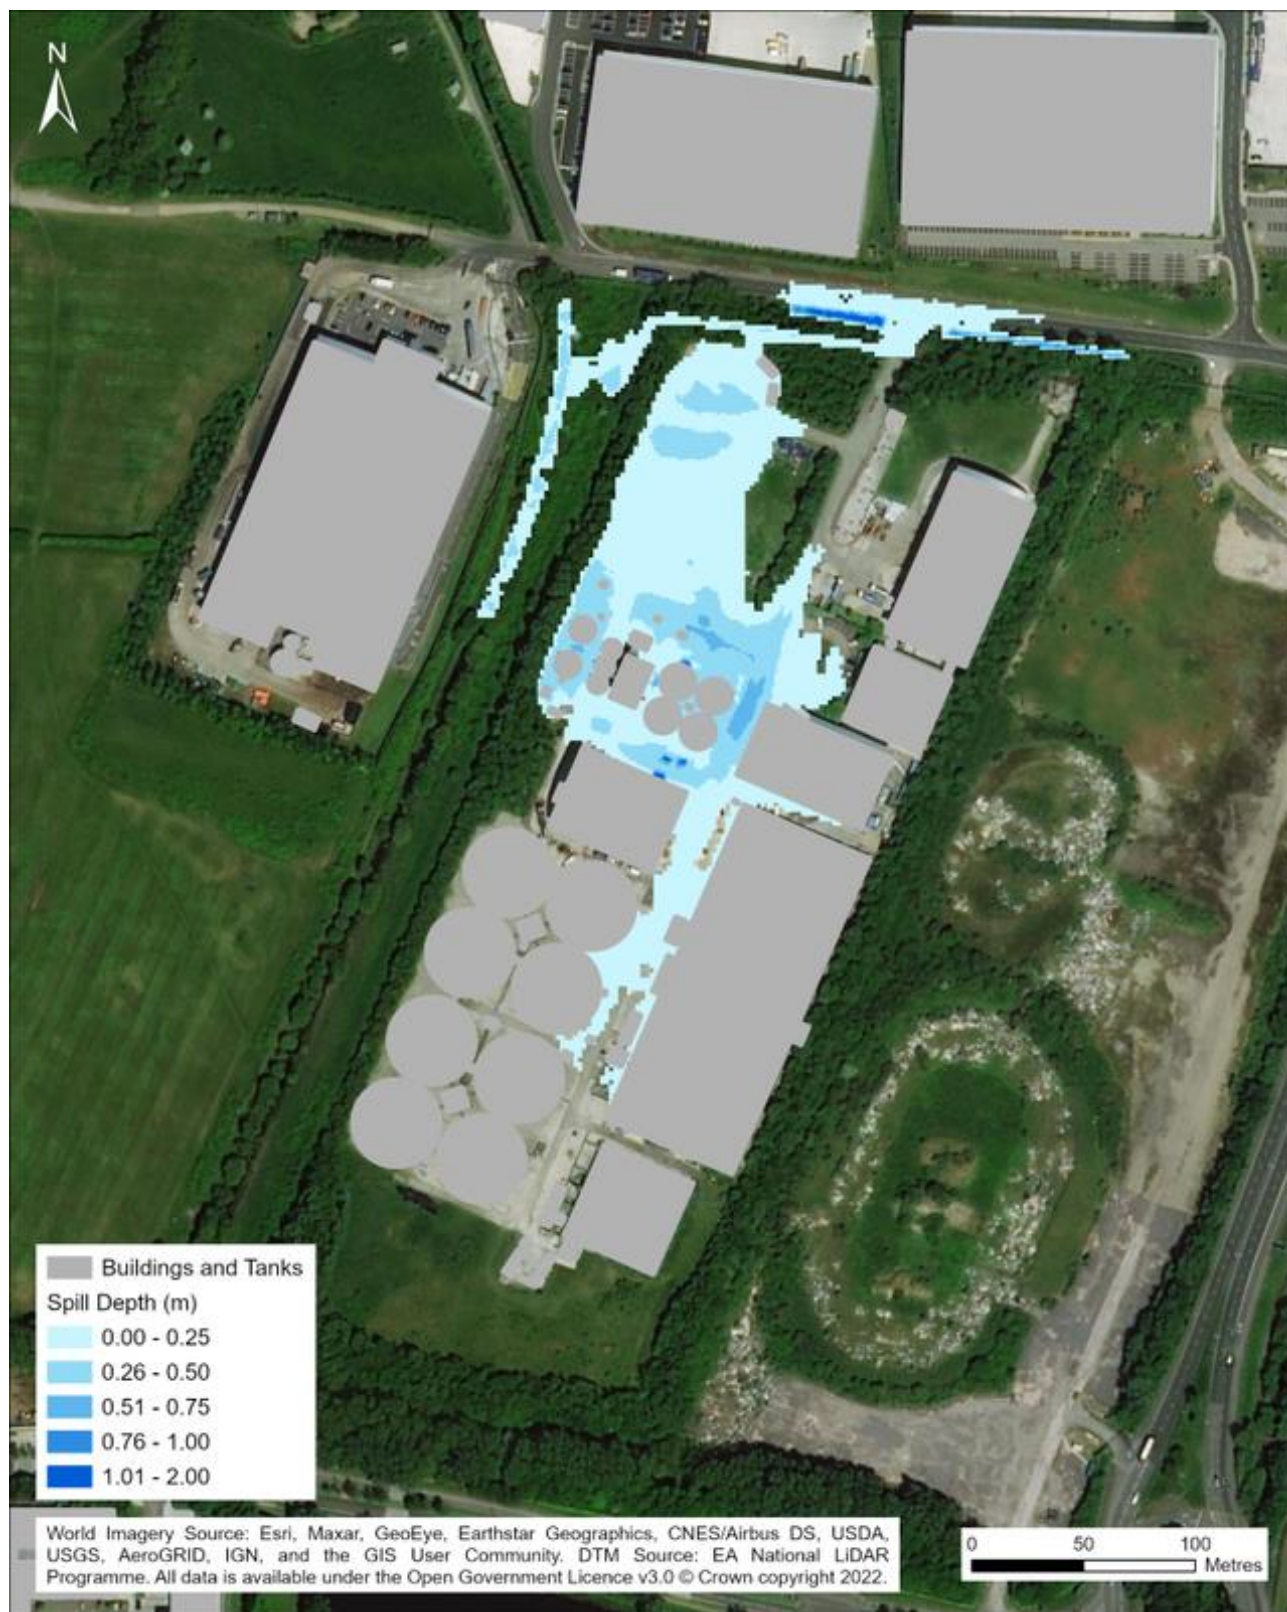

Figure 2.3 Map of the extent of an uncontrolled event of sludge spill in Reading STW

3. Other site risks

3.1 Jetting Flows

In addition to analysis of spill maps for containment assessed in this report, jetting effects have also been considered to better understand the flow paths for a potential spill. Jetting is the phenomenon whereby the failure of a tank through rupture or corrosion results in the escape of a jet of liquid with sufficient force causing projection out of the tank.

In the instance that tanks are located near the boundary of the containment areas, jetting could have potential implications on where sludge spills accumulate. The sludge area is a compact area and as a result, several tanks are near the containment area boundaries. Where it is not practical to locate a bund wall to contain the potential jetting of sludge to the areas beyond the containment boundary, baffle plates or suitably robust curtains should be considered.

There are several sludge containing tanks, including the digesters, located in the proximity of the site boundaries and proposed containment area (<20 m) and therefore jetting should also be assessed at Reading STW.

Figure 3.1 below details the method for determining the necessary height and distance of a bund wall from a given tank to prevent jetting.

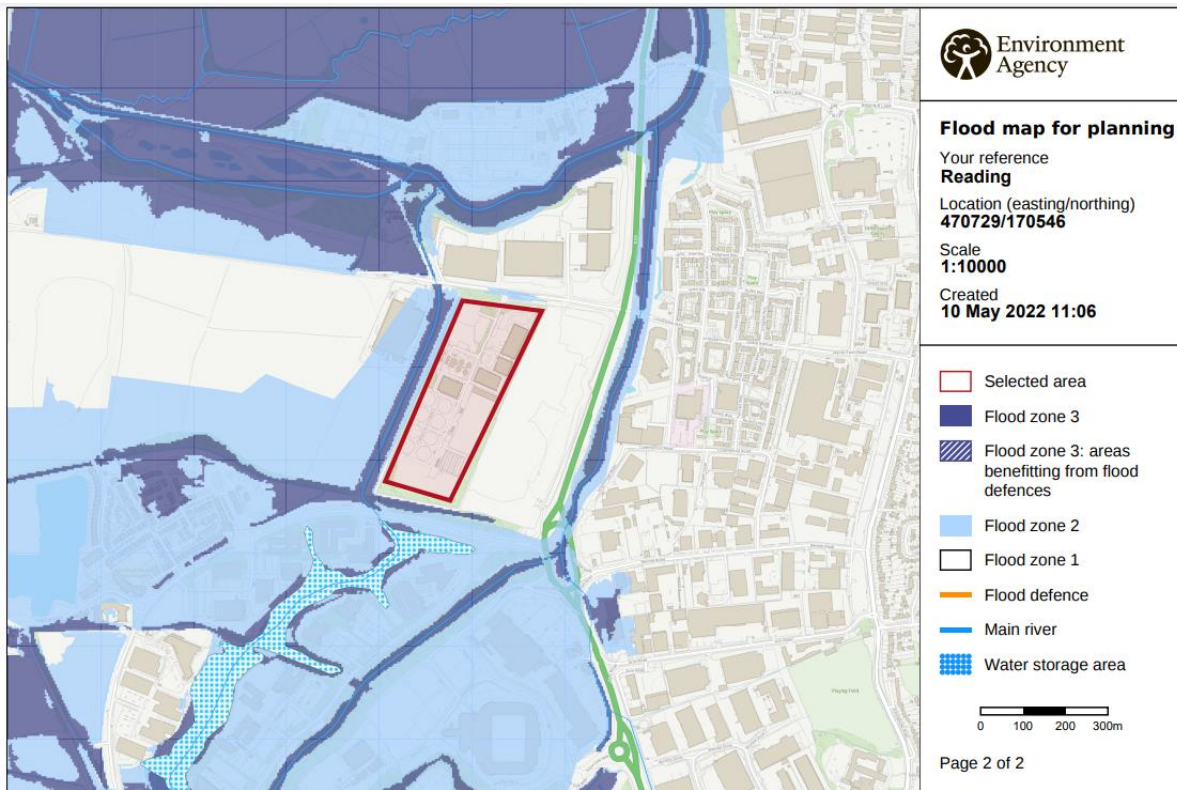

Figure 3.1 Method for calculating bund geometry to prevent jetting (CIRIA guidance document C736)

3.2 Flooding

According to the UK Government’s Flood Map for Planning, the sludge area is in Flood Zone 2, as shown in Figure 3.2. The Flood Zone definitions listed in Table 3.1 provide additional detail of the areas of concern, which in the case of Reading STW, have a 1 in 100 and 1 in 1000 annual probability of river flooding. The flood map shows that the River Kennet and the side stream that runs west of the STW would increase the risk of flooding in this area. Mitigation measures for fluvial flooding should be considered given that the probability of flooding in the area is medium. Given the close proximity of the sludge assets to the nearby receptor (Riven Kennet), a means of preventative measures might be required to prevent potential river flooding.

Additionally, in the Flood Risk Vulnerability Classification sewage works are classified as ‘less vulnerable’, if adequate measures to control pollution and manage sewage during flooding events are in place.

Figure 3.2 Extent of Fluvial flooding in Reading due to extreme weather events

Table 3.1 Flood Zone Definitions from GOV.UK Flood Map for Planning

Flood Zone	Definition
Zone 1 Low Probability	Land having a less than 1 in 1,000 annual probability of river or sea flooding. (Shown as 'clear' on the Flood Map – all land outside Zones 2 and 3)
Zone 2 Medium Probability	Land having between a 1 in 100 and 1 in 1,000 annual probability of river flooding; or land having between a 1 in 200 and 1 in 1,000 annual probability of sea flooding. (Land shown in light blue on the Flood Map)
Zone 3a High Probability	Land having a 1 in 100 or greater annual probability of river flooding; or Land having a 1 in 200 or greater annual probability of sea flooding.(Land shown in dark blue on the Flood Map)

4. Potential Options

There are several options which need to be considered as part of the optioneering to deliver containment at the Reading Sludge Treatment Centre. This optioneering has not yet been carried out and hence some of the proposed options may not be appropriate for the site on a cost, engineering, space, or practicality basis, which is being programmed by TWUL, including consideration of future investment at the site and local ground conditions.

Some of these options are applicable across several sites, while others are site and location specific. It is possible that more than one option may be appropriate at a single site, on an asset specific basis, rather than using a single concept at the site.

The high-level containment options are tabulated below, followed by an overview of some of the options, with regards to their practicality at the specific site. Some options may not relate to specific tanks but involve the movement of other assets such as pumps, pipework, or the biogas systems to minimise the risk of damage to these in the event of a spill. This may involve relocating assets or raising them above their current level, which may alter available volumes close to tanks impacting upon bunding requirements with regards to location and height.

High Level Option	Details	Cost	Practicality	Applicability
Replacement of tanks	Existing tanks replaced by assets which are double skinned or integrally banded.	High	Low	Will depend upon the assessed current asset lifespan. Integral bunding practicality may be influenced by tank volume.
Replacement of tanks	Resizing of existing tanks to reduce either the overall number of tanks, or potential volume in a containment failure scenario.	Medium	Medium	Will depend upon the assessed current asset lifespan. May increase overall number of tanks on site. May reduce site resilience due to reduced storage volumes.
Installation of tank farm bunding	Bunding of tanks on either an individual basis or for a group of closely spaced tanks.	Low	Medium	May be used on all tanks, however, likely to involve changes to existing piperuns and pumping requirements, to reduce the requirement for bund penetrations by pipes. May impact on access to individual tanks. For some assets, may lead to potential confined space or DSEAR concerns.
Use of Secondary containment	Remote bunding of tanks, which may include use of existing assets to capture spillages, such as roadways or open space.	Low	High	Likely to be applicable to all sites. However, may lead to increased requirement for impermeable surfacing to reduce infiltration in designated spill containment areas. Will depend on existing site infrastructure and may lead to land sterilisation issues.

<p>Installation of increased diameter drains and wet wells</p>	<p>Installation of increased diameter drainage locally to capture more of a spillage, linked to wet wells to hold spillages, prior to return to works inlet.</p>	<p>High</p>	<p>Low</p>	<p>May be applicable for single or multiple tanks, but the larger the covered area, the greater the potential volume needed to account for rainwater.</p> <p>May be limited in use due to ground conditions and subsurface asset locations.</p> <p>May have carbon related impacts due to increase in pumping requirements</p>
<p>Construction of sumps</p>	<p>Construction of engineered, sealed, sumps, to increase storage capacity locally in the event of a loss of containment.</p>	<p>Medium</p>	<p>Medium</p>	<p>Likely to be applicable mainly for smaller tanks</p> <p>May be limited in use due to ground conditions and subsurface asset locations</p> <p>May create confined spaces or raise DSEAR concerns.</p>
<p>Tank construction</p>	<p>Change to asset standards to reduce the potential risk of tank failure.</p>	<p>High</p>	<p>Low</p>	<p>Will not remove need for containment, but may alter the failure mode, impacting on the speed of a spillage occurring and volume involved.</p> <p>Potential carbon related impacts.</p>

Reading STW Risk Identification and Containment Assessment Report

Process changes	Changes to process technology and techniques to reduce the requirement for post digestion storage duration to achieve the required pathogen kill level.	Medium	Low	<p>May reduce to the overall volume of sludge stored reducing containment requirements. However, may increase dewatering requirements and associated storage volumes.</p> <p>May have wider impact on works, such as changes to gas yield or requirement for liquor treatment.</p>
Movement or raising of ancillary assets	Movement of assets such as pumps, pipework and the biogas system in order to raise it above the potential spill level local to those assets.	Low	Medium	<p>Applicable to all assets which may be impacted by a loss of containment.</p> <p>May involve raising levels locally through installation of plinths or similar, altering the existing spill mapping.</p> <p>May have carbon related impacts due to increase in pumping requirements.</p>
Site closure	Closure of sludge assets, with transfer of sludge to alternative treatment location.	High	Low	<p>Will depend upon the assessed current asset lifespan.</p> <p>Requires sufficient capacity at alternative treatment location.</p> <p>Potential for carbon impact due to transfer of sludge</p>

5. Conclusions

This section summarises the findings of the site assessment at Reading STW for the event of a credible catastrophic failure of a primary digester tank.

Sludge spill modelling was undertaken to assess the impact of an uncontained sludge spill on Reading STW. The results of the modelling showed that the spill is not self-contained within the site and sludge would leave the site at the northern boundary onto Island Road which could potentially restrict access to Amazon and DHL warehouses and spread to the area near the RE3 Waste Management Site.

A hazard risk assessment for Reading STW, was also undertaken with the site hazard rating estimated to be High and the likelihood of a spillage was classed as Medium. Based on these risks, an overall site risk rating was determined to be High, meaning that class 3 containment is required.

Jetting effects should also be considered to better understand the flow paths for a potential spill. However, the focus of this assessment report is not to provide detailed solutions for containment. The sludge area is in Flood Zone 2 according to the UK Government's Flood Map for Planning and therefore some additional measures for flooding should be considered.

In the instance of a credible catastrophic failure of one of the digesters at Reading STW, to prevent sludge from entering the adjacent private properties and Lower Kennet, the provision of a secondary containment system should be considered.

1. Executive Summary

Thames Water is required by the Environment Agency to provide secondary containment to their sludge treatment centres to satisfy provisions of the Industrial Emissions Directive and to safeguard the operation of the adjacent sewage treatment works. Twenty-five sludge treatment centres have been identified where containment proposals are required. This report deals with the proposals for Reading.

Reading serves a population equivalent of 264,000 taking in sewage from Reading and surrounding area. The sludge treatment centre shares the same site as the sewage treatment works.

CIRIA Report 736 – Containment systems for the prevention of pollution sets out principles and direction. This report sets out options to apply the CIRIA 736 principles within the accepted constraints of a retrofitted solution.

Reading holds some 11,530m³ of liquid within the sludge treatment centre. The liquid sludge is stored in 12 tanks with individual volumes varying between 30 to 1775m³ and the majority of the tanks are concrete. The site is generally low lying and flat. The containment volume of 2883m³ is driven by the 25% rule (25% of total tank volumes which includes allowance for rainfall) rather than 110% (of the largest single tank) of the total tanks volume. The STW when constructed in early 2000's with a bund around the STW and this will act as tertiary containment.

Two wide area options for containment have been identified and reviewed with Operations to confirm that the working of the sewage treatment work is not compromised by proposals:

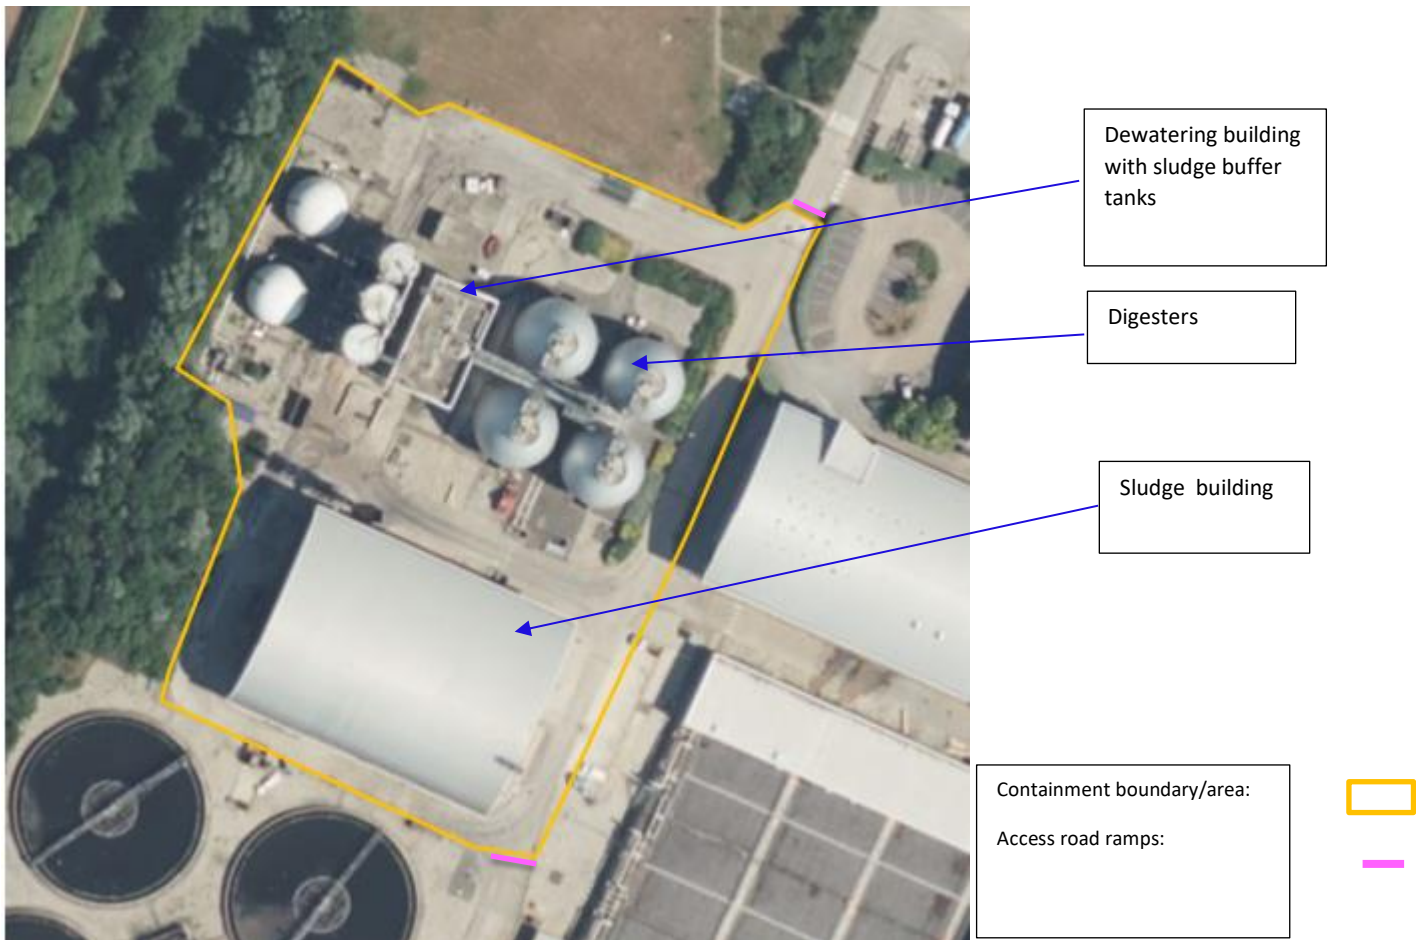

1. Wide area containment whereby the sludge tanks are contained within a bunded boundary with sufficient area to generate depth that does not deny emergency access to equipment when the spill has been contained.
2. Increased the wide area containment area utilising the available land on site, whereby the sludge tanks are contained within a bunded boundary with sufficient area to generate shallow depth that does not deny emergency access to equipment when the spill has been contained.

In addition to the creation of bunds, which due to space constraints are likely to be formed from concrete, existing grass or gravelled areas will be replaced with a bound impermeable material (high cement replacement concrete) to provide a surface that can be cleared of sludge to meet an eight-day recovery period. Vehicular access into the containment areas is by ramps (speed humps) restricted to nom 250-300mm in height; traffic movements on site make the use of permanent flood gates impracticable. Whilst the site is identified as requiring Class 2 containment (impermeable soil with a liner), the proposed solution is intending to concrete (with no liner) on the basis of the impermeability of the concrete, inherent strength and long-term mechanical resistance.

The containment volume identified reflects the potential escape volume from the tanks and the 1 in 10 year rainfall that could arrive during the clearing up period.

Bund heights are being set to provide freeboard considering both static conditions when the containment has been filled and during the transient condition at initial failure. There is the potential for some flow to overtop the access ramps during the conditions of the initial burst which is addressed by tertiary containment and conveyance to the site drainage system which discharges to the inlet works.

General layout of proposed Option

The modelling highlights that the design detailing may need to consider flood gates instead of ramps to access the containment area due to the standing depth of the sludge and height of the containment walls. The other consideration is any spill over the ramps will be contained onsite by the sites boundary bunds tertiary containment and conveyance to the site drainage network which discharges back to the head of works.

Grassed and gravel areas within the yellow area to be replaced by concrete. Some of the concrete roads in the yellow area may need to be replaced/repared to enable them to be impermeable.

2. Background

Following initial audits by the Environment Agency (EA) in 2019 that examined the primary, secondary, and tertiary containment provisions for Thames Water's anaerobic digestion (AD) process and associated tanks, the EA reported *"there is no provision of secondary containment for the AD process at any of Thames Water's sites. Catastrophic tank failure may impact nearby receptors and the operation of adjacent sewage treatment activities"*. Jacobs were appointed to assess site risks and outline the options available for providing remote secondary containment of a catastrophic tank or digester failure across 28 Thames Water sites. Based on CIRIA C736 and ABDA risk assessment tools this containment report addresses the site-specific risks at Reading and outlines the options available for providing remote secondary containment in the event of a catastrophic tank or digester failure.

The current assessment identified gaps between the existing conditions of the sludge assets in Reading STW and the requirements to meet the industrial standard (i.e., CIRIA C736 and The Anaerobic Digestion and Bioresources Association Limited (ADBA)). Site-specific risks, credible failure scenario and design containment volume for the Reading STW were identified through a desktop study, Light Detection and Ranging Analysis (LiDAR) analysis and a site visit.

Reading Sewage Treatment Works (STW) (Figures i-iii) is located south of the town of Reading, close to the A33 which links the town with the M4 motorway. To the south of the site, separated by a dual carriageway road, is the Green Park business park which consists of a few commercial office properties. To the west and south is agricultural land and to the west and north is a local council household waste and recycling centre, closed landfill, and local council waste transfer station. To the north is commercial properties consisting of large warehouse type premises. Immediately to the east of the site is derelict land and then the A33. The STW serves a population equivalent of 264,000 taking in sewage from Reading and surrounding area.

Figure iv shows the Boundary of the permitted IED area and the assets contained within Long Reach STW.

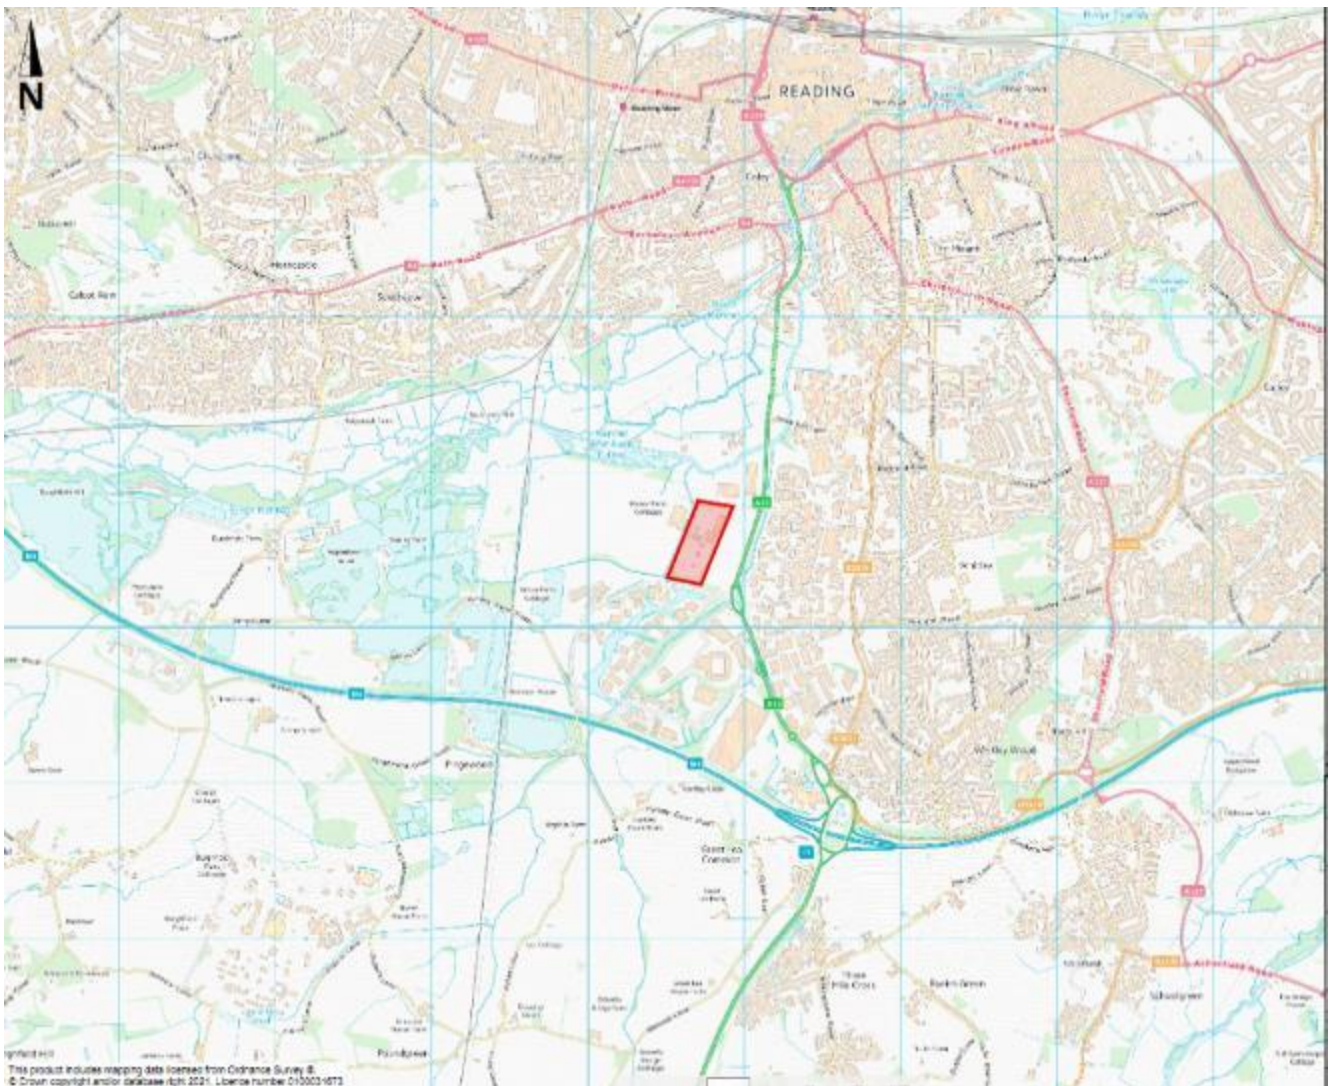

Figure i Location Plan Reading Sewage Treatment Works

Figure ii Satellite view of Reading Sewage Treatment Works

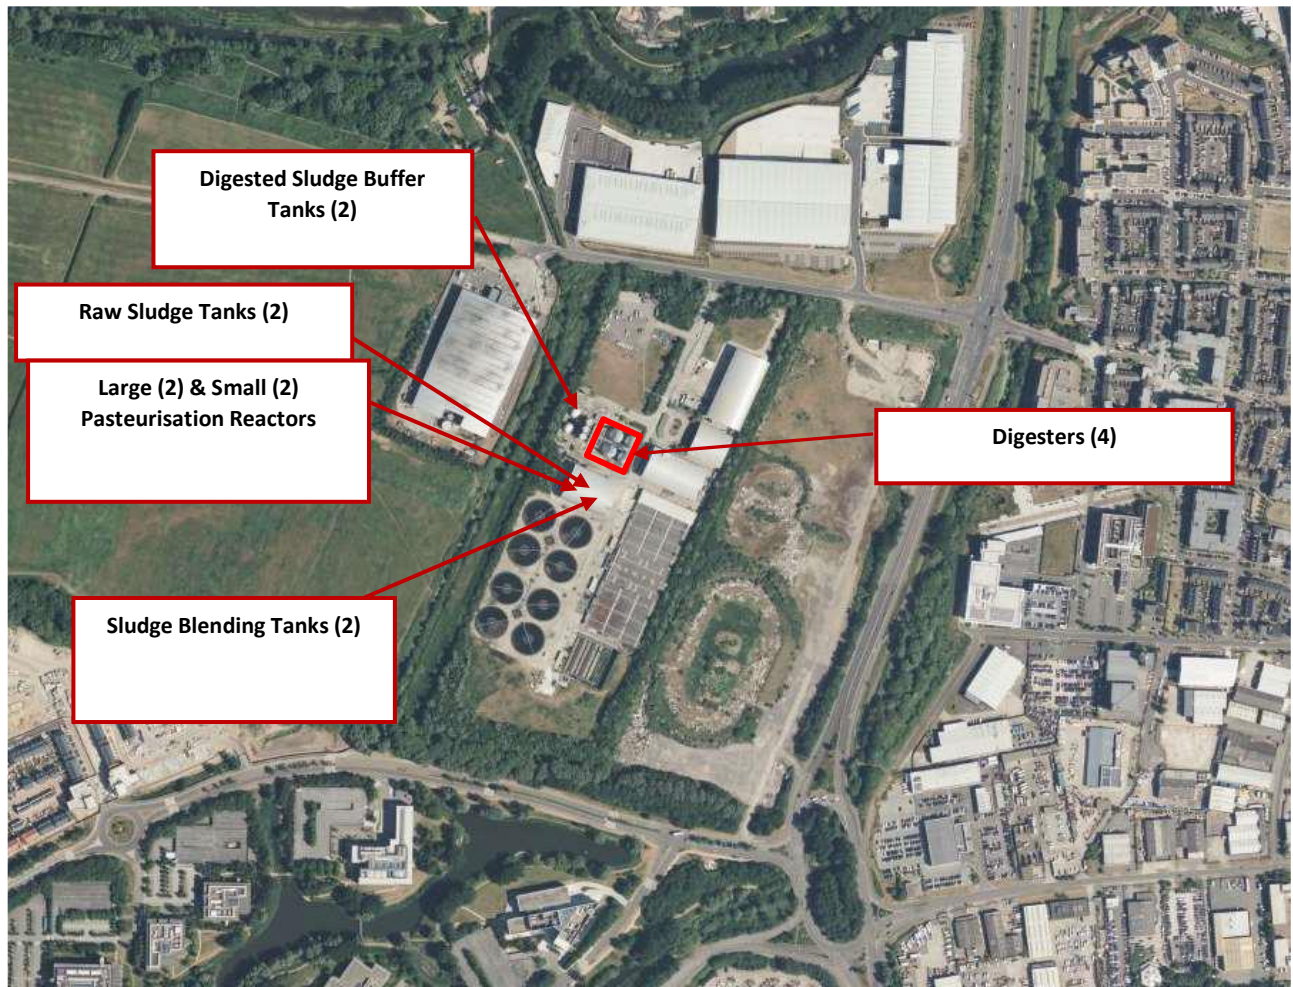

Figure iii Reading Sewage Treatment Works – Digester Area plan

This document should be read in conjunction with; Reading STW, Risk Identification and Containment Assessment Report, revision OA dated 09/05/2022. This report outlines the impact of an uncontained spill and the risk assessment completed.

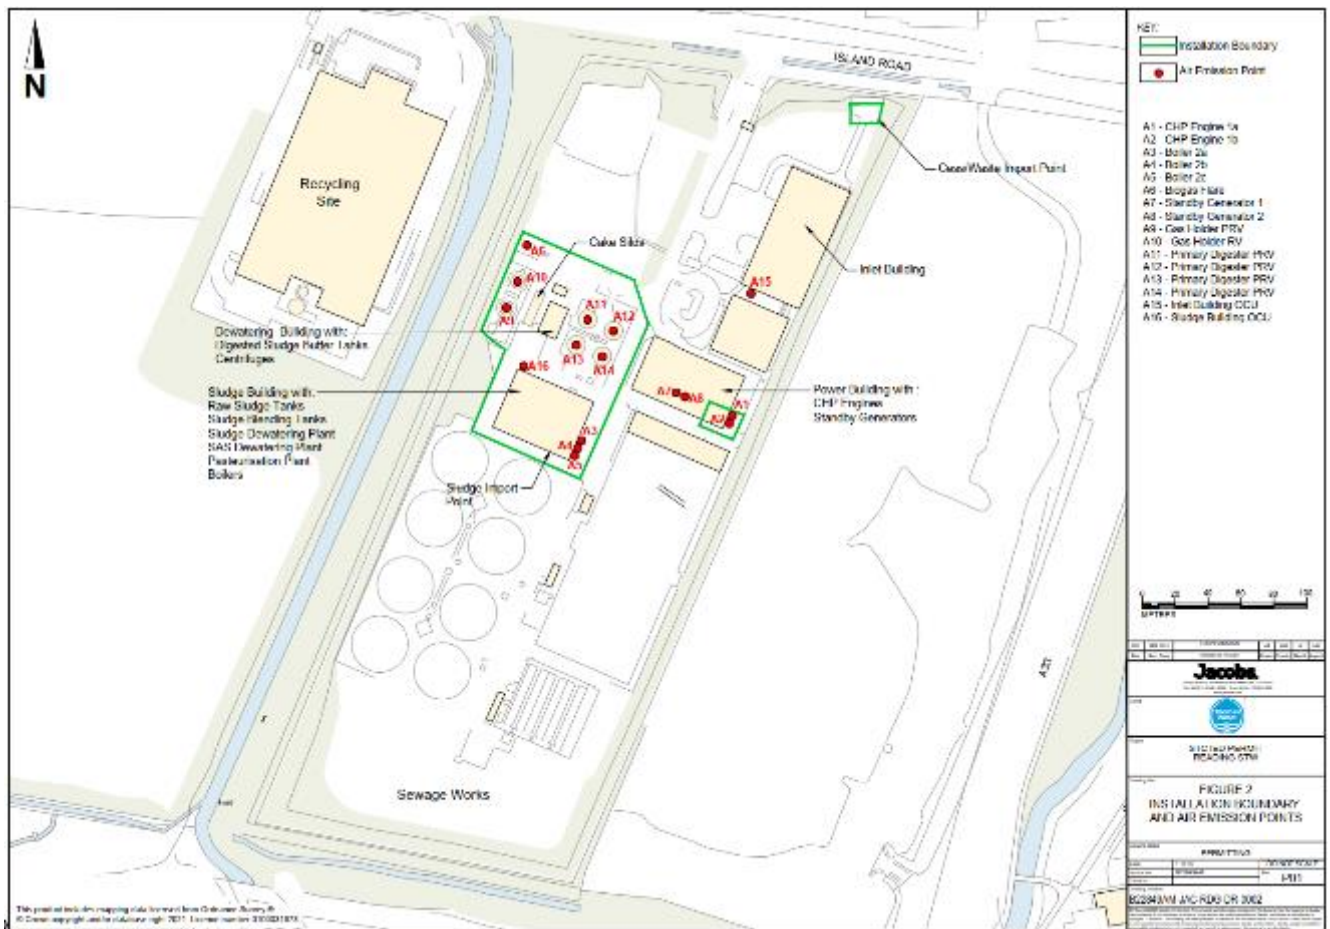

Figure iv Boundary of the permitted IED area and the assets contained within Reading STW.

3. Proposed Containment at Reading STW

3.1 CIRIA C736

This containment option report has been prepared using CIRIA C736 as the basis of design and guidelines. Where a deviation from C736 has been recommended it is highlighted in the text.

CIRIA guidance document C736 (*Containment systems for the prevention of pollution – Secondary, tertiary, and other measures for industrial and commercial premises, 2014*) describes various options for containment of spillages from a credible failure scenario. It makes reference to a key plan, reproduced below;

Key plan

viii

CIRIA, C736

Figure 3.1 Diagram of primary, secondary and tertiary containment examples

-**Primary containment** is provided by the actual tank or vessel [1]

-**Secondary containment** is provided by a bund immediately surrounding the primary vessel e.g. [3] and [4], or by a lagoon [5] or tank [6]. If containment is provided away from the primary vessels this is known as **remote containment** and may be considered as either **remote secondary** or **tertiary containment**.

-**Tertiary containment** can be provided by a number of means including lagoons [5], or impermeable areas such as car parks [8]. Roadways with high kerbing of sufficient height [9] can also form part of a tertiary containment system, or the **transfer system** to the remote containment.

The distinction between *remote secondary* and *tertiary* containment is not always clear but, if properly designed, a combined system can be provided that is capable of providing the necessary degree of environmental protection. The overriding concern is not the terminology but the robustness and reliability of the system which depends on a number of factors such as;

- Its complexity – the more there is to go wrong, the greater the risk. Passive systems relying solely on gravity are more reliable than pumped.
- Whether manual intervention is relied on to make the system work or whether the system can be automated to include fail-safes and interlocks.
- The ease of maintenance and monitoring of the system's integrity, and repair of any defects.

During and after an incident any rainfall runoff from the remote secondary storage areas, from the spillage catchment areas and from the transfer systems must also be prevented from reaching any outfall(s) to surface water by closure of control valve(s).

3.2 Objectives of remote secondary containment

The objectives of the remote secondary containment measures proposed in this report are to safely contain spillages from credible failure scenarios and prevent them from:

- escaping off site
- entering surface waters
- percolating into groundwater
- being pumped back to the inlet of the sewage works in an uncontrolled manner.

The remote secondary containment will be provided by maximising the use of existing impermeable surfaced areas to provide a fail-safe passive system that relies on gravity rather than pumps. A means of leak detection that will automatically trigger isolation valves at key locations in the drainage system is also proposed.

3.2.1 Uncontained Spill modelling

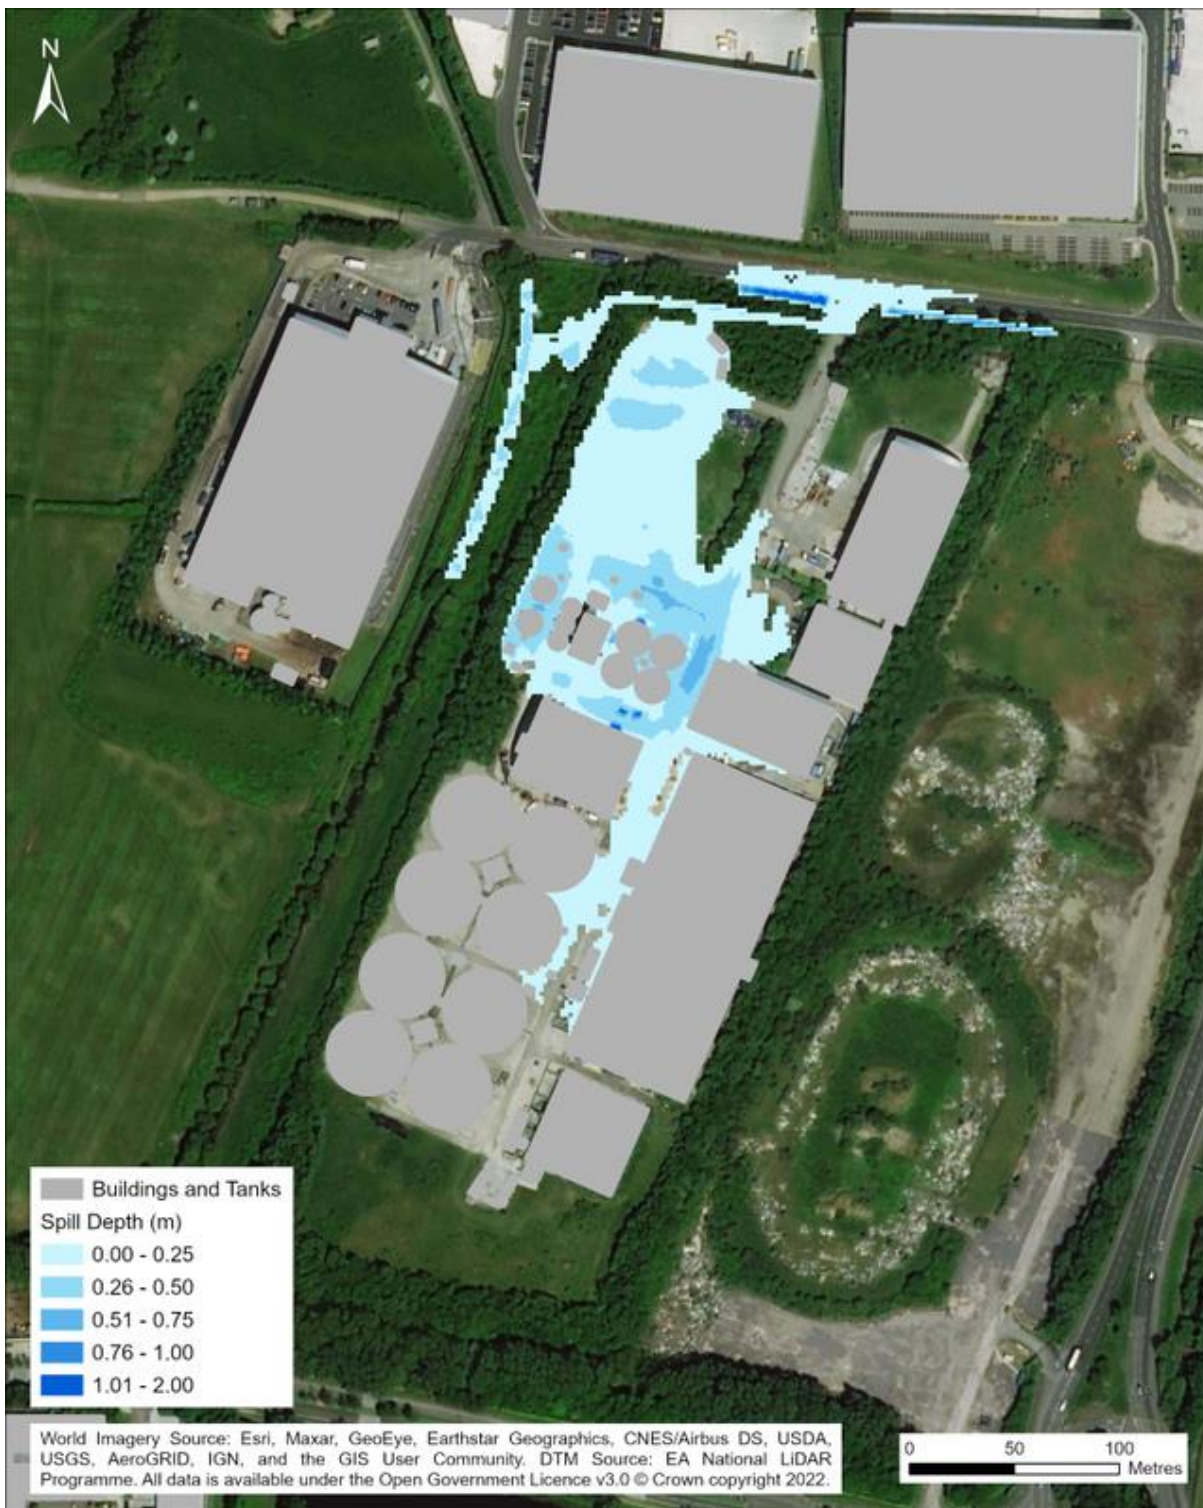

Figure 3.2 Uncontained Spill Model Results

As seen from Figure 3.2 the sludge spill mapping of an uncontained event in Reading STW showed that the potential sludge spill from one of the Digesters will not be self contained within the site and therefore passive containment needs to be implemented to safeguard the nearby receptors. According to the model the spill will leave the site boundary (the northwest site boundary) in approximately 15 minutes following failure of one of the digesters.

The sludge content will initially spread within the sludge and digester area including the Dewatering and Sludge Buildings and the Power building containing the Combined Heat and Power engines. It is expected that the flow will further travel north bound and overflow the site's carpark space some sludge will partially spill over to adjacent grassland next to RE3 Waste Management Site, northwest of the site boundary. Most of this sludge will then spread to the road entering the site and will eventually spill onto Island Road, north of the site boundary which could potentially prevent access to the nearby Amazon and DHL warehouses. The spill will also travel south of the digesters within the STW; however, this run-off will not spill over the southern site boundary and therefore will be contained within the southern side of the Reading STW.

3.3 Site Classification Reading

Based on the use of the ABDA risk assessment, considering the source, pathway and receptor risk Reading site hazard rating is deemed to be High. When considering the mitigated likelihood as low a class 2 secondary containment is required.

<u>Source Risk</u>	<u>Pathway Risk</u>	<u>Receptor Risk</u>	<u>Site Hazard Rating</u>	<u>Likelihood</u>	<u>Overall Site Risk Rating</u>
High	High	High	High	Low	Medium (Class 2)

Refer to appendix 1 for summary of the ABDA risk assessment tool.

3.3.1 Spill Volume Summary

There are two components that contribute to the required capacity of secondary containment, the source spill volume requiring containment and rainfall. Section 4 of CIRIA 736 forms the basis of this assessment. Section 4.2 reviews current industry practice relating to source spill volume, section 4.2.8 then summarises current industry practice relating to source spill volume in a tabular form. It can be seen from section 4.2.8 that sewage sludges and associated regulations / guidance are not listed.

Within section 4.2.1 there is detailed reference to the use of 110% of the largest tank or 25% of the total tank inventory volume, whichever is greater, and the rationale for this. CIRIA recognises that this approach is not quantitative or based on a risk assessment and are arbitrary methods. Section 4.3 and 4.4 provide guidance on a quantitative risk assessment methodology and this is what is being used for the calculation of the required capacity for containment in this report.

3.3.2 Total Spill Volumes

The containment volume has been checked against the 110 and 25% rule and the 25% rule applies.

The total design contained volume comprises 2883m³ (25% of the total volume of all tanks 11530m³ within the containment area including allowance for rainfall), compared to largest single tank failure of 1,775m³ and total

rainfall 892 m³ rainfall from Flood estimating handbook over catchment area, which giving a lesser volume 2882m³.

3.4 Reading STW Summary of Containment volumes and assets

3.4.1 Assets for Containment

The tanks for which containment is required are summarised below:

Tanks within containment area	No. of tanks	Total Tank Volume (m ³)
Raw sludge tanks	2	2400
Sludge blending tanks	2	1000
Small Pasteur reactor	1	30
Large Pasteur reactor	1	100
Digesters	4	7100
Digested buffer tanks	2	900
Total	12	11530
25% rule which includes allowance for rainfall		2883

3.4.2 Digital Terrain Model

The terrain model (Figure 3.3) shows that Reading STW was constructed to have an internal bund around the site, with the only low spot is at the entrance to the site.

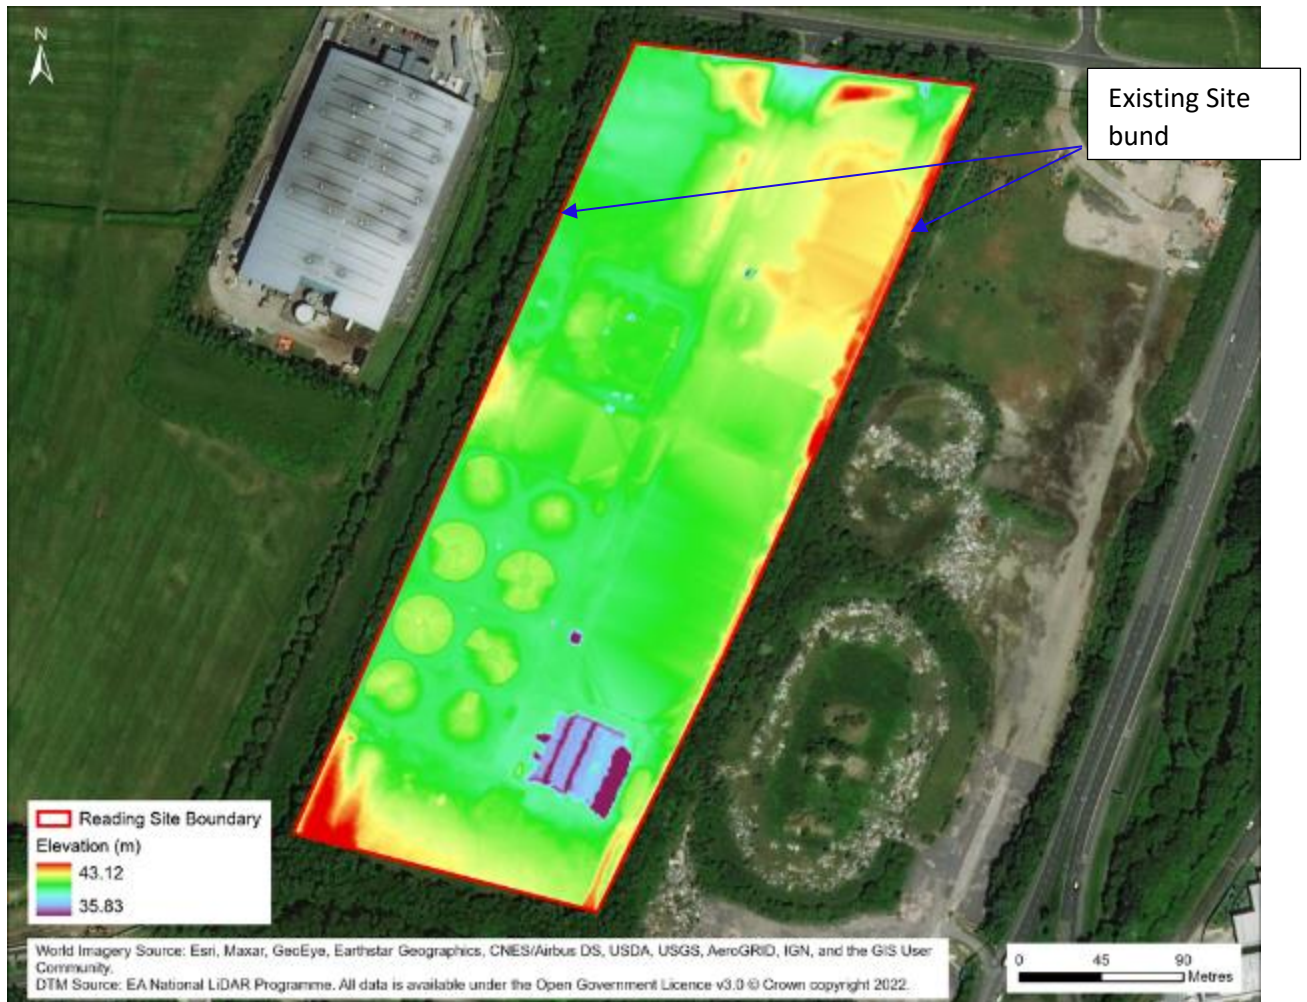

Figure 3.3 Digital Terrain Model of Reading Sewage Treatment Works

The contained model output is shown in Figure 3.4. This identifies the flow will be contained at a fairly uniform depth across the site. The containment model shows that for 100% volume loss the top water level will settle at 41.35m A.O.D. Therefore allowing for 250mm freeboard on the bund wall the bund height will vary between 0.5 – 1m with the higher bund wall along the northern and eastern sides of the containment area.

Figure 3.5 shows the contour plot for the containment area. Some of the potential depths at the northern limit of the containment area near the are in excess of that which ramps can hold. Final design development of the bunded area will consider the provision of floodgates instead of ramps.

3.4.3 Contained Model

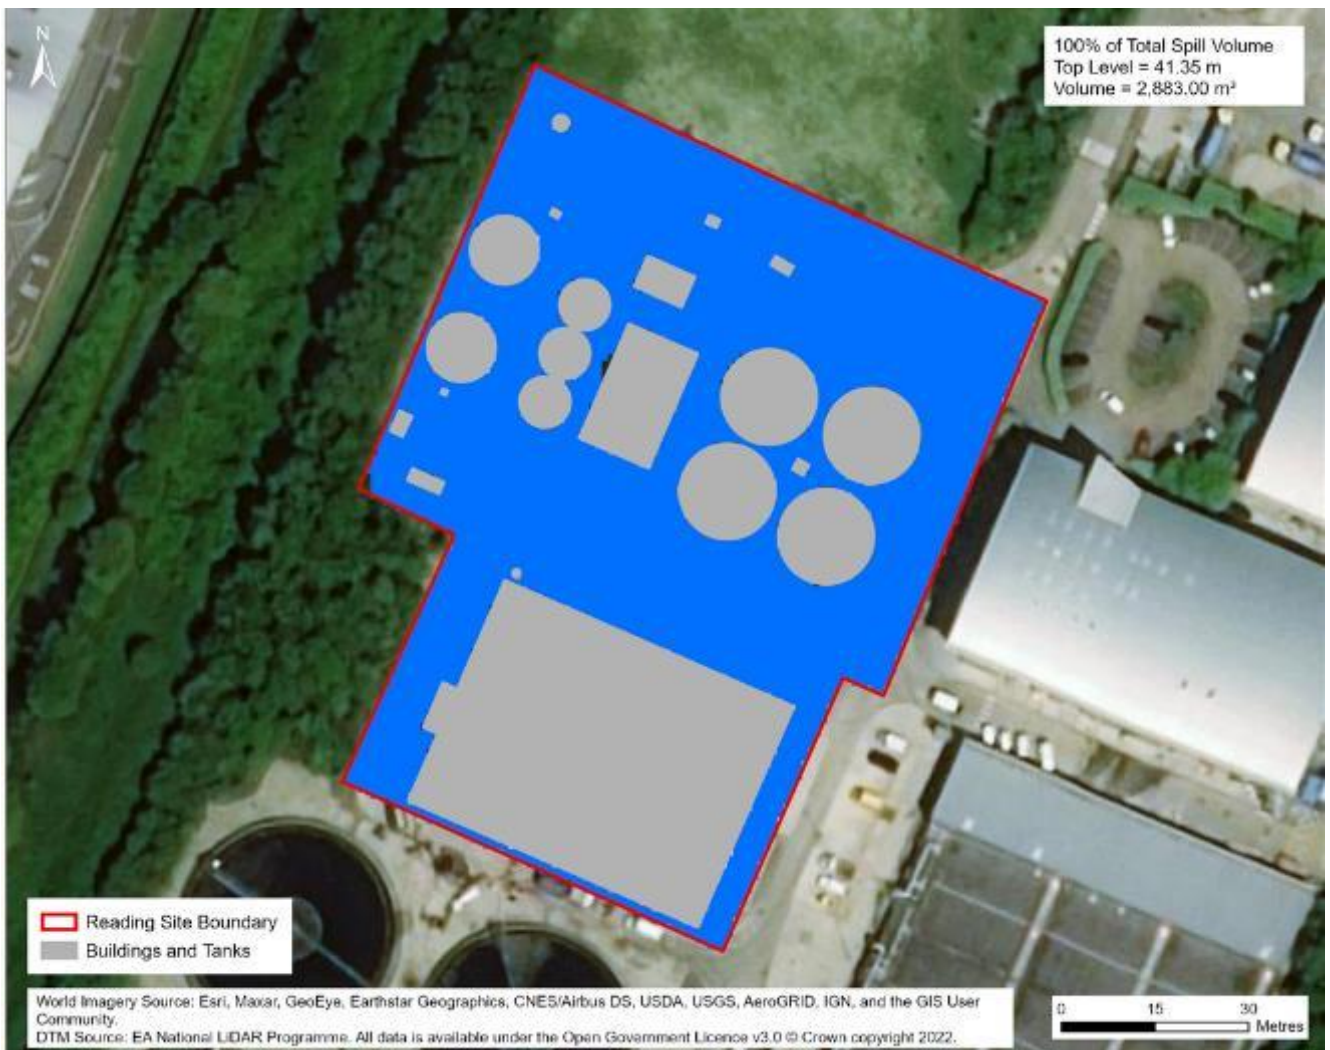

Figure 3.4 Containment spill model

Figure 3.5 contour map of the contained area

3.5 Identified Constraints

3.5.1 Operational constraints

The existing ground surfaces are mainly grass and gravel and this will need to be replaced with impermeable surface e.g. concrete from which sludge can be cleared up easily.

TW operations have stated that it would be difficult to clean up sludge from gravel areas as the gravel would also sucked up with the sludge.

The time to recovery and return site back to operation has been set at 8 days which aligns with the CIRIA guidance maximum as Thames Water operations state they cannot achieve this in a significantly shorter time, e.g. 48hrs.

3.5.2 Geotechnical and Environmental constraints

Ground conditions need to be considered during excavating and backfilling activities.

Regarding the construction works, there are no significant environmental constraints as these will all be completed within a Thames Water site.

The existing shrubbery within the containment area shall be removed and area infilled with concrete. To compensate for the loss of shrubbery, alternative areas shall be identified onsite for compensation planting or planting containers installed onsite.

3.5.3 Other constraints

None identified

3.6 Design allowance for rainfall

In addition to the maximum volume arising from a credible failure scenario, extra allowance for rainfall that may accumulate within the contained area before and after an incident has been made. The CIRIA guidance recommends that the containment volume should include an allowance for the total rainfall accumulated in response to a 1 in 10-year return period events for the 24 hours preceding an incident and for an eight-day period following an incident. The arising average rainfall depths for a 1 in 10-year storm over the event period for Reading is 91 mm. It should be noted that the rainfall depths for Reading have been estimated using the depth-duration-frequency rainfall model contained on the *Flood Estimation Handbook* (FEH), which provides location specific rainfall totals for given durations and return periods.

4. Secondary Containment

The constituent parts of secondary containment are;

- The contained area itself.
- The transfer system.
- Isolation of the drainage from both the contained area and from the transfer system.

For Reading, where possible, existing features of the site (e.g., building structures and impermeable surfaces) are used as much as possible to provide the remote secondary containment to reduce cost. The options considered, modifications and their functionality at Reading STW are listed below:

- Bund/walls to contain liquid. The heights of bund/walls given in Section 4.1 are the minimum heights required such that that top of the bund/wall is equal to the top water level plus a 250mm freeboard consideration for potential surge (to reflect the planned use of concrete walls with a recurved profile to return flow back on itself) in accordance with CIRIA. Containment ramps provide a barrier for the liquid on roads that still need to be accessible to vehicles for site operation. The maximum height of these will be 250-300mm to avoid issues with vehicle passage. The risk of spill at the ramps is mitigated by conveyance of the flow to site drainage and return to the head of the works.
- Local infill of grass/gravel to create an impermeable surface and facilitate containment and conveyance.
- Raised kerbs on roadways to channel spill to the remote containment area.
- All buildings within the containment and transfer areas must either have doors that lie above the top water levels detailed in Section 4.1 or any equipment inside must be raised off the ground to level above the top water level.

4.1 Containment Options

4.1.1 Containment Option 1 – wide area containment Approach

This option utilises containment surrounding the total containment permit area, providing secondary containment to the sludge processing facilities. The containment area is approximately 9825m² but the actual available containment area will be less than this as areas such as the tanks and sludge and dewatering buildings will not be included in the storage volume.

The containment volume has been checked against the 110 and 25% rule and the 25% rule applies.

The total design contained volume comprises 2883m³ (25% of the total volume of all tanks within the containment area which includes allowance for rainfall), LiDAR spill modelling calculated the top water level (TWL) when 2883m³ is contained in this area to be at 41.35AOD.

Summary of the recommended containment for Digestion area is described below and shown in Figure 4.1. For additional detail on the option refer to Appendix 3.

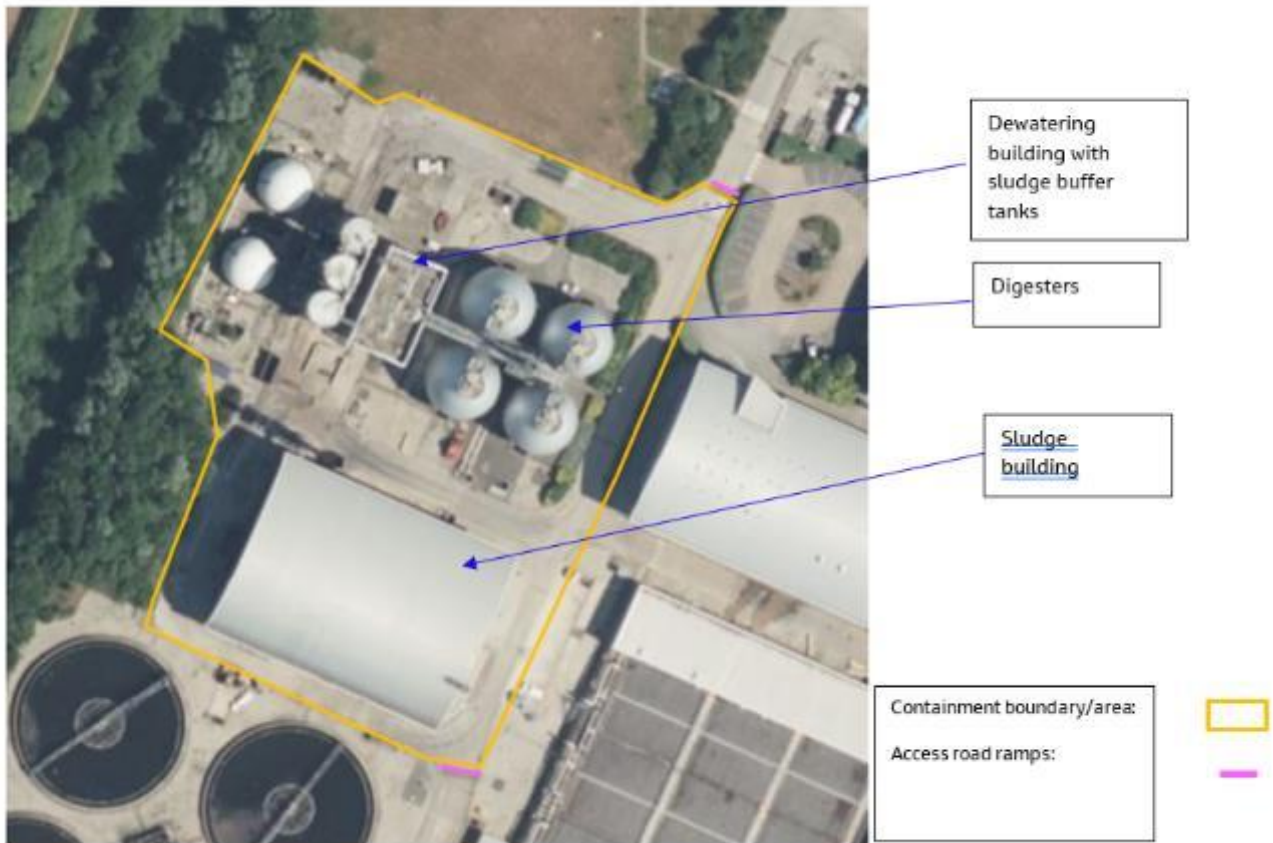

Figure 4.1 – Containment Option 1 – Wide area containment option

Bund will be utilised around containment boundary and ramps constructed across roads to enable vehicular access. Maximum height of ramps is 250mm and bunds between 500mm to 1000mm. All grass and gravel areas will be excavated and resurfaced with concrete (Figure 4.2) to mitigate seepage into the local ground and soil. This also aids cleaning procedures following a spill. There is the potential for some flow to overtop the access ramps during the conditions of the initial burst which is addressed by tertiary containment and conveyance to the site drainage system which discharges to the inlet works. The existing planted / grass within the containment area shall be removed and the area infilled with concrete.

Figure 4.2 – Planted area to be replaced with concrete

4.1.2 Containment Option 2

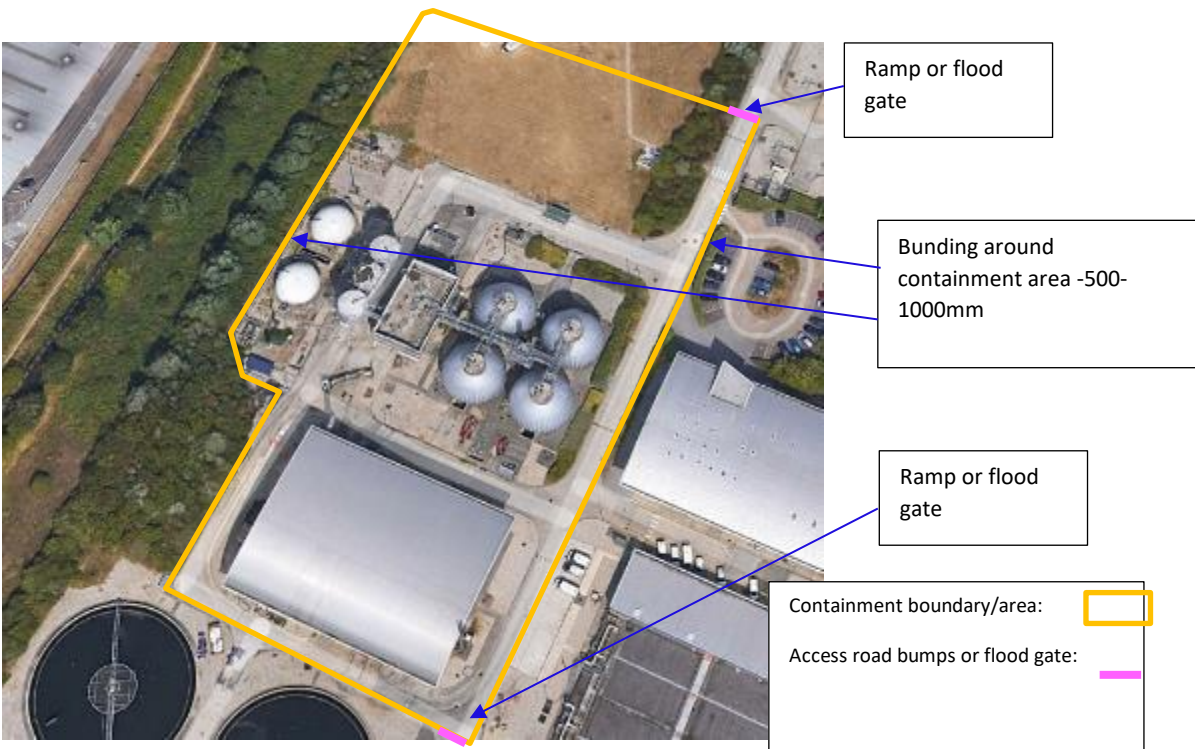

Figure 4.3 – Containment Option 2 – Wide area containment option

This option is similar to option 1 but with a larger containment area to utilise the open area to the north of the site (Figure 4.3).

Bunds will be utilised around containment boundary and ramps constructed across roads to enable vehicular access. Maximum height of ramps is 250mm and bunds 500- 1000mm. All grass and gravel areas (Figure 4.2) will be excavated and resurfaced with concrete to mitigate seepage into the local ground and soil. This also aids cleaning procedures following a spill. Any sludge that spills over the ramps will follow the road and end up in the site drainage and go back to the head of the works. The existing drainage network on site is pumped back to the head of the works, as per confirmation from TW Operations of Reading. The existing planting / grass area within the containment area shall be removed and the area infilled with concrete.

This option was discounted as Thames Water has confirmed the open area at the north of the proposed containment area has been ring fenced for future projects.

4.1.3 Tertiary Containment Option

Reading STW was constructed with a bund around the site, and this will be utilised to provide tertiary containment. The low spot on the site is around the site entrance (ref Figure 3.3) and the proposal is to install a ramp across the site 12m wide site access road.

Figure 4.4 – Road Ramp for tertiary containment

4.2 Mitigation of Site-Specific Risks

4.2.1 Jetting and Surge Flows

Due to the location of the tanks and their distance from the boundary of the containment area, there is no risk of contamination through jetting.

There is a low risk of jetting occurring as the majority of the digester tanks are concrete construction, for which catastrophic failure is deemed to be less of an issue. Failure is more likely to begin with major seeping from the tanks which would be spotted during routine site walkabout tours each day.

The natural topography of the site and the distance to the boundaries of the containment area results in a low risk of surge overwhelming the containment.

4.2.2 Flooding

According to the UK Government’s Flood Map for Planning, Reading STW is not within any potential flooding zone as shown in Figure 4.4 therefore, no modifications need to be made to Reading STW to accommodate this risk.

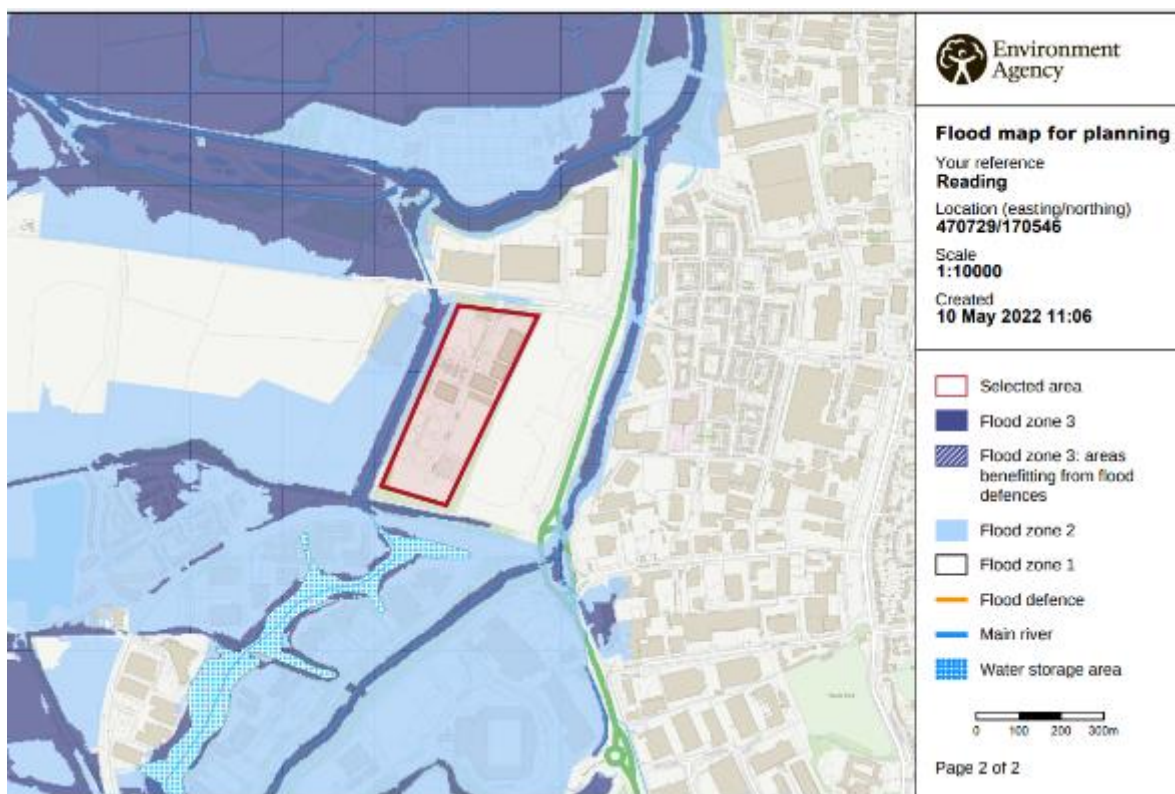

Figure 4.4 Extent of Fluvial flooding in Reading due to extreme weather events

4.3 Identification of Preferred Option

The preferred containment option is wide area containment option 1, constructing a low bund wall (500 - 1000mm high) around the wide containment area and constructing ramps at road crossings.

4.3.1 H&S and CDM risks

- Flood gates not suitable for areas of high traffic movement
- Cable ducts and fibre ducts act as conduit to transport sludge around site.

5. Site Drainage and liquor returns

5.1 Process flow diagram

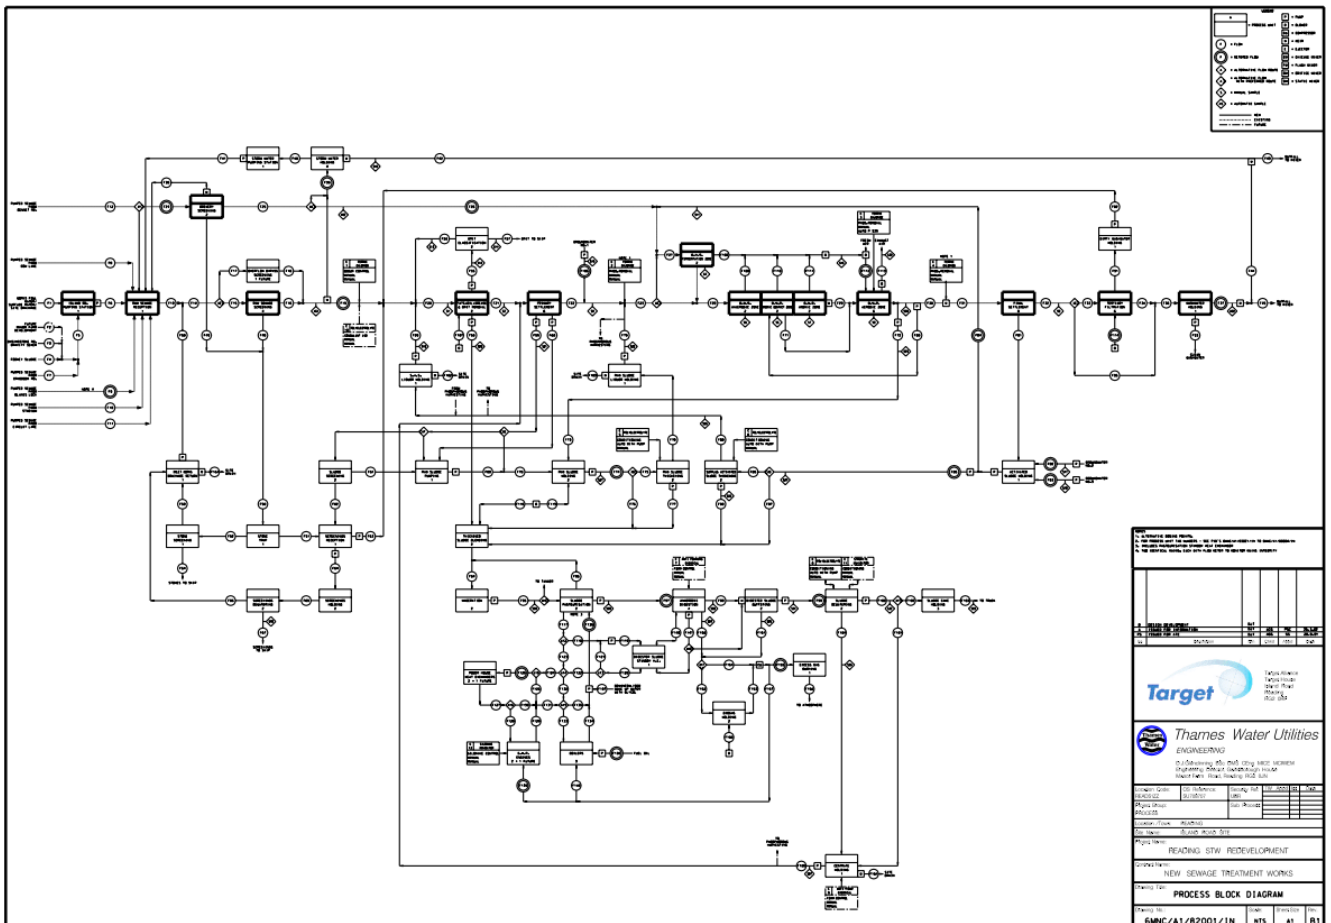

Figure 5.1 Process Flow Diagram

5.2 Foul, Process and Effluent Drainage

Site drainage assessments are based on Reading Sewage Works Layout Plan Drawing Numbers READS1ZZ-DPL-001

The Sewage Works Layout Plan for Reading shows all Foul/ Combined/ Process/ Effluent drainage pipes, indicated by green lines, go to the head of the works shown in Figure 5.3. In the event of sludge entering the head of the works, the shock load could adversely impact the sewage works treatment process. Therefore, in the event of a catastrophic loss of containment, this line should be isolated or pumping should be inhibited.

The surface water drains, shown as the orange lines, are also mixed with the process drains and go to the head of the works. As both systems combine, the surface water drains have been reviewed as part of this section.

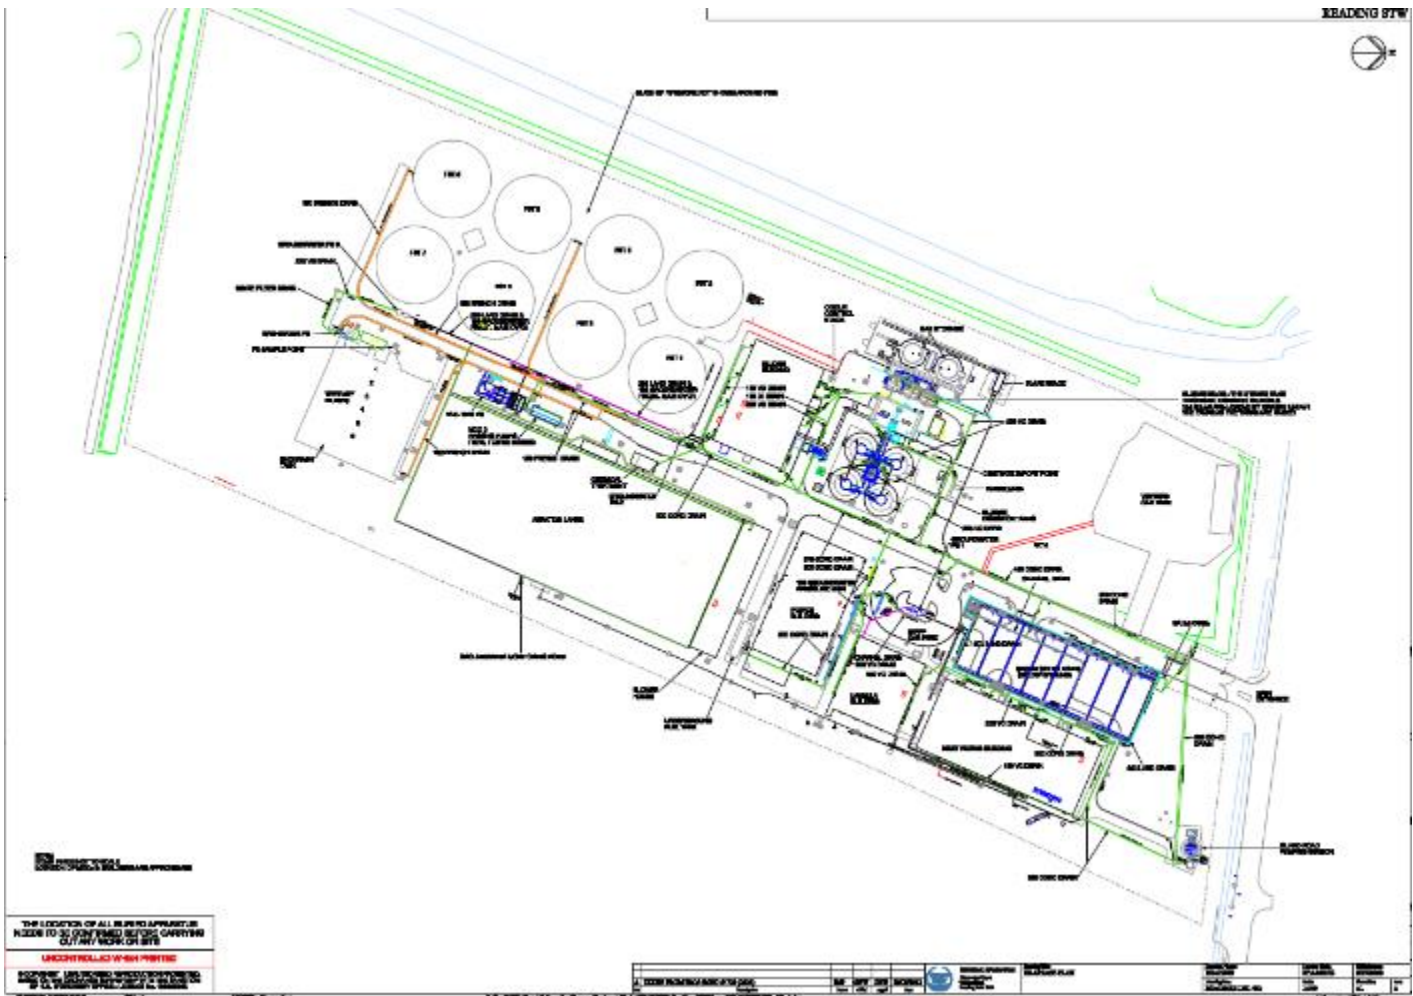

Figure 5.3 Drainage plans

5.3 Liquor Returns

The existing liquor return system is not being altered by the containment system, other than the control modifications proposed in 5.4.

Details of the liquor returns sampling are being developed outside of this report for incorporation within the permit submission.

5.4 Automatic Isolation Valves

For the catastrophic loss of containment scenarios for Digester area discussed, such a loss could be automatically detected by the level sensors in the tanks. A catastrophic failure would be identified by the rate of change in tank level being larger than expected at normal operation. The signal from the sensors would be used to automatically prevent any adverse impact on sewage treatment. There are two options for this;

- A. Level signal automatically isolates the at-risk pipes. This would prevent large flows of digestate from entering the drainage lines to the inlet channel or river. This option requires an automatically actuated isolation valve to be installed on each of these pipes.

- B. Level signal automatically inhibits sludge being returned back to the head of the i.e., allow catastrophic spillages to enter the inlet channel but prevent it from being pumped back to the head of the works. This option requires no hardware or infrastructure, only software modifications.

Option B is cheaper and easier to implement as it will use current equipment and require only software modifications only. However, operators on site should be consulted to further understand the surface water drainage system to explore any automatic isolation solutions that involve software modifications only.

The option of the level sensor signal from an abnormal rate of change triggering an alarm system for an operator has been considered. However, the response time, particularly for nights and weekends when operators may not be on site, was deemed too slow to manually close isolation vales in a timely manner to prevent pollution or sludge entering the head of the works having adverse consequences on its function. As such a separate level sensor to detect increasing level in the containment area will be provided.

Once the spillage has been stopped and contained, any sludge in the drainage system can be released back into the head of the work in a controlled manner therefore, not creating adverse effects at the inlet.

6. Conclusions

This section summarises the findings of the containment assessment options report for Reading Sewage Treatment Works.

In the Risk Identification Report for Reading a containment classification report was carried out. An overall site risk rating of Medium was determined meaning that class 2 containment is needed. The detailed requirements for class 2 containment have been outlined in the Risk Identification Report in section 3.3.

The assessment focuses on site-specific risks and outlines the options available for providing secondary containment of a catastrophic tank or digester failure.

The preferred option is option 1 – wide containment approach as outlined in section 4.1.1, to construct a 350m long bund wall (500 - 1000mm high) around the wide containment area. Containment ramps will be constructed across the road crossings. Tertiary containment to be provide by the existing site wide boundary bund and installation of a 250mm high ramp across the main site access road 12m length. In addition to the containment elements, isolation of the site drainage system linked to the containment area will be required to mitigate the risk of unmanaged flows impacting the sewage treatment works. Existing gravelled and grass areas within the containment will be replaced with concrete. Elements of the site roads will be replaced/repared to allow them to present an impermeable surface.

The results of the uncontained spill mapping show that a catastrophic spill will not be contained with the boundary.

The contained spill modelling retains the tank contents and associated rainfall within the site boundary and the flows can be managed by TW operations for return to treatment. Due to gradients across the site, water may pond to a depth of 300-500mm. The volume for containment is driven by the 25% rule.

Appendix 1 ABDA Site Hazard Risk assessment summary for Reading STW

ADBA Industry Guidance and CIRIA C736 state how the site hazard rating of the site risk and classification are to be calculated. A summary of the hazard risks for Reading STW are as follows:

Source – There are two sources that have been identified:

1. Domestic and trade effluent Wastewater sludges, both in a raw, semi treated and treated state.
2. Polyelectrolyte chemicals for sludge thickening.

The Source Hazard rating was determined as High.

Pathway – There are three pathways that have been identified:

1. The process and site drains take any liquid to the head of the works which would negatively impact the process stability on site and would eventually impact on the receiving watercourse.
2. There are several areas where a sludge spill could pass over permeable ground.
3. The river Kennet and Foudry Brook to the north and east can impact downstream.

The site inventory has a runoff time of 15 minutes if unconstrained.

Consequently, the Pathway Hazard rating was determined as High.

Receptor – There are several potential receptors which have been identified:

1. The site drainage system and the head of the works.
2. There is a “Medium-High” groundwater vulnerability in this location.
3. The River Kennet and its stream to the north and west of the site, at a lower elevation and Foundry Brook to the east, also at a lower elevation.
4. The A33 to the east at a lower elevation.
5. The Hilton hotel (commercial) and Kennet Island Housing (residential) across the A33.
6. The Amazon and DHL warehouse immediately north of the site.

The Receptor Hazard rating was determined as High.

Likelihood – For the purpose of this assessment the likelihood for mitigated and unmitigated risks was calculated based on the assumption that the likelihood hazard rating is low.

Pre-mitigation measures, operational failures were highlighted as a high risk, shortfalls in design (provision of alarms and monitoring) together with structural failure were highlighted as a medium risk.

Post-mitigation measures operational failures were re-scored as a low risk. Therefore, the final Likelihood Hazard rating was determined as low.

Based on the information above the overall site risk rating was calculated to be medium which means that Class 2 secondary containment is required.

Appendix 2 Tank Covering initial review

There are no open top tanks within the permit boundary at Reading STC.

Appendix 2 Tank Covering High Level Commitment	33

1. Executive Summary

Thames Water is required by the Environment Agency to provide secondary containment to their sludge treatment centres to satisfy provisions of the Industrial Emissions Directive and to safeguard the operation of the adjacent Sewage Treatment Works (STW) and any neighbouring receptor. Twenty-five Sludge Treatment Centres (STC) have been identified where containment proposals are required. This report deals with the proposals for Reading.

Reading STW serves a population equivalent of 264,000 taking in sewage from Reading and surrounding area. The sludge treatment centre shares the same site as the sewage treatment works.

CIRIA Report 736 – Containment systems for the prevention of pollution sets out principles and direction. This report sets out options to apply the CIRIA 736 principles within the accepted constraints of a retrofitted solution.

Reading STW holds some 11,660m³ of liquid within the sludge treatment centre. The liquid sludge is stored in 14 tanks with individual volumes varying between 15 to 1775m³, refer to section 3.4.1 for details of the tanks and volumes, the majority of the tanks are concrete. The site is generally low lying and flat. The containment volume of 2915m³ is driven by the 25% rule (25% of total tank volumes) rather than 110% (of the largest single tank) of the total tanks volume. The STW when constructed in early 2000's with a bund around the STW and this will act as tertiary containment.

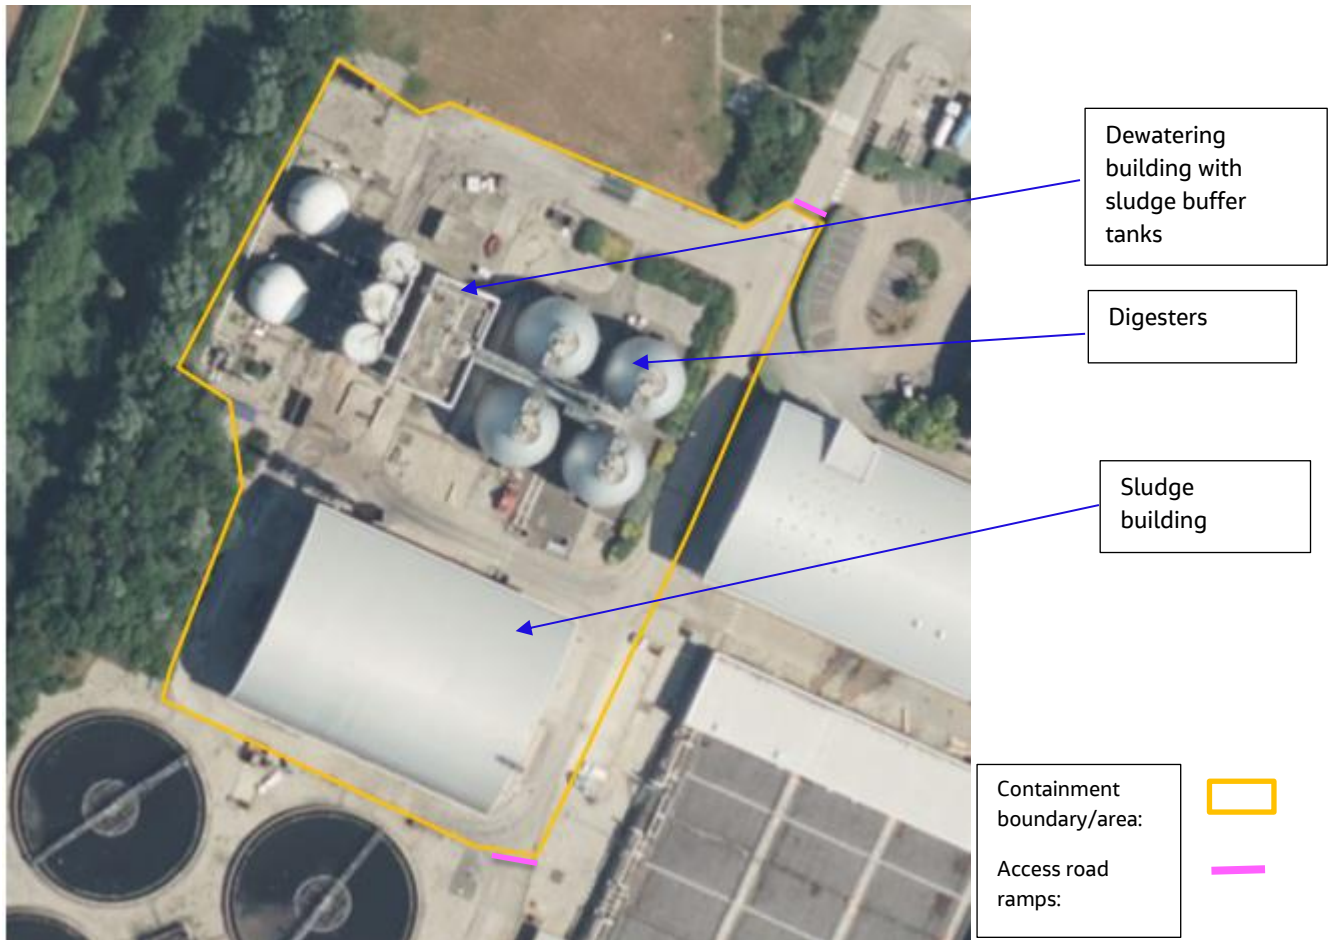

Two wide area options for containment have been identified and reviewed with Operations to confirm that the working of the sewage treatment work is not compromised by proposals, for details of the options refer to section 4.1 and section 4.3 for preferred option:

1. Wide area containment whereby the sludge tanks are contained within a bunded boundary with sufficient area to generate depth that does not deny emergency access to equipment when the spill has been contained.
2. Increased the wide area containment area utilising the available land on site, whereby the sludge tanks are contained within a bunded boundary with sufficient area to generate shallow depth that does not deny emergency access to equipment when the spill has been contained.

In addition to the creation of bunds, which due to space constraints are likely to be formed from concrete, existing grass or gravelled areas will be replaced with a bound impermeable material (high cement replacement concrete) to provide a surface that can be cleared of sludge to meet a 3-4 day recovery period. Vehicular access into the containment areas is by ramps (speed humps) restricted to nom 250-300mm in height; traffic movements on site make the use of permanent flood gates impracticable. Whilst the site is identified as requiring Class 2 containment (impermeable soil with a liner), the proposed solution is intending to concrete (with no liner) on the basis of the impermeability of the concrete, inherent strength and long-term mechanical resistance.

Bund heights are being set to provide freeboard considering both static conditions when the containment has been filled and during the transient condition at initial failure. There is the potential for some flow to overtop the access ramps during the conditions of the initial burst which is addressed by tertiary containment and conveyance to the site drainage system which discharges to the inlet works.

General layout of proposed Option

The modelling highlights that the design detailing may need to consider flood gates instead of ramps to access the containment area due to the standing depth of the sludge and height of the containment walls. The other consideration is any spill over the ramps will be contained onsite by the sites boundary bunds tertiary containment and conveyance to the site drainage network which discharges back to the head of works.

Grassed and gravel areas within the yellow area to be replaced by concrete. Some of the concrete roads in the yellow area may need to be replaced/repared to enable them to be impermeable.

2. Background

Following initial audits by the Environment Agency (EA) in 2019 that examined the primary, secondary, and tertiary containment provisions for Thames Water's anaerobic digestion (AD) process and associated tanks, the EA reported "*there is no provision of secondary containment for the AD process at any of Thames Water's sites*". Jacobs were appointed to assess site risks and outline the options available for providing remote secondary containment of a catastrophic tank or digester failure across 25 Thames Water sites. Based on CIRIA C736 and ABDA risk assessment tools this containment report addresses the site-specific risks at Reading STW and outlines the options available for providing remote secondary containment in the event of a catastrophic tank or digester failure.

The current assessment identified gaps between the existing conditions of the sludge assets in Reading STW and the requirements to meet the industrial standard (i.e., CIRIA C736 and The Anaerobic Digestion and Bioresources Association Limited (ADBA)). Site-specific risks, credible failure scenario and design containment volume for the Reading STW were identified through a desktop study, Light Detection and Ranging Analysis (LiDAR) analysis and a site visit.

Reading Sewage Treatment Works (STW) (Figures i-iv) is located south of the town of Reading, close to the A33 which links the town with the M4 motorway. To the south of the site, separated by a dual carriageway road, is the Green Park business park which consists of a few commercial office properties. To the west and south is agricultural land and to the west and north is a local council household waste and recycling centre, closed landfill, and local council waste transfer station. To the north is commercial properties consisting of large warehouse type premises. Immediately to the east of the site is derelict land and then the A33. The STW serves a population equivalent of 264,000 taking in sewage from Reading and surrounding area.

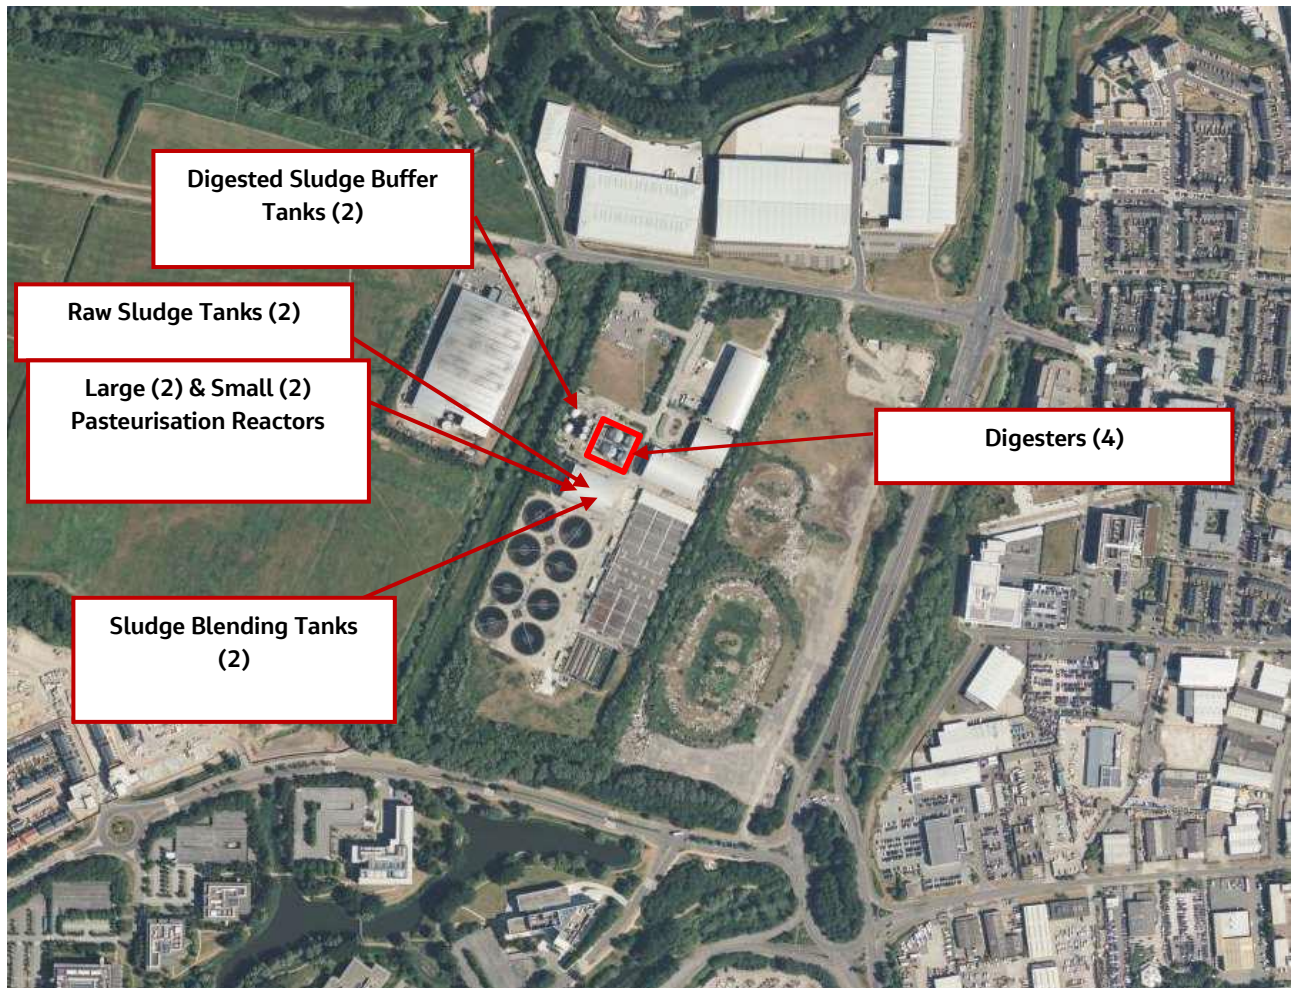

Figure iii Reading Sewage Treatment Works – Digester Area plan

This document should be read in conjunction with; Reading STW, Risk Identification and Containment Assessment Report, revision OA dated 09/05/2022. This report outlines the impact of an uncontained spill and the risk assessment completed.

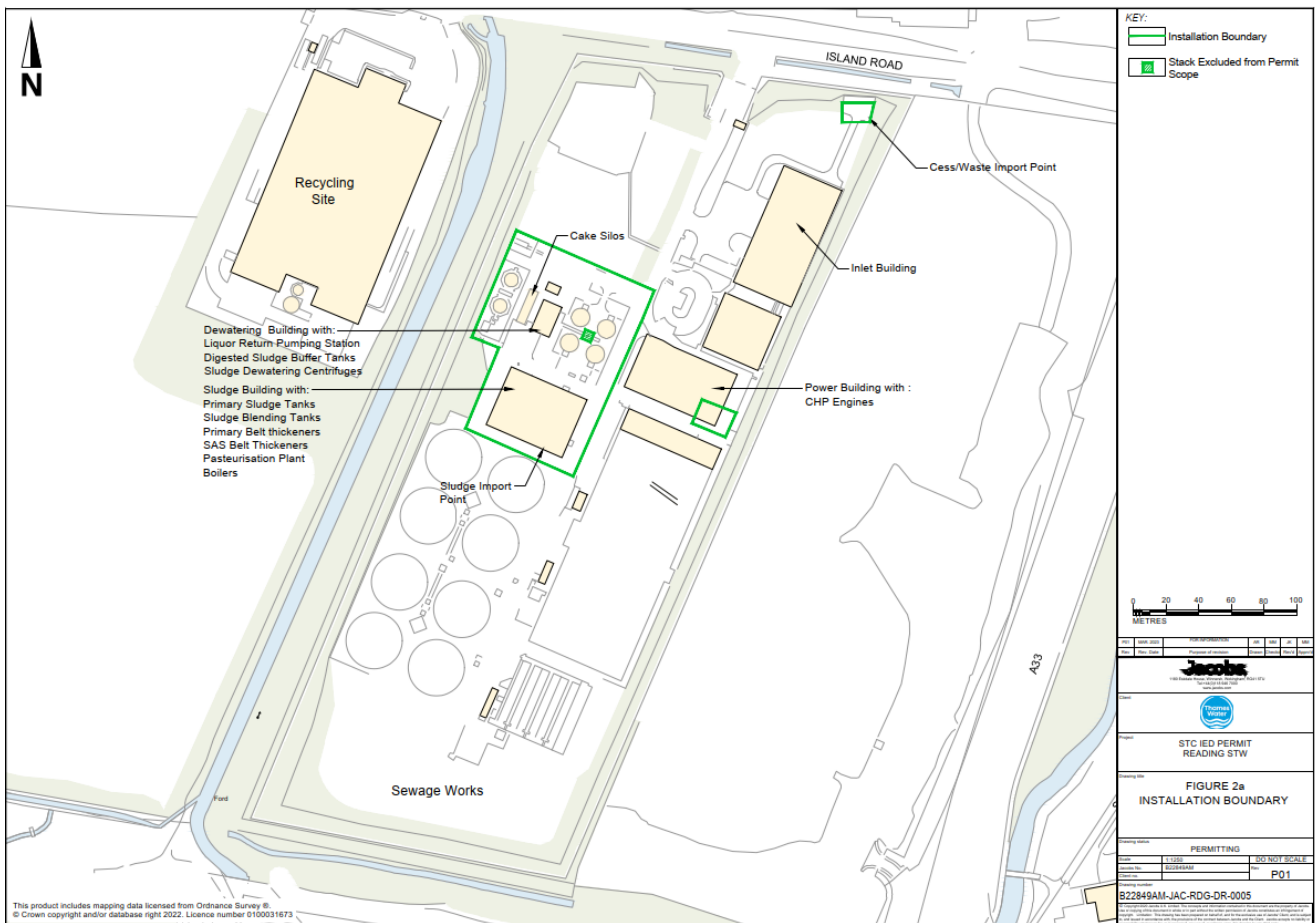

Figure iv Boundary of the permitted IED area and the assets contained within Reading STW.

This document has been developed from Reading STW, Risk Identification and Containment Assessment Report, which outlines the impact of an uncontained spill and the risk assessment completed.

3. Proposed Containment at Reading STW

3.1 CIRIA C736

This containment option report has been prepared using CIRIA C736 as the basis of design and guidelines. Where a deviation from C736 has been recommended it is highlighted in the text.

CIRIA guidance document C736 (*Containment systems for the prevention of pollution – Secondary, tertiary, and other measures for industrial and commercial premises, 2014*) describes various options for containment of spillages from a credible failure scenario. It makes reference to a key plan, reproduced below;

Key plan

viii

CIRIA, C736

Figure 3.3-1 Diagram of primary, secondary and tertiary containment examples

-**Primary containment** is provided by the actual tank or vessel [1]

-**Secondary containment** is provided by a bund immediately surrounding the primary vessel e.g. [3] and [4], or by a lagoon [5] or tank [6]. If containment is provided away from the primary vessels this is known as **remote containment** and may be considered as either **remote secondary** or **tertiary containment**.

-**Tertiary containment** can be provided by a number of means including lagoons [5], or impermeable areas such as car parks [8]. Roadways with high kerbing of sufficient height [9] can also form part of a tertiary containment system, or the **transfer system** to the remote containment.

The distinction between *remote secondary* and *tertiary* containment is not always clear but, if properly designed, a combined system can be provided that is capable of providing the necessary degree of environmental protection. The overriding concern is not the terminology but the robustness and reliability of the system which depends on a number of factors such as;

- Its complexity – the more there is to go wrong, the greater the risk. Passive systems relying solely on gravity are more reliable than pumped.
- Whether manual intervention is relied on to make the system work or whether the system can be automated to include fail-safes and interlocks.
- The ease of maintenance and monitoring of the system's integrity, and repair of any defects.

During and after an incident any rainfall runoff from the remote secondary storage areas, from the spillage catchment areas and from the transfer systems must also be prevented from reaching any outfall(s) to surface water by closure of control valve(s).

3.2 Objectives of remote secondary containment

The objectives of the remote secondary containment measures proposed in this report are to safely contain spillages from credible failure scenarios and prevent them from:

- escaping off site
- entering surface waters
- percolating into groundwater
- being pumped back to the inlet of the sewage works in an uncontrolled manner.

The remote secondary containment will be provided by maximising the use of existing impermeable surfaced areas to provide a fail-safe passive system that relies on gravity rather than pumps. A means of leak detection that will automatically trigger isolation valves at key locations in the drainage system is also proposed.

3.2.1 Uncontained Spill modelling

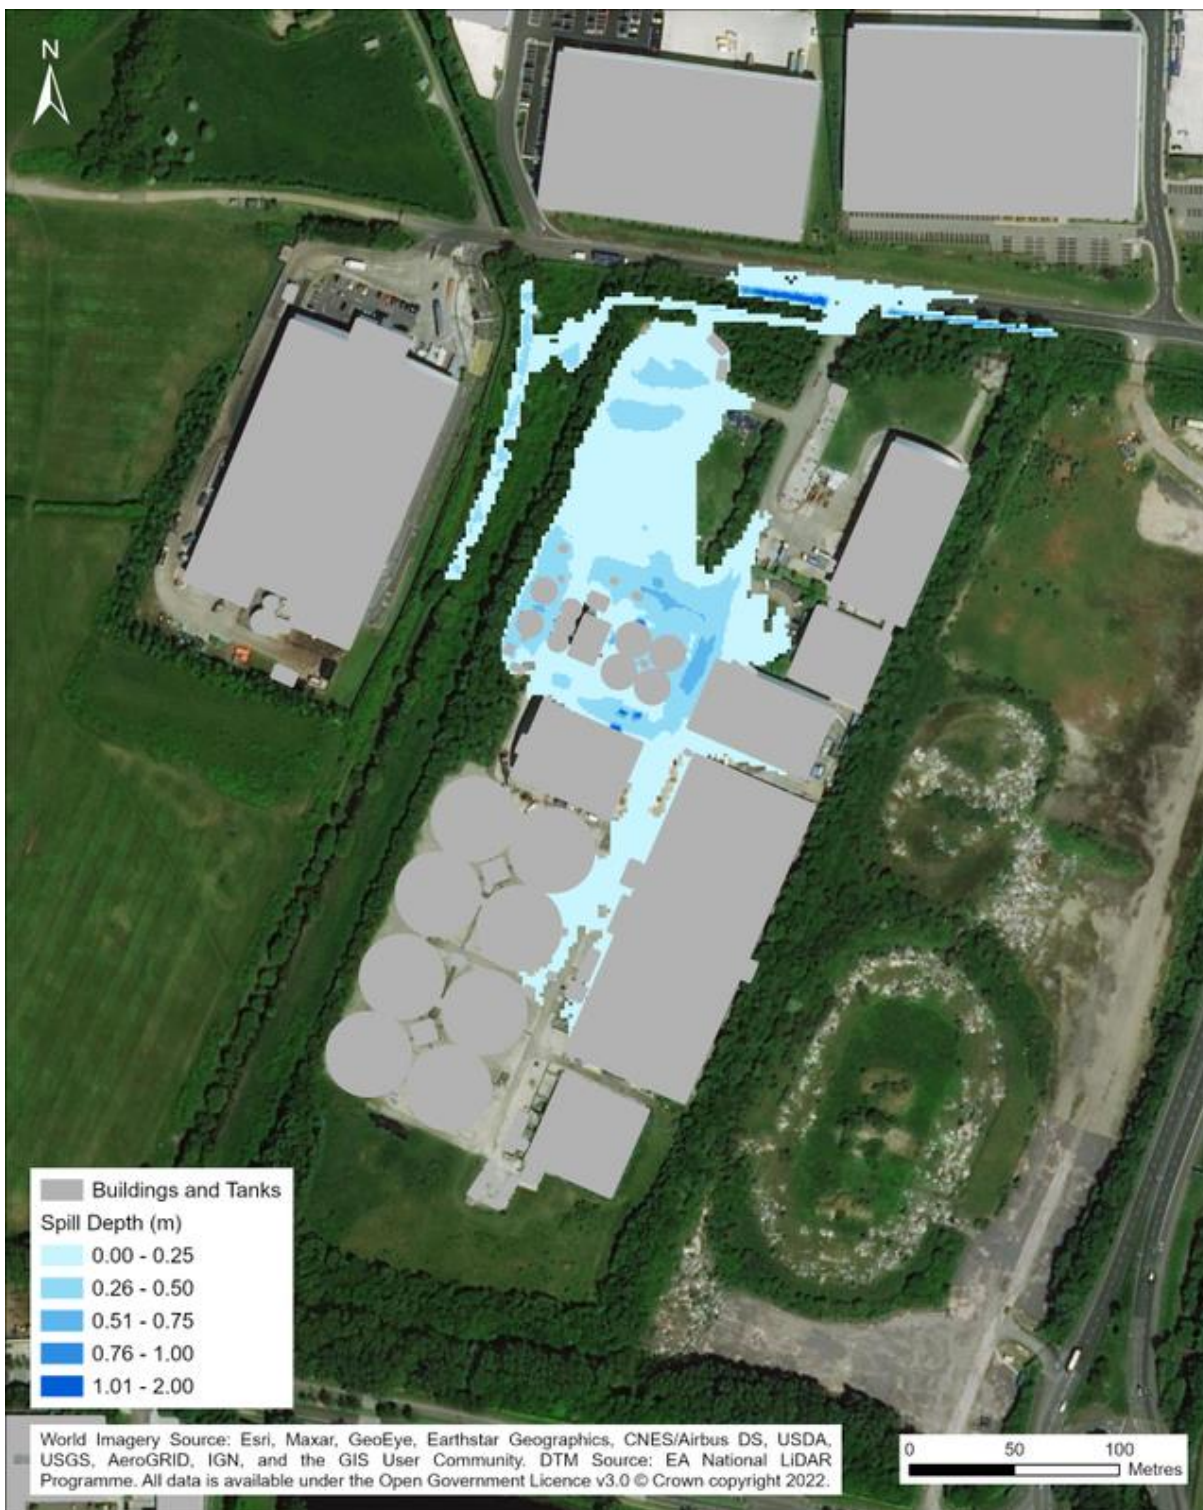

Figure 3.2 Uncontained Spill Model Results

As seen from Figure 3.2 the sludge spill mapping of an uncontained event in Reading STW showed that the potential sludge spill from one of the Digesters will not be self-contained within the site and therefore passive containment needs to be implemented to safeguard the nearby receptors. According to the model the spill will leave the site boundary (the northwest site boundary) in approximately 15 minutes following failure of one of the digesters.

The sludge content will initially spread within the sludge and digester area including the Dewatering and Sludge Buildings and the Power building containing the Combined Heat and Power engines. It is expected that the flow will further travel north bound and overflow the site's carpark space with some sludge partially spilling over to adjacent grassland next to RE3 Waste Management Site, northwest of the site boundary. Most of the sludge will then spread to the road entering the site and will eventually spill onto Island Road, north of the site boundary which could potentially prevent access to the nearby Amazon and DHL warehouses. The spill will also travel south of the digesters within the STW; however, this run-off will not spill over the southern site boundary and therefore will be contained within the southern side of the Reading STW.

3.3 Site Classification Reading

Based on the use of the ABDA risk assessment, considering the source, pathway and receptor risk, Reading site hazard rating is deemed to be High. When considering the mitigated likelihood as low a Class 2 secondary containment is required.

Source Risk	Pathway Risk	Receptor Risk	Site Hazard Rating	Likelihood	Overall Site Risk Rating
High	High	High	High	Low	Medium (Class 2)

Refer to Appendix 1 for summary of the ABDA risk assessment tool.

3.3.1 Spill Volume Summary

There are two components that contribute to the required capacity of secondary containment, the source spill volume requiring containment and rainfall. Section 4 of CIRIA 736 forms the basis of this assessment. Section 4.2 reviews current industry practice relating to source spill volume, section 4.2.8 then summarises current industry practice relating to source spill volume in a tabular form. This document has been developed from Reading STW, Risk Identification and Containment Assessment Report, which outlines the impact of an uncontained spill and the risk assessment completed.

Within Section 4.2.1, there is detailed reference to the use of 110% of the largest tank or 25% of the total tank inventory volume, whichever is greater, and the rationale for this. CIRIA recognises that this approach is not quantitative or based on a risk assessment and are arbitrary methods. Section 4.3 and 4.4 provide guidance on a quantitative risk assessment methodology and this is what is being used for the calculation of the required capacity for containment in this report.

3.3.2 Total Spill Volumes

The containment volume has been checked against the 110 and 25% rule and the 25% rule applies.

The total design contained volume is 2915m³ (25% of the total volume of all tanks (11660m³) within the containment area), compared to largest single tank failure of 1,775m³ and total rainfall 683 m³ rainfall from Flood estimating handbook over catchment area, which gives a lesser volume of 2458m³.

3.4 Reading STW Summary of Containment volumes and assets

3.4.1 Assets for Containment

The tanks for which containment is required are summarised below:

Tanks within containment area	No. of tanks	Effective Volume per Tank (m3)	Total Effective Volume (m3)
Raw sludge tanks	2	1200	2400
Sludge blending tanks	2	500	1000
Small Pasteur reactor	2	30	60
Large Pasteur reactor	2	100	200
Digesters	4	1775	7100
Digested buffer tanks	2	450	900
Total	14	-	11660
Rainfall (mm)			69.55
Catchment Area (m ²)			9825
Total Rainfall (m³)			683
Largest Tank plus Rainfall (m ³)			2458
110% of Largest Tank (m ³)			1953
25% of all tanks within containment area (m ³)			2915
Design Spill Volume (m³)			2915

3.4.2 Digital Terrain Model

The terrain model (Figure 3.3) shows that Reading STW was constructed to have an internal bund around the site, with the only low spot is at the entrance to the site.

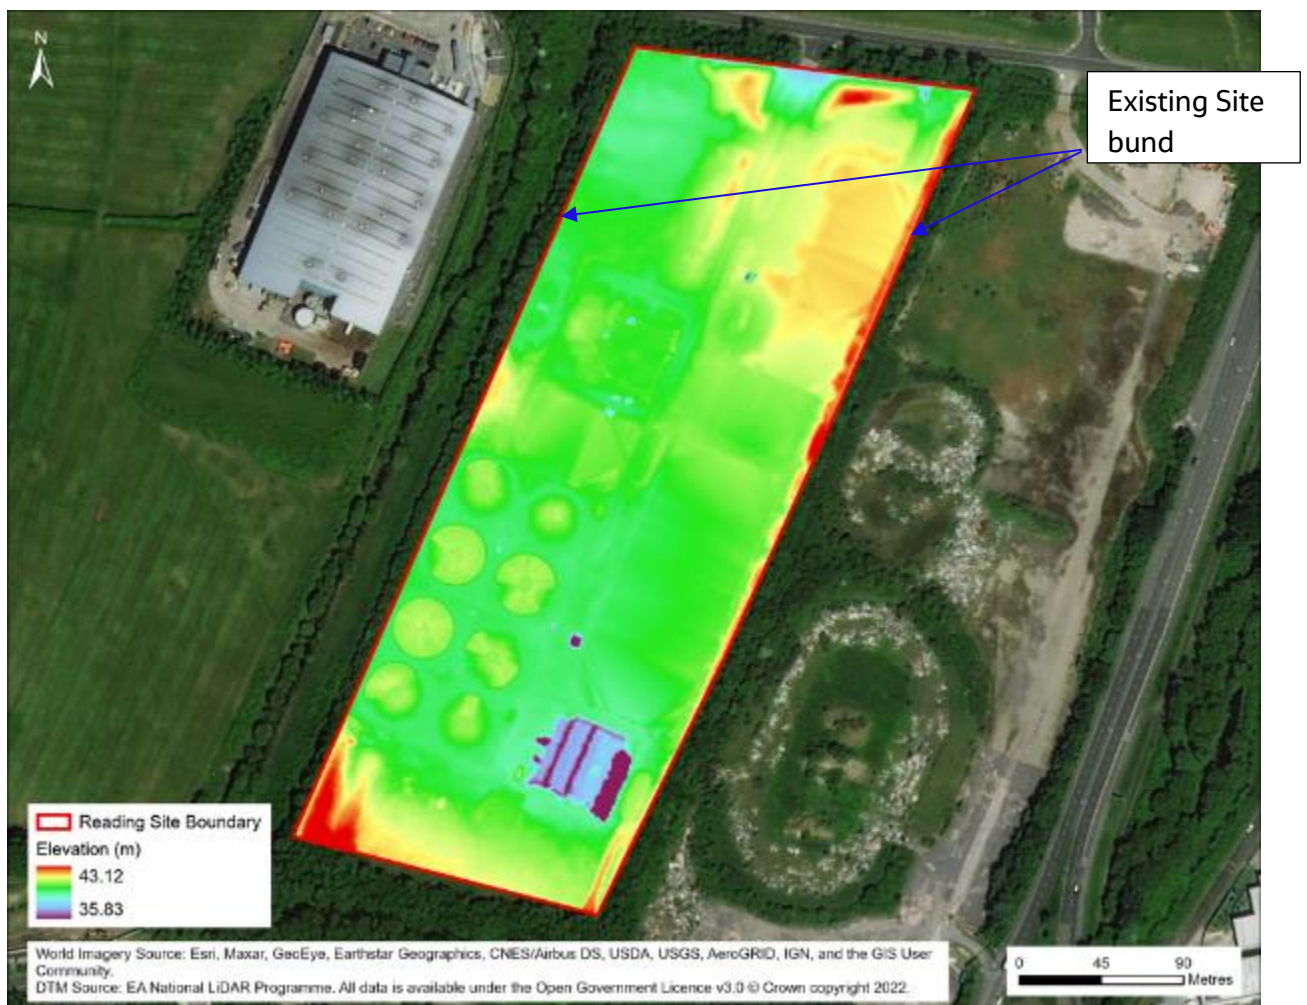

Figure 3.3 Digital Terrain Model of Reading Sewage Treatment Works

The contained model output is shown in Figure 3.4. This identifies the flow will be contained at a fairly uniform depth across the site. The containment model shows that for 100% volume loss the top water level will settle at 41.36m A.O.D. Therefore, allowing for 250mm freeboard on the bund wall the bund height will vary between 0.5 – 1m with the higher bund wall along the northern and eastern sides of the containment area.

Figure 3.5 shows the contour plot for the containment area. Some of the potential depths at the northern limit of the containment area are in excess of that which ramps can hold. Final design development of the bunded area will consider the provision of floodgates instead of ramps.

3.4.3 Contained Model

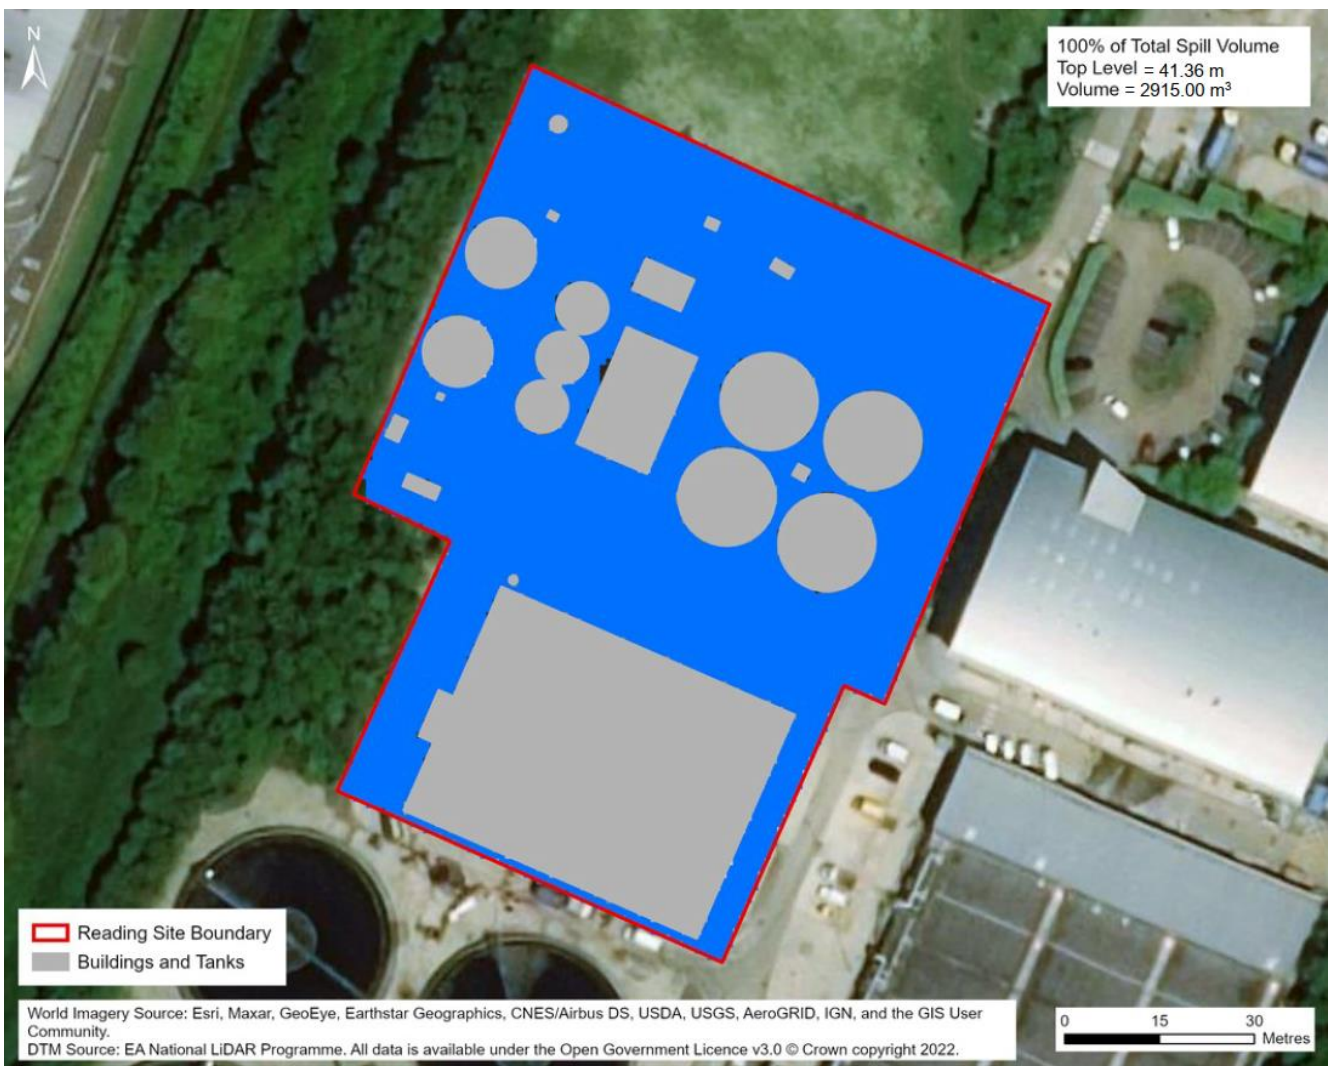

Figure 3.4 Containment spill model

Figure 3.5 contour map of the contained area

3.5 Identified Constraints

3.5.1 Operational constraints

The existing ground surfaces are mainly grass and gravel and this will need to be replaced with impermeable surface e.g. concrete from which sludge can be cleared up easily.

TW operations have stated that it would be difficult to clean up sludge from gravel areas as the gravel would also be sucked up with the sludge.

The time to recovery and return site back to operation has been set at 3-4 days following direction by Thames Water. The containment volume, when not dictated by the 110% or 25% containment rules allows for three days of rain during the recovery period and one day of rain immediately preceding an event.

3.5.2 Geotechnical and Environmental constraints

Ground conditions need to be considered during excavating and backfilling activities.

Regarding the construction works, there are no significant environmental constraints as these will all be completed within a Thames Water site.

The existing shrubbery within the containment area shall be removed and area infilled with concrete. To compensate for the loss of shrubbery, alternative areas shall be identified onsite for compensation planting or planting containers installed onsite.

3.5.3 Other constraints

None identified

3.6 Design allowance for rainfall

The containment volume, when not dictated by the 10% or 25% containment rules includes an extra allowance for rainfall that may accumulate within the contained area before and after an incident has been made. The CIRIA guidance recommends that the containment volume should include an allowance for the total rainfall accumulated in response to a 1 in 10-year return period events for the 24 hours preceding an incident and for an eight-day period following an incident or other time period as dictated by site specific assessment. Thames Water has indicated that the clean-up and return to operation is feasible in 3 to 4 days. Therefore, a three-day period following an incident has been allowed for in the design allowance for rainfall following the incident. The arising average rainfall depths for a 1 in 10-year storm over the event period for Reading is 69.55mm. It should be noted that the rainfall depths for Reading have been estimated using the depth-duration-frequency rainfall model contained on the *Flood Estimation Handbook* (FEH), which provides location specific rainfall totals for given durations and return periods.

4. Secondary Containment

The constituent parts of secondary containment are:

- The contained area itself.
- The transfer system.
- Isolation of the drainage from both the contained area and from the transfer system.

For Reading, where possible, existing features of the site (e.g., building structures and impermeable surfaces) are used as much as possible to provide the remote secondary containment to reduce cost. The options considered, modifications and their functionality at Reading STW are listed below:

- Bund/walls to contain liquid. The heights of bund/walls given in Section 4.1 are the minimum heights required such that that top of the bund/wall is equal to the top water level plus a 250mm freeboard consideration for potential surge (to reflect the planned use of concrete walls with a recurved profile to return flow back on itself) in accordance with CIRIA. Containment ramps provide a barrier for the liquid on roads that still need to be accessible to vehicles for site operation. The maximum height of these will be 250-300mm to avoid issues with vehicle passage. The risk of spill at the ramps is mitigated by conveyance of the flow to site drainage and return to the head of the works.
- Local infill of grass/gravel to create an impermeable surface and facilitate containment and conveyance.
- Raised kerbs on roadways to channel spill to the remote containment area.
- All buildings within the containment and transfer areas must either have doors that lie above the top water levels detailed in Section 4.1 or any equipment inside must be raised off the ground to level above the top water level.

4.1 Containment Options

4.1.1 Containment Option 1 – wide area containment Approach

This option utilises containment surrounding the total containment permit area, providing secondary containment to the sludge processing facilities. The containment area is approximately 9825m² but the actual available containment area will be less than this as areas such as the tanks and sludge and dewatering buildings will not be included in the storage volume.

The containment volume has been checked against the 110 and 25% rule and the 25% rule applies.

The total design contained volume comprises 2915m³ (25% of the total volume of all tanks within the containment area), LiDAR spill modelling calculated the top water level (TWL) when 2915m³ is contained in this area to be at 41.36AOD.

Summary of the recommended containment for Digestion area is described below and shown in Figure 4.1.

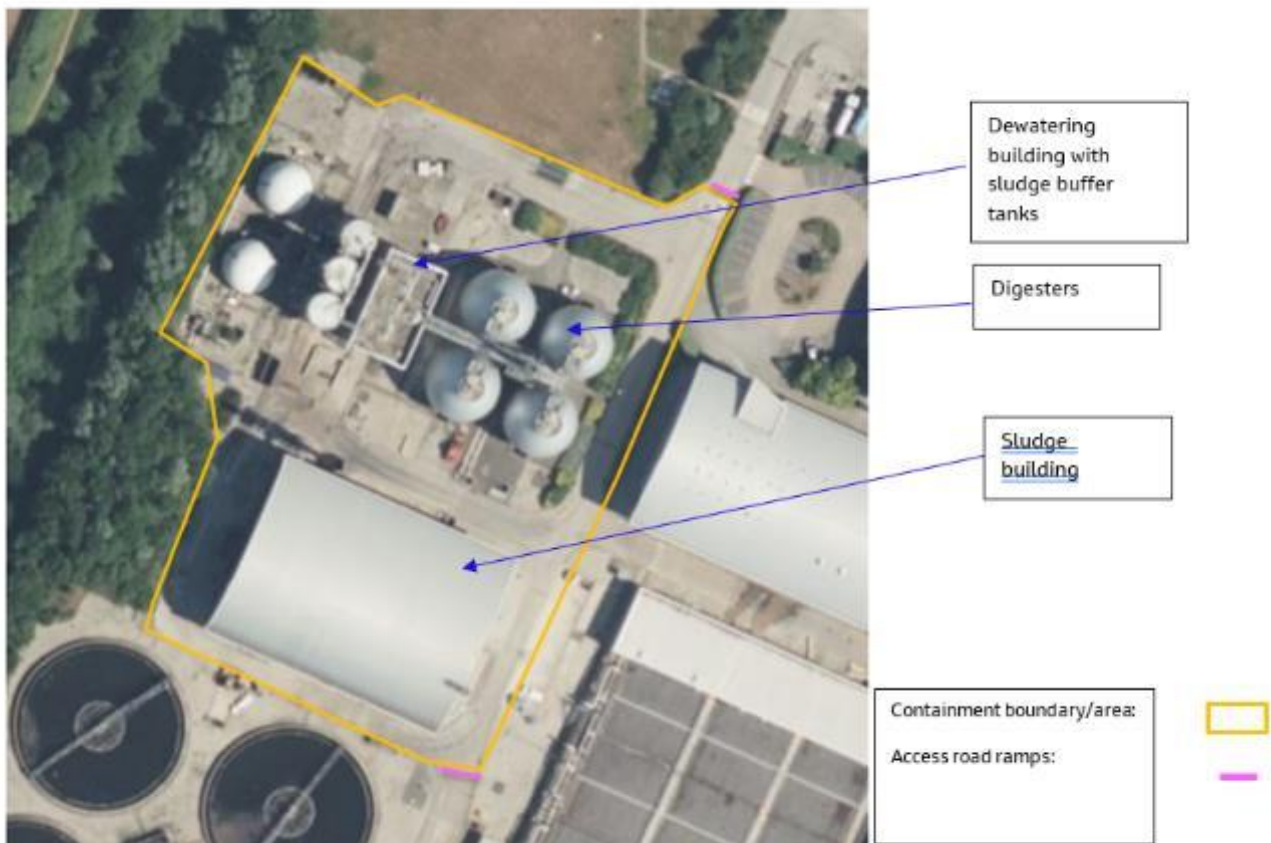

Figure 4.1 – Containment Option 1 – Wide area containment option

Bunds will be utilised around containment boundary and ramps constructed across roads to enable vehicular access. Maximum height of ramps is 300mm and bunds between 500mm to 1000mm. All grass and gravel areas will be excavated and resurfaced with concrete (Figure 4.2) to mitigate seepage into the local ground and soil. This also aids cleaning procedures following a spill. There is the potential for some flow to overtop the access ramps during the conditions of the initial burst which is addressed by tertiary containment and conveyance to the site drainage system which discharges to the inlet works. The existing planted / grass within the containment area shall be removed and the area infilled with concrete.

Figure 4.2 – Planted area to be replaced with concrete

4.1.2 Containment Option 2

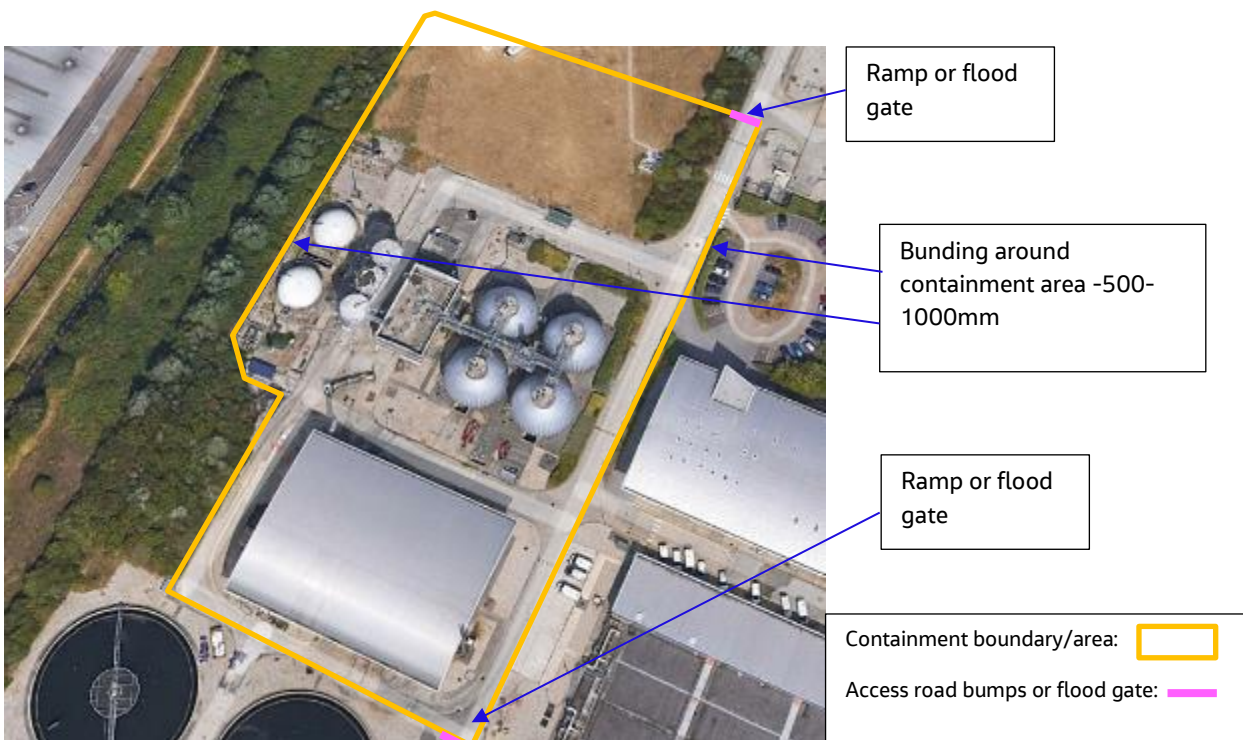

Figure 4.3 – Containment Option 2 – Wide area containment option

This option is similar to option 1 but with a larger containment area to utilise the open area to the north of the site (Figure 4.3).

Bunds will be utilised around containment boundary and ramps constructed across roads to enable vehicular access. Maximum height of ramps is 300mm and bunds 500- 1000mm. All grass and gravel areas will be excavated and resurfaced with concrete to mitigate seepage into the local ground and soil. This also aids cleaning procedures following a spill. Any sludge that spills over the ramps will follow the road and end up in the site drainage and go back to the head of the works. The existing drainage network on site is pumped back to the head of the works, as per confirmation from TW Operations of Reading. The existing planting / grass area within the containment area shall be removed and the area infilled with concrete.

This option was discounted as Thames Water has confirmed the open area at the north of the proposed containment area has been ring fenced for future projects.

4.1.3 Tertiary Containment Option

Reading STW was constructed with a bund around the site, and this will be utilised to provide tertiary containment. The low spot on the site is around the site entrance (ref Figure 3.3) and the proposal is to install a ramp across the site 12m wide site access road.

Figure 4.4 – Road Ramp for tertiary containment

4.2 Mitigation of Site-Specific Risks

4.2.1 Jetting and Surge Flows

Due to the location of the tanks and their distance from the boundary of the containment area, there is no risk of contamination through jetting.

There is a low risk of jetting occurring as the majority of the digester tanks are concrete construction, for which catastrophic failure is deemed to be less of an issue. Failure is more likely to begin with major seeping from the tanks which would be spotted during routine site walkabout tours each day.

The natural topography of the site and the distance to the boundaries of the containment area results in a low risk of surge overwhelming the containment.

4.2.2 Flooding

According to the UK Government's Flood Map for Planning, Reading STW is situated in Flood Zone 1 as shown in Figure 4.4. Areas situated in flood zone 1 have a low probability of flooding and have an annual probability of river flooding of less than 0.1%. Therefore, no modifications need to be made to Reading STW to accommodate this risk.

Figure 4.4 Extent of Fluvial flooding in Reading due to extreme weather events

4.3 Identification of Preferred Option

The preferred containment option is wide area containment option 1, constructing a low bund wall (500 - 1000mm high) around the wide containment area and constructing ramps at road crossings.

4.3.1 H&S and CDM risks

- Cable ducts and fibre ducts act as conduit to transport sludge around site.

5. Site Drainage and liquor returns

5.1 Process flow diagram

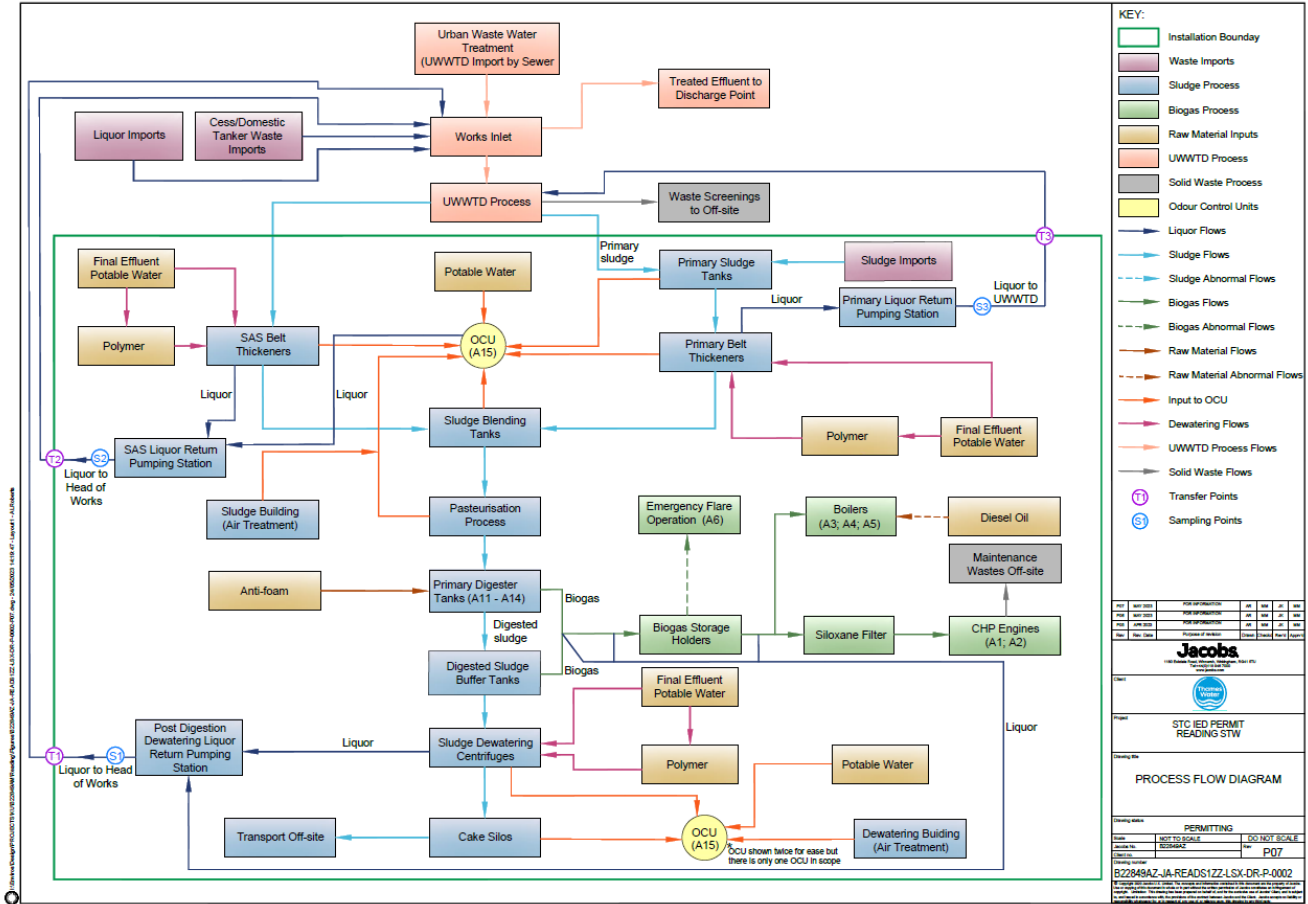

Figure 5-1 Process Flow Diagram

5.2 Foul, Process and Effluent Drainage

Site drainage assessments are based on Reading Sewage Works Layout Plan Drawing Numbers READS1ZZ-DPL-001

The Sewage Works Layout Plan for Reading shows all Foul/ Combined/ Process/ Effluent drainage pipes, indicated by green lines, go to the head of the works shown in Figure 5.3. In the event of sludge entering the head of the works, the shock load could adversely impact the sewage works treatment process. Therefore, in the event of a catastrophic loss of containment, this line should be isolated or pumping should be inhibited.

The surface water drains, shown as the orange lines, are also mixed with the process drains and go to the head of the works. As both systems combine, the surface water drains have been reviewed as part of this section.

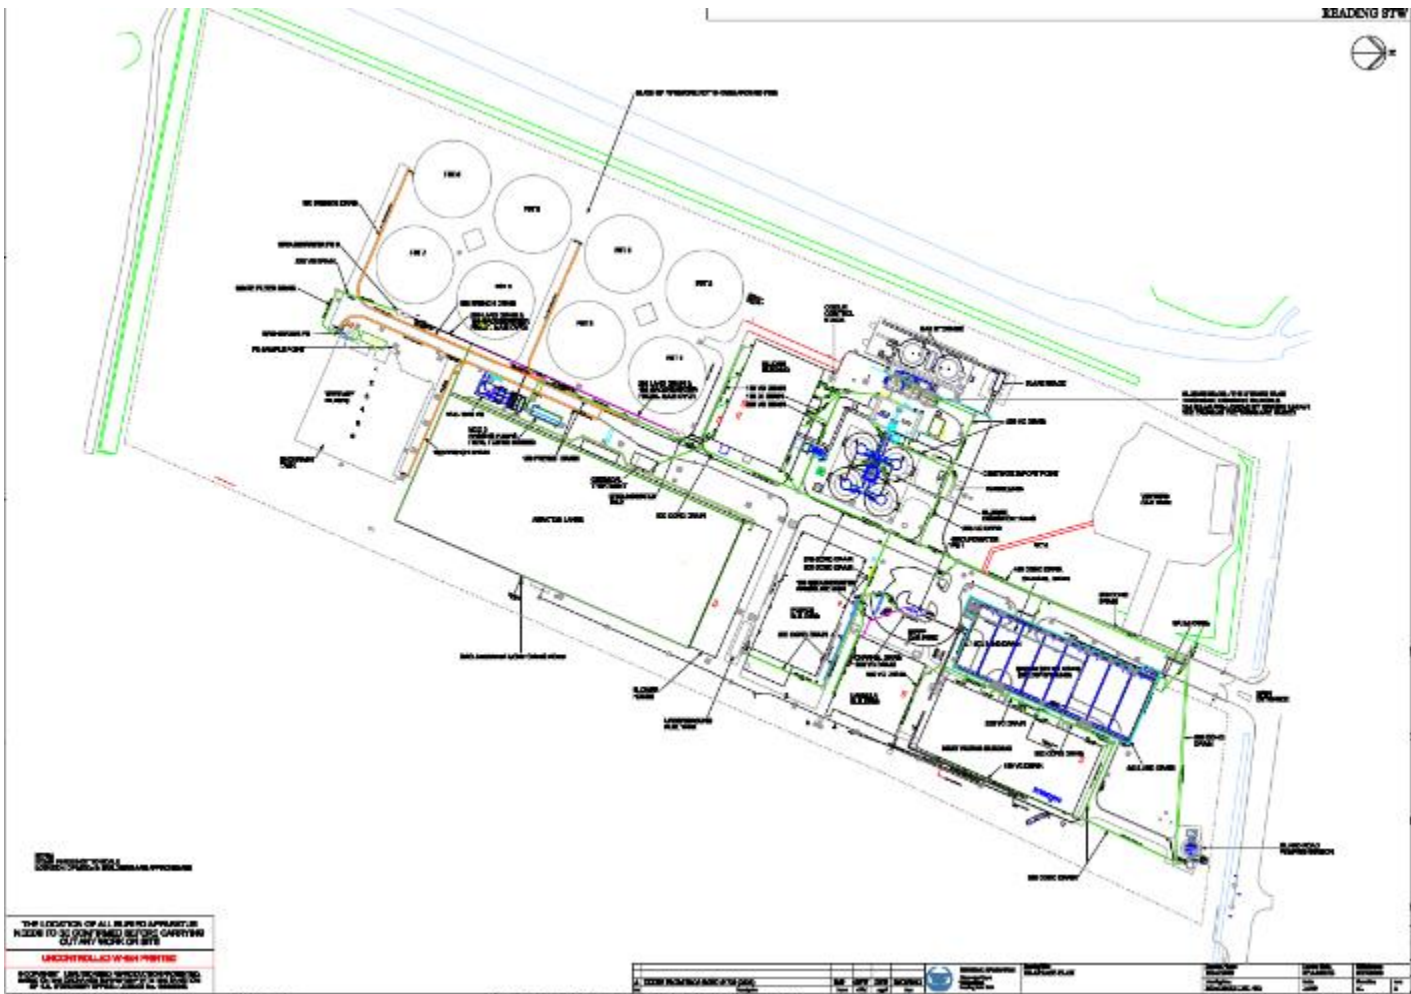

Figure 5.3 Drainage plans

5.3 Liquor Returns

The existing liquor return system is not being altered by the containment system, other than the control modifications proposed in 5.4.

Details of the liquor returns sampling are being developed outside of this report for incorporation within the permit submission.

5.4 Automatic Isolation Valves

For the catastrophic loss of containment scenarios for Digester area discussed, such a loss could be automatically detected by the level sensors in the tanks. A catastrophic failure would be identified by the rate of change in tank level being larger than expected at normal operation. The signal from the sensors would be used to automatically prevent any adverse impact on sewage treatment. There are two options for this;

- A. Level signal automatically isolates the at-risk pipes. This would prevent large flows of digestate from entering the drainage lines to the inlet channel or river. This option requires an automatically actuated isolation valve to be installed on each of these pipes.
- B. Level signal automatically inhibits sludge being returned back to the head of the i.e., allow catastrophic spillages to enter the inlet channel but prevent it from being pumped back to the head of the works. This option requires no hardware or infrastructure, only software modifications.

Option B is cheaper and easier to implement as it will use current equipment and require only software modifications only. However, operators on site should be consulted to further understand the surface water drainage system to explore any automatic isolation solutions that involve software modifications only.

The option of the level sensor signal from an abnormal rate of change triggering an alarm system for an operator has been considered.

Once the spillage has been stopped and contained, any sludge in the drainage system can be released back into the head of the work in a controlled manner therefore, not creating adverse effects at the inlet.

6. Conclusions

This section summarises the findings of the containment assessment options report for Reading Sewage Treatment Works.

In the Risk Identification Report for Reading a containment classification report was carried out. An overall site risk rating of Medium was determined meaning that Class 2 containment is needed. The detailed requirements for Class 2 containment have been outlined in the Risk Identification Report in section 3.3.

The assessment focuses on site-specific risks and outlines the options available for providing secondary containment of a catastrophic tank or digester failure.

The preferred option is option 1 – wide containment approach as outlined in section 4.1.1, to construct a 350m long bund wall (500 - 1000mm high) around the wide containment area. Containment ramps will be constructed across the road crossings. Tertiary containment to be provide by the existing site wide boundary bund and installation of a 250mm high ramp across the main site access road 12m length. In addition to the containment elements, isolation of the site drainage system linked to the containment area will be required to mitigate the risk of unmanaged flows impacting the sewage treatment works. Existing gravelled and grass areas within the containment will be replaced with concrete. Elements of the site roads will be replaced/repared to allow them to present an impermeable surface.

The results of the uncontained spill mapping show that a catastrophic spill will not be contained with the boundary.

The contained spill modelling retains the tank contents and associated rainfall within the site boundary and the flows can be managed by TW operations for return to treatment. Due to gradients across the site, water may pond to a depth of 300-500mm. The volume for containment is driven by the 25% rule.

Appendix 1 ABDA Site Hazard Risk assessment summary for Reading STW

ADBA Industry Guidance and CIRIA C736 state how the site hazard rating of the site risk and classification are to be calculated. A summary of the hazard risks for Reading STW are as follows:

Source – There are two sources that have been identified:

1. Domestic and trade effluent Wastewater sludges, both in a raw, semi treated and treated state.
2. Polyelectrolyte chemicals for sludge thickening.

The Source Hazard rating was determined as High.

Pathway – There are three pathways that have been identified:

1. The process and site drains take any liquid to the head of the works which would negatively impact the process stability on site and would eventually impact on the receiving watercourse.
2. There are several areas where a sludge spill could pass over permeable ground.
3. The river Kennet and Foundry Brook to the north and east can impact downstream.

The site inventory has a runoff time of 15 minutes if unconstrained.

Consequently, the Pathway Hazard rating was determined as High.

Receptor – There are several potential receptors which have been identified:

1. The site drainage system and the head of the works.
2. There is a "Medium-High" groundwater vulnerability in this location.
3. The River Kennet and its stream to the north and west of the site, at a lower elevation and Foundry Brook to the east, also at a lower elevation.
4. The A33 to the east at a lower elevation.
5. The Hilton hotel (commercial) and Kennet Island Housing (residential) across the A33.
6. The Amazon and DHL warehouse immediately north of the site.

The Receptor Hazard rating was determined as High.

Likelihood – For the purpose of this assessment the likelihood for mitigated and unmitigated risks was calculated based on the assumption that the likelihood hazard rating is low.

Pre-mitigation measures, operational failures were highlighted as a high risk, shortfalls in design (provision of alarms and monitoring) together with structural failure were highlighted as a medium risk.

Post-mitigation measures operational failures were re-scored as a low risk. Therefore, the final Likelihood Hazard rating was determined as low.

Based on the information above the overall site risk rating was calculated to be medium which means that Class 2 secondary containment is required.

Appendix 2 Tank Covering High Level Commitment

There are no open top tanks within the permit boundary at Reading STC.

Consultation on the transposition of the industrial emissions Directive in England and Wales

Scope of the consultation

Topic of this consultation:	Transposition of the industrial emissions Directive (2010/75/EU) through amendment of the Environmental Permitting (England and Wales) Regulations 2010
Scope of this consultation:	Several specific points about the Directive, notably how to use derogations and flexibilities which it makes available. Also the application of Directive requirements to activities which are not specified in the Directive but which appear in the current Regulations.
Geographical scope:	England and Wales. (The administrations in Scotland and Northern Ireland are making separate arrangements for transposition. Separate arrangements are being made by the Department of Energy and Climate Change in respect of UK offshore installations)
Impact Assessment:	A draft impact assessment accompanies this consultation paper: views on it are sought.

Basic Information

To:	Operators of industrial installations which are subject to the Directive, and anyone with an interest in how those installations are regulated.
Body/bodies responsible for the consultation:	Department for Environment, Food and Rural Affairs and the Welsh Government
Duration:	12 March to 6 June 2012

Enquiries:	David Demain – 020 7238 1687 - Control.Pollution@defra.gsi.gov.uk
How to respond:	By post to Defra, Area 5F Ergon House, 17 Smith Square, London SW1P 3JR. By E-mail to Control.Pollution@defra.gsi.gov.uk .
Additional ways to become involved:	As this is a largely technical issue with largely specialist interests, this is a written exercise, although we shall be happy to respond to any questions you may have about it.
After the consultation:	When this consultation ends, we intend to put a copy of the responses, subject to any for which confidentiality is justified, in the Defra library at Ergon House, London. The responses will help us draft the amending Regulations for which we shall seek Parliamentary approval in the autumn of 2012. The responses will also help us finalise the impact assessment and the draft guidance.

Introduction

1. The industrial emissions Directive¹ is a Recast² of seven existing Directives: those concerning integrated pollution prevention and control (2008/1/EC³), large combustion plants (2001/80/EC), waste incineration (2000/76/EC), solvent emissions (1999/13/EC) and three concerning waste from the titanium dioxide industry⁴. Material from those Directives is to be found in Chapters II to VI respectively of the industrial emissions Directive. All those Directives – the “component Directives” - are currently transposed in England and Wales through the Environmental Permitting (England and Wales) Regulations 2010 (SI 2010. No. 675)⁵ – usually abbreviated in this consultation paper as “EPR”. In this paper and its accompanying material, the industrial emissions Directive is generally referred to simply as “the Directive”.
2. As much of the material in the recast Directive remains substantively unchanged from the component Directives, we consider that the EPR provide the most appropriate vehicle through which to transpose the industrial emissions Directive. Draft amending Regulations have therefore been drawn up and **the primary purpose of this consultation paper is to seek your views on particular points** which have arisen in doing so.
3. Please note that the Welsh Government is consulting⁶ on proposals to create a single environment body for Wales. The body will exercise a range of functions currently conferred on the Environment Agency, the Countryside Council for Wales and the Forestry Commission. These amendments to the EPR are proposed in the expectation that the new body will take over the Environment Agency's statutory duties in relation to the industrial emissions Directive at a future date.
4. **Please note that this consultation refers only to England and Wales.** The administrations in Scotland and Northern Ireland will be transposing the Directive separately. If you have interests there, please watch out for separate

¹ A short summary of the industrial emissions Directive, containing a link to the Directive itself, is at http://europa.eu/legislation_summaries/environment/air_pollution/ev0027_en.htm .

² The Recast was made under Inter-institutional Agreement of 28 November 2001 on a more structured use of the recasting technique for legal acts (2002/C 77/01). This states that ‘recasting shall consist in the adoption of a new legal act which incorporates in a single text both the substantive amendments which it makes to an earlier act and the unchanged provisions of that act. The new legal act replaces and repeals the earlier act’.

³ Directive 2008/1/EC is a codified version of the original IPPC Directive, 96/61/EC.

⁴ Directives 78/176/EEC, 82/883/EEC and 92/112/EEC.

⁵ At <http://www.legislation.gov.uk/ukxi/2010/675/contents/made> .

⁶ See <http://wales.gov.uk/consultations/environmentandcountryside/singlebody/?lang=en> . The consultation period ends on 2 May 2012.

consultations. Please note also that the Directive applies to offshore installations. The Department of Energy and Climate Change will be consulting separately on UK transposition arrangements in respect of the limited range of Directive activities which are carried out at offshore oil or gas installations.

5. Although specific questions are put to you below, **please consider the draft amending Regulations as a whole and comment on any perceived deficiencies or uncertainties.** Please note that there are three main components to the draft amending Regulations:
 - amendments to the main body of the EPR – these are relatively few in number and arise from various features of the Directive;
 - amendments to Schedule 1 – these make quite extensive changes, in particular to Part 2 of the Schedule which describes the activities subject to integrated pollution prevention and control (“IPPC” hereinafter) – these are listed under Part A(1) and Part A(2). Some of these amendments are driven by changes to the coverage of the IPPC Directive, but more are driven by the consideration of “legacy” activities – that is to say, activity descriptions which are not to be found in Annex I of the industrial emissions Directive – see section 32 of this paper; and
 - amendments in respect of Schedules 7, 13, 14, 15 and 17 – all of these are needed to transpose Chapters II – VI of the industrial emissions Directive, just as the current versions of those Schedules transpose the component Directives, largely through reference to the various Articles of the industrial emissions Directive with which the regulator must ensure compliance. This “referential” system in effect transposes the exact words of the Articles.
6. The draft amending Regulations also contain a replacement Schedule 8 which concerns the regulation of emissions to air from activities described under Part B of Part 2 of Schedule 1. This system of regulation is unaffected by the industrial emissions Directive⁷, but the current Schedule 8 refers to Articles in the IPPC Directive which will be repealed by the industrial emissions Directive from 7 January 2014. It is therefore proposed to replace Schedule 8 as part of this set of amendments, in a way which preserves unchanged the provisions of the current Schedule 8. **Do you have any concerns about the proposed replacement Schedule 8?**
7. Other points to note about the effect of the draft amending Regulations are set out in Appendix A to this consultation paper.
8. In order to help your consideration of the draft amending Regulations, we have provided “marked up” versions of the main regulations and of Schedule 1 which accompany this consultation paper. Please note that the “base” material in these

⁷ Although the solvent emission activities covered by the Directive are currently listed as Part B in Section 7 of Part 2 of Schedule 1 to the EPR, the draft amending Regulations remove them to a separate listing in the proposed Schedule 14.

versions is that which would be in existence if the amending Regulations⁸ first proposed in late 2010 enter force from April 2012. The small amount of material which is dependent on that entry into force is clearly identified. However, the changes made by the proposed amending Regulations will in any case be unaffected.

9. For further background to the industrial emissions Directive, **you should read the draft impact assessment which accompanies this consultation paper.** To aid the preparation of the final impact assessment which will accompany the finalised amending Regulations, **you are particularly invited to respond to the questions which are contained in that draft** and which, for convenience, are listed in Section 34 of this consultation paper.
10. Also accompanying this consultation paper is draft guidance from Defra and the Welsh Government in respect of Part A installations. This builds on the current Part A guidance in the series of EPR guidance documents⁹. The draft guidance is included with this consultation because the changes made by the industrial emissions Directive are most extensive in relation to Part A activities. Draft revised guidance in respect of large combustion plants also accompanies this consultation, as an aid to understanding the changes made by the Directive. This draft guidance may aid your understanding of the context of the amending Regulations and of how particular provisions of them are proposed to be implemented. **We shall be grateful for comments on the form and content of that draft guidance.**
11. The current EPR guidance on waste incineration is much less affected by the industrial emissions Directive and arrangements will be made within the next few months for the necessary amendments. Revision of the current EPR guidance on activities using solvents will depend upon the outcome of this consultation (see sections 28 to 30 of this consultation paper) and so a draft of that revision will be proposed late in 2012 when the final form of the amending Regulations is known.
12. The remaining sections of this paper set out the particular points upon which Defra and Welsh Government would be particularly grateful to receive comments. The sections are ordered according to the Directive Article number to which they refer, with sections thereafter dealing with a few issues which are not immediately connected with the Directive.

Directive Chapter I – ‘Common Provisions’

13. Please note that Articles 1 to 9 of the Directive apply to the Directive as a whole. Sections 14 and 15 of this consultation paper highlight particular points amongst those Articles, but respondents – particularly those with installations not subject

⁸ See <http://archive.defra.gov.uk/corporate/consult/env-permitting-regs/>

⁹ EPR guidance is available through <http://archive.defra.gov.uk/environment/policy/permits/guidance.htm> .

to the IPPC provisions in the Directive's Chapter II - should examine Chapter I as a whole in some detail.

14. ***Permits for operators of parts of an installation***

14.1. Article 4(3) provides the option for a single permit to cover 'several parts of an installation operated by different operators', provided that the permit specifies the responsibilities of each operator.

14.2. Under the current EPR, a permit can only be granted to a person who is in control of the operation of the installation, or a part of the installation. So where there:

- is a sole operator of an entire installation, one permit is issued to that operator;
- are joint operators of an entire installation (*ie* more than one person operating in partnership or in some other form of joint enterprise), one permit for the entire installation is issued to the "person" of the joint operators as defined in the partnership or joint enterprise agreement; or where there
- are sole operators of different parts of an installation (for example, one person operates the main activity, another a directly associated activity forming part of the installation), a permit is issued to each of the sole operators in respect of the activity or activities they operate.

14.3. Thus the EPR already allow for the possibility of more than one operator of an installation. However, the EPR do not provide for a single permit to be issued to operators who are not acting in partnership or other form of joint enterprise. A permit covering the activities of more than one distinct operator would still need to make the responsibilities of each operator within the installation completely clear, so that appropriate conditions could be included and, in the event of non-compliance, enforcement action could be taken in the same way as would be the case if the permit covered only a single operator. Only in that way could environmental protection be satisfactorily provided. A permit covering different operators would be highly complex in terms both of its content and the processes needed in making and determining the application.

14.4. Defra and the Welsh Government are therefore currently not minded to amend the EPR so as to accommodate the option contained in Article 4(3) of the Directive. **Are you content with that? If not, can you demonstrate from a real example that allowing a permit to cover several parts of an installation operated by different operators will reduce overall regulatory burden whilst maintaining the environmental protection required by the Directive?**

15. *Incidents and accidents*

- 15.1. Article 7(c) requires the competent authority, in the event of any incident or accident significantly affecting the environment, to require 'the operator to take any appropriate complementary measures that the competent authority considers necessary to limit the environmental consequences and to prevent further possible incidents or accidents'. This Article applies to all activities covered by the industrial emissions Directive, not only those which are subject to IPPC.
- 15.2. Regulation 36 of the EPR already provides regulators with the power to serve an enforcement notice which can specify steps to be taken if an operator 'has contravened, is contravening, or is likely to contravene' a permit condition. Those steps may be directed towards limiting environmental consequences and the prevention of further incidents or accidents.
- 15.3. However, it is conceivable that an incident or accident significantly affecting the environment may arise in circumstances where there is no breach or likely breach of a permit condition. Regulation 15 of the draft amending Regulations therefore empowers the regulator to issue enforcement notices in those circumstances. **Do you agree with this approach. If not, why not?**

16. *Energy efficiency requirements upon installations in the EU-ETS*

- 16.1. Article 9(2) continues the provision in the IPPC Directive that energy efficiency requirements need not be applied in the case of installations which are also subject to the EU emissions trading system (EU-ETS). However, paragraph 5(2)(a) of Schedule 7 to the EPR currently instructs the regulator to ignore that provision, with the effect that energy efficiency requirements are applied to such installations, albeit in a less specific manner than employed in relation to other installations. The Environment Agency's current approach is set out in its draft Horizontal Guidance Note IPPC H2 on *Energy Efficiency*¹⁰.
- 16.2. The proposed Schedule 7 is drafted in such a way that regulators must exercise their relevant functions so as to comply with Article 9(2), meaning that, from the time that the proposed Schedule comes into force, they will be able exercise discretion on the application of energy efficiency requirements to EU-ETS installations. Before that time we shall develop guidance for the regulators on how to exercise that discretion. **Are you content with the proposed way of transposing Article 9(2)? What guidance do you consider Ministers should issue?**

¹⁰ At <http://www.environment-agency.gov.uk/static/documents/Business/interimenergy.pdf>.

- 16.3. It should be noted that Article 9(2) applies not only to Chapter II (IPPC) requirements but also to Chapters III, IV, V and VI. The relevant Schedules therefore contain the same provision, although its relevance may be limited.

Directive Chapter II – installations subject to IPPC

17. *Preamble*

- 17.1. Chapter II of the Directive contains requirements which apply to the conduct of any of the industrial activities listed in the Directive's Annex I. They are largely very similar to those in the current IPPC Directive, but some clarify or extend those existing requirements. We propose to transpose them mainly through the proposed Schedule 7 of the draft amending Regulations which, like the current Schedule 7, requires the regulator to exercise its functions so as to ensure compliance with specified Articles of the Directive.
- 17.2. Please note that the existing Schedule 7 will remain in force until 7 January 2014 so as to maintain the transposition of the current IPPC Directive to the date where it is repealed by the industrial emissions Directive. This is particularly relevant to existing installations subject to IPPC which, under Article 82(1) of the industrial emissions Directive, are not subject to Chapter II until that date. The replacement Schedule 7 will enter force from 7 January 2013 and be immediately applicable to any new installations. It will become applicable to existing IPPC installations from 7 January 2014, and to any existing installations in respect of the activities newly subject to IPPC listed in Article 82(2) (listed in paragraph A1.1 of Appendix A to this consultation paper) from 7 July 2015.

18. *Emission limit values*

- 18.1. Article 15(3) requires the competent authority to set emission limit values that ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques (BAT) as laid down in the decisions on BAT conclusions. Article 15(4) enables the competent authority, in specific cases, to set less strict emission limit values, but only where an assessment shows that the achievement of emission levels associated with the best available techniques as described in BAT conclusions would lead to disproportionately higher costs compared to the environmental benefits due to (a) the geographical location or the local environmental conditions of the installation concerned; or (b) the technical characteristics of the installation concerned. Article 24(1)(c) applies public participation requirements to the exercise of the derogation provided by Article 15(4) and the reasons for the derogation have to be documented in an annex to the permit.
- 18.2. We propose to transpose the requirements of Article 15(3) and (4) through the proposed Schedule 7 which requires the regulator to exercise its functions so as to ensure compliance with them. To aid the regulator,

paragraphs 4.26 to 4.38 of the draft Part A guidance accompanying this consultation paper addresses these requirements. **Is that guidance clear and sufficient?** Note also that Annex A of the draft Impact Assessment accompanying this consultation paper provides further background.

- 18.3. Please note that Article 24(1)(c), requiring public participation in respect of the proposed application of Article 15(4), will be transposed through the requirement in the proposed Schedule 7 for the regulator to exercise its functions so as to meet the requirements of the whole of Article 24 and hence Annex IV of the Directive.

19. *General binding rules*

- 19.1. Taken together, Articles 3(8), Article 6 (unchanged) and Article 17 allow Member States to set “general binding rules” (GBRs). Defra and the Welsh Government consider that Chapter 4 of the EPR on “standard rules” already provides a framework which is consistent with these GBR provisions. It should be noted that Article 17(1) maintains the requirement of Article 9(8) of the IPPC Directive by requiring Member States to ‘ensure [through the use of GBRs] an integrated approach and a high level of environmental protection equivalent to that achievable with individual permit conditions’. **Do you consider that, in particular sectors, further use of this approach could be made?**

20. *Baseline reports and site closure*

- 20.1. Article 3(1)(f) of the IPPC Directive requires that installations are operated in such a way that ‘the necessary measures are taken upon definitive cessation of activities to avoid any pollution risk and return the site of operation to a satisfactory state’. The Environment Agency accordingly already requires a ‘site condition report’, on the basis that, without it, there would be no means of assessing whether the site of operation has been returned to a satisfactory state in compliance with that requirement of the current IPPC Directive. Article 11(h) of the industrial emissions Directive maintains that requirement and so in principle no change is brought about by the latter. However, that Article refers to ‘satisfactory state’ defined in accordance with Article 22.
- 20.2. Much of Article 22 reflects the already-established practice of the Environment Agency and local authorities. Article 22(2) explicitly requires the preparation of a “baseline report”, as defined in Article 3(19), but only where ‘the activity at the installation involves the use, production or release of relevant hazardous substances and having regard to the possibility of soil and groundwater contamination at the site of the installation’. That means that a baseline report will not necessarily be required for every installation subject to the IPPC requirements in Chapter II: even if ‘relevant hazardous

substances' are involved, the regulator has to take a view on whether they could actually cause contamination.

20.3. The site condition report, dating from the time the IPPC permit was first applied for, should generally remain valid even when the permit is subsequently updated. There should therefore be no need for submission of a completely new baseline report when an existing permit is updated for the first time after 7 January 2013. But it must be noted that Article 22(2) requires the baseline report to contain the information necessary to enable a quantified comparison to be made between the state of the site at cessation of activity and the baseline state. Regulators will need to check this when permits receive their first review under the requirements of Article 21. **Do you currently envisage it being necessary to strengthen existing site condition reports? If so, in what way or ways, and at what cost?** Operators should in any case bear in mind that it is in their interests to have a report which contains detail sufficient to minimise the risk of their being held responsible for contamination which in fact predated their permitted activity.

20.4. Guidance already exists from the Environment Agency¹¹ and in respect of local authorities¹² on site condition reports. It should be noted that the European Commission is obliged by Article 22(2) to establish guidance on baseline reports, but by the end of February 2012 no material had been produced. The regulators' guidance may need to be further revised in the light of the Commission's guidance.

21. *Emerging techniques*

21.1. Article 3(14) defines "emerging techniques" as 'a novel technique for an industrial activity that, if commercially developed, could provide either a higher general level of protection of the environment or at least the same level of protection of the environment and higher cost savings than existing best available techniques'. Article 27(1) requires Member States, where appropriate, to encourage the development and application of emerging techniques.

21.2. The proposed Schedule 7 would require regulators, where appropriate, to exercise their functions so as to encourage the application of emerging techniques, in particular for those identified in BAT reference documents. We consider that regulators can do this primarily through their dealings with operators who seek either new or varied permits for an activity in which an emerging technique is to be employed: regulators will note that Articles 14(5) and (6) provide the basis for their permitting decisions in such situations. **Do you have views on how regulators can encourage the development and application of emerging techniques?** The development and application of

¹¹ Guidance on site condition reports is at http://www.environment-agency.gov.uk/static/documents/Business/h5_scr_guidance_2099540.pdf .

¹² Guidance on site assessment is the Guidance Manual at <http://www.defra.gov.uk/publications/files/env-permitting-general-guidance-a.pdf>

emerging techniques is in line with the Coalition Government's wish to promote green industries¹³. Note also that Article 27(2) requires the European Commission to 'establish guidance to assist Member States' in that regard, but that no draft of such guidance had been issued by the Commission by the end of February 2012.

22. Waste management activities

- 22.1. Point 5.3(b) of the Directive's Annex I extends the coverage of non-hazardous waste management activities by IPPC to include specified recovery activities. Point 5.1 of that Annex specifies hazardous waste management activities by direct description rather than by reference to Annex II of what is now Directive 2008/98/EC on waste. These descriptions are in the proposed replacement Section 5.3 of Part 2 of EPR Schedule 1.
- 22.2. The Directive's definition of "waste" in Article 3(37) uses that in Article 3(1) of Directive 2008/98/EC on waste: "waste' means any substance or object which the holder discards or intends or is required to discard'. Please note that there is no reference to Article 2 of Directive 2008/98/EC which excludes certain specified wastes from the scope of that Directive: technical units treating any material which is waste according to Article 3(1) of 2008/98/EC are subject to IPPC if their capacity exceeds the relevant threshold, even if the material is covered by the waste Directive's exclusions. The wastes concerned are listed in paragraph A3.1 of Appendix A to this consultation paper.
- 22.3. The IPPC Directive contains a provision¹⁴ which has been interpreted in England and Wales as meaning that IPPC does not apply to any waste operation exempted from the permitting requirement of what is now Directive 2008/98/EC – that is to say, any waste operation registered as exempt under the provisions of regulations 4 and 5 and Schedules 2 and 3 of the EPR. That provision has not been included in the industrial emissions Directive, with the consequence that IPPC must be applied to installations conducting a waste management activity with a capacity above the relevant threshold of IPPC even if the unit is registered as an exempt waste operation. To clarify the situation, regulation 49 of the draft amending Regulations would amend EPR Schedule 3 to remove the waste exemption if the activity is one described in Chapter 5 of Part 2 of Schedule 1 to the EPR. It is expected that activities described in the exemptions listed below are most likely to be affected.

¹³ See, for example, https://online.businesslink.gov.uk/Horizontal_Services_files/Enabling_the_transition_to_a_Green_Economy_Main_D.pdf

¹⁴ At the head of Section 5 of Annex I of the IPPC Directive, listing waste treatment activities subject to the Directive: 'Without prejudice to Article 11 of Directive 2006/12/EC or Article 3 of Council Directive 91/689/EEC of 12 December 1991 on hazardous waste'.

Code	Description
T4	Preparatory treatments (baling, sorting, shredding etc.)
T9	Recovery of scrap metal
T11	Repair or refurbishment of waste electrical and electronic equipment
T12	Manual treatment of waste
T14	Crushing and emptying waste vehicle oil filters
T20	Treatment of waste at a water treatment works
T21	Recovery of waste at a water treatment works
T23	Aerobic composting and associated prior treatment
T24	Anaerobic digestion at premises used for agriculture and burning of resultant biogas
T25	Anaerobic digestion at premises not used for agriculture and burning of resultant biogas
S2	Storage of waste in a secure place

22.4. In view of what is described in paragraphs 22.1 ff, and also in the draft Impact Assessment, **do you have any uncertainties about which waste management activities are now subject to IPPC requirements? If so, how would you like them remedied?**

23. *Preservation of wood and wood products*

23.1. Point 6.10 of Annex I to the Directive adds wood preservation to the list of activities subject to IPPC. The draft amending Regulations which this consultation accompanies assign this activity to Part A(2) on the grounds that some 40 installations are already regulated by local authorities because they conduct a “timber activity” as described under Part B of Section 6.6 of EPR Schedule 1. **Do you agree with the assignment of the wood preservation activity as described in the Directive to local authorities?**

Directive Chapter IV – waste incineration

24. *Preamble*

24.1. With the small exception noted in Appendix A (paragraph A9) to this consultation paper, Chapter IV and Annex VI of the industrial emissions Directive maintain without generally significant change the requirements of the waste incineration Directive. The proposed replacement Schedule 13 to the EPR will transpose those requirements, largely through reference to the relevant Articles.

24.2. Note that, as under the current waste incineration Directive, the Chapter IV requirements apply to all waste incineration and co-incineration activities other than those specifically excluded by Article 42(2). There is no lower capacity threshold. Note also that the Chapter IV requirements are self-contained: they do not bring in any IPPC requirements from Chapter II. But activities above the relevant threshold in point 5.2 of Annex I of the industrial emissions Directive are additionally subject to IPPC and that may possibly drive more stringent permit conditions.

25. *Regulator for non-hazardous waste co-incineration activities*

25.1. The proposed replacement Schedule 13 simplifies the current prescription of regulator for waste incineration and co-incineration activities by making the relevant local authority the regulator for all such activities – irrespective of whether hazardous or non-hazardous waste is involved – which are below the relevant threshold¹⁵ for the IPPC requirements in Chapter II of the Directive, with the Environment Agency the regulator for all such activities above the threshold. **Do you have any comments about this assignment of regulator?** We are aware that some 10 plants may thus qualify for transfer to local authority regulation and we expect that to be addressed administratively by the regulators in discussion with the operators concerned.

26. *Removal of BAT requirements from incineration and co-incineration installations not subject to IPPC*

26.1. Activities subject to the current waste incineration Directive are all currently assigned to Part A in Part 2 of Schedule 1 to the EPR, thus subjecting them to IPPC even if the installation's capacity is below the IPPC threshold. There are some 10 installations in that position. However, the amended Part 2 of Schedule 1 will apply only to installations above the relevant thresholds¹⁶ in Annex I of the industrial emissions Directive. The proposed Schedule 13 requires the regulator to apply only the requirements of Chapter IV and Annex VI of the industrial emissions Directive (which are almost entirely unchanged from the corresponding material in the current waste incineration Directive) to installations with capacities below the IPPC

¹⁵ The IPPC capacity thresholds for incineration/co-incineration activities are 3 tonnes per hour for non-hazardous waste and 10 tonnes per day for hazardous waste.

¹⁶ See footnote 15.

thresholds. **Do you agree with this proposal? What environmental consequences and compliance cost savings may arise?**

27. PCB and PAH monitoring

- 27.1. Paragraph 2.1(c) of Part 6 of Annex VI of the Directive maintains the requirement of Article 11(2)(c) of the waste incineration Directive in respect of monitoring for heavy metals and furans. However, in transposing the waste incineration Directive, the words “dioxin-like polychlorinated biphenyls and poly-cyclic aromatic hydrocarbons” were added to this requirement and that remains the position under the current Schedule 13 to the EPR.
- 27.2. For all except the very small waste incineration or waste co-incineration plants not subject to IPPC requirements, it is in any case for the Environment Agency (as proposed sole regulator of such plants) to take a view on what pollutants are likely to be emitted in significant quantities and to set permit and monitoring conditions accordingly. In order to remove the possibility of environmentally unjustified monitoring requirements, particularly from installations with an already demonstrably sustained low emissions of these substances, the proposed Schedule 13 therefore contains no explicit requirement in respect of monitoring for dioxin-like polychlorinated biphenyls and poly-cyclic aromatic hydrocarbons. **Do you agree with this proposal? If not, why not?**

Directive Chapter V – activities using solvents

28. Preamble

- 28.1. Chapter V and Annex VII of the Directive maintain without significant change the requirements of the current “solvent emissions” Directive. The proposed replacement Schedule 14 to the EPR will transpose those requirements, largely through reference to the relevant Articles.
- 28.2. Please note that the Chapter V requirements are self-contained: they do not bring in any IPPC requirements from Chapter II. But where activities using solvents – even if they lie below the solvent consumption thresholds in Part 2 of Annex VII - are also covered by an activity description in Annex I of the industrial emissions Directive, the resulting IPPC requirements may possibly drive more stringent permit conditions.
- 28.3. So as better to reflect the self-contained nature of the Chapter requirements, the listing of activities, consumption thresholds and emission limit values are copied from the industrial emissions Directive into the proposed Schedule 14, thus removing them from their current designation as “Part B” activities within Part 2 of Schedule 1. This also facilitates the proposed removal of BAT and other requirements which currently apply to them additionally (see section 30).

29. Registration option for solvent activities

- 29.1. Article 4(1) of the Directive maintains an option available in the solvent emissions Directive by stating that ‘by way of derogation from the first subparagraph, Member States may set a procedure for the registration of installations covered only by Chapter V’. That Chapter contains the provisions of the current solvent emissions Directive virtually unchanged.
- 29.2. Solvent activities currently need a permit from the regulator, which in nearly all cases is the relevant local authority. Annual permit subsistence charges range from £76 pa for a dry cleaning installation assessed as “low risk” to £1,672 pa for a “high risk” standard installation.
- 29.3. We need to consider whether it would be any less onerous for operators and regulators if the current permitting system for solvent activities were to be replaced by a registration system, and what the implications would be for checking compliance. Part 3 of Schedule 14 of the draft amending Regulations sets out provisions for the registration system. With a few exceptions, it would be available in respect of all installations at which solvent use is the only activity carried on – that is to say, it would not be available where any activity listed in Part 2 of Schedule 1 is also carried on. Appendix B to this consultation paper explains how this would work in detail,
- 29.4. We propose that the operator of a new activity using solvents would merely have to notify the local authority regulator of their name and address and basic information about the type of activity to be registered. There would be no application process. There might be a small registration fee to cover administrative costs. We envisage that, for new registrations, regulators may decide subsequently to visit the installation to verify the registration information and to collect information hitherto provided in a permit application. For existing operators, the registration system as proposed would deem their permits to be registrations unless the operator notified the regulator of a wish to remain permitted rather than registered.
- 29.5. Through the amendments made to EPR Schedule 2 by the draft amending Regulations, registered solvent activities would become “exempt facilities” meaning that they would need an environmental permit. The proposed paragraph 3A of that Schedule would establish, mainly by reference to the proposed Schedule 14, that exempt solvent emission activities must meet the requirements set out in Chapter V of the Directive. Failure to comply with any of those requirements would mean that the activity could no longer be regarded as exempt, and would thus become an unpermitted regulated facility. Continued operation would therefore amount to the regulation 38(1) offence of operating a regulated facility without a permit. We consider that, as now, the regulator would undertake a risk-based level of supervision and inspection of registered activities on a continuing basis, although regulators will bear in mind that, like the solvent emissions Directive, Chapter V of the Directive does not contain any explicit requirements regarding inspections.

- 29.6. With these considerations in mind, it is not clear whether the introduction of a registration system would enable, in either the short or longer term, any savings to be made in regulators' costs and so allow annual charges to be lower than those under the current permitting system. For the registration of new installations, it is possible that charges might be somewhat higher in the first year to reflect the possible need for verification of registration details, although operators would clearly be spared the costs associated with a permit application. And a registration system would reduce the possibility of costs arising from the need for permit variation if the nature of the operation changed substantially.
- 29.7. If introduced, all qualifying existing permits would be deemed, through a provision which would be inserted in the finalised amending Regulations, to be registrations from 1 April 2014 unless the permit holder notifies the regulator of a wish to retain the permit. There would be powers for local authorities to charge for new registrations and to make annual charges to cover the costs of checking compliance.
- 29.8. **Do you consider that the introduction of a registration system for solvent activities would be worthwhile in the short and longer term? Can you suggest any alternative form of registration?**
- 29.9. Please note that the activity descriptions in Part B of Sections 6.4 (coating activities etc.) and 6.5 (Manufacture of dyestuffs, printing ink and coating materials) of Part 2 of EPR Schedule 1 are expressed in terms of solvent usage. There is no direct linkage between these and the solvent activities listed in the industrial emissions Directive but, if a registration system is introduced, we could extend it to those Part B activities.

30. *Removal of BAT requirement from solvent activities*

- 30.1. Solvent activities are currently regulated as a "Part B" activity, meaning that they are subject to BAT-based requirements in respect of any emissions to air which are likely to be significant, whether or not they are of volatile organic compounds (VOCs). This goes beyond what is required by the current solvent emissions Directive and also by Chapter V of the industrial emissions Directive: the use of BAT is mentioned only in relation to item 19 of the table in Part 2 of Annex VII of the Directive and in the context of the derogations provided by Article 59(2) and (3) of the Directive.
- 30.2. Initial indications from operators and regulators are that, in general, the BAT requirement does not add much or anything by way of compliance costs which would not in any case be necessary to meet the relevant solvent emission limit values. For the some 3,460 dry cleaning installations, plainly likely to have no other significant emissions to air than VOCs, the BAT requirement adds nothing. Amongst some 2,400 other installations, the BAT requirement is assessed to cost some £550,000 pa. Further details are in Annex C of the draft impact assessment which accompanies this consultation paper. The removal of the BAT requirement could result in

businesses taking less care in controlling emissions of some pollutants (mainly particulate matter, oxides of nitrogen, and carbon monoxide) other than solvents from the installations in question.

- 30.3. The proposed draft amending regulations would therefore remove BAT requirements from installations carrying out nothing but solvent activities. **Do you agree with this proposal? What are your views on the environmental consequences and compliance cost savings which may arise?**

Directive Chapter VII - transitional arrangements

31. *Timetable for permit applications*

- 31.1. Operators of installations carrying out activities newly subject to IPPC need to be operating in compliance with a permit by 7 July 2015. Those activities are tabulated in Appendix A to this consultation paper (section A1) and installations carrying them out are referred to as “2015 installations”.
- 31.2. Whilst it is unlikely that any single local authority will receive more than a single figure number of applications, the Environment Agency may have to deal with some 500 applications and so we have to consider what can be done to avoid the Agency becoming overwhelmed by last minute applications. But we are reluctant to impose a statutory timetable for submission of applications (as was done when IPPC was first introduced over the years 2000 to 2007).
- 31.3. If a “2015 installation” has not received a permit by that date, then its continued operation would constitute an offence under regulation 38(1) of the EPR. But the amending Regulations would insert into regulation 40 a defence in any proceedings under that regulation that a duly made application for a permit was submitted to the regulator by 24 November 2014. In that way, there would be some incentive (if any should be needed) upon the regulator to determine all permit applications received by 24 November 2014, because it would be unlikely to succeed in carrying through enforcement action against “2015 installation” operators for operation without a permit after 7 July 2015 until it had done so. Similarly, there would be some incentive for operators to apply by 24 November 2014. But please note that, even with this incentive, operators should make every effort to make permit applications considerably before November 2014. **Have you any comments upon this proposed means of incentivising permit applications in respect of new IPPC activities? Can you suggest any non-regulatory means by which the flow of permit applications to the Environment Agency can be spread?**
- 31.4. Operators should note that new or varied permits granted in respect of “2015 installations” will be brought into effect only from 7 July 2015 (or thereafter), even though the majority of applications will have been determined before that date. Similarly, the expectation is that permit charges will commence only from that date, although that and any other permit

charging provision in respect of such activities will be the subject of separate consultation on the permit charging schemes operated by the Environment Agency and by local authorities.

Activities not subject to the industrial emissions Directive

32. “Legacy” activities

- 32.1. Part 2 of Schedule 1 to the EPR lists industrial activities, with those in Part A subject to IPPC whilst those in Part B are subject only to controls upon emissions to air. As well as covering all the activities specified in Annex I of the Directive, Part A also includes 62 activity descriptions which have no foundation in EU requirements. They originate from the system of integrated pollution control which was set up under the Environmental Protection Act 1990 (and which was influential upon the making of the IPPC Directive in 1996). For the purposes of this consultation they are referred to as “**legacy activities**”
- 32.2. An assessment of these legacy activities has been carried out. In summary, four categories have been identified:
- 32.2.1. There are 15 instances of “moribund” descriptions” meaning that no extant Part A permits contain them and that it is considered very unlikely that any instances of these activities un-associated with other Directive Annex I activities will arise in future. These descriptions are tabulated in Appendix C.
- 32.2.2. There are 27 instances of descriptions which are superfluous because they are in fact covered by Directive Annex I activities for which a permit is needed in any case. These descriptions are separately tabulated in Appendix C.
- 32.2.3. In 13 cases, involving 137 permits, the activities are not covered in Directive Annex I, but there are considered to be sound environmental protection reasons for **maintaining** Part A regulation. These descriptions, together with a short justification for retention, are listed in Appendix D. The justifications for retention are informed by the Environment Agency, drawing upon its regulatory experience and concerns about the risks which might arise if Part A regulation ceased. It is of course not possible to quantify what would happen if that regulation were removed.
- 32.2.4. There may be a case for **removal** of controls under EPR Schedule 1 Part A from seven activity descriptions, currently accounting for 25 permits. These descriptions, together with a short commentary, are listed in Appendix E.
- 32.3. The draft amending Regulations therefore contain amendments which would remove the descriptions tabulated in Appendix C, and which would

adjust the descriptions tabulated in Appendix E . > **Do you consider that any of the descriptions proposed for deletion or adjustment should in fact be retained? If so, please provide reasons.** Please note that, if consultation responses support deletions of activity descriptions which are included in extant “Part A” permits, it will be for the regulator to determine, in consultation with the operators concerned on an individual basis, whether permits need to be varied or revoked by the same regulator or transferred between regulators (as could happen if the installation continues to operate a Part B activity). It would be for the regulator and operator to agree a reasonable period of time, necessarily starting from the date that the amended Schedule 1 enters force, in which to make necessary changes to permits.

32.4. Please note that the Climate Change Agreement (CCA) scheme¹⁷ relies upon the current Part A activity descriptions for defining the industry sectors for which CCAs are available. There are 40 sectors whose eligibility for Climate Change Agreements (CCAs) is based on such processes. Our analysis suggests that, on this basis, the proposals to delete descriptions set out above would result in one sector (slag grinders – described in Section 3.1 A(2) (a) and (b)) no longer remaining eligible for a CCA and associated climate change levy discount. Additionally, there may be a number of facilities holding CCAs in a small number of sectors which may be at risk of losing eligibility. If these facilities do not also undertake another Part A activity, they would not be able to hold a Climate Change Agreement in the future.

32.5. The draft amending Regulations are such that the descriptions tabulated in Appendix D would be retained within Part A regulation. > **Do you agree that the retention of the “legacy” descriptions tabulated in Appendix D is justified? Have you any evidence which either supports or refutes the need for retention?**

33. Mobile plant

33.1. The EPR currently require the application of IPPC to any mobile plant carrying out Part A activities. But the industrial emissions Directive applies only to installations which, by the definition in its Article 3(3), are stationary. The draft amending Regulations therefore contain amendments which would remove mobile plant from IPPC. In practice, instances of mobile plant “Part A” permits are numbered in single figures. > **>Do you agree with the proposal to end IPPC requirements for mobile plant?**

¹⁷ See <http://www.decc.gov.uk/en/content/cms/emissions/ccas/ccas.aspx>

34. Consultation questions

- 34.1. Listed below are all the specific questions raised in this consultation paper and in the accompanying draft impact assessment. We would be grateful for responses to any or all of the questions, preferably supported by evidence drawn from practical experience. We would also be grateful to receive any more general questions or comments on the proposed transposition arrangements.
- 34.2. Please consider the draft amending Regulations as a whole and comment on any perceived deficiencies or uncertainties. (See paragraph 5.)
- 34.3. Do you have any concerns about the proposed replacement Schedule 8? (See paragraph 6.)
- 34.4. We shall be grateful for comments on the form and content of the draft guidance which accompanies this consultation. (See paragraph 10.)
- 34.5. Are you content with the proposal not to transpose the option for a single permit to cover several parts of an installation operated by different operators? If not, can you demonstrate from a real example that allowing a permit to cover several parts of an installation operated by different operators will reduce overall regulatory burden whilst maintaining the environmental protection required by the Directive? (See paragraph 14.4.)
- 34.6. Do you agree with our proposed transposition of Article 7(c) concerning incidents and accidents? If not, why not? (See paragraph 15.3.)
- 34.7. Are you content with the proposed way of transposing the Article 9(2) option not to apply energy efficiency requirements to EU-ETS installations? What guidance on that issue do you consider Ministers should issue? (See paragraph 16.2.)
- 34.8. Is the “Part A” guidance concerning Articles 15(3) and(4) (setting emission limit values where there are BAT conclusions and derogation from that requirement) clear and sufficient? (See paragraph 18.2.)
- 34.9. Do you consider that, in particular sectors, further use of standard rules could be made? (See paragraph 19.1.)
- 34.10. Do you currently envisage it being necessary to strengthen existing site condition reports? If so, in what way or ways, and at what cost? (See paragraph 20.3.)
- 34.11. Do you have views on how regulators can encourage the development and application of emerging techniques? (See paragraph 21.2.)
- 34.12. Do you have any uncertainties about which waste management activities are now subject to IPPC requirements? If so, how would you like them remedied? (See paragraph 22.4.)

- 34.13. Do you agree with the assignment of the wood preservation activity as described in the Directive to local authorities? (See paragraph 23.1.)
- 34.14. Do you have any comments about the assignment of local authorities as regulators for all waste incineration and co-incineration activities which are below the capacity thresholds in Annex I of the Directive? (See paragraph 25.1.)
- 34.15. Do you agree with the proposal to remove BAT requirements from incineration and co-incineration installations not subject to IPPC? What environmental consequences and compliance cost savings may arise? (See paragraph 26.1.)
- 34.16. Do you agree with the proposal to remove obligatory PCB and PAH monitoring from WI? If not, why not? (See paragraph 27.2.)
- 34.17. Do you consider that the introduction of a registration system for solvent activities would be worthwhile in the short and longer term? Can you suggest any alternative form of registration? (See paragraph 29.8.)
- 34.18. Do you agree with the proposal to remove BAT requirements from solvent activities? In What are your views on the environmental consequences and compliance cost savings which may arise? (See paragraph 30.3.)
- 34.19. Have you any comments upon the proposed means of incentivising permit applications in respect of “2015 installations”? Can you suggest any non-regulatory means by which the flow of permit applications to the Environment Agency can be spread? See paragraph 31.3.)
- 34.20. Do you consider that any of the “legacy” activity descriptions proposed in Appendices C and E for deletion or adjustment should in fact be retained? If so, please provide reasons. (See paragraph 32.3.)
- 34.21. Do you agree that the retention of the “legacy” descriptions tabulated in Appendix D is justified? Have you any evidence which either supports or refutes the need for retention? (See paragraph 32.5.)
- 34.22. Do you agree with the proposal to end IPPC requirements for mobile plant? (See paragraph 33.1.)
- 34.23. You are invited to respond to the questions which are contained in the draft impact assessment which accompanies this consultation. For convenience these are:
- 34.23.1. Please present any information you may have in respect of the impact of the inclusion of more waste management activities in IPPC on the delivery of waste policy (draft IA paragraph 17, and see also section 22 of this paper).
- 34.23.2. Please comment on the assessment of the impact upon the industry sector(s) in which you are interested of the substantive changes

discussed in the draft impact assessment, and of any other changes which you consider potentially significant. In all cases, quantified information on costs and information, quantified if possible, on benefits would be particularly welcome (draft IA paragraph 20).

34.23.3. Please submit any quantified information on impacts you may have already identified as arising from the recent adoption¹⁸ of BAT Conclusions for the glass and the iron & steel sectors (draft IA paragraph 21).

34.23.4. Please consider in detail the impact of the components added in Option 2 described in paragraph 39 of the draft impact assessment. Quantified information on changes in costs to operators changes which would result from the proposals within this option would be particularly welcome (draft IA paragraph 40).

¹⁸ BAT conclusions for these sectors were adopted at a meeting on 21 November 2011 and are expected to be published by the European Commission in the early spring of 2012.

APPENDIX A - Other points to note about the Directive

A1. *Activities newly subject to IPPC – the “2015 installations”*

A1.1. As noted in paragraph 17.2, Article 82(2) lists, by reference to the Directive’s Annex I, activities which need to be permitted only from 7 July 2015 if they are carried out at installations which were in operation before 7 January 2013. Such installations are referred to here as the “2015 installations”. The activity descriptions concerned would be, in Part 2 of Schedule 1 to the EPR as proposed to be amended, as follows:

Directive Annex I point:	EPR Part 2 of Schedule 1 (as amended), Section:	Affecting installations carrying out:
1.4(b)	1.2 Part A(1) (d)	gasification insofar as fuels other than coal are concerned
4.1-4.6	4.1 – 4.4 and 4.6	chemical production but only insofar as any biological processing activities are not already permitted.
5.1	5.3 Part A(1) (a)(i)-(iv) and (xi)	only recovery operations involving one or more of the following treatments of hazardous waste: biological treatment; physico-chemical treatment; blending or mixing or repackaging prior to submission to any of the other activities listed in Section 5.3 Part A(1)(a) or in Part A(1) of Section 5.1; or surface impoundment.
5.2	5.1	waste incineration or co-incineration above the relevant thresholds if not already permitted.
5.3(a)(iii) to (v)	5.4 Part A(1) (a)(iii) to (v)	only one or more of the following disposal activities for non-hazardous waste: pre-treatment waste for incineration or co-incineration; treatment of slags and ashes; and treatment in shredders of metal waste.
5.3(b)	5.4 Part A(1) (b)	recovery or a mix of recovery and disposal of non-hazardous waste with a capacity exceeding 75 tonnes per day (or 100 tonnes per day if the only waste treatment activity is anaerobic digestion) involving one or more of the following activities and excluding activities covered by Directive 91/271/EEC: biological treatment; pre-treatment of waste for incineration or co-incineration; treatment of slags and ashes; or treatment in shredders of metal waste.
5.5	5.5 Part A(1) (a)-	temporary storage of hazardous waste with capacity above 50 tonnes (excluding on the site where the waste is generated).

Directive Annex I point:	EPR Part 2 of Schedule 1 (as amended), Section:	Affecting installations carrying out:
5.6	5.5 Part A(1) (b)	underground storage of hazardous waste with a total capacity exceeding 50 tonnes.
6.1(c)	6.1 Part A(2) (a)	manufacturing board if not already permitted.
6.4(b)	6.8 Part A(1)(d)(iii)	food production from mixed animal and vegetable materials if not already permitted.
6.10	6.6 Part A(2)(a)	wood preservation.
6.11	5.6 Part A(1) (a)	independently operated treatment of waste water not covered by Directive 91/271/EEC and discharged by an installation carrying out any other Part A(1) or A(2) activity.

A1.2. Note that, for several of the activities tabulated above, some installations may already have IPPC permits as a result of interpretations already in place within England and Wales, or because the installations concerned are already carrying out other Part A activities.

A2. IPPC “general principle” on waste prevention

A2.1. Article 11(e) modifies the IPPC Directive’s general principle concerning waste from IPPC installations so as to align with Directive 2008/98/EC. Whereas they previously had to be operated such that

‘where waste is produced, it is recovered or, where that is technically and economically impossible, it is disposed of while avoiding or reducing any impact on the environment’,

under the industrial emissions Directive, installations must be operated such that

‘where waste is generated, it is, in order of priority and in accordance with Directive 2008/98/EC, prepared for re use, recycled, recovered or, where that is technically and economically impossible, it is disposed of while avoiding or reducing any impact on the environment’.

A3. Wastes not excluded from subsection to the Directive

A3.1. As described in paragraph 22.1 of this document, wastes excluded from the scope of the waste Directive (2008/98/EC) by its Article 2 are not

excluded from the relevant requirements of the industrial emissions Directive. Those requirements are in Chapter II – through the inclusion of waste management activities in Annex I – and in Chapter IV on waste incineration and co-incineration. The wastes concerned are:

- In all cases:
 - (a) gaseous effluents emitted into the atmosphere;
 - (b) land (in situ) including unexcavated contaminated soil and buildings permanently connected with land;
 - (c) uncontaminated soil and other naturally occurring material excavated in the course of construction activities where it is certain that the material will be used for the purposes of construction in its natural state on the site from which it was excavated;
 - (d) radioactive waste;
 - (e) decommissioned explosives; and
 - (f) faecal matter, if not covered by paragraph (b), straw and other natural non-hazardous agricultural or forestry material used in farming, forestry or for the production of energy from such biomass through processes or methods which do not harm the environment or endanger human health.
- To the extent that they are covered by other EU legislation:
 - (a) waste waters;
 - (b) animal by-products including processed products covered by Regulation (EC) No 1069/2009, except those which are destined for incineration, landfilling or use in a biogas or composting plant;
 - (c) carcasses of animals that have died other than by being slaughtered, including animals killed to eradicate epizootic diseases, and that are disposed of in accordance with Regulation(EC) No 1069/2009; and
 - (d) waste resulting from prospecting, extraction, treatment and storage of mineral resources and the working of quarries covered by Directive 2006/21/EC on the management of waste from extractive industries.
- Without prejudice to obligations under other relevant Community legislation, sediments relocated inside surface waters for the purpose of managing waters and waterways or of preventing floods or mitigating the effects of floods and droughts or land reclamation if it is proved that the sediments are non-hazardous.

A4. Site closure

A4.1. Article 22(3) requires the operator to remediate contamination identified as such by reference to the baseline report, although no deadline for remediation is given. Article 22(4) applies where the operator has not been required to produce a baseline report (for example, because the activity was deemed not to involve relevant hazardous substances) and similarly requires remediation to deal with contamination resulting from the permitted activities.

A4.2. These Article 22(3) and (4) requirements are already embodied in current regulatory practice in England and Wales. Regulation 25(2) of the EPR states that ‘by application to the regulator, an operator may surrender an environmental permit, or that part of a permit, to which this regulation applies’. Paragraph 14 of Schedule 5 applies in respect of the application and states that ‘the regulator must accept an application for the surrender of an environmental permit in whole or in part under regulation 25(2) if it is satisfied that the necessary measures have been taken (a) to avoid a pollution risk resulting from the operation of the regulated facility; and (b) to return the site of the regulated facility to a satisfactory state, having regard to the state of the site before the facility was put into operation’. So the permit remains in force – and with it the enforceable obligation to comply with all its conditions and to pay annual subsistence charges – until the regulator is satisfied that any necessary remediation is complete. We therefore consider that the current provisions in regulation 25 and Schedule 5 of the EPR effectively transpose Article 22.

A5. Chemical industry – production on an ‘industrial scale’

A5.1. Chapter 4 of Part 2 of Schedule 1 to the EPR currently has an interpretation that “‘producing” means producing in a chemical plant by chemical processing for commercial purposes substances or groups of substances listed [in Chapter 4]’. The draft Regulations omit this in favour of direct copy out of the corresponding interpretation at the head of Point 4 in Annex I of the Directive: ‘production means the production on an industrial scale by chemical or biological processing of substances or groups of substances listed [in Point 4].’ Existing guidance¹⁹ from the European Commission on the interpretation of “production on an industrial scale” remains relevant.

A6. Disposal or recovery of non-hazardous waste – exclusion of activities covered by the urban waste water treatment Directive

A6.1. Point 5.3(a) and (b) of Annex I of the industrial emissions Directive each exclude activities covered by the urban waste water treatment

¹⁹ At http://ec.europa.eu/environment/air/pollutants/stationary/ippc/general_guidance.htm#5

Directive²⁰. Our view is that this excludes all activities conducted at sewage works for the treatment of ‘domestic waste water or the mixture of domestic waste water with industrial waste water and/or run-off rain water²¹’ and ‘residual sludge, whether treated or untreated, from urban waste water treatment plants²²’ so long as they are dedicated to that treatment. Anaerobic digestion plants used for sludge treatment will therefore be covered by the exclusion, unless those plants also treat other waste material not derived from the sewage treatment process. However, the European Commission may express a view on this issue.

A7. *Installations producing foodstuffs with both animal and vegetable ingredients*

A7.1. Point 6.4(b) of Annex I clarifies how the threshold for such installations must be determined. What is prescribed is very similar to the approach the Environment Agency already takes. The draft impact assessment addresses the consequences.

A8. *Definition of poultry*

A8.1. Under Article 3(23) of the industrial emissions Directive, “poultry” is defined, by reference to other EU legislation²³, as ‘fowl, turkeys, guinea fowl, ducks, geese, quails, pigeons, pheasants and partridges reared or kept in captivity for breeding, the production of meat or eggs for consumption, or re-stocking supplies of game’. The inclusion of that definition plainly has no consequences for the current application of IPPC to the rearing of chicken laying hens and broilers, turkeys, ducks or Guinea fowls, where there are more than 40,000 places in a technical unit. But it is necessary to consider whether the game birds mentioned in this definition are subject to IPPC through point 6.6(a) of Annex I of the industrial emissions Directive.

A8.2. Initial investigations indicate that in most instances of the rearing of game, a combination of an exceptionally short season (typically some seven weeks in late spring/early summer), stocking densities that are significantly lower than any covered by animal welfare recommendations, and limited access to housing which is in nearly all cases only temporary in nature, make it unlikely that any significant environmental pollution would result. Defra and the Welsh Government therefore take the view that only

²⁰ 91/271/EEC .

²¹ The definition of “urban waste water” in Article 2(1) of the urban waste water treatment Directive.

²² The definition of “sludge” in Article 2(10) of the urban waste water treatment Directive.

²³ Point 1 of Article 2 of Council Directive 90/539/EEC.

those game bird farms which are similar in nature (in terms of length of rearing season, stocking density, and nature of housing) to poultry farms already regulated by the Environment Agency as Part A installations, may become subject to the industrial emissions Directive. Defra and the Welsh Government understand that very few game bird farms are of such similar nature.

A9. *Waste incineration provisions*

A9.1. Article 42(1) removes the waste incineration provisions from gasification and pyrolysis plants ‘if the gases resulting from this thermal treatment of waste are purified to such an extent that they are no longer a waste prior to their incineration and they can cause emissions no higher than those resulting from the burning of natural gas’. It should be noted that such plants may still be subject to the IPPC requirements in Chapter II of the industrial emissions Directive if the activity they carry out falls within Annex I – for example, point 1.1 (combustion with a rated thermal input of 50 MW or more), 1.4(b) (gasification in an installation with a rated thermal input of 20 MW or more) or points 5.1(a) or 5.3(a)(ii) (physico-chemical treatment of waste).

A10. *Large combustion plants – transitional national plan*

A10.1. The establishment of a transitional national plan for the United Kingdom is being taken forward separately by Defra²⁴, in consultation with the devolved administrations in Wales, Northern Ireland and Scotland.

A11. *Large combustion plants – limited life time derogation*

A11.1. Operators of existing large combustion plants which qualify for the derogation provided by Article 33 are reminded that they have until 1 January 2014 to provide a written declaration to the Environment Agency of their intention to take it.

A12. *Large combustion plants – aggregation rules*

A12.1. Article 29(3) changes the aggregation rules so that plants with a rated thermal input below 15 MW shall not be considered when calculating the total rated thermal input of a candidate large combustion plant. However, it should be noted that such plants will still need to be taken into account by the

²⁴ A letter to operators participating in the current National Emission Reduction Plan and to representatives of other large combustion plant interests was sent by Defra on 28 December 2011. This is available at <http://www.defra.gov.uk/environment/quality/industrial/eu-international/lcpd/> under the heading “Recent developments”.

regulator when determining the aggregate rated thermal input to establish whether a combustion plant has a rated thermal input of 50 MW or more and so subject to the IPPC requirements of Chapter II of the Directive, in accordance with the first introductory sentence to Annex I.

A13. Transitional arrangements

- A13.1. Much of the material in the industrial emissions Directive is substantively unchanged from that in the component Directives. Nevertheless, Article 80 of the Directive lists an array of Articles and parts of Annexes which, for various reasons, have to be transposed (or confirmed as already transposed) by Member States. The transposition deadline is 7 January 2013 and the transposed material has to be applied from the same date. The draft amending Regulations, taken with the relevant unchanged material in the EPR, are considered to achieve that.
- A13.2. The Directive recognises the need for a period of transition for installations already in existence²⁵ at 7 January 2013. Under Article 82(1), existing installations carrying out any of the activities listed in Annex I of the IPPC Directive – that is to say, those (other than “legacy” activities) described in Part A of Part 2 of EPR Schedule 1 – have until 7 January 2014 to meet any new requirements arising from the transposition.
- A13.3. Defra and the Welsh Government, advised by the Environment Agency, consider that few, if any, changes to current permits and regulatory practice will be needed within that transition period. The periodic reconsideration of permits which will be required under Article 21 of the industrial emissions Directive will in any case provide a means of identifying the need for and making any adjustments. If the regulator identifies any particular cases which need more urgent attention, the existing EPR provisions in respect of permit variation will be sufficient to deal with them.
- A13.4. A consequence of the transitional arrangements for existing IPPC installations is that the current EPR Schedule 7, with its references to Articles of the IPPC Directive – will need to remain in force until 7 January 2014 to cover the transitional period. But a replacement is needed from 7 January 2013 to achieve transposition and to cover installations which are new after that date. For that reason, the draft amending Regulations propose a new Schedule 7 which, under regulation 2 of the draft amending Regulations, would come into force from 7 January 2013 for new installations and from a year later for existing installations.
- A13.5. Article 82(2) of the Directive deals with the additional activities which it has placed under IPPC through inclusion in Annex I of the Directive. These are tabulated in paragraph A1 of this Appendix, Installations which were in

²⁵ That is to say, already in operation by 7 January 2013 or for which a permit application has been made by that date, provided the installation is put into operation within a year of that date.

operation before 7 January 2013²⁶ - referred to in this consultation paper and the draft amending Regulations as “2015 installations” - have until 7 July 2015 to be operating in accordance with a permit for which the operator will need to apply according to the procedure in the current EPR. Section 31 above seeks views on ways of incentivising the making of applications sufficient early to avoid the Environment Agency becoming overwhelmed in the run-up to that date.

A13.6. Article 82(3) provides that the requirements of Chapter III apply to existing large combustion plants only from 1 January 2016. For that reason, the current EPR Schedule 15 will remain in force until that date, when it is replaced by the proposed Schedule 15A (which will have been in force from 7 January 2013 for new plants). However, it should be noted that all those plants are also subject to IPPC under the provisions of Chapter II and that any changed IPPC requirements will therefore need to be met from 7 January 2014.

A13.7. Article 82(4) applies Chapter III from 7 January 2013 to any large combustion plant not in operation or the subject of a permit application by that date – hence the proposed Schedule 15A will apply from that date. It should be noted that Chapter II requirements will apply also.

A14. *Review of the Regulations*

A14.1. A guiding principle of the Government’s approach to transposition of EU Directives is that there should be a statutory duty for ministerial review of the transposition every five years.

A14.2. Subject to the will of Parliament, amendments to the EPR are likely to take effect in April 2012 which will insert requirements within the EPR for the EPR as a whole (i) to be reviewed and a report published by 6 April 2017, and (ii) for review reports thereafter to be published at intervals not exceeding five years. Through being done by amendment of the EPR, the transposition of the industrial emissions Directive will thus be subject to those requirements.

²⁶ Note that there is no provision in Article 82(2) for installations for which a permit has been applied for before that date.

APPENDIX B – registration system for solvent activities

B1. The registration option would:

- be available only for installations at which nothing other than a solvent activity (currently specified in Section 7 of Part 2 of Schedule 1 of EPR but proposed to be moved to the replacement Schedule 14) is carried out;
- not be available to any operator which considers itself likely to make use of either of the derogations set out in Article 59(2) and Article 59(3) of the industrial emissions Directive;
- not be available in the specific case of an operator carrying out vegetable oil extraction or refining activities on individual batches of seeds and vegetable matter other than those specifically listed in item 19 of Part 2 of Annex VII of the industrial emissions Directive (because the regulator has to set emission limit values on the basis of BAT);
- compel the operator to notify the regulator (the local authority in all cases) of an intention to operate an installation at which a solvent activity is to be carried out, with the notification containing:
 - the name, address and post code of the installation where the solvent activity is to be carried out;
 - the name, address and post code of the operator if different from that of the installation itself;
 - the details of which of the solvent activities (as listed in Table 1 of the replacement Schedule 14) are to be carried out there;
 - a statement of which of the alternative means of complying with its obligations (see paragraph B5) the operator will use.

B2. The local authority would be given, by amendment of EPR Schedule 2, the duty to maintain a publicly-available register of all the registered solvent activities for which it is the regulator. The existing provisions of Schedule 2 in respect of the register would apply .

B3. A registered operator would be required to comply with Article 7(a) and (b) of the Directive in respect of incidents and accidents. The regulator would be empowered to serve a notice upon a registered operator to secure compliance with Article 7(c). The operator would have the right of appeal if aggrieved by the notice. Failure to comply with the notice would constitute an offence and attract the enforcement provisions of regulation 36.

- B4. The operator would be obliged to meet Article 58 requirements for the replacement of certain particularly hazardous classes of solvent. .
- B5. Under Article 59, a registered operator of a solvent activity would be obliged either:
- to ensure that the emission of volatile organic compounds from installations does not exceed the emission limit values in waste gases and the fugitive emission limit values, or the total emission limit values, and other requirements laid down in Parts 2 and 3 of Annex VII of the Directive; or
 - to comply with the requirements of the reduction scheme set out in Part 5 of Annex VII provided that an equivalent emission reduction is achieved compared to that achieved through the application of the emission limit values referred to in point (a).
- B6. A registered operator of a solvent activity would also be obliged:
- to take all appropriate precautions to minimise emissions of volatile organic compounds during start-up and shut-down operations; and
 - as relevant, to comply with the requirements of Article 59(5) and Article 59(6).
- B7. A registered operator of a solvent activity would be obliged either to:
- measure its emissions in accordance with Part 6 of Annex VII of the Directive; or
 - to supply the competent authority, on request, with data enabling the competent authority to verify compliance with either of the following:
 - emission limit values in waste gases, fugitive emission limit values and total emission limit values; or
 - the requirements of the reduction scheme under Part 5 of Annex VII.
- B8. The data supplied by the registered operator for compliance verification may include a solvent management plan prepared in accordance with Part 7 of Annex VII. An information notice provision would enable the regulator to require a plan if one is not provided by the operator.
- B9. An operator of a registered solvent activity would be obliged to report to the regulator any substantial change to the installation, where “substantial change” is defined as set out in Article 63(1) of the Directive.

- B10. Failure to meet the obligations upon the operator of a registered solvent activity would become an offence through regulation 38(1), with the provisions as regards penalties and defences in regulations 39 and 40 thus applying.
- B11. Each registration would remain in place until the operator notifies the regulator that it is no longer required, or until revoked by the regulator. The regulator would have the power to require a permit application from any operator which does not comply with its obligations under registration.
- B12. Existing permits for installations carrying out only a solvent activity would be regarded as registrations with effect from 1 April 2014, with permit conditions not required under the proposed amended EPR Schedule 14 not applicable from that date, unless the operator informs the regulator by that date of a wish to retain permitted, rather than registered, status.
- B13. EPR regulation 65 would be amended to provide local authorities with the power to prescribe fees payable for (i) the registration of a solvent activity, and (ii) the subsistence of a registration. The actual prescription of fees for the former and, if required, the latter, would be the subject of a separate consultation. An annual subsistence charge is likely to be required in order to cover reasonable costs of local authorities in checking compliance with registration conditions and in handling annual emission reports from registered operators, and may therefore be very similar to those currently applied to permits covering only solvent activities. However, the scope for reduction would be kept under review.

APPENDIX C – legacy activities – “moribund and superfluous”

The activity descriptions tabulated here are proposed to be removed from Part A in the amended Part 2 of Schedule 1 to the EPR because the activities are (i) not practiced and are considered unlikely to be (“moribund”), or (ii) in practice covered by other Part A activity descriptions (“superfluous”).

EPR Sch. 1, Part 2, Section...	“Moribund” activities - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
	[15 activity descriptions]
1.2 A(1) (e)	<i>Gasification, liquefaction and Refining</i> - producing gas from oil or other carbonaceous material.
1.2 A(1) (h)(iii)	<i>Gasification, liquefaction and Refining</i> - loading/storage/treatment etc of crude shale oil.
1.2 A(1) (h)(v)	<i>Gasification, liquefaction and Refining</i> - loading/storage/treatment etc of emulsified hydrocarbons intended for use as a fuel.
1.2 A(1) (i)	<i>Gasification, liquefaction and Refining</i> - further refining or conversion.
2.2 A(1) (g)	<i>Non-Ferrous Metals</i> - mining zinc or tin-bearing ores where the activity may result in the release into water of cadmium or any compound of cadmium in a concentration which is greater than the background concentration.
3.2 A(1) (c)	<i>Activities Involving Asbestos</i> - destroying a railway vehicle by burning.
4.1 A(1) (f)(i)	<i>Organic Chemicals</i> - recovering carbon disulphide.
4.2 A(1) (g)(i)	<i>Organic Chemicals</i> – recovering etc. sulphuric acid.
4.2 A(1) (g)(ii)	<i>Organic Chemicals</i> – recovering etc. nitric acid.
4.2 A(1) (i)	<i>Inorganic Chemicals</i> - recovering ammonia.

EPR Sch. 1, Part 2, Section...	“Moribund” activities - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
4.2 A(1) (j)	<i>Inorganic Chemicals</i> - extracting any magnesium compound from sea water.
4.5 A(1) (b)	<i>Pharmaceutical Production</i> - formulating if there may be releases of specified substances to water.
5.1 A(1) (d)	<i>Incineration and Co-incineration of Waste</i> – incineration of hazardous waste in a plant that is not an incinerator.
5.1 A(1) (e)	<i>Incineration and Co-incineration of Waste</i> – incineration of non-hazardous waste in a plant that is not an incinerator.
6.3 A(1) (a)(ii)	<i>Tar and Bitumen Activities</i> – manufacture of electrodes or carbon-based refractory materials.

EPR Sch. 1, Part 2, Section...	“Superfluous” activities - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
	[27 activity descriptions]
1.1 A(1) (b)(i)	<i>Combustion activities</i> – burning waste oil.
1.1 A(1) (b)(ii)	<i>Combustion activities</i> – burning recovered oil.
1.1 A(1) (b)(iii)	<i>Combustion activities</i> – burning fuel manufactured from or comprising waste.
1.2 A(1) (b)	<i>Gasification, liquefaction and Refining</i> - reforming natural gas.
1.2 A(1) (f)	<i>Gasification, liquefaction and Refining</i> - purifying or refining products.
1.2 A(1) (h)(iv)	<i>Gasification, liquefaction and Refining</i> - handling etc. any gas or condensate associated with crude oil etc..

EPR Sch. 1, Part 2, Section...	“Superfluous” activities - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
1.2 A(1) (k)	<i>Gasification, liquefaction and Refining</i> - odorising gas where related to a Part A activity.
2.2 A(1) (c)	<i>Non-Ferrous Metals</i> – refining any non-ferrous metal, other than copper.
2.2 A(1) (d)	<i>Non-Ferrous Metals</i> – melting etc. lead.
2.2 A(1) (e)	<i>Non-Ferrous Metals</i> – recovering gallium <i>et al.</i> .
2.2 A(1) (h)	<i>Non-Ferrous Metals</i> - use of beryllium or selenium.
2.2 A(1) (i)	<i>Non-Ferrous Metals</i> –pelletising etc. any non-ferrous metal ore.
3.1 A(1) (b)(ii)	<i>Production of Cement And Lime</i> - producing lime with input >5,000 tonnes in 12 months.
4.1 A(1) (b)	<i>Organic Chemicals</i> - producing any other organic compounds not described in paragraph (a).
4.1 A(1) (c)	<i>Organic Chemicals</i> - polymerising etc. unsaturated hydrocarbons.
4.1 A(1) (d)	<i>Organic Chemicals</i> – use of toluene di-isocyanate.
4.1 A(1) (f)(ii)	<i>Organic Chemicals</i> - recovering pyridines.
4.1 A(1) (g)	<i>Organic Chemicals</i> - recovering or purifying acrylic acids.
4.2 A(1) (c)	<i>Inorganic Chemicals</i> - using hydrogen cyanide or hydrogen sulphide.
4.2 A(1) (g)(iii)	<i>Inorganic Chemicals</i> - purifying phosphoric acid.
4.3 A(1) (b)	<i>Chemical Fertiliser Production</i> - converting into granules.
4.7 A(1) a)	<i>Manufacturing Activities Involving Carbon Disulphide Or Ammonia</i> – use of carbon disulphide.
5.4 A(1) (b)	<i>Recovery Of Waste</i> ; cleaning/regenerating carbon <i>et al.</i> .
5.5 A(1) (a)	<i>The Production of Fuel From Waste</i> - making solid fuel from waste by using heat.

EPR Sch. 1, Part 2, Section...	“Superfluous” activities - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
6.1 A(1) (c)	<i>Paper, Pulp And Board Manufacturing Activities</i> - making paper with possible release of scheduled substances to water.
6.4 A(1) (c)	<i>Coating Activities, Printing and Textile Treatments</i> – treating textiles with possible release of scheduled substances to water.
6.8 A(1) (f)	<i>The Treatment of Animal and Vegetable Matter and Food Industries</i> - processing, storing or drying.

APPENDIX D – legacy activities – environmentally justified

The activity descriptions tabulated here are proposed to be retained in the amended Part 2 of Schedule 1 to the EPR.

EPR Sch. 1, Part 2, Section...	Environmentally justified activities (The section heading under which the activity is listed is quoted in <i>italics</i> . Justification for retention is given in <i>bold italics</i> after each description.)
	[13 activity descriptions]
1.2 A(1) (h)(i)	<p><i>Gasification, Liquefaction and Refining Activities</i> – loading, unloading, handling or storage, or the physical, chemical or thermal treatment of crude oil.</p> <p><i>37 permits – significant releases of methane, non-methane volatile organic compounds and other organic compounds to air, and of toluene and benzene to water. Obvious potential for environmental damage if not regulated.</i></p>
1.2 A(1) (h)(ii)	<p><i>Gasification, Liquefaction and Refining Activities</i> – loading, unloading, handling or storage, or the physical, chemical or thermal treatment of stabilised crude petroleum.</p> <p><i>2 permits – activity very similar to that involving crude oil</i></p>
1.2 A(1) (j)	<p><i>Gasification, Liquefaction and Refining Activities</i> – pyrolysis, carbonisation, distillation, liquefaction, gasification, partial oxidation or other heat treatment of coal, oil or other carbonaceous material.</p> <p><i>8 permits – potentially polluting in view both of the raw material and the intensive treatment applied to it.</i></p>
2.1 A(1) (d)	<p><i>Ferrous Metals</i> – loading, unloading or otherwise handling or storing more than 500,000 tonnes in any 12-month period of iron ore.</p> <p><i>3 permits – the activity has given rise to considerable local concern.</i></p>

<p>EPR Sch. 1, Part 2, Section...</p>	<p>Environmentally justified activities</p> <p>(The section heading under which the activity is listed is quoted in <i>italics</i>. Justification for retention is given in <i>bold italics</i> after each description.)</p>
<p>2.2 A(1) (f)</p>	<p><i>Non-Ferrous Metals</i> – producing, melting or recovering cadmium or mercury or any alloy containing more than 0.05% of either metal or of both in aggregate.</p> <p><i>7 permits – significant releases of cadmium to air. There is no other suitable environmental control upon these activities which use very notorious pollutants.</i></p>
<p>3.2 A(1) (b)</p>	<p><i>Activities Involving Asbestos</i> – stripping asbestos from railway vehicles</p> <p><i>2 permits – no other suitable means of environmental regulation in respect of this highly notorious pollutant.</i></p>
<p>4.2 A(1) (b)</p>	<p><i>Inorganic Chemicals</i> – activity (other than water treatment and other specified activities) likely to release halogens (chlorine <i>et al.</i>), interhalogens or hydrogen halides to air.</p> <p><i>20 permits – chlorine and the other halogens are notoriously toxic and they and the compounds covered are potentially damaging to all three media if released.</i></p>
<p>4.2 A(1) (d)</p>	<p><i>Inorganic Chemicals</i> – use of any compound of a range of metallic elements (including arsenic and lead) where the activity may result in releases of the elements or their compounds to air or to water.</p> <p><i>24 permits – significant releases to both air and water. The elements covered and their compounds are toxic.</i></p>
<p>4.2 A(1) (f)</p>	<p><i>Inorganic Chemicals</i> – use of mercury or cadmium or any compound thereof which may result in releases to air.</p> <p><i>18 permits – significant releases of cadmium to water and the need to maintain regulation of activities involving these very notorious substances justify retention of IPPC.</i></p>

<p>EPR Sch. 1, Part 2, Section...</p>	<p>Environmentally justified activities</p> <p>(The section heading under which the activity is listed is quoted in <i>italics</i>. Justification for retention is given in <i>bold italics</i> after each description.)</p>
<p>4.2 A(1) (h)</p>	<p><i>Inorganic Chemicals</i> – any activity, other than combustion or incineration of carbonaceous material, which is likely to result in the release to air of any acid-forming oxide of nitrogen.</p> <p><i>9 permits – potentially significant releases of nitrogen oxides to air are controlled under present arrangements.</i></p>
<p>4.7 A(1) (b)</p>	<p><i>Manufacturing Activities Involving Carbon Disulphide or Ammonia</i> – any activity for the manufacture of a chemical which may result in the release of ammonia into the air other than a refrigeration activity.</p> <p><i>5 permits – potentially significant releases of ammonia to air controlled under present arrangements.</i></p>
<p>5.1 A(1) (f)</p>	<p><i>Incineration and Co-incineration of Waste</i> - incineration of any gaseous compound containing halogens in a plant which is not an incineration plant or co-incineration plant.</p> <p><i>No current permits, but needed to cover the possibility that the activity might arise from removal of CFCs and similar compounds from refrigeration and air conditioning plant – particularly since the requirements concerning waste incineration of Chapter IV of the Directive do not apply to gaseous waste.</i></p>
<p>6.3 A(1) (a)(i)</p>	<p><i>Tar and Bitumen Activities</i> – distilling tar or bitumen in connection with any process of manufacture.</p> <p><i>2 permits – highly significant releases of naphthalene to air: no other suitable means of environmental regulation.</i></p>

APPENDIX E – legacy activities – “remove from Part A”

The activity descriptions tabulated here are proposed to be removed from Part A in the amended Part 2 of Schedule 1 to the EPR and hence from IPPC.

EPR Sch. 1, Part 2, Section...	Activities to be removed - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
	[Seven activity descriptions]
3.1 A(2) (a) and (b)	<p><i>Production of Cement and Lime</i> – grinding cement clinker or metallurgical slag.</p> <p>8 permits – the activity descriptions are proposed for insertion in Part B of Section 3.1.</p>
3.3 A(1)(a)	<p><i>Manufacturing Glass and Glass Fibre</i> – manufacturing glass fibre in an installation with a capacity of 20 tonnes/day or less.</p> <p>5 permits – the installations concerned operate below the threshold in the Directive and would fall from regulation unless carrying out an activity described elsewhere in Part 2 of EPR Schedule 1.</p>
3.3 A(1)(b)	<p><i>Manufacturing Glass and Glass Fibre</i> – manufacturing glass frit or enamel frit and its use in any activity where that activity is related to its manufacture and the aggregate quantity of such substances is likely to be 100 tonnes or more in any 12-month period.</p> <p>4 permits – this activity is already listed under Part B of Section 3.3 without the capacity threshold.</p>
3.4 A(1)(b)	<p><i>Production of Other Mineral Fibres</i> – producing any fibre from any mineral.</p> <p>1 permit – installation with minimal impact.</p>
4.1 A(1) (e)	<p><i>Organic Chemicals</i> – flame bonding of polyurethane foams or polyurethane elastomers.</p> <p>3 permits – activity similar to that described in 4.1 B (b) which will be amended to cover this.</p>

EPR Sch. 1, Part 2, Section...	Activities to be removed - short description (The section heading under which the activity is listed is quoted in <i>italics</i>)
4.4 A(1) (b)	<i>Plant Health Products and Biocides</i> - formulating products if this may result in the release to water of specified substances. 1 permit - regulation solely as water discharge activities (under Schedule 21 of the EPR) is considered sufficient.
6.4 A(1) (a)	<i>Coating Activities, Printing and Textile Treatments</i> – applying or removing organo-tin compounds. 3 permits – organo-tin compounds no longer used.

Strategic Steering Group Meeting

Item No. **SSG19.02.04-02**

Subject: Implementation of the Industrial Emissions Directive for biological treatments of sewage sludge

SSG is asked to note that the Environment Agency:

1. has determined that the Industrial Emissions Directive applies to the biological treatment of sewage sludge
2. will be discussing the timetable and process for permit applications through the Water UK waste and recycling network

1.0 Background

- 1.1 Directive 2010/75/EU on industrial emissions (the IED) entered into force on 6 January 2011 and was transposed into UK law on 20 February 2013¹. The IED recast the Directive on integrated pollution prevention and control (IPPC) and introduced a revised schedule of industrial activities falling within scope of its permitting requirements. The schedule of waste management activities includes the recovery of non-hazardous waste with a capacity exceeding 75 tonnes per day involving biological treatment, but excludes activities covered by the Urban Waste Water Treatment Directive² (UWWTD).
- 1.2 There was much discussion about whether the biological treatment of sewage sludge is an activity covered by the UWWTD. In July 2014 we deferred the need to submit permit applications for sewage sludge digestion at sewage treatment works to allow further consideration of the question. All of the UK environmental regulators have now concluded that the biological treatment of sewage sludge is not an activity covered by the UWWTD and is therefore within the scope of the IED. This unanimously held view has been communicated to the UK and devolved governments with a view to commencing implementation.

2.0 Implementation

- 2.1. The IED seeks to achieve a high level of protection for the environment taken as a whole from the harmful effects of industrial activities. It does so by requiring each of the industrial installations to be operated under a permit from the competent authority with conditions based around the use of best available techniques (BAT). In this instance the Environment Agency is the competent authority.
- 2.2. The IED set a deadline of 7 January 2014 for existing installations to obtain an environmental permit. We have therefore delayed implementation of this aspect of the IED for over five years. We now

¹ Environmental Permitting (England and Wales)(Amendment) Regulations 2013

² Directive 91/271/EEC concerning urban waste water treatment

need to address this by ensuring all installations involving the biological treatment of sewage sludge obtain and operate under an environmental permit in as short a timescale as can reasonably be achieved.

- 2.3. We recognise that many sludge treatment facilities were constructed prior to the current permitting requirements and their design may not be compatible with the best available techniques as described in the EU BAT reference documents. Where this is the case risk assessments can be used to demonstrate that an equivalent level of environmental protection is being or can be achieved. Where additional measures are required we will use improvement conditions within permits to allow time to achieve the BAT standard.

3.0 Next Steps

- 3.1. The Environment Agency is developing a sludge strategy in order to plan and deliver clear and consistent regulation of sewage sludge treatment and use activities. It will be finalised by the end of 2019. The permitting of sewage sludge biological treatment activities is one element of the strategy. It will be delivered in parallel with the development of the strategy.
- 3.2. We will use the Water UK waste and recycling network (WaRN) as the main forum to discuss IED and permitting arrangements. We therefore propose that the representatives who attend WaRN act as the main point of contact. We will also ensure that our water company account managers are kept fully informed of progress.
- 3.3. On a practical level all internal resourcing and training needs are being addressed in preparation to support pre-application discussions and the receipt of permit applications later this year. Through WaRN we be asking each company to provide a definitive list of all sites used to carry out biological treatment of sludge, and to provide a best estimate of the number of permit applications they anticipate making.

Clive Humphreys, Environment and Business, Environment Agency

Nick Fincham
Director of Regulation

Dear Nick

INDUSTRIAL EMISSIONS DIRECTIVE

At the last Strategic Steering Group meeting on 2 April 2019 we tabled a paper about implementation of the Industrial Emissions Directive (IED) for biological treatments of sewage sludge. The paper (enclosed) informed the group that the IED applies to the biological treatment of sewage sludge, and that we would be discussing the timetable and process for permit applications with the Water UK waste and recycling network. The meeting acknowledged the paper and its contents received some discussion.

The purpose of this letter is to inform you that we are now implementing this aspect of the IED. This means that permits will be required for the biological treatment of sewage sludge above the IED thresholds. We will arrange for engagement and further communications to take place, principally through the Water UK waste and recycling network, and will be inviting applications for permits in accordance with a timetable to be agreed.

In order to agree the timetable implementation and to initiate the permitting process we are asking each water and sewerage company to provide details of the following to Clive Humphreys via your waste and recycling network representative by 24th July:

- sites carrying out biological treatment of sludge
- sites carrying out biological treatment of other sewage related wastes such as screenings and grits
- sites operating biogas engines
- sites injecting biogas to the gas grid

Should you require any further information please contact Clive Humphreys at clive.humphreys@environment-agency.gov.uk.

Yours sincerely

Sarah Chare

Director of Operations

Secondary Containment for the Water Industry

Darren Legge
Senior Advisor – Landfill and Resources for Waste Team Team
February 2020

In the presentation we will look at:

- What our sector guidance currently requires and what it will require;
- A look at CIRIA 736 and how this will relate to new sites;
- How CIRIA 736 will relate to existing sites
- A few examples of problems we have encountered
- A summary of what we are looking for

Current guidance;

‘How to comply with your environmental permit : additional guidance for Anaerobic Digestion includes AD and the digestion of organic sludge generated from the treatment of municipal waste water (2013)’.

What does this require in terms of secondary containment?

Above ground structures;

- bunds to be impermeable, stable and resistant to the stored materials
- have no outlet (that is, no drains or taps) and drain to a blind collection point
- have pipework routed within bunded areas with no penetration of contained surfaces
- be designed to catch leaks from tanks or fittings
- have a capacity greater than 110 percent of the largest tank or 25 percent of the total tankage, whichever is the larger
- have regular visual inspections - any contents must be pumped out or otherwise removed under manual control after checking for contamination
- be fitted with a high-level probe and an alarm (as appropriate) if not frequently inspected
- have tanker connection points within the bund (where possible), and if not possible you must provide adequate containment for spillages or leakage
- have programmed engineering inspections (extending to water testing if structural integrity is in doubt)
- Be designed, constructed and maintained to meet with the specifications outlined in the Construction Industry Research and Information Association guidance document titled CIRIA 164.

For sub-surface structures;

- establish and record the routing of all site drains and subsurface pipework
- identify all sub-surface sumps and storage vessels
- engineer systems to minimise leakages from pipes and make sure they can be detected quickly if they do occur, particularly where hazardous (that is groundwater-listed) substances are involved
- provide secondary containment and leakage detection for sub-surface pipework, sumps and storage vessels
- establish an inspection and maintenance programme for all subsurface structures, for example, pressure tests, leak tests, material thickness checks or CCTV

Future guidance;

‘Appropriate measures for the biological treatment of waste’.

What the difference?

For secondary containment we require CIRIA 736 rather than CIRIA 164

Draft appropriate measures for biological treatment of waste – specific guidance referred to;

- Recognised industry standards for the design and construction of secondary containment measures;
 - CIRIA 736 for secondary containment and lagoon structures
 - ADBA ICOP and risk assessment tool
 - Design and construction validated by a suitably qualified person

CIRIA 736

- CIRIA C736 'Design of containment systems for the prevention of pollution : secondary, tertiary and other measures for industrial and commercial premises' (2014) – the landfill industry wanted to move away from the use of this document but didn't;
- Is risk also based and reflects current good practice for all liquids stored on a permitted site – including AD, landfill and oil and gas sectors;
- Provides design criteria for concrete and earth bunds – bunds don't necessarily have to be concrete

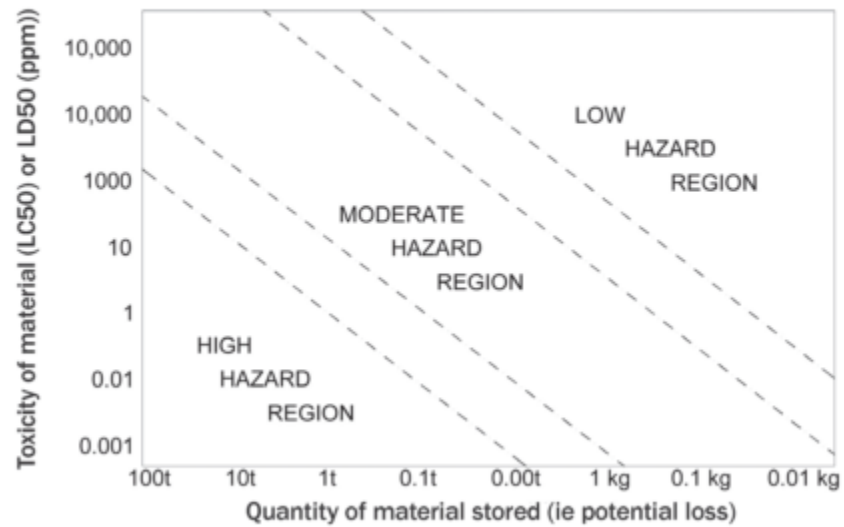

ABDA ICOP and Risk Assessment Tool

- Key messages:
 - Has been available since July 2016 – so plants constructed since then should have better secondary containment than prior to issue
 - Early and continuous discussion with the EA recommended to determine suitability of location and design
 - Requires a risk assessment approach
 - ICOP still relies heavily of CIRIA 736 despite industry wanting to move away from this documents
 - Although the ICOP is primarily for the industry we the Environment Agency, can use it to inform our decision making process

The risk assessment tool – follows the CIRIA 736 approach;

- Identify the hazard via the S-P-R approach
- Determine the Site Hazard Rating - CIRIA Box 2.1 for the source-pathway-receptor;
- Calculate the realistic likelihood of loss of containment occurring – CIRIA Paragraph 2.5;
- Calculate the overall Site Risk Rating – CIRIA Box 2.2;
- Determine the class of containment - CIRIA Paragraph 2.6.1;

Hazard Rating for Source

Hazard Rating for Pathways

Some Examples

Higher Risk / Lower Risk

- On top of hill facing surface water
 - Drains open to surface water
 - Sitting on an aquifer
 - On site boundary
 - Site with weather extremes
- On flat ground well away from SW
 - Pumped discharge drainage system
 - Sitting on impermeable ground
 - In middle of fully protected site
 - Cooler drier site with no extremes

Receptor

- Humans, animals, water course or body, groundwater
- Environmental sensitivity of receptor
- Nature and classification of receiving water
- Dilution and mixing – before reaches receptor

Bund Integrity Requirements based on required Performance Standards

Possible combination	Overall Risk Rating	Indicated class of secondary containment
HH, HM, OR MH	HIGH	Class 3
MM, HL, OR LH	MEDIUM	Class 2
LL, ML, OR LM	LOW	Class 1

Class 1

Class 2

Class 3

Existing Installations

- CIRIA 736 and the ICOP identify what secondary measures are required and how these should be design and constructed. But what about those sites that are already constructed and operated?
- CIRIA 736 was published in 2014 with the ICOP being published in 2016. Since these dates suitably designed secondary containment should have been constructed
- Before these dates, it is possible/likely that secondary containment was either not installed or will not meet the guidance
- Where this is the case we need evidence that what has been constructed is fit for purpose or that further measures/improvements will be put in place to ensure the environment is protected should there be a failure of the primary containment

Existing Installations – What does CIRIA Require?

- Chapter 5 of CIRIA 736 addresses existing installations
- First, establish the class of containment that is required for the site, specifically looking at;
 - Nature and volume of inventory to be stored
 - Compatibility with form of construction
 - Potential pathways to sensitive receptors – site drainage, emptying rainwater
 - Type of containment system – concrete, blockwork, earth
 - Condition of the containment – inspect, repair, maintain
 - In service performance – design able to tolerate anticipated loading
- Next, determine whether there has been a change of use from when the site was originally developed to identify whether further construction is required
- Where the construction needs to be upgraded, Ch12 provides options

Chapter 12 – repair and upgrading of existing containment facilities

- Repair and maintenance of concrete walls
- Pipe penetrations
- Repair techniques
- Extension of containment – to follow Chapter 7 or 8 depending on material

- CIRIA 736 would also apply if no secondary containment measures are in place and the assessment has determined that these are necessary to protect the environment

But what we can achieve needs to be based on the risk posed by the site and in order to reduce the risk sufficiently – might be that the solution for one site isn't the same for another.

Secondary containment issues

- Inappropriate design and/or build
- Inspection & maintenance

Secondary containment issues

- Lack of evidence of CQA
- Absence of secondary containment

In summary what do we expect?

- Appropriately designed infrastructure
- Construction quality assurance
- Planned inspection & maintenance regime
- Continuing evidence of fitness for purpose

Appropriately designed infrastructure

- Is the tank specified to perform its current function? (specific gravity, pressure, temperature, resistant to contents, design code)
- Is the bund designed as a water-retaining structure? (joints, seals/sealant, tie-bar holes)
- How is surface water managed? (sealed drainage)

Construction Quality Assurance

- CQA plans for intended construction (design drawings, tech specifications, competent engineer)
- Competent supervision of construction phase (records)
- CQA reports for as-built (evidence built according to plan, competent engineer sign-off)

Planned inspection & maintenance

- Listed assets with reference data (design spec, CQA)
- Competently designed inspection regime for critical infrastructure
- Written schemes of examination & competent sign-off of continuing fitness for purpose
- Planned preventative maintenance regime for all fixtures & fittings

Continuing evidence of fitness for purpose

- We know how they were built and what they were designed to do
- We know they are being checked and maintained
- We have confidence in the site management
- We have assurance that the risk of failure is low

Questions?

Water and sewage companies IED permits:

Basic pre-application advice – applying (v1, March 2021)

This document provides basic advice for water and sewage companies applying for permits or variations in the biowaste treatment sector.

This advice covers the application itself and the associated charges. We expect the majority of applications will relate to biological treatment of waste by anaerobic digestion (AD). This guidance is tailored with that in mind. If your site undertakes other activities you should consider how this advice and other guidance is applicable.

Note – If you have been served a **Regulation 61 Notice**, refer to the relevant section before reading the rest of this advice.

Check if you need an environmental permit

How do I apply for a new permit?

Check if you need an environmental permit

If you are unsure whether your activity requires an environmental permit or what kind of permit you require, you should read our [guidance on whether you need an environmental permit](#).

How do I apply for a new permit?

You must complete the relevant forms and provide the required supporting information.

For some operations you can apply for a [standard rules](#) environmental permit. These have fixed conditions and are only suitable for a limited number of activities and locations:

- [Apply for a new standard rules online](#).
- You can also use the [application forms for a new standard rules permit](#).

For all other activities and locations you need to apply for a bespoke permit:

- To apply for a new bespoke environmental permit you must complete application forms A, B2 and F1.
- For bespoke installation activities you must also complete form B3.
- For bespoke waste operations, that are not directly associated activities, you must also complete form B4.
- [Application forms and guidance for a bespoke permit application](#).

You should read the guidance notes that accompany each form. You need to email the completed forms, along with supporting documentation, to psc@environment-agency.gov.uk.

How do I change (vary), transfer or cancel my permit?

If you already have a permit, and want to change (vary) it, transfer it to another person or business, or surrender it, you must provide the correct forms and supporting information.

For example, to apply to vary an existing bespoke installation permit you will need to complete application forms A, C2, C3 and F1.

[How to change details of your environmental permit, transfer it to somebody else or surrender it](#).

How much will my permit cost?

Before applying, you should read our [Environmental permitting charges guidance](#). This sets out how to calculate your charge and when certain charges apply.

Baseline charge

You can find a full list of activity charges in table 1 in the tables of charges in the [Environmental permitting charging scheme](#). The baseline charge for an application covers the work we carry out each time we determine a typical permit application.

There are fixed baseline charges for new applications, variations to permits, transfer applications and surrender applications.

New anaerobic digestion installation activities and permits

To apply for a new permit, the full permit application charge for the new activity will apply.

To apply to vary a bespoke permit to add a new activity, the full permit application charge for that new activity will apply. For example, if you want to add an anaerobic digestion installation activity to an existing bespoke permit, which currently only permits the operation of CHPs, you will need to pay the full permit application charge for the activity being added.

Most new anaerobic digestion installation activities will be a Section 5.4 (a)(i) and (b)(i) - non-hazardous waste installation for biological treatment with an application charge of £13,984 (charging ref. 1.16.2.1). This charge covers the assessment of directly associated activities including combustion plant and air quality modelling.

To apply for more than one new activity you need to calculate the correct application charge using the approach set out in section 2.12 of the [charging guidance](#). Using the [tables of charges](#), you need to calculate the sum of:

- 100% of the relevant application charge in the [tables of charges](#) for the largest application charge
- 50% of the relevant application charge for any secondary activities that can reasonably be considered to be part of the same operation – to reflect the time saved during the determination period, for example, by only needing one consultation or one set of operator competence checks
- 10% of the relevant application charge for the same activity carried out multiple times on the same site

Varying existing anaerobic digestion permits

To apply to vary an existing permit which already authorises anaerobic digestion under a bespoke waste operation, you will need to pay a variation charge of the anaerobic digestion installation activity you are changing to. We expect a substantial variation to be the most appropriate level of variation for the majority of cases.

To apply to change a standard rules permit to a bespoke activity you need to apply for a bespoke permit as you cannot make significant changes to standard rules permit. You will need to pay a variation charge of the anaerobic digestion installation activity you are changing to. We expect a substantial variation to be the most appropriate level of variation for the majority of cases.

For example, to vary a SR2009no4 permit to a non-hazardous bespoke anaerobic digestion installation activity, the charge would be £12,586 (charging ref. 1.16.2.1, substantial variation)

Other variations

To apply to make changes to other permitted activities the charge will be a variation charge of each activity being varied. The scope of the variation types are described in section 3 of our [charging guidance](#). The charges for each type of variation can be found in table 1.6 of our table of [Charging Scheme](#).

As described in our [charging guidance](#), the following points should be taken into account when calculating your variation charge.

- If you want to add an activity to your permit, you must pay the charge for a new permit application for that type of activity
- If you want to vary a permit that covers more than one activity you must pay a variation charge for each activity you want to vary. If the change affects other activities on the same permit, that means they will also need to be changed, you will need to pay a variation charge for each of the other activities affected
- If you have a permit that covers the same activity multiple times, you pay a variation charge when changing each repeat activity. However, if you want to make the same change, at the same time, to a second or subsequent repeat activities, you do not need to pay another variation charge. This is because the changes to the second or subsequent repeat activities are regarded as administrative changes which are free of charge
- If you have a permit that covers multiple activities and you apply to change any plant or infrastructure (for example replacing the boilers, or extending the site boundary), you pay the highest variation charge of the activities affected. Any changes to the other activities are then regarded as administrative variations and will be free of charge. This applies if it is a minor, normal or substantial variation

Add-on charges

You may have to pay an add-on assessment charge for the assessment of plans, for example an odour management plan.

If we need to carry out additional assessments, for example a habitats assessment, we may charge extra for this work. You must pay the add-on charge when applying for a new permit or if you need to submit a new plan or updated when applying for a permit variation.

In some cases the costs of assessing these plans is included in the baseline application charge. The activity description in table 1 in the tables of charges will say if this is the case.

The plans and assessments are listed in table 1.19 in the tables of charges in the [Charging Scheme](#).

As odour has been identified a key issue for sites that carry out biological treatment. Therefore an odour management plan is required. If you need a new plan, or an existing one to be revised, the following charge will apply:

- Odour management plan – a fixed charge of £1,246.

Noise and bioaerosol emissions have also been identified as potential key issues for the sector. Depending on the findings of your risk assessment, it is possible that the following add-on charges may apply in addition at the baseline application charge:

- Noise and vibration management plan – a fixed charge of £1,246.
- Emissions management plan (bioaerosols) – a fixed charge of £1,241.

There are no charge reductions for these plans when submitted as part of a variation application.

Habitats assessment

For certain protected sites we need to carry out a habitats assessment. For these sites we charge a fixed charge of £779.

This is an assessment of the risks to one or more of these sites, a:

- European Site within the meaning of the Conservation of Habitats and Species Regulations 2017
- site referred to in the National Planning Policy Framework 2018 as requiring the same assessment as a European Site
- site of special scientific interest within the meaning of the Wildlife and Countryside Act 1981
- marine conservation zone within the meaning of the Marine and Coastal Access Act 2009

We have included further information on when this is required in the supporting documents section below.

Subsistence

If we grant a permit, you will need to pay an annual subsistence charge to cover the ongoing costs of regulating the permit. The subsistence charges are in listed in the tables of charges in Part 3 of the charging scheme.

Biological treatment installation activities, including treating hazardous or animal waste and anaerobic digestion, have a subsistence charge of £11,019 (charging ref. 2.16.11).

If any of your activities are listed in table 2.16 in the [tables of charges](#), you must pay the sum of the highest installation activity charge and the highest waste operation charge.

We can confirm the subsistence during the determination of your application.

Sites of High Public Interest (SHPI)

If your site is designated as a SHPI additional charges and a different charging process apply. Additional information on SHPI is included in [section 2.5 of the Environmental Permitting Charges Guidance](#).

An application for a SHPI is subject to a newspaper advertising charge of £500.

The number of hours it takes to determine the application will be calculated at £100 per hour (commonly referred to as a 'time and materials' charge). If this is higher than the standard application charge listed in the Charging Scheme, the additional charge component will be charged – please see [section 2.5 of the Environmental Permitting Charges Guidance](#).

Declaration

Please ensure the Declaration section is completed by each “relevant person”.

In the case of a company a relevant person must be an active director/company secretary as listed on [Companies House](#). We accept letters from a relevant person stating that they authorise another individual to submit applications, and complete the declaration, on their behalf.

Further information on who should complete the declaration can be found in section 5 of the [guidance notes for the F1 application form](#).

Submitting an application

Please submit your application by email or, if applicable, by using the online form as detailed in the 'How do I apply for a new permit?' section above. Any applications submitted by post may be delayed as our offices are not yet fully operational following the Covid-19 lockdown.

Application Timescales

Once an application is duly made, the amount of time taken to determine your application will vary. It will be impacted by factors such as:

- The quality of the application

- The complexity of the application
- Whether an application is of high public interest
- Whether the application includes novel technologies or techniques
- Whether the determination requires input from others, both internal and external to the Environment Agency
- Whether modelling and/or monitoring and assessment is required, for example Air Quality modelling and assessment

The Permitting Officer determining your application will be able to keep you updated with the progress of your application.

Publicising and consultation

The majority of applications will be publicised on Citizen Space, a platform for public consultation, and linked through [gov.uk](https://www.gov.uk). There are no additional costs associated with this. Additional costs will be associated with sites of high public interest, see above.

Once applications have been determined the majority will be publicised on [gov.uk](https://www.gov.uk). This will include the permit and our decision document.

Regulation 61

If you are already permitted as a bespoke anaerobic digestion installation, and are therefore IED compliant, we should only need to carry out a BAT review. You do not need to apply to do this. Instead, we will serve a Regulation 61 notice asking for the relevant information for us to be able to carry out this review.

Once we have this information we carry out a regulator initiated variation. This will follow a similar process to an operator led variation. Once we have completed the determination we issue a variation and send an invoice to you to cover the costs of our work.

In the case of a regulator initiated variation, the charge is equivalent to the charge that would have been payable if the variation had been made in response to an application. This is likely to be at a normal variation level.

You may also apply to make other changes to a permit at the same time we're carrying out a regulator initiated variation. These applications will be charged as a regular application.

We can issue all changes under one permit and will specify which conditions have changed as a result of our variation or your variation. It is important to note that the appeal period against conditions imposed by a regulator initiated variation is 2 months. It is 6 months for conditions relating to an operator variation.

Further Support

Enhanced pre-application advice

If you want further specific technical advice on your activity you can apply for our enhanced pre-application service. This is a chargeable service. Further details of the service are provided in [section 2.3 of our charging guidance](#).

For Installations, our enhanced pre-application service is now limited to specific technical questions and dependant on your application meeting certain criteria. For the time being we have agreed that for these applications that you do not necessarily have to meet those criteria.

Whilst we are operating a reduced service, we have limited our enhanced pre-application advice service to answering specific technical questions you may have.

Once we receive your request for enhanced pre-application we will assess if this is something we are able to provide at that time. Please note: We cannot currently attend site visits or face to face meetings or provide a review of your application prior to submission.

We periodically review the level of service we can offer.

You can apply for enhanced pre-application advice using our [pre-application guidance request form](#).

Water and sewerage company IED permits: Update April 2022

To: Regulatory Directors of Water and Sewerage Companies

**Duly making of Tranche 2 – Tranche 6 applications to commence
from 09 May 2022**

Summary

We contacted you in February 2022 to explain that our approach to assessing permit applications submitted in Tranches 2 to 6 will revert to the standard application approach as outlined within the [Environmental Permitting Core Guidance](#). This means that we will perform the standard level of scrutiny at the duly making stage commencing from the beginning of May 2022. Our previous approach was not applied as strictly as we took the decision to try to progress the applications during *determination*. We have not seen the progress that we had anticipated, therefore we are reverting to our usual process to ensure applications contain the information we need to progress them.

The Environmental Permitting Core Guidance sections 6.4 – 6.8 outline the duly making process. If application information is insufficient, the application will not be duly made. Our [charging scheme guidance](#) states: *The Environment Agency will check your application to make sure it is complete and they can accept it as 'duly made'. This means they have enough information to start to determine your permit application.*

From 09 May 2022, permitting officers will start to undertake duly making checks for permit applications from Tranche 2. We intend to take the same approach for the subsequent tranches, we will let you know if this changes. To reiterate our letter from February 2022, if we consider information is missing, the applicant will have 10 working days to provide it. Applications with missing or clearly inadequate information will be returned.

Our duly making checks and subsequent determination are conducted on an individual application basis, not part of an industry wide or group approach. If you consider that individual applications to date are likely to be insufficient for the purposes of duly making, you should update your application documents and submit them to the Environment Agency, starting with your Tranche 2 applications. We strongly advise that you do this as soon as possible and not wait for the applications to be allocated to a permitting officer.

If you consider that your applications will not be duly made, and you cannot make the necessary improvements to them, you do have the option to withdraw your application and receive a full refund. If we have to return your application as *not duly made*, we will retain a portion of the application charge (as outlined in our [charging scheme](#) guidance).

Consequences of applications *not duly made*

If your application is returned as *not duly made*, or is withdrawn, you will not have the necessary authorisation to operate your facility. Operating a regulated facility without an environmental permit is an offence under the Environmental Permitting Regulations 2016. Where this occurs we will determine the appropriate enforcement response on a case by case basis.

Key issues

Our letter from February 2022 outlines some of the common issues which may cause an application to be returned as *not duly made*. Our experience of assessing applications to date in Tranche 1 has highlighted applications which are missing key information. This letter provides feedback on key aspects which may result in an application being returned as *not duly made*.

New plant, assets and infrastructure

- Applications which contain new plant/assets proposed on site must meet Best Available Techniques (BAT) requirements at the application stage.
- If parts of the proposals have been recently constructed and have not been designed and developed to BAT, we will consider that key information was not submitted, and your application may not be duly made.
- Any changes to the site infrastructure and plant (related to the installation) must be in the application. If there is key information missing, we cannot assess your proposals and your application may be returned as *not duly made*.
- Please note that we will not permit new plant which does not meet BAT and we will not use improvement conditions to address proposals not designed to BAT.

Containment and secondary containment

- As explained in both the containment and spill modelling workshops we consider the approach taken by the ADBA risk assessment tool and in CIRIA C736 to represent the industry standard for containment. We recommended their use to demonstrate equivalence to BAT.
- Submissions received under Tranche 1 included assessments/proposals which were not sufficient to provide a level of environmental protection equivalent to BAT.

- Our experience during Tranche 1 is that the *Environmental Quantitative Risk Assessments* (EQRAs), as submitted, do not demonstrate environmental protection equivalent to BAT and cannot be used as an alternative to CIRIA C736.
- For existing facilities not designed and constructed to CIRIA C736 standards we expect spill modelling which demonstrates that spillages will not leave the site boundary and will not cause pollution. If spill modelling shows that spillages will leave the site, then improvements will be required. Arguing that the likelihood of a loss of containment is extremely low is not sufficient to meet BAT.
- The term ‘credible scenarios’ used in containment assessments must be defined in detail and be supported by evidence from structural engineers.
- Our approach does not necessarily mean a blanket rejection of all applications containing an EQRA. We will treat each application on its own merit. However, if an application relies solely on an EQRA (without spill modelling which shows that pollution would be prevented from leaving the site) we are more likely to consider that an application is *not duly made*.
- Submissions that do not meet BAT should contain site specific proposals for alternative containment measures. Applications submitted without appropriate alternative measures may result in the application not being duly made.
- Reliance upon permeable areas to retain spills is highly unlikely to meet BAT.

Bioaerosol Risk Assessments

- Applications with point source or ambient bioaerosol emissions within 250 meters of a sensitive receptor must include a Bioaerosol Risk Assessment.
- Bioaerosol Risk assessments must meet the requirements of our M9 Position Statement ([Bioaerosol monitoring at regulated facilities - use of M9: RPS 209 - GOV.UK \(www.gov.uk\)](http://www.gov.uk)). They must show that the process and/or abatement measures adequately prevent, or where this is not possible, significantly reduce the risk of bioaerosol release. It must show that the resulting activity will be unlikely to expose the nearest sensitive receptor to elevated concentrations of bio-aerosols.
- Bioaerosol Risk assessment must include qualitative and quantitative assessments. Where bioaerosol levels have not been provided, as a minimum, a plan to address quantitative data must be provided as part of the risk assessment.

Emission Point Plans

- Applications must include an emission points plan(s) which clearly identify the location of all emissions to air and water. This also includes emissions returned to the wastewater treatment works.

- Applications that do not identify emissions leaving the permit boundary may be returned as *not duly made*.

Air Quality Modelling

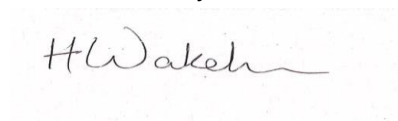

- Applications that need to assess the risk of emissions to air must provide a detailed air dispersion model and risk assessment of emissions which do not screen out through your air emissions risk assessment ([air emissions risk assessment for your environmental permit guidance](#)). Modelling reports should follow the [air dispersion modelling reports guidance](#).
- Applications that do not provide a relevant assessment may be returned as *not duly made*.

Odour Management Plans

- Odour management plans submitted must take account of applicable Best Available Techniques (BAT) requirements and be in line with our guidance, *H4 Odour Management – how to comply with your environmental permit* [Environmental permitting: H4 odour management - GOV.UK \(www.gov.uk\)](#).
- Applications that do not demonstrate Best available techniques in relation to odour may be returned as *not duly made*.

The [Best Available Techniques reference](#) document (BRef) contains comprehensive information on BAT and supports the binding [BAT conclusions](#) which must be met by August 2022, or where relevant the date specified by an improvement condition.

Yours sincerely

Helen Wakeham

Deputy Director - Water Industry Regulation

1. Introduction

The purpose of this consultation was to engage with stakeholders and the wider public and invite comment on the content of our draft technical guidance 'Appropriate measures for biowaste treatment'. Our aim was to help operators understand the appropriate measures for permitted facilities that transfer or treat biowaste. The guidance is also applicable to exempt waste activities which are required to meet the relevant objectives. Relevant objectives, in relation to waste, are to make sure that the waste is recovered or disposed of without:

- endangering human health
- using processes or methods which could harm the environment

In particular without:

- causing risk to water, air, soil, plants or animals
- causing nuisance through noise or odours
- adversely affecting the countryside or places of special interest

The guidance is not definitive and it does not prevent, limit or replace an operator's obligation to assess appropriate measures fully and put other measures into place if necessary.

Currently, the measures and standards for permitted facilities taking biological waste for transfer and, or treatment are set out in various documents:

- Draft technical guidance documents (November 2013 Anaerobic digestion, composting and mechanical biological treatment)
- Framework for assessing suitability of wastes going to anaerobic digestion, composting and biological treatment (July 2013)
- Sector guidance note S5.06: recovery and disposal of hazardous and non-hazardous waste (May 2013)

- BAT reference documents (BREF) and best available techniques (BAT) measures for waste treatment

The proposed guidance will replace the documents listed in the first 3 bullet points. It will be published on GOV.UK.

Other guidance may also apply to biowaste facilities, for example on developing fire prevention plans, environmental management systems (EMS), odour management plans (OMP), for medium combustion plants and specified generators and for controlling and monitoring emissions.

This guidance incorporates the relevant requirements of the waste treatment BAT conclusions document, made under the European Industrial Emission Directive (2010/75/EU). This applies to waste installations permitted under the Environmental Permitting Regulations 2016.

New installations must meet the standards from the start of operations. Sites permitted after 17 August 2018 must already be meeting them. Existing waste installations (permitted before August 2018) are required to meet BAT and the associated emission limits (BAT AELs) by 17 August 2022. Where an operator is unable to comply by the deadline they have an option to apply for a derogation. Advice regarding derogations for BAT compliance is available through the [Industrial Emissions Directive derogation: cost-benefit analysis tool](https://www.gov.uk/government/publications/industrial-emissions-directive-derogation-cost-benefit-analysis-tool) (<https://www.gov.uk/government/publications/industrial-emissions-directive-derogation-cost-benefit-analysis-tool>).

The guidance provides clarification about how we expect operators to achieve compliance with the BAT conclusions. In some circumstances compliance with the BAT conclusions may be insufficient to prevent harm and in these cases the operator may be required to undertake additional measures.

There is overlap between BAT for waste installations and necessary measures for waste operations. The Environment Agency uses the term 'appropriate measures' to

cover both sets of requirements. Exempt waste operations must meet the relevant objectives as set out in the Introduction. This guidance indicates the appropriate measures for exempt biowaste transfer and treatment operations.

Some measures may not be suitable or relevant for your operation. Appropriate measures will depend on the:

- activities being carried out
- size and nature of the activities
- location of the facility

We will implement the guidance for new permitted facilities through the environmental permit application process. For existing facilities, we will do this through staged permit reviews. We have also reviewed the existing standard rules that apply to biowaste transfer and treatment operations. The review ensures that those standard rules provide an appropriate level of environmental protection and include the appropriate measures and standards. The revised versions will be published shortly.

Once published, the guidance will apply to all biowaste operations.

2. How we ran the consultation

In 2013 we produced draft guidance documents with industry's contribution and those documents are considered by the industry to be sound technical guidance. The draft guidance merges 4 previous documents specifically relating to biowaste.

In 2018 we met industry representatives and trade bodies to review regulatory compliance issues and seek views on how we could achieve improvements. The industry strongly favoured formally publishing appropriate measures guidance and

revising permits. We agreed to consult industry in a call for evidence which we undertook in 2018, and in 2019 we consulted on revised standard rules.

We shared a pre-consultation version of this guidance with key stakeholders including the water industry in the summer of 2020. We incorporated suggested amendments prior to the formal consultation.

We ran a formal online public consultation on the Environment Agency Citizen Space website over a 6-week period between 10 July and 21 August 2020. We also received responses by email which we have incorporated into the responses.

We asked 15 questions relating to specific aspects of the draft guidance (technical questions 4 to 15 of the consultation). We also asked for additional comments. We have reviewed all of the comments and suggestions and will amend the guidance as appropriate.

A list of the names of organisation that responded to the consultation is in the Annex at the end of this document. We would like to thank all the respondents for their time and contributions.

3. Summary of the main findings and our actions

The format of the guidance received a mixed response. Several respondents thought the document should be structured so that different processes are addressed separately. Alternatively that we provide a table to indicate when specific measures apply.

Some stated that the guidance adopts 'a one size fits all' approach whilst others said that they were supportive of standardising and simplifying guidance across the sector.

The majority pointed out that there are differing levels of risk within the sector and a risk-based approach should be used in applying appropriate measures.

We agree that some measures are not relevant to all biowaste treatments and consider that section 2 of the guidance explains when appropriate measures apply. However in light of these comments we will review the guidance and make amendments where it appears appropriate. The BAT conclusions remain mandatory for installations.

There was no clear consensus regarding the process monitoring requirements. Several respondents expressed concerns over the detailed level of process monitoring suggested, especially for anaerobic digestion (AD) processes. However others supported robust process monitoring and considered this should already be standard practice.

We considered all relevant technical responses and will amend the text where appropriate. However we note that other industry standards and documents indicate the importance of good process control and believe this to be standard practice.

Some respondents felt that operators should be given time to implement changes to secondary containment requirements. There was a clear perception that existing sites would be required to retrofit secondary containment to CIRIA 736 standards. We have made it clear that the requirement to ensure secondary containment to CIRIA 736 standards applies to new sites. Existing facilities such as water industry sludge digesters are unlikely to be designed and built to a CIRIA 736 specification. In such cases we expect operators to evaluate primary and secondary containment to ensure it is fit for purpose and use alternative means to achieve an equivalent standard. All sites must be assessed by a chartered engineer.

Some respondents appeared unclear about waste characterisation and duty of care requirements. There were some comments expressing concern at the rigour of assessment for bespoke and novel wastes. Waste characterisation must be undertaken to fulfil duty of care requirements. Our existing framework for assessment

of novel and bespoke wastes has been incorporated into the guidance. This represents a continuation of current practice and not a tightening of requirements. We are concerned at the lack of awareness of existing legal obligations. All wastes accepted must be suitable for biological treatment and not simply to blend and dilute in another bulk material. The majority of output from the biowaste sector is used on agricultural land used for food production so this is a critical consideration.

We received many comments about the storage and covering of digestate and liquors. Some felt that we were not joined up with Department for Environment, Food and Rural Affairs (Defra) and Department for Business, Energy and Industrial Strategy (BEIS) and that it is not the Environment Agency's remit to control pollution to air. We are working closely with Defra and BEIS on the need to reduce emissions and balancing this with the need to divert biodegradable waste to recovery. Ammonia emissions are addressed in the Clean Air Strategy and responsibility for controlling emissions from permitted facilities lies with the Environment Agency. We are clear that it is necessary to control and mitigate ammonia pollution.

Respondents commented on the need for contingency measures when the land bank is not available, or where the facility is not fully functional, for example, for equipment failure and incidents.

One contingency measure mentioned in the guidance was to stop or reduce the acceptance of feedstock. Some respondents felt this was either excessive or not practicable. We accept that some processes such as sewage sludge digesters cannot easily be turned off although sludge can be diverted elsewhere. However we will retain this in guidance as it is a measure that operators must consider. Planning for contingencies is critical to compliance. A facility should not accept waste it does not have the capacity to legally treat then store or export. Contracts to receive and dispatch waste should be designed to accommodate such contingencies. In recent years wet and extreme weather has severely impacted the sector's ability to manage materials and being climate change ready is becoming increasingly critical to business continuity. Contingency planning is a must do.

Some water companies commented that the August 2022 timescale set out for BAT compliance was unlikely to be achievable. They believe any significant capital works should form part of the next 'water industry national environment plan' (WINEP) and compliance timescales should align with the water industry 5-year business planning cycle. We disagree. The WINEP does not determine regulatory compliance deadlines which are laid down in legislation. Water companies were informed in July 2019 of the need to obtain environmental permits for their sludge digesters and in exceptional circumstances will allow until the end of 2024 to meet BAT requirements. This represents a 5 and a half year lead in period for compliance.

We will review and make changes to the guidance where we believe it is appropriate. These changes will provide greater clarity on how and when the guidance applies, will drive improved environmental performance and reduce impacts to the wider environment, whilst minimising the business impact.

We aim to publish the revised guidance in early summer 2021. We may respond to individual company specific comments where this is deemed necessary.

4. Responses to 'about you' consultation questions (1 to 3)

Q1 Are you responding as an individual or on behalf of an organisation or group?

We received 29 responses to the consultation:

- 25 responses on behalf of an organisation or group
- 4 responses from individuals

A list of respondents is provided at the end of this report.

Q2. We asked if responders would like to be updated.

28 responders wished to be updated and they provided their contact details. We will ensure we update them on progress. We aim to publish the revised guidance in summer 2021.

Q3 We asked if we could publish responses

26 confirmed their responses could be published (4 individuals and 22 groups or organisations).

3 organisations stated that we could not publish their responses because of:

- confidentiality
- the impact of COVID-19 on internal stakeholders

See the list of organisations that responded to the consultation in the annex at the end of this document.

5. Responses to consultation questions (4 to 13)

Q4 We asked whether the guidance was clear about which sites have to follow the guidance.

We received 25 responses:

- yes – 12
- no – 11
- do not know – 2

There were 16 responses providing further information.

a) Two respondents commented it was not clear on which sites the guidance applied to, commenting that the guidance needs to be divided into subsections for each process type. One respondent suggested a matrix to show what applies to each process.

b) One respondent said that attempting to provide all-encompassing guidance caused greater uncertainty along with references that say ‘some measures may not be suitable or relevant to your operation’. Although some sections refer to specific operations, others do not. With the addition of apparent repetition and cross over of topics between references and unreferenced sections and those with, and without, subheadings the overall picture is unclear in many areas.

c) One respondent stated that the terminology was confusing, stating the use of the term ‘must’ for many requirements and in some places stating some measures ‘may not be relevant’, left the document open to interpretation. Suggesting that there

needed to be development of appropriate sectorial, or possibly sub-sectorial, guidance.

d) Several water companies asked for clarity regarding what activities the guidance applied to. For example whether or not other activities at waste water treatment works (WwTW) such as dewatering sites, tankering of domestic wastes (cess and septic), and interworks tankering are captured. Clarity was required on which parts of sludge treatment centres are included in Waste Framework Directive (WFD) or excluded under Urban Waste Water Treatment Directive (UWWTD) and Sludge (Use in Agriculture) Regulations (SUiAR), for example, liquor treatment plants, biosolids cake pads.

e) One company stated that the definition of a lagoon versus a tank is not clear.

f) One trade body stated that the term 'fibre' should be clarified.

g) Two companies questioned the term 'low cost improvement' stating that assessment of risk or aggregated costs across sites had not been taken into account.

h) One water company felt that the timescales and investments required where the industry was only recently identified as failing under the Industrial Emissions Directive (IED) was totally unreasonable.

i) One water company commented on the applicability of the guidance for AD operations involving energy crops which were not 'waste' and asked that we advise what regulation is applicable to such activities as these must surely represent similar environmental risks in terms of emissions and escapes, and comparable obligations and enforcement should apply.

Our response

a) and b) The guidance applies to 800 separately permitted facilities (and a much larger number of exempt facilities) covering biowaste transfer, digestion and composting activities. They differ widely in their complexity, scale, location and age. We accept that these differences will result in diverse risk profiles and this is acknowledged in the guidance which states that:

“Some measures may not be suitable or relevant for your operation. Appropriate measures will depend on the:

- activities being carried out
- size and nature of the activities
- location of the facility”

Despite this some generic measures do apply to most facilities, for example EMS and waste acceptance procedures.

We will not be providing sub-sectorial guidance. We consider that the operator is best placed to understand the risk profile of their activities and should take responsibility for applying the guidance to their site. This offers some flexibility but also requires that the guidance be read in context. Operators will inevitably need to exercise some judgement in deciding what constitutes appropriate measures for their facility.

We will however review the guidance to remove duplication and where possible offer further clarification about which measures relate to specific processes.

c) The term ‘must’ is used to make clear that operators are required to demonstrate that a measure or measures have been considered. Where appropriate the operator can demonstrate that the measure is not relevant, or can justify an alternative measure which provides an equivalent level of environmental protection.

d) The guidance is clear that waste water treatment processes at UWWTD facilities are not regulated under IED or WFD. However tankered effluents arriving at these facilities are controlled wastes and their acceptance at the works requires an

environmental permit. These permitted facilities are subject to the guidance. For clarity the pre-assessment and acceptance criteria in the guidance do apply to the importation of effluents to the head of works.

Sewage sludges transferred between works and cess and septic tank wastes are controlled wastes whilst in the tanker but can be discharged to the head of works without a permit. The guidance does not apply to these activities unless the wastes are mixed with other effluents.

Liquor treatment and sludge treatment and storage facilities are waste operations regardless of whether they are co-located with UWWTD facilities and are therefore subject to the guidance.

Using aeration and activated sludge treatment methods to treat industrial waste waters falls within the definition of biological treatment so this guidance does apply to these facilities.

Sludge dewatering is not biological treatment so not subject to this guidance unless it is a directly associated activity at a biological treatment installation.

This is a complex area of regulation. Where there is any uncertainty relating to specific activities we will continue to advise water companies through the usual channels.

e) We will amend the text to clarify. The definition of tanks and lagoon containment are clearly laid out in CIRIA 736.

f) A fibre is the solid fraction from a digestate and should be able to be stacked. We will amend the text as appropriate to clarify.

g) Examples of low cost measures that can be easily implemented included improved signage, maintenance schedules, temperature and process monitoring, and procedure or document reviews such as OMP or EMS.

h) The BREF and BAT were published in 2018 with a legal deadline for compliance of August 2022. We confirmed that water companies would need to comply with BAT in July 2019. We consider that there has been ample time to prepare. However we recognise that for a small number of sites the deadline will be challenging because of the need to carry out significant infrastructure improvements. In these cases we will consider using improvement conditions to allow limited extensions. Where operators consider they are unable to comply with BAT requirements by the end of 2024 they will need to demonstrate that they meet the criteria for a derogation.

i) Anaerobic digestion of energy crops is not subject to waste regulation and therefore out of scope of the guidance. We agree that anaerobic digestion activities pose broadly similar environmental risks regardless of the type of feedstock. The question of whether energy crop digesters should fall under similar permitting requirements to waste digesters is a policy matter which is outside the scope of this guidance but we will raise the matter with government.

Q5 Are there additional measures that you think we should include in the environmental management system section to protect people and the environment for biological treatment of the waste sector?

We received 25 responses:

- yes – 4
- no – 18
- do not know – 3

16 respondents provided further comments.

Summary of responses

a) The insurance and engineering sector said that sections regarding pressure relief and vacuum systems should be more robust. They further commented that as many pressure vacuum systems are not designed to a standard, this required increased focus on maintenance and inspection checks. The insurance sector also expressed concerns about the need for lightening conduction requirements.

b) One respondent suggested that the EMS should be audited and accredited annually by independent external third party. Overall the industry welcomed the inclusion for all sites to have an EMS, ensuring a level playing field. One company responded that they had accredited ISO 14000:1 and felt that if too much was prescribed in the EMS section of the guidance which could prohibit the progressive nature of this internal standard.

c) We were asked to clarify how much detail small sites need in the EMS and whether an EMS be used over multiple sites with the same process.

d) One water company added that several new named documents are identified but it is not clear if they are relevant to all AD sectors, and clarity is sought on this point. For example 'Leak Detection & Repair Plan' and 'Residues Management Plan'.

e) The same respondent stated that creating and maintaining an 'inventory of waste water and waste gas streams' needs further definition to see that it is adding real value, prioritised to any significant pollutants, and that accompanying monitoring requirements are not unduly onerous. A 'fugitive emissions plan' also needs to be realistic in terms of what it can practically contain or abate.

f) The same water company considered that the EMS and its content should be the responsibility of the operator, and the prescriptive list blurs the distinction between guidance and mandatory requirements.

- g) Some respondents commented that the level of details in pre-acceptance and acceptance of waste was too much. We received extensive comments from the waste water industry sector regarding waste acceptance and the cost of upgrading assets to a standard.
- h) Some respondents expressed concern regarding potential inconsistency that may develop during Environment Agency compliance visits.
- i) It was claimed that following manufacturer's guidance will duplicate maintenance and cause increased down time. For example conducting engineering checks on some tanks every 5 years would cause unnecessary down time and loss of revenue.
- j) One respondent commented that the 'Emissions Control' section may fit better under the management system section compared to where they are located within the document now – odour, pests, noise and vibration, and waste minimisation.
- k) One water company questioned the relative roles of the Environment Agency and other regulatory bodies such as the Health and Safety Executive (HSE). It was suggested that fire and explosion prevention are within the remit of the HSE and not the Environment Agency.
- l) One water company responded that the need for waste characterisation does not necessarily apply to biosolids (meaning biosolids produced from only UWWTD treatment, with no co-digestion). They stated that the current instrument, the SUIAR allows for land recycling with no further waste controls, and that this is expected to remain the case by the development of an assurance scheme as stipulated by the [Environment Agency strategy for safe and sustainable sludge use](https://www.gov.uk/government/publications/environment-agency-strategy-for-safe-and-sustainable-sludge-use) (<https://www.gov.uk/government/publications/environment-agency-strategy-for-safe-and-sustainable-sludge-use>) published on 15 July 2020.

Our response

a) We have revised and expanded the section on pressure relief and vacuum systems and the assessment to address lightening.

b) The EMS must incorporate details about how the site is managed and how emissions and pollution is prevented dependant on the risk profile and inventory. With regards to the suppression of developing internal systems we do not think this is the case. An EMS is a live document that is meant to be regularly reviewed.

c) For all operations, including smaller ones, the EMS must ensure there is sufficient control to prevent pollution and ensure compliance with the permit. Less complex activities may require a less detailed EMS. We will amend the guidance to clarify the use of an EMS across multiple sites. As respondents have made clear every site is different and whilst the EMS can be applied across multiple sites some elements of the EMS may need to be site specific.

d) We confirm that these documents are relevant to all AD sectors.

e) The inventory requirement is derived directly from the BAT conclusions but it is also best practice. We refer operators to the BAT and BREF for further detail. A fugitive emission plan should be comprehensive. It should identify all potential sources of fugitive emissions and detail measures to minimise them. Where these measures are limited by practical or other constraints this should be noted and justified within the plan.

f) There has been detailed industry guidance available since 2008 (The Composting Association 2008) and more recently the anaerobic digestion industry has produced guidance on good operational practice and have developed schemes to assist operators. The adoption and implementation of an evidenced and documented EMS that is regularly reviewed is not a new concept. In our experience where site procedures, processes and maintenance regimes are not rigidly applied the results

can significantly impact on the environment and local communities and in some extreme cases result in loss of the plant.

g) Pre-acceptance and acceptance procedures are not new. We produced guidance in 2013 to enable the biowaste sector to accept novel types of wastes. This guidance is simply being incorporated into the main guidance document. It encompasses obligations under the duty of care and the environmental permit. The principles are protective of the biological treatment process and the environment and ensure that only wastes which are suitable for and capable of treatment are accepted. They also prevent the dilution and dispersion of pollutants by mixing with bulk wastes. Installation permits will already be compliant with the requirements as specified in SGN 5.06.

h) No rationale was provided to support this concern. We will ensure that our staff continue to receive training based on this guidance and believe this revision of appropriate measures will improve consistency.

i) We believe that following manufacture's guidelines is best practice. Manufacturers understand the design characteristics of their plant and are best placed to determine operation and maintenance parameters. Not following manufacturer's recommendation introduces unnecessary additional risk. Protecting revenue is not an acceptable reason for cutting corners. Where manufacture's recommendations are critical in relation to design and tolerance parameters of the plant or where a failure to do so negates insurance cover then they must be followed. Where there is a deviation this should be done in line with assessment such as the Hazard and Operability Analysis. If an equivalent approach is shown to ensure safe and effective operation and integrity of plant infrastructure without increased environmental risk or consequence this must be outlined in the EMS. In such cases an alternative maintenance and inspection regime can be fully documented and implemented.

j) The document is written to ensure permit compliance and emission controls apply across a range of control points. However, where emissions are regulated under the

permit and limits applied then we believe these warrant separate and identified measures.

k) The EMS must cover all aspects of operations which may impact on the environment. Clearly fire and explosion prevention is a fundamental aspect of site safety but the evidence shows that fires and explosions at waste facilities can also cause significant environmental harm. We expect the EMS to address and minimise these risks. Non-compliance with HSE regulations, for example, lack of Dangerous Substances and Explosive Atmospheres Regulations (DSEAR) assessment or signage, can prevent us safely inspecting facilities.

l) This interpretation of the SUIAR is incorrect. Sewage sludge is a waste. The regulations, which are *lex specialis*, make the landspreading of sludge as a waste subject to specific rules. Regulation 3(7) of the SUIAR requires the sludge producer to ensure sludge is used in such a way that account is taken of the nutrient needs of the plants and that the quality of the soil and of the surface and ground water is not impaired. This can only be achieved by characterising the waste prior to its use. The role of any assurance scheme is also misunderstood as it will not change the waste status of sludge.

Q6 Are there measures included in the environmental management system section that you feel are not relevant to the biological treatment of waste sector?

We received 24 responses:

- yes – 7
- no – 11
- do not know – 6

16 responses were received detailing further comments.

Summary of responses

- a) Many comments were in relation to concerns that the Environment Agency is expecting retrofitting of critical infrastructure and additional secondary containment.
- b) There was comment from 2 water companies regarding 'avoiding underground pipework', or to include secondary containment or monitoring underground pipework. Comments related to secondary containment not being feasible for existing pipework and other underground assets. By moving underground pipework above ground, there would be an increased need for pumping (adding to the carbon footprint of the process) and the added risks of failure of this additional equipment.
- c) One water company stated that with regards buffer storage capacity, water company assets operate on a continuous basis with very limited ability to close the process therefore this section should not be applicable. Assets are designed with a degree of capacity for emergencies and the material processed is low hazard. Another stated that water companies operate on a continuous basis therefore ceasing to accept waste is not an option and where there is excess gas the use of a waste gas burner (flare) is used.
- d) One water company stated that more detail is needed on remote monitoring of alarms.
- e) One respondent stated that the reference to abatement of emissions from safety relief valves and bursting discs should not cause their operation to be restricted as this may result in unsafe practices. It was suggested this be clarified to remove any ambiguity.

Our response

a) We have stated that we do not require retrofitting on existing sites. We require that all critical infrastructure is fit for purpose, inspected and maintained so that it remains fit for purpose. Where it cannot meet a standard, and we have suggested CIRIA 736 as the industry recognised standard, then the operator must put in place an improvement plan or additional measures as recommended by a chartered engineer (or both) that achieve an equivalent standard. Our standard rules permits have required all containers to be within a bunded area. A bunded area is secondary containment, so should therefore have the ability to contain polluting material.

b) We have not stated that underground pipe work should be replaced, but it should be avoided wherever possible. Underground pipe work is difficult to monitor, inspect and repair. Where underground pipework continues to be used there must be regular maintenance checks and leak detection measures in place to minimise the risk of leaks and ground contamination.

c) We have suggested a range of contingency measures including as a last resort diverting the waste elsewhere. Continuing to accept waste at a facility with no capacity or with severe operational difficulties is often the root cause of non-compliance. Particularly with issues around odour and pollution. Where diversion is not an option we expect operators to put alternative contingency measures in place. This is usually possible for some wastes within the network of waste water treatment works but we accept this may not always be the case. For some operators it will be essential to manage sludge and other organic outputs in periods when there is no access to the land bank. Biogas production contingency planning is necessary because national gas networks are under pressure. Frequent disposal of gas by flaring is not an appropriate long-term contingency for gas overproduction.

d) Remote alarm monitoring may be set up on a case-by-case basis as long as the technical and maintenance personnel have access to alarms when the site is not manned.

e) The appropriate use of safety systems is already covered by the guidance which states that 'If this is not advisable on safety grounds, you must focus attention on reducing the probability of the emission'. In our experience a significant percentage of systems are poorly designed or unfit for purpose and there is considerable scope for improvement. It is incumbent upon the operator to ensure that pressure relief devices are designed and operated in a manner which does not result in unnecessary biogas loss. It is inefficient in terms of energy recovery and in some cases the significant losses of methane, a powerful greenhouse gas, undermines the environmental benefits of AD.

Q7 Do you think that the measures in the guidance are appropriate for the commissioning of biological treatment plants?

We received 25 responses:

- yes – 11
- no – 9
- do not know – 5

Most responses felt this section was satisfactory but there were some notable technical suggestions which we have included in the guidance or amended. We received 17 further comments about this section. There were no clear improvements or suggestions about how safe commissioning could be achieved.

Summary of responses

a) Many respondents commented that commissioning is site and plant specific. One water company commented that many of the capital schemes are delivered to multiple external stakeholder dependencies and are therefore complex and often working to tight time constraints. They went on to say that they were concerned about the potential delays which could result from another external dependency and the knock-on impacts on the outputs and delivery of the projects. They added that clarification would be useful regarding commissioning or decommissioning plans in relation to which 'plant or equipment' is to be included (AD, CHP, gas to grid, flares, storage tanks). One respondent stated that commissioning is not relevant to open composting operations.

b) Two water companies asked for clarification about the definition of a 'period of dormancy' and went on to seek clarity if this applied to tank inspections or cleaning, and to thermal hydrolysis plant (THP) and combined heat and power plant (CHP). They wanted further clarity as to the necessity for a full commissioning plan to be undertaken each time. They stated that increased tank inspections would be a huge burden, especially if the Environment Agency want to sign off each one.

c) Two water companies commented on the need for a decommissioning plan in relation to what was deemed 'satisfactory condition or state', and went on to ask who is qualified to decide this in each case. One added that a number of their sites are located on historically contaminated ground and site condition reports are not available. Others stated that decommissioning guidance is not considered appropriate and considered onerous.

d) The use of lithium tracing in AD was supported by some but not by others due to residence time and the structure of the tanks.

e) One respondent stated that, in terms of commissioning and the use of inoculum, that where more novel waste inoculum was used it may have to travel long distances and inoculum can be in short supply. They went on to state that it was more useful to say the inoculum should be compliant with the permit where possible. This will ensure that commissioning can take place in a timely manner and reduce the cost and the

distance associated with transport. One respondent stated that permit applications take more than a year and causes difficulty in planning commissioning due to the uncertain nature of permit issue.

f) One a water company stated that when a refurbished plant requires re-seeding a U6 exemption is required. The current U6 exemption does not contain the new European Waste Catalogue (EWC) codes we have been asked to use, for example, 190206. It would be helpful if the exemption application could be updated to include the latest EWC codes.

Our response

We have noted the comments received and amended the technical text where appropriate.

a) This section is not exhaustive and there will be instances that where specifics of the plant and its location will need to be considered. Commissioning or recommissioning needs to be carefully managed, with the design and construction regulations and commissioning fundamental to any project. These activities require a process management approach and cannot be dealt with in an ad hoc fashion. Our guidance is based on industry best practice and nothing should be contrary or additional to a well designed and executed commissioning or decommissioning plan. We expect to see the sign-off for each commissioning phase but this will not cause any delay as this documentation will already be required for other purposes. The complexity of any commissioning plan is dependent on the complexity and location of the site. Even for composting operations there are instances where equipment and plant need to be commissioned, for example, shredders, air abatement and leachate management systems. These activities must be managed and documented.

b) On the question of scope, decommissioning and re-commissioning is relevant to any plant covered by the permit, or which will have a direct impact on the operation of the permitted facility. A plan needs to cover the extent of the dormancy and complexity of the process and equipment being brought back into commission. It will include emptying, inspecting and recommissioning a digester, this is a significant and technically complex activity. We will amend the text to clarify. The Environment Agency does not seek to approve each plan but requires evidence that the operator has identified all potential risk and put procedures in place to remove those risks. We consider that a qualified chartered engineer would provide an appropriate level of sign off. We are unclear why reference to increased tank inspections has been raised here.

c) Decommissioning is a necessary and important stage in permit surrender and should be considered throughout the operational life of a facility. Failure to do so means more work on surrender. Site condition reports are required at the permit application stage so each permitted facility will have one. At the end of the operational life of the facility the operator must produce an evidenced decommissioning proposal which enables them to proceed to surrender. The guidance provides a framework rather than a binding set of requirements. Further guidance on site condition reports and how to surrender permits can be found on GOV.UK.

d) We have amended the text regarding digester mixing efficiency to provide lithium tracing as one recognised procedure and included other recommendations.

e) We note the comment regarding permit issue time. Where the determination of permit applications for new sites are delayed we find this is generally due to incomplete information being submitted. This guidance should enable an applicant to provide sufficient information and therefore reduce permit assessment time. However, for existing operations this should not be an issue. Decommissioning and recommissioning digesters or key plant should be planned activities. Aspects of AD feedstock and organic loading should be within the business planning of the site and not considered simply to meet a tariff guarantee date.

f) We will explore whether it is possible to amend the U6 exemption. We will also review RPS231 and where possible amend it to cover the interim period.

Q8 Do you think that having and implementing a contingency plan that meets the requirements of the proposed guidance should be an appropriate measure?

We received 25 responses:

- yes – 15
- no – 9
- do not know – 1

We received 16 further comments regarding this question.

Summary of responses

a) Most respondents supported the need to have robust contingency plans. In particular it was recognised that for off-farm waste-fed AD, planning for volatile weather would help the agriculture sector meet the compliance requirements on storage for nitrate vulnerable zones (NVZs) and farming rules for water (FRfW). It was also recognised that sites need to have alternative storage arrangements in place for times when the agricultural land bank is not available. One company said that while they cannot plan for all eventualities they do need to think about which scenarios present a risk.

b) Several respondents and trade bodies commented that ceasing to accept waste incurs potentially large costs and loss of customers and contractual issues and may affect process stability in AD and can have adverse implications that are not related to gas management.

c) Two water companies said while they recognise that contingency plans are a normal part of planning processes in order to ensure risk is managed and critical activities maintained through abnormal circumstances. However, they did not believe that they should constitute an appropriate measure. They went on to state that a requirement for formalised contingency plans should be proportionate to the level of risk, and where required, guidance should enable operators to consider risks and measures appropriate to their operation and not prescriptive in detail. For water companies dealing with inter-site sludge movements internalised to their own business or catchment (that is, satellite to hub works import), the non-hazardous nature of the waste means that the accompanying level of risk is already inherently low. Many sewage plants, when land bank is limited, will seek alternative arrangements to avoid the need to stop accepting waste. One responder stated that the onus should not be on the treatment facility. Stating that waste carriers and producers also have an obligation to prepare. Another stated that it was not necessary for a waste producer to see the permit and that they should not have to be informed of the details of the contingency planning.

d) One operator felt that storage of material that fails end of waste classification is a matter for the Animal and Plant Health Agency (APHA) and PAS110.

Our response

All new facilities will have to demonstrate they have adequate storage available.

a) As the biowaste sector matures and weather patterns change the need for contingency planning has become more urgent. We acknowledge that not all eventualities can be planned for but it is the responsibility of waste producers and permit holders to minimise those risks by planning for foreseeable adverse events.

b) Contingency planning is a core business activity which protects operators from significant risks. We agree that there are sound business reasons why ceasing to accept waste or diverting waste should be actions of last resort and with good contingency planning they can be. Contingency planning can minimise the risk of having to take these actions and suffering any consequential losses or contractual issues. Sharing contingency plans with waste producers and working together is best practice and prevents the producer or holder of waste committing duty of care offences or permit breaches.

c) We consider contingency planning to be central to risk management and therefore an appropriate measure. For installations contingency planning is necessary to achieve compliance with aspects of BAT. Plans will vary in complexity but must be sufficiently detailed and robust to address the risks associated with the activity and the waste being handled. The guidance is deliberately not prescriptive in this regard but does provide a framework for operators. Classifying sludge as low risk simply because it is classed as non-hazardous is overly simplistic; there are many examples where sludge has caused environmental harm. We accept that the production of sludge cannot be avoided but this simply emphasises the need for sludge producers to make robust contingency arrangements. This responsibility cannot be passed on to other parties. We accept that water companies cannot stop accepting waste via the sewage systems but other tankered waste inputs may need to cease or be diverted elsewhere to manage risks.

d) Waste which fails to achieve end of waste continues to be regulated as a waste and is therefore our concern. Also we are the competent regulatory body to support (or not) certification schemes. We work with the APHA as E. coli and salmonella failures are a concern and result in a zoonosis notice.

Q9 Do you think that obtaining details about who the waste producer is should be an appropriate measure?

We received 26 responses:

- yes – 16
- no – 9
- do not know – 1

We received 21 further comments regarding this question.

The majority of responses considered this to be fundamental in compliance with waste acceptance and waste description and ensuring that waste producers comply with regulatory requirements. Contamination control, was welcomed by most respondents.

Summary of other comments

a) One water company said that without further clarity on which waste streams this applies to it was difficult to comment.

b) Some responders felt it was up to the operators to understand the risk and that the measures were impracticable and gave an example of 'portaloo' waste. They went on to state that the 'producer' and subsequent holders (that is, person or persons responsible for the collection and transfer of waste from point of production to point of reception) have met their duty of care requirements it may not be possible for the operator to contact the producer or obtain their details as relevant information will have been provided to enable safe acceptance and treatment. They felt this waste acceptance measure was an unnecessary administrative burden.

- c) One operator said that pre-acceptance and collecting the information may mean that waste cannot not be processes for some days. This should be done in initial or proposed supply with periodic checks. The checking of paperwork was too onerous for small AD operators.
- d) One operator stated that they, the operator, should be able to choose what characteristics and testing is applicable to their process and waste feedstocks. It is not feasible to have all the proposed analytical checks carried out and these should be used as an example.
- e) In relation to reduction of ammonia and controls in feedstock - one trade body responded that this should be aligned to legislation that Defra will put in place to implement the clean air strategy. They stated that for some operators covered storage will be impossible without Defra support. The measures proposed may encourage sites to cease taking feedstock like chicken manures. Covering will be too prescriptive they felt that measures used in pig and poultry sector should be used such as reducing the ratio between emitting surface area and volume of the manure heap or using a three-sided wall. Others responded that OMP and risk assessment are sufficient.
- f) One respondent stated that holding stable high energy waste for longer than 5 days should be permissible for example powdered off-specification food waste.
- g) With regards prevention of cross contamination, one respondent considered that segregating waste is not always feasible and are often blended to feed to digesters.
- h) One respondent stated that washout certificates should not be required for bulk containers each load.
- i) One water company stated they had little control of bespoke waste arriving at site. They commented that this document should only apply to bespoke wastes being imported directly into a sewage sludge facility, rather than the UWWTD facility.

j) Two water companies stated that they were not able to keep representative samples on site due to the volume of samples. The data set and requirement are too large and will distract operators from the management of the site. Smaller site will not have a computerised tracking system. This is a comprehensive and detailed requirement. Where a sludge treatment facility is only accepting sewage sludge wastes we would question whether the requirement for such a system is cost beneficial.

Our response

a) This applies to all waste streams unless the method of collection or treatment makes it impossible in which case checking the duty of chain care is sufficient. Waste characterisation, coding and accurate description are fundamental to the pre-acceptance, acceptance and segregation and are legal requirements and necessary to comply fully with a permit. The Waste (England and Wales) Regulations 2011 and 34(5) of the Environmental Protection Act 1990 set out the requirements.

b) We agreed with the comment about portaloo waste streams which is an example covered in comment a) above. We will amend the appropriate text. However we do not consider that isolated examples where the measure does not apply, means it is not a valid appropriate measure. Nor can we accept the measure is an unnecessary administrative burden. Assurance about the type of waste being received is fundamental to safe waste management.

c) The purpose of pre-acceptance is that it is carried out when the waste producer contacts the facility and should not cause hold up when that waste is agreed as permitted and suitable. Waste tracking requirements represent best practice regardless of the size of the operation and are critical for permit compliance and quality assurance for the end user.

- d) The duty of care recognises that waste producers are best placed to understand their waste and the characteristics it is likely to possess. Having this information allows the operator to manage their process more effectively. Receiving wastes without full information about their characteristics increases the risk to the plant and final product quality. The parameters given in the guidance indicate what would typically be required.
- e) The requirement to reduce and minimise ammonia and other emissions goes beyond odour management. We agree that these measures described in the guidance will be part of a management system or risk prevention. We are working with Defra and they are fully acquainted with changes we have made to permits and this guidance.
- f) High energy dry waste which is sealed or contained may present a lower risk of odour. If supported by a risk assessment then we agree these could be kept for longer periods as set out in an OMP and waste inventory.
- g) Segregating waste is best practice and essential where wastes are incompatible. It is also required where animal by-products are accepted. However the guidance also recognises that wastes may be blended prior to being fed into the digestion process.
- h) Wash out certificates are required for untreated animal by-products and the transportation of commercial and hazardous waste. The full characterisation and knowledge of the waste received should be paramount to the process controls on site. Cross contamination can compromise this. The guidance states that in some circumstances a declaration of the previous load may be sufficient.
- i) Operators should only import wastes into their facilities if they can show their treatment process can treat the waste effectively. Allowing unsuitable wastes to be received would effectively sanction dilute and disperse activities and would distort the market against operators of more suitable treatment facilities. Placing controls upon the types of bespoke waste entering water company facilities also provides some reassurance about the quality of the sludge produced. This is important to both the

end user and to anyone accepting the sludge for further treatment. It also ensures that legal obligations on restricting persistent organic pollutants are observed. All these factors are equally true for imports to the head of waste water treatment works and to sludge treatment facilities.

j) Much of the on-site sampling and analysis can be avoided by implementing comprehensive pre-acceptance procedures. For installations it will be necessary to operate a waste tracking and inventory system in order to comply with BAT 2c and 4b. Where site specific difficulties arise alternatives can be proposed to ensure an equivalent standard to BAT is achieved.

Q10 Do you think that the requirement to install secondary containment that is built to a recognised standards should be an appropriate measure?

We received 24 responses:

- yes – 8
- no – 14
- do not know – 2

We received 20 detailed comments

Summary of responses

The fact that two thirds of respondents did not recognise the importance of secondary containment in protecting the environment is alarming. Containment is a fundamental principle in pollution prevention at industrial sites, waste management facilities and even in domestic settings, for example double skinned or self-bunded heating oil tanks. In the vast majority of settings relying solely on primary containment is not an acceptable option. Secondary containment is both an appropriate measure and for installations a BAT requirement.

a) One water company stated that CIRIA 736 is not wholly necessary or appropriate for the water industry which already uses high engineering standards.

b) A number of respondents commented that full compliance with CIRIA 736 may not be achievable at some existing sites but was appropriate for new sites. They suggested that a risk based approach should be taken at existing sites with an option to put in place systems to reduce the risk of pollution, such as a greater number of tank inspections and comprehensive maintenance procedures.

c) Several water companies recognised that secondary containment is a BAT requirement but stated it would be significantly challenging to retrospectively install secondary containment by the August 2022 deadline. They suggested that a phased approach in line with water industry asset management plans (AMP) funding cycles should be considered.

d) One respondent stated there is over reliance on CIRIA 736 as a document developed for the petrochemical industry and is not for use on the waste sector.

e) A number of respondents stated that the requirement for secondary containment should not be default approach. One stated that in some cases they would be relying on tertiary containment as it was not possible to retrofit secondary containment in some facilities. Others stated that the use of risk-assessment as an alternative to CIRIA 736 does not come across clearly enough in the guidance.

f) Another water company asked for clarification on the requirements for above ground tanks applies to pre-existing tanks and below ground tanks. Stating that this requirement should be subject to risk assessment on pre-existing infrastructure to demonstrate the benefit of such extensive investment. They further commented that this should be within the AMP funding cycle. They further commented that this contradicted the section that states 'avoid using underground tanks and pipework - if it is not economically possible to replace them, you must protect them by secondary containment or a suitable monitoring programme'.

Our response

a) CIRIA is the industry standard and provides a benchmark against which alternative schemes can be measured. We are aware that the water industry uses the Civil Engineering Specification for the Water Industry (CESWI). The industry has been invited to demonstrate that this is equivalent to CIRIA 736. However it is apparent that water companies apply CESWI in different ways. It is also clear that CESWI is an engineering specification and because it does not adequately address environmental risk some water company assets built to CESWI specifications lack the containment measures that would enable them to meet BAT.

b) This is entirely consistent with BAT and with our guidance. We expect new facilities to be designed and built to CIRIA 736 standards. At existing sites we recognise that retrofitting may not be viable so alternative mitigation measures may be required to achieve an equivalent level of environmental protection. The guidance explains that 'operators of existing sites must use a chartered structural or civil engineer to undertake a detailed assessment to identify if additional infrastructure improvements are required to protect the environment'.

c) The August 2022 deadline for BAT compliance is a legislative requirement and water companies were informed in July 2019 that their sludge biological treatment

facilities would need to comply with BAT. We have noted above that retrospective installation is not necessarily required at existing sites. We will consider using improvement conditions for major works but these will not extend beyond the end of 2024 at the very latest. Compliance with legislation is not conditional on funding. Funding is out of scope of this consultation and funding questions should be directed to the Water Services Regulation Authority (OFWAT).

d) CIRIA is based on the widely adopted source-pathway-receptor approach to risk assessment and is applicable to any situation where secondary containment may be required. It is standard practice to use recognised standards where they are available and CIRIA 736 is considered the industry standard of choice.

e) CIRIA 736 is a risk based standard which provides a benchmark against which alternatives can be assessed. The key measure of the acceptability of containment taken as a whole is the level of environmental protection achieved. If a combination of primary, secondary and tertiary containment plus any additional measures provides equivalent environmental protection this can be proposed. As the guidance states 'Where a measure is not suitable or relevant, an operator can either; propose alternative measures, that must achieve the same level of environmental protection or provide an explanation of why the measure is not relevant using a risk based approach.'

Q11 Do you think the guidance is clear on the requirements to cover storage structures?

We received 25 responses:

- yes – 3
- no – 21
- do not know – 1

We received 20 further comments

Summary of responses

- a) One trade association noted that ammonia abatement issues will be covered by Defra's Clean Air Strategy and so should be removed from the guidance. FRfW, Code of Good Agricultural Practice and Silage, Slurry and Agricultural Fuel Oil Regulations were also referenced. They also said that BEIS need to be involved in relation to the Green Gas Support Scheme (GGSS).
- b) Some respondents associated the covering of stores solely with the need to control odorous emissions. One trade body responded that members believe that covering storage is difficult and that other solutions can be found in the odour management plan (OMP) meaning that the plant should not need to invest twice.
- c) One respondent stated that the guidance should require all vents to be leak tested and must have a current leak test certificate. Other respondents felt that requirements on abating and containing vented releases was too prescriptive.
- d) Two responders stated that abating emission will conflict with DSEAR regulation where a vessel that could produce methane should not be fully covered.
- e) Several respondents added that retrofitting is not appropriate and disproportionately expensive and not suitable for existing assets. Rather this needs to be addressed at the design and planning stage.
- f) One water company was seeking clarity on whether this included small day tanks where small quantities are held prior to de-watering. Covering existing tanks will require significant investment and disruption.

g) There was a request to clarify the applicability of cover requirements to storage bays and windrows at open windrow composting sites.

Our response

a) We work closely with Defra and BEIS on emission controls and in particular ammonia. We have worked together on the GGSS, discussed our guidance and have agreed measures that are within our remit to implement through permit controls. It should be noted that the need to control emissions and protect public health is not dependent upon the availability of a subsidy.

b) It was apparent that respondents were unclear whether the purpose of covering storage structures was to abate odour or to prevent other emissions such as ammonia. The guidance refers to preventing or mitigating fugitive emissions including odour, ammonia, methane and other organic compounds and dust. The responses that address only odour ignore the need to control and mitigate other emissions. Odour is a symptom of emission and loss of containment and whilst the OMP covers control of odour and impact on amenity the requirement to cover tanks comes from a need to control and mitigate other polluting emissions. Reliance on the OMP is therefore not sufficient.

c) We have amended the text where appropriate.

d) We liaise closely with the HSE and have sought their advice in the preparation of this guidance. We will follow up comments regarding DSEAR with the HSE and amend the text if necessary. We recognise some of the concerns raised and are also aware that covers can reduce volatilisation and reduce the risk of explosive atmospheres.

e) We have not stated that retrofitting fixed covers is an absolute requirement on existing sites. If retrofitting is technically problematic then alternatives such as a floating cover may be an acceptable means of reducing surface air stripping. This is in agreement with Defra and advice in evidence from various reports, for example [Options for Ammonia Mitigation – Guidance from the UNECE Task Force on Reactive Nitrogen](http://www.clrtap-tfrn.org/sites/clrtap-tfrn.org/files/documents/AGD_final_file.pdf) (http://www.clrtap-tfrn.org/sites/clrtap-tfrn.org/files/documents/AGD_final_file.pdf).

f) Day tanks are included in this requirement but where appropriate an evidence-based risk assessment could be submitted to propose alternative measures. The comment on cost and disruption is noted but this is not an acceptable reason to disapply appropriate measures.

g) We will amend the text to clarify the requirements.

Q12 Do you think the requirements are clear and helpful to the operator to determine if a bespoke waste is suitable for treatment using a biological process?

We received 25 responses:

- yes – 12
- no – 11
- do not know – 2

We received 15 further comments.

Summary of responses

We received a number of comments about the general applicability of some statements. For example some respondents made general observations about the overly prescriptive nature of the guidance. Others raised concerns about specific requirements such as 'you must minimise the time you store waste in reception before treatment and hold it for no longer than 5 days' which was considered to be impractical and dependent on the waste stream as many can be stored for longer without risk.

We accept that there will be exceptions to some of the statements in the document. We are unable to respond to all of them but such instances are already catered for in the guidance which states that 'where a measure is not suitable or relevant, an operator can either propose alternative measures that achieve the same level of environmental protection or provide an explanation of why the measure is not relevant'. We expect operators to be able to provide evidence of any decisions to deviate from the guidance if asked.

a) One respondent stated that the feedstock for AD plants is variable and the information in the guidance does not provide information about the AD process and plant feedstock.

b) One trade body suggested that requirement for bespoke waste to have a high level of biodegradability is not possible; stating that high lignocellulose waste does not have 90% biodegradability and the stability outlines in PAS 110 should be sufficient. This was also picked up by a water company who stated that waste rarely can be fully mineralised, and asked what equates to full mineralisation, stating that this is an onerous challenge as the lab tests give the degradation rates of the individual waste which may be different when mixed with other wastes. For anaerobic processes full degradation may take 2 weeks to reach full stabilisation, therefore approvals for these wastes will take a minimum of 3 to 4 weeks which is may be impractical for some industries as pre-acceptance procedure. They suggested that in some processes 90% of the degradation occurs in a short space of time with the remaining 10% taking

longer. In some cases 90% biodegradability is not demonstrable where partial degradation will have happened in the previous process, before the waste is received. It was suggested that the UWWTD requires a minimum of 80% chemical oxygen demand reduction, however this guidance is even more onerous and may be impractical. Would it be better to align to UWWTD, or just state 'until stabilised'?

c) Others stated that full mineralisation is impossible but that the recommendations are helpful. However the degree of prescription is excessive and needs to reflect the risk being better captured in the EMS. Others suggested the level of detail required is unclear and illustrative case studies would be appropriate.

d) One water company stated that 90% biodegradability is not demonstrable for some leachates and digestates or centrates where partial degradation will have happened in the previous process, before the waste is received.

So what is the purpose of taking a waste such as a leachate if the biological treatment process it is consigned to does not afford effective treatment?

e) One water company stated that it was not possible to avoid particulate metals in waste and that metals are ubiquitous and it is very challenging to ensure there is no presence of metals. They stated that the sites use 6mm screens, but a number of these waste streams have no other disposal options.

f) One respondent stated they were not sure any labs testing waste have United Kingdom Accreditation Service (UKAS) or monitoring certification scheme (MCERTS) accreditation. Another operator commented that it is not clear how an operator is meant to test and evidence biodegradability. They stated that suitable techniques are not given and believe this should be explained in more detail giving examples of how this can be done. They stated that this potentially is very onerous and costly and questioned if the cost was beneficial. However they did not suggest any other way to ensure the waste was suitable for the process.

g) Several water companies wanted clarification of whether the requirements apply to wastes tankered to the head of a WwTW. One stated that they thought it should only apply to wastes tankered directly into a sludge digester.

h) One water company expressed concern that when receiving sewage sludges from other companies they will have limited control over the bespoke wastes which may have been accepted into the WwTW. They stated that the onus should be on the waste receiver (the UWWTD sites) to characterise and assess the wastes rather than the sewage sludge treatment facility.

i) One respondent commented on the statement 'if you accept similar waste from a different producer it will require its own pre-acceptance assessment'. They said that they take a risk based approach and have a sampling programme in place, therefore not every import is sampled. They asked whether a 'season ticket' style pre-acceptance procedure was sufficient.

Our response

a) Pre-acceptance requires that the characteristics of the waste stream need to be assessed as suitable for the process before agreeing to take the waste. This ensures that an operators meets the permitted waste types and listed activities. Where there is no variation in the waste then a simple annual check on the waste or load delivered can be used. Where there is greater variability the frequency of testing should be increased. Where there are a wide range of feedstocks being received each one needs to be assessed and demonstrated as suitable for the biological treatment it will receive. It is for the operator to consider other variables when making that assessment.

b) The WFD states that the treatment of a waste must be appropriate for that waste. Some wastes sent for biologically treatment have been found not to be capable of

biological treatment and are simply being diluted and lost in another bulky waste. This dilute and disperse practice is not acceptable because it is a form of disposal. This is why acceptance criteria are necessary. Waste sent for biological treatment must be capable of being biologically treated, should have high levels of biodegradability, and should not produce problematic breakdown products. We understand that wood and some other plant material takes longer to biodegrade but they are biodegradable. However it is not acceptable for bespoke wastes to go to biological treatment without prior assessment and operators should not be accepting wastes if they are uncertain of their properties. It breaches duty of care requirements and puts both the treatment plant and the output at greater risk.

c) Fully mineralised means that a substance is broken down to its most stable mineral end point. The purpose of demonstrating mineralisation is to show that no intermediate breakdown substances remain within the waste that could have the potential to cause harm. By demonstrating complete mineralisation within the process the operator can show that there are no intermediate substances that could be of concern and therefore a human health risk assessment is unnecessary. The mineralisation test will be retained in the guidance but we will review and revise the text to make it clearer.

d) Leachates vary widely and are often chemically extremely complex. Mineralisation is likely to be of greater concern than biodegradability. A full characterisation of the leachate would be expected. If it can be demonstrated that a high level of mineralisation is achieved then this might justify its acceptance even if the biodegradability of the waste is lower than normally required.

e) The guidance deals with metals in solution not fragments of metals. If there are metal fragments in excess of 6mm there is a problem with the feedstock.

f) There are a number of UKAS accredited laboratories nationally and MCERTS accredited laboratories. Some of these laboratories specialise in biodegradability testing. If the waste producer is unable to provide adequate information the operator should seek the services of a laboratory.

g) Yes these measures apply to wastes deposited at the head of a waste water treatment works. We consider this to be an important control point where it is necessary to ensure only appropriate wastes are entering a biological treatment process. They can only be accepted if it is shown that they are capable of treatment in that process, otherwise contaminants will simply partition into the sludge or the effluent and be released into the environment. We will produce standard rules for tankered wastes deposited at the head of the works. Where operators can comply with these then they will not need a bespoke permit.

h) We agree that responsibility for characterising and assessing wastes received at a WwTW lies with the operator of that facility which is why we apply the pre-assessment and acceptance requirements to imports to the head of works.

i) Yes an appropriate 'season ticket' approach should be sufficient if the wastes are similar, well characterised and variability is taken into account. The greater the variability the greater the need for periodic sampling.

Q13 Do you think that the parameters and inhibitory values provided in the section called inhibition values for aerobic and anaerobic processes are appropriate and relevant?

We received 25 responses:

- yes – 3
- no – 12
- do not know – 10

We received 15 further comments.

Summary of responses

- a) One trade body felt this was information that had no place in a regulatory document and did not allow for the range of feedstock variability and digester bacterial population.
- b) One operator stated that these inhibitory values should be used as guidance only and strict interpretation may prevent materials from being accepted. Another added that it was unclear as to what the inhibition tables add to the document but there must not be an expectation that operators will routinely monitor for these.
- c) One respondent stated they were not clear why this is needed and how it is implemented. Another queried if these values are guidance or thresholds.
- d) One water company stated the reference needed updating, and more relevant referencing should be used for operational methods. They further commented that by including the specifics of this table, we were not future proofing this document as technology surrounding this changes quickly.

Our response

- a) We regulate and control waste inputs through the permits. The acceptance of waste requires the operator to understand its effect on the process and this is about process control, understanding the environmental fate of substances, and ensuring that inappropriate substances are not allowed to enter and compromise the biological treatment process.
- b) We developed the original framework for assessing waste as a result of biowaste treatment companies wanting to take various novel chemical and industrial waste streams where the treated outputs were aimed at the agricultural land bank. This was,

in the absence of no framework for assessment. Industry was involved in the development of this framework in 2013 to 2014. This allowed a structured assessment of waste streams to guarantee that the resulting outputs were not a risk to the end user or the wider environment. In the absence of such frameworks we would agree a list of waste and the industry would have to adhere to that list or undertake more extensive testing and chemical analysis of the final materials. They are still able to do that if they feel the inhibitory values are not appropriate for their treatment process and can demonstrate this.

c) Where we can be assured that the waste are suitable and fully recovered by a biological process and that biological treatment is a bona fide option then we can agree that the waste can be processed. Where a waste falls outside of the inhibition values it is often possible for the operator to manage this, for example, pH adjustment.

d) We will retain the information in the guidance as it both emphasises the importance of considering inhibitory factors and assists operators in assessing and presenting information on novel waste streams. We will review the literature but would appreciate evidence based comments and examples of where the guidance can be improved.

Q14 Do you think the requirement to install an enclosed flare that is capable of achieving 1,000°C with 0.3 seconds retention time at this temperature should be an appropriate measure?

We received 25 responses:

- yes – 11
- no – 5
- do not know – 9

On the whole this is accepted as best practice. There were 13 further comments.

Summary of comments

a) One respondent said that the requirement to have a flare available always was too onerous. Another said that it was not clear why an open flare is not considered best practice. A third said that they were unsighted on the derivation of this requirement or if it is a reasonable expectation for existing ground flares. They assumed that most or all their existing flares would fail this criterion.

b) One respondent stated that the need for a flare should be based on a site specific risk assessment adding that most AD sites will produce gas from feedstock where non- methane trace elements are readily combustible. Replacing flares will have a significant cost to the AD sector.

c) One respondent stated that the requirement to 'optimise the flare to make sure the combustion of gases is efficient' needs further clarification. Another stated that it would be helpful to understand the environmental benefit that is achieved through implementation of this requirement. Methane has a flame temperature of 1500 to 1600 degree C, adding in some endothermy from the CO₂ and H₂O present in the gas, 1000 degrees C should be achievable in the crescent of the flame. Modifications to the flare to increase either the temperature or the retention time are likely to require flame shaping or repression and this is likely to increase the NO_x emissions accordingly.

d) One respondent stated that they thought that this is a desirable long-term outcome and several of their sites are currently compliant. The additional information regarding the intended outcome will allow us to understand the work required at the remainder of our sites. We are happy to upgrade in due course as and when the individual sites are refurbished. However, we see no need to carry out this work prior to that

refurbishment and suggest that a derogation of this requirement be granted until such time.

Our response

a) Open or shrouded flares are not permitted in other sectors as there is no capability to monitor the emissions from these types of flares and therefore no assurance that the destruction of volatiles takes place. Flares, whether closed or shrouded (open flares), should be capable of achieving maximum destruction of trace elements.

We believe that all AD plant must have a process and equipment to burn surplus biogas. It is not appropriate to vent biogas to air other than in an emergency.

b) to d) Flares should be able to destroy trace elements and VOCs and the burn time and residence time is critical. Where flares are rarely used then a shrouded flare may be sufficient. It is up to the operator to ensure that maximum destruction is achieved by maintaining the flare and choosing the most effective operating parameters.

Q15 We really value your feedback on the proposed guidance. Please let us know if there are any other sections that are unclear. Let us know how we can improve then. Please provide as much information as possible to support your answer.

We received 22 further responses with multiple technical threads, and we have summarised these. We will take these into consideration and revise the text where

appropriate. We will respond to individuals in due course.

a) Section 60 of the draft Appropriate measures for biowaste treatment consultation document requires the operator to consider every option available for managing each waste and material, including extended storage, other recovery or treatment options and disposal. As an operator we would reserve the right to delegate this responsibility to a contractor but understand that the accountability would lie with the operator.

Our response: Contracting out responsibility for delivering contingency measures is risky and we would expect a full audit of any sub-contractors ability to deliver. Ultimately the responsibility remains with the company to demonstrate it has robust contingency arrangements in place.

b) Section 61 on page 42 of the draft Appropriate measures for biowaste treatment consultation document requires an operator to have a system in place to prevent 'tanker drive off'. It is not clear what systems would be considered acceptable. It is not thought to necessarily be practicable at existing sites either which will have waste reception areas built in a specific way that might not allow this. Significant capital investment may also be required which may not be available until the next Ofwat funding cycle for water companies. Can this be something as simple as an immobiliser fitted to vehicles that detects if it is still coupled?

Page 42 of the draft Appropriate measures for biowaste treatment consultation document – requirement for system to prevent 'tanker drive off' (whilst still coupled) – this is impractical for the majority of our discharge points, and we are unsure of a solution.

Other water companies said they can see how this can arise but it did not need to be covered in an appropriate measures document.

Our response: Experience has demonstrated that this can and does happen and because it can have environmental consequences it is included as an appropriate measure. We do not recognise the comment about significant capital investment and

the water industry funding cycle is irrelevant. If an immobiliser is effective this would be acceptable. A simple procedure might also suffice such as depositing the vehicle keys by the coupling point which is only released when the vehicle is uncoupled.

c) It is unclear whether some measures apply to interworks sewage sludges and tankered domestic sewage.

Our response: Where activities are excluded from waste controls by the controlled waste regulations then the guidance is not applicable although we believe it is still relevant.

d) The implementation date for low-cost improvements is within 12 months of the document being published. This will be outside the scope to attract WINEP AMP funding. Larger improvements are to be completed as soon as reasonably possible or within the time frame set in the site permit. BAT related improvements need to be completed by August 2022. Both the larger and BAT improvements are outside the timetable for WINEP AMP funding. PR20 has been approved and funding requirements for AMP 8 starting in 2025 will not start until 2024.

Our response: The examples given on page 7 illustrate the difference between low cost and capital intensive. Compliance with legal requirements is not dependent upon water industry funding cycles and any funding issues should be raised with Ofwat.

e) There is lack of alignment to other initiatives such as the Environment Agency sludge strategy and related working groups.

Our response: The review and publication of guidance is not dependent upon delivery of the sludge strategy which is primarily about sludge use and not treatment.

f) Introduces onerous requirements for sites that have not been previously been subject to permit obligations. The retrospective application of BAT to existing assets is too onerous.

Our response: It is not the guidance which introduces BAT requirements to previously unpermitted facilities it is a legislative requirement. Where BAT cannot be achieved at existing sites then the operator can apply for a derogation subject to meeting the strict criteria laid down in legislation. The existing BREF and BAT conclusions set out best practice and it is assumed that most good operators would be operating broadly in compliance with this. Where we feel we need to enhance environmental protection to achieve our own national environment objectives then we can issue further guidance.

g) Sections 3 and 6 Waste acceptance. Would the pre- acceptance and acceptance for monitoring and sampling apply where tankered waste activity is already permitted? Will it be necessary to merge tankered waste permits and biological treatment permits?

Our response: Operators may choose to consolidate these activities under a single permit. This can be more cost effective in terms of subsistence charging.

h) Do operators who only take raw sludge need to adopt the pre acceptance methods? Given that sludge treatment have standards inputs is there a need to assess this annually?

Our response: Facilities receiving only raw sewage sludge for treatment will need to carry out periodic checks on quality but if the waste is well characterised and consistent this can be done less frequently. Raw sewage delivered to the head of works is excluded from waste controls but some basic analysis is advisable to manage the load on the works.

i) One water company suggested that managing bulk loads and tankers where sites are unmanned or out of hours was too onerous.

Our response: We are surprised to learn of unmanned sites, but some controls would be necessary, and the company should submit their risk assessment and procedures. Where works are unmanned (highly unlikely at permitted facilities) CCTV and remote monitoring are already mentioned in the guidance as an option.

j) Where there is a dedicated fleet of tanker who only carry raw sewage sludge will a wash out certificate be necessary

Our response: No it will not be necessary to have wash-out certificates if the waste is the same and carried by a dedicated fleet of vehicles. We will clarify this in the text.

k) The use of meteorological monitoring will be overly expensive for the water industry and sludge treatment continues all year round.

Our response: The use of weather data and monitoring does not have to be expensive and can be easily recorded on site. The operations can be timed or adjusted to comply with conditions. This is especially important where the operator intends to moderate operations when the prevailing wind direction is towards a sensitive receptor.

l) There has been no assessment of the impact on regulated business and would be expected when regulation is changed.

Our response: We have not changed regulation. We are updating existing guidance on appropriate measures. However, we are required to do a business impact target assessment.

m) Proposals for plant enclosure conflicts with health and safety requirements and have not been fully considered

Our response: We have not stated that existing sites need to be enclosed. We have shared these documents and worked closely with the HSE over the past years about concerns we share about the sector.

n) One water company stated that these obligations were not indicated or foreseen prior to the recent business planning cycle and funding is not provided to meet these obligations. This is true for all the required explicit and implicit improvements indicated but is an obvious obstacle for containment, enclosure and fugitive emission

expectations in particular - 'softer' requirements such as competence and training will be challenging to be met within the year of adoption of this guidance.

Our response: It would be concerning if there was a significant shortfall in competence at existing water industry facilities. Staff competence and training have long been recognised as standard best practice and company training and competency structures should already be in place. These can be developed into a corporate competence management system or used to deliver training for the necessary modules under the waste management industry training and advisory board scheme.

o) One water company commented on the absence of any reference to the SUIAR, the safe sludge matrix or the biosolids assurance scheme (BAS) is surprising as the water sector largely deploys anaerobic digestion to satisfy these expectations.

Our response: These are out of scope for the treatment guidance. SUIAR and the safe sludge matrix relate to the storage and use of biosolids. BAS is an industry standard with no regulatory role.

p) Removal of plastics is impossible for sewage sludge.

Our response: We acknowledge that microplastic in sludge is an issue and extremely difficult to remove. Larger fragments of plastic and other litter are usually removed by screening. Further work on microplastics in the environment will inform future policy and regulation.

q) Grit removal is a particular issue for operation of sewage sludge digesters and must not be mandated.

Our response: We will amend the text to clarify but it is important that the integrity of mixing systems and primary tanks assessment is set out in procedures. As with all measures if it is not relevant to certain facilities then the operator is free to demonstrate this is so.

r) Grit and sediment removal from PAS110 containing vessels - if the vessel is only ever containing 'product' where does the 'waste' aspect materialise from and why should waste controls be placed on the grits and sediments that could have otherwise been removed in the digestate. One member has expressed concern at this as they undertook PAS 110 to be exempt from waste regulation controls and may still be held to them after conforming to PAS 110.

Our response: If grits and sediments are being removed from the vessel that produces PAS110 digestate they are not digestates and cannot achieve end of waste status. They are regulated as a waste.

s) The proposed expectations for methane slippage is a particular if relatively minor concern, as this sets an unachievable expectation where gas engines are involved. As such it should be deleted or revised, as this appears to be out with operator control, with no commercially viable or readily available abatement solution possible.

Our response: We have been monitoring the emissions data and we are aware that methane slippage may be a significant issue. This is a guidance document but we are undertaking review of emission monitoring and will review that data to assess if in future secondary abatement needs to be instigated. Methane slip is detrimental to the environment and is a loss of income to operators where the combustion is not efficient.

t) The presumption of enclosure for receipt of sludge cake will drive unnecessary and unfunded expenditure. It would potentially create new confined spaces or DSEAR areas and so is inherently undesirable, not likely to be cost beneficial and so should be removed.

Our response: The requirement to enclose reception areas for sludge cake will not be taken forward. We will expect operators to take other operational measures to minimise emissions from the handling and storage of sludge cake.

u) Regarding the need to calibrate meteorological monitoring equipment every 4 months. This will depend on the type of instrument used and there is little benefit to prescribe such frequency

Our response: It is an appropriate requirement given that meteorological conditions are a material consideration for on-site operations. The absence of a frequency would cause the requirement to be unenforceable and the 4 month figure is caveated by words 'unless agreed otherwise with the Environment Agency' so it is flexible.

There were additionally many hundreds of individual comments and we have taken these into account and revised the guidance where appropriate. We will endeavour to feed back to individual responders in due course where requested.

6. Next steps

Now we have considered the consultation responses received, we will finalise the guidance document for publication. We will publish the finalised guidance on GOV.UK.

We will convert the PDF document that was used for the consultation to HTML format so that the guidance is fully accessible.

7. Annex: list of consultation respondents (by name)

The organisations that responded are:

- Veolia
- Assentech Sales Ltd
- Yorwaste Limited
- Charlie Trousdell Associates Ltd
- Aqua Enviro, a UK subsidiary of SUEZ Smart and Environmental Solutions
- Environmental Services Association (ESA)
- REA - The Association for Renewable Energy and Clean Technology.
- Foodchain and Biomass Renewables Association FABRA UK
- Biffa Waste Services Limited
- Yorkshire Water
- Andigestion Ltd
- Wessex Water Services Ltd
- Natural World Products Ltd
- The National Farmers' Union (NFU)
- Viridor Limited
- Thames Water Utilities Limited
- Bio-Based and Biodegradable Industries Association
- Chartered Institution of Wastes Management (CIWM)
- Severn Trent Water Ltd
- United Utilities
- Anglian Water Services Ltd
- The Anaerobic Digestion and Bioresources Association (ADBA)

CIRIA 736 for AD Plants

Relevant Good Practice – Secondary Containment

17th May 2022

global **environmental** and **advisory** solutions

WELCOME

Marc Giambianco

Technical Director – SLR Consulting

Marc is a Technical Director at SLR consulting with over 17 years experience in the waste sector. Since 2011, Marc has fulfilled the role of project manager / owners engineer on a number of anaerobic digestion projects and has experience with the construction and commissioning, of dry and wet AD technologies for food waste and farm-based AD Plants. Marc has assisted in the development of ADs for both the Public and Private sectors. In recent years Marc has project managed and provided Technical Due Diligence input into a number of AD projects with specific input into civils, ground conditions, utilities and contracts. These projects include single sites and portfolios and new builds and existing facilities.

Marc is experienced with the requirements of CIRIA 736 and is able to provide design and assessment support to clients who require secondary containment at their facilities.

WELCOME

Danny Jones

Principal Process Engineer – SLR Consulting

Danny is a Principal with SLR Consulting and has over 20 years of experience in the management, treatment and disposal of landfill leachate and similar waste waters. In his role within SLR's Process Engineering and Process Safety Group Danny provides consultancy services to a wide range of UK and overseas clients on issues relating to leachate management and treatment of industrial waste waters. Danny was the Lead author for the Code of Practice for UK landfill operators in relation to bunding / secondary containment requirements of infrastructure that contains landfill leachate, the 'UK Landfill Industry Code of Practice 'The Establishment of Appropriate Containment Standards for Leachate Storage Infrastructure''. The document was published in 2017 and is in current use.

WELCOME

Ian Walton

Technical Director – SLR Consulting

Ian Walton is a Technical Director at SLR Consulting. He is a chartered civil engineer with over 30 years broad environmental consultancy experience working for both public and private sector clients. He has been responsible for managing and directing a diverse range of commissions including those in the public health, waste management, infrastructure and general development sectors. Ian is also regularly called upon to provide expert evidence in relation to flooding and drainage issues.

Ian was retained by CIRIA in 2012 to author the update of the R164 design of containment systems for the prevention of water pollution from industrial incidents guided by a Project Steering Group drawn from industry and regulators.

Following publication of the updated guidance, C736, in 2014, he has provided advice to industrial and waste management clients on the compliance of their facilities with current guidance. Ian has also been using his expertise in flood modelling and drainage to review the adequacy of tertiary containment in relation principally to the retention of firefighting water.

Secondary Containment & Anaerobic Digestion

New Builds:

- Suitable secondary containment to be in place prior to issue of a permit by the regulator;
- Non waste sites are often exempt, however the operators of these sites still have a duty to protect the environment;

Existing Sites:

- Primary and secondary containment require routine inspection;
- *“Where your activity has above ground storage or primary containment (tanks and/or vessels) used for the storage and treatment of waste, provide a detailed report which describes an assessment of the suitability of the existing primary containment in comparison to the relevant standard in the CIRIA C736 guidance”*
- *“Where your activity has above ground storage or primary containment, provide a detailed report which describes an assessment of the suitability of the existing secondary containment and storage lagoons in comparison to the relevant standard in the CIRIA 736 guidance. The report should follow the methodology for existing facilities which consists of a risk assessment.”*

Legal Background

Operators that pose a higher pollution risk:

- Environmental Permitting (England and Wales) Regulations 2016
- PPC Regulations (Northern Ireland) 2018
- Environmental Authorisations (Scotland) Regulations 2016 in Scotland.

These operators will be Permitted and Regulated by:

- the EA in England;
- NRW in Wales
- NIEA in Northern Ireland
- SEPA in Scotland

BUT.....**Everyone has to follow UK Law** – it is an offence to cause pollution:

- Environmental Protection Act 1990
- Environment Act 1995
- Environmental Damage Regulations 2015

Anaerobic Digestion – Where is Secondary Containment Required

Infrastructure requiring secondary containment include

- Liquid feedstock tanks;
- Digesters;
- Digestate storage tanks;
- Chemicals tanks or IBCs for example ferric chloride; and
- Coolants & any other liquids that have potential to cause environmental harm;

The following does not remove the need for secondary containment:

- Storing of pasteurised digestate; and
- Leak detection systems.

The Law and Good Practice

Acts of Parliament and their Regulations are **'the Law'**

Regulators publish or endorse Good Practice **'Guidance'**

Good Practice is:

CIRIA C736 'Containment systems for the prevention of pollution: Secondary, tertiary and other measures for industrial and commercial premises', published in 2014.

Other relevant industry guidance:

ADBA Tool

Failure to maintain adequate containment can lead to Regulator intervention and prosecution should pollution occur.

CIRIA 736

CIRIA 736

- Major update to CIRIA Report 164 (1997).
- CIRIA Report 163 - Construction of Bunds for Oil Storage Tanks withdrawn
- Funded by Environment Agency and SEPA

Purpose of C736

- Reduce the risk of harm to the environment (essentially ground and water) through the storage of hazardous substances – more properly called ‘inventory’

How does C736 achieve this?

- Generally reduce rather than completely eliminate the risk
- Risk assessment that ‘balances’ the potential harm against the resources required, i.e. measures that are proportionate to the risk

C736 – General Principles

- Source – Pathway – Receptor

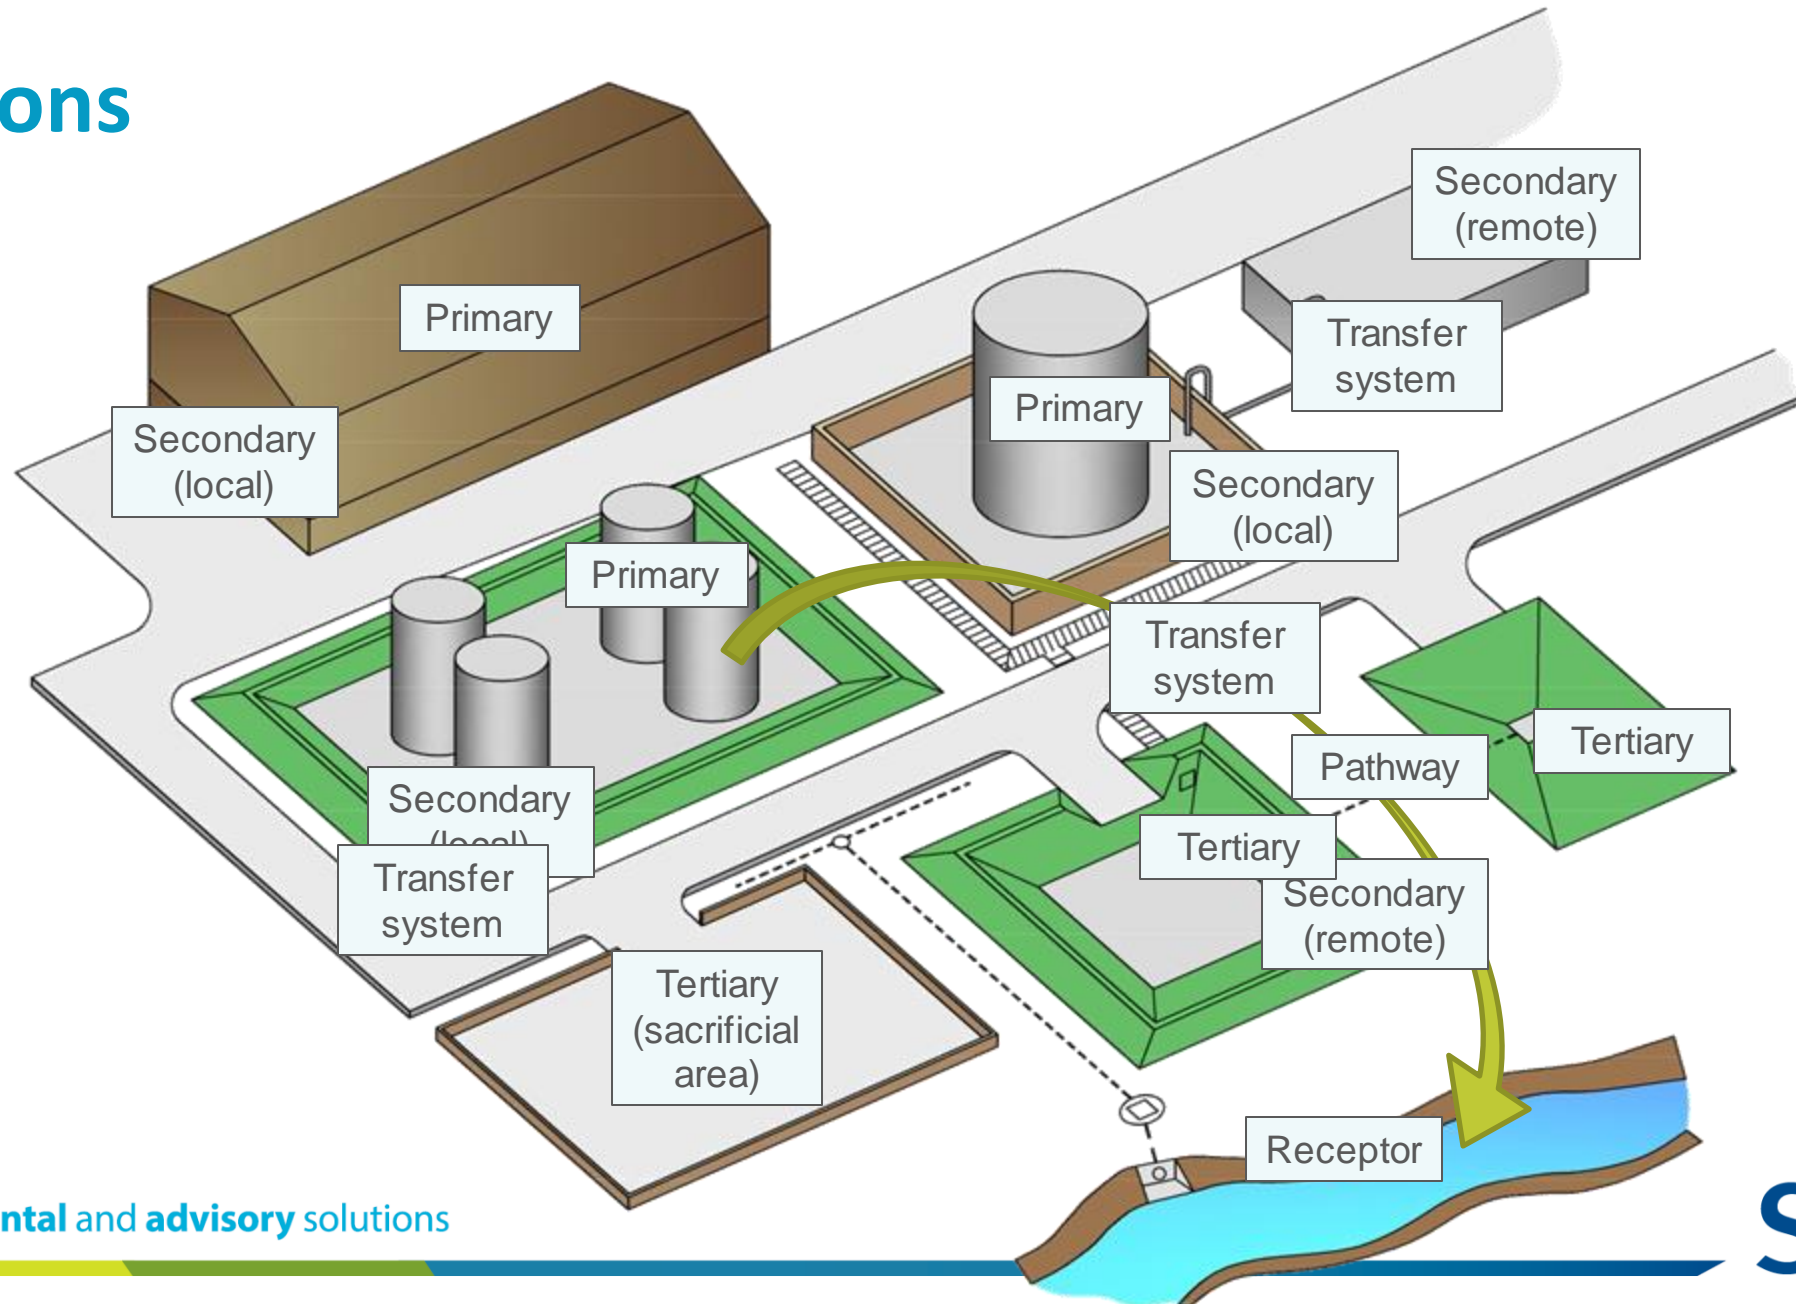

- Source and Receptors generally are 'fixed'
- Containment seeks to 'break' or 'reduce' the Pathway

Primary Containment

Definitions

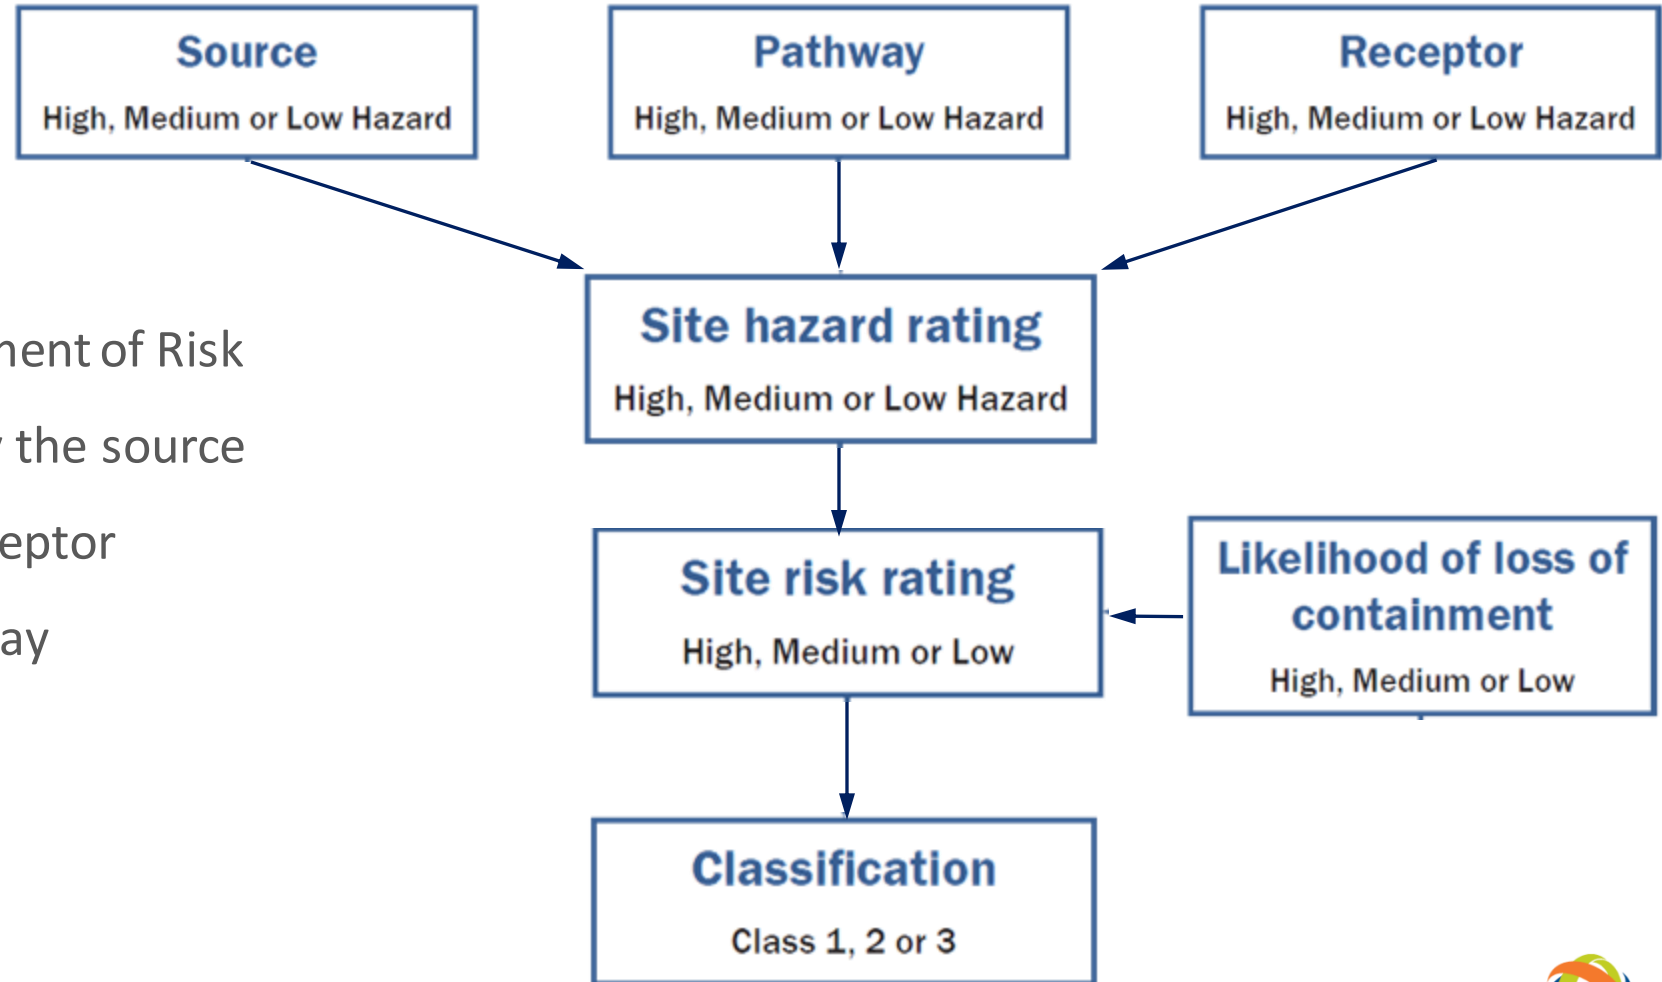

Scope of Guidance

- **Part 1**
 - Introduction
 - Risk Assessment and Classification
 - Containment Options
 - System Capacity
- **Part 2**
 - Assessment of existing installations
- **Part 3**
 - Covers the detail of the design of various containment options

Some key concepts.....

Risk Assessment and Classification

- Classification based on assessment of Risk
 - Hazard presented by the source
 - Sensitivity of the receptor
 - Presence of a pathway

Bund Classes

- **Class 1** – Low hazard
- **Class 2** – Medium hazard
- **Class 3** – High hazard

- **Bund Class impacts on the design, specification and construction of containment:**
 - Layout – proximity to bund wall to prevent jetting
 - Material – reinforced blockwork only permitted for Class 1
 - Drainage – gravity drainage of bunds not permitted for Class 2 and 3
 - Detailing – waterbars required in kicker joints for Class 2 and 3
 - Leak detection – requirement for earthwork bunds, below ground bunds, class 3 bund

Volume of Containment

- **Previous 110% rule**
 - Additional 10% to cover a multitude of sins...
 - Generally adequate to contain firefighting agents (foam) and rainfall
 - BUT still mandatory minimum for some regulations e.g. OSR
- **What has to be contained?**
 - 100% of the contents for single tank
 - For multiple tanks based on credible failure scenario
 - Generally brimful capacity should be adopted
 - Nominal or tank rated capacity may be appropriate
 - Rainfall
 - Firefighting and cooling water applied during an incident

Other Bund Volume Considerations

- **Freeboard**
 - Accounts for uncertainty
 - Firefighting agents (foam) in addition to inventory and rainfall
 - Dynamic effects
- **Firefighting and Cooling Water**
 - 'Explosion' more likely than a fire at most AD plants
 - C736 provides review of methods to provide a first estimate of fire water volumes if required

Failure to manage firefighting water one of the principal cause of environmental harm

Tertiary Containment

- Where will firefighting and cooling water go?

- Mobilising storage

- Emergency and temporary containment

Existing Facilities - Overview

- **Few new facilities being constructed, generally**
 - Extensions
 - Modification
 - Upgrading
- **Recent inspection indicate uncertainty with form of construction and compliance with good practice recommendations**
- **Assessment of existing containment facilities**
 - *'Source, Pathway, Receptor' assessment for required bund Class*
 - Gap analysis of what is required versus the existing facility
 - Duty holder responsibility to demonstrate facility is appropriate for the risk
 - Regular reviews and any time that the nature of the inventory changes

Existing Facilities – Focus of C736 Guidance

- **Difference to ‘best practice’ construction**
 - Why it is different to a concrete wall
 - Duty Holder should seek professional advice
 - Not rely on ‘have-a-go’ maintenance staff or local builder
- **Impermeably**
 - Joints
 - Penetrations
 - Earthworks
 - Lining systems
- **Fire resistance**
 - Joints – metal waterbars
 - Penetrations – detailed to allow movement and remain sealed

Existing Facilities – Baseline Surveys

- **Asset Survey**
 - Volume of inventory
 - Type and volume of containment
 - Type of construction
 - Potential leakage pathways (joints, drainage, penetrations etc.)

- **Further Investigations**
 - May be required to establish type of construction
 - Ability to withstand loads – foundations
 - Ability to resist fire – rendered blockwork wall or reinforced concrete
 - Type and detail of joints – fire and chemical resistance able to accommodate movement

Existing Facilities – Baseline Surveys

- **Gap Analysis**

- Compare bund Class
- Identify improvements
 - Repair and upgrading
 - Tertiary containment
- Regulator engagement
- Aim is to reduce the risk of causing pollution to occur

Note that it is not the intention of the guidance to be a blanket retrospective application to existing facilities

- **Maintenance Plans**

- Regular maintenance and inspection
- Requirement of EPC, PPC and COMAH
- C736 provides some guidance

Existing Facilities – Maintenance and Inspection Regimes

C736 suggest the following checks by **Operational staff**

- **Daily**
 - Visual inspection including drip trays
 - Remove wastes, remove water
 - Note any damage to tanks, leaks, spills and immediate remediation
 - Check alarms and pumps
- **Weekly**
 - Check drain covers/grids
- **After rainfall**
 - Check for excess water

Existing Facilities – Maintenance and Inspection Regimes

Checks by **Works Engineer or similar suitably qualified manager**

- **Annually** – tanks, pipework, loading bays etc
 - Cracks and corrosion
 - Seals and joints
 - Damage
 - Integrity
 - Signage
 - Equipment

Link to a maintenance plan.

Existing Facilities – Maintenance and Inspection Regimes

5 yearly (or where changes have occurred)

- Site risk assessment and containment classification should be reviewed
- Review details of inspections carried out
- Review maintenance identified, planned and completed

Checks by a **suitably qualified assessor**

- **10+ yearly**

- Wall thickness NDT
- Surface inspections
- Leak detection

Obtaining the guidance

- CIRIA publication C736 Containment systems for the prevention of pollution can be freely downloaded from the CIRIA website.
- Please do register with CIRIA and download the document rather than circulate a copy as this enables CIRIA to keep track of who has copies and will be able to email you notice of any updates.

Obtaining assistance

SLR Consulting can provide a range of Consultants who can help Operators discharge their duties under CIRIA C736.

- SLR can provide services such as
 - Inspection of containment facilities
 - Gap analysis against RGP and BAT requirements
 - Development of improvement plans
 - Negotiation with Regulators
 - Drainage and hydrology studies
 - Spill modelling
 - Climate change and resilience analysis
 - Tertiary containment and firewater modelling

Questions?

Biological waste treatment: appropriate measures for permitted facilities

From: **Environment Agency** (</government/organisations/environment-agency>)

Published 21 September 2022

Updated: 2 February 2024 - [See all updates](#)

[Contents](#)

4. Site location, design and capacity

Issues to consider relating to site location, design and capacity, reducing or preventing contamination and primary

and secondary containment for new and existing sites.

This section applies to all processes and operations.

4.1 Site location

1. You should consider the potential impacts on local sensitive receptors when selecting a new site.

2. You must choose the location of your site so you prevent or minimise fugitive emissions to air. This includes dust, bioaerosols, odours and other gaseous emissions including ammonia.

3. You should also consider the possible impact of climate change, especially:

- flood risk
- drought
- extreme temperatures
- other extreme weather events

Existing sites must consider the risk of climate change on their existing facilities and as far as possible have contingency measures in place.

4.2 Site design

1. The storage and handling of waste on site must be located as far as technically and economically possible from any sensitive receptors.
2. When designing your biological treatment site you must consider minimising the unnecessary handling of waste between each step in the process, from receipt, during treatment, and during storage of the final material.
3. All biological treatment facilities must be designed by a suitably qualified or experienced person. Facilities must be built to recognised industry standards.
4. You must design your plant to minimise emissions during the transfer of waste from one step to another. For example, the transfer of feedstock from reception to a feed hopper.

You must consider at the design stage where there is an opportunity to cover storage areas and where possible contain, treat and abate air using appropriately engineered plant.

5. To prevent emissions (including ammonia) you must cover digestate stores and compost liquor. Where fixed covers are used these must have a system that can remove and effectively treat emissions.
6. You must consider the location of access doors in relation to sensitive receptors to prevent loss of containment.

Reducing or preventing contamination

7. Good site design and process flow reduces the risk of cross-contamination of pasteurised or sanitised and stabilised materials.

8. You must consider the design, process flow and intended use of outputs during the planning and design stage of your plant to prevent cross contamination of treated and untreated material.

Preventing cross contamination by segregation relies on both the:

- physical separation of waste
- procedures that identify when and where wastes are stored

Primary and secondary containment

New facilities

9. When designing new plant, you must make sure that you assess the environmental impacts from the plant's operating life and eventual decommissioning.

10. All critical structures should be designed and built to construction and design regulation.

11. All secondary containment must meet the requirements of the Construction Industry Research and Information Association (CIRIA) report [C736 \(https://www.ciria.org/ItemDetail?iProductCode=C736F&Category=FREEPUBS&WebsiteKey=3f18c87a-d62b-4eca-8ef4-9b09309c1c91\)](https://www.ciria.org/ItemDetail?iProductCode=C736F&Category=FREEPUBS&WebsiteKey=3f18c87a-d62b-4eca-8ef4-9b09309c1c91) or an equivalent standard.

12. A chartered civil or structural engineer must provide construction quality assurance (CQA) and validate the construction of all facilities. You can use a chartered geotechnical or structural engineer for lagoon design and construction. All pipe work must be designed to allow for inspection or integrity checks, or both.

13. Drainage and vessels must be accessible to allow cleaning and maintenance.

14. You must design underground tanks to allow inspection and must have secondary containment with leakage detection.

15. You must consider the life of all plant and its decommissioning at the design stage. This includes tanks, pipework and drainage and lagoon structures.

Existing sites

16. Operators of existing sites must use a chartered engineer to carry out a detailed assessment of primary and secondary containment where it has not previously been validated to industry recognised standards.

17. You must assess containment structures against CIRIA 736. This is a risk-based assessment. Where you have not used CIRIA 736, the assessment must be an equivalent approved standard. Where improvements are identified, you must propose an improvement programme or process monitoring to make sure there are no uncontrolled process releases.

18. You should monitor underground pipe work or ducting and drainage to make sure there is no leakage.

19. Underground tanks should have secondary containment. You must implement a method of inspection and leakage detection as a minimum.

4.3 Site capacity

1. You must determine the actual physical capacity needed to manage, treat and store waste on your site without causing pollution.

2. You must include factors like seasonal changes in feedstock supplies and in markets for outputs.

Exceeding the site capacity will significantly increase the risks of pollution. This includes the capacity of storm tanks.

3. You must provide enough space on site to operate your plant and equipment safely, and to allow easy and environmentally safe storage and treatment.

4. Environmental permits set limits on the amount of waste you can:

- bring onto site on an annual basis
- treat at any one time
- store at any one time

To determine the daily and annual throughput, you must establish the following critical volumes or tonnes:

- waste storage capacity at any one time for both incoming waste and processed material
- residence time for waste to be fully treated and recycled

Industrial Emissions Directive (IED)

Dear Georgina,

Thank you for your letter of 7th June 2023 regarding the Industrial Emissions Directive (IED) and the important issue of obtaining environmental permits for sludge treatment centres (STCs).

I can confirm that Thames Water supports the objectives of the IED in delivering environmental protection, but we cannot commit to meeting all the requirements set out in the 'Appropriate Measures' guidance (issued September 2022), by December 2024. In addition, we have concerns regarding the overall value for money for customers of this work, in the context of other planned environmental improvements. I would also note that, given the constraints we face in terms of what we are able to deliver, we will inevitably need to focus the capacity we have on those things that matter most for our customers and the environment. The resource that would be required to undertake the full scale of the work envisaged by an extensive interpretation of the IED would mean displacing work to be undertaken on other priority areas.

We accept that the Environment Agency confirmed the need to obtain environmental permits for sludge treatment in July 2019. However, this was confirmed after the industry PR19 price review process and was therefore, not a directly funded activity within the AMP7 period (2020-2025).

Since the guidance was clarified we have been undertaking a gap analysis of the requirements at each site to understand the implications and scale of investment and activity required to develop a programme of works we can commit to. We are now undertaking a range of enabling activities to inform our approach and assess risks. These include:

- Odour emissions data collection and dispersion modelling for the sludge treatment areas for each site
- Developing the liquor monitoring programme
- Undertaking ambient bioaerosol monitoring
- Undertaking Residual Biogas Potential (RBP) testing at an initial five Sludge Treatment Centres
- Continuing to develop the waste acceptance procedures for inter-site sludge, cake, and liquors and for third-party waste imports

In terms of what we need to deliver, and by when, it is already clear to us that we will not be able to comply fully with the 'Appropriate Measures' guidance issued in September 2022. The highly prescriptive approach set out in the measures goes far beyond the original BAT requirements to achieve compliance.

Our current estimate is that the cost of implementing IED aligned with the 'Appropriate Measures' guidance will be in the region of £480m Capex and a £40m increase in Opex per annum. This is a significant change to the assumptions made back in 2019. We need to do further work to scope out the detail of what is required, but a programme of this size will need to be delivered over more than one AMP, especially when considering the requirement to maintain overall treatment capacity during construction activity and the wide range of other infrastructure improvements that will be required in AMP8.

The constraints on delivering more quickly include the availability of skilled resources and additional capability to manage such a large investment programme, and the ability of the supply chain to ramp up to the rates required. We and other companies will need to do significant work to create the necessary pathways and recruit the required skilled individuals to support this programme. Feedback from other companies indicates that the whole industry is already experiencing stretch from key Tier 1 suppliers in delivering existing programmes.

An additional important aspect that is causing us concern is the cost benefit of the requirements now being specified. As we mentioned in our letter to David Dangerfield of 15th May, we are concerned that we are collectively at risk of delivering poor value for our customers' money, at a time when their ability to pay is stretched and when there are many other environmental improvements that will require to be funded in AMP 8.

Against this background, I want to leave you in no doubt that we are fully aligned with the Environment Agency in supporting its wider environmental improvement aims. However, the requirements and timescales set out in the draft permits we have received are not achievable. This is clearly an important issue for both our organisations, and we are keen to meet with yourselves, WaterUK and the wider industry to work towards a solution to achieve the objectives of IED as soon as practicably possible.

Yours sincerely

Cathryn Ross
Interim Co-Chief Executive Officer

Appendix

Timeline

Water Industry Act 1991

1991 CHAPTER 56

An Act to consolidate enactments relating to the supply of water and the provision of sewerage services, with amendments to give effect to recommendations of the Law Commission. [25th July 1991]

Be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

Extent Information

E1 Act extends to England and Wales; for minor variations see s. 223(3)

Modifications etc. (not altering text)

- C1** A reference to a detention centre within the meaning of [Part VIII of the Immigration and Asylum Act 1999 \(c. 33\)](#) to be construed as a reference to a removal centre within the meaning of that Part (10.2.2003) by virtue of [2002 c. 41, s. 66\(4\)](#); S.I. 2003/1, [art. 2](#), [Sch.](#)
- C2** Act modified (temp.) (29.3.2005) by [The Water Act 2003 \(Commencement No. 4, Transitional Provisions and Savings\) Order 2005 \(S.I. 2005/968\)](#), [art. 4](#), {[Sch. 2 paras. 3, 4](#)}
- C3** Act: certain provisions modified (temp.) (8.3.2004) by [The Water Act 2003 \(Commencement No. 1 and Transitional Provisions\) Order 2004 \(S.I. 2004/641\)](#), [art. 6](#), [Sch. 3 para. 7](#)
- C4** Act: transfer of functions (W.) (except ss. 1, 14, 15, 17, 24(2)(d), 27(3), 32-35, 152(2), 193(3), 206(3) (e), [Schs. 1, 4](#) and subject to entry in [Sch. 1](#) of the amending S.I.) (1.7.1999) by [1999/672](#), [art. 2](#), [Sch. 1](#) (as amended by [2003 c. 37, s. 100\(2\)\(4\)\(6\)\(7\)](#); S.I. 2004/2528, [art. 2\(s\)](#); S.I. 2006/3334, [Sch.](#))
- C5** Act restricted (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 15\(2\)\(a\)](#), 225(2).
- C6** Act restricted (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 18\(2\)](#), 225(2).
- C7** Act: definitions of "service pipe" and "water main" applied (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 162\(6\)](#), 225(2).
Act: definition of "sewerage services" applied (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 173](#), [Sch. 20 para. 8\(1\)](#), [s. 207\(8\)](#), 225(2).
Act: definition of "service pipe" applied (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 176\(7\)](#) and 195(7), 225(2).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Act: definition of "stopcock" applied (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 176\(7\)](#) and 221(1), 225(2).

Act: definition of "trunk main" applied (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 186\(1\)](#), 225(2).

Act: definition of "drain" applied (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 221\(1\)](#), 225(2).

C8 [A table showing the derivation of the provisions of this Consolidation Act will be found at the end of the Act. The table has no official status.]

C9 Act excluded (01.12.1991) by [Statutory Water Companies Act 1991 \(c. 58, SIF 130\)](#), [ss. 11\(2\)](#), 17(2).

C10 Act: definition of "public sewers" applied (01.12.1991) by [Land Drainage Act 1991 \(c. 59, SIF 73:1\)](#), [ss. 72\(1\)](#), 76(2) (with [ss. 67\(3\)\(5\)\(8\)](#), [72\(6\)\(8\)](#), [74\(3\)\(4\)](#)).

C11 Act applied (8.8.2017) by [The Wrexham Gas Fired Generating Station Order 2017 \(S.I. 2017/766\)](#), [Sch. 9 para. 34](#)

Commencement Information

II Act wholly in force at 1.12.1991 see s. 223(2)

PART I

PRELIMINARY

The Director General of Water Services

1 The Director General of Water Services.

F1

Textual Amendments

F1 S. 1 repealed (1.4.2006) by [Water Act 2003 \(c. 37\)](#), [ss. 34\(4\)](#), [101\(2\)](#), [105\(3\)](#), [Sch. 9 Pt. 2](#); S.I. 2005/2714, [art. 4\(a\)\(g\)\(i\)](#) (with [Sch. para. 8](#))

[^{F2}1A Water Services Regulation Authority

- (1) There shall be a body corporate to be known as the Water Services Regulation Authority (in this Act referred to as “the Authority”) for the purpose of carrying out the functions conferred on or transferred to it by this Act or under or by virtue of any other enactment.
- (2) The functions of the Authority are performed on behalf of the Crown.
- (3) Schedule 1A to this Act shall have effect with respect to the Authority.
- (4) In Welsh the Authority may be known as “Awdurdod Rheoleiddio Gwasanaethau Dŵr”.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Textual Amendments

- F2** S. 1A inserted (1.4.2006) by [Water Act 2003 \(c. 37\)](#), **ss. 34(1)**, 105(3); S.I. 2005/2714, **art. 4(a)** (with [Sch. para. 8](#))

General duties

2 General duties with respect to water industry.

(1) This section shall have effect for imposing duties on the Secretary of State and on the Director as to when and how they should exercise and perform [^{F3}the powers and duties conferred or imposed on the Secretary of State or the Authority by virtue of any of the relevant provisions.]

[^{F4}(2A) The Secretary of State or, as the case may be, the Authority shall exercise and perform the powers and duties mentioned in subsection (1) above in the manner which he or it considers is best calculated—

- (a) to further the consumer objective;
- (b) to secure that the functions of a water undertaker and of a sewerage undertaker are properly carried out as respects every area of England and Wales;
- (c) to secure that companies holding appointments under Chapter 1 of Part 2 of this Act as relevant undertakers are able (in particular, by securing reasonable returns on their capital) to finance the proper carrying out of those functions;
^{F5} ...
- (d) to secure that the activities authorised by the licence [^{F6}of a water supply licensee or sewerage licensee] and any statutory functions imposed on it in consequence of the licence are properly carried out[^{F7}; and
- (e) to further the resilience objective.]

(2B) The consumer objective mentioned in subsection (2A)(a) above is to protect the interests of consumers, wherever appropriate by promoting effective competition between persons engaged in, or in commercial activities connected with, the provision of water and sewerage services.

(2C) For the purposes of subsection (2A)(a) above the Secretary of State or, as the case may be, the Authority shall have regard to the interests of—

- (a) individuals who are disabled or chronically sick;
- (b) individuals of pensionable age;
- (c) individuals with low incomes;
- (d) individuals residing in rural areas; ^{F8} ...
- (e) customers, of companies holding an appointment under Chapter 1 of Part 2 of this Act, whose premises are [^{F9}household premises (as defined in section 17C)] [^{F10}; and
- (f) customers, of companies holding an appointment under Chapter 1 of Part 2 of this Act, whose premises are below the consumption threshold and in the area of a relevant undertaker whose area is wholly or mainly in Wales.]

but that is not to be taken as implying that regard may not be had to the interests of other descriptions of consumer.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(2D) For the purposes of subsection (2C) above, premises are [^{F11}below the consumption threshold if the total quantity] of water estimated to be supplied to the premises annually for the purposes of subsection (2) of section 17D below is less than the quantity specified in that subsection.

[^{F12}(2DA) The resilience objective mentioned in subsection (2A)(e) is—

- (a) to secure the long-term resilience of water undertakers' supply systems and sewerage undertakers' sewerage systems as regards environmental pressures, population growth and changes in consumer behaviour, and
- (b) to secure that undertakers take steps for the purpose of enabling them to meet, in the long term, the need for the supply of water and the provision of sewerage services to consumers,

including by promoting—

- (i) appropriate long-term planning and investment by relevant undertakers, and
- (ii) the taking by them of a range of measures to manage water resources in sustainable ways, and to increase efficiency in the use of water and reduce demand for water so as to reduce pressure on water resources.

(2DB) For the purposes of subsection (2DA)—

- (a) the reference to water undertakers' supply systems is to be construed in accordance with section 17B;
- (b) the reference to sewerage undertakers' sewerage systems is [^{F13}to be construed in accordance with section 17BA(7).]

(2E) The Secretary of State and the Authority may, in exercising any of the powers and performing any of the duties mentioned in subsection (1) above, have regard to—

- (a) any interests of consumers in relation to electricity conveyed by distribution systems (within the meaning of the Electricity Act 1989);
- (b) any interests of consumers in relation to gas conveyed through pipes (within the meaning of the Gas Act 1986);
- (c) any interests of consumers in relation to communications services and electronic communications apparatus (within the meaning of the Communications Act 2003),

which are affected by the exercise of that power or the performance of that duty.]

[^{F14}(3) Subject to subsection (2A) above, the Secretary of State or, as the case may be, the Authority shall exercise and perform the powers and duties mentioned in subsection (1) above in the manner which he or it considers is best calculated—

- (a) to promote economy and efficiency on the part of companies holding an appointment under Chapter 1 of Part 2 of this Act in the carrying out of the functions of a relevant undertaker;
- (b) to secure that no undue preference is shown, and that there is no undue discrimination in the fixing by such companies of water and drainage charges;

[^{F15}(ba) to secure that no undue preference (including for itself) is shown, and that there is no undue discrimination, in the doing by such a company of—

- (i) such things as relate to the provision of services by itself or another such company, or
- (ii) such things as relate to the provision of services by a water supply licensee or a sewerage licensee;]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) to secure that consumers are protected as respects benefits that could be secured for them by the application in a particular manner of any of the proceeds of any disposal (whenever made) of any of such a company's protected land or of an interest or right in or over any of that land;
 - (d) to ensure that consumers are also protected as respects any activities of such a company which are not attributable to the exercise of functions of a relevant undertaker, or as respects any activities of any person appearing to the Secretary of State or (as the case may be) the Authority to be connected with the company, and in particular by ensuring—
 - (i) that any transactions are carried out at arm's length;
 - (ii) that the company, in relation to the exercise of its functions as a relevant undertaker, maintains and presents accounts in a suitable form and manner;
 - ^{F16}(iii)
 - (e) to contribute to the achievement of sustainable development.
- (4) In exercising any of the powers or performing any of the duties mentioned in subsection (1) above in accordance with the preceding provisions of this section, the Secretary of State and the Authority shall have regard to the principles of best regulatory practice (including the principles under which regulatory activities should be transparent, accountable, proportionate, consistent and targeted only at cases in which action is needed).]
- (5) In this section the references to water and drainage charges are references to—
- (a) any charges in respect of any services provided in the course of the carrying out of the functions of a relevant undertaker; and
 - (b) amounts of any other description which such an undertaker is authorised by or under any enactment to require any of its customers or potential customers to pay.
- ^{F17}(5A) In this section—
- “consumers” includes both existing and future consumers; and
 - “the interests of consumers” means the interests of consumers in relation to—
 - (a) the supply of water by means of a water undertaker's supply system to premises either by water undertakers or by ^{F18}water supply licensees] acting in their capacity as such; and
 - (b) the provision of sewerage services ^{F19}either by sewerage undertakers or by sewerage licensees acting in their capacity as such.]]
- (6) For the purposes of this section—
- ^{F20}(a) subject to subsection (6A) below, the reference in subsection (1) above to ^{F21}the relevant provisions] is a reference to the provisions ^{F22}contained in—
 - (i) Part 2 of this Act (except section 27A and Schedule 3A),
 - (ii) any of sections 37A to 38, 38ZA, 39, 39ZA, 39B to 39D, 40E to 40J, 42, 51CD to 51CG, 63AC to 63AF, 66B, 66CA to 66H, 66K, 66L, 66O(2), 95, 95ZA, 96, 96ZA, 99, 105ZF to 105ZI, 110F to 110J, 110L to 110O, 117E to 117O, 117R, 117S, 143B to 143E, 144ZA to 144ZF, 153, 181, 182, 185, 192A, 192B, 195, 195A and 201 to 203 below, and
 - (iii) any of sections 42 to 54 of the Water Act 2014.]
 - ^{F23}(b)

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

^{F24}(c)

^{F25}[(6A) [^{F26}Subsections (2A) to (4) above and [^{F27}sections 2A and 2B] below] do not apply in relation to anything done by the Director in the exercise of functions assigned to him by section 31(3) below (“Competition Act functions”).

(6B) The Director may nevertheless, when exercising any Competition Act function, have regard to any matter in respect of which a duty is imposed by any of [^{F28}subsections (2A) to (4) above and [^{F29}sections 2A and 2B] below], if it is a matter to which [^{F30}the CMA] could have regard when exercising that function.]

[^{F31}(7) The duties imposed by subsections (2A) to (4) above and [^{F32}sections 2A and 2B] below do not affect the obligation of the Authority or, as the case may be, the Secretary of State to perform or comply with any other duty or requirement (whether arising under this Act or another enactment, by virtue of any [^{F33}[^{F34}assimilated] obligation] or otherwise).]

- F30** Words in s. 2(6B) substituted (1.4.2014) by [The Enterprise and Regulatory Reform Act 2013 \(Competition\) \(Consequential, Transitional and Saving Provisions\) Order 2014 \(S.I. 2014/892\)](#), art. 1(1), **Sch. 1 para. 74** (with art. 3)
- F31** S. 2(7) added (1.4.2005) by [Water Act 2003 \(c. 37\)](#), **ss. 39(9)**, 105(3); S.I. 2005/968, **art. 2(f)** (with savings in art. 4, Schs. 1, 2)
- F32** Words in s. 2(7) substituted (6.4.2015) by [Water Act 2014 \(c. 21\)](#), **ss. 24(2)**, 94(3); S.I. 2015/773, art. 2(1)(c) (with art. 4)
- F33** Words in s. 2(7) substituted (31.12.2020) by [The Floods and Water \(Amendment etc.\) \(EU Exit\) Regulations 2019 \(S.I. 2019/558\)](#), regs. 1(1), **3(2)**; 2020 c. 1, Sch. 5 para. 1(1)
- F34** Word in s. 2(7) substituted (1.1.2024) by [The Retained EU Law \(Revocation and Reform\) Act 2023 \(Consequential Amendment\) Regulations 2023 \(S.I. 2023/1424\)](#), reg. 1(2), **Sch. para. 30(2)(a)**

Modifications etc. (not altering text)

- C13** S. 2 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), regs. 1(1)(b), **3(3)** (with regs. 1(1)(c), 3(2)(5))

[^{F35}2A Strategic priorities and objectives: England

- (1) The Secretary of State may from time to time publish a statement setting out strategic priorities and objectives for the Authority in carrying out relevant functions relating wholly or mainly to England.
- (2) The Authority must carry out those functions in accordance with any statement published under this section.
- (3) In formulating a statement under this section, the Secretary of State—
 - (a) must have regard to the duties imposed on the Authority under section 2,
 - (b) must have regard to social and environmental matters, and
 - (c) may have regard to such other matters as the Secretary of State thinks fit.
- (4) Before publishing a statement under this section, the Secretary of State must consult—
 - (a) the Authority,
 - (b) the Council,
 - (c) relevant undertakers,
 - (d) [^{F36}water supply licensees and sewerage licensees],
 - (e) the Environment Agency,
 - (f) the Welsh Ministers,
 - (g) the NRBW, and
 - (h) anyone else the Secretary of State thinks appropriate.
- (5) Before publishing a statement under this section the Secretary of State must—
 - (a) lay a draft of the statement before Parliament, and
 - (b) then wait until the end of the 40-day period.
- (6) The Secretary of State may not publish the statement under this section if, within the 40-day period, either House of Parliament resolves not to approve it.
- (7) “The 40-day period” means the period of 40 days beginning with the day on which the draft is laid before Parliament (or, if it is not laid before each House on the same day, the later of the days on which it is laid).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (8) When calculating the 40-day period, ignore any period during which Parliament is dissolved or prorogued or during which both Houses are adjourned for more than 4 days.
- (9) In this section “relevant functions relating wholly or mainly to England” means the functions mentioned in [F37 section 2(1)] so far as they relate to appointment areas wholly or mainly in England.
- (10) In subsection (9) “appointment area” means an area for which an appointment is held under Chapter 1 of Part 2.]

Textual Amendments

- F35** Ss. 2A, 2B substituted for s. 2A (6.4.2015) by [Water Act 2014 \(c. 21\)](#), **ss. 24(1)**, 94(3); S.I. 2015/773, art. 2(1)(c) (with art. 4)

- F37** Words in s. 2A(9) substituted (31.3.2017) by [The Water Act 2014 \(Consequential Amendments etc.\) Order 2017 \(S.I. 2017/506\)](#), arts. 1(1), **6(2)**

[F35] **2B Strategic priorities and objectives: Wales**

- (1) The Welsh Ministers may from time to time publish a statement setting out strategic priorities and objectives for the Authority in carrying out relevant functions relating wholly or mainly to Wales.
- (2) The Authority must carry out those functions in accordance with any statement published under this section.
- (3) In formulating a statement under this section the Welsh Ministers—
 - (a) must have regard to the duties imposed on the Authority under section 2,
 - (b) must have regard to social and environmental matters, and
 - (c) may have regard to such other matters as the Welsh Ministers think fit.
- (4) Before publishing a statement under this section, the Welsh Ministers must consult—
 - (a) the Authority,
 - (b) the Council,
 - (c) relevant undertakers,
 - (d) [F38 water supply licensees],
 - (e) the NRBW,
 - (f) the Secretary of State,
 - (g) the Environment Agency, and
 - (h) anyone else the Welsh Ministers think appropriate.
- (5) Before publishing a statement under this section the Welsh Ministers must—
 - (a) lay a draft of the statement before the Assembly, and
 - (b) then wait until the end of the 40-day period.
- (6) The Welsh Ministers may not publish the statement under this section if, within the 40-day period, the Assembly resolves not to approve it.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 3 General environmental and recreational duties.

- (1) It shall be the duty of each of the following, that is to say—
 - (a) the Secretary of State;
 - (b) ^{F40}
 - (c) the Director; and
 - (d) every company holding an appointment as a relevant undertaker,
 in formulating or considering any proposals relating to any functions of a relevant undertaker (including, in the case of such a company, any functions which, by virtue of that appointment, are functions of the company itself) to comply with the requirements imposed in relation to the proposals by subsections (2) and (3) below.
- (2) The requirements imposed by this subsection in relation to any such proposals as are mentioned in subsection (1) above are—
 - (a) a requirement, so far as may be consistent—
 - (i) with the purposes of any enactment relating to the functions of the undertaker; and
 - (ii) in the case of the Secretary of State and the Director, with their duties under section 2 above,
 so to exercise any power conferred with respect to the proposals on the person subject to the requirement as to further the conservation and enhancement of natural beauty and the conservation of flora, fauna and geological or physiographical features of special interest [F41 and, in the case of the exercise of such a power by a company holding an appointment as a relevant undertaker, as to further water conservation] ;
 - (b) a requirement to have regard to the desirability of protecting and conserving buildings, sites and objects of archaeological, architectural or historic interest; and

Status: This version of this Act contains provisions that are prospective.

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (c) a requirement to take into account any effect which the proposals would have on the beauty or amenity of any rural or urban area or on any such flora, fauna, features, buildings, sites or objects.
- (3) The requirements imposed by this subsection in relation to any such proposals as are mentioned in subsection (1) above are, subject to the requirements imposed by subsection (2) above—
- (a) a requirement to have regard to the desirability of preserving for the public any freedom of access to areas of woodland, mountains, moor, heath, down, cliff or foreshore and other places of natural beauty;
 - (b) a requirement to have regard to the desirability of maintaining the availability to the public of any facility for visiting or inspecting any building, site or object of archaeological, architectural or historic interest; and
 - (c) a requirement to take into account any effect which the proposals would have on any such freedom of access or on the availability of any such facility.
- (4) Subsections (1) to (3) above shall apply so as to impose duties on the Director and any company holding an appointment as a relevant undertaker in relation to any proposal relating to—
- (a) the functions of [^{F42}the Environment Agency]; ^{F43} ...
 - ^{F44}(aa) the functions of the NRBW; or]
 - (b) the functions of an internal drainage board,
- as they apply in relation to any proposals relating to the functions of such an undertaker; and for the purposes of this subsection the reference in subsection (2)(a) above to the functions of the undertaker shall have effect as a reference to the functions of [^{F45}the Environment Agency][^{F46}, the NRBW,] or, as the case may be, of the internal drainage board in question.
- (5) Subject to obtaining the consent of any navigation authority, harbour authority or conservancy authority before doing anything which causes navigation which is subject to the control of that authority to be obstructed or otherwise interfered with, it shall be the duty of every company holding an appointment as a relevant undertaker to take such steps as are—
- (a) reasonably practicable; and
 - (b) consistent with the purposes of the enactments relating to the functions of the undertaker in question,
- for securing, so long as that company has rights to the use of water or land associated with water, that those rights are exercised so as to ensure that the water or land is made available for recreational purposes and is so made available in the best manner.
- (6) It shall be the duty of a company holding an appointment as a relevant undertaker, in determining what steps to take in performance of any duty imposed by virtue of subsection (5) above, to take into account the needs of persons who are chronically sick or disabled.
- (7) The obligations under this section of a company holding an appointment as a relevant undertaker shall be enforceable under section 18 below by the Secretary of State.
- (8) Nothing in this section or the following provisions of this Act shall require recreational facilities made available by a relevant undertaker to be made available free of charge.
- (9) References in this section to the functions of a relevant undertaker shall be construed, without prejudice to section 156(7) below, as if those functions included the

4 Environmental duties with respect to sites of special interest.

- (1) Where [^{F47}Natural England] or [^{F48}the NRBW] are of the opinion that any area of land in England or, as the case may be, in Wales—
- (a) is of special interest by reason of its flora, fauna or geological or physiographical features; and
 - (b) may at any time be affected by schemes, works, operations or activities of a relevant undertaker,
- [^{F49}Natural England or (as the case may be) [^{F50}the NRBW]] shall notify the fact that the land is of special interest for that reason to every relevant undertaker whose works, operations or activities may affect the land.
- (2) Where a National Park authority or the Broads Authority is of the opinion that any area of land in a National Park or in the Broads—
- (a) is land in relation to which the matters for the purposes of which section 3 above has effect are of particular importance; and
 - (b) may at any time be affected by schemes, works, operations or activities of a relevant undertaker,
- the National Park authority or Broads Authority shall notify the fact that the land is such land, and the reasons why those matters are of particular importance in relation to the land, to every relevant undertaker whose works, operations or activities may affect the land.
- (3) Where a relevant undertaker has received a notification under subsection (1) or (2) above with respect to any land, that undertaker shall consult the notifying body before carrying out any works, operations or activities which appear to that undertaker to be likely—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) to destroy or damage any of the flora, fauna, or geological or physiographical features by reason of which the land is of special interest; or
 - (b) significantly to prejudice anything the importance of which is one of the reasons why the matters mentioned in subsection (2) above are of particular importance in relation to that land.
- (4) Subsection (3) above shall not apply in relation to anything done in an emergency where particulars of what is done and of the emergency are notified to [^{F51}Natural England], [^{F48}the NRBW], the National Park authority in question or, as the case may be, the Broads Authority as soon as practicable after that thing is done.
- (5) The obligations under this section of a relevant undertaker shall be enforceable under section 18 below by the Secretary of State.
- (6) In this section—
- “the Broads” has the same meaning as in the ^{M1}Norfolk and Suffolk Broads Act 1988; ^{F52} . . .
- ^{F52} . . .
- and section 3(9) above shall apply, as it applies in relation to that section, for construing (in accordance with section 6 below) any references in this section to a relevant undertaker.

Textual Amendments

PART II

APPOINTMENT AND REGULATION OF UNDERTAKERS

CHAPTER I

APPOINTMENTS

Making of appointments

6 Appointment of relevant undertakers.

- (1) Subject to the following provisions of this Chapter, a company may be appointed—
 - (a) by the Secretary of State; or
 - (b) with the consent of or in accordance with a general authorisation given by the Secretary of State, by the Director,to be the water undertaker or sewerage undertaker for any area of England and Wales.
- (2) Without prejudice to the obligation of a company holding an appointment under this Chapter to comply with the conditions of its appointment, the appointment of a company to be the water undertaker or sewerage undertaker for any area shall have the effect, while the appointment remains in force—
 - (a) of requiring the company to perform any duty imposed by or under any enactment on an undertaker of the relevant description (that is to say, a water undertaker or, as the case may be, sewerage undertaker);
 - (b) of authorising the company, for the purposes of, or in connection with, the carrying out of any of the functions of an undertaker of the relevant description, to exercise any power conferred by or under any enactment on an undertaker of that description;
 - (c) of requiring enactments and subordinate legislation authorising or requiring anything to be done in relation to an undertaker of the relevant description to be construed as authorising or requiring that thing to be done in relation to that company; and
 - (d) of requiring other references in any enactment or subordinate legislation to an undertaker of the relevant description, or to the area of that undertaker, to be construed, so far as necessary for the purposes of, or in connection with, the carrying out by that company of the functions of an undertaker of that description, as references to that company or, as the case may be, to that area.
- (3) The appointment of a company to be a relevant undertaker shall be by service on the company of an instrument in writing containing the appointment and describing the area for which it is made.
- (4) A single instrument may contain the appointment of a company to be the sewerage undertaker for an area and the appointment of the same company to be the water undertaker for the whole or any part of that area or for an area which includes the whole or any part of that area.
- (5) A company shall not be appointed to be a water undertaker [^{F60}or a sewerage undertaker] unless it is a limited company ^{F61}...

Status: This version of this Act contains provisions that are prospective.

Modifications etc. (not altering text)

- C14** S. 6 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), **Sch. 1 para. 2** (with reg. 1(1)(c))

7 Continuity of appointments, replacement appointments etc.

(1) It shall be the duty of the Secretary of State to secure that such appointments are made under this Chapter as will ensure that for every area of England and Wales there is at all times both—

- (a) a company holding an appointment under this Chapter as water undertaker; and
- (b) whether or not the same company in relation to the whole or any part of that area, a company holding an appointment as sewerage undertaker.

(2) Subject to the following provisions of this section—

- (a) the Secretary of State; and
- (b) with the consent of or in accordance with a general authorisation given by the Secretary of State, the Director,

shall have power, by notice to a company holding an appointment under this Chapter, to terminate the appointment or to vary the area to which it relates.

(3) The appointment of a company to be a water undertaker or sewerage undertaker shall not be terminated or otherwise cease to relate to or to any part of any area except with effect from the coming into force of such appointments and variations replacing that company as a relevant undertaker as secure either—

- (a) that another company becomes the water undertaker or, as the case may be, sewerage undertaker for that area or part or for an area that includes that area or part; or
- (b) that two or more companies each become the water undertaker or, as the case may be, sewerage undertaker for one of a number of different areas that together constitute or include that area or part.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) An appointment or variation replacing a company as a relevant undertaker shall not be made in relation to the whole or any part of the area to which that company's appointment as water undertaker or, as the case may be, sewerage undertaker relates except where—
- (a) that company consents to the appointment or variation;
 - (b) the appointment or variation relates only to parts of that area none of the premises in which is served by that ^{F64}company;
 - (bb) the appointment or variation relates only to parts of that area and the conditions mentioned in subsection (5) below are satisfied in relation to each of the premises in those parts which are served by that company; or]
 - (c) the appointment or variation is made in such circumstances as may be set out for the purposes of this paragraph in the conditions of that company's appointment.
- ^{F65}[(5) The conditions are that—
- ^{F66}(a)
 - I the premises are, or are likely to be, supplied with not less than the following quantity of water in any period of twelve months:
 - (i) if the area of the relevant undertaker concerned is wholly or mainly in Wales, 250 megalitres;
 - (ii) in all other cases, [^{F67}50 megalitres] ; and]]
 - (b) the person who is the customer in relation to the premises consents in writing to the appointment or variation.
 - (6) The Secretary of State may, after consulting the Director, make regulations amending subsection (5)(a) above by substituting, for the quantity of water for the time being specified there, such smaller quantity as he considers appropriate.

8 Procedure with respect to appointments and variations.

- (1) An application for an appointment or variation replacing a company as a relevant undertaker shall be made in such manner as may be prescribed.
- (2) Within fourteen days after making an application under this section, the applicant shall—
- (a) serve notice of the application ^{F68}on—
 - (i) the existing appointee,
 - (ii) if the application relates to the replacement of a water undertaker whose area is wholly or mainly in England, the Chief Inspector of Drinking Water,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (iii) if the application relates to the replacement of a water undertaker whose area is wholly or mainly in Wales, the Chief Inspector of Drinking Water for Wales if there is one, or the Chief Inspector of Drinking Water if section 86(1B)(b) applies,
 - (iv) the appropriate agency, and
 - (v) every] local authority whose area includes the whole or any part of the area to which the application relates; and
 - (b) publish a copy of the notice in such manner as may be prescribed.
- (3) Before making an appointment or variation replacing a company as a relevant undertaker, the Secretary of State or the Director shall give notice—
 - (a) stating that he proposes to make the appointment or variation;
 - (b) stating the reasons why he proposes to make the appointment or variation; and
 - (c) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed appointment or variation may be made.
- (4) A notice under subsection (3) above shall be given—
 - (a) by publishing the notice in such manner as the Secretary of State or, as the case may be, the Director considers appropriate for bringing it to the attention of persons likely to be affected by the making of the proposed appointment or variation; and
 - (b) by serving a copy of the notice [F69] on—
 - (i) the existing appointee,
 - (ii) if the proposed appointment or variation would replace a water undertaker whose area is wholly or mainly in England, the Chief Inspector of Drinking Water,
 - (iii) if the proposed appointment or variation would replace a water undertaker whose area is wholly or mainly in Wales, the Chief Inspector of Drinking Water for Wales if there is one, or the Chief Inspector of Drinking Water if section 86(1B)(b) applies,
 - (iv) the appropriate agency, and
 - (v) every] local authority whose area includes the whole or any part of the area to which the proposed appointment or variation relates.
- (5) As soon as practicable after making an appointment or variation replacing a company as a relevant undertaker, the Secretary of State or the Director shall—
 - (a) serve a copy of the appointment or variation on the existing appointee; and
 - (b) serve notice of the making of the appointment or variation [F70] on—
 - (i) if the appointment or variation replaces a water undertaker whose area is wholly or mainly in England, the Chief Inspector of Drinking Water,
 - (ii) if the appointment or variation replaces a water undertaker whose area is wholly or mainly in Wales, the Chief Inspector of Drinking Water for Wales if there is one, or the Chief Inspector of Drinking Water if section 86(1B)(b) applies,
 - (iii) the appropriate agency, and
 - (iv) every] local authority whose area includes the whole or any part of the area to which the appointment or variation relates,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

and as soon as practicable after exercising any power to vary the area to which an appointment under this Chapter relates, the Secretary of State shall send a copy of the variation to the Director.

(6) In this section “the existing appointee”, in relation to an appointment or variation replacing a company as a relevant undertaker, means the company which is replaced in relation to the whole or any part of the area to which the appointment or variation relates or, where there is more than one such company, each of them.

[^{F71}(6A) In this section “the appropriate agency”, in relation to the replacement of a relevant undertaker, means—

- (a) the Environment Agency, if the undertaker's area is wholly in England;
- (b) the NRBW, if the undertaker's area is wholly in Wales;
- (c) both the Environment Agency and the NRBW, if the undertaker's area is partly in England and partly in Wales.]

^{F72}[(7) The Secretary of State may by regulations impose such additional procedural requirements as he considers appropriate for any case where the conditions mentioned in section 7(5) above are required to be satisfied in relation to an application for an appointment or variation replacing a company as a relevant undertaker.]

9 Duties affecting making of appointments and variations.

- (1) Before making an appointment or variation replacing a company as a relevant undertaker, the Secretary of State or the Director shall consider any representations or objections which have been duly made in pursuance of the notice under section 8(3) above and have not been withdrawn.
- (2) Before making an appointment or variation replacing a company as a relevant undertaker, the Secretary of State shall consult the Director.
- (3) In determining whether to make an appointment or variation by virtue of section 7(4)(b) above in relation to any part of an area, the Secretary of State or, as the case may be, the Director shall have regard, in particular, to any arrangements made or expenditure incurred by the existing appointee for the purpose of enabling premises in that part of that area to be served by that appointee.
- (4) It shall be the duty of the Secretary of State or, as the case may be, of the Director—
 - (a) in making an appointment or variation replacing a company as a relevant undertaker; and
 - (b) where he makes such an appointment or variation, in determining what provision is to be made with respect to the fixing by the new appointee of any water or drainage charges,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

to ensure, so far as may be consistent with his duties under Part I of this Act, that the interests of the members and creditors of the existing appointee are not unfairly prejudiced as respects the terms on which the new appointee could accept transfers of property, rights and liabilities from the existing appointee.

(5) In this section—

“existing appointee”, in relation to an appointment or variation replacing a company as a relevant undertaker in relation to any area or part of an area, means the company which is replaced by that appointment or variation;

“new appointee”, in relation to such an appointment or variation, means the company which by virtue of the appointment or variation becomes a relevant undertaker for the area or part of an area in question;

“water or drainage charges” means

- (a) charges in respect of any services provided in the course of the carrying out of the functions of a water undertaker or sewerage undertaker; or
- (b) amounts of any other description which such an undertaker is authorised by or under any enactment to require any person to pay.

10 Transitional provision with respect to replacement appointments.

[1] Schedule 2 to this Act shall have effect for enabling provision to be made with respect to cases in which a company is replaced by another as a relevant undertaker by an appointment or variation under this Chapter.

^{F73}[2] Subsections (3) [^{F74}to (4)] below apply where, by such an appointment or variation, one company (“the new undertaker”) is to replace another company as a relevant undertaker, but the appointment or variation has not come into force.

(3) The following provisions of this Act shall (except where they are inapplicable to the kind of undertaker in question) apply in relation to the new undertaker as if the appointment or variation had come into force—

- (a) sections 18 to 24 and Schedule 3;
- (b) sections 32 to 35;
- (c) section 155 and Schedule 9;
- (d) sections 156, 158 to 161 and 163 to 167 and Schedule 11;
- (e) sections 168 to 171, 173, 174, 178 to 180 and Schedule 12;
- (f) sections 181 to 183 and Schedule 13;
- (g) sections 184 to 188 and Schedule 14;
- (h) sections 189 to 192, 197 to 200, 202, 203, 206, 208, 209, 211, 212 and 217.

[To the extent that charging rules issued under section 144ZA relate to charges imposed ^{F75}(3A) or security required by a relevant undertaker under section 185, those rules are to apply in relation to the new undertaker as if the appointment or variation had come into force.]

(4) Such of the conditions imposed on the new undertaker under section 11 below as the Director may specify in a written notice given by him to the undertaker shall have effect, in relation to the operation of any provision mentioned in subsection (3) above before the appointment or variation comes into force, as if the appointment or variation had come into force.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) The Secretary of State may by regulations amend subsection (3) above by adding to, removing or modifying references to provisions of this Act.]

Conditions of appointments

11 Power to impose conditions.

- (1) An appointment under this Chapter may include—
- such conditions as appear to the Secretary of State or, as the case may be, the Director to be requisite or expedient having regard to the duties imposed on him by Part I of this Act;
 - conditions for the purposes of section 7(4)(c) above; and
 - conditions requiring the rendering to the Secretary of State of a payment on the making of an appointment, or payments while such an appointment is in force, or both, of such amount or amounts as may be determined by or under the conditions.
- (2) Conditions may be included by virtue of subsection (1)(a) above in an appointment under this Chapter whether or not they are connected with the supply of water, the provision of sewerage services or the exercise or performance of any power or duty conferred or imposed by or under any enactment on water undertakers or sewerage undertakers.
- (3) Conditions included in an appointment under this Chapter may contain provision for the conditions to cease to have effect or be modified at such times, in such manner and in such circumstances as may be specified in or determined by or under the conditions.
- (4) Any provision included by virtue of subsection (3) above in an appointment under this Chapter shall have effect in addition to the provision made by this Chapter with respect to the modification of the conditions of an appointment.
- (5) For the purposes of this Act where the same instrument contains an appointment of the same company to be both a water undertaker and a sewerage undertaker (whether or not for the same area), all the conditions included in that instrument by virtue of

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

this section shall have effect, irrespective of their subject-matter, as conditions of both appointments.

- (6) Where an instrument of appointment has been served under subsection (3) of section 6 above on any company, the coming into force of the appointment for the purposes specified in subsection (2) of that section shall not be affected by any contravention of the requirements of this Act with respect to the provision contained by way of conditions of appointment in that instrument.
- (7) If the Secretary of State considers it appropriate to do so in consequence of any legal proceedings with respect to any such provision as is mentioned in subsection (6) above, he may by order made by statutory instrument direct that such conditions as may be specified in the order are to be treated as included in the appointment in question until there is an opportunity for the provision to which the proceedings relate to be replaced by virtue of any of the other provisions of this Chapter.
- (8) Any sums received by the Secretary of State in consequence of the provisions of any condition of an appointment under this Chapter shall be paid into the Consolidated Fund.

12 Determinations under conditions of appointment.

- (1) Without prejudice to the generality of paragraph (a) of section 11(1) above, conditions included in an appointment by virtue of that paragraph may—
 - (a) require the appointed company to comply with any direction given by the Director as to such matters as are specified in the appointment or are of a description so specified; and
 - (b) require the appointed company, except in so far as the Director consents to the company’s doing or not doing them, not to do or to do such things as are specified in the appointment or are of a description so specified.
- (2) Without prejudice as aforesaid, such conditions may provide for the reference to and determination by—
 - (a) the Secretary of State or the Director; or
 - (b) on a reference by the Director, the [F76CMA] ,
 of such questions arising under the appointment and of such other matters, including (in the case of references to [F77the CMA]) disputes as to determinations by the Director, as are specified in the appointment or are of a description so specified.
- (3) Where any question or other matter falls to be determined by the [F78CMA] in pursuance of a provision contained in an appointment under this Chapter—
 - (a) it shall be the duty of the Director, on being required to do so by the company holding that appointment, to refer that question or matter to [F79the CMA] ; and
 - (b) it shall be the duty of [F79the CMA] to determine any question or other matter referred by virtue of paragraph (a) above in accordance with—
 - (i) ^{F80}
 - (ii) the principles which apply, by virtue of Part I of this Act, in relation to determinations under this Chapter by the Director.

[F81(3A) For the purposes of subsection (3) above, where—

- (a) the question or matter referred to the [F82CMA] concerns the review of a price control imposed on the company holding the appointment; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(b) the [F82CMA] is to decide to what extent it is reasonable to take into account in its determination costs incurred or borne by the company in connection with the reference,

the [F82CMA] shall also have regard to the extent to which, in its view, its determination is likely to support the company's (rather than the Authority's) claims in relation to the question or matter referred to it.

(3B) Subsections (4) and (5) of section 14, and [F83sections 14A and 14B], below apply to references to the [F84CMA] under this section as they apply to references under section 14.

(3C) A report of the [F84CMA] on a reference under this section—

(a) shall be made to the Authority; and

(b) shall include definite conclusions on the questions or other matters comprised in the reference, together with such an account of their reasons for those conclusions as, in the opinion of the [F84CMA], is expedient for facilitating a proper understanding of those questions or other matters and of their conclusions,

and subsections (5) and (6) of section 15 below apply to such a report as they apply to a report on a reference under section 14.]

[F85(3D) The functions of the CMA with respect to a reference under this section are to be carried out on behalf of the CMA by a group constituted for the purpose by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013 (including functions relating to the making of modifications following a report on a reference, and functions under sections 109 to 115 of the Enterprise Act 2002, as applied by subsection (3B) read with section [F8614B].]

^{F88}Modification of appointment conditions: England

Textual Amendments

- F88** Ss. 12A-12I and cross-heading inserted (24.1.2022) by Environment Act 2021 (c. 30), **ss. 86(2), 147(3)** (with s. 144); S.I. 2022/48, **reg. 2(m)**

12A Modification by the Authority

- (1) This section and sections 12B to 12I apply in relation to a company appointed under this Chapter whose area is wholly or mainly in England.
- (2) The Authority may make modifications of the conditions of the company's appointment under this Chapter.
- (3) Before making any modifications under this section, the Authority must give notice—
 - (a) stating that it proposes to make modifications,
 - (b) setting out the proposed modifications and their effect,
 - (c) stating the reasons why it proposes to make the modifications, and
 - (d) specifying the time within which representations with respect to the proposed modifications may be made.
- (4) That time must not be less than 42 days from the date of publication of the notice.
- (5) A notice under subsection (3) must be given—
 - (a) by publishing the notice in a way the Authority considers appropriate for bringing it to the attention of persons likely to be affected by the modifications, and
 - (b) by sending a copy of it to—
 - (i) each company holding an appointment under this Chapter the conditions of which the Authority proposes to modify,
 - (ii) any other company holding an appointment under this Chapter, any water supply licensee and any sewerage licensee, whose interests the Authority considers are likely to be materially affected by the modifications,
 - (iii) the Secretary of State,
 - (iv) any person whose functions are or include representing those within sub-paragraph (i) or (ii) in respect of interests of theirs that the Authority considers are likely to be materially affected by the modifications, and
 - (v) the Consumer Council for Water.
- (6) The Authority must consider any representations which are duly made.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (7) If, within the time specified under subsection (3)(d), the Secretary of State directs the Authority not to make a modification, the Authority must comply with the direction.
- (8) Subsections (9) to (11) apply where, having complied with subsections (3) to (6), the Authority decides to proceed with making modifications.
- (9) The Authority must—
 - (a) publish the decision and the modifications in a way the Authority considers appropriate for bringing them to the attention of persons likely to be affected by the modifications,
 - (b) state the effect of the modifications,
 - (c) state how it has taken account of any representations duly made, and
 - (d) state the reason for any differences between the modifications and those set out in the notice under subsection (3).
- (10) Each modification has effect from the date specified by the Authority in relation to that modification (subject to the giving of a direction under paragraph 2 of Schedule 2ZA).
- (11) The date specified may not be less than 56 days from publication of the decision to make the modification (except as provided in section 12B).

12B Modification of conditions of appointment: early effective date

- (1) The date specified by virtue of section 12A(10) in relation to a modification under that section may be less than 56 days from the publication of the decision to make the modification if—
 - (a) the Authority considers it necessary or expedient for the modification to have effect before the 56 days expire, and
 - (b) the consultation condition is satisfied.
- (2) The consultation condition is that the notice under section 12A relating to the modification—
 - (a) stated the date from which the Authority proposed that the modification should have effect,
 - (b) stated the Authority’s reasons for proposing that the modification should have effect from a date less than 56 days from the decision to modify, and
 - (c) explained why, in the Authority’s view, that would not have a material adverse effect on any person holding an appointment under this Chapter.

12C Modifications of conditions under section 12A: supplementary

- (1) This section applies where under section 12A the Authority modifies the conditions of any appointment under this Chapter.
- (2) The Authority may make such incidental or consequential modifications of the conditions of any appointments as it considers necessary or expedient.
- (3) The modification of a condition of an appointment has effect subject to the giving of a direction under paragraph 2 of Schedule 2ZA in relation to the decision to which the modification relates.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

12D Appeal to the CMA

- (1) An appeal lies to the CMA against a decision by the Authority to proceed with the modification under section 12A of a condition of an appointment under this Chapter.
- (2) An appeal may be brought under this section only by—
 - (a) a company holding an appointment under this Chapter the conditions of which the Authority has decided to modify,
 - (b) any other company holding an appointment under this Chapter, any water supply licensee or any sewerage licensee, whose interests are materially affected by the decision,
 - (c) a person whose functions are or include representing those within paragraph (a) or (b) in respect of interests of theirs which are materially affected by the decision, or
 - (d) the Consumer Council for Water.
- (3) The permission of the CMA is required for the bringing of an appeal under this section.
- (4) The CMA may refuse permission only on one of the following grounds—
 - (a) in relation to an appeal brought by a company, water supply licensee or sewerage licensee within subsection (2)(b), that the interests of the company or licensee are not materially affected by the decision;
 - (b) in relation to an appeal brought by a person within subsection (2)(c), that the interests of the person represented are not materially affected by the decision;
 - (c) in relation to any appeal, that the appeal is brought for reasons that are trivial or vexatious, or has no reasonable prospect of success.

12E Procedure on appeal to CMA

- (1) Schedule 2ZA makes provision about the procedure for appeals under section 12D.
- (2) Except where specified otherwise in that Schedule, the functions of the CMA with respect to an appeal under section 12D are to be carried out by a group constituted for that purpose by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013.

12F Determination by CMA of appeal

- (1) This section applies to an appeal brought under section 12D.
- (2) In determining an appeal, the CMA must have regard, to the same extent as is required of the Authority, to—
 - (a) the Authority's duties under section 2, and
 - (b) the Authority's strategic priorities and objectives as set out in a statement under section 2A.
- (3) In determining the appeal the CMA—
 - (a) may have regard to any matter to which the Authority was not able to have regard in relation to the decision which is the subject of the appeal, but
 - (b) must not, in the exercise of that power, have regard to any matter to which the Authority would not have been entitled to have regard in reaching its decision had it had the opportunity of doing so.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) The CMA may allow the appeal only to the extent that it is satisfied that the decision appealed against was wrong on one or more of the following grounds—
- (a) that the Authority failed properly to have regard to any matter mentioned in subsection (2),
 - (b) that the Authority failed to give appropriate weight to any matter mentioned in subsection (2),
 - (c) that the decision was based, wholly or partly, on an error of fact,
 - (d) that the modifications fail to achieve, in whole or in part, the effect stated by the Authority by virtue of section 12A(9)(b),
 - (e) that the Authority did not follow the procedure required by sections 12A to 12C, or
 - (f) that the decision was otherwise wrong in law.
- (5) To the extent that the CMA does not allow the appeal, it must confirm the decision appealed against.

12G CMA’s powers on allowing an appeal

- (1) Where the CMA allows an appeal under section 12D to any extent, it must do one or both of the following—
- (a) quash the decision (to the extent that the appeal is allowed);
 - (b) remit the matter back to the Authority for reconsideration and determination in accordance with any directions given by the CMA.
- (2) A direction under subsection (1) must not require the Authority to do anything that it would not have power to do (apart from the direction).
- (3) The Authority must comply with a direction given to it under that subsection.

12H Time limits for CMA to determine an appeal

- (1) The CMA must determine an appeal within the period of 4 months beginning with the permission date, unless subsection (2) applies.
- (2) This subsection applies where—
- (a) the CMA has received representations on the timing of the determination from a party to the appeal, and
 - (b) it is satisfied that there are special reasons why the determination cannot be made within the period specified in subsection (1).
- (3) Where subsection (2) applies, the CMA must determine an appeal within the period specified by it, not being longer than the period of 5 months beginning with the permission date.
- (4) Where subsection (2) applies, the CMA must also—
- (a) inform the parties to the appeal of the time limit for determining the appeal, and
 - (b) publish that time limit in a way it considers appropriate to bring it to the attention of any other persons likely to be affected by the determination.
- (5) References in this section to the permission date are to the date on which the CMA gave permission to bring the appeal in accordance with section 12D(3).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) In this section and in section 12I any reference to a party to an appeal is to be read in accordance with Schedule 2ZA.

12I Determination of appeal by CMA: supplementary

- (1) A determination by the CMA on an appeal—
- (a) must be contained in an order made by the CMA;
 - (b) must set out the reasons for the determination;
 - (c) takes effect at the time specified in the order or determined in accordance with provision made in the order;
 - (d) must be notified by the CMA to the parties to the appeal;
 - (e) must be published by the CMA—
 - (i) as soon as reasonably practicable after the determination is made;
 - (ii) in a way the CMA considers appropriate to bring it to the attention of any person likely to be affected by it (other than a party to the appeal).
- (2) The CMA may exclude from publication any information it is satisfied is—
- (a) commercial information, the disclosure of which would, or in the CMA's opinion might, significantly harm the legitimate business interests of an undertaking to which it relates, or
 - (b) information relating to the private affairs of an individual, the disclosure of which would, or in the CMA's opinion might, significantly harm the individual's interests.
- (3) The Authority must take such steps as it considers requisite for it to comply with an order of the CMA under subsection (1)(a).
- (4) The steps must be taken—
- (a) if a time is specified in (or is to be determined in accordance with) the order, within that time;
 - (b) in any other case, within a reasonable time.
- (5) Section 12C applies where a condition of a licence is modified in accordance with section 12G as it applies where a condition of a licence is modified under section 12A.]

[^{F89}Modification of appointment conditions: Wales]

Textual Amendments

F89 S. 13 cross-heading substituted (24.1.2022) by Environment Act 2021 (c. 30), ss. 86(3), 147(3) (with s. 144); S.I. 2022/48, reg. 2(m)

13 Modification by agreement.

[^{F90}(A1) This section and sections 14 to 16B apply in relation to a company appointed under this Chapter whose area is wholly or mainly in Wales.]

- (1) Subject to the following provisions of this section, the Director may modify the conditions of a company's appointment under this Chapter if the company consents to the modifications.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Before making modifications under this section, the Director shall give notice—
 - (a) stating that he proposes to make the modifications and setting out their effect;
 - (b) stating the reasons why he proposes to make the modifications; and
 - (c) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed modifications may be made,and shall consider any representations or objections which are duly made and not withdrawn.
- (3) A notice under subsection (2) above shall be given—
 - (a) by publishing the notice in such manner as the Director considers appropriate for the purpose of bringing the notice to the attention of persons likely to be affected by the making of the modifications; and
 - (b) by serving a copy of the notice on the company and on the Secretary of State.
- (4) The Director shall not under this section make any modifications which the Secretary of State has, within the time specified in the notice under subsection (2) above, directed the Director not to make.
- (5) The Secretary of State shall not give a direction under subsection (4) above in relation to any modification unless—
 - (a) the modification is a modification of provision contained in the appointment for the purposes of section 7(4)(c) above;
 - (b) the modification is a modification of a provision of the appointment which relates to the disposal of, or of interests or rights in or over, a company's protected land and is stated in the appointment to be a provision which cannot be modified; or
 - (c) it appears to the Secretary of State that the modification should be made, if at all, under section 16 below.

Textual Amendments

F90 S. 13(A1) inserted (24.1.2022) by [Environment Act 2021 \(c. 30\)](#), **ss. 86(4)**, 147(3) (with s. 144); S.I. 2022/48, reg. 2(m)

14 Modification references to ^{F91}CMA].

- (1) The Director may make to the ^{F92}CMA] a reference which is so framed as to require ^{F93}the CMA] to investigate and report on the questions—
 - (a) whether any matters which—
 - (i) relate to the carrying out of any function which is a function of any company by virtue of an appointment of that company under this Chapter; and
 - (ii) are specified in the reference,operate, or may be expected to operate, against the public interest; and
 - (b) if so, whether the effects adverse to the public interest which those matters have or may be expected to have could be remedied or prevented by modifications of the conditions of the company's appointment.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The Director may, at any time, by notice given to the [F94CMA] vary a reference under this section by—
 - (a) adding to the matters specified in the reference; or
 - (b) excluding from the reference some or all of the matters so specified;
 and on receipt of any such notice [F95the CMA] shall give effect to the variation.
- (3) The Director may specify in a reference under this section, or a variation of such a reference, for the purpose of assisting the [F96CMA] in carrying out the investigation on the reference—
 - (a) any effects adverse to the public interest which, in his opinion, the matters specified in the reference or variation have or may be expected to have; and
 - (b) any modifications of the conditions of any appointment mentioned in the reference or variation by which, in his opinion, those effects could be remedied or prevented.
- (4) As soon as practicable after making a reference under this section or a variation of such a reference, the Director shall—
 - (a) serve a copy of the reference or variation on the company whose appointment is mentioned in the reference or variation; and
 - (b) publish particulars of the reference or variation in such manner as he considers appropriate for the purpose of bringing the reference or variation to the attention of persons likely to be affected by it.
- (5) It shall be the duty of the Director, for the purpose of assisting the [F97CMA] in carrying out an investigation on a reference under this section [F98or in carrying out functions under section 16A below], to give to [F99the CMA] —
 - (a) any information in his possession which relates to matters falling within the scope of the investigation [F100or the carrying out of those functions], and which is either—
 - (i) requested by [F99the CMA] for that purpose; or
 - (ii) information which, in his opinion, it would be appropriate for that purpose to give to [F99the CMA] without any such request;
 and
 - (b) any other assistance which [F99the CMA] may require, and which it is within his power to give, in relation to any such matters;
 and [F99the CMA], for the purpose of carrying out any such investigation [F101or such functions], shall take account of any information given to them for that purpose under this subsection.
- (6) In determining for the purposes of this section whether any particular matter operates, or may be expected to operate, against the public interest, the [F102CMA] shall have regard to the matters as respects which duties are imposed on the Secretary of State and the Director by Part I of this Act.
- [F103(6A) The functions of the CMA with respect to a reference under this section are to be carried out on behalf of the CMA by a group constituted for the purpose by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013 (including functions relating to the making of modifications following a report on a reference, and functions under sections 109 to 115 of the Enterprise Act 2002, as applied by sections 14B and 16B).]
- (7) ^{F104}

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. [^{F106}14A References under section 14: time limits

- (1) Every reference under section 14 above shall specify a period (not longer than six months beginning with the date of the reference) within which a report on the reference is to be made.
- (2) A report of the [^{F107}CMA] on a reference under section 14 above shall not have effect (and no action shall be taken in relation to it under section 16 below) unless the report is made before the end of the period specified in the reference or such further period (if any) as may be allowed by the Director under subsection (3) below.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) The Director may, if he has received representations on the subject from the [F107CMA] and is satisfied that there are special reasons why the report cannot be made within the period specified in the reference, extend that period by no more than six months.
- (4) No more than one extension is possible under subsection (3) above in relation to the same reference.
- (5) The Director shall, in the case of an extension made by him under subsection (3) above—
 - (a) publish that extension in such manner as he considers appropriate for the purpose of bringing it to the attention of persons likely to be affected by it; and
 - (b) send a copy of what has been published by him under paragraph (a) above to the company whose appointment is mentioned in the reference.

Textual Amendments

F106 Ss. 14A, 14B inserted (20.6.2003) by Enterprise Act 2002 (c. 40), ss. 278, 279, Sch. 25 para. 25(5); S.I. 2003/1397, art. 2(1), Sch.

F107 Words in s. 14A(2)(3) substituted (1.4.2014) by Enterprise and Regulatory Reform Act 2013 (c. 24), s. 103(3), Sch. 6 para. 55; S.I. 2014/416, art. 2(1)(d) (with Sch.)

14B References under section 14: powers of investigation

- (1) The following sections of Part 3 of the Enterprise Act 2002 shall apply, with the modifications mentioned in subsections [F108(1A),] (2) and (3) below, for the purposes of references under section 14 above as they apply for the purposes of references under that Part—
 - (a) section 109 (attendance of witnesses and production of documents etc.);
 - (b) section 110 (enforcement of powers under section 109: general);
 - (c) section 111 (penalties);
 - (d) section 112 (penalties: main procedural requirements);
 - (e) section 113 (payments and interest by instalments);
 - (f) section 114 (appeals in relation to penalties);
 - (g) section 115 (recovery of penalties); and
 - (h) section 116 (statement of policy).

[Section 109 shall, in its application by virtue of subsection (1) above, have effect as F109(1A) if—

- (a) for subsection (A1), there were substituted—

“(A1) For the purposes of this section, a permitted purpose is assisting the CMA in carrying out any functions exercisable by it in connection with a reference under section 14 of the Water Industry Act 1991.”, and

- (b) subsection (8A) were omitted.]

- (2) Section 110 shall, in its application by virtue of subsection (1) above, have effect as if—

- (a) subsection (2) were omitted; F110 ...

[after subsection (3), there were inserted—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- ^{F111}(aa) “(3A) No penalty shall be imposed by virtue of subsection (1) or (3) if more than 4 weeks have passed since the publication of the report of the CMA on the reference concerned; but this subsection shall not apply in relation to any variation or substitution of the penalty which is permitted by virtue of this Part.”; and]
- (b) in subsection (9) the words from “or section” to “section 65(3)” were omitted.
- [^{F112}(3) Section 111(5)(b) shall, in its application by virtue of subsection (1) above, have effect as if for sub-paragraph (ii) there were substituted—
- “(ii) if earlier, the day on which the report of the CMA on the reference concerned is made or, if no such report is made within the period permitted for that purpose, the latest day on which the report may be made within the permitted period.”.]
- (4) Provisions of Part 3 of the Enterprise Act 2002 which have effect for the purposes of sections 109 to 116 of that Act (including, in particular, provisions relating to offences and the making of orders) shall, for the purposes of the application of those sections by virtue of subsection (1) above, have effect in relation to those sections as applied by virtue of that subsection.
- (5) Accordingly, corresponding provisions of this Act shall not have effect in relation to those sections as applied by virtue of that subsection.]

15 Reports on modification references.

- (1) In making a report on a reference under section 14 above, the [^{F113}CMA] —
- (a) shall include in the report definite conclusions on the questions comprised in the reference together with such an account of their reasons for those conclusions as, in their opinion, is expedient for facilitating a proper understanding of those questions and of their conclusions;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) where they conclude that any of the matters specified in the reference operate, or may be expected to operate, against the public interest, shall specify in the report the effects adverse to the public interest which those matters have or may be expected to have; and
 - (c) where they conclude that any adverse effects so specified could be remedied or prevented by modifications of the conditions of a company's appointment under this Chapter, shall specify in the report modifications by which those effects could be remedied or prevented.
- [^{F114}(1A) For the purposes of section 16 below, a conclusion contained in a report of the [^{F115}CMA] is to be disregarded if the conclusion is not that of at least two-thirds of the members of the group constituted [^{F116}by the chair of the CMA for the purpose of carrying out the functions of the CMA with respect to the reference].
- (1B) If a member of a group so constituted disagrees with any conclusions contained in a report made on a reference under section 14 above as the conclusions of the [^{F117}CMA], the report shall, if the member so wishes, include a statement of his disagreement and of his reasons for disagreeing.]
- [^{F118}(2)
- [^{F119}(3) For the purposes of the law relating to defamation, absolute privilege attaches to any report made by the [^{F120}CMA] on a reference under section 14 above.
- (3A) In making any report on a reference under section 14 above the [^{F120}CMA] must have regard to the following considerations before disclosing any information.
- (3B) The first consideration is the need to exclude from disclosure (so far as practicable) any information whose disclosure the [^{F120}CMA] thinks is contrary to the public interest.
- (3C) The second consideration is the need to exclude from disclosure (so far as practicable)
- (a) commercial information whose disclosure the [^{F120}CMA] thinks might significantly harm the legitimate business interests of the undertaking to which it relates, or
 - (b) information relating to the private affairs of an individual whose disclosure the [^{F120}CMA] thinks might significantly harm the individual's interests.
- (3D) The third consideration is the extent to which the disclosure of the information mentioned in subsection (3C)(a) or (b) above is necessary for the purposes of the report.]
- (4) A report of the [^{F121}CMA] on a reference under section 14 above shall be made to the Director.
- (5) Subject to subsection (6) below, the Director—
- (a) shall, on receiving such a report, send a copy of it to the company to whose appointment under this Chapter the report relates and to the Secretary of State; and
 - (b) shall, not less than fourteen days after that copy is received by the Secretary of State, publish another copy of that report in such manner as he considers appropriate for bringing the report to the attention of persons likely to be affected by it.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) If it appears to the Secretary of State that the publication of any matter in such a report would be against the public interest or the commercial interests of any person, he may, before the end of the period of fourteen days mentioned in paragraph (b) of subsection (5) above, direct the Director to exclude that matter from every copy of the report to be published by virtue of that paragraph; and the Director shall comply with any such direction.

16 Modification following report.

- (1) Where a report of the [F122CMA] on a reference under section 14 above—
- includes conclusions to the effect that any of the matters specified in the reference operate, or may be expected to operate, against the public interest;
 - specifies effects adverse to the public interest which those matters have or may be expected to have;
 - includes conclusions to the effect that those effects could be remedied or prevented by modifications of the conditions of a company's appointment under this Chapter; and
 - specifies modifications by which those effects could be remedied or prevented,
- the Director shall, subject to the following provisions of this section, make such modifications of the conditions of that appointment as appear to him requisite for the purpose of remedying or preventing the adverse effects specified in the report.
- (2) Before making modifications under this section, the Director shall have regard to the modifications specified in the report.
- (3) Before making modifications under this section, the Director shall give notice—
- stating that he proposes to make the modifications and setting out their effect;
 - stating the reasons why he proposes to make the modifications; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed modifications may be made,
 and shall consider any representations or objections which are duly made and not withdrawn.
- (4) A notice under subsection (3) above shall be given—
- (a) by publishing the notice in such manner as the Director considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be affected by the making of the modifications; and
 - (b) by serving a copy of the notice on the company whose appointment it is proposed to modify.
- [^{F123}(4A) After considering any representations or objections made in response to proposals set out in a notice under subsection (3) above, the Authority shall give notice to the [^{F124}CMA] —
- (a) setting out the modifications it proposes to make to remedy or prevent the adverse effects specified in the report; and
 - (b) stating the reasons for making the modifications.
- (4B) The Authority shall include with the notice under subsection (4A) above a copy of any representations or objections received in relation to the notice under subsection (3) above.
- (4C) If the period of four weeks from the date on which the notice under subsection (4A) above is given elapses without a direction under section 16A(1)(a) below having been given to it, the Authority shall—
- (a) make the modifications set out in the notice; or
 - (b) if a direction under section 16A(1)(b) below has been given, make the modifications which are not specified in the direction.]
- (5) The Director shall not under this section make any modification of any provisions of a company's appointment under this Chapter which—
- (a) are contained in that appointment for the purposes of section 7(4)(c) above; or
 - (b) being provisions relating to the disposal of, or of interests or rights in or over, a company's protected land, are stated in the appointment to be provisions which cannot be modified.

F124 Words in s. 16(4A) substituted (1.4.2014) by [Enterprise and Regulatory Reform Act 2013 \(c. 24\)](#), s. 103(3), [Sch. 6 para. 57](#); S.I. 2014/416, art. 2(1)(d) (with Sch.)

[^{F125}16A [^{F126}CMA's] power of veto following report

- (1) [^{F127}The CMA] may, within the period of four weeks after the date on which it is given a notice under section 16(4A) above, direct the Authority—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) not to make the modifications set out in that notice; or
 - (b) not to make such of the modifications as may be specified in the direction;
- and the Authority shall comply with any such direction.
- (2) The Secretary of State may, within the period of four weeks after the date on which the [F128CMA] is given a notice under section 16(4A) above and on the application of the [F128CMA], direct that the period for giving a direction under subsection (1) above (and, accordingly, the period mentioned in section 16(4C) above) shall be extended by fourteen days.
- (3) The power to give a direction under subsection (1) above may only be exercised in respect of such of the modifications set out in the notice under section 16(4A)(a) above as appear to the [F128CMA] not to be the modifications which are requisite for the purpose of remedying or preventing all or any of the adverse effects specified in the report as effects which could be remedied or prevented by modifications.
- (4) If the [F128CMA] gives a direction under subsection (1) above, it—
- (a) shall give notice setting out the modifications proposed by the Authority, the terms of the direction and the reasons for giving it; and
 - (b) shall itself make such modifications as appear to it to be requisite for the purpose of remedying or preventing—
 - (i) if the direction was given under subsection (1)(a) above, the adverse effects specified in the report as effects which could be remedied or prevented by modifications;
 - (ii) if the direction was given under subsection (1)(b) above, such of those adverse effects as are not remedied or prevented by the modifications made by the Authority under section 16(4C)(b) above.
- (5) In exercising its power under subsection (4)(b) above, the [F128CMA] shall have regard to the matters to which the Authority is required to have regard when determining the conditions of a company's appointment.
- (6) Before making modifications under subsection (4)(b) above the [F128CMA] shall give notice—
- (a) stating that it proposes to make the modifications and setting them out;
 - (b) stating the reason why it proposes to make them;
 - (c) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed modifications may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- (7) A notice under subsection (4)(a) or (6) above shall be given—
- (a) by publishing the notice in such manner as the [F128CMA] considers appropriate for the purpose of bringing it to the attention of persons likely to be affected by the making of the modifications; and
 - (b) by serving a copy on the Authority and the company whose conditions of appointment it is proposed should be modified.
- (8) The [F128CMA] may not make any modification under this section which the Authority could not make under section 16 above.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (9) After making modifications under this section the [F128CMA] shall publish a notice stating that the modifications have been made and setting them out, with the reasons for making them.

16B [F130CMA's] power of veto following report: supplementary

- (1) For the purposes of the law relating to defamation, absolute privilege attaches to any notice under subsection (4)(a), (6) or (9) of section 16A above.
- (2) In giving any notice under subsection (4)(a) or (6) of section 16A above, or publishing any notice under subsection (9) of that section, the [F131CMA] must have regard to the following considerations before disclosing any information.
 - (3) The first consideration is the need to exclude from disclosure (so far as practicable) any information whose disclosure the [F131CMA] thinks is contrary to the public interest.
 - (4) The second consideration is the need to exclude from disclosure (so far as practicable)
 - (a) commercial information whose disclosure the [F131CMA] thinks might significantly harm the legitimate business interests of the undertaking to which it relates; or
 - (b) information relating to the private affairs of an individual whose disclosure the [F131CMA] thinks might significantly harm the individual's interests.
 - (5) The third consideration is the extent to which the disclosure of the information mentioned in subsection (4)(a) or (b) above is necessary for the purposes of the notice.
 - (6) The following sections of Part 3 of the Enterprise Act 2002 shall apply, with the modifications mentioned in subsections [F132(6A),] (7) and (8) below, for the purposes of any investigation by the [F133CMA] for the purposes of the exercise of its functions under section 16A above, as they apply for the purposes of any investigations on references under that Part—
 - (a) section 109 (attendance of witnesses and production of documents etc);
 - (b) section 110 (enforcement of powers under section 109: general);
 - (c) section 111 (penalties);
 - (d) section 112 (penalties: main procedural requirements);
 - (e) section 113 (payments and interest by instalments);

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (f) section 114 (appeals in relation to penalties);
- (g) section 115 (recovery of penalties); and
- (h) section 116 (statement of policy).

[Section 109 shall, in its application by virtue of subsection (6) above, have effect as ^{F134}(6A) if—

- (a) for subsection (A1), there were substituted—

“(A1) For the purposes of this section, a permitted purpose is assisting the CMA in carrying out any functions exercisable by it in connection with an investigation for the purposes of the exercise of its functions under section 16A of the Water Industry Act 1991.”, and

- (b) subsection (8A) were omitted.]

(7) Section 110 shall, in its application by virtue of subsection (6) above, have effect as if—

- (a) subsection (2) were omitted;

[^{F135}(b) after subsection (3), there were inserted—

“(3A) No penalty shall be imposed by virtue of subsection (1) or (3) if more than 4 weeks have passed since the publication by the CMA of a notice under section 16A(9) of the Water Industry Act 1991 in connection with the reference concerned or, if no direction has been given by the CMA under section 16A(1) of that Act in connection with the reference concerned and within the period permitted for that purpose, the latest day on which it was possible to give such a direction within the permitted period; but this subsection shall not apply in relation to any variation or substitution of the penalty which is permitted by virtue of this Part.”; and]

- (c) in subsection (9) the words from “or section” to “section 65(3)” were omitted.

(8) Section 111(5)(b) shall, in its application by virtue of subsection (6) above, have effect as if for sub-paragraph (ii) there were substituted—

(ii) if earlier, the day on which a notice is published by the [^{F136}CMA] under section 16A(9) of the Water Industry Act 1991 in connection with the reference concerned or, if no direction is given by the [^{F136}CMA] under section 16A(1) of that Act in connection with the reference concerned and within the period permitted for that purpose, the latest day on which such a direction may be given within the permitted period.

(9) Provisions of Part 3 of the Enterprise Act 2002 which have effect for the purposes of sections 109 to 116 of that Act (including, in particular, provisions relating to offences and the making of orders) shall, for the purposes of the application of those sections by virtue of subsection (6) above, have effect in relation to those sections as applied by virtue of that subsection.

(10) Accordingly, corresponding provisions of this Act shall not have effect in relation to those sections as applied by virtue of that subsection.]

^{F137}Modification of appointment conditions: England and Wales]

Textual Amendments

- F137** S. 17 cross-heading inserted (24.1.2022) by Environment Act 2021 (c. 30), **ss. 86(5)**, 147(3) (with s. 144); S.I. 2022/48, reg. 2(m)

17 Modification by order under other enactments.

- ^{F138}(1) Where the [^{F139}CMA] or (as the case may be) the Secretary of State (in this section “the relevant authority”) makes a relevant order, the order may, subject to subsection (3), also provide for the modification of the conditions of a company’s appointment under this Chapter to such extent as may appear to the relevant authority to be requisite or expedient for the purpose of giving effect to, or taking account of, any provision made by the order.
- (2) In subsection (1) above “relevant order” means—
- (a) an order under section 75, 83 or 84 of, or paragraph 5, 10 or 11 of Schedule 7 to, the 2002 Act where—
 - (i) one or more than one of the enterprises which have, or may have, ceased to be distinct enterprises was carried on by a relevant undertaker; or
 - (ii) one or more than one of the enterprises which will or may cease to be distinct enterprises is carried on by a relevant undertaker; or
 - (b) an order under section 160 or 161 of the 2002 Act where the feature, or combination of features, of the market [^{F140}or markets] in the United Kingdom for goods or services which prevents, restricts or distorts competition is—
 - (i) the structure or an aspect of the structure of a market for the supply of goods or services by a relevant undertaker; or
 - (ii) the conduct of a relevant undertaker or of customers of a relevant undertaker.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) No modification shall be made by virtue of this section of any provisions of a company's appointment under this Chapter which—
- (a) are contained in that appointment for the purposes of section 7(4)(c) above; or
 - (b) being provisions relating to the disposal of, or of interests or rights in or over, a company's protected land, are stated in the appointment to be provisions which cannot be modified.

[^{F141}(4) Expressions used in subsection (2) above and in Part 3 or (as the case may be) Part 4 of the 2002 Act have the same meanings in that subsection as in that Part.]

Granting of licences

[^{F144}17A Water supply licences

- (1) The Authority may grant to a person a licence in respect of the use of the supply system of a water undertaker (a “water supply licence”).
- (2) A water supply licence may give the holder of the licence one or more of the following authorisations and combination of authorisations—
 - (a) a retail authorisation;
 - (b) a wholesale authorisation;
 - (c) a restricted retail authorisation;
 - (d) a restricted retail authorisation and a supplementary authorisation.
- (3) Schedule 2A makes provision as to the authorisations (including their operation in England and Wales).
- (4) In the case of each of the authorisations, an authorisation to do a thing is an authorisation to do it in accordance with Chapter 2A of Part 3.
- (5) The Authority may exercise the power to grant a water supply licence only in accordance with a general authorisation given by the Secretary of State.
- (6) Before giving a general authorisation as regards the Authority, the Secretary of State must consult the Welsh Ministers.
- (7) References in this Act to a water supply licensee are references to a person that is the holder for the time being of a water supply licence.]

- the purpose of conveying water from the undertaker’s treatment works to the premises of customers; and
- (b) any water mains and other pipes which—
- (i) are used by the undertaker for the purpose of conveying non-domestic water from any of its sources to the premises of customers; and
 - (ii) are not connected to any water mains or pipes falling within paragraph (a) above or to any water mains or other pipes connected to the treatment works mentioned in that paragraph (whether directly or indirectly),
- and in sub-paragraph (i) above the reference to non-domestic water is to water supplied other than for domestic or food production purposes.
- (6) In subsection (5)(a) above, the reference to treatment works is a reference to the works designated from time to time by the Secretary of State as treatment works for the purposes of this subsection.
- (7) Before designating any works for the purposes of subsection (6) above, the Secretary of State shall consult the Assembly.
- (8) A list of any works designated for the purposes of subsection (6) above shall be published from time to time by the Secretary of State in such manner as he considers appropriate for the purpose of bringing the designations to the attention of persons likely to be affected by them.

Sewerage licences

F150 17BA

- (1) The Authority may grant to a person a licence in respect of the use of the sewerage system of a sewerage undertaker whose area is wholly or mainly in England (a “sewerage licence”).
- (2) A sewerage licence may give the holder of the licence one or more of the following—
- (a) a retail authorisation;
 - (b) a wholesale authorisation;
 - (c) a disposal authorisation.
- (3) Schedule 2B makes provision as to the authorisations.
- (4) In the case of each of the authorisations, an authorisation to do a thing is an authorisation to do it in accordance with Chapter 2A of Part 4.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) The Authority may exercise the power to grant a sewerage licence only in accordance with a general authorisation given by the Secretary of State.
- (6) References in this Act to a sewerage licensee are references to a person that is the holder for the time being of a sewerage licence.
- (7) References in this Chapter to the sewerage system of a sewerage undertaker are references to the system comprising—
 - (a) the system of public sewers, the facilities for emptying public sewers and the sewage disposal works and other facilities for dealing effectually with the contents of public sewers that the undertaker is required to provide by section 94, and
 - (b) the lateral drains that the undertaker is required to maintain by section 94.

Textual Amendments

F150 Ss. 17BA, 17BB inserted (1.1.2016 for the substitution of s. 17BA(2)-(5), 1.4.2016 for the insertion of s. 17BA(1) for specified purposes and ss. 17BA(7), 17BB(2)-(4) by [Water Act 2014 \(c. 21\)](#), [ss. 4\(1\), 94\(3\)](#); [S.I. 2015/1938](#), [art. 3\(b\)\(i\)](#); [S.I. 2016/465](#), [art. 2\(b\)\(i\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by [S.I. 2017/462](#), [art. 16](#))

17BB Sewerage licences: restrictions on grants

- (1) The Authority must consult the Secretary of State, the Environment Agency and the NRBW before granting a licence that gives—
 - (a) a wholesale authorisation, or
 - (b) a disposal authorisation.
- (2) A sewerage licence granted to a sewerage undertaker may not give the holder—
 - (a) a retail authorisation, or
 - (b) a wholesale authorisation.
- (3) A sewerage licence may not be granted to a person unless that person is a limited company.
- (4) The restriction in subsection (3) does not apply if the sewerage licence gives only a retail authorisation.]

Textual Amendments

F150 Ss. 17BA, 17BB inserted (1.1.2016 for the substitution of s. 17BA(2)-(5), 1.4.2016 for the insertion of s. 17BA(1) for specified purposes and ss. 17BA(7), 17BB(2)-(4) by [Water Act 2014 \(c. 21\)](#), [ss. 4\(1\), 94\(3\)](#); [S.I. 2015/1938](#), [art. 3\(b\)\(i\)](#); [S.I. 2016/465](#), [art. 2\(b\)\(i\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by [S.I. 2017/462](#), [art. 16](#))

17C Meaning of household premises

- (1) For the purposes of [^{F151}paragraphs 4 and 7(a) of Schedule 2A and paragraph 2 of Schedule 2B], “household premises” means premises in which, or in any part of which, a person has his home.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The fact that a person has his home in, or in part of, any premises does not mean that the premises are household premises unless the principal use of the premises is as a home.
- (3) The Secretary of State may by regulations make provision as to—
 - (a) the circumstances in which a person is or is not to be treated as having his home in, or in part of, any premises for the purposes of this section; and
 - (b) the factors which are, or are not, to be taken into account in determining the principal use of any premises for those purposes.
- (4) The power to make regulations under subsection (3) above is exercisable by the Assembly (and not by the Secretary of State) in relation to premises supplied with water using the supply system of a water undertaker whose area is wholly or mainly in Wales.

Textual Amendments

F151 Words in s. 17C(1) substituted (1.1.2016) by [Water Act 2014 \(c. 21\), s. 94\(3\), Sch. 7 para. 11](#); [S.I. 2015/1938, art. 3\(f\)\(i\)](#)

17D The threshold requirement

- (1) This section applies for the purpose of construing the reference to the threshold requirement in [^{F152}paragraph 7(b) of Schedule 2A] in relation to the supply of water to any premises [^{F153}in accordance with a restricted retail authorisation].
- (2) The requirement is that, at the time when the [^{F154}water supply licensee] first enters into an undertaking with a customer to give the supply, the total quantity of water estimated to be supplied to the premises annually pursuant to the undertaking [^{F155}is not less than—
 - (a) 5 megalitres, in the case of premises supplied with water using the supply system of a water undertaker whose area is wholly or mainly in England, and
 - (b) 50 megalitres, in the case of premises supplied with water using the supply system of a water undertaker whose area is wholly or mainly in Wales].
- (3) Any estimate of the quantity of water to be supplied to any premises for the purposes of subsection (2) above shall be made in accordance with guidance issued [^{F156}from time to time] by the Authority with the approval of [^{F157}the Welsh Ministers].
- (4) Any guidance issued under subsection (3) above may, in particular—
 - (a) specify—
 - (i) the factors to be, and not to be, taken into account;
 - (ii) the assumptions to be made; and
 - (iii) the method of calculation to be employed,
 in making estimates; and
 - (b) make provision as to the commencement of the annual periods by reference to which estimates are to be made.

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (7) [^{F160}The Welsh Ministers] may make provision by regulations as to the circumstances in which a [^{F161}water supply licensee] is not, for the purposes of subsection (2) above, to be treated as entering into an undertaking with a new customer to give a supply of water to any premises ^{F162}....
- (8) [^{F163}The Welsh Ministers] may by regulations amend subsection (2) above by substituting, for the quantity of water for the time being specified there, a different quantity of water ^{F164}....
- (9) Regulations under subsection (8) above—
- (a) shall include provision for the amendment made by the regulations not to apply in relation to any undertaking entered into before the date on which the regulations come into force; and
 - (b) may include provision for that amendment not to apply in relation to any undertaking which is proposed, but not entered into, before that date.
- (10) A statutory instrument containing regulations under subsection (8) above shall not be made unless a draft of the instrument has been laid before, and approved by a resolution of, [^{F165}the Assembly].
- (11) Before making regulations under subsection (8) above, [^{F166}the Welsh Ministers] shall consult—
- (a) the Authority; and
 - (b) such other persons (if any) as [^{F167}the Welsh Ministers think] it appropriate to consult.

Guidance

F170 17DA

The Authority must publish guidance issued from time to time under—

- (a) section 17D(3),
- (b) paragraph 10 of Schedule 2A, or
- (c) paragraph 4 of Schedule 2B,

in such manner as the Authority considers appropriate for the purpose of bringing it to the attention of persons likely to be affected by it.]

Textual Amendments

- F170** S. 17DA inserted (1.1.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), [Sch. 7 para. 13](#); S.I. 2015/1938, art. 3(f)(iv)

17E Determinations by the Authority

[^{F171}(1) The Authority may determine, in a case referred to it by—

- (a) a water supply licensee or a potential customer of a water supply licensee, or
- (b) a sewerage licensee or a potential customer of a sewerage licensee,

whether a proposed supply of water to, or proposed sewerage services for, the customer would be in accordance with what is authorised by the licensee's licence.]

(2) The matters which the Authority may determine include the following matters—

- (a) the extent of the premises to be supplied for the purposes of [^{F172}paragraph 4 or 7(a) or (b) of Schedule 2A];

[the extent of the premises to be served for the purposes of paragraph 2 of

^{F173}(aa)

Schedule 2B;]

- (b) whether the premises to be supplied [^{F174}or served] are household premises (as defined in section 17C above); and
- (c) whether the threshold requirement is satisfied in relation to the premises to be supplied (construed in accordance with section 17D above),

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

and also include any other matter the determination of which is relevant to those matters.

Textual Amendments

- F171** S. 17E(1) substituted (1.4.2016) by [Water Act 2014 \(c. 21\), s. 94\(3\)](#), [Sch. 7 para. 14\(2\)](#); S.I. 2016/465, art. 2(m), [Sch. 1 para. 1\(h\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by S.I. 2017/462, art. 16)

17F Procedure for granting water supply [^{F175}and sewerage] licences

[^{F176}(1) The Authority must determine for each type of relevant application that may be made—

- (a) the form and manner in which an application is to be made;
- (b) the information it is to contain;
- (c) the documents that are to accompany it;
- (d) the fee that is to accompany it.

(1A) The fees may be different in different circumstances.

(1B) The Authority may make a new determination as to a matter referred to in subsection (1).

(1C) The Authority must publish a notice of what it has determined under subsection (1) or (1B) in such manner as it thinks appropriate for bringing the determination to the attention of those affected by the determination.

(1D) For the purposes of subsection (1) a relevant application is an application for—

- (a) the grant of a water supply or sewerage licence giving a particular authorisation or combination of authorisations;
- (b) the variation of a water supply or sewerage licence so that it gives—
 - (i) a particular authorisation only, or
 - (ii) a particular combination of authorisations.

(1E) A person making a relevant application must comply with such provisions of a notice published under subsection (1C) as relate to the application.]

^{F177}(2)

^{F178}(3)

(4) If ^{F179}... the Authority proposes to refuse [^{F180}a relevant application], ^{F181}... it shall give to the applicant a notice—

- (a) stating that ^{F181}... it proposes to refuse the application;
- (b) stating the reasons why ^{F181}... it proposes to refuse the application; and

Status: This version of this Act contains provisions that are prospective.

- (c) specifying the time within which representations or objections with respect to the proposed refusal may be made,
 and shall consider any representations or objections which are duly made and not withdrawn.
- ^{F182}(5)
- (6) A licence shall be in writing and, unless revoked or suspended in accordance with any condition contained in it, shall continue in force for such period as may be specified in or determined by or under the licence.
- (7) ^{F183}As soon as practicable after granting a licence or variation of a licence, ... the Authority shall serve a copy of the licence or licence as varied—
- (a) on the licence holder;
 - (b) on the Assembly;
 - (c) on the Chief Inspector of Drinking Water;
 - (d) on the Environment Agency;
 - [on the NRBW;]
 - ^{F184}(da)
 - (e) on the Council;
 - (f) on each relevant undertaker;
 - [^{F185}(g) on each water supply licensee and sewerage licensee (other than the holder of the licence in question);]
 - ^{F186}(h)
 - (i) ^{F187}... on the Secretary of State.
- (8) Any sums received ^{F188}... by the Authority by virtue of this section shall be paid into the Consolidated Fund.

Applications forwarded by the Water Industry Commission for Scotland

F189 **17FA**

- (1) The Secretary of State may by regulations make provision about—
- (a) treating a 2005 Act application for the grant of a water services licence under section 6 of the 2005 Act as being also an application under section 17F for the grant of a water supply licence giving only a retail authorisation or a restricted retail authorisation or both;
 - (b) treating a 2005 Act application for the grant of a sewerage services licence under section 6 of the 2005 Act as being also an application under section 17F for the grant of a sewerage licence giving only a retail authorisation.
- (2) The regulations may in particular make provision about—
- (a) the circumstances in which, and the conditions subject to which, a 2005 Act application is to be treated as an application under section 17F for a water supply or sewerage licence giving a particular authorisation or particular authorisations;
 - (b) the time at which an application is to be treated as having been made;
 - (c) the processing of an application by the Authority.
- (3) Provision under subsection (2)(a) may require a 2005 Act application that is forwarded to the Authority—
- (a) to contain, or to be accompanied by, such information or information of such description as is specified by the regulations;
 - (b) to be accompanied by such documents or documents of such descriptions as are specified by the regulations;
 - (c) to be accompanied by a fee, or a fee of a description, specified by the regulations.
- (4) In this section and section 17FB—
- “the 2005 Act” means the Water Services etc. (Scotland) Act 2005;
 - “2005 Act application” means an application under paragraph 1 of Schedule 2 to the 2005 Act.

Textual Amendments

F189 Ss. 17FA, 17FB inserted (18.12.2015 for the insertion of s. 17FA, 1.4.2016 in so far as not already in force) by [Water Act 2014 \(c. 21\), ss. 6\(2\), 94\(3\)](#); [S.I. 2015/1938, art. 2\(a\)\(ii\)](#); [S.I. 2016/465, art. 2\(c\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by [S.I. 2017/462, art. 16](#))

17FB Applications forwarded to the Water Industry Commission for Scotland

- (1) If the conditions in subsection (2) are satisfied, the Authority must—
- (a) forward to the Commission a copy of an application under section 17F for the grant of a water supply licence or sewerage licence, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) send to the Commission such information and such fee as appear to the Authority to be required in order that the application may be treated by the Commission as a 2005 Act application for the grant of—
 - (i) a water services licence under section 6 of the 2005 Act, or
 - (ii) a sewerage services licence under section 6 of the 2005 Act, as the case may be.
- (2) The conditions are that—
 - (a) the Authority is requested to do so by the applicant;
 - (b) the application under section 17F appears to the Authority to be an application that would be treated by the Commission as a 2005 Act application for the grant of—
 - (i) a water services licence under section 6 of the 2005 Act, or
 - (ii) a sewerage services licence under section 6 of the 2005 Act, as the case may be;
 - (c) the applicant has given the Authority—
 - (i) such information as is mentioned in subsection (1)(b), and
 - (ii) a means of sending to the Commission such fee as is mentioned in subsection (1)(b).
- (3) The Authority must—
 - (a) forward a copy of the application, and
 - (b) send such information and fee as are mentioned in subsection (1)(b), before the end of the agreed period for an application of that description.
- (4) In this section—
 - “the agreed period”, in relation to an application under section 17F of a particular description, means the period agreed between the Authority and the Commission as the period applying to an application of that description for the purposes of subsection (3);
 - “the Commission” means the Water Industry Commission for Scotland.]

Textual Amendments

Licence conditions

17G ^{F190}**Licence conditions**

- (1) ^{F191}[A licence under this Chapter] may include—
 - (a) such conditions as appear to ^{F192}... the Authority to be requisite or expedient having regard to the duties imposed on ^{F193}... it by Part 1 of this Act;
 - (b) conditions requiring the rendering to ^{F194}[the Authority] of a payment on the grant of a ^{F195}[licence under this Chapter], or payments while such a licence is in force, or both, of such amount or amounts as may be determined by or under the conditions.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Conditions may be included by virtue of subsection (1)(a) above in a water supply licence whether or not they are connected with the supply of water or the introduction of water into a water undertaker’s supply system.
- [Conditions may be included by virtue of subsection (1)(a) in a sewerage licence^{F196}(2A) whether or not they are connected with—
- (a) effectual dealing with the contents of sewers, or
 - (b) the use of the sewerage system of a sewerage undertaker.]
- (3) Conditions included in a [^{F197}licence under this Chapter] may—
- (a) require the holder of the licence to comply with any direction given by a specified relevant person as to specified matters or matters which are of a specified description;
 - (b) require the holder of the licence to do or not to do specified things or things which are of a specified description, except in so far as a specified relevant person consents to the holder’s not doing or doing them; and
 - (c) provide for the reference to and determination by a specified relevant person of specified questions, or questions which are of a specified description, which arise under or in connection with the licence.
- (4) For the purposes of subsection (3) above—
- (a) the following are relevant persons—
 - (i) the Secretary of State;
 - (ii) the Authority;
 - (iii) [^{F198}so far as subsection (3) applies to water supply licences,] the Assembly;
 - (iv) the Environment Agency; ^{F199}...
[the NRBW; and]
 - ^{F200}(v)
 - (b) “specified” means specified in the licence in question.
- (5) Conditions included in a [^{F201}licence under this Chapter] may contain provision for the conditions to have effect, cease to have effect or be modified at such times, in such manner and in such circumstances as may be specified in or determined in accordance with the conditions.
- (6) Any such condition as is referred to in subsection (5) above shall have effect in addition to the provision made by this Chapter with respect to the modification of the conditions of a licence.
- (7) Any sums received by [^{F202}the Authority] by virtue of this section shall be paid into the Consolidated Fund.

17H Standard conditions of water supply licences

- [^{F203}(1) The Secretary of State may determine the conditions that are to be the standard conditions of water supply licences granted by the Authority.
- (1A) Before determining the standard conditions, the Secretary of State must consult the Welsh Ministers as regards conditions relating to a restricted retail authorisation or a supplementary authorisation.
- (1B) The Secretary of State is to publish the standard conditions in such manner as the Secretary of State considers appropriate.
- (2) The standard conditions may be different depending on the different authorisations or combinations of authorisations to which the conditions are to relate.
- (3) The power to determine standard conditions in relation to water supply licences giving a particular authorisation or a particular combination of authorisations may be exercised only before the grant of the first licence to give that authorisation or that particular combination of authorisations (but this is without prejudice to the power to modify standard conditions in accordance with the provisions of this Chapter).]
- (4) The standard conditions for the purposes of water supply licences [^{F204}giving any particular authorisation or combination of authorisations] may contain provision—
- (a) for any standard condition included in a licence of that description not to have effect until brought into operation in such manner and in such circumstances as may be specified in or determined under the standard conditions;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) for the effect of any standard condition included in such a licence to be suspended in such manner, and in such circumstances, as may be so specified or determined; and
 - (c) for any standard condition included in such a licence which is for the time being suspended to be brought back into operation in such manner and in such circumstances as may be so specified or determined.
- (5) Subject to subsection (6) below, each condition which is a standard condition shall be incorporated by reference in each water supply licence (or in each such licence to which the standard condition applies).
- (6) Subject to the following provisions of this section, ^{F205}... the Authority may, in granting a licence, exclude or modify any of the standard conditions to such extent as ^{F206}... it considers requisite to meet the circumstances of a particular case.
- (7) Before excluding any standard conditions or making any modifications under subsection (6) above, ^{F207}... the Authority shall give notice—
- (a) stating that ^{F208}... it proposes to exclude the conditions or make the modifications and setting out the effect of so doing;
 - (b) stating the reasons why ^{F209}... it proposes to exclude the conditions or make the modifications; and
 - (c) specifying the time (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed exclusions or modifications may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- (8) A notice under subsection (7) above shall be given—
- (a) by publishing the notice in such manner as ^{F210}... the Authority considers appropriate for the purpose of bringing the notice to the attention of persons likely to be affected by the making of the exclusions or modifications; and
 - (b) by serving a copy of the notice—
 - ^{F211}(i) if the notice relates to a water supply licence giving a restricted retail authorisation or a restricted retail authorisation and a supplementary authorisation, on the Welsh Ministers;]
 - (ii) on the Chief Inspector of Drinking Water;
 - ^{F212}(iii)
 - (iv) ^{F213}... on the Secretary of State.
 - [on the Water Industry Commission for Scotland.]
 - ^{F214}(v)
- (9) If, within the time specified in the notice under subsection (7) above, the Secretary of State (after consulting [^{F215}the Welsh Ministers in a case where notice was served on them under subsection (8)(b)(i)]) directs the Authority not to exclude or modify any standard condition, the Authority shall comply with the direction.
- (10) The ^{F216}... Authority shall not exclude any conditions, or make any modifications, under subsection (6) above unless ^{F217}... it is of the opinion that the exclusions or modifications are such that—
- (a) the licence holder would not be unduly disadvantaged in competing with other holders of water supply licences; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) no other holder of a water supply licence would be unduly disadvantaged in competing with other holders of such licences (including the holder of the licence).
- (11) The modification under subsection (6) above of part of a standard condition shall not prevent any other part of the condition from continuing to be treated as a standard condition for the purposes of this Chapter.

Standard conditions of sewerage licences

- F218** **17HA**
 (1) The Secretary of State may determine the conditions that are to be the standard conditions of sewerage licences granted by the Authority.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The Secretary of State is to publish the standard conditions in such manner as the Secretary of State considers appropriate.
- (3) The standard conditions may be different depending on the different authorisations or combinations of authorisations to which the conditions are to relate.
- (4) The power to determine standard conditions in relation to sewerage licences giving a particular authorisation or a particular combination of authorisations may be exercised only before the grant of the first licence to give that authorisation or that particular combination of authorisations (but this is without prejudice to the power to modify standard conditions in accordance with the provisions of this Chapter).
- (5) The standard conditions for the purposes of sewerage licences giving any particular authorisation or combination of authorisations may contain provision—
 - (a) for any standard condition included in a licence of that description not to have effect until brought into operation in such manner and in such circumstances as may be specified in or determined under the standard conditions;
 - (b) for the effect of any standard condition included in such a licence to be suspended in such manner, and in such circumstances, as may be so specified or determined; and
 - (c) for any standard condition included in such a licence which is for the time being suspended to be brought back into operation in such manner and in such circumstances as may be so specified or determined.
- (6) Subject to subsection (7), each condition which is a standard condition is to be incorporated by reference in each sewerage licence (or in each such licence to which the standard condition applies).
- (7) Subject to the following provisions of this section, the Authority may, in granting a licence, exclude or modify any of the standard conditions to such extent as the Authority considers requisite to meet the circumstances of a particular case.
- (8) Before excluding any standard conditions or making any modifications under subsection (7), the Authority must give notice—
 - (a) stating that the Authority proposes to exclude the conditions or make the modifications and setting out the effect of so doing;
 - (b) stating the reasons why the Authority proposes to exclude the conditions or make the modifications; and
 - (c) specifying the time (not being less than 28 days from the date of publication of the notice) within which representations or objections with respect to the proposed exclusions or modifications may be made,and the Authority must consider any representations or objections which are duly made and not withdrawn.
- (9) A notice under subsection (8) must be given—
 - (a) by publishing the notice in such manner as the Authority considers appropriate for the purpose of bringing the notice to the attention of persons likely to be affected by the making of the exclusions or modifications; and
 - (b) by serving a copy of the notice—
 - (i) on the Secretary of State;
 - (ii) on the Environment Agency;
 - (iii) on the NRBW;

Status: This version of this Act contains provisions that are prospective.

17J [F226 **Modification of standard conditions**]

- (1) Subject to the following provisions of this section, the Authority [F227 may modify—
- (a) the standard conditions of water supply licences, or
 - (b) the standard conditions of sewerage licences.]
- [Modifications may relate to—
- ^{F228}(1A) (a) standard conditions contained in all water supply licences or sewerage licences, or
- (b) standard conditions contained in those water supply licences or sewerage licences that grant a particular authorisation or combination of authorisations.]
- (2) Where at any time the Authority modifies the standard conditions of [F229 water supply licences or sewerage licences] under this section the Authority may make such incidental or consequential modifications as it considers necessary or expedient of any conditions of [F230 any licence so affected].
- (3) Before making any modifications under this section, the Authority shall give notice—
- (a) stating that it proposes to make the modifications and setting out their effect;
 - (b) stating the reasons why it proposes to make the modifications; and
 - (c) specifying the time (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed modifications may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- (4) A notice under subsection (3) above shall be given—
- (a) by publishing the notice in such manner as the Authority considers appropriate for the purpose of bringing the notice to the attention of persons likely to be affected by the making of the modifications; and
 - (b) by serving a copy of the notice on—
 - (i) each relevant licence holder;
 - (ii) the Council;
 - (iii) the Secretary of State;
 - (iv) [F231 if the notice relates to a water supply licence,] the Assembly; and
 - (v) the Chief Inspector of Drinking Water.
- (5) If, within the time specified in the notice under subsection (3) above, the Secretary of State ^{F232}... directs the Authority not to make any modification, the Authority shall comply with the direction.
- [The Secretary of State is to consult the Welsh Ministers before giving a direction under
- ^{F233}(5A) subsection (5) in relation to a water supply licence.]
- (6) The Authority may not under this section make any modifications of the standard conditions of [F234 water supply licences or sewerage licences] unless—
- (a) no notice of objection to those modifications is given by any relevant licence holder to the Authority within the time specified in the notice under subsection (3) above;
 - (b) if one or more relevant licence holders give notice of objection to the Authority within that time—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (i) the proportion (expressed as a percentage) of the relevant licence holders who have given notice of objection is less than such percentage as may be specified in an order made by statutory instrument by the Secretary of State; and
 - (ii) the percentage given by subsection (7) below is less than such percentage as may be so specified; or
 - (c) subsection (8) below applies to the case.
- (7) The percentage given by this subsection is the proportion (expressed as a percentage) of the relevant licence holders who have given notice of objection, weighted according to their market share at such time and in such manner as may be specified in an order under subsection (6) above.
- (8) This subsection applies where the Authority is satisfied that—
- (a) the effect of the standard conditions is such as to impose a burden affecting relevant licence holders in the carrying on of activities to which the modifications relate;
 - (b) the modifications would remove or reduce the burden without removing any necessary protection; and
 - (c) the modifications are such that no holder of a water supply licence [^{F235}or, as the case may be, a sewerage licence] would be unduly disadvantaged in competing with other holders of such licences.
- (9) An order under subsection (6) above may include such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.
- (10) Before making an order under subsection (6) above [^{F236}in relation to the standard conditions of water supply licences], the Secretary of State shall consult the Assembly.
- (11) A statutory instrument containing an order under subsection (6) above shall not be made unless a draft of the instrument has been laid before, and approved by a resolution of, each House of Parliament.
- (12) Where the Authority modifies the standard conditions of [^{F237}water supply licences or sewerage licences], the Authority shall—
- (a) also make (as nearly as may be) the same modifications of those conditions for the purposes of their incorporation in [^{F238}water supply licences or, as the case may be, sewerage licences] granted after that time; and
 - (b) publish the modifications in such manner as it considers appropriate.
- [^{F239}Where the Authority modifies the standard conditions of water supply licences or sewerage licences that grant particular authorisations or combinations of authorisations, paragraph (a) has effect only as regards licences granting the same authorisations or combinations of authorisations.]
- (13) In this section “relevant licence holder”, in relation to proposed modifications of standard conditions of [^{F240}water supply licences or sewerage licences or of such of those licences as grant a particular authorisation or combination of authorisations], means the holder of a licence of that description—
- (a) which is to be modified under the proposals by the inclusion of any new standard condition; or
 - (b) which includes any standard conditions to which the proposals relate, other than standard conditions which are not in effect (by virtue of anything

Modifications etc. (not altering text)

- C22** Pt. 2 Ch. 1A applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), **Sch. 1 para. 4** (with reg. 1(1)(c))

17K [F241 Modification references to competition authority]

- (1) The Authority may make to the [F242 CMA] a reference which is so framed as to require the [F243 CMA to] investigate and report on the questions—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) whether any matters which—
 - (i) relate to the carrying on of activities authorised or regulated by [^{F244}a particular water supply or sewerage licence]; and
 - (ii) are specified in the reference, operate, or may be expected to operate, against the public interest; and
 - (b) if so, whether the effects adverse to the public interest which those matters have, or may be expected to have, could be remedied or prevented by modifications of the conditions of the licence.
- (2) The Authority may make to the Commission a reference which is so framed as to require the [^{F245}CMA] to investigate and report on the questions—
- (a) whether any matters which—
 - (i) relate to the carrying on of activities authorised or regulated by [^{F246}water supply licences or sewerage licences that grant a particular authorisation or combination of authorisations]; and
 - (ii) are specified in the reference, operate, or may be expected to operate, against the public interest; and
 - (b) if so, whether the effects adverse to the public interest which those matters have, or may be expected to have, could be remedied or prevented by modifications of the standard conditions of licences of that description.
- (3) The Authority may, at any time, by notice given to the [^{F245}CMA] vary a reference under this section by—
- (a) adding to the matters specified in the reference; or
 - (b) excluding from the reference some of the matters so specified,
- and on receipt of any such notice the [^{F245}CMA] shall give effect to the variation.
- (4) The Authority may specify in a reference under this section, or a variation of such a reference, for the purpose of assisting the [^{F245}CMA] in carrying out the investigation on the reference—
- (a) any effects adverse to the public interest which, in its opinion, the matters specified in the reference or variation have or may be expected to have; and
 - (b) any modifications of the relevant conditions by which, in its opinion, those effects could be remedied or prevented.
- (5) As soon as practicable after making a reference under this section or a variation of such a reference, the Authority shall—
- (a) publish particulars of the reference or variation in such manner as it considers appropriate for the purpose of bringing the reference or variation to the attention of persons likely to be affected by it; and
 - (b) serve a copy of the reference or variation on—
 - (i) the licence holder or, as the case may be, the relevant licence holders;
 - (ii) the Council;
 - (iii) the Secretary of State;
 - (iv) [^{F247}in a case relating to a water supply licence or licences,] the Assembly; and
 - (v) the Chief Inspector of Drinking Water.
- (6) If, before the end of the period of twenty-eight days beginning with the day on which the Secretary of State receives the copy of the reference or variation, the Secretary of State directs the [^{F248}CMA]—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) not to proceed with the reference; or
 (b) not to give effect to the variation,
 the [F248CMA] shall comply with the direction.
- (7) It shall be the duty of the Authority, for the purpose of assisting the [F248CMA] in carrying out an investigation on a reference under this section or in carrying out functions under section 17P below, to give to the [F248CMA]—
- (a) any information in the Authority’s possession which relates to matters falling within the scope of the investigation or the carrying out of those functions and which is either—
- (i) requested by the [F248CMA] for that purpose; or
 (ii) information which, in the Authority’s opinion, it would be appropriate for that purpose to give to the [F248CMA] without any such request; and
- (b) any other assistance which the [F248CMA] may require, and which it is within the Authority’s power to give, in relation to any such matters,
 and the [F248CMA], for the purpose of carrying out any such investigation or such functions, shall take account of any information given to it for that purpose under this subsection.
- (8) In this section and the following provisions of this Chapter—
- “relevant conditions”—
- (a) in relation to a reference under subsection (1) above, means the conditions of the licence to which the reference relates; and
 (b) in relation to a reference under subsection (2) above, means the standard conditions of the licences to which the reference relates; and
- “relevant licence holder” means the holder of a licence to which a reference under subsection (2) above relates.
- (9) In determining for the purposes of this section whether any particular matter operates, or may be expected to operate, against the public interest, the [F249CMA] shall have regard to the matters as respects which duties are imposed on the Secretary of State and the Authority by Part 1 of this Act.
- [The functions of the CMA with respect to a reference under this section are to be
 F250(10) carried out on behalf of the CMA by a group constituted for the purpose by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013 (including functions relating to the making of modifications following a report on a reference, and functions under sections 109 to 115 of the Enterprise Act 2002, as applied by sections 17M and 17Q).]

17L References under section 17K: time limits

- (1) Every reference under section 17K above shall specify a period (not longer than six months beginning with the date of the reference) within which a report on the reference is to be made.
- (2) A report of the [F251CMA] on a reference under section 17K above shall not have effect (and no action shall be taken in relation to it under section 17O below) unless the report is made before the end of the period specified in the reference or such further period (if any) as may be allowed by the Authority under subsection (3) below.
- (3) The Authority may, if it has received representations on the subject from the [F251CMA] and is satisfied that there are special reasons why the report cannot be made within the period specified in the reference, extend that period by no more than six months.
- (4) No more than one extension is possible under subsection (3) above in relation to the same reference.
- (5) The Authority shall, in the case of an extension made by it under subsection (3) above—
 - (a) publish that extension in such manner as the Authority considers appropriate for the purpose of bringing it to the attention of persons likely to be affected by it; and
 - (b) send a copy of what has been published by it under paragraph (a) above to the holder of the licence or, as the case may be, the relevant licence holders.

Status: This version of this Act contains provisions that are prospective.

C24 Ss. 17L, 17M applied (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 5\(3\)](#) (with reg. 1(1)(c))

17M References under section 17K: powers of investigation

(1) The following sections of Part 3 of the Enterprise Act 2002 shall apply, with the modifications mentioned in subsections [^{F252}(1A),] (2) and (3) below, for the purposes of references under section 17K above as they apply for the purposes of references under that Part—

- (a) section 109 (attendance of witnesses and production of documents etc);
- (b) section 110 (enforcement of powers under section 109: general);
- (c) section 111 (penalties);
- (d) section 112 (penalties: main procedural requirements);
- (e) section 113 (payments and interest by instalments);
- (f) section 114 (appeals in relation to penalties);
- (g) section 115 (recovery of penalties); and
- (h) section 116 (statement of policy).

[Section 109 shall, in its application by virtue of subsection (1) above, have effect as ^{F253}(1A) if—

- (a) for subsection (A1), there were substituted—

“(A1) For the purposes of this section, a permitted purpose is assisting the CMA in carrying out any functions exercisable by it in connection with a reference under section 17K of the Water Industry Act 1991.”, and

- (b) subsection (8A) were omitted.]

(2) Section 110 shall, in its application by virtue of subsection (1) above, have effect as if—

- (a) subsection (2) were omitted; ^{F254}...

[^{F255}(aa) after subsection (3), there were inserted—

“(3A) No penalty shall be imposed by virtue of subsection (1) or (3) if more than 4 weeks have passed since the publication of the report of the CMA on the reference concerned; but this subsection shall not apply in relation to any variation or substitution of the penalty which is permitted by virtue of this Part.”; and]

- (b) in subsection (9) the words from “or section” to “section 65(3)” were omitted.

[^{F256}(3) Section 111(5)(b) shall, in its application by virtue of subsection (1) above, have effect as if for sub-paragraph (ii) there were substituted—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

“(ii) if earlier, the day on which the report of the CMA on the reference concerned is made or, if no such report is made within the period permitted for that purpose, the latest day on which the report may be made within the permitted period.”.]

- (4) Provisions of Part 3 of the Enterprise Act 2002 which have effect for the purposes of sections 109 to 116 of that Act (including, in particular, provisions relating to offences and the making of orders) shall, for the purposes of the application of those sections by virtue of subsection (1) above, have effect in relation to those sections as applied by virtue of that subsection.
- (5) Accordingly, corresponding provisions of this Act shall not have effect in relation to those sections as applied by virtue of that subsection.

- (c) where it concludes that any adverse effects so specified could be remedied or prevented by modifications of the relevant conditions, shall specify in the report modifications by which those effects could be remedied or prevented.
- (2) For the purposes of section 17O below, a conclusion contained in a report of the [F259CMA] is to be disregarded if the conclusion is not that of at least two-thirds of the members of the group constituted [F260] by the chair of the CMA for the purpose of carrying out the functions of the CMA with respect to the reference].
- (3) If a member of a group so constituted disagrees with any conclusions contained in a report made on a reference under section 17K above as the conclusions of the [F261CMA], the report shall, if the member so wishes, include a statement of his disagreement and of his reasons for disagreeing.
- (4) For the purposes of the law relating to defamation, absolute privilege attaches to any report made by the [F261CMA] on a reference under section 17K above.
- (5) In making any report on a reference under section 17K above the [F261CMA] must have regard to the following considerations before disclosing any information.
- (6) The first consideration is the need to exclude from disclosure (so far as practicable) any information whose disclosure the [F261CMA] thinks is contrary to the public interest.
- (7) The second consideration is the need to exclude from disclosure (so far as practicable) —
- (a) commercial information whose disclosure the [F261CMA] thinks might significantly harm the legitimate business interests of the undertaking to which it relates; or
 - (b) information relating to the private affairs of an individual whose disclosure the [F261CMA] thinks might significantly harm the individual's interests.
- (8) The third consideration is the extent to which the disclosure of the information mentioned in subsection (7)(a) or (b) above is necessary for the purposes of the report.
- (9) A report of the [F262CMA] on a reference under section 17K above shall be made to the Authority.
- (10) Subject to subsection (13) below, the Authority shall—
- (a) on receiving a report on a reference under section 17K(1) above, serve a copy of it on—
 - (i) the licence holder;
 - (ii) the Council;
 - (iii) the Secretary of State; and
 - (iv) [F263:if the report relates to a water supply licence,] the Assembly; and
 - (b) not earlier than the relevant time, publish another copy of the report in such manner as it considers appropriate for bringing the report to the attention of persons likely to be affected by it.
- (11) Subject to subsection (13) below, the Authority shall—
- (a) on receiving a report on a reference under section 17K(2) above, serve a copy of it on—
 - (i) the Secretary of State; and
 - (ii) [F264:if the report relates to water supply licences,] the Assembly; and
 - (b) not earlier than the relevant time—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (i) serve another copy on each relevant licence holder; and
 - (ii) not less than twenty-four hours after complying with subparagraph (i) above, publish another copy of the report in such manner as it considers appropriate for bringing the report to the attention of persons likely to be affected by it.
- (12) For the purposes of subsections (10) and (11) above, the “relevant time” means—
- (a) fourteen days after the copy of the report in question is received by the Secretary of State and [F265, if the report relates to water supply licences,] the Assembly, or
 - (b) if copies are received by them on different days, fourteen days after the later day.
- (13) Subsection (14) below applies if it appears to the Secretary of State that the publication of any matter in a report on a reference under section 17K(1) or (2) above would be against—
- (a) the public interest; or
 - (b) the commercial interests of any person.
- (14) The Secretary of State may, not later than the relevant time for the purposes of subsection (10) or (11) above, direct the Authority to exclude that matter from the copy of the report, or (as the case may be) each copy of the report, to be served and published as mentioned in paragraph (b) of that subsection; and the Authority shall comply with any such direction.

C25 S. 17N applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 5\(4\)](#) (with reg. 1(1)(c))

170 [F266] **Modification of licences following report**

- (1) Where a report of the [F267]CMA] on a reference under section 17K above—
- (a) includes conclusions to the effect that any of the matters specified in the reference operate, or may be expected to operate, against the public interest;
 - (b) specifies effects adverse to the public interest which those matters have or may be expected to have;
 - (c) includes conclusions to the effect that those effects could be remedied or prevented by modifications of the relevant conditions; and
 - (d) specifies modifications by which those effects could be remedied or prevented,

the Authority shall, subject to the following provisions of this section, make such modifications of the relevant conditions as appear to it requisite for the purpose of remedying or preventing the adverse effects specified in the report.

- (2) Where at any time it modifies under subsection (1) above [F268]—
- (a) the standard conditions of water supply licences or sewerage licences, or
 - (b) the standard conditions of water supply licences or sewerage licences that grant a particular authorisation or combination of authorisations,

in consequence of a reference under section 17K(2) above, the Authority may make such incidental or consequential modifications as it considers necessary or expedient of any conditions of licences of that description.

- (3) Before making modifications under this section, the Authority shall have regard to the modifications specified in the report.
- (4) Before making modifications under this section, the Authority shall give notice—
- (a) stating that it proposes to make the modifications and setting out their effect;
 - (b) stating the reasons why it proposes to make the modifications; and
 - (c) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed modifications may be made,

and shall consider any representations or objections which are duly made and not withdrawn.

- (5) A notice under subsection (4) above shall be given—
- (a) by publishing the notice in such manner as the Authority considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be affected by the making of the modifications;
 - (b) by serving a copy of the notice on the holder of the licence in question or, as the case may be, the relevant licence holders; and
 - (c) by serving a copy of the notice on—
 - (i) the Council;
 - (ii) the Secretary of State;
 - (iii) [F269]in a case relating to a water supply licence or licences,] the Assembly; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (iv) the Chief Inspector of Drinking Water.
- (6) After considering any representations or objections made in response to proposals set out in a notice under subsection (4) above, the Authority shall give notice to the ^{F270}CMA]—
- (a) setting out the modifications it proposes to make to remedy or prevent the adverse effects specified in the report; and
 - (b) stating the reasons for making the modifications.
- (7) The Authority shall include with the notice under subsection (6) above a copy of any representations or objections received in relation to the notice under subsection (4) above.
- (8) If the period of four weeks from the date on which the notice under subsection (6) above is given elapses without a direction under section 17P(1)(a) below having been given to it, the Authority shall—
- (a) make the modifications set out in the notice; or
 - (b) if a direction under section 17P(1)(b) below has been given, make the modifications which are not specified in the direction.
- (9) The modification under subsection (1) above of part of a standard condition of a particular licence in consequence of a reference under section 17K(1) above shall not prevent any other part of the condition from continuing to be regarded as a standard condition for the purposes of this Chapter.
- (10) Where at any time it modifies under subsection (1) above the standard conditions of ^{F271}water supply licences or sewerage licences] in consequence of a reference under section 17K(2) above, the Authority shall—
- (a) also make (as nearly as may be) the same modifications of those conditions for the purposes of their incorporation in ^{F272}water supply licences or, as the case may be, sewerage licences] granted after that time; and
 - (b) publish the modifications made for those purposes in such manner as it considers appropriate.
- ^{F273}Where the Authority modifies the standard conditions of water supply licences or sewerage licences that grant particular authorisations or combinations of authorisations, paragraph (a) has effect only as regards licences granting the same authorisations or combinations of authorisations.]

- C22** Pt. 2 Ch. 1A applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 4](#) (with reg. 1(1)(c))
- C26** S. 17O applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 5\(5\)](#) (with reg. 1(1)(c))

17P [^{F274}**Power of veto following report**]

- (1) The [^{F275}CMA] may, within the period of four weeks after the date on which it is given a notice under section 17O(6) above, direct the Authority—
- (a) not to make the modifications set out in that notice; or
 - (b) not to make such of the modifications as may be specified in the direction;
- and the Authority shall comply with any such direction.
- (2) The Secretary of State may—
- (a) within the period of four weeks after the date on which the [^{F275}CMA] is given a notice under section 17O(6) above; and
 - (b) on the application of the [^{F275}CMA] ,
- direct that the period for giving a direction under subsection (1) above (and, accordingly, the period mentioned in section 17O(8) above) shall be extended by fourteen days.
- (3) The power to give a direction under subsection (1) above may only be exercised in respect of such of the modifications set out in the notice under section 17O(6)(a) above as appear to the [^{F275}CMA] not to be the modifications which are requisite for the purpose of remedying or preventing all or any of the adverse effects specified in the report as effects which could be remedied or prevented by modifications.
- (4) If the [^{F275}CMA] gives a direction under subsection (1) above, it shall—
- (a) give notice setting out the modifications proposed by the Authority, the terms of the direction and the reasons for giving it; and
 - (b) make such modifications itself of the relevant conditions as appear to it to be requisite for the purpose of remedying or preventing—
 - (i) if the direction was given under subsection (1)(a) above, the adverse effects specified in the report as effects which could be remedied or prevented by modifications;
 - (ii) if the direction was given under subsection (1)(b) above, such of those adverse effects as are not remedied or prevented by the modifications made by the Authority under section 17O(8)(b) above.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) In exercising its power under subsection (4)(b) above the [F275CMA] shall have regard to the matters as respects which duties are imposed on the Authority by Part 1 of this Act.
- (6) Before making modifications under subsection (4)(b) above the [F275CMA] shall give notice—
- (a) stating that it proposes to make the modifications and setting them out;
 - (b) stating the reason why it proposes to make them;
 - (c) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed modifications may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- (7) A notice under subsection (4)(a) or (6) above shall be given—
- (a) by publishing the notice in such manner as the [F275CMA] considers appropriate for the purpose of bringing it to the attention of persons likely to be affected by the making of the modifications;
 - (b) by serving a copy of the notice on—
 - (i) the Authority;
 - (ii) the holder of the licence in question or, as the case may be, the relevant licence holders;
 - (iii) the Council;
 - (iv) the Secretary of State;
 - (v) [F276if the reference relates to water supply licences,] the Assembly;and
 - (vi) the Chief Inspector of Drinking Water.
- (8) After making modifications under this section the [F275CMA] shall publish a notice stating that the modifications have been made and setting them out, with the reasons for making them.
- (9) The modification under this section of part of a standard condition of a particular licence in consequence of a reference under section 17K(1) above shall not prevent any other part of the condition from continuing to be regarded as a standard condition for the purposes of this Chapter.
- (10) Where, in consequence of a reference under section 17K(2) above, the [F277CMA] modifies under subsection (4)(b) above [F278—
- (a) the standard conditions of water supply licences or sewerage licences, or
 - (b) the standard conditions of water supply licences or sewerage licences that grant a particular authorisation or combination of authorisations,]
- the Authority may make such incidental or consequential modifications as it considers necessary or expedient of any conditions of licences of that description.
- (11) Where, in consequence of a reference under section 17K(2) above, the [F277CMA] modifies under subsection (4)(b) above the standard conditions of [F279water supply licences or sewerage licences], the Authority shall—
- (a) make (as nearly as may be) the same modifications of those conditions for the purposes of their incorporation in [F280water supply licences or, as the case may be, sewerage licences] granted after that time, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 17Q Section 17P: supplementary

- (1) For the purposes of the law relating to defamation, absolute privilege attaches to any notice under subsection (4)(a), (6) or (8) of section 17P above.
- (2) In giving any notice under subsection (4)(a) or (6) of section 17P above, or publishing any notice under subsection (8) of that section, the [^{F282}CMA] must have regard to the following considerations before disclosing any information.
 - (3) The first consideration is the need to exclude from disclosure (so far as practicable) any information whose disclosure the [^{F282}CMA] thinks is contrary to the public interest.
 - (4) The second consideration is the need to exclude from disclosure (so far as practicable)

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) commercial information whose disclosure the [^{F282}CMA] thinks might significantly harm the legitimate business interests of the undertaking to which it relates; or
 - (b) information relating to the private affairs of an individual whose disclosure the [^{F282}CMA] thinks might significantly harm the individual's interests.
- (5) The third consideration is the extent to which the disclosure of the information mentioned in subsection (4)(a) or (b) above is necessary for the purposes of the notice.
- (6) The following sections of Part 3 of the Enterprise Act 2002 shall apply, with the modifications mentioned in subsections [^{F283}(6A),] (7) and (8) below, for the purposes of any investigation by the [^{F284}CMA] for the purposes of the exercise of its functions under section 17P above, as they apply for the purposes of any investigation on references under that Part—
- (a) section 109 (attendance of witnesses and production of documents etc);
 - (b) section 110 (enforcement of powers under section 109: general);
 - (c) section 111 (penalties);
 - (d) section 112 (penalties: main procedural requirements);
 - (e) section 113 (payments and interest by instalments);
 - (f) section 114 (appeals in relation to penalties);
 - (g) section 115 (recovery of penalties); and
 - (h) section 116 (statement of policy).

[Section 109 shall, in its application by virtue of subsection (6) above, have effect as ^{F285}(6A) if—

- (a) for subsection (A1), there were substituted—
 - “(A1) For the purposes of this section, a permitted purpose is assisting the CMA in carrying out any functions exercisable by it in connection with an investigation for the purposes of the exercise of its functions under section 17P of the Water Industry Act 1991.”, and
- (b) subsection (8A) were omitted.]

(7) Section 110 shall, in its application by virtue of subsection (6) above, have effect as if—

- (a) subsection (2) were omitted,
- [^{F286}(b) after subsection (3), there were inserted—
 - “(3A) No penalty shall be imposed by virtue of subsection (1) or (3) if more than 4 weeks have passed since the publication by the CMA of a notice under section 17P(9) of the Water Industry Act 1991 in connection with the reference concerned or, if no direction has been given by the CMA under section 17P(1) of that Act in connection with the reference concerned and within the period permitted for that purpose, the latest day on which it was possible to give such a direction within the permitted period; but this subsection shall not apply in relation to any variation or substitution of the penalty which is permitted by virtue of this Part.”; and]
- (c) in subsection (9) the words from “or section” to “section 65(3)” were omitted.

(8) Section 111(5)(b) shall, in its application by virtue of subsection (6), have effect as if for sub-paragraph (ii) there were substituted—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) if earlier, the day on which a notice is published by the [F287CMA] under section 17P(8) of the Water Industry Act 1991 in connection with the reference concerned or, if no direction is given by the [F287CMA] under section 17P(1) of that Act in connection with the reference concerned and within the period permitted for that purpose, the latest day on which such a direction may be given within the permitted period.
- (9) Provisions of Part 3 of the Enterprise Act 2002 which have effect for the purposes of sections 109 to 116 of that Act (including, in particular, provisions relating to offences and the making of orders) shall, for the purposes of the application of those sections by virtue of subsection (6) above, have effect in relation to those sections as applied by virtue of that subsection.
- (10) Accordingly, corresponding provisions of this Act shall not have effect in relation to those sections as applied by virtue of that subsection.

17R [F288 Modification by order under other enactments]

- (1) Where the [F289CMA] or the Secretary of State (the “relevant authority”) makes a relevant order, the order may also provide for the modification of—
- [F290(a) the conditions of a particular water supply or sewerage licence,
 (b) the standard conditions of water supply licences or sewerage licences, or
 (c) the standard conditions of water supply licences or sewerage licences that grant a particular authorisation or combination of authorisations,]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

to such extent as may appear to the relevant authority to be requisite or expedient for the purpose of giving effect to, or taking account of, any provision made by the order.

- (2) In subsection (1) above “relevant order” means—
- (a) an order under section 75, 83 or 84 of, or paragraph 5, 10 or 11 of Schedule 7 to, the Enterprise Act 2002 where—
 - (i) one or more than one of the enterprises which have, or may have, ceased to be distinct enterprises was engaged in the carrying on of activities authorised or regulated by [^{F291}a water supply licence or sewerage licence]; or
 - (ii) one or more than one of the enterprises which will or may cease to be distinct enterprises is engaged in the carrying on of activities authorised or regulated by [^{F292}a water supply licence or sewerage licence]; or
 - (b) an order under section 160 or 161 of that Act where the feature, or combination of features, of the market [^{F293}or markets] in the United Kingdom for goods or services which prevents, restricts or distorts competition relates to activities authorised or regulated by [^{F294}a water supply licence or sewerage licence].
- (3) The modification under subsection (1)(a) above of part of a standard condition of a particular licence shall not prevent any other part of the condition from continuing to be regarded as a standard condition for the purposes of this Chapter.
- (4) Where at any time the relevant authority modifies under [^{F295}subsection (1)(b) or (c)] above [^{F296}the standard conditions of water supply licences or sewerage licences or of water supply licences or sewerage licences that grant a particular authorisation or combination of authorisations], the relevant authority—
- (a) shall also make (as nearly as may be) the same modifications of those conditions for the purposes of their incorporation in licences of that description granted after that time; and
 - (b) may, after consultation with the Authority, make such incidental or consequential modifications as the relevant authority considers necessary or expedient of any conditions of licences of that description granted before that time.
- (5) Where at any time the relevant authority modifies standard conditions of [^{F297}water supply licences or sewerage licences] under subsection (4)(a) above for the purposes of their incorporation in licences, the relevant authority shall publish those modifications in such manner as the relevant authority considers appropriate.
- (6) Expressions used in subsection (2) above and in Part 3 or 4 of the Enterprise Act 2002 have the same meaning in that subsection as in that Part.]

CHAPTER II

ENFORCEMENT OF INSOLVENCY

Enforcement orders

18 Orders for securing compliance with certain provisions.

- (1) Subject to subsection (2) and sections 19 and 20 below, where in the case of any company holding an appointment under Chapter I of this Part [^{F298} or [^{F299} any person holding] a licence under Chapter 1A of this Part] the Secretary of State or the Director is satisfied—
- (a) that that company [^{F300} or that person] is contravening—
- (i) any condition of the company's appointment [^{F301} or [^{F302} the person's] licence] in relation to which he is the enforcement authority; or
- (ii) any statutory or other requirement which is enforceable under this section and in relation to which he is the enforcement authority;
- or
- (b) that that company [^{F303} or that person][^{F304} is likely to contravene any such condition or requirement],

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

he shall by a final enforcement order make such provision as is requisite for the purpose of securing compliance with that condition or requirement.

[^{F305}(1A) Subject to subsection (2) and sections 19 and 20 below, where—

- (a) in the case of any company holding an appointment under Chapter 1 of this Part, the Secretary of State or the Authority is satisfied that the company—
 - (i) is causing or contributing to a contravention of a condition or requirement such as is referred to in paragraph (a)(i) or (ii) of subsection (1) above by [^{F306}a person] holding a licence under Chapter 1A of this Part; or
 - (ii) is likely to cause or contribute to any such contravention; or
- (b) in the case of [^{F307}any person] holding a licence under Chapter 1A of this Part, the Secretary of State or the Authority is satisfied that [^{F308}the person]—
 - (i) is causing or contributing to a contravention of a condition or requirement such as is referred to in paragraph (a)(i) or (ii) of subsection (1) above by a company holding an appointment under Chapter 1 of this Part; or
 - (ii) is likely to cause or contribute to any such contravention,

he or it shall by a final enforcement order make such provision as is requisite for the purpose of securing compliance with that condition or requirement.]

(2) Subject to section 19 below, where in the case of any company holding an appointment under Chapter I of this Part [^{F309}or [^{F310}any person holding] a licence under Chapter 1A of this Part]—

- (a) it appears to the Secretary of State or the Director as mentioned in paragraph (a) or (b) of subsection (1) [^{F311}or (1A)] above; and
- (b) it appears to him that it is requisite that a provisional enforcement order be made,

he may (instead of taking steps towards the making of a final order) by a provisional enforcement order make such provision as appears to him requisite for the purpose of securing compliance with the condition or requirement in question.

(3) In determining for the purposes of subsection (2)(b) above whether it is requisite that a provisional enforcement order be made, the Secretary of State or, as the case may be, the Director shall have regard, in particular, to the extent to which any person is likely to sustain loss or damage in consequence of anything which, in contravention of any condition or of any statutory or other requirement enforceable under this section, is likely to be done, or omitted to be done, before a final enforcement order may be made.

(4) Subject to sections 19 and 20 below, where the Secretary of State or the Director has made a provisional enforcement order, he shall confirm it, with or without modifications, if—

- (a) he is satisfied that the company to which the order relates—
 - (i) is contravening any condition or statutory or other requirement in relation to which he is the enforcement authority; or
 - [^{F312}(ii) is likely to contravene any such condition or requirement;][^{F313}or
 - (iii) is causing or contributing to a contravention of any such condition or requirement; or
 - (iv) is likely to cause or contribute to any such contravention;]

and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the provision made by the order (with any modifications) is requisite for the purpose of securing compliance with that condition or requirement.
- (5) An enforcement order—
- (a) shall require the company to which it relates (according to the circumstances of the case) to do, or not to do, such things as are specified in the order or are of a description so specified;
 - (b) shall take effect at such time, being the earliest practicable time, as is determined by or under the order; and
 - (c) may be revoked at any time by the enforcement authority who made it.
- (6) For the purposes of this section and the following provisions of this Act—
- (a) the statutory and other requirements which shall be enforceable under this section in relation to a company holding an appointment under Chapter I of this Part [^{F314}or [^{F315}a person holding] a licence under Chapter 1A of this Part] shall be such of the requirements of any enactment or of any subordinate legislation as—
 - (i) are imposed in consequence of that appointment [^{F316}or licence]; and
 - (ii) are made so enforceable by that enactment or subordinate legislation;
 - (b) the Director shall be the enforcement authority in relation to the conditions of an appointment under Chapter I of this Part [^{F317}or of a licence under Chapter 1A of this Part]; and
 - (c) the enforcement authority in relation to each of the statutory and other requirements enforceable under this section shall be the Secretary of State, the Director or either of them, according to whatever provision is made by the enactment or subordinate legislation by which the requirement is made so enforceable.
- (7) In this section and the following provisions of this Chapter—
- “enforcement order” means a final enforcement order or a provisional enforcement order;
- “final enforcement order” means an order under this section other than a provisional enforcement order;
- “provisional enforcement order” means an order under this section which, if not previously confirmed in accordance with subsection (4) above, will cease to have effect at the end of such period (not exceeding three months) as is determined by or under the order.
- [^{F318}(8) Where any act or omission—
- (a) constitutes a contravention of a condition of an appointment under Chapter 1 of this Part or of a condition of a licence under Chapter 1A of this Part or of a statutory or other requirement enforceable under this section; or
 - (b) causes or contributes to a contravention of any such condition or requirement, the only remedies for, or for causing or contributing to, that contravention (apart from those available by virtue of this section) shall be those for which express provision is made by or under any enactment and those that are available in respect of that act or omission otherwise than by virtue of its constituting, or causing or contributing to, such a contravention.]

Status: This version of this Act contains provisions that are prospective.

19 Exceptions to duty to enforce.

- (1) ^{F319}Subject to the Drinking Water (Undertakings) (England and Wales) Regulations 2000]Neither the Secretary of State nor the Director shall be required to make an enforcement order in relation to any ^{F320}person], or to confirm a provisional enforcement order so made, if he is satisfied—
 - (a) that the contraventions were, or the apprehended contraventions are, of a trivial nature;
 - ^{F321}(aa) that the extent to which the ^{F320}person] caused or contributed to, or was likely to cause or contribute to, a contravention was trivial;]
 - (b) that the ^{F320}person] has given, and is complying with, an undertaking to take all such steps as it appears to him for the time being to be appropriate for the ^{F320}person] to take for the purpose of securing or facilitating compliance with the condition or requirement in question; or
 - (c) that the duties imposed on him by Part I of this Act preclude the making or, as the case may be, the confirmation of the order.
- ^{F322}(1A) Before making an enforcement order or confirming a provisional enforcement order, the Authority shall consider whether it would be more appropriate to proceed under the Competition Act 1998.
- (1B) The Authority shall not make an enforcement order or confirm a provisional enforcement order if it considers that it would be more appropriate to proceed under the Competition Act 1998.]
- (2) The requirement to comply with an undertaking given for the purposes of subsection (1)(b) above shall be treated as a statutory requirement enforceable under section 18 above—
 - (a) by the Secretary of State; or

- (b) with the consent of or in accordance with a general authorisation given by the Secretary of State, by the Director.
- (3) Where the Secretary of State or the Director, having notified a [F320 person] that he is considering the making in relation to the [F320 person] of an enforcement order or the confirmation of a provisional enforcement order so made, is satisfied as mentioned in paragraph (a), [F323(aa),(b) or (c) of subsection (1) above [F324 or, in the case of the Director, [F325 has decided that it would be more appropriate to proceed under the Competition Act 1998]], he shall—
- (a) serve notice that he is so satisfied [F326 or has so decided] on the [F320 person];
- [F327(b) publish in such manner as the Secretary of State or the Authority considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be affected by them—
- (i) a copy of the notice, and
- (ii) where the Secretary of State or the Authority is satisfied as mentioned in paragraph (b) of subsection (1), a summary of the undertaking describing the steps to be taken under it; and]
- (c) in a case where the Secretary of State is satisfied as mentioned in the said paragraph (b), serve a copy of the notice and of the undertaking given for the purposes of that paragraph on the Director.
- [F328(3A) In a case where notice under subsection (3)(a) falls to be served by the Welsh Ministers, references to the Secretary of State in subsection (3)(b) are to be read as references to the Welsh Ministers.]
- (4) The requirements of subsection (3) above shall not apply, in the case of any proposed order or confirmation in respect of a direction under section 208 below, to the extent that the Secretary of State directs that they should not be complied with in the interests of national security.

20 Procedure for enforcement orders.

- (1) Before making a final enforcement order [^{F329}under section 18(1) above] or confirming a provisional enforcement order [^{F330}in a case in which section 18(4)(a)(i) or (ii) above applies], the Secretary of State or the Director shall give notice—
- (a) stating that he proposes to make or confirm the order and setting out the effect of the order;
 - (b) setting out—
 - (i) the condition or requirement for the purpose of securing compliance with which the order is to be made or confirmed;
 - (ii) the acts or omissions which, in his opinion, constitute or would constitute contraventions of that condition or requirement; and
 - (iii) the other facts which, in his opinion, justify the making or confirmation of the order;
- and
- (c) specifying the period (not being less than [^{F331}twenty-one] days from the date of publication of the notice) within which representations or objections with respect to the proposed order or proposed confirmation may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- [^{F332}(1A) Before making a final enforcement order under section 18(1A) above or confirming a provisional enforcement order in a case in which section 18(4)(a)(iii) or (iv) above applies, the Secretary of State or the Authority shall give notice—
- (a) stating that he or it proposes to make or confirm the order and setting out the effect of the order;
 - (b) setting out—
 - (i) the condition or requirement for the purposes of securing compliance with which the order is to be made or confirmed;
 - (ii) the acts or omissions which, in his or its opinion, cause or contribute to or would cause or contribute to the contravention of that condition or requirement; and
 - (iii) the other facts which, in his or its opinion, justify the making or confirmation of the order; and
 - (c) specifying the period (not being less than twenty-one days from the date of publication of the notice) within which representations or objections to the proposed order or proposed confirmation may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.]
- (2) A notice under subsection (1) [^{F333}or (1A)] above shall be given—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) by publishing the notice in such manner as the Secretary of State or, as the case may be, the Director considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be affected by them; and
 - (b) by serving a copy of the notice, and a copy of the proposed order or of the order proposed to be confirmed, on the [^{F334}person to whom] the order relates and, where the notice is given by the Secretary of State, on the Director.
- (3) Neither the Secretary of State nor the Director shall make a final enforcement order with modifications, or confirm a provisional enforcement order with modifications, except—
 - (a) with the consent to the modifications of the [^{F334}person to whom] the order relates; or
 - (b) after complying with the requirements of subsection (4) below.
- (4) The requirements mentioned in subsection (3) above are that the Secretary of State or, as the case may be, the Director shall—
 - (a) serve on the [^{F334}person to whom] the order relates such notice as appears to him to be requisite of his proposal to make or confirm the order with modifications;
 - (b) in that notice specify the period (not being less than [^{F335}twenty-one] days from the date of the service of the notice) within which representations or objections with respect to the proposed modifications may be made; and
 - (c) consider any representations or objections which are duly made and not withdrawn.
- (5) As soon as practicable after making an enforcement order or confirming a provisional enforcement order, the Secretary of State or, as the case may be, the Director shall—
 - (a) serve a copy of the order on the [^{F334}person to whom] the order relates and, where this subsection applies in the case of an order made or confirmed by Secretary of State, on the Director; and
 - (b) publish such a copy in such manner as he considers appropriate for the purpose of bringing the order to the attention of persons likely to be affected by it.
- (6) Before revoking an enforcement order, other than an unconfirmed provisional order, the Secretary of State or the Director shall give notice—
 - (a) stating that he proposes to revoke the order and setting out its effect; and
 - (b) specifying the period (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposed revocation may be made,and shall consider any representations or objections which are duly made and not withdrawn.
- (7) If, after giving a notice under subsection (6) above, the Secretary of State or the Director decides not to revoke the order to which the notice relates, he shall give notice of that decision.
- (8) A notice under subsection (6) or (7) above shall be given—
 - (a) by publishing the notice in such manner as the Secretary of State or, as the case may be, the Director considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be affected by them; and

Status: This version of this Act contains provisions that are prospective.

21 Validity of enforcement orders.

- (1) If the [^{F336}person to whom] an enforcement order relates is aggrieved by the order and desires to question its validity on the ground—
- (a) that its making or confirmation was not within the powers of section 18 above; or
 - (b) that any of the requirements of section 20 above have not been complied with in relation to it,
- the [^{F337}person] may, within forty-two days from the date of service on it of a copy of the order, make an application to the High Court under this section.
- (2) On any such application the High Court may, if satisfied that the making or confirmation of the order was not within those powers or that the interests of the [^{F338}person] have been substantially prejudiced by a failure to comply with those requirements, quash the order or any provision of the order.
- (3) Except as provided by this section, the validity of an enforcement order shall not be questioned in any legal proceedings whatsoever.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

22 Effect of enforcement order.

- (1) The obligation to comply with an enforcement order shall be a duty owed to any person who may be affected by a contravention of the order.
- (2) Where a duty is owed by virtue of subsection (1) above to any person, any breach of the duty which causes that person to sustain loss or damage shall be actionable at the suit of that person.
- (3) In any proceedings brought against any [^{F339}person] in pursuance of subsection (2) above, other than proceedings in respect of so much of a contravention of any order as consists in a breach of the duty imposed by virtue of section 68(1)(a) [^{F340}or (1A)(a)] below, it shall be a defence for the [^{F339}person] to show that [^{F341}the person] took all reasonable steps and exercised all due diligence to avoid contravening the order.
- (4) Without prejudice to any right which any person may have by virtue of subsection (1) above to bring civil proceedings in respect of any contravention or apprehended contravention of an enforcement order, compliance with any such order shall be enforceable by civil proceedings by the relevant enforcement authority for an injunction or for any other appropriate relief.
- (5) In subsection (4) above “the relevant enforcement authority”, in relation to any enforcement order, means the Secretary of State or the Director or either of them according to who is the enforcement authority in relation to the condition or requirement compliance with which was to be secured by the order.

[^{F342}Financial penalties

Textual Amendments

F342 Ss. 22A-22F and preceding cross-heading inserted (1.10.2004 for specified purposes and otherwise 1.4.2005) by [Water Act 2003 \(c. 37\)](#), **ss. 48(1)**, 105(3); S.I. 2004/2528, **art. 2(e)** (with savings in [art. 4](#)); S.I. 2005/968, **art. 2(i)** (with savings in [art. 4](#), [Sch. 1](#), 2)

22A Penalties

(1) Where the Authority is satisfied—

- (a) in the case of any company holding an appointment under Chapter 1 of this Part, that the company—
 - (i) has contravened or is contravening any condition of the appointment;
 - (ii) has caused or contributed to, or is causing or contributing to, a contravention by a [^{F343}person] holding a licence under Chapter 1A of this Part of any condition of the licence; or
 - (iii) has failed or is failing to achieve any standard of performance prescribed under section 38(2) or 95(2) below; or
- (b) in the case of any [^{F344}person] holding a licence under Chapter 1A of this Part, that the [^{F344}person]—
 - (i) has contravened or is contravening any condition of the licence; ^{F345}...
 - (ii) has caused or contributed to, or is causing or contributing to, a contravention by a company holding an appointment under Chapter 1 of this Part of any condition of the appointment, [^{F346}or
 - (iii) has failed or is failing to achieve any standard of performance prescribed under section 38ZA or 95ZA,]

the Authority may, subject to section 22C below, impose on [^{F347}that company or that person] a penalty of such amount as is reasonable in all the circumstances of the case.

(2) Where the Authority, the Secretary of State or the Assembly is satisfied—

- (a) in the case of any company holding an appointment under Chapter 1 of this Part, that the company—
 - (i) has contravened or is contravening any statutory or other requirement which is enforceable under section 18 above and in relation to which he or it is the enforcement authority; or
 - (ii) has caused or contributed to, or is causing or contributing to, a contravention by a [^{F348}person] holding a licence under Chapter 1A of this Part of any such requirement; or
- (b) in the case of any [^{F349}person] holding a licence under Chapter 1A of this Part, that the [^{F349}person]—
 - (i) has contravened or is contravening any statutory or other requirement which is enforceable under section 18 above and in relation to which he or it is the enforcement authority; or
 - (ii) has caused or contributed to, or is causing or contributing to, a contravention by a company holding an appointment under Chapter 1 of this Part of any such requirement,

he or it may, subject to section 22C below, impose on [^{F350}that company or that person] a penalty of such amount as is reasonable in all the circumstances of the case.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) In a case in which—
- (a) subsection (1) above applies by virtue of paragraph (a)(ii) or (b)(ii) of that subsection, or
 - (b) subsection (2) above applies by virtue of paragraph (a)(ii) or (b)(ii) of that subsection,
- references in the following provisions of this section and sections 22B and 22C below to a contravention include references to causing or contributing to a contravention.
- (4) Before imposing a penalty on a [^{F351}person] under subsection (1) or (2) above the Authority, the Secretary of State or the Assembly (the “enforcement authority”) shall give notice—
- (a) stating that it proposes to impose a penalty and the amount of the penalty proposed to be imposed;
 - (b) setting out the condition, requirement or standard of performance in question;
 - (c) specifying the acts or omissions which, in the opinion of the enforcement authority, constitute the contravention or failure in question and the other facts which, in the opinion of the enforcement authority, justify the imposition of a penalty and the amount of the penalty proposed; and
 - (d) specifying the period (not being less than twenty-one days from the date of publication of the notice) within which representations or objections with respect to the proposed penalty may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- (5) Before varying any proposal stated in a notice under subsection (4)(a) above the enforcement authority shall give notice—
- (a) setting out the proposed variation and the reasons for it; and
 - (b) specifying the period (not being less than twenty-one days from the date of publication of the notice) within which representations or objections with respect to the proposed variation may be made,
- and shall consider any representations or objections which are duly made and not withdrawn.
- (6) As soon as practicable after imposing a penalty [^{F352}on a person], the enforcement authority shall give notice—
- (a) stating that he or it has imposed a penalty on the [^{F353}person] and its amount;
 - (b) setting out the condition, requirement or standard of performance in question;
 - (c) specifying the acts or omissions which, in the opinion of the enforcement authority, constitute the contravention or failure in question and the other facts which, in the opinion of the enforcement authority, justify the imposition of the penalty and its amount; and
 - (d) specifying a date, no earlier than the end of the period of forty-two days from the date of service of the notice on the [^{F354}person], by which the penalty is required to be paid.
- (7) The [^{F355}person on whom the penalty has been imposed] may, within twenty-one days of the date of service ^{F356}... of a notice under subsection (6) above, make an application to the enforcement authority for him or it to specify different dates by which different portions of the penalty are to be paid.
- (8) Any notice required to be given under this section shall be given—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) by publishing the notice in such manner as the enforcement authority considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be affected by them;
 - (b) by serving a copy of the notice on the [^{F357}person on whom the penalty is to be or has been imposed];
 - (c) by serving a copy of the notice on the Council; and
 - (d) where the notice is given by the Secretary of State or the Assembly, by serving a copy of the notice on the Authority.
- (9) Any sums received by the enforcement authority by way of penalty under this section shall be paid into the Consolidated Fund.
- (10) The power of the enforcement authority to impose a penalty under this section is not exercisable in respect of any contravention or failure before the commencement of this section.
- (11) No penalty imposed by an enforcement authority under this section may exceed [^{F358}—
- (a) 10% of the turnover of the company, or
 - (b) in a case where the person on whom the penalty is imposed is not a company, 10% of the turnover of the business of the person,
- (determined] in accordance with provisions specified in an order made, after consulting the Assembly, by the Secretary of State).
- (12) The power of the Secretary of State to make an order under subsection (11) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.
- [^{F359}(13) Before imposing a penalty under this section, the Authority shall consider whether it would be more appropriate to proceed under the Competition Act 1998.
- (14) The Authority shall not impose a penalty under this section if it considers that it would be more appropriate to proceed under the Competition Act 1998.]

22B Statement of policy with respect to penalties

- (1) Each enforcement authority shall prepare and publish a statement of policy with respect to the imposition of penalties and the determination of their amount.
- (2) In deciding whether to impose a penalty, and in determining the amount of any penalty, in respect of a contravention or failure an enforcement authority shall have regard to his or its statement of policy most recently published at the time when the contravention or failure occurred.
- (3) An enforcement authority may revise his or its statement of policy and where he or it does so shall publish the revised statement.
- (4) Publication under this section shall be in such manner as the enforcement authority considers appropriate for the purpose of bringing the matters contained in the statement of policy to the attention of persons likely to be affected by them.
- (5) An enforcement authority shall undertake such consultation as he or it considers appropriate when preparing or revising his or its statement of policy.

Status: This version of this Act contains provisions that are prospective.

Modifications etc. (not altering text)

- C51** S. 22B applied (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), **Sch. 1 para. 6(4)** (with reg. 1(1)(c))

22C Time limits on the imposition of financial penalties

- (1) Where no final or provisional order has been made in relation to a contravention or failure, an enforcement authority may not impose a penalty [^{F360}on a person] in respect of the contravention or failure later than the end of the period of [^{F361}five years] from the time of the contravention or failure, unless before the end of that period—
- (a) the notice under section 22A(4) above relating to the penalty is served on the [^{F362}person] under section 22A(8) above; or
 - (b) a notice relating to the contravention or failure is served on the [^{F363}person] under section 203(2) below.
- (2) Where a final or provisional order has been made in relation to a contravention or failure, an enforcement authority may not impose a penalty [^{F364}on a person] in respect of the contravention or failure unless the notice relating to the penalty under section 22A(4) above was served on the [^{F365}person] under section 22A(8) above—
- (a) within three months from the confirmation of the provisional order or the making of the final order; or
 - (b) where the provisional order is not confirmed, within six months from the making of the provisional order.

22D Interest and payment of instalments

- (1) If the whole or any part of a penalty is not paid by the date by which it is required to be paid, the unpaid balance from time to time shall carry interest at the rate for the time being specified in section 17 of the Judgments Act 1838.
- (2) If an application is made under subsection (7) of section 22A above in relation to a penalty, the penalty is not required to be paid until the application has been determined.
- (3) If the enforcement authority grants an application under that subsection in relation to a penalty but any portion of the penalty is not paid by the date specified in relation to it by the enforcement authority under that subsection, the enforcement authority may where he or it considers it appropriate require so much of the penalty as has not already been paid to be paid immediately.

Modifications etc. (not altering text)

C53 S. 22D applied (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 6\(4\)](#) (with reg. 1(1)(c))

22E Appeals

- (1) If the [^{F366}person on whom] a penalty is imposed is aggrieved by—
 - (a) the imposition of the penalty;
 - (b) the amount of the penalty; or
 - (c) the date by which the penalty is required to be paid, or the different dates by which different portions of the penalty are required to be paid,the company may make an application to the court under this section.
- (2) An application under subsection (1) above must be made—
 - (a) within forty-two days from the date of service on the [^{F367}person] of a notice under section 22A(6) above; or
 - (b) where the application relates to a decision of an enforcement authority on an application by the [^{F368}person] under section 22A(7) above, within forty-two days from the date the [^{F368}person] is notified of the decision.
- (3) On any such application, where the court considers it appropriate to do so in all the circumstances of the case and is satisfied of one or more of the grounds falling within subsection (4) below, the court—
 - (a) may quash the penalty;
 - (b) may substitute a penalty of such lesser amount as the court considers appropriate in all the circumstances of the case; or
 - (c) in the case of an application under subsection (1)(c) above, may substitute for the date or dates imposed by the enforcement authority an alternative date or dates.
- (4) The grounds falling within this subsection are—
 - (a) that the imposition of the penalty was not within the power of the enforcement authority under section 22A above;
 - (b) that any of the requirements of subsections (4) to (6) or (8) of section 22A above have not been complied with in relation to the imposition of the penalty

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- and the interests of the [F369 person] have been substantially prejudiced by the non-compliance; or
- (c) that it was unreasonable of the enforcement authority to require the penalty imposed, or any portion of it, to be paid by the date or dates by which it was required to be paid.
- (5) If an application is made under this section in relation to a penalty, the penalty is not required to be paid until the application has been determined.
- (6) Where the court substitutes a penalty of a lesser amount it may require the payment of interest on the substituted penalty at such rate, and from such date, as it considers just and equitable.
- (7) Where the court specifies as a date by which the penalty, or a portion of the penalty, is to be paid a date before the determination of the application under this section it may require the payment of interest on the penalty, or portion, from that date at such rate as it considers just and equitable.
- (8) Except as provided by this section, the validity of a penalty shall not be questioned by any legal proceedings whatever.
- (9) In this section “the court” means the High Court.

Special administration orders

23 Meaning and effect of special administration order.

- (1) A special administration order is an order of the High Court made in accordance with section 24 or 25 below in relation to a company holding an appointment under Chapter I of this Part [^{F371}or which is [^{F372}a qualifying water supply licensee or a qualifying sewerage licensee]] and directing that, during the period for which the order is in force, the affairs, business and property of the company shall be managed, by a person appointed by the High Court—
- for the achievement of the purposes of such an order; and
 - in a manner which protects the respective interests of the members and creditors of the company.
- (2) The purposes of a special administration order made in relation to any company [^{F373}holding an appointment under Chapter 1 of this Part] shall be—
- the transfer to another company, or (as respects different parts of the area to which the company's appointment relates, or different parts of its undertaking) to two or more different companies, as a going concern, of so much of the company's undertaking as it is necessary to transfer in order to ensure that the functions which have been vested in the company by virtue of its appointment may be properly carried out; and
 - the carrying out of those functions pending the making of the transfer and the vesting of those functions in the other company or companies (whether by virtue of the transfer or of an appointment or variation which replaces the former company as a relevant undertaker).
- [^{F374}(2A) The purposes of a special administration order made in relation to any company which is [^{F375}a qualifying water supply licensee] shall be—
- the transfer to another company or companies, as a going concern, of so much of the company's undertaking as it is necessary to transfer in order to ensure that activities relating to the introduction or introductions of water mentioned in [^{F376}subsection (7)] below may be properly carried on; and
 - the carrying on of those activities pending the making of the transfer.]
- [^{F377}(2B) Where a company is in special administration as a result of an order made on the grounds that the company is or is likely to be unable to pay its debts—
- a purpose of the special administration order is to rescue the company as a going concern, and
 - the transfer purpose under subsection (2)(a) or (2A)(a) applies only if the special administrator thinks that—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (i) it is not likely to be possible to rescue the company as a going concern, or
 - (ii) transfer is likely to secure more effective performance of the functions or activities mentioned in subsection (2)(a) or (2A)(a).
- (2C) Where subsection (2B) applies, subsections (2)(b) and (2A)(b) have effect as if they referred to carrying out functions, or carrying on activities, pending rescue or transfer.
- (2D) For the purpose of rescuing the company as a going concern a special administrator may propose—
- (a) a company voluntary arrangement under Part 1 of the Insolvency Act 1986, or
 - (b) a compromise or arrangement in accordance with Part 26 [^{F378}or 26A] of the Companies Act 2006.
- (2E) The Secretary of State may by regulations made by statutory instrument—
- (a) modify a provision of the Insolvency Act 1986 or the Companies Act 2006 in respect of the arrangements and compromises mentioned in subsection (2D) in so far as they apply to a company which is or has been in special administration;
 - (b) make other supplemental provision about those arrangements and compromises (which may, in particular, apply or modify the effect of an enactment about insolvency or companies).
- (2F) Provision under subsection (2E)(a) or (b) may, in particular, confer a function on—
- (a) the Secretary of State,
 - (b) the Welsh Ministers, or
 - (c) the Authority.
- (2G) Regulations under subsection (2E) may not be made unless—
- (a) the Welsh Ministers have consented to the making of the regulations, and
 - (b) a draft has been laid before and approved by resolution of each House of Parliament (and section 213(1) shall not apply).]
- [^{F379}(2H) A transfer under subsection (2) or (2A) may be effected by—
- (a) transferring all or part of the company's undertaking to a wholly-owned subsidiary of the company, and
 - (b) then transferring securities in the subsidiary to another company.]
- [^{F380}(3) Schedule B1 to the Insolvency Act 1986 (administration) applies to special administration (subject to regulations under subsection (3A)).
- (3A) The Secretary of State may make regulations about special administration which—
- (a) apply (with or without modification) an insolvency provision;
 - (b) disapply an insolvency provision;
 - (c) modify the effect of an insolvency provision;
 - (d) make provision similar to, and in place of, an insolvency provision.
- (3B) In subsection (3A) “insolvency provision” means a provision of the Insolvency Act 1986 or another enactment about insolvency (including (i) a provision about administration, (ii) a provision about consequences of insolvency, and (iii) a provision conferring power to make rules).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3C) A reference in an enactment to Part II of the Insolvency Act 1986 includes a reference to that Part as applied by or under this section (subject to regulations under subsection (3A)).
- (3D) Regulations under subsection (3A) shall be made by statutory instrument and may not be made unless—
- (a) the Welsh Ministers have consented to the making of the regulations, and
 - (b) a draft has been laid before and approved by resolution of each House of Parliament (and section 213(1) shall not apply).]
- (4) Schedule 2 to this Act shall have effect for enabling provision to be made with respect to cases in which
- [^{F381}(a) a company is replaced by another as a relevant undertaker without an appointment or variation under Chapter 1 of this Part; or
 - [^{F382}(b) a company carries on activities relating to—
 - (i) the introduction or introductions of water mentioned in subsection (7) formerly carried on by another company; or
 - (ii) the removal or removals of matter mentioned in subsection (9) formerly carried on by another company,]in pursuance of a special administration order.]
- (5) In this section “business” and “property” have the same meanings as in the ^{M6}Insolvency Act 1986.
- [^{F383}(6) For the purposes of this section, sections 24 to 26 below and Schedule 2 to this Act, a [^{F384}water supply licensee] is a [^{F385}qualifying water supply licensee] if—
- [^{F386}(a) it is the holder of a water supply licence giving it a wholesale or supplementary authorisation (within the meaning of Chapter 1A of this Part), and
 - (b) the condition in subsection (7) is satisfied in relation to it.]
- [The condition in this subsection is that—
- ^{F387}(7) (a) the introduction of water by the licence holder which is permitted under section 66B or 66C is designated as a strategic supply under section 66G, or
- (b) the introductions of water by the licence holder which are permitted under section 66B or 66C are designated as a collective strategic supply under section 66H.]]

24 Special administration orders made on special petitions.

(1) If, on an application made to the High Court by petition presented—

- (a) by the Secretary of State; or
- (b) with the consent of the Secretary of State, by the Director,

that Court is satisfied in relation to any company which holds an appointment under Chapter I of this Part that any one or more of the grounds specified in subsection (2) below is satisfied in relation to that company, that Court may make a special administration order in relation to that company.

^{F388}(1A) If on an application made to the High Court by petition presented—

- (a) by the Secretary of State [^{F389}(after consulting the Assembly)]; or
- (b) with the consent of the Secretary of State [^{F390}(after consulting the Assembly)], the Authority,

the Court is satisfied in relation to any company which is a [^{F391}qualifying water supply licensee or qualifying sewerage licensee] that any one or more of the grounds specified

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. in subsection (2) below is satisfied in relation to that company, that Court may make a special administration order in relation to that company.]

[^{F392}(1B) Before presenting a petition under subsection (1A) in relation to a qualifying water supply licensee whose licence gives it a supplementary authorisation, the Secretary of State or the Authority (as the case may be) must consult the Welsh Ministers.]

(2) The grounds mentioned in [^{F393}subsections (1) and (1A)] above are, in relation to any company—

(a) that there has been, is or is likely to be such a contravention by the company of any principal duty, not being a contravention in respect of which a notice has been served under subsection (3) of section 19 above, as is serious enough to make it inappropriate for the company to continue to hold its appointment [^{F394}or licence];

(b) that there has been, is or is likely to be such a contravention by the company of the provisions of any enforcement order which—

(i) is not for the time being the subject-matter of proceedings brought by virtue of section 21(1) above; and

(ii) if it is a provisional enforcement order, has been confirmed,

as is serious enough to make it inappropriate for the company to continue to hold its appointment [^{F394}or licence];

[^{F395}(bb) in the case of a company which is a [^{F396}qualifying water supply licensee], that—

(i) action taken by the company has caused a contravention by a water undertaker of any principal duty; and

(ii) that action is serious enough to make it inappropriate for the company to continue to hold its licence;]

[^{F397}(bc) in the case of a company which is a qualifying sewerage licensee, that—

(i) action taken by the company has caused a contravention by a sewerage undertaker of any principal duty; and

(ii) that action is serious enough to make it inappropriate for the company to continue to hold its licence;]

(c) that the company is or is likely to be unable to pay its debts;

(d) that, in a case in which the Secretary of State has certified that it would be appropriate, but for section 25 below, for him to petition for the winding up of the company under [^{F398}section 124A of the Insolvency Act 1986] (petition by the Secretary of State following inspectors' report etc.), it would be just and equitable, as mentioned in that section, for the company to be wound up if it did not hold an appointment under Chapter I of this Part or was not a [^{F399}qualifying water supply licensee or a qualifying sewerage licensee]; or

(e) [^{F400}in the case of a company holding an appointment under Chapter 1 of this Part,] that the company is unable or unwilling adequately to participate in arrangements certified by the Secretary of State or the Director to be necessary by reason of, or in connection with, a proposal for the making by virtue of section 7(4)(c) above of any appointment or variation replacing a company as a relevant undertaker.

(3) Notice of any petition under this section for a special administration order shall be given forthwith to such persons and in such manner as may be prescribed by rules made under section 411 of the ^{M7}Insolvency Act 1986 (“the 1986 Act”); and no such petition shall be withdrawn except with the leave of the High Court.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

^{F401}(4)

^{F401}(5)

- (6) For the purposes of this section a company is unable to pay its debts if—
- (a) it is a limited company which is deemed to be so unable under section 123 of the 1986 Act (definition of inability to pay debts); or
 - (b) it is an unregistered company which is deemed, by virtue of any of sections 222 to 224 of that Act, to be so unable for the purposes of section 221 of that Act (winding up of unregistered companies).

[^{F402}(7) In this section “principal duty” means—

- (a) in relation to a company holding an appointment under Chapter 1 of this Part, a requirement imposed on the company by section 37 or 94 below;
- (b) in relation to a company which is a [^{F403}qualifying water supply licensee or a qualifying sewerage licensee], any condition of its licence or any statutory requirement imposed on it in consequence of its licence.]

CHAPTER III

PROTECTION OF CUSTOMERS ETC..

General provisions

27 General duty of Director to keep matters under review.

- (1) It shall be the duty of the Director, so far as it appears to him practicable from time to time to do so, to keep under review the carrying on both in England and Wales and elsewhere of activities connected with the matters in relation to which
- [^{F407}(a) water undertakers or sewerage undertakers carry out functions; and
 (b) [^{F408}water supply licensees or sewerage licensees] carry on activities authorised by their licences.]
- (2) It shall also be the duty of the Director, so far as it appears to him practicable from time to time to do so, to collect information with respect to—
- (a) the carrying out by companies appointed under Chapter I of this Part of the functions of relevant undertakers; or
- [^{F409}(aa) the carrying on by [^{F410}persons] holding licences under Chapter 1A of this Part of the activities authorised by their licences; or]
- (b) any [^{F411}company mentioned in paragraph (a) or (aa) above] ,
- with a view to his becoming aware of, and ascertaining the circumstances relating to, matters with respect to which any power or duty is conferred or imposed on him by or under any enactment.
- (3) The Secretary of State may give general directions indicating—

- (a) considerations to which the Director should have particular regard in determining the order of priority in which matters are to be brought under review in performing his duty under subsection (1) or (2) above; and
 - (b) considerations to which, in cases where it appears to the Director that any of his powers under Parts II to V and VII of this Act are exercisable, he should have particular regard in determining whether to exercise those powers;
- and it shall be the duty of the Director to comply with any such directions.
- (4) It shall be the duty of the Director, where either he considers it expedient or he is requested by the Secretary of State or [^{F412}the CMA] to do so, to give information, advice and assistance to the Secretary of State or that Director with respect to any matter relating to—
- (a) the functions of either description of relevant undertaker; or
 - (b) the carrying out of any such functions by a company holding an appointment under Chapter I of this Part [^{F413} or
 - (c) the activities authorised by [^{F414}the authorisations or combinations of authorisations given by licences under Chapter 1A of this Part (see sections 17A and 17BA)]; or
 - (d) the carrying on of any such activities by a [^{F415}person] holding any such licence.]

C63 S. 27(4): functions exercisable by the Assembly concurrently with the Ministers of the Crown (W.) (1.7.1999) by [S.I. 1999/672](#), art. 2, [Sch. 1](#)

[^{F416}**27ZA** Power to require information for purpose of monitoring

- (1) The Authority may, for the purpose of performing its duty under section 27(1) or (2), serve a notice under subsection (2) on—
 - (a) a water undertaker or sewerage undertaker;
 - (b) a water supply licensee or sewerage licensee.
- (2) A notice under this subsection is a notice which requires the person on whom it is served—
 - (a) to produce to the Authority, at a time and place specified in the notice (which must be reasonable), any documents specified or described in the notice which are in that person’s custody or under that person’s control, or
 - (b) to provide to the Authority, at a time and place and in the form and manner specified in the notice (which must be reasonable), information specified or described in the notice.
- (3) The requirements imposed by a notice under subsection (2) are enforceable by the Authority under section 18.
- (4) Nothing in this section requires a disclosure of information that would contravene the data protection legislation (but in determining whether a disclosure would do so, take into account the duty imposed by this section).
- (5) In subsection (4) “the data protection legislation” has the same meaning as in the Data Protection Act 2018 (see section 3(9) of that Act).]

[^{F417}*The Consumer Council for Water*

Textual Amendments

F417 Ss. 27A, 27B and preceding cross-heading inserted (1.8.2005 for specified provisions and purposes and 1.10.2005 for further specified provisions and purposes and 1.4.2006 otherwise) by [Water Act 2003 \(c. 37\)](#), [ss. 35\(1\)](#), [105\(3\)](#); [S.I. 2005/968](#), [art. 3\(a\)](#); [S.I. 2005/2714](#), [arts. 2\(a\)](#), [4\(b\)](#) (with [Sch. para. 8](#))

27A Establishment of the Council and committees

- (1) There shall be a body corporate to be known as the Consumer Council for Water (in this Act referred to as “the Council”) for the purpose of carrying out the functions of the Council under this Act.
- (2) In Welsh the Council may be known as “Cyngor Defnyddwyr Dŵr”.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) The Council shall not be regarded as a servant or agent of the Crown or as enjoying any status, immunity or privilege of the Crown.
- (4) The Council shall establish such committees of the Council—
 - (a) as the Assembly may direct, for relevant undertakers whose areas are wholly or mainly in Wales; and
 - (b) as the Secretary of State may direct, for other relevant undertakers.
- (5) A direction under subsection (4) above may provide for the allocation of each relevant undertaker to a committee specified in the direction.
- (6) The power to give a direction under subsection (4) above may not be exercised after the end of the period of six months beginning with the commencement of section 35 of the Water Act 2003.
- (7) After the end of the period mentioned in subsection (6) above the Council may (subject to paragraph 11 of Schedule 3A to this Act)—
 - (a) establish such committees for relevant undertakers as it considers appropriate; or
 - (b) alter the allocation of a relevant undertaker to a committee established under this section.
- (8) The Council shall ensure that each relevant undertaker is allocated to a committee established under this section.
- (9) A committee established under this section is referred to in this Act as a “regional committee”.
- (10) The purposes of a regional committee shall be—
 - (a) the provision of advice and information to the Council on consumer matters affecting the areas of the relevant undertakers allocated to that committee;
 - (b) such other purposes as the Council may determine.
- (11) The provisions of Schedule 3A to this Act (which makes further provision about the Council and regional committees) shall have effect.
- (12) The Council shall exercise and perform its powers and duties in the manner which it considers is best calculated to contribute to the achievement of sustainable development.
- (13) In this Chapter—

“consumers” includes both existing and future consumers;

“the interests of consumers” means the interests of consumers in relation to—

 - (a) the supply of water by means of a water undertaker’s supply system to premises either by water undertakers or by [^{F418}water supply licensees] acting in their capacity as such; and
 - (b) the provision of sewerage services [^{F419}either by sewerage undertakers or by sewerage licensees acting in their capacity as such]; and

“consumer matter” means any matter connected with the interests of consumers.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 27B Co-operation between Council and other authorities

- (1) This section imposes duties on—
 - (a) the Authority and the Council;
 - (b) the Council and the Secretary of State; and
 - (c) the Council and the Assembly.
- (2) It shall be the duty of the bodies mentioned in each paragraph of subsection (1) above to make arrangements with a view to securing—
 - (a) co-operation and the exchange of information between them; and
 - (b) the consistent treatment of matters which affect both of them.
- (3) As soon as practicable after agreement is reached on any arrangements required by this section, the parties shall prepare a memorandum setting them out.
- (4) Arrangements under this section shall be kept under review by the parties.
- (5) As soon as practicable after agreement is reached on any changes to arrangements under this section, the parties shall revise their memorandum.
- (6) Parties to arrangements required by this section shall send a copy of their memorandum, and any revised memorandum, to each other person mentioned in subsection (1) above who is not a party to the arrangements set out in the memorandum (or revised memorandum).
- (7) The Secretary of State shall lay a copy of every memorandum or revised memorandum under this section before each House of Parliament.]

[^{F420}General functions of the Council

Textual Amendments

- F420** Ss. 27C-27G and preceding cross-heading inserted (1.10.2005) by [Water Act 2003 \(c. 37\), ss. 43\(1\), 105\(3\)](#); [S.I. 2005/2714, art. 2\(e\)](#) (with [Sch. 2 para. 8](#))

27C The interests of consumers

- (1) In considering the interests of consumers, the Council shall have regard to the interests of—
 - (a) individuals who are disabled or chronically sick;
 - (b) individuals of pensionable age;
 - (c) individuals with low incomes;
 - (d) individuals residing in rural areas; ^{F421} ...

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (e) customers, of companies holding an appointment under Chapter 1 of Part 2 of this Act, whose premises are [^{F422}household premises (as defined in section 17C)]^{F423} and
- (f) customers, of companies holding an appointment under Chapter 1 of Part 2 of this Act, whose premises are below the consumption threshold and in the area of a relevant undertaker whose area is wholly or mainly in Wales.]

but that is not to be taken as implying that regard may not be had to the interests of other descriptions of consumer.

- (2) For the purposes of subsection (1) above, premises are [^{F424}below the consumption threshold if the total quantity] of water estimated to be supplied to the premises annually for the purposes of subsection (2) of section 17D above is less than the quantity specified in that subsection.

27D Acquisition and review of information

The Council shall have the function of obtaining and keeping under review—

- (a) information about consumer matters (including matters affecting consumers in different areas); and
- (b) information about the views of consumers on such matters (including the views of consumers in different areas).

27E Provision of advice and information to public authorities

- (1) The Council shall have the function of—

- (a) making proposals, or providing advice and information, about consumer matters (including matters affecting consumers in different areas); and
- (b) representing the views of consumers on such matters (including the views of consumers in different areas),

to public authorities, companies holding an appointment under Chapter 1 of this Part, [^{F425}water supply licensees, sewerage licensees] and other persons whose activities may affect the interests of consumers.

- (2) Subject to subsection (7) below, information which relates to the affairs of any particular individual or body of persons (corporate or unincorporate) shall not be disclosed in the exercise of the Council's function under this section unless one or more of paragraphs (a) to (c) of subsection (3) below applies to the information.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) Information relating to a particular individual or body may be disclosed if—
- (a) the individual or body has consented to the disclosure;
 - (b) it is information that is available to the public from some other source; or
 - (c) it is not information the disclosure of which would or might, in the opinion of the Council, seriously and prejudicially affect the interests of the individual or body.
- (4) Before deciding to disclose any information relating to a particular individual or body in pursuance of subsection (3)(c) above, the Council shall—
- (a) consult that individual or body; and
 - (b) have regard to any opinion expressed by the Authority as to the application of subsection (3)(c) above to the information or as to the desirability or otherwise of its disclosure;
- and paragraph (b) applies whether the opinion is given in relation to the information itself or to information of a description which applies to that information.
- (5) Subject to subsection (7) below, the Council shall not in the exercise of its function under this section disclose any information which it considers relates to any matter which is, or is likely to be, the subject of criminal proceedings.
- (6) In considering whether information relates to any matter as mentioned in subsection (5) above, the Council shall have regard to any opinion expressed (whether in relation to the information itself or to information of a description which applies to that information) by the Secretary of State, the Assembly or the Director of Public Prosecutions.
- (7) Subsections (2) to (5) above do not apply to a disclosure of information which is made to the Authority, the Secretary of State, the Assembly, the [F426CMA] or any other public authority.
- (8) The disclosure by the Council of information in the exercise of its function under this section does not contravene section 206 below (restriction on disclosure of information).

Textual Amendments

- F425** Words in s. 27E(1) substituted (1.4.2016) by [Water Act 2014 \(c. 21\), s. 94\(3\), Sch. 7 para. 42](#); [S.I. 2016/465, art. 2\(m\), Sch. 1 para. 1\(k\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by [S.I. 2017/462, art. 16](#))
- F426** Word in s. 27E(7) substituted (1.4.2014) by [The Enterprise and Regulatory Reform Act 2013 \(Competition\) \(Consequential, Transitional and Saving Provisions\) Order 2014 \(S.I. 2014/892\), art. 1\(1\), Sch. 1 para. 82](#) (with [art. 3](#))

27F Provision of information to consumers

- (1) The Council has the function of providing information to consumers about consumer matters in such form as appears to the Council to be most useful to the recipients.
- (2) That function may be exercised by—
- (a) publishing information in any manner the Council thinks appropriate for the purpose of bringing it to the attention of those likely to be interested; or
 - (b) furnishing information to any consumer (whether in response to a request or otherwise).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) Information may only be disclosed in the exercise of that function if it is information that is available to members of the public from some other source.
- (4) The Council shall maintain at least one office in each of England and Wales at which consumers may apply for information.

27G Power to publish information and advice about consumer matters

- (1) If it appears to the Council that the publication of any advice and information about consumer matters (including information about the views of consumers on such matters) would promote the interests of consumers, the Council may publish that advice or information in such manner as it thinks fit.
- (2) Information which relates to the affairs of any particular individual or body of persons (corporate or unincorporate) shall not be published in the exercise of the Council's function under this section unless one or more of paragraphs (a) to (c) of subsection (3) below applies to the information.
- (3) Information relating to a particular individual or body may be published if—
 - (a) the individual or body has consented to the publication;
 - (b) it is information that is available to the public from some other source; or
 - (c) it is not information the publication of which would or might, in the opinion of the Council, seriously and prejudicially affect the interests of the individual or body.
- (4) Before deciding to publish any information relating to a particular individual or body in pursuance of subsection (3)(c) above, the Council shall—
 - (a) consult that individual or body; and
 - (b) have regard to any opinion expressed by the Authority as to the application of subsection (3)(c) above to the information or as to the desirability or otherwise of its publication;and paragraph (b) applies whether the opinion is given in relation to the information itself or to information of a description which applies to that information.
- (5) The Council shall not in the exercise of its function under this section publish any information which it considers relates to any matter which is, or is likely to be, the subject of criminal proceedings.
- (6) In considering whether information relates to any matter as mentioned in subsection (5) above, the Council shall have regard to any opinion expressed (whether in relation to the information itself or to information of a description which applies to that information) by the Secretary of State, the Assembly or the Director of Public Prosecutions.
- (7) The publication of information under this section does not contravene section 206 below (restriction on disclosure of information).

^{F427}27H Provision of information to the Council

- (1) The Council may direct—
 - (a) the Authority;
 - (b) a company holding an appointment under Chapter 1 of this Part; ^{F428} ...
 - (c) [^{F429}a water supply licensee, or],

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

[a sewerage licensee,]
^{F430}(d)

to supply to it, in such form as it may reasonably specify, such information specified or described in the direction as it may require for the purpose of exercising its functions.

- (2) A body [^{F431}or person] to whom a direction under this section is given shall, if the information specified or described in the direction is in its possession, comply with the direction as soon as reasonably practicable.
- (3) Before giving a direction under this section and in specifying the form in which any information is to be supplied, the Council shall have regard to the desirability of minimising the costs, or any other detriment, to the body [^{F432}or person] to whom the direction is given.
- (4) If a body [^{F433}or person] to whom a direction under this section is given fails to comply with the direction [^{F434}the body or person] shall, if so required by the Council, give notice to the Council of the reasons for [^{F435}the] failure.

- (a) that individual or body has consented to the publication;
 - (b) it is information that is available to the public from some other source; or
 - (c) it is not information the publication of which would or might, in the opinion of the Council, seriously and prejudicially affect the interests of the individual or body.
- (4) Before deciding to publish any information relating to a particular individual or body in pursuance of subsection (3)(c) above, the Council shall—
- (a) consult that individual or body; and
 - (b) have regard to any opinion expressed by the Authority as to the application of subsection (3)(c) above to the information or as to the desirability or otherwise of its publication;
- and paragraph (b) applies whether the opinion is given in relation to the information itself or to information of a description which applies to that information.
- (5) The Council shall not in the exercise of its function under this section publish any information which it considers relates to any matter which is, or is likely to be, the subject of criminal proceedings.
- (6) In considering whether information relates to any matter as mentioned in subsection (5) above, the Council shall have regard to any opinion expressed (whether in relation to the information itself or to information of a description which applies to that information) by the Secretary of State, the Assembly or the Director of Public Prosecutions.
- (7) The publication by the Council of information under this section does not contravene section 206 below (restriction on disclosure of information).

27J Provision of information by the Council

- (1) Any of—
- (a) the Authority;
 - (b) the Secretary of State; or
 - (c) the Assembly,
- may direct the Council to supply to him or it, in such form as he or it may reasonably specify, such information specified or described in the direction as he or it may require for the purpose of exercising his or its functions.
- (2) The Council shall, if the information specified or described in the direction is in its possession, comply with a direction under this section as soon as reasonably practicable.
- (3) Where the Council fails to comply with a direction given under subsection (1) above it must give to the person who gave the direction notice of its reason for the failure, and that person may publish that notice in such manner as he considers appropriate.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (4) A person publishing a notice under this section shall have regard to the need for excluding, so far as that is practicable, any matter which relates to the affairs of a particular individual or body of persons (corporate or unincorporate), where he considers that publication of that matter would or might seriously and prejudicially affect the interests of that individual or body.

Textual Amendments

F427 Ss. 27H-27K inserted (1.10.2005) by [Water Act 2003 \(c. 37\)](#), **ss. 44, 105(3)**; [S.I. 2005/2714](#), **art. 2(d)** (with [Sch. 2 para. 8](#))

27K Sections 27H to 27J: supplementary

- (1) The Secretary of State may make regulations prescribing—
- (a) descriptions of information which a person to whom a direction is given under section 27H or 27J above may refuse to supply; or
 - (b) circumstances in which such a person may refuse to comply with a direction given under either of those sections.
- (2) The Council may, if no person is prescribed for the purpose under subsection (3) below, refer a failure by a company holding an appointment [^{F436}, a water supply licensee or a sewerage licensee] to comply with a direction under section 27H above to the Authority.
- (3) The Secretary of State may make regulations for the purpose of enabling a failure to comply with a direction under section 27H or 27J above to be referred by the person who gave the direction to such person (other than the Authority) as may be prescribed by the regulations.
- (4) A person to whom such a failure is referred (whether under subsection (2) above or regulations under subsection (3) above) shall—
- (a) consider any representations made by either party;
 - (b) determine whether the person failing to comply with the direction is entitled to refuse to do so, and, if not, order him to comply with the direction; and
 - (c) give notice of his determination and any order under paragraph (b), with reasons, to both parties.
- (5) The duty of a company holding an appointment [^{F437}, a water supply licensee and a sewerage licensee] to comply with an order under this section shall be enforceable by the Authority under section 18 above.
- (6) A notice under subsection (4) above may be published by either party to the reference.
- (7) Subsections (2) to (7) of section 27I above apply to the publication of a notice under this section as they apply to the publication of a notice given to the Council under section 27H(4) above.]

Editorial Information

- X1** The insertion of the new cross-heading "General functions of the Council" in Pt. II Chapter III gives rise to a change in the structure of this legislation on SLD which breaks the continuity of historical versions of the existing provisions which are now brought under that new heading.

Textual Amendments

- F438** S. 28 repealed (1.10.2005) by [Water Act 2003 \(c. 37\)](#), ss. 35(4), 105(3), [Sch. 9 Pt. 2](#); S. I. 2005/2714, [art. 2\(a\)\(m\)](#)

^{x2}^{F439}29 Consumer complaints

- (1) This section applies to a complaint which any person (“the complainant”) has against a relevant undertaker [^{F440}, a water supply licensee or a sewerage licensee] in relation to any matter connected with the functions of that undertaker or the services provided [^{F441}by that water supply licensee or that sewerage licensee].
- (2) Where a complaint to which this section applies (other than one appearing to the Council to be frivolous or vexatious) is referred to the Council by or on behalf of the complainant, the Council shall (subject to subsections (3) and (8) below) investigate the complaint for the purpose of determining whether it is appropriate to take any action under subsection (9) below.
- (3) Where it appears to the Council that the complaint is one the Authority would be required to investigate under section 181 below, the Council shall, instead of investigating the matter to which it relates, refer the complaint to the Authority.
- (4) Where it appears to the Council that the complaint relates to a matter in respect of which a function under section 18 or 22A above is or may be exercisable by any person, the Council shall (unless it considers that that person already has notice of the matter) refer the matter to that person.
- (5) Where it appears to the Council that the complaint relates to a matter which constitutes or might constitute an offence, the Council shall refer the matter—
 - (a) to the Assembly, if the matter relates to a relevant undertaker whose area is wholly or mainly in Wales or to services provided^{F442}—
 - (i) by a water supply licensee using the supply system of a water undertaker whose area is wholly or mainly in Wales, or
 - (ii) by a sewerage licensee using the supply system of a sewerage undertaker whose area is wholly or mainly in Wales]; or
 - (b) to the Secretary of State, in any other case.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) Where it appears to the Council that the complaint relates to a matter which constitutes a dispute of a kind which can be referred to the Authority for determination under any provision of this Act, the Council shall, if the complainant consents, refer the matter to the Authority.
- (7) A referral under subsection (6) above shall have effect for the purposes of section 30A below as if it were a referral by the complainant of a dispute for determination by the Authority.
- (8) The Council is not required to investigate any matter if it appears to the Council that—
- (a) it is unlikely that the complaint could be resolved by action taken by the relevant undertaker [^{F443}, the water supply licensee or the sewerage licensee];
 - (b) the relevant undertaker [^{F444}, the water supply licensee or the sewerage licensee] has not been given a reasonable opportunity to deal with the complaint; or
 - (c) in a case mentioned in subsection (4) or (5) above or (where the complainant does not consent to the matter being referred to the Authority) subsection (6) above, it is inappropriate to do so.
- (9) Where it appears to the Council to be appropriate to do so with a view to assisting in reaching a satisfactory resolution of a complaint referred to it under this section, the Council shall make representations on behalf of the complainant to the relevant undertaker [^{F445}, the water supply licensee or the sewerage licensee] about anything to which the complaint relates.
- (10) After investigating a complaint the Council may make a report to the Authority, the Secretary of State or the Assembly.
- (11) A report under subsection (10) above may include information about—
- (a) any representations made by the Council under subsection (9) above; and
 - (b) the response of the relevant undertaker or the licensed water supplier to the complaint or any such representations.
- (12) No report under subsection (10) above or information about a complaint referred to the Council under this section, from which the complainant may be identified, shall be published or disclosed by the Council, the Authority, the Secretary of State or the Assembly in the exercise of any power under this Act without the consent of the complainant.
- (13) Where a representation made to the Authority, the Secretary of State or the Assembly about any matter (other than a representation appearing to the person to whom it is made to be frivolous or vexatious) appears to that person—
- (a) to be about a matter which is or amounts to a complaint to which this section applies (other than one which, in the case of the Authority, it is its duty to investigate under section 181 below); and
 - (b) to have been made by or on behalf of the complainant,
- that person shall refer the matter to the Council.]

Editorial Information

- X2** The insertion of the new cross-heading "General functions of the Council" in Pt. II Chapter III gives rise to a change in the structure of this legislation on SLD which breaks the continuity of historical versions of the existing provisions which are now brought under that new heading.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

^{F446}29A **Power of Council to investigate other matters**

- (1) The Council may investigate any matter (not being a matter which it is its duty to investigate under this Part) which appears to it to be a matter relating to the interests of consumers.
- (2) Before undertaking an investigation under this section the Council shall consult the Authority, the Secretary of State and the Assembly.
- (3) Where the Council has investigated a matter under this section it may make a report on that matter to the Authority, the Secretary of State, the [^{F447}CMA], the Assembly or any other public authority whose functions appear to the Council to be exercisable in relation to that matter.
- (4) Subject to subsection (5) below, the Council may—
- send a report on any matter investigated under this section to any person who appears to the Council to have an interest in that matter; and
 - publish any such report in such manner as the Council thinks appropriate.
- (5) Information which relates to the affairs of any particular individual or body of persons (corporate or unincorporate)—
- shall not be included in a report which is to be sent to any person under subsection (4)(a) above, unless one or more of paragraphs (a) to (c) of subsection (6) below applies; and
 - shall be excluded from any such report which is to be published under subsection (4)(b) above, unless one or more of paragraphs (a) to (c) of subsection (7) below applies.
- (6) Information relating to a particular individual or body may be included in a report to be sent under subsection (4)(a) above if—
- that individual or body has consented to the disclosure;
 - it is information that is available to the public from some other source; or
 - it is not information the disclosure of which would or might, in the opinion of the Council, seriously and prejudicially affect the interests of that individual or body.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (7) Information relating to a particular individual or body may be included in a report to be published under subsection (4)(b) above if—
 - (a) that individual or body has consented to the publication;
 - (b) it is information that is available to the public from some other source; or
 - (c) it is not information the publication of which would or might, in the opinion of the Council, seriously and prejudicially affect the interests of that individual or body.

- (8) Before deciding to include in such a report any information relating to a particular individual or body in pursuance of subsection (6)(c) or (7)(c) above, the Council shall—
 - (a) consult that individual or body; and
 - (b) have regard to any opinion expressed by the Authority as to the application of subsection (6)(c) or (7)(c) above to the information or as to the desirability or otherwise of its inclusion in the report;

and paragraph (b) applies whether the opinion is given in relation to the information itself or to information of a description which applies to that information.

- (9) The Council shall not include in any report to be sent under subsection (4)(a) above or published under subsection (4)(b) above any information which it considers relates to any matter which is, or is likely to be, the subject of criminal proceedings.

- (10) In considering whether information relates to any matter as mentioned in subsection (9) above, the Council shall have regard to any opinion expressed (whether in relation to the information itself or to information of a description which applies to that information) by the Secretary of State, the Assembly or the Director of Public Prosecutions.]

[^{F449}Further functions of Authority

Textual Amendments

F449 Ss. 30ZA, 30ZB and preceding cross-heading inserted (1.10.2005) by [Water Act 2003 \(c. 37\)](#), **ss. 43(2), 105(3)**; S.I. 2005/2714, **art. 2(c)** (with Sch. 2 para. 8)

30ZA Duty to consult Council

- (1) It shall be the duty of the Authority to consult the Council in relation to the exercise of each of its functions, except where—
 - (a) the Council has indicated to the Authority (whether specifically or generally) that it does not wish to be consulted; or
 - (b) the Authority considers that it would be clearly inappropriate to consult the Council.
- (2) That duty is in addition to any duty on the Authority to consult the Council which is provided for elsewhere.

30ZB Copies of notices

Where the Authority is required by any provision of this Act to publish a notice or any other document, it shall send a copy of the document to the Council.

^{x4}[**^{F450}Determination of disputes by the Director.**

30A

- (1) In this section “relevant dispute” means a dispute which, by virtue of any provision of this Act, may be referred to the Director for determination under this section.
- (2) The practice and procedure to be followed in connection with the reference to the Director of any relevant dispute shall be such as he considers appropriate.
- (3) Where the Director determines any dispute under this section he shall give his reasons for reaching his decision with respect to the dispute.
- (4) On making a determination under this section the Director may include such incidental, supplemental and consequential provision (including provision requiring either party to pay a sum in respect of the costs or expenses incurred by the Director) as he considers appropriate.
- (5) A determination under this section—
 - (a) shall be final; and
 - (b) shall be enforceable as if it were a judgment of [^{F451}the county court], in so far as it includes such provision as to costs or expenses as is mentioned in subsection (4) above.
- (6) The Director shall not determine any relevant dispute which is the subject of proceedings before, or with respect to which judgment has been given by, any court.
- (7) In including in any determination under this section any provision as to costs or expenses, the Director shall have regard to the conduct and means of the parties and any other relevant circumstances.]]

Status: This version of this Act contains provisions that are prospective.

Provisions with respect to competition

31 Functions of Director with respect to competition.

- (1) ^{F452}
- ^{F453}(2) The functions to which subsection (2A) below applies shall be concurrent functions of the Director and the ^{F454}CMA].
- (2A) This subsection applies to the functions of the ^{F455}CMA] under Part 4 of the 2002 Act (other than sections 166 ^{F456}171 and 174E]) so far as ^{F457}those functions—
- (a) are exercisable by the CMA Board (within the meaning of Schedule 4 to the Enterprise and Regulatory Reform Act 2013), and
 - (b) relate to] commercial activities connected with the supply of water or the provision of sewerage services.]
- ^{F458}(3) The Director shall be entitled to exercise, concurrently with the ^{F459}CMA], the functions of the ^{F459}CMA] under the provisions of Part 1 of the Competition Act 1998 (other than sections 31D(1) to (6), 38(1) to (6) ^{F460}, 40B(1) to (4)] and 51), so far as relating to —
- (a) agreements, decisions or concerted practices of the kind mentioned in section 2(1) of that Act,
 - (b) conduct of the kind mentioned in section 18(1) of that Act, ^{F461}or]
- ^{F462}(c) transferred EU anti-trust commitments or transferred EU anti-trust directions (as defined in section 40ZA of that Act),]
- which relate to commercial activities connected with the supply of water or securing a supply of water or with the provision or securing of sewerage services.]
- ^{F463}(4) So far as necessary for the purposes of, or in connection with, subsections (2) and (2A) ^{F464}above—
- (a) references] in Part 4 of the 2002 Act to the ^{F465}CMA] (including references in provisions of that Act applied by that Part) shall be construed as including references to the Director (except in sections 166 ^{F466}, 171 and 174E] of that Act and in any other provision of that Act where the context otherwise ^{F467}requires);
 - (b) references in that Part to section 5 of the 2002 Act are to be construed as including references to section 27(1) and (2) of this Act.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

[^{F468}(4ZA) Section 130A of the 2002 Act is to have effect in its application in relation to the Authority] by virtue of subsections (2) and (2A)—

(a) as if for subsection (1) of that section there were substituted—

“(1) Where the Water Services Regulation Authority—

(a) is proposing to carry out its functions under section 27(1) and (2) of the Water Industry Act 1991 in relation to a matter for the purposes mentioned in subsection (2), and

(b) considers that the matter is one in respect of which it would be appropriate for the Authority to exercise its powers under section 174 (investigation) in connection with deciding whether to make a reference under section 131,

the Authority must publish a notice under this section (referred to in this Part as a “market study notice”).”, and

(b) as if in subsection (2)(a) of that section, for “the acquisition or supply of goods or services of one or more than one description in the United Kingdom” there were substituted “commercial activities connected with the supply of water or the provision of sewerage services (within the meaning given by section 219(1) of the Water Industry Act 1991)”.]

^{F469}[(4A) So far as necessary for the purposes of, or in connection with, the provisions of subsection (3) above, references in Part I of the Competition Act 1998 to [^{F470}the CMA] are to be read as including a reference to the Director ([^{F471}except in sections 31D(1) to (6), 38(1) to (6)][^{F460}, 40B(1) to (4)], 51, 52(6) and (8) and 54 of that Act and in any other provision of that Act where the context otherwise requires).]

[^{F472}(5) Before the [^{F473}CMA] or the Director first exercises in relation to any matter functions which are exercisable concurrently by virtue of subsection (2) above, that person shall consult the other.

(6) Neither the [^{F473}CMA] nor the Director shall exercise in relation to any matter functions which are exercisable concurrently by virtue of subsection (2) above if functions which are so exercisable have been exercised in relation to that matter by the other.]

(7) It shall be the duty of the Director, for the purpose of assisting [^{F474}a CMA group] in carrying out an investigation on a [^{F475}market investigation reference made by the Authority (under section 131 of the 2002 Act)] by virtue of subsection (2) ^{F476} . . . above, to give to the [^{F477}group] —

(a) any information which is in his possession and which relates to matters falling within the scope of the investigation, and which is either requested by the [^{F477}group] for that purpose or is information which in his opinion it would be appropriate for that purpose to give to the [^{F477}group] without any such request; and

(b) any other assistance which the [^{F477}group] may require, and which it is within his power to give, in relation to any such matters;

and the [^{F477}group] shall, for the purposes of carrying out any such investigation, take into account any information given to them for that purpose under this subsection.

[^{F478}(7A) In subsection (7) “CMA group” has the same meaning as in Schedule 4 to the Enterprise and Regulatory Reform Act 2013.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (8) If any question arises as to whether subsection (2) or (3) above ^{F479} . . . applies to any particular case, that question shall be referred to and determined by the Secretary of State; and no objection shall be taken to anything done under—
- (a) [^{F480}Part 4 of the 2002 Act]; or
- ^{F481}(b) Part I of the Competition Act 1998 ([^{F482}other than sections 31D(1) to (6), 38(1) to (6)][^{F483}, 40B(1) to (4)] and 51),]
- by or in relation to the Director on the ground that it should have been done by or in relation to [^{F484}the CMA] .
- ^{F485}(8A) Section 117 of the 2002 Act (offences of supplying false or misleading information) as applied by section 180 of that Act shall have effect so far as relating to functions exercisable by the Director by virtue of subsection (2) above as if the references in section 117(1)(a) and (2) to the [^{F486}CMA] included references to the Director.]
- (9) ^{F487}

[^{F488}32 Duty to refer merger of water or sewerage undertakings.

[^{F489}Subject to sections 33 and 33A below,] it shall be the duty of the [^{F490}CMA to make a reference to its chair for the constitution of a group under Schedule 4 to the Enterprise and Regulatory Reform Act 2013 if the CMA believes] that it is or may be the case—

- (a) that arrangements are in progress which, if carried into effect, will result in a merger of any two or more water enterprises; or
- (b) that such a merger has taken place otherwise than as a result of the carrying into effect of arrangements that have been the subject of a reference by virtue of paragraph (a) above.]

Textual Amendments

- F488** Ss. 32-35 substituted (29.12.2004) by Enterprise Act 2002 (c. 40), ss. 70(1), 279; S.I. 2004/3233, art. 2, Sch. (with transitional provisions and savings in arts. 3-5)

- F490** Words in s. 32 substituted (1.4.2014) by The Enterprise and Regulatory Reform Act 2013 (Competition) (Consequential, Transitional and Saving Provisions) Order 2014 (S.I. 2014/892), art. 1(1), Sch. 1 para. 85 (with art. 3)

[^{F491}33 Exclusion of small mergers from duty to make reference.

- (1) The [^{F492}CMA] shall not make a merger reference under section 32 above in respect of any actual or prospective merger of two or more water enterprises if it appears to the [^{F492}CMA] —
 - (a) that the value of the turnover of the water enterprise being taken over does not exceed or, as the case may be, would not exceed £10 million; or
 - (b) that the only water enterprises already belonging to the person making the take over are enterprises each of which has a turnover the value of which does not exceed or, as the case may be, would not exceed £10 million.
- (2) For the purposes of subsection (1)(a) above, the value of the turnover of the water enterprise being taken over shall be determined by taking the total value of the turnover of the water enterprises ceasing to be distinct enterprises and deducting—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) the turnover of any water enterprise continuing to be carried on under the same ownership and control; or
 - (b) if there is no water enterprise continuing to be carried on under the same ownership and control, the turnover which, of all the turnovers concerned, is the turnover of the highest value.
- (3) For the purposes of subsection (1)(b) above—
- (a) every water enterprise ceasing to be a distinct enterprise and whose turnover is to be deducted by virtue of subsection (2)(a) or (b) above shall be treated as a water enterprise belonging to the person making the take over; and
 - (b) water enterprises shall be treated as separate enterprises so far as they are carried on by different companies holding appointments under Chapter 1 of this Part.
- (4) For the purposes of this section the turnover of a water enterprise shall be determined in accordance with such provisions as may be specified in regulations made by the Secretary of State.
- (5) Regulations under subsection (4) above may, in particular, make provision as to—
- (a) the amounts which are, or which are not, to be treated as comprising an enterprise's turnover; and
 - (b) the date or dates by reference to which an enterprise's turnover is to be determined.
- (6) Regulations under subsection (4) above may, in particular, make provision enabling the Secretary of State or the [^{F493}CMA] to determine matters of a description specified in the regulations (including any of the matters mentioned in paragraphs (a) and (b) of subsection (5) above).
- [^{F494}(6A) The CMA must—
- (a) keep under review the conditions set out in subsection (1)(a) and (b), and
 - (b) from time to time advise the Secretary of State as to whether the conditions in subsection (1)(a) and (b), and the sums mentioned in those paragraphs, are still appropriate.]
- (7) The Secretary of State may by regulations amend subsection (1) above so as—
- (a) to alter the sum for the time being mentioned in paragraph (a) of that subsection or otherwise to modify the condition set out in that paragraph; or
 - (b) to alter the sum for the time being mentioned in paragraph (b) of that subsection or otherwise to modify the condition set out in that paragraph.
- (8) Regulations under subsection (7) above—
- (a) shall not make any modifications in relation to mergers on or before the coming into force of the regulations; and
 - (b) may, in particular, include supplemental, consequential or transitional provision amending or repealing any provision of this section.
- (9) References in this section to enterprises being carried on under the same ownership and control shall be construed in accordance with Part 3 of the 2002 Act.]

Status: This version of this Act contains provisions that are prospective.

[^{F495}33A Exceptions to duty to make reference

- (1) The CMA may decide not to make a merger reference under section 32 as regards a case falling within section 32(a) if it believes that—
 - (a) the arrangements concerned are not sufficiently far advanced, or are not sufficiently likely to proceed, to justify the making of a merger reference;
 - (b) the prospective merger is not likely to prejudice the ability of the Authority, in carrying out its functions by virtue of this Act, to make comparisons between water enterprises; or
 - (c) the prospective merger is likely to prejudice that ability, but the prejudice in question is outweighed by relevant customer benefits relating to the merger.
- (2) The CMA may decide not to make a merger reference under section 32 as regards a case falling within section 32(b) if it believes that—
 - (a) the merger has not prejudiced and is not likely to prejudice the ability of the Authority, in carrying out its functions by virtue of this Act, to make comparisons between water enterprises; or
 - (b) the merger has prejudiced or is likely to prejudice that ability, but the prejudice in question is outweighed by relevant customer benefits relating to the merger.
- (3) Before forming a view as to the matters in subsection (1)(b) or (c) or (2)(a) or (b), the CMA must—
 - (a) request the Authority to give an opinion under section 33B, and
 - (b) consider that opinion.
- (4) The CMA may not make a merger reference under section 32 if—
 - (a) it is considering whether to accept an undertaking under section 33D instead of making such a reference; or
 - (b) it is prevented by section 74 of the Enterprise Act 2002 (effect of accepting an undertaking in lieu), in a case where that section as applied by paragraph 1 of Schedule 4ZA may have effect to prevent such a merger reference.
- (5) In this section “relevant customer benefit” has the meaning given by paragraph 7 of Schedule 4ZA.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F495 Ss. 33A-33C inserted (6.4.2015 for the insertion of s. 33C, 18.12.2015 in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 14(2)**, 94(3); S.I. 2015/773, art. 2(2)(a); S.I. 2015/1938, art. 2(d)

33B Opinion of the Authority

- (1) Where the CMA makes a request under section 33A(3), the Authority must give its opinion on—
 - (a) whether and to what extent the actual or prospective merger has prejudiced or is likely to prejudice the Authority's ability, in carrying out its functions by virtue of this Act, to make comparisons between water enterprises, and
 - (b) where it forms the view that the actual or prospective merger has prejudiced or is likely to prejudice that ability, whether the prejudice in question is outweighed by any relevant customer benefits relating to the merger.
- (2) In forming an opinion on the matters in subsection (1), the Authority must apply the methods set out in the statement under section 33C that has effect when the request under section 33A(3) is made.
- (3) In this section “relevant customer benefit” has the meaning given by paragraph 7 of Schedule 4ZA, except that references in paragraph 7 to what the CMA believes are to be read for the purposes of this section as references to what the Authority believes.

Textual Amendments

33C Statement of methods

- (1) The Authority must prepare and keep under review a statement of the methods to be applied in forming an opinion on the matters in section 33B(1).
- (2) The statement must in particular set out—
 - (a) the criteria to be used for assessing the effect of any particular water enterprise ceasing to be a distinct enterprise on the Authority's ability, in carrying out its functions by virtue of this Act, to make comparisons between water enterprises;
 - (b) the relative weight to be given to the criteria.
- (3) Before preparing or altering the statement, the Authority must consult—
 - (a) the Secretary of State,
 - (b) the Welsh Ministers,
 - (c) the CMA, and
 - (d) relevant undertakers.
- (4) The Authority must from time to time publish the statement as it has effect for the time being.]

Status: This version of this Act contains provisions that are prospective.

Textual Amendments

F495 Ss. 33A-33C inserted (6.4.2015 for the insertion of s. 33C, 18.12.2015 in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 14(2)**, 94(3); [S.I. 2015/773](#), art. 2(2)(a); [S.I. 2015/1938](#), art. 2(d)

[^{F496}33D Undertakings in lieu of a merger reference

- (1) If the CMA considers that it is under a duty to make a merger reference under section 32, it may instead of making such a reference accept undertakings to take such action as it thinks appropriate from such of the parties concerned in the actual or prospective merger as it considers appropriate.
- (2) The power under subsection (1) is to be exercised for the purpose of remedying, mitigating or preventing the prejudicial effect on the Authority's ability, in carrying out its functions by virtue of this Act, to make comparisons between water enterprises that the actual or prospective merger has had, may have had or may be likely to have.
- (3) In forming a view for the purposes of subsection (1) as to whether it is under a duty to make a merger reference under section 32, the CMA—
 - (a) is to disregard the effect of section 33A(4)(a), but
 - (b) is to take into account the powers under section 33A(1) and (2) to decide not to make a merger reference.
- (4) In proceeding under subsection (1), the CMA must, in particular, have regard to the need to achieve as comprehensive a solution as is reasonable and practicable to the prejudicial effect on the Authority's ability, in carrying out its functions by virtue of this Act, to make comparisons between water enterprises.
- (5) In proceeding under subsection (1), the CMA may, in particular, have regard to the effect of any action on any relevant customer benefits in relation to the actual or prospective merger.
- (6) Before deciding whether or not to accept an undertaking under this section, the CMA must—
 - (a) request the Authority to give its opinion on the effect of the undertakings offered, and
 - (b) consider the Authority's opinion.
- (7) Where the CMA makes a request under subsection (6), the Authority must give its opinion on the effect of the undertakings offered.
- (8) An undertaking under this section—
 - (a) comes into force when accepted;
 - (b) may be varied or superseded by another undertaking under this section;
 - (c) may be released by the CMA.
- (9) An undertaking under this section ceases to be in force if an order under section 75 or 76 of the Enterprise Act 2002 (powers to make an order where an undertaking is not fulfilled) is made, in a case where that provision of the Enterprise Act 2002 as applied by paragraph 1 of Schedule 4ZA may have effect in relation to such an undertaking.
- (10) The CMA must consider any representations received by it in relation to varying or releasing an undertaking under this section as soon as reasonably practicable.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (11) In this section “relevant customer benefit” has the meaning given by paragraph 7 of Schedule 4ZA, except that references in paragraph 7 to what the CMA believes are to be read for the purposes of subsection (7) as references to what the Authority believes.]

Textual Amendments

F496 S. 33D inserted (18.12.2015) by [Water Act 2014 \(c. 21\)](#), **ss. 14(3)**, 94(3); S.I. 2015/1938, art. 2(d)

[^{F497}34 Application of provisions of Enterprise Act 2002

The provisions of Schedule 4ZA to this Act shall have effect with respect to mergers of water enterprises.]

Textual Amendments

F497 Ss. 32-35 substituted (29.12.2004) by [Enterprise Act 2002 \(c. 40\)](#), **ss. 70(1)**, 279; S.I. 2004/3233, **art. 2**, Sch. (with transitional provisions and savings in **arts. 3-5**)

[^{F498}35 Construction of merger provisions.

- (1) In this Chapter (including Schedule 4ZA)—
“enterprise” has the same meaning as in Part 3 of the 2002 Act; and
“water enterprise” means an enterprise carried on by a [^{F499}relevant undertaker].
- (2) References in this Chapter (including Schedule 4ZA), in relation to any two or more enterprises, to the merger of those enterprises are references to those enterprises ceasing, within the meaning of Part 3 of the 2002 Act, to be distinct enterprises; and sections 27 and 29 of that Act and any provision made under section 34 of that Act (time at which enterprises cease to be distinct) shall have effect for the purposes of this Chapter (including Schedule 4ZA) as they have effect for the purposes of that Part.
- (3) Nothing in sections 32 to 34 above (including Schedule 4ZA) shall prejudice any power of the [^{F500}CMA] or the Secretary of State, in a case in which, or to any extent to which, the [^{F500}CMA] is not required to make a reference under section 32 above, to make a reference under Part 3 of the 2002 Act in respect of any actual or prospective merger of two or more water enterprises.
- (4) Where two or more enterprises have merged or will merge as part of transactions or arrangements which also involve an actual or prospective merger of two or more water enterprises, Part 3 of the 2002 Act shall apply in relation to the actual or prospective merger of the enterprises concerned excluding the water enterprises; and references in that Part to the creation of a relevant merger situation shall be construed accordingly.
- (5) Subject to subsections (3) and (4), Part 3 of the 2002 Act shall not apply in a case in which the [^{F501}CMA] is required to make a reference under section 32 above except as applied by virtue of Schedule 4ZA.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. ^{F502}Disclosure of arrangements for remuneration

Textual Amendments

- F502** S. 35A and preceding cross-heading inserted (1.10.2004) by [Water Act 2003 \(c. 37\), ss. 50, 105\(3\); S.I. 2004/2528, art. 2\(g\)](#)

35A Remuneration and standards of performance

- (1) This section applies to any company holding an appointment under Chapter 1 of this Part.
- (2) As soon as reasonably practicable after the end of each financial year of the company it must make a statement to the Authority—
 - (a) disclosing whether or not remuneration has been paid or become due during that financial year to the directors of the company as a result of arrangements falling within subsection (3) below; and
 - (b) where such remuneration has been paid or become due, describing the arrangements and the remuneration.
- (3) Arrangements fall within this subsection if they are arrangements for linking the remuneration of the directors of the company to standards of performance in connection with the carrying out by the company of the functions of a relevant undertaker.
- (4) A description under subsection (2)(b) above must include in particular—
 - (a) a statement of when the arrangements were made;
 - (b) a description of the standards of performance in question;
 - (c) an explanation of the means by which the standards of performance are assessed; and
 - (d) an explanation of how the remuneration was calculated.
- (5) The statement required by subsection (2) above must also state—
 - (a) whether or not there are in force in respect of the financial year during which the statement is made arrangements falling within subsection (3) above; or
 - (b) if not, whether the company intends that such arrangements will be in force at some time during that financial year,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

and if there are, or it is intended that there will be, such arrangements in force the statement must describe those arrangements.

- (6) A description under subsection (5) above must—
- (a) include in particular the matters listed in subsection (4)(a), (b) and (c) above; and
 - (b) where the arrangements described are different from any arrangements described under subsection (2)(b) above, state the likely effect of those differences on the remuneration of each director of the company.
- (7) The statement required by subsection (2) above must be made to the Authority in such manner as may be required by the Authority.
- (8) The statement required by subsection (2) above—
- (a) must be published by the company making the statement in such manner as it reasonably considers will secure adequate publicity for it; and
 - (b) may be published by the Authority in such manner as it may consider appropriate.
- (9) The duty of a company under this section applies in respect of any person who has at any time been a director of the company.
- (10) In this section—
- “remuneration” in relation to a director of a company—
- (a) means any form of payment, consideration or other benefit (including pension benefit), paid or due to or in respect of the director; and
 - (b) includes remuneration in respect of any of his services while a director of the company;
- “standards of performance”, in relation to any company, include any standards which are—
- (a) set by or under any conditions of the company’s appointment under Chapter 1 of this Part;
 - (b) contained in or prescribed by regulations made under section 38(1)(b) or (2) or section 95(1)(b) or (2) below; or
 - (c) set or agreed to by the company.
- (11) Any requirement imposed by this section shall be treated as a statutory requirement enforceable under section 18 above by the Authority.]

Modifications etc. (not altering text)

C65 S. 35A applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), **Sch. 1 para. 9** (with reg. 1(1)(c))

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. CHAPTER IV

INTERPRETATION OF PART II

36 Interpretation of Part II.

- (1) In this Part—
- [^{F503}“the 1973 Act” means the ^{M9}Fair Trading Act 1973; and]
“the 1980 Act” means the ^{M10}Competition Act 1980.
[^{F504}“the 2002 Act” means the Enterprise Act 2002;]
- (2) References in this Part to an appointment or variation replacing a company as a relevant undertaker are references to the following, that is to say—
- (a) the appointment of a company to be the water undertaker or sewerage undertaker for any area which is or includes the whole or any part of any area for which another company already holds an appointment as water undertaker or, as the case may be, sewerage undertaker; or
- (b) a variation by virtue of which the area for which a company holds an appointment under Chapter I of this Part is modified so as to include the whole or any part of an area for which another company already holds an appointment as water undertaker or, as the case may be, sewerage undertaker.
- (3) For the purposes of this Part premises in a part of an area are served by a company holding an appointment under Chapter I of this Part—
- (a) in relation to an appointment or variation by virtue of which that company would be replaced as the water undertaker for that part of that area, if those premises—
- (i) are supplied with water by means of a connection with a distribution main of that company; or
- ^{F505}(ii)
- and
- (b) in relation to an appointment or variation by virtue of which that company would be replaced as the sewerage undertaker for that part of that area, if those premises—
- (i) are drained by means of a relevant sewer [^{F506}or drain] ; or
- ^{F507}(ii)
- (4) In this section—
- “distribution main” means a water main that is not a trunk main; and
- [^{F508}“relevant sewer or drain”, in relation to any appointment or variation which would replace a company as a sewerage undertaker, means any of the following, that is to say—
- (a) a public sewer or lateral drain vested in that company;
- (b) a sewer or lateral drain in relation to which that company has made a declaration of vesting under section 102 below which has not yet taken effect;
- (c) a sewer or lateral drain in relation to which that company has entered into an agreement under section 104 below.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. [^{F509}PART 2A

REGULATION OF PROVISION OF INFRASTRUCTURE

Textual Amendments

- F509** Pt. 2A inserted (1.10.2010 for specified purposes) by [Flood and Water Management Act 2010 \(c. 29\)](#), **ss. 35(1)**, 49(3) (with s. 49(1)(6)); S.I. 2010/2169, art. 4, Sch.

36A Regulations

- (1) The Minister may make regulations about the provision of infrastructure for the use of water undertakers or sewerage undertakers.
- (2) The regulations may in particular—
 - (a) confer regulatory functions on the Authority;
 - (b) apply provisions of Part 2 with or without modification;
 - (c) make provision similar to a provision of Part 2.
- (3) The regulations must specify the activities to which they apply; in particular, the regulations may—
 - (a) apply to designing, constructing, owning and operating infrastructure, and
 - (b) define “infrastructure”.
- (4) The regulations—
 - (a) may make provision only in relation to projects or works that in the Minister's opinion are of a size or complexity that threatens the undertaker's ability to provide services for its customers, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) in conferring powers, must restrict them to projects or works that, in the opinion of the person exercising the power, are of a size or complexity that threatens the undertaker's ability to provide services for its customers.
- (5) Sections 36B to 36D and 36F specify other kinds of provision that the regulations may make; and in those sections “infrastructure project” means a project, or part of a project, in connection with any of the things specified in subsection (3)(a).

36B Tendering

- (1) Regulations under section 36A may—
- (a) allow the Minister to specify one or more infrastructure projects which must be put out to tender;
 - (b) allow the Authority to specify one or more infrastructure projects which must be put out to tender;
 - (c) allow the Minister to delegate the power under paragraph (a) to the Authority.
- (2) The regulations must prohibit a water undertaker or sewerage undertaker from undertaking an infrastructure project which is to be put out to tender in accordance with the regulations.
- (3) But the regulations may permit or require a water or sewerage undertaker to undertake preparatory work of a specified kind or for a specified purpose.
- (4) The regulations must make provision about the extent to which companies associated with a water undertaker or sewerage undertaker (as defined by the regulations) are permitted to bid in a tender process.
- (5) The regulations must specify the procedure to be followed in a tender process; in particular, the regulations—
- (a) may require the undertaker to consult the Authority or the Minister about the terms on which an infrastructure project is put out to tender;
 - (b) may specify factors to be taken into account in considering bids;
 - (c) must provide for the water or sewerage undertaker responsible for the tender process to determine which bid to accept (if any).

36C Criteria for tendering

- (1) Regulations under section 36A must specify criteria to be used by the Minister or the Authority in determining whether to exercise a power by virtue of section 36B(1).
- (2) The regulations may—
- (a) provide that the Authority must consult the Minister before exercising a power by virtue of section 36B(1);
 - (b) require the Authority to publish guidance to be followed by it in determining whether to exercise a power by virtue of section 36B(1).

36D Designation as an infrastructure provider

- (1) Regulations under section 36A may enable the Minister or the Authority to designate as an “infrastructure provider” a person who appears to the Minister or Authority to be wholly or partly responsible for an infrastructure project that was put out to tender in accordance with regulations by virtue of section 36B.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The regulations may—
- (a) confer powers and impose duties on designated infrastructure providers (including any power or duty that is the same as or similar to a power or duty conferred or imposed under or by virtue of this Act on water or sewerage undertakers),
 - (b) confer powers and impose duties on the Authority, the Minister or any other body with public functions (including any power or duty that is the same as or similar to a power or duty conferred or imposed under or by virtue of this Act in respect of water or sewerage undertakers),
 - (c) relieve water or sewerage undertakers of specified duties to a specified extent,
 - (d) provide for designation to be conditional,
 - (e) provide, or enable the provision of, limits (by reference to place, time or otherwise) on powers and duties conferred under paragraph (a),
 - (f) include provision about enforcement of powers, duties, conditions and limitations, and
 - (g) include provision for variation or revocation of designation.

36E Ministerial responsibility

- (1) In this Part “the Minister” means—
- (a) the Secretary of State, in relation to infrastructure which is provided or to be provided for the use of one or more English undertakers,
 - (b) the Welsh Ministers, in relation to infrastructure which is provided or to be provided for the use of one or more Welsh undertakers, and
 - (c) the Secretary of State and the Welsh Ministers acting jointly in relation to infrastructure which is provided or to be provided for the use of one or more English undertakers and one or more Welsh undertakers.
- (2) In this section and section 36F—
- (a) “an English undertaker” means a water undertaker or sewerage undertaker whose area is wholly or mainly in England, and
 - (b) “a Welsh undertaker” means a water undertaker or sewerage undertaker whose area is wholly or mainly in Wales.

36F Cross-border infrastructure projects

- (1) Regulations under section 36A may make provision about cross-border infrastructure projects.
- (2) In this section “cross-border infrastructure project” means an infrastructure project which—
- (a) relates to infrastructure in Wales which is for the use of an English undertaker, or
 - (b) relates to infrastructure in England which is for the use of a Welsh undertaker.
- (3) Regulations made by the Secretary of State about cross-border infrastructure projects—
- (a) may confer functions on the Welsh Ministers, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) must require the Secretary of State or the Authority to consult the Welsh Ministers before exercising any power under section 36B(1) to specify projects which must be put out to tender.
- (4) Regulations made by the Welsh Ministers about cross-border infrastructure projects—
 - (a) may confer functions on the Secretary of State, and
 - (b) must require the Welsh Ministers or the Authority to consult the Secretary of State before exercising any power under section 36B(1) to specify projects which must be put out to tender.

36G Regulations: procedure

- (1) Regulations under section 36A may not be made unless a draft has been laid before and approved by resolution of—
 - (a) each House of Parliament, in the case of regulations made by the Secretary of State,
 - (b) the National Assembly for Wales, in the case of regulations made by the Welsh Ministers, or
 - (c) each House of Parliament and the National Assembly for Wales, in the case of regulations made by the Secretary of State and the Welsh Ministers acting jointly.
- (2) Before laying a draft under subsection (1) the Minister must consult persons who in the Minister's opinion represent interests likely to be affected by the regulations.
- (3) Section 213 applies to regulations made by the Welsh Ministers under section 36A as it applies to regulations made by the Secretary of State.]

CHAPTER I

GENERAL DUTIES OF WATER UNDERTAKERS [^{F510}ETC]

Textual Amendments

F510 Word in Pt. 3 Ch. 1 heading inserted (1.4.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), [Sch. 7 para. 46](#); [S.I. 2016/465](#), art. 2(m), [Sch. 1 para. 1\(k\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by [S.I. 2017/462](#), art. 16)

37 General duty to maintain water supply system etc.

- (1) It shall be the duty of every water undertaker to develop and maintain an efficient and economical system of water supply within its area and to ensure that all such arrangements have been made—
- for providing supplies of water to premises in that area and for making such supplies available to persons who demand them; and
 - for maintaining, improving and extending the water undertaker's water mains and other pipes,
- as are necessary for securing that the undertaker is and continues to be able to meet its obligations under this Part.
- (2) The duty of a water undertaker under this section shall be enforceable under section 18 above—
- by the Secretary of State; or
 - with the consent of or in accordance with a general authorisation given by the Secretary of State, by the Director.
- (3) The obligations imposed on a water undertaker by the following Chapters of this Part, and the remedies available in respect of contraventions of those obligations, shall be in addition to any duty imposed or remedy available by virtue of any provision of this section or section 38 below and shall not be in any way qualified by any such provision.

Modifications etc. (not altering text)

- C71** S. 37 saved (01.12.1991) by [Water Resources Act 1991 \(c. 57, SIF 130\)](#), [ss. 19\(2\)](#), 225(2).
- C72** S. 37 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 10\(1\)](#) (with reg. 1(1)(c))

[^{F511}37A Water resources management plans: preparation and review

- (1) It shall be the duty of each water undertaker to prepare [^{F512}, publish] and maintain a water resources management plan.
- (2) A water resources management plan is a plan for how the water undertaker will manage and develop water resources so as to be able, and continue to be able, to meet its obligations under this Part.
- (3) A water resources management plan shall address in particular—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) the water undertaker’s estimate of the quantities of water required to meet those obligations;
 - (b) the measures which the water undertaker intends to take or continue for the purpose set out in subsection (2) above (also taking into account for that purpose the introduction of water into the undertaker’s supply system by or on behalf of [^{F513}water supply licensees]);
 - (c) the likely sequence and timing for implementing those measures; and
 - (d) such other matters as the Secretary of State may specify in directions [^{F514}(and see also section 37AA).]
- (4) The procedure for preparing [^{F515}and publishing] a water resources management plan (including a revised plan) is set out in section 37B below.
- (5) Before each anniversary of the date when its plan (or revised plan) was last published, the water undertaker shall —
- (a) review its plan; and
 - (b) send a statement of the conclusions of its review to the Secretary of State.
- (6) The water undertaker shall prepare [^{F516}and publish] a revised plan in each of the following cases—
- (a) following conclusion of its annual review, if the review indicated a material change of circumstances;
 - (b) if directed to do so by the Secretary of State;
 - (c) in any event, not later than the end of the period of five years beginning with the date when the plan (or revised plan) was last published,
- and shall follow the procedure in section 37B below (whether or not the revised plan prepared by the undertaker includes any proposed alterations to the previous plan).
- (7) The Secretary of State may give directions specifying—
- (a) the form which a water resources management plan must take;
 - (b) the planning period to which a water resources management plan must relate.
- (8) Before preparing its water resources management plan (including a revised plan), the water undertaker shall consult—
- (a) the Environment Agency [^{F517}, if the plan (or revised plan) would affect water resources in England;]
 - ^{F518}(aa) [the NRBW, if the plan (or revised plan) would affect water resources in Wales;]
 - (b) the Authority;
 - (c) the Secretary of State; and
 - (d) any [^{F519}water supply licensee] which supplies water to premises in the undertaker’s area via the undertaker’s supply system.
- [^{F520}(9) Before giving a direction under subsection (6)(b), the Secretary of State shall consult—
- (a) the Environment Agency, if the revised plan would affect water resources in England, and
 - (b) the NRBW, if the revised plan would affect water resources in Wales.
- (9A) Before giving a direction under subsection (6)(b), the Welsh Ministers shall consult—
- (a) the NRBW, if the revised plan would affect water resources in Wales, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Water resources management plans for England: resilience

- F521** **37AA**
- (1) The Secretary of State may give a direction about the basis on which a water resources management plan for England is to be prepared.
- (2) A direction under this section may be given only where the Secretary of State considers it appropriate to do so with a view to securing that a water undertaker is able to meet the need for the supply of water to consumers in particular circumstances.
- (3) A direction under this section may, in particular, require a plan to be prepared on the basis of a specified assumption, including—
- an assumption as to whether, and how often, specified circumstances are likely to arise;
 - an assumption that a specified power would or would not be exercised by the water undertaker or another person in specified circumstances.
- (4) Before giving a direction under this section, the Secretary of State must consult—

Status: This version of this Act contains provisions that are prospective.

F521 S. 37AA inserted (14.7.2014) by [Water Act 2014](#) (c. 21), **ss. 27(3)**, 94(2)(g)

37B Water resources management plans: publication and representations

(1) A water undertaker shall—

- (a) send a draft water resources management plan to the Secretary of State;
- (b) state whether it appears to the undertaker that any information contained in that plan is or might be commercially confidential (as regards itself or another person); and
- (c) give the Secretary of State the name of each such other person and his address for service of a notice under subsection (2)(a) below.

(2) If the water undertaker states that it so appears in relation to any such information, the Secretary of State shall—

- (a) if the person to whom or to whose business the information relates is not the water undertaker, give that person notice that the information is included in a draft water resources management plan and, unless subsection (10) below applies, is required to be published under this section; and
- (b) give each person (including the water undertaker) to whom any such information relates a reasonable opportunity—
 - (i) of objecting to the publication of the information relating to him on the ground that it is commercially confidential; and
 - (ii) of making representations to the Secretary of State for the purpose of justifying any such objection,

and shall determine, taking any objections and representations under paragraph (b) into account, whether the information is or is not commercially confidential.

(3) A water undertaker shall—

- (a) (subject to subsection (10) below) publish the draft water resources management plan in the prescribed way or, if no way is prescribed, in a way calculated to bring it to the attention of persons likely to be affected by it;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) publish with it a statement—
 - (i) whether any information has been excluded from the published draft plan by virtue of subsection (10) below and, if it has, the general nature of that information; and
 - (ii) that any person may make representations in writing about the plan to the Secretary of State before the end of a period specified in the statement; and
 - (c) send a copy of the published draft plan and accompanying statement to such persons (if any) as may be prescribed.
- (4) The Secretary of State shall send to the water undertaker a copy of any representations he receives following publication of the draft plan under subsection (3) above and shall give it a reasonable period of time within which to comment on the representations.
- (5) The Secretary of State may in regulations prescribe how such representations and any comments by the water undertaker on them are to be dealt with.
- (6) Regulations under subsection (5) above—
- (a) may provide for the Secretary of State to cause an inquiry or other hearing to be held in connection with the draft water resources management plan; and
 - (b) if they do so provide, may provide for subsections (2) to (5) of section 250 of the Local Government Act 1972 (local inquiries: evidence and costs) to apply with prescribed modifications to such an inquiry or hearing as they apply to inquiries under that section.
- (7) The Secretary of State may direct a water undertaker that its water resources management plan must differ from the draft sent to him under subsection (1) above in ways specified in his direction, and (subject to subsection (9) below) it shall be the duty of the water undertaker to comply with the direction.
- (8) The water undertaker shall—
- (a) (subject to subsection (10) below) publish the water resources management plan in the prescribed way or, if no way is prescribed, in a way calculated to bring it to the attention of persons likely to be affected by it; and
 - (b) publish with it a statement whether any information has been excluded from the published plan by virtue of subsection (10) below and, if it has, the general nature of that information.
- (9) If the water undertaker considers that publishing a water resources management plan complying with a direction under subsection (7) above would mean including in the published plan any information (other than any information in relation to which the Secretary of State has already made a determination under subsection (2) above) which might be commercially confidential (as regards itself or another person)—
- (a) the water undertaker shall send the Secretary of State a notice saying so, and giving the Secretary of State the name of any such other person and his address for service of a notice under subsection (2)(a) above as applied by paragraph (b) below; and
 - (b) subsection (2) above shall apply in relation to that information as it applies in relation to the information referred to there;
- and the Secretary of State may either confirm his direction under subsection (7) above (which is to be treated as a new direction under subsection (7)) or revoke the previous such direction (or the previous one so treated) and give a new one.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (10) The published version of a draft water resources management plan published under subsection (3)(a) above, and a water resources management plan published under subsection (8)(a) above, shall exclude any information which the Secretary of State—
- (a) has determined under subsection (2) above (or that subsection as applied by subsection (9) above) is commercially confidential; or
 - (b) directs the water undertaker to exclude on the ground that it appears to him that its publication would be contrary to the interests of national security.
- (11) Any steps to be taken by a water undertaker under this section shall be completed by such time or within such period as the Secretary of State may direct.

37C Water resources management plans: provision of information

- (1) It shall be the duty of each [^{F522}water supply licensee] to provide the water undertaker with such information as the water undertaker may reasonably request for the purposes of preparing or revising its water resources management plan.
- (2) In the event of any dispute between a water undertaker and a [^{F522}water supply licensee] as to the reasonableness of the water undertaker's request under subsection (1) above, either party may refer the matter for determination by the Secretary of State, and any such determination shall be final.
- (3) For the purposes of paragraph (b) of section 37B(1) above, the water undertaker shall identify in its statement under that paragraph any information—
- (a) provided by a [^{F522}water supply licensee] pursuant to subsection (1) above; and
 - (b) contained in the water undertaker's draft water resources management plan, which the [^{F522}water supply licensee] has (at the time of providing it to the water undertaker) specifically identified as being, in the [^{F523}water supply licensee's] opinion, commercially confidential.
- (4) The water undertaker shall not use any unpublished information save for the purpose of facilitating the performance by it of any of the duties imposed on it by or under this Act, any of the other consolidation Acts or the Water Act 1989.
- (5) In subsection (4) above—
- (a) “unpublished information” means confidential information which—
 - (i) is provided to the water undertaker by a [^{F522}water supply licensee] under this section;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) relates to the affairs of any individual or to any particular business;
and
 - (iii) by virtue of section 37B above, is not published;
- (b) “the other consolidation Acts” has the same meaning as in section 206 below.

37D Water resources management plans: supplementary

- (1) Directions given under section 37A [^{F524} 37AA] or 37B above may be—
- (a) general directions applying to all water undertakers; or
 - (b) directions applying only to one or more water undertakers specified in the directions,
- and shall be given by an instrument in writing.
- (2) It shall be the duty of each water undertaker to whom directions apply to comply with the directions.
- (3) The duties of—
- (a) a water undertaker under sections 37A to 37C above and under this section;
and
 - (b) a [^{F525} water supply licensee] under section 37C above,
- shall be enforceable by the Secretary of State under section 18 above.
- [The Minister may by order made by statutory instrument amend the period for the ^{F526}(4) time being specified in section 37A(6)(c).
- (5) In subsection (4), “the Minister” means—
- (a) the Secretary of State, in relation to an order applying to water undertakers whose areas are wholly or mainly in England, and
 - (b) the Welsh Ministers, in relation to an order applying to water undertakers whose areas are wholly or mainly in Wales.
- (6) A statutory instrument containing an order made by the Secretary of State under subsection (4) is subject to annulment in pursuance of a resolution of either House of Parliament.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 38 Standards of performance in connection with water supply.

- (1) For the purpose-
- (a) of facilitating the determination of the extent to which breaches of the obligations imposed by the following provisions of this Part are to amount to breaches of the duty imposed by section 37 above; or
 - (b) of supplementing that duty by establishing overall standards of performance in relation to that duty,
- the Secretary of State may, in accordance with section 39 below, by regulations provide for contraventions of such requirements as may be prescribed to be treated for the purposes of this Act as breaches of that duty.
- (2) The Secretary of State may, in accordance with section 39 below, by regulations prescribe such standards of performance in connection with the provision of supplies of water as, in his opinion, ought to be achieved in individual cases.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (3) Regulations under subsection (2) above may provide that if a water undertaker fails to meet a prescribed standard it shall pay such amount as may be prescribed to any person who is affected by the failure and is of a prescribed description.
- (4) Without prejudice to the generality of the power conferred by subsection (2) above, regulations under that subsection may—
- (a) include in a standard of performance a requirement for a water undertaker, in prescribed circumstances, to inform a person of his rights by virtue of any such regulations;
 - (b) provide for any dispute under the regulations to be referred by either party to the dispute to the Director;
 - (c) make provision for the procedure to be followed in connection with any such reference and for the Director's determination on such a reference to be enforceable in such manner as may be prescribed;
 - (d) prescribe circumstances in which a water undertaker is to be exempted from requirements of the regulations.
- ^{F527}[(5) Where the Director determines any dispute in accordance with regulations under this section he shall, in such manner as may be specified in the regulations, give his reasons for reaching his decision with respect to the dispute.]

Textual Amendments

^{F528}**38ZA Standards of performance in connection with the supply of water: water supply licensees**

- (1) For the purpose of establishing overall standards of performance in connection with the supply of water by water supply licensees in accordance with their retail authorisations or restricted retail authorisations, the Minister may, in accordance with section 39ZA, by regulations—
- (a) impose requirements in connection with such supplies of water;
 - (b) provide for a requirement so imposed to be enforceable under section 18 by—
 - (i) the Minister, or
 - (ii) the Authority, with the consent of or in accordance with a general authorisation given by the Secretary of State.
- (2) The Minister may, in accordance with section 39ZA, by regulations prescribe such standards of performance in connection with the provision of supplies of water as, in the Minister's opinion, ought to be achieved in individual cases.
- (3) Regulations under subsection (2) may provide that if a water supply licensee fails to meet a prescribed standard the licensee must pay such amount as may be prescribed to any person who—
- (a) is affected by the failure, and
 - (b) is of a prescribed description.

Status: This version of this Act contains provisions that are prospective.

39 Procedure for regulations under section 38.

- ^{F539}(A1) The Secretary of State may make regulations under section 38 above—
- (a) on an application by the Authority, in accordance with subsections (1) to (3) below; or
 - (b) otherwise than on such an application, in accordance with subsections (4) to (8) below.]
- (1) ^{F540}Where the Authority has made to the Secretary of State a written application complying with subsection (2) below, the Secretary of State may make regulations under section 38 above if—
- ^{F541}(b) the Secretary of State is satisfied that a copy of the application has been served by the Director—
 - (i) on every water undertaker specified in the application,^{F542} . . .
 - (ii) on persons or bodies appearing to the Secretary of State to be representative of persons likely to be affected by the regulations;]
 - ^{F543}(iii) on the Council; and
 - (iv) on such other persons or bodies as the Secretary of State may consider appropriate;]
 - (c) such period as the Secretary of State considers appropriate has been allowed for the making—
 - (i) by the Director; and
 - (ii) by any affected water undertaker ^{F544}or person or body on whom a copy of the application has been served under paragraph ^{F545}(b) above],
 of representations or objections with respect to the Director’s proposals and any modifications proposed by the Secretary of State; and
 - (d) the Secretary of State has considered ^{F546}the summary mentioned in subsection (2)(bb) below,] the Director’s reasons for his proposals and every representation or objection which has been duly made with respect to those proposals, or any proposed modifications of those proposals, and has not been withdrawn.
- ^{F547}[(1A) Before making an application to the Secretary of State under this section the Director shall arrange for such research as he considers appropriate with a view to discovering the views of a representative sample of persons likely to be affected and consider the results.]
- (2) An application made by the Director to the Secretary of State complies with this subsection if it—

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) sets out [^{F548}the Authority’s proposals for the making of] regulations under section 38 above;
 - (b) specifies the water undertaker or undertakers in relation to which it is proposed [^{F549}the regulations] should apply
 - ^{F550}[(b) is accompanied by a written summary of the results of the research carried out in accordance with subsection (1A) above;] ; and
 - (c) summarises the Director’s reasons for his proposals.
- (3) The Secretary of State shall not make any regulations [^{F551}on an application by the Authority under this section] except where—
- (a) the only provisions of the regulations are [^{F552}those which in the opinion of the Secretary of State give effect to the proposals set out in the Authority’s application or to those proposals] with such modifications as the Secretary of State considers appropriate; and
 - (b) each of the modifications (if any) of the Director’s proposals to which effect is given by the regulations is a modification the proposal to make which has been notified—
 - (i) to the Director,^{F553} . . .
 - (ii) to any water undertaker appearing to the Secretary of State to be likely to be affected by the modifications [^{F554}and
 - (iii) to any person or body on whom a copy of the Authority’s application was served under subsection (1)(b) above.]
- ^{F555}(4) Where no such application as is mentioned in subsection (1) above has been made, the Secretary of State may make regulations under section 38 above only if he considers—
- (a) that the regulations will contribute towards the attainment of policies relating to public health or the environment; or
 - (b) (if he does not consider that they will so contribute) that there are exceptional reasons why it is otherwise in the public interest that the regulations should be made.
- (5) Before making regulations under section 38 above by virtue of subsection (4) above, the Secretary of State shall—
- (a) give notice of his proposals;
 - (b) consider the results of the research carried out in accordance with subsection (7) below; and
 - (c) consider every representation or objection with respect to the proposals which has been duly made and not withdrawn.
- (6) A notice under subsection (5)(a) above must—
- (a) summarise the Secretary of State’s reasons for his proposals;
 - (b) specify the water undertaker or undertakers in relation to which it is proposed the regulations should apply; and
 - (c) specify the period within which objections or representations with respect to the proposals may be made.
- (7) Before giving notice under subsection (5)(a) above the Secretary of State shall arrange for such research as he considers appropriate with a view to discovering the views of a representative sample of persons likely to be affected.
- (8) A notice under subsection (5)(a) above shall be given by serving a copy on—
- (a) the Authority;

[^{F556}39ZA] Procedure for regulations under section 38ZA

- (1) Section 39 applies for the purposes of making regulations under section 38ZA as it applies for the purposes of making regulations under section 38.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) In the application of section 39 by virtue of subsection (1)—
 - (a) a reference to a water undertaker is to be treated as a reference to a water supply licensee, and
 - (b) a reference to the Secretary of State is to be treated as a reference to the Minister (as defined in section 38ZA(6)).
- (3) Regulations under section 38ZA are to be made by statutory instrument.
- (4) A statutory instrument containing regulations under section 38ZA is subject to annulment in pursuance of a resolution of—
 - (a) either House of Parliament, in the case of regulations made by the Secretary of State;
 - (b) the Assembly, in the case of regulations made by the Welsh Ministers.
- (5) Section 213(2) to (2B) applies to regulations made by the Welsh Ministers under section 38ZA as it applies to regulations made by the Secretary of State.]

[F567] 39B Drought plans: preparation and review

- (1) It shall be the duty of each water undertaker to prepare [F568, publish] and maintain a drought plan.
- (2) A drought plan is a plan for how the water undertaker will continue, during a period of drought, to discharge its duties to supply adequate quantities of wholesome water, with as little recourse as reasonably possible to drought orders or drought permits under Chapter 3 of Part 2 of the Water Resources Act 1991.
- (3) The duties referred to in subsection (2) above include in particular those imposed under or by virtue of—
- (a) section 37 above;
 - (b) sections 67 to 69 below.
- (4) A drought plan shall address, in particular, the following matters—
- (a) what measures the water undertaker might need to take to restrain the demand for water within its area;
 - (b) what measures the water undertaker might need to take to obtain extra water from other sources (also taking into account for that purpose the introduction

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - of water into the undertaker's supply system by or on behalf of [^{F569}water supply licensees]);
- (c) how the water undertaker will monitor the effects of the drought and of the measures taken under the drought plan;
 - (d) such other matters as the Secretary of State may specify in directions.
- (5) Section 37B above (water resources management plans: publication and representations), including any power in that section to make regulations or give directions, applies in relation to drought plans (including revised plans) as it applies in relation to water resources management plans.
- (6) Each water undertaker shall review (or further review) its drought plan and prepare [^{F570}and publish] a revised plan in each of the following cases—
- (a) if there is a material change of circumstances;
 - (b) if directed to do so by the Secretary of State;
 - (c) in any event, not later than the end of the period of [^{F571}five years] beginning with the date when the plan (or revised plan) was last published in accordance with section 37B(8)(a) above as applied by subsection (5) above,
- and shall follow the procedure in section 37B above as applied by subsection (5) above (whether or not the revised plan prepared by the undertaker includes any proposed alterations to the previous plan).
- (7) Before preparing its drought plan (including a revised plan), the water undertaker shall consult—
- (a) the Environment Agency [^{F572}, if the plan (or revised plan) would affect water resources in England;]
 - ^{F573}(aa) [the NRBW, if the plan (or revised plan) would affect water resources in Wales;]
 - (b) the Authority;
 - (c) the Secretary of State; and
 - (d) any [^{F574}water supply licensee] which supplies water to premises in the undertaker's area via the undertaker's supply system.
- (8) The Secretary of State may give directions specifying the form which a drought plan must take.
- (9) Directions given under this section (including directions given under section 37B above as applied by subsection (5) above) may be—
- (a) general directions applying to all water undertakers; or
 - (b) directions applying only to one or more water undertakers specified in the directions,
- and shall be given by an instrument in writing.
- (10) It shall be the duty of each water undertaker to whom directions apply to comply with the directions.
- ^{F575}(11) Before giving a direction under subsection (6)(b), the Secretary of State shall consult—
- (a) the Environment Agency, if the revised plan would affect water resources in England, and
 - (b) the NRBW, if the revised plan would affect water resources in Wales.
- (11A) Before giving a direction under subsection (6)(b), the Welsh Ministers shall consult—

39C Drought plans: provision of information

- (1) It shall be the duty of each [^{F576}water supply licensee] to provide the water undertaker with such information as the water undertaker may reasonably request for the purposes of preparing or revising its drought plan.
- (2) In the event of any dispute between a water undertaker and a [^{F576}water supply licensee] as to the reasonableness of the water undertaker's request under subsection (1) above, either party may refer the matter for determination by the Secretary of State, and any such determination shall be final.
- (3) For the purposes of paragraph (b) of section 37B(1) above as applied by section 39B(5) above, the water undertaker shall identify in its statement under that paragraph any information—
 - (a) provided by a [^{F576}water supply licensee] pursuant to subsection (1) above; and
 - (b) contained in the water undertaker's draft drought plan,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. CHAPTER II

SUPPLY DUTIES

Major supplies

[^{F579}40 Bulk supplies.

- (1) This section applies where—
- (a) a qualifying person requests a water undertaker to provide a supply of water in bulk to the qualifying person, or
 - (b) a water undertaker proposes such an arrangement;
- and references in this section to the supplier are references to the water undertaker who is to provide the supply of water.
- (2) In this section “qualifying person” means—
- (a) a water undertaker;
 - (b) a person who has made an application for an appointment or variation under section 8 which has not been determined.
- (3) On the application of the qualifying person or the supplier, the Authority may—
- (a) if it appears to the Authority that it is necessary or expedient for the purposes of securing the efficient use of water resources, or the efficient supply of water, that the supplier should give a supply of water in bulk to the qualifying person, and
 - (b) if the Authority is satisfied that the supplier and qualifying person cannot reach agreement within a reasonable time,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- by order require the supplier to give and the qualifying person to take a supply of water in bulk for such period and on such terms and conditions as may be specified in the order.
- (4) Before making an order under subsection (3), the Authority must consult the appropriate agency, in particular about whether the proposed supply of water would secure an efficient use of water resources, taking into account the effect on the environment of the proposed supply.
 - (5) Subject to subsection (6), an order under subsection (3) has effect as an agreement between the supplier and the qualifying person.
 - (6) If the Authority makes an order under subsection (3) that affects a person who is a qualifying person by virtue of subsection (2)(b), the Authority must frame the order so that it does not have effect until—
 - (a) the person becomes a water undertaker for the area specified in the order, or
 - (b) the person becomes a water undertaker for an area that includes the area specified in the order (in the case of a water undertaker applying for a variation).
 - (7) Neither the CMA nor the Authority may exercise, in respect of an agreement for the supply of water in bulk by a water undertaker to a qualifying person, the powers conferred by—
 - (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
 - (8) Subsection (7)(b) does not apply to the exercise of powers in respect of conduct—
 - (a) which is connected with an agreement for the supply of water in bulk by a water undertaker to a qualifying person, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
 - (9) In exercising its functions under this section, the Authority must have regard to the desirability of—
 - (a) facilitating effective competition within the water supply industry;
 - (b) the supplier's recovering the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the supplier's being able to meet its existing obligations, and likely future obligations, to supply water without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the supplier to meet its existing obligations, or likely future obligations, to supply water.
 - (10) In this section and section 40A “the appropriate agency”, in relation to a determination whether to make an order under subsection (3) or section 40A(1) which would result in, or which would vary or terminate, a bulk supply agreement, means—
 - (a) the Environment Agency, in a case where all parties to the bulk supply agreement are or would be—
 - (i) a water undertaker whose area is wholly in England, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (b) the NRBW, in a case where all parties to the bulk supply agreement are or would be—
 - (i) a water undertaker whose area is wholly in Wales, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (c) both the Environment Agency and the NRBW, in any other case.
- (11) In this section and sections 40A to 40J “bulk supply agreement” means an agreement with one or more water undertakers for the supply of water in bulk and includes—
- (a) an order under subsection (3) which is deemed to be an agreement by virtue of subsection (5), and
 - (b) any agreement which has been varied by order under section 40A(1).]

Textual Amendments

F579 Ss. 40-40J substituted for ss. 40, 40A (6.4.2015 for the insertion of s. 40J, 1.11.2016 for the insertion of s. 40E for specified purposes and s. 40I, 1.4.2018 for E. for specified purposes, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), ss. 8(1), 94(3) (with s. 8(2)); S.I. 2015/773, art. 2(1)(a)(i) (with art. 4); S.I. 2016/1007, art. 2(b); S.I. 2017/1288, art. 3(a); S.I. 2018/397, art. 2(a)

[^{F579}40A] Variation and termination of bulk supply agreements.

- (1) On the application of any party to a bulk supply agreement, the Authority may—
 - (a) if it appears to the Authority that it is necessary or expedient for the purpose of securing the efficient use of water resources, or the efficient supply of water, that the bulk supply agreement should be varied or terminated, and
 - (b) if the Authority is satisfied that variation or termination cannot be achieved by agreement within a reasonable time,
 by order vary or terminate the bulk supply agreement.
- (2) Before making an order under subsection (1), the Authority must consult the appropriate agency, in particular about whether the proposed variation or termination of the bulk supply agreement would secure an efficient use of water resources, taking into account the effect on the environment of what is proposed.
- (3) If an order under subsection (1) is made in relation to a bulk supply agreement, the agreement—
 - (a) has effect subject to the provision made by the order, or
 - (b) ceases to have effect (as the case may be).
- (4) An order under subsection (1) may require any party to the agreement to pay compensation to any other party.
- (5) Neither the CMA nor the Authority may exercise, in respect of an agreement to vary or terminate a bulk supply agreement, the powers conferred by—
 - (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) Subsection (5)(b) does not apply to the exercise of powers in respect of conduct—
- (a) which is connected with an agreement to vary or terminate a bulk supply agreement, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (7) In exercising its functions under this section, the Authority must have regard to the expenses incurred by the supplier in complying with its obligations under the bulk supply agreement in question and to the desirability of—
- (a) facilitating effective competition within the water supply industry;
 - (b) the supplier's recovering the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the supplier's being able to meet its existing obligations, and likely future obligations, to supply water without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the supplier to meet its existing obligations, or likely future obligations, to supply water.
- (8) In this section and sections 40B to 40J—
- “qualifying person” has the meaning given by section 40;
 - “supplier”, in relation to a bulk supply agreement, means any water undertaker which is required by the agreement to provide a bulk supply of water.]

Textual Amendments

F579 Ss. 40-40J substituted for ss. 40, 40A (6.4.2015 for the insertion of s. 40J, 1.11.2016 for the insertion of s. 40E for specified purposes and s. 40I, 1.4.2018 for E. for specified purposes, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), ss. [8\(1\)](#), [94\(3\)](#) (with s. [8\(2\)](#)); S.I. [2015/773](#), art. [2\(1\)\(a\)\(i\)](#) (with art. [4](#)); S.I. [2016/1007](#), art. [2\(b\)](#); S.I. [2017/1288](#), art. [3\(a\)](#); S.I. [2018/397](#), art. [2\(a\)](#)

[^{F579} 40B Codes in respect of bulk supply agreements

- (1) The Authority may issue one or more codes in respect of bulk supply agreements.
- (2) A code may make provision about—
- (a) procedures in connection with making a bulk supply agreement;
 - (b) procedures in connection with varying or terminating a bulk supply agreement;
 - (c) procedures to be followed by the Authority in determining whether to make an order under section 40(3) or 40A(1);
 - (d) the terms and conditions of a bulk supply agreement, including terms as to the duration of such an agreement;
 - (e) principles for determining the terms and conditions that should or should not be incorporated into a bulk supply agreement;
 - (f) the steps to be taken by the Authority in determining whether a person is complying with a code.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) A code must include provision requiring persons proposing to make, vary or terminate a bulk supply agreement to consult the appropriate agency.
- (4) If the Authority considers that a water undertaker is not acting as required by a code, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (5) The Authority may not give a direction under subsection (4) requiring a person to enter into, vary or terminate an agreement.
- (6) It is the duty of a water undertaker to comply with a direction under subsection (4), and this duty is enforceable by the Authority under section 18.
- (7) A code may make different provision for different persons or different descriptions of person.
- (8) The Authority may from time to time revise a code issued under this section and issue a revised code.
- (9) A revised code may include provision for applying any of its revisions to bulk supply agreements made before the revised code comes into force.
- (10) In this section “the appropriate agency”, in relation to a bulk supply agreement or proposed bulk supply agreement, means the body that would be consulted by the Authority under section 40(4) or 40A(2) if an order under section 40(3) or 40A(1) were being considered in relation to the agreement or proposed agreement.

Textual Amendments

F579 Ss. 40-40J substituted for ss. 40, 40A (6.4.2015 for the insertion of s. 40J, 1.11.2016 for the insertion of s. 40E for specified purposes and s. 40I, 1.4.2018 for E. for specified purposes, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), ss. 8(1), 94(3) (with s. 8(2)); S.I. 2015/773, art. 2(1)(a)(i) (with art. 4); S.I. 2016/1007, art. 2(b); S.I. 2017/1288, art. 3(a); S.I. 2018/397, art. 2(a)

40C Codes under section 40B: procedure

- (1) Before issuing a code under section 40B, the Authority must—
 - (a) prepare a draft of the proposed code under section 40B;
 - (b) consult the appropriate agency;
 - (c) consult such other persons about the proposed code as it considers appropriate.
- (2) The Authority must specify the period (“the consultation period”) within which persons may make representations about the proposed code.
- (3) Before a code under section 40B prepared by the Authority is issued, the Minister may direct the Authority—
 - (a) not to issue the code, or
 - (b) to issue the code with specified modifications.
- (4) Subsection (3) is subject to subsections (6) and (7).
- (5) In subsection (3) “the Minister” means—
 - (a) the Secretary of State, so far as a code prepared by the Authority relates to bulk supply agreements to which all parties are—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (i) a water undertaker whose area is wholly or mainly in England, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (b) the Welsh Ministers, so far as a code prepared by the Authority relates to bulk supply agreements to which all parties are—
 - (i) a water undertaker whose area is wholly or mainly in Wales, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, so far as a code prepared by the Authority relates to bulk supply agreements to which—
 - (i) a person falling within paragraph (a)(i) or (ii) is party, and
 - (ii) a person falling within paragraph (b)(i) or (ii) is party.
- (6) If the power under subsection (3) is exercised to give a direction in respect of such bulk supply agreements as are referred to in paragraph (a), (b) or (c) of subsection (5), it may not be exercised again in respect of such bulk supply agreements as are referred to in that paragraph.
- (7) If the power under subsection (3) to give a direction in respect of such bulk supply agreements as are referred to in paragraph (a), (b) or (c) of subsection (5) is not exercised on the first occasion on which it may be so exercised, it may not be exercised in respect of such bulk supply agreements as are referred to in that paragraph on a later occasion.
- (8) A direction under subsection (3) must be given within the period of 28 days beginning with the day after the end of the consultation period, and a code prepared by the Authority in relation to which a direction may be given may not be issued before that period of 28 days has expired.
- (9) In this section “the appropriate agency” means—
 - (a) the Environment Agency, so far as a proposed code relates to bulk supply agreements to which all parties are persons mentioned in section 40(10)(a)(i) or (ii);
 - (b) the NRBW, so far as a proposed code relates to bulk supply agreements to which all parties are persons mentioned in section 40(10)(b)(i) or (ii);
 - (c) both the Environment Agency and the NRBW, in any other case.
- (10) This section is subject to section 40D.

Textual Amendments

40D Codes under section 40B: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue a revised code under section 40B and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 40C does not apply to the proposed revised code.
- (3) Once the Authority has issued the revised code, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised code, and
 - (b) as regards each revision contained in it, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (4) Notice under subsection (3) is to be given to such persons as the Authority considers appropriate.
- (5) Unless the Authority gives notice that a revision in a revised code is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised code is issued.

40E Rules about charges for the supply of water in bulk

- (1) The Authority may issue rules about charges that may be imposed by a water undertaker under a bulk supply agreement.
- (2) The rules may in particular make provision about—
 - (a) what types of charge may be imposed;
 - (b) the amount or the maximum amount, or a method for determining the amount or maximum amount, of any type of charge;
 - (c) principles for determining what types of charge may or may not be imposed;
 - (d) principles for determining the amount of any charge that may be imposed;
 - (e) publication of the charges that may be imposed.
- (3) If the Authority considers that a water undertaker is not acting as required by rules under this section, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (4) It is the duty of a water undertaker to comply with a direction under subsection (3), and this duty is enforceable by the Authority under section 18.
- (5) The rules may—

- (a) make different provision for different water undertakers or different descriptions of water undertaker;
 - (b) make different provision for different purposes;
 - (c) make provision subject to exceptions.
- (6) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (7) The Authority must issue revised rules if—
- (a) guidance is issued under section 40I, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (8) Revised rules may include provision for applying any of their revisions to bulk supply agreements made before the revised rules come into effect.

40F Rules under section 40E: provision about the reduction of charges

- (1) Rules under section 40E may provide for the reduction of charges payable for a supply of water under a bulk supply agreement where conditions specified by the rules are satisfied.
- (2) Rules made by virtue of subsection (1) may in particular—
- (a) specify conditions that affect any party to a bulk supply agreement;
 - (b) require that steps be taken for the purpose of reducing or managing water consumption;
 - (c) specify conditions about reducing charges payable by a person who—
 - (i) is not party to the agreement, and
 - (ii) takes or proposes to take such steps as satisfy or would satisfy a condition falling within paragraph (b).
- (3) The rules may provide that, where a charge falls to be reduced in accordance with rules made by virtue of subsection (1), the water undertaker to which the charges are payable must give notice of that reduction to the Authority.
- (4) Rules made by virtue of subsection (3) may—
- (a) make provision as to the content of the notice;
 - (b) specify the period within which an undertaker is to give notice to the Authority.
- (5) Provision under subsection (4)(a) may in particular require the notice to specify—
- (a) the provision of the rules that brings about the reduction in the charge;
 - (b) the amount of the charge, with and without the reduction;
 - (c) the period for which the reduction has effect.

Status: This version of this Act contains provisions that are prospective.

40G Rules under section 40E: procedure

- (1) Before issuing rules under section 40E, the Authority must—
 - (a) prepare a draft of the proposed rules, and
 - (b) consult such persons about the proposed rules as it thinks appropriate.
- (2) The Authority must specify the period (“the consultation period”) within which persons may make representations about the proposed rules.
- (3) The Authority must have regard to guidance issued under section 40I in making rules under section 40E.
- (4) Before rules under section 40E prepared by the Authority are issued, the Minister may direct the Authority not to issue the rules.
- (5) In subsection (4) “the Minister” means—
 - (a) the Secretary of State, so far as rules prepared by the Authority relate to bulk supply agreements to which all parties are—
 - (i) a water undertaker whose area is wholly or mainly in England, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (b) the Welsh Ministers, so far as rules prepared by the Authority relate to bulk supply agreements to which all parties are—
 - (i) a water undertaker whose area is wholly or mainly in Wales, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, so far as rules prepared by the Authority relate to bulk supply agreements to which—
 - (i) a person falling within paragraph (a)(i) or (ii) is party, and
 - (ii) a person falling within paragraph (b)(i) or (ii) is party.
- (6) A direction under subsection (4) must be given within the period of 28 days beginning with the day after the end of the consultation period, and rules may not be issued before that period of 28 days has expired.
- (7) This section is subject to section 40H.

40H Rules under section 40E: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue revised rules under section 40E and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 40G does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Minister of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Minister may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
 - (a) that period of 14 days expires, or
 - (b) the Minister notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.
- (8) Unless the Authority gives notice that a revision in revised rules is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised rules are issued.
- (9) In this section “the Minister” has the meaning given by section 40G.

40I Rules under section 40E: guidance

- (1) The Minister may issue guidance as to the content of rules under section 40E.
- (2) Before issuing the guidance, the Minister must—
 - (a) prepare a draft of the proposed guidance;
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) such other persons as the Minister thinks appropriate.
- (4) The Minister may from time to time revise the guidance and issue revised guidance.
- (5) Subsections (2) and (3) apply to revised guidance as they apply to the original guidance.
- (6) The Minister must arrange for the publication of guidance issued under this section.
- (7) In this section “the Minister” means—
 - (a) the Secretary of State, in relation to bulk supply agreements to which all parties are—
 - (i) a water undertaker whose area is wholly or mainly in England, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (b) the Welsh Ministers, in relation to bulk supply agreements to which all parties are—
 - (i) a water undertaker whose area is wholly or mainly in Wales, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a water undertaker;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, in relation to bulk supply agreements to which—
 - (i) a person falling within paragraph (a)(i) or (ii) is party, and
 - (ii) a person falling within paragraph (b)(i) or (ii) is party.

F579 Ss. 40-40J substituted for ss. 40, 40A (6.4.2015 for the insertion of s. 40J, 1.11.2016 for the insertion of s. 40E for specified purposes and s. 40I, 1.4.2018 for E. for specified purposes, 1.4.2019 for W. in so far as not already in force) by Water Act 2014 (c. 21), ss. 8(1), 94(3) (with s. 8(2)); S.I. 2015/773, art. 2(1)(a)(i) (with art. 4); S.I. 2016/1007, art. 2(b); S.I. 2017/1288, art. 3(a); S.I. 2018/397, art. 2(a)

41 Duty to comply with water main requisition.

- (1) It shall be the duty of a water undertaker (in accordance with section 44 below) to provide a water main to be used for providing such supplies of water to premises in a particular locality in its area as (so far as those premises are concerned) are sufficient for domestic purposes, if-
- (a) the undertaker is required to provide the main by a notice served on the undertaker by one or more of the persons who under subsection (2) below are entitled to require the provision of the main for that locality;
 - (b) the premises in that locality to which those supplies would be provided by means of that main are—
 - (i) premises consisting in buildings or parts of buildings; or
 - (ii) premises which will so consist when proposals made by any person for the erection of buildings or parts of buildings are carried out;
- and
- (c) the conditions specified in section 42 below are satisfied in relation to that requirement.
- (2) Each of the following persons shall be entitled to require the provision of a water main for any locality, that is to say—
- (a) the owner of any premises in that locality;
 - (b) the occupier of any premises in that locality;
 - (c) any local authority within whose area the whole or any part of that locality is situated;
 - ^{F580}(ca) where the whole or any part of that locality is situated within a Mayoral development area, the Mayoral development corporation;]
 - (d) where the whole or any part of that locality is situated in a new town, within the meaning of the ^{M11}New Towns Act 1981—
 - (i) the ^{F581}new towns residuary body]; and
 - (ii) ^{F582} . . . the development corporation for the new town, ^{F582} . . . ;
- and
- (e) where the whole or any part of that locality is situated within an area designated as an urban development area under Part XVI of the ^{M12}Local Government, Planning and Land Act 1980, the urban development corporation.

43 Calculation of “relevant deficit” for the purposes of section 42.

[^{F592}(1) For the purposes of section 42 above the relevant deficit for any year on a water main is the amount (if any) by which the [^{F593}relevant revenue in respect of that main for that year is] exceeded by the annual borrowing costs of a loan of the amount required for the provision of that main.

(2) The annual borrowing costs of a loan of the amount required for the provision of a water main is the aggregate amount which would fall to be paid in any year by way of payments of interest and repayments of capital if an amount equal to so much of the costs reasonably incurred in providing that main as were not incurred in the provision

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

of additional capacity had been borrowed, by the water undertaker providing the main, on terms—

- (a) requiring interest to be paid and capital to be repaid in twelve equal annual instalments; and
- (b) providing for the amount of the interest to be calculated at such rate, and in accordance with such other provision, as may have been determined for the purposes of this subsection.

(3) A determination for the purposes of subsection (2) above shall be made either—

- (a) by the undertaker with the approval of the Director; or
- (b) in default of such a determination, by the Director.

(4) For the purposes of this section the costs reasonably incurred in providing a water main (“the new main”) shall include—

- (a) the costs reasonably incurred in providing such other water mains and such tanks, service reservoirs and pumping stations as it is necessary to provide in consequence of the provision of the new main; and
- (b) such proportion (if any) as is reasonable of the costs reasonably incurred in providing [^{F594}or procuring the provision of] any such additional capacity in an earlier main as falls to be used in consequence of the provision of the new main.

[^{F595}(5) In subsection (4) above the reference to an earlier main, in relation to the new main, is a reference to any water main which—

- (a) has been provided in pursuance of a water main requisition; or
- (b) has been vested (by virtue of a declaration made under this Chapter) in the water undertaker,

in the period of twelve years immediately before the provision of the new main.]

(6) Any reference in this section to the provision of additional capacity in a water main provided in pursuance of a requirement under any enactment is a reference to such works carried out or other things done in connection with the provision of that main as are carried out or done for the purpose of enabling that main to be used for purposes in addition to those for which it is necessary to provide the main in order to comply with the requirement.

[^{F596}(7) Any reference in this section to the relevant revenue in respect of a main provided by a water undertaker for any year is—

- (a) in relation to premises connected with the main which are supplied with water by the undertaker, is a reference to so much of the aggregate of any charges payable to the undertaker in respect of services provided in the course of that year as represents charges which—
 - (i) have been imposed by the undertaker in relation to those premises; and
 - (ii) are reasonably attributable to the provision of a supply of water (whether or not for domestic purposes) to those premises by means of that main;
- (b) in relation to premises connected with the main which are supplied with water by a licensed water supplier, is a reference to so much of the aggregate of any charges made during the course of that year which—
 - (i) are payable by the supplier to the undertaker in respect of the duty under section 66A(2)(b), 66B(3)(b) or 66C(2)(b)(ii) below; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. [^{F598}43A Calculation of “discounted aggregate deficit” for the purposes of section 42

- [^{F599}(1) For the purposes of section 42 above the discounted aggregate deficit on a water main is the amount equal to the sum of the estimated relevant deficits for each of the twelve years following the provision of the main, in each case discounted in accordance with subsection (6) below.
- (2) The estimated relevant deficit for any year is the amount (if any) by which the estimated revenue in respect of the water main for that year would be exceeded by the annual borrowing costs of a loan of the amount required for the provision of that main.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) Subsections (2) to (6), (8) and (9) of section 43 above (which relate to the annual borrowing costs of a loan of the amount required for the provision of a water main) shall apply for the purposes of this section as they apply for the purposes of that.
- (4) Any reference in this section to the estimated revenue in respect of a water main for any year—
- (a) in relation to premises expected to be connected with the main and supplied with water by a water undertaker, is a reference to so much of the aggregate of any charges expected to be payable to the undertaker for the provision of services in the course of that year as would represent charges—
 - (i) imposed by the undertaker in relation to those premises, and
 - (ii) reasonably attributable to the provision of a supply of water (whether or not for domestic purposes) to those premises by means of that main; and
 - (b) in relation to premises expected to be connected with the main and supplied with water by a licensed water supplier, is a reference to so much of the aggregate of any charges expected to be made during the course of that year as would be—
 - (i) payable by the supplier to the undertaker in respect of the duty under section 66A(2)(b), 66B(3)(b) or 66C(2)(b)(ii) below; and
 - (ii) reasonably attributable to the use of that main for the purpose of the supplier's supplying water to those premises.
- (5) For the purpose of calculating estimated revenue under subsection (4) above, a thing is expected to be the case if, at the time the calculation is made, it is reasonably likely to occur.
- (6) The estimated relevant deficit for a year mentioned in subsection (1) above shall be discounted in order to determine its net present value by applying such factor, and in accordance with such other provision, as may be determined by the Authority.
- (7) A determination made by the Authority for the purposes of subsection (6) above—
- (a) may be made in relation to the provision of a particular water main or in relation to the provision of water mains generally; and
 - (b) may be revoked at any time except in relation to a water main in respect of which the conditions referred to in section 42(1) above have already been satisfied.]]

44 Determination of completion date and route for requisitioned main.

- (1) A water undertaker shall not be in breach of a duty imposed by section 41 above in relation to any locality unless-
- (a) the period of three months beginning with the relevant day has expired; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- [^{F600}(b) the water undertaker has not, before the end of that period, so laid the water main to be provided as to enable (as the case may be)—
- (i) service pipes to premises in that locality; or
 - (ii) a water main which is the subject of an agreement under section 51A below (“the self-laid main”),
- to connect with the main at the place or places determined under subsection (3) below.]
- (2) The period mentioned in subsection (1)(a) above may be extended in any case—
- (a) by agreement between the water undertaker and the person or persons who required the provision of the main; or
 - (b) where there is a dispute as to whether the period should be extended, by [^{F601}the Authority] on a reference under subsection (4) below.
- (3) The places mentioned in subsection (1)(b) above shall be—
- (a) such places as are determined by agreement between the water undertaker and the person or persons who required the provision of the water main; or
 - (b) in default of agreement, such places as are determined by [^{F602}the Authority], on a reference under subsection (4) below, to be the places at which it is reasonable, in all the circumstances, for service pipes to premises in the locality in question [^{F603}, or (as the case may be) the self-laid main,] to connect with the water main.
- [^{F604}(4) A reference for the purposes of subsection (2) or (3) above may be made to the Authority for determination under section 30A above by either party to the dispute.]
- (5) In this section “relevant day”, in relation to a requirement to provide a water main ^{F605} . . . , means the day after whichever is the later of the following, that is to say—
- (a) the day on which the conditions specified in section 42 above are satisfied in relation to the requirement; and
 - [^{F606}(b) the day on which the place or places where (as the case may be)—
- (i) service pipes to premises in the locality in question; or
 - (ii) the self-laid main,
- will connect with the main are determined under subsection (3) above.]

Domestic connections

45 Duty to make connections with main.

(1) Subject to the following provisions of this section and to sections 46 and 47 below, it shall be the duty of a water undertaker (in accordance with section 51 below) to make a connection under this section where the owner or occupier of any premises^{F607} . . . which—

- (a) consist in the whole or any part of a building; or
- (b) are premises on which any person is proposing to erect any building or part of a building,

serves a notice on the undertaker requiring it, for the purpose of providing a supply of water for domestic purposes to that building or part of a building, to connect a service pipe to those premises with one of the undertaker's water mains.

^{F608}(1ZA)

[^{F609}(1A) In relation to service pipes which do not belong to or fall to be laid by the undertaker—

- (a) subsection (1) above is subject to section 51D(1) below; and
- (b) any such service pipe which is to vest in the undertaker by virtue of an agreement under section 51A below shall be connected to one of the undertaker's water mains subject to and in accordance with the terms of that agreement.]

(2) Where a notice has been served for the purposes of this section, the duty imposed by subsection (1) above shall be a duty^{F610} . . . to make the connection required by the notice if—

- (a) the main with which the service pipe is required to be connected is neither a trunk main nor a water main which is or is to be used solely for the purpose of supplying water otherwise than for domestic purposes; and
- (b) such conditions as the undertaker may have imposed under sections 47 to 50 below have been satisfied;

and, subject to section 51 below, that duty shall arise whether or not the service pipe to which the notice relates has been laid when the notice is served.

(3) A notice for the purposes of this section—

- (a) shall be accompanied or supplemented by all such information as the undertaker may reasonably require; and
- (b) if the notice has effect so that a requirement is imposed on the undertaker by virtue of section 46(4) below, shall set out the matters that have given rise to the imposition of that requirement;

but, subject to section 51(5) below and without prejudice to the effect (if any) of any other contravention of this subsection, a failure to provide information in pursuance of the obligation to supplement such a notice shall not invalidate that notice.

(4) The duty imposed on a water undertaker by this section shall be owed to the person who served the notice by virtue of which the duty arises.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) Where a duty is owed by virtue of subsection (4) above to any person, any breach of that duty which causes that person to sustain loss or damage shall be actionable at the suit of that person; but, in any proceedings brought against a water undertaker in pursuance of this subsection, it shall be a defence for the undertaker to show that it took all reasonable steps and exercised all due diligence to avoid the breach.
- [^{F611}(6) Where a water undertaker carries out any works which it is its duty under this section to carry out, the person serving the notice is liable to pay to the undertaker such charges as the undertaker may impose in accordance with charging rules.]
- ^{F612}[(6A) Any dispute between a water undertaker and any other person [^{F613}as to the payments required to be made] may be referred to the Director for determination under section 30A above by either party to the dispute.]
- (7) Nothing in this section or in sections 46 to 51 below shall impose any duty on a water undertaker to connect a service pipe to any premises with a service pipe to any other premises.
- (8) In the following provisions of this Chapter a notice served for the purposes of this section is referred to as a connection notice.

- (a) the water main with which the service pipe is to be connected is situated in a street;
 - (b) the premises consisting in the building or part of a building in question together with any land occupied with it abut on the part of the street where the main is situated; and
 - (c) the service pipe to those premises will—
 - (i) enter the premises otherwise than through an outer wall of a building abutting on the street; and
 - (ii) have a stopcock fitted to it by the undertaker in the premises,
 this section applies to the laying of so much of the service pipe as it is necessary, for the purpose of making the required connection, to lay in land between the boundary of the street and that stopcock.
- (4) In a case where the connection notice is served in compliance with a requirement imposed by a notice by a local authority under section 80 below, this section applies to the laying of so much of the service pipe to be connected with a water main in pursuance of the connection notice as it is necessary, for the purpose of making the connection, to lay in land owned or occupied by a person who is certified by that authority—
- (a) to have unreasonably refused his consent to the laying of the service pipe; or
 - (b) to have sought to make the giving of his consent subject to unreasonable conditions.
- (5) Where a water main is alongside a street and within eighteen metres of the middle of that street, subsections (2) to (4) above shall have effect in relation to the laying, for the purpose of making a connection with that main, of a service pipe to any premises as if the street included so much of the land between the main and the boundary of the street as is not comprised in those premises or in any land occupied with those premises.
- (6) It shall be the duty of any water undertaker making a connection in pursuance of a connection notice to ensure that a stopcock belonging to the undertaker is fitted to the service pipe which is connected.
- (7) Subsections (4) to [F615(6A)] of section 45 above shall have effect—
- (a) in relation to any duties which, by virtue of a connection notice, are imposed on a water undertaker by this section; and
 - (b) in relation to any works which, by virtue of the service of such a notice, such an undertaker carries out [F616as its duty under this section],
- as they have effect by virtue of that notice in relation to the duty which arises under that section or, as the case may be, to works which the undertaker carries out [F617as its duty under that section].
- (8) Subject to subsection (9) below, a water undertaker may comply with any duty under this section to lay a service pipe by laying a water main instead; but nothing in section 45 above or this section shall impose any duty on a water undertaker to lay a water main where it has no power to lay a service pipe.
- (9) Where a water undertaker exercises its power under subsection (8) above to lay a water main instead of a service pipe—
- (a) paragraph (a) of section 51(1) below shall have effect as if any additional time reasonably required by reason of the laying of the main instead of the service pipe were included in the time allowed by that paragraph for the laying of the service pipe; ^{F618} ...

47 Conditions of connection with water main.

- (1) Subject to subsection (3) and [F619 sections 48 to][F619 sections 49 and] 50 below, where the owner or occupier of any premises (“the relevant premises”) serves a connection notice on a water undertaker, the undertaker may make compliance with one or more of the requirements specified in subsection (2) below a condition of its complying with the duties to which it is subject by virtue of that notice.
- (2) The requirements mentioned in subsection (1) above are—
- (a) a requirement that [F620 such security as charging rules allow and the undertaker requires] has been provided for the discharge of any obligations imposed by virtue of section 45(6) or 46(7)(b) above on the person who served the connection notice;
 - (b) a requirement, in a case where the connection required by the connection notice is necessary as a consequence of a disconnection made by reason of any person’s failure to pay any charges, that the person serving the connection notice has paid any amount owed by him to the undertaker—
 - (i) in respect of a supply of water to the relevant premises; or
 - (ii) in respect of expenses [F621 reasonably]incurred in the making of the disconnection;
 - (c) a requirement that a meter for use in determining the amount of any charges which have been or may be fixed in relation to the relevant premises by reference to volume has been installed and connected either—
 - (i) by the undertaker; or
 - (ii) in accordance with specifications approved by the undertaker;
 - (d) a requirement that—
 - [F622(i) subject to section 51D(1) below, so much of the service pipe to the relevant premises as does not belong to, vest in or fall to be laid by the undertaker; and]
 - (ii) the plumbing of the premises,comply with specifications approved by the undertaker for the purpose of ensuring that it will be reasonably practicable for such a meter as is mentioned in paragraph (c) above to be installed and connected as so mentioned;
 - (e) a requirement that a separate service pipe has been provided—

50 Restriction on imposition of condition requiring separate service pipes.

- (1) This section applies where the effect of a connection notice served in respect of any house is to require a service pipe to that house to be connected with a water main with which it has previously been connected.
- (2) Where this section applies, the water undertaker on which the connection notice is served shall not be entitled to make the reconnection subject to any such condition as, apart from this section, may be imposed by virtue of section 47(2)(e) above unless the undertaker would have been entitled under section 64 below to require the provision of a separate service pipe if the reconnection had already been made.

51 Time for performance of connection etc. duties.

- (1) A water undertaker shall not be in breach of a duty imposed by virtue of the service of a connection notice unless—
 - (a) in the case of a duty to lay any service pipe or to connect any service pipe to which such a duty relates, it has failed to lay that pipe or to make that connection as soon as reasonably practicable after the relevant day;
 - (b) in the case of a duty to connect a service pipe the whole of which has already been laid when the notice is served on the undertaker, it has failed to make the connection before the end of the period of fourteen days beginning with the relevant day.
- (2) In any case in which a water undertaker is subject to any such duty as is mentioned in subsection (1)(a) above, it shall be presumed, unless the contrary is shown in relation to that case, that the period of twenty-one days beginning with the relevant day is the period within which it is reasonably practicable for a water undertaker—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (a) to lay so much of any service pipe; and
- (b) to fit such stopcock,

as it is necessary to lay or fit in that case for connecting a water main in a street with a service pipe at the boundary of any premises which abut on the part of the street where the main is situated.

(3) Where—

- (a) a connection notice is served in respect of any premises; and
- (b) at the time when the notice is served, the customer’s part of the service pipe to those premises has not been laid,

the duties of the undertaker under sections 45 and 46 above shall not arise by virtue of that notice until the person serving the notice, having obtained the necessary consents from the owners and occupiers of any affected land, has, at his own expense, laid so much of the service pipe as it is necessary, for the purpose of making the connection, to lay otherwise than in a street or in land mentioned in subsections (3) to (5) of section 46 above.

(4) In subsection (3) above the reference to the customer’s part of the service pipe to any premises is a reference to so much of the service pipe to those premises as falls to be laid otherwise than by the water undertaker in pursuance of section 46 above.

(5) Where—

- (a) a person who has served a connection notice on a water undertaker has failed to comply with his obligation under section 45(3)(a) above to supplement that notice with information required by the undertaker; and
- (b) that requirement was made by the undertaker at such a time before the end of the period within which the undertaker is required to comply with the duties imposed by virtue of the notice as gave that person a reasonable opportunity to provide the required information within that period,

the undertaker may delay its compliance with those duties until a reasonable time after the required information is provided.

(6) In this section “the relevant day”, in relation to a duty imposed on a water undertaker by virtue of a connection notice, means the day after whichever is the latest of the following days, that is to say—

- (a) the day on which the notice was served on the undertaker;
- (b) in a case where it is necessary for the person serving the notice to lay any service pipe after serving the notice, the day on which a notice stating that the pipe has been laid is served on the undertaker;
- (c) the day on which all such conditions are satisfied as the undertaker has, under sections 47 to 50 above, made conditions of its compliance with that duty.

51A Agreements to adopt water main or service pipe at future date

(1) Subject to subsections (2) and (10) below, a water undertaker may agree with any person constructing or proposing to construct—

- (a) any water main; or
- (b) any service pipe,

that, if the water main or service pipe is constructed in accordance with the terms of the agreement, the undertaker will, upon completion of the work, at some specified date or on the happening of some future event, declare the water main or (as the case may be) so much of the service pipe as the undertaker could otherwise, by virtue of sections 45 to 51 above, be required to lay, to be vested in that undertaker.

(2) Subsection (1) above shall not apply in the case of water mains or service pipes which are to be used (in whole or in part) for the purpose of supplying water other than for domestic purposes, but—

- (a) nothing in this section shall prevent a water undertaker from agreeing apart from this section to declare any such water main or service pipe (or a part of it, as specified in the agreement) to be vested in the undertaker; and
- (b) such a declaration shall take effect as a declaration made under this Chapter.

(3) A person constructing or proposing to construct a water main or a service pipe to which subsection (1) above applies may [^{F632}request a water undertaker to make an agreement under this section.]

^{F633}(4)

^{F633}(5)

^{F633}(6)

^{F633}(7)

^{F633}(8)

(9) An agreement made under this section by a water undertaker shall be enforceable against the undertaker by the owner or occupier for the time being of any premises connected or to be connected with the water main or service pipe to which it relates.

[The reference in subsection (9) to an agreement made under this section includes a ^{F634}(9A) reference to—

- (a) an order under section 51B which is deemed to be an agreement by virtue of section 51B(5), and
- (b) an agreement which has been varied by order under section 51C(1).]

(10) A water undertaker shall not make an agreement under this section with respect to a water main or a service pipe situated within the area of another water undertaker, until either—

- (a) that other undertaker has consented in writing to the making of the agreement; or
- (b) the Secretary of State, on an application made to him, has dispensed with the necessity for such consent, either unconditionally or subject to such conditions as he may think fit to impose.

Status: This version of this Act contains provisions that are prospective.

[^{F635}51B Adoption at a future date: orders by Authority

- (1) This section applies where a person constructing or proposing to construct a water main or service pipe makes a request to a water undertaker under section 51A(3).
- (2) The person or the water undertaker may apply to the Authority for an order under subsection (4) if the person and the water undertaker have not made such agreement as was requested by the person.
- (3) The Authority may, on the application of the person or the water undertaker, make an order under subsection (4) if the Authority is satisfied that—
 - (a) it is appropriate for work proposed to be done by a person other than the water undertaker to be so done, and
 - (b) the person and the water undertaker cannot reach agreement within a reasonable time.
- (4) The Authority may by order—
 - (a) require the water undertaker to give such undertakings as to the vesting of the water main or service pipe in the undertaker as the Authority may specify, and
 - (b) impose such terms and conditions as regards taking the benefit of the undertakings as the Authority may specify.
- (5) An order under subsection (4) has effect as an agreement under section 51A between the person and the water undertaker.
- (6) The Authority may not, by order under subsection (4), require a water undertaker to vest in itself a water main or service pipe as regards which there is a contravention of any of the requirements of section 74 that are prescribed for the purposes of this subsection.
- (7) The Authority may not make an order under subsection (4) with respect to a water main or service pipe that is situated within the area of another water undertaker, until either—
 - (a) that other undertaker has consented in writing to the making of the order, or
 - (b) the Minister, on an application made to the Minister, has disappplied paragraph (a), either unconditionally or subject to such conditions as the Minister thinks fit.
- (8) “The Minister” means—
 - (a) the Secretary of State, as regards the consent of a water undertaker whose area is wholly or mainly in England;
 - (b) the Welsh Ministers, as regards the consent of a water undertaker whose area is wholly or mainly in Wales.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (9) Neither the CMA nor the Authority may exercise, in respect of an agreement for the vesting of a water main or service pipe in a water undertaker at a future date, the powers conferred by—
- (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
- (10) Subsection (9)(b) does not apply to the exercise of powers in respect of conduct—
- (a) which is connected with an agreement for the vesting of a water main or service pipe at a future date, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (11) In exercising its functions under this section, the Authority must have regard to the desirability of—
- (a) facilitating effective competition within the water supply industry;
 - (b) the recovery by the water undertaker of the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the ability of the water undertaker to meet its existing obligations, and likely future obligations, to supply water without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the water undertaker to meet its existing obligations, or likely future obligations, to supply water.]

Codes in respect of section 51A agreements

F635 51CA

- (1) The Authority must issue a code in respect of section 51A agreements.
- (2) The code may make provision about—
 - (a) procedures in connection with making an agreement under section 51A;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) procedures in connection with varying or terminating a section 51A agreement;
 - (c) procedures to be followed by the Authority in determining whether to make an order under section 51B(4) or 51C(1);
 - (d) the circumstances in which it is, or is not, appropriate for work to be done by a person other than a water undertaker;
 - (e) the terms and conditions of a section 51A agreement;
 - (f) principles for determining the terms and conditions that should or should not be incorporated into a section 51A agreement;
 - (g) the steps to be taken by the Authority in determining whether a person is complying with the code.
- (3) Provision under subsection (2)(c) may in particular require the Authority to consult—
- (a) the Chief Inspector of Drinking Water;
 - (b) the Chief Inspector of Drinking Water for Wales if there is one.
- (4) Provision under subsection (2)(d) may include in particular provision about circumstances relating to—
- (a) the nature of the work;
 - (b) the kind of premises supplied or to be supplied.
- (5) Provision under subsection (2)(e) may include in particular provision about terms and conditions as regards—
- (a) constructing associated infrastructure;
 - (b) vesting associated infrastructure in a water undertaker;
 - (c) constructing water mains so as to meet additional supply requirements;
 - (d) connecting new water mains or service pipes to the existing supply system of a water undertaker;
 - (e) complying with requirements of the kind referred to in section 47(2);
 - (f) the duration of a section 51A agreement.
- (6) If the Authority considers that a water undertaker is not acting as required by the code, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (7) The Authority may not give a direction under subsection (6) requiring a person to enter into, vary or terminate an agreement.
- (8) It is the duty of a water undertaker to comply with a direction under subsection (6), and this duty is enforceable by the Authority under section 18.
- (9) The code may make different provision for different persons or descriptions of person.
- (10) The Authority must from time to time review the code and, if appropriate, issue a revised code.
- (11) A revised code may include provision for applying any of its revisions to section 51A agreements made before the revised code comes into force.

in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014](#) (c. 21), [ss. 10\(3\), 94\(3\)](#); S.I. 2015/1938, art. 2(b)(ii); S.I. 2017/462, arts. 3(d)(ii), 4(a) (with art. 15); S.I. 2017/1288, art. 3(c)

51CB Codes under section 51CA: procedure

- (1) Before issuing a code under section 51CA, the Authority must—
 - (a) prepare a draft of the proposed code under section 51CA, and
 - (b) consult the relevant persons about the proposed code.
- (2) The relevant persons are—
 - (a) the Chief Inspector of Drinking Water;
 - (b) the Chief Inspector of Drinking Water for Wales if there is one;
 - (c) such other persons as the Authority considers appropriate.
- (3) The Authority must specify the period (“the consultation period”) within which a person may make representations about the proposed code.
- (4) Before a code under section 51CA prepared by the Authority is issued, the Minister may direct the Authority—
 - (a) not to issue the code, or
 - (b) to issue the code with specified modifications.
- (5) Subsection (4) is subject to subsections (7) and (8).
- (6) In subsection (4) “the Minister” means—
 - (a) the Secretary of State, so far as the code relates to section 51A agreements for the vesting of water mains or service pipes in water undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as the code relates to section 51A agreements for the vesting of water mains or service pipes in water undertakers whose areas are wholly or mainly in Wales.
- (7) The power under subsection (4) may not be exercised more than once by the Secretary of State or the Welsh Ministers.
- (8) If the power under subsection (4) is not exercised by the Secretary of State or the Welsh Ministers on the first occasion on which it may be exercised by the Secretary of State or (as the case may be) the Welsh Ministers, it may not be exercised by the Secretary of State or (as the case may be) the Welsh Ministers on a later occasion.
- (9) A direction under subsection (4) must be given within the period of 28 days beginning with the day after the end of the consultation period, and a code in relation to which a direction may be given may not be issued before that period of 28 days has expired.
- (10) This section is subject to section 51CC.

51CC Codes under section 51CA: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue a revised code under section 51CA and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 51CB does not apply to the proposed revised code.
- (3) Once the Authority has issued the revised code, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised code, and
 - (b) as regards each revision contained in it, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (4) Notice under subsection (3) is to be given to such persons as the Authority considers appropriate.
- (5) Unless the Authority gives notice that a revision in a revised code is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised code is issued.

F635 **Ss. 51B-51CG** substituted for **ss. 51B, 51C** (18.12.2015 for the substitution of ss. 51CD-51CG, 1.4.2017 for E. for the substitution of s. 51B(6) for specified purposes and s. 51CB, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by **Water Act 2014** (c. 21), **ss. 10(3)**, 94(3); S.I. 2015/1938, art. 2(b)(ii); S.I. 2017/462, arts. 3(d)(ii), 4(a) (with art. 15); S.I. 2017/1288, art. 3(c)

51CD Rules about charges in connection with a section 51A agreement

- (1) The Authority may issue rules about charges that may be imposed by a water undertaker under a section 51A agreement.
- (2) The rules may in particular make provision about—
 - (a) what types of charge may be imposed;
 - (b) the amount or the maximum amount, or a method for determining the amount or maximum amount, of any type of charge;
 - (c) principles for determining what types of charge may or may not be imposed;
 - (d) principles for determining the amount of any charge that may be imposed;
 - (e) publication of the charges that may be imposed.
- (3) The rules may require a water undertaker, upon declaring a water main or service pipe to be vested in the undertaker in accordance with a section 51A agreement, to pay to the other party to the agreement an amount (which may be nil) determined in accordance with the rules.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) Rules made by virtue of subsection (3) may, in particular, provide for the determination to take into account—
 - (a) revenue that might be derived from the water main or service pipe in question;
 - (b) costs that might have been incurred in providing such a water main or service pipe.
- (5) The rules may also make provision as to—
 - (a) the amount of security that may be required by a water undertaker for the purposes of any charges imposed by the water undertaker under a section 51A agreement;
 - (b) the type of security that may be required;
 - (c) the payment of interest on a sum deposited with a water undertaker by way of security.
- (6) If the Authority considers that a water undertaker is not acting as required by rules under this section, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (7) It is the duty of a water undertaker to comply with a direction under subsection (6), and this duty is enforceable by the Authority under section 18.
- (8) The rules may make different provision for different water undertakers or descriptions of undertaker.
- (9) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (10) The Authority must issue revised rules if—
 - (a) guidance is issued under section 51CG, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (11) Revised rules may include provision for applying any of their revisions to section 51A agreements made before the revised rules come into effect.

- (b) the Welsh Ministers, so far as the guidance is as to the content of rules relating to section 51A agreements for the vesting of water mains or service pipes in water undertakers whose areas are wholly or mainly in Wales.]

Textual Amendments

F635 Ss. 51B-51CG substituted for ss. 51B, 51C (18.12.2015 for the substitution of ss. 51CD-51CG, 1.4.2017 for E. for the substitution of s. 51B(6) for specified purposes and s. 51CB, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), [ss. 10\(3\)](#), 94(3); S.I. 2015/1938, art. 2(b)(ii); S.I. 2017/462, arts. 3(d)(ii), 4(a) (with art. 15); S.I. 2017/1288, art. 3(c)

51D Prohibition on connection without adoption

- (1) Where a person (other than a water undertaker) constructs a water main or service pipe which is to be used, in whole or in part, for supplying water for domestic or food production purposes, no water undertaker may permit that water main or service pipe to become connected with its supply system unless it vests (to the relevant extent) in a water undertaker.
- (2) In subsection (1) above, “the relevant extent” means the extent specified in the agreement for the vesting in the undertaker of the water main or service pipe in question.
- (3) The prohibition imposed on a water undertaker by subsection (1) above shall be enforceable under section 18 above by the Authority.

51E Sections 51A to 51D: supplementary

- (1) For the purposes of sections 51A to 51D above, the definition of “water main” in section 219(1) below shall be treated as if the words “not being a pipe for the time being vested in a person other than the undertaker” were omitted.
- (2) [^{F636}In section 51A], references to so much of the service pipe as the undertaker could otherwise, by virtue of sections 45 to 51 above, be required to lay shall be construed disregarding section 46(8) above.
- (3) In this Act, references to vesting or the making of a declaration of vesting with respect to a service pipe refer to so much of the service pipe as is specified for those purposes in the relevant vesting agreement.]

Textual Amendments

Domestic supplies

52 The domestic supply duty.

- (1) The domestic supply duty of a water undertaker in relation to any premises is a duty, until there is an interruption of that duty—
 - (a) to provide to those premises such a supply of water as (so far as those premises are concerned) is sufficient for domestic purposes; and
 - (b) to maintain the connection between the undertaker’s water main and the service pipe by which that supply is provided to those premises.
- (2) Subject to the following provisions of this section and to section 53 below, a water undertaker shall owe a domestic supply duty in relation to any premises to which this section applies^{F637} . . . if—
 - (a) a demand for a supply of water for domestic purposes has been made, in accordance with subsection (5) below, to the undertaker in respect of those premises; or
 - (b) those premises are premises to which this section applies by reason of a supply of water provided before 1st September 1989,and there has been no interruption of the domestic supply duty in relation to those premises since that demand was made or, as the case may be, since the beginning of 1st September 1989.
- (3) [^{F638}Subject to subsection (4A) below,] this section applies to any premises if—
 - (a) they consist in the whole or any part of a building and are connected by means of a service pipe to [^{F639}one of the water undertaker’s water mains]; and
 - (b) the requirements of subsection (4) below are satisfied in relation to those premises.
- (4) The requirements of this subsection are satisfied in relation to any premises if—
 - (a) the pipe by means of which the premises are connected to the water main in question was first connected with that main in pursuance of a connection notice served in respect of those premises;
 - (b) that pipe was the means by which a supply of water from that main was being supplied to those premises for domestic purposes immediately before 1st September 1989;
 - (c) the condition specified in paragraph (b) above would be satisfied in relation to the premises if any service pipe to those premises had not been temporarily disconnected for the purposes of any necessary works which were being carried out immediately before 1st September 1989;
 - [^{F640}(ca) the premises are in a retail exit area and the pipe by means of which the premises are connected to the water main in question was first connected with that main in pursuance of section 66A(3);] or,
 - (d) the condition specified in any of the preceding paragraphs—
 - (i) has been satisfied in relation to the premises at any time on or after 1st September 1989; and
 - (ii) would continue to be satisfied in relation to the premises had not the whole or any part of a service pipe to those premises, or the main with which such a pipe had been connected, been renewed (on one or more previous occasions).

[^{F641}(4A) This section does not apply to any premises if—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) they are not in the area of the water undertaker [^{F642}or they are in a retail exit area] ;
 - (b) they are not household premises (as defined in section 17C above); and
 - (c) [^{F643}in the case of premises to be supplied using the supply system of a water undertaker whose area is wholly or mainly in Wales,] the total quantity of water estimated to be supplied to them annually for the purposes of subsection (2) of section 17D above is not less than the quantity specified in that subsection.]
- (5) For the purposes of this section a demand in respect of any premises is made in accordance with this subsection if it is made—
- (a) by the person who is the occupier of the premises at the time when the demand is made; or
 - (b) by a person who is the owner of the premises at that time and agrees with the undertaker to pay all the undertaker’s charges in respect of the supply demanded.
- (6) For the purposes of this section—
- (a) there is an interruption of the domestic supply duty owed by a water undertaker in relation to any premises if that supply is cut off by anything done by the undertaker in exercise of any of its disconnection powers, other than a disconnection or cutting off for the purposes of the carrying out of any necessary works; and
 - (b) a domestic supply duty owed in relation to any premises shall not be treated as interrupted by reason only of a change of the occupier or owner of the premises.
- ^{F644}(6A) For the purposes of this section, there is also an interruption of the domestic supply duty owed by a water undertaker in relation to any premises where—
- (a) a notice is served in respect of those premises under section 63AA below; and
 - (b) the time specified in that notice has passed.]
- (7) Nothing in this section shall impose any duty on a water undertaker—
- (a) to provide a supply of water directly from, or maintain any connection with, a water main which is a trunk main or is or is to be used solely for the purpose of supplying water otherwise than for domestic purposes; or
 - (b) to provide a supply of water to any premises, or maintain the connection between a water main and a service pipe to any premises, during any period during which it is reasonable—
 - (i) for the supply of water to those premises to be cut off or reduced; or
 - (ii) for the pipe to be disconnected,
 for the purposes of the carrying out of any necessary works.
- (8) In this section references to the disconnection powers of a water undertaker are references to the powers conferred on the undertaker by any of sections 60 to 62 and 75 below.

53 Conditions of compliance with domestic supply duty.

- (1) Where a demand for the purposes of section 52(2) above has been made to a water undertaker in respect of any premises (“the relevant premises”), the undertaker may make compliance with one or more of the requirements specified in subsection (2) below a condition of providing his first supply of water in compliance with that demand.
- (2) The requirements mentioned in subsection (1) above are—
- (a) a requirement, in a case where the demand is made as a consequence of a supply having been cut off by reason of any person’s failure to pay any charges, that the person making the demand has paid any amount owed by him to the undertaker—
 - (i) in respect of a supply of water to the relevant premises; or
 - (ii) in respect of expenses [^{F645}reasonably] incurred in cutting off any such supply;
 - (b) a requirement, in relation to the relevant premises
 - (i) that such a requirement as may be imposed under section 66 below has been complied with; or
 - (ii) in a case where such a requirement could be imposed but for there already being such a cistern as is mentioned in that section, that the cistern and its float-operated valve are in good repair;
 - (c) a requirement that there is no contravention in relation to the water fittings used or to be used in connection with—
 - (i) the supply of water to the relevant premises; or
 - (ii) the use of water in those premises,of such of the requirements of regulations under section 74 below as are prescribed for the purposes of this subsection; and
 - (d) a requirement that every such step has been taken as has been specified in any notice served on any person under section 75 below in relation to the relevant premises.

^{F646}[(2A) Any dispute between a water undertaker and any other person as to whether the expenses referred to in subsection (2)(a)(ii) above were incurred reasonably may be

54 Enforcement of domestic supply duty.

- (1) A duty imposed on a water undertaker under section 52 above—
- (a) to provide a supply of water to any premises; or
 - (b) to maintain a connection between a water main and a service pipe by which such a supply is provided,
- shall be owed to the consumer.
- (2) Where a duty is owed by virtue of this section to any person, any breach of that duty which causes that person to sustain loss or damage shall be actionable at the suit of that person; but, in any proceedings brought against a water undertaker in pursuance of this subsection, it shall be a defence for the undertaker to show that it took all reasonable steps and exercised all due diligence to avoid the breach.

Other supplies

55 Supplies for non-domestic purposes.

- (1) This section applies where the owner or occupier of any premises in the area of a water undertaker requests the undertaker to provide a supply of water to those premises and—
- (a) the premises are premises which do not consist in the whole or any part of a building; or
 - (b) the requested supply is for purposes other than domestic purposes.

^{F648}(1A) This section also applies where—

- (a) a water undertaker is requested to provide a supply of water to premises which are not in the undertaker's area by the owner or occupier of the premises;
- (b) the premises are household premises (as defined in section 17C above) [^{F649}, in the case of premises to be supplied using the supply system of a water undertaker whose area is wholly or mainly in Wales,] or the total quantity of water estimated to be supplied to the premises annually for the purposes of subsection (2) of section 17D above is less than the quantity specified in that subsection; and
- (c) paragraph (a) or (b) of subsection (1) above applies.]

[^{F650}(1B) But this section does not apply to any premises if—

- (a) they are in a retail exit area, and
- (b) they are not household premises (as defined in section 17C above).]

- (2) Where this section applies, it shall be the duty of the water undertaker, in accordance with such terms and conditions as may be determined under section 56 below—
 - (a) to take any such steps as may be so determined in order to enable the undertaker to provide the requested supply; and
 - (b) having taken any such steps, to provide that supply.
- (3) A water undertaker shall not be required by virtue of this section to provide a new supply to any premises, or to take any steps to enable it to provide such a supply, if the provision of that supply or the taking of those steps would—
 - (a) require the undertaker, in order to meet all its existing obligations to supply water for domestic or other purposes, together with its probable future obligations to supply buildings and parts of buildings with water for domestic purposes, to incur unreasonable expenditure in carrying out works; or
 - (b) otherwise put at risk the ability of the undertaker to meet any of the existing or probable future obligations mentioned in paragraph (a) above.
- (4) A water undertaker shall not be required by virtue of this section to provide a new supply to any premises, or to take any steps to enable it to provide such a supply, if there is a contravention in relation to the water fittings used or to be used in connection with—
 - (a) the supply of water to those premises; or
 - (b) the use of water in those premises,of such of the requirements of regulations under section 74 below as are prescribed for the purposes of this subsection.
- (5) Where—
 - (a) a request has been made by any person to a water undertaker for the purposes of subsection (2) above; and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by the undertaker of any of its powers or the carrying out by the undertaker of any works,the failure of the undertaker to acquire the necessary authority or agreement shall not affect any liability of that person, under any term or condition in accordance with which those steps are taken, to re-imburse the undertaker in respect of some or all of the expenses incurred by the undertaker in taking those steps.

56 Determinations on requests for non-domestic supplies.

- (1) Subject to subsection (3) below, any terms or conditions or other matter which falls to be determined for the purposes of a request made by any person to a water undertaker for the purposes of section 55 above shall be determined—
 - (a) by agreement between that person and the water undertaker; or
 - (b) in default of agreement, by the Director according to what appears to him to be reasonable.
- (2) Subject to subsection (3) below, the Director shall also determine any dispute arising between any person and a water undertaker by virtue of subsection (3) or (4) of section 55 above.
- (3) The Director may, instead of himself making a determination under subsection (1) or (2) above, refer any matter submitted to him for determination under that subsection to the arbitration of such person as he may appoint.
- (4) For the purposes of any determination under this section by the Director or any person appointed by him it shall be for a water undertaker to show that it should not be required to comply with a request made for the purposes of section 55 above.
- (5) The charges in respect of a supply provided in compliance with any request made for the purposes of section 55 above—

57 Duty to provide a supply of water etc. for fire-fighting.

- (1) It shall be the duty of a water undertaker to allow any person to take water for extinguishing fires from any of its water mains or other pipes on which a fire-hydrant is fixed.
- (2) Every water undertaker shall, at the request of the [^{F652}fire and rescue authority] concerned, fix fire-hydrants on its water mains (other than its trunk mains) at such places as may be most convenient for affording a supply of water for extinguishing any fire which may break out within the area of the undertaker.
- (3) It shall be the duty of every water undertaker to keep every fire-hydrant fixed on any of its water mains or other pipes in good working order and, for that purpose, to replace any such hydrant when necessary.
- (4) It shall be the duty of a water undertaker to ensure that a [^{F652}fire and rescue authority] has been supplied by the undertaker with all such keys as the authority may require for the fire-hydrants fixed on the water mains or other pipes of the undertaker.
- [^{F653}(4A) Where a fire-hydrant is removed (other than at the request of the fire authority concerned) by a water undertaker in the course of carrying out works in relation to any of its water mains or other pipes, the cost of replacing the fire-hydrant shall be borne by the undertaker.]
- (5) Subject to [^{F654}subsection (5A) and] section 58(3) below, the expenses incurred by a water undertaker in complying with its obligations under subsections (2) to (4) above shall be borne by the [^{F655}fire and rescue authority] concerned.
- [^{F656}(5A) Where a fire-hydrant is damaged as the result of any use made of it with the authority of a water undertaker, other than use for the purposes of fire-fighting or for any other purposes of a fire and rescue authority, the fire and rescue authority is not liable for the cost of repairing or replacing the hydrant.]

59 Supplies for other public purposes.

- (1) A water undertaker shall, at the request of a sewerage undertaker, highway authority or local authority, provide, from such of its pipes as are of an appropriate capacity, a supply of water for cleansing sewers and drains, for cleansing and watering highways or, as the case may be, for supplying any public pumps, baths or wash-houses.
- (2) A supply of water provided by a water undertaker under this section shall be provided upon such terms and conditions as may be reasonable.
- (3) A water main or other pipe of a water undertaker shall be treated as of an appropriate capacity for the purposes of this section if and only if it has a fire-hydrant fixed on it.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (4) Nothing in this section shall require a water undertaker to do anything which it is unable to do by reason of the carrying out of any necessary works.
- (5) The obligations of a water undertaker under this section shall be enforceable under section 18 above by the Director.

Disconnections

60 Disconnections for the carrying out of necessary works.

- (1) Subject to the following provisions of this section, a water undertaker may—
 - (a) disconnect a service pipe which, for the purposes of providing a supply of water to any premises, is connected with any water main of that undertaker; or
 - (b) otherwise cut off a supply of water to any premises,
 if it is reasonable for the disconnection to be made, or the supply to be cut off, for the purposes of the carrying out of any necessary works.
- (2) The power of a water undertaker under this section to cut off a supply of water shall include power to reduce a supply of water.
- (3) Except in an emergency or in the case of a reduction which is immaterial, the power of a water undertaker under this section to cut off or reduce a supply shall be exercisable in relation to any premises only after the undertaker has served reasonable notice on the consumer of the proposal for the carrying out of the necessary works.
- (4) Where a water undertaker exercises its power under this section to make any disconnection or to cut off or reduce a supply of water to any premises for the purposes of the carrying out of any necessary works, it shall owe a duty to the consumer to secure—
 - (a) that those works are carried out with reasonable dispatch; and
 - (b) that any supply of water to those premises for domestic purposes is interrupted for more than twenty-four hours for the purposes of the carrying out of those works only if an emergency supply has been made available (whether or not in pipes) within a reasonable distance of the premises.
- (5) Any breach by a water undertaker of the duty owed by virtue of subsection (4) above which causes any person to whom it is owed to sustain loss or damage shall be actionable at the suit of that person.

61 Disconnections for non-payment of charges.

- (1) Subject to ^{F659}subsections (1A) to (6)], a water undertaker may disconnect a service pipe which for the purposes of providing a supply of water to any premises is connected with any water main of that undertaker, or may otherwise cut off a supply of water to any premises, ^{F660}if subsection (1ZA) or (1ZB) applies
- (1ZA) This subsection applies] if the occupier of the premises—
- (a) is liable (whether in his capacity as occupier or under any agreement with the undertaker) to pay charges due to the undertaker in respect of the supply of water to those premises; and
 - (b) has failed to do so before the end of the period of seven days beginning with the day after he is served with notice requiring him to do so.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

[^{F661}(1ZB) This subsection applies if a water supply licensee requests the undertaker to disconnect the service pipe or otherwise cut off the supply of water to the premises.

(1ZC) A water supply licensee may make a request under subsection (1ZB) only if—

- (a) the occupier of the premises is liable under an agreement with the licensee to pay charges to the licensee in respect of the supply of water to the premises,
- (b) the licensee has served notice on the occupier requiring payment of charges due,
- (c) the occupier has failed to pay the charges before the end of the period of seven days beginning with the day after the notice was served, and
- (d) that period has expired.]

[^{F662}(1A) The power conferred by subsection (1) above is not exercisable in relation to any premises specified in Schedule 4A to this Act.]

(2) Where—

- (a) a water undertaker has served a notice for the purposes of paragraph (b) of [^{F663}subsection (1ZA)] above on a person; and
- (b) within the period of seven days mentioned in that paragraph, that person serves a counter-notice on the undertaker stating that he disputes his liability to pay the charges in question,

the undertaker shall not in respect of that notice exercise his power by virtue of [^{F664}subsection (1)] in relation to any premises except at a time when that person is the occupier of the premises and those charges are enforceable against that person in a manner specified in subsection (3) below.

[^{F665}(2A) Where—

- (a) a water supply licensee has served a notice for the purposes of subsection (1ZC)(b) on a person, and
- (b) within the period of seven days mentioned in subsection (1ZC)(c), the person serves a counter-notice on the licensee stating that he disputes his liability to pay the charges in question,

the licensee may not make a request under subsection (1ZB) in relation to the premises except at a time when that person is the occupier of the premises and those charges are enforceable against that person in a manner specified in subsection (3).]

(3) For the purposes of subsection (2) [^{F666}or (2A)] above charges are enforceable in a manner specified in this subsection against a person if-

- (a) the undertaker [^{F667}or, as the case may be, the licensee] is able to enforce a judgment against that person for the payment of the charges; or
- (b) that person is in breach of an agreement entered into, since the service of his counter-notice, for the purpose of avoiding or settling proceedings by the undertaker [^{F668}or, as the case may be, the licensee] for the recovery of the charges.

(4) A water undertaker which exercises its power under this section to disconnect any pipe or otherwise to cut off any supply of water may recover^{F669}... any expenses reasonably incurred by the undertaker in making the disconnection or in otherwise cutting off the supply [^{F670}—

- (a) from the person in respect of whose liability the power is exercised, in a case where the power is exercised in the circumstances mentioned in subsection (1ZA);

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) from the water supply licensee who made the request, in a case where the power is exercised in the circumstances mentioned in subsection (1ZB).]
- (5) Where—
- (a) a water undertaker has power under this section to disconnect any pipe to any premises, or otherwise to cut off any supply to any premises; and
- (b) a supply of water is provided to those premises [^{F671}(“the primary premises”)] and to other premises [^{F672}(“the secondary premises”)] wholly or partly by the same service pipe,
- the undertaker may exercise that power so as to cut off the supply to [^{F673}the secondary premises] if and only if the same person is the occupier of [^{F674}the primary premises] and of [^{F675}the secondary premises].
- [^{F676}(6) The undertaker may not cut off the supply to the secondary premises in reliance on subsection (5) if—
- (a) in a case where the undertaker is exercising the power in subsection (1) because charges are due to it, the secondary premises are supplied by a person other than the undertaker;
- (b) in a case where the undertaker is exercising the power in subsection (1) because of a request for disconnection under subsection (1ZB), the secondary premises are supplied by a person other than the licensee which made that request.]

62 Disconnections at request of customer.

- (1) Subject to the following provisions of this section, a water undertaker may—
- (a) disconnect a service pipe which for the purposes of providing a supply of water to any premises is connected with any water main of that undertaker; or
 - (b) otherwise cut off a supply of water to any premises,
- if notice specifying the time after which a supply of water to those premises will no longer be required has been served on the undertaker by a consumer and that time has passed.
- (2) No person shall be liable to a water undertaker for any expenses incurred by the undertaker in exercising the power conferred on the undertaker by this section.

63 General duties of undertakers with respect to disconnections.

- (1) Where a water undertaker—
- (a) disconnects a service pipe to any inhabited house, or otherwise cuts off a supply of water to such a house; and
 - (b) does so without restoring the supply to that house before the end of the period of twenty-four hours beginning with the time when it is cut off,
- the undertaker shall, no later than forty-eight hours after that time, serve notice that it has cut off that supply on the local authority in whose area the house is situated.
- (2) A water undertaker which fails, without reasonable excuse, to serve a notice on a local authority as required by subsection (1) above shall be guilty of an offence under this section.
- (3) A water undertaker shall be guilty of an offence under this section if—
- (a) it disconnects a service pipe to any premises, or otherwise cuts off a supply of water to any premises, in a case in which it has no power to do so under sections 60 to 62 above, section 75 below or any other enactment; or
 - (b) in disconnecting any such pipe or cutting off any such supply it fails, without reasonable excuse, to comply with any requirement of the provisions in pursuance of which it disconnects the pipe or cuts off the supply.
- [^{F677}(3A) A water undertaker is not guilty of an offence under subsection (3) where it disconnects a service pipe or otherwise cuts off a supply of water under section 61 in the circumstances mentioned in section 61(1ZB) (request from water supply licensee).]
- (4) A water undertaker which is guilty of an offence under this section shall be liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

[^{F685}63A] **Interim duty: domestic and non-domestic supply**

(1) This section applies where—

(a) a water supply licensee (“the previous licensee”) ceases to supply any premises with water, and

(b) the owner or occupier of the premises has not notified the water undertaker in whose area the premises are that—

(i) he has made arrangements for the continuation of the supply of water to the premises, or

(ii) he intends any supply of water to the premises to cease.

(2) It is to be the duty of the water undertaker to continue the supply of water to the premises which was made by the previous licensee.

(3) But the Authority may give a direction to an eligible water supply licensee (an “interim licensee”) providing that it is to be the duty of that licensee to continue the supply instead.

(4) An “eligible water supply licensee” is a water supply licensee with a retail authorisation or a restricted retail authorisation who has elected to be an eligible water supply licensee for the purposes of this section in accordance with the code issued under section 63AF.

(5) If the Authority proposes to give a direction under subsection (3) to an eligible water supply licensee—

(a) the Authority must give notice of the proposed direction to the licensee, and

(b) the licensee may, in accordance with the code issued under section 63AF, temporarily suspend the election made by the licensee as mentioned in subsection (4), so that the proposed direction cannot be given to the licensee.

(6) Where a supply is made by an undertaker under subsection (2)—

(a) the charges payable in respect of the supply are to be fixed from time to time by a charges scheme under section 143, and

(b) subject to subsection (12), the supply is to be made until—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (i) a supply is made by an interim licensee by virtue of a direction under subsection (3),
 - (ii) a supply is made by a water supply licensee following the service of a notice under section 63AA or 63AB;
 - (iii) a supply is made under section 52 or 55, or
 - (iv) a notice is served by the undertaker on the owner or occupier of the premises stating that the supply is to be discontinued (subject to subsection (8)),
- whichever is the earlier.
- (7) Where a supply is made by an interim licensee by virtue of a direction given under subsection (3)—
- (a) the supply by the interim licensee is to be treated as having begun on the date on which the previous licensee ceased to supply the premises,
 - (b) the terms and conditions in accordance with which the supply is to be made are to be—
 - (i) those provided for by a scheme made under section 63AE, or
 - (ii) such other terms and conditions as may be agreed between the interim licensee and the owner or occupier of the premises, and
 - (c) subject to subsection (12), the supply is to be made until it is discontinued in accordance with the terms and conditions mentioned in paragraph (b).
- (8) A notice under subsection (6)(b)(iv) may not be served before the end of the period of three months beginning with the day on which the supply by the previous licensee ceased.
- (9) Subsections (10) and (11) apply if, within a period of three months beginning with the date on which the previous licensee ceased to supply the premises with water, the owner or occupier of the premises serves notice—
- (a) under section 63AA or 63AB, on the water undertaker continuing the supply under subsection (2), or
 - (b) in accordance with the terms and conditions mentioned in subsection (7)(b), on the interim licensee continuing the supply by virtue of a direction given under subsection (3),
- that instead another water supply licensee (“the new licensee”) is to continue the supply of water to the premises which was made by the previous licensee.
- (10) The notice must—
- (a) specify the time from which the new licensee is to continue the supply in question, and
 - (b) be served in accordance with the code issued under section 63AF.
- (11) In the case of a notice served as mentioned in subsection (9)(a), the supply by the new licensee is to be treated as having begun on the date on which the previous licensee ceased to supply the premises.
- (12) Supplies of water under this section are subject to sections 60 to 63.]]

Textual Amendments

F685 Ss. 63AC-63AF substituted for s. 63AC (1.4.2017) by [Water Act 2014 \(c. 21\)](#), **ss. 31**, 94(3); S.I. 2017/462, art. 3(f)

[^{F685} 63A] **Interim duty: supplementary**

- (1) A water undertaker is not required by virtue of section 63AC to provide a supply of water to any premises if the provision of the supply would—
 - (a) require the undertaker, in order to meet all its existing obligations to supply water for domestic or other purposes, together with its probable future obligations to supply buildings and parts of buildings with water for domestic purposes, to incur unreasonable expenditure in carrying out works, or
 - (b) otherwise put at risk its ability to meet any of the existing or probable future obligations mentioned in paragraph (a).
- (2) The Authority may determine, in a case referred to it by the owner or occupier of the premises in question, whether the condition in subsection (1) is satisfied in relation to a water undertaker.
- (3) Before the Authority determines whether that condition is satisfied, it must consult—
 - (a) the Secretary of State, in the case of a water undertaker whose area is wholly or mainly in England;
 - (b) the Welsh Ministers, in the case of a water undertaker whose area is wholly or mainly in Wales.
- (4) The supply of water to any premises by a water undertaker under section 63AC does not prevent a proposed supply to those premises by that undertaker under section 55 from being regarded as a new supply for the purposes of that section.
- (5) Where a duty is imposed by section 63AC(2), or by virtue of a direction given under section 63AC(3), in respect of any premises, any breach of the duty which causes the owner or occupier of the premises to sustain loss or damage is actionable at the suit of that owner or occupier.
- (6) But in any proceedings brought against a water undertaker or water supply licensee in pursuance of subsection (5), it is a defence for the undertaker or licensee to show that the undertaker or, as the case may be, the licensee took all reasonable steps and exercised all due diligence to avoid the breach.
- (7) For the purposes of section 63AC, premises which are outside a water undertaker's area are to be treated as being within that area if they are supplied with water using the undertaker's supply system.
- (8) In subsection (7), the reference to the undertaker's supply system is to be construed in accordance with section 17B.

Textual Amendments

F685 Ss. 63AC-63AF substituted for s. 63AC (1.4.2017) by [Water Act 2014 \(c. 21\)](#), **ss. 31**, 94(3); S.I. 2017/462, art. 3(f)

Status: This version of this Act contains provisions that are prospective.

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

63AE Interim licensees: schemes for terms and conditions

- (1) A person who is an eligible water supply licensee for the purposes of section 63AC must make, and from time to time revise, a scheme containing the terms and conditions which, in the absence of agreed terms and conditions, are to apply to a supply of water made by the licensee by virtue of a direction given under section 63AC(3).
- (2) A scheme under this section may make different provision for different purposes, or for different areas.
- (3) As soon as practicable after a water supply licensee makes or revises a scheme under this section the licensee is to—
 - (a) publish the scheme, or revised scheme, on the licensee's website, and
 - (b) send a copy of the scheme, or revised scheme, to the Authority.
- (4) The Authority may give a direction that terms and conditions applying to a supply of water in accordance with a scheme under this section must be modified as specified in the direction.
- (5) A direction under subsection (4) may apply—
 - (a) generally to terms and conditions applying in accordance with a scheme under this section, or
 - (b) to terms and conditions so applying in any particular case.
- (6) It is the duty of a water supply licensee to comply with a direction under subsection (4), and this duty is enforceable under section 18.

Textual Amendments

F685 Ss. 63AC-63AF substituted for s. 63AC (1.4.2017) by [Water Act 2014 \(c. 21\)](#), **ss. 31, 94(3)**; S.I. [2017/462](#), art. 3(f)

63AF Interim duty: code

- (1) The Authority must issue a code in relation to—
 - (a) supplies of water under section 63AC, and
 - (b) its power of direction under section 63AC(3) (power to direct that eligible water supply licensee makes interim supply).
- (2) The code may, in particular, make provision about—
 - (a) the procedure for electing to be an eligible water supply licensee for the purposes of section 63AC;
 - (b) the procedure for temporarily suspending such an election under section 63AC(5)(b);
 - (c) the circumstances in which the Authority's power of direction under section 63AC(3) or 63AE(4) may or may not be exercised;
 - (d) how the Authority will determine the date on which a water supply licensee ceased to supply premises with water for the purposes of section 63AC;
 - (e) terms and conditions contained in schemes made under section 63AE;
 - (f) eligible water supply licensees informing owners or occupiers of premises of their schemes for terms and conditions made under section 63AE, before agreeing any terms and conditions as mentioned in section 63AC(7)(b)(ii);

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (g) the giving of notices as mentioned in section 63AC(9) (that a new licensee is to continue the supply of water made by the previous licensee) including, in particular, provision about—
 - (i) the earliest time that a notice may specify as the time from which a new licensee is to continue the supply of water made by a previous licensee;
 - (ii) the procedure for serving a notice.
- (3) If the Authority considers that a water supply licensee is not acting as required by provision contained in the code as mentioned in subsection (2)(e) or (f), the Authority may give the licensee a direction to do, or not to do, a particular thing specified in the direction.
- (4) It is the duty of a water supply licensee to comply with a direction under subsection (3), and this duty is enforceable under section 18.
- (5) The Authority must from time to time review the code and, if appropriate, issue a revised code.
- (6) References in section 63AC to the code issued under this section are to the code issued under this section that has effect at the time in question.]

Textual Amendments

F685 Ss. 63AC-63AF substituted for s. 63AC (1.4.2017) by [Water Act 2014 \(c. 21\)](#), **ss. 31, 94(3)**; S.I. 2017/462, art. 3(f)

[Use of limiting devices

^{F686}**63A Prohibition of use of limiting devices.**

- (1) A water undertaker shall be guilty of an offence under this section if it uses a limiting device in relation to any premises specified in Schedule 4A to this Act, with the intention of enforcing payment of charges which are or may become due to the undertaker in respect of the supply of water to the premises.
- (2) For the purposes of this section “a limiting device”, in relation to any premises, means any device or apparatus which—
 - (a) is fitted to any pipe by which water is supplied to the premises or a part of the premises, whether that pipe belongs to the undertaker or to any other person, and
 - (b) is designed to restrict the use which may be made of water supplied to the premises by the undertaker.
- (3) An undertaker does not commit an offence under this section by disconnecting a service pipe to any premises or otherwise cutting off a supply of water to the premises.
- (4) An undertaker guilty of an offence under this section shall be liable on summary conviction to a fine not exceeding level 3 on the standard scale.]

Textual Amendments

F686 S. 63A inserted (30.6.1999) by 1999 c. 9, ss. 2, 17(2)

Means of supply

64 Supply by means of separate service pipes.

- (1) Subject to the following provisions of this section, a water undertaker may require the provision of a separate service pipe to any premises ^{F687} . . . which—
- (a) consist in a house or any other building or part of a building, being, in the case of a part of a building, a part which is separately occupied; and
 - (b) are already supplied with water by the undertaker but do not have a separate service pipe.
- (2) Where the supply of water to two or more houses [^{F688}is provided wholly or partly by the same service pipe], the water undertaker shall not require the provision of separate service pipes to those houses until—
- (a) the service pipe, in so far as it belongs to a person other than the undertaker, becomes so defective as to require renewal or is no longer sufficient to meet the requirements of those houses;
 - (b) a payment in respect of the supply of water to any of those houses remains unpaid after the end of the period for which it is due;
 - (c) the houses are, by structural alterations to one or more of them, converted into a larger number of houses;
 - (d) the owner or occupier of any of those houses has interfered with, or allowed another person to interfere with, the existing service pipe and thereby caused the supply of water to any house to be interfered with; or
 - (e) the undertaker has reasonable grounds for believing that such interference as is mentioned in paragraph (d) above is likely to take place.
- ^{F689}[(2A) Any dispute between a water undertaker and any other person as to whether any condition of a kind mentioned in subsection (2) above has been complied with may be referred to the Director for determination under section 30A above by either party to the dispute.]
- (3) If, in the case of any such premises as are described in subsection (1) above, the water undertaker which provides a supply of water to those premises serves notice on the consumer requiring the provision of a separate service pipe and setting out the power of the undertaker under subsection (4) below—
- (a) that consumer shall, within three months after the service of the notice, lay so much of the required pipe as the undertaker is not under a duty to lay by virtue of paragraph (b) below;
 - (b) sections 45 to 51 above shall apply as if that consumer had by a connection notice required the undertaker to connect the separate service pipe to those premises with the undertaker's water main;
 - (c) that consumer shall be presumed, without prejudice to his power to make further demands and requests—
 - (i) in so far as those premises were provided before the service of the notice with a supply of water for domestic purposes, to have made

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- a demand for the purposes of section 52 above that such a supply is provided by means of the separate service pipe; and
- (ii) in so far as those premises were provided before the service of the notice with a supply of water for other purposes, to have requested the undertaker to provide the same supply by means of that pipe as was provided before the service of the notice;
- and
- (d) on providing a supply of water to those premises by means of the separate service pipe, the undertaker may cut off any supply replaced by that supply and may make such disconnections of pipes by which the replaced supply was provided as it thinks fit.
- (4) If a person upon whom a notice has been served for the purposes of subsection (3) above fails to comply with the notice, the water undertaker may—
- (a) itself carry out the works which that person was required to carry out; and
- (b) recover the expenses reasonably incurred by the undertaker in doing so from that person.
- (5) Without prejudice—
- (a) to the power of a water undertaker by virtue of paragraph (b) of subsection (3) above to impose conditions under section 47 above; or
- (b) to the power conferred by virtue of paragraph (d) of that subsection, any works carried out by a water undertaker by virtue of the provisions of the said paragraph (b) or of subsection (4) above shall be necessary works for the purposes of this Chapter.

65 Duties of undertakers as respects constancy and pressure.

- (1) Subject to the following provisions of this section, it shall be the duty of a water undertaker to cause the water in such of its water mains and other pipes as—
- (a) are used for providing supplies of water for domestic purposes; or
- (b) have fire-hydrants fixed on them,
- to be laid on constantly and at such a pressure as will cause the water to reach to the top of the top-most storey of every building within the undertaker's area.
- (2) Nothing in subsection (1) above shall require a water undertaker to provide a supply of water at a height greater than that to which it will flow by gravitation through its water mains from the service reservoir or tank from which that supply is taken.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) For the purposes of this section a water undertaker shall be entitled to choose the service reservoir or tank from which any supply is to be taken.
- (4) Nothing in subsection (1) above shall impose any duty on a water undertaker to maintain the constancy or pressure of any supply of water during any period during which it is reasonable for that supply to be cut off or reduced for the purposes of the carrying out of any necessary works.
- (5) The Secretary of State may by order modify the application of the preceding provisions of this section in relation to any water undertaker.
- (6) The Secretary of State shall not make an order under subsection (5) above except—
 - (a) in accordance with Schedule 5 to this Act; and
 - (b) on an application made in accordance with that Schedule by the Director or by the water undertaker in relation to which the order is made.
- (7) Subject to subsection (6) above, the power of the Secretary of State to make an order under subsection (5) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament
- (8) An order under subsection (5) above may—
 - (a) require the payment of compensation by a water undertaker to persons affected by the order;
 - (b) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
 - (c) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.
- (9) The obligations of a water undertaker under this section shall be enforceable under section 18 above by the ^{F690}Director].
- (10) In addition, where a water undertaker is in breach of a duty under this section, the undertaker shall be guilty of an offence and liable—
 - (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (11) In any proceedings against any water undertaker for an offence under subsection (10) above it shall be a defence for that undertaker to show that it took all reasonable steps and exercised all due diligence to avoid the commission of the offence.

Textual Amendments

F690 Word in s. 65(9) substituted (1.7.1992) by [Competition and Service \(Utilities\) Act 1992 \(c. 43\), s. 56\(6\), Sch. 1 para.22](#); Competition and Service (Utilities) Act 1992 (Commencement No. 1) Order 1992, art. 3, Sch. Pt.I

66 Requirements by undertaker for maintaining pressure.

- (1) A water undertaker may require that any premises consisting in—
 - (a) any building or part of a building the supply of water to which need not, in accordance with provision contained in or made under this Act, be constantly laid on under pressure; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) any relevant house to which water is required to be delivered at a height greater than a point 10.5 metres below the draw-off level of the service reservoir or tank from which a supply of water is being provided by the undertaker to those premises,
shall be provided with a cistern which has a float-operated valve and is fitted on the pipe by means of which water is supplied to those premises.
- (2) A water undertaker may, in the case of such a house as is mentioned in paragraph (b) of subsection (1) above, require that a cistern the provision of which is required under that subsection shall be capable of holding sufficient water to provide an adequate supply to the house for a period of twenty-four hours.
- (3) If, where a water undertaker provides a supply of water to any premises, the consumer, after having been required to do so by notice served on him by the undertaker, fails before the end of the period specified in the notice—
- (a) to provide a cistern in accordance with a requirement under this section; or
(b) to put any such cistern and its float-operated valve into good repair,
the water undertaker may itself provide a cistern, or carry out any repairs necessary to prevent waste of water.
- (4) The period specified for the purposes of subsection (3) above in a notice under this section shall be a period of not less than twenty-eight days beginning with the day after the service of the notice.
- (5) Where a water undertaker provides a cistern or carries out any repairs under subsection (3) above, it may recover the expenses reasonably incurred by it in doing so from the owner of the premises in question.
- (6) In this section—
“pre-transfer supplier”, in relation to a house, means the person who was supplying water to that house immediately before 1st September 1989; and
“relevant house” means any house other than a house in relation to which the following two conditions are satisfied, that is to say—
- (i) the erection of the house was commenced before 1st September 1989; and
(ii) no such requirement as is mentioned in subsection (1) or (2) above could have been imposed in relation to the house under any enactment having effect immediately before that date in relation to the pre-transfer supplier.

C81 Pt. 3 Ch. 2A applied (3.10.2016) by [The Water and Sewerage Undertakers \(Exit from Non-household Retail Market\) Regulations 2016 \(S.I. 2016/744\)](#), regs. 1(2), **38**

[^{F692}Duties of undertakers to supply water supply licensees etc]

[^{F692}66A Wholesale water supply by primary water undertaker

- (1) This section applies where a water supply licensee with a retail authorisation (“L”) requests a water undertaker to permit the use of the undertaker’s supply system for the purpose of supplying water to premises that—
 - (a) L is to supply in accordance with L’s retail authorisation, and
 - (b) are in the area of the undertaker.
- (2) This section also applies where a water supply licensee with a restricted retail authorisation (“R”) requests a water undertaker to permit the use of the undertaker’s supply system for the purpose of supplying water to premises that—
 - (a) R is to supply in accordance with R’s restricted retail authorisation, and
 - (b) are in the area of the undertaker.
- (3) Where this section applies, the undertaker must in accordance with a section 66D agreement take such steps—
 - (a) for the purpose of connecting the premises in question with the undertaker’s supply system, or
 - (b) in respect of that system,
 as may be provided for in that agreement in order to enable the requested use of the undertaker’s supply system.
- [^{F693}(3A)** A water undertaker is not required by this section to take any steps to enable the use of its supply system at a time when it is required to take those steps by virtue of a notice under section 41 or a connection notice.]
- (4) A water undertaker is not required by this section to permit the use of its supply system, or to take any steps to enable its use, if the first or second ground applies.
- (5) The first ground is that—
 - (a) in the case of a request under subsection (1), the water supply licensee has not secured by means of—
 - (i) a request under section 66AA(1) made by the licensee,
 - (ii) a request under section 66B(1) or 66C(1), (2) or (3) made by the licensee or another water supply licensee, or
 - (iii) a combination of such requests,
 a supply of water, or the introduction of a supply of water, in connection with which the premises in question are to be supplied;
 - (b) in the case of a request under subsection (2), the water supply licensee has not secured by means of—
 - (i) a request under section 66AA(2), 66B(2) or (3) or 66C(4), or
 - (ii) a combination of such requests,
 a supply of water, or the introduction of a supply of water, in connection with which the premises in question are to be supplied.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) The second ground is that there is, in relation to the water fittings used or to be used in connection with—
- (a) the supply of water to the premises in question, or
 - (b) the use of water in those premises,
- a contravention of such of the requirements of regulations under section 74 as are prescribed for the purposes of this subsection.
- (7) Where—
- (a) a request has been made by a water supply licensee for the purposes of subsection (1) or (2), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,
- the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 66D agreement provides for such liability as regards those steps.
- (8) For the purposes of this section and sections 66AA to 66C—
- (a) premises which are outside a water undertaker's area are to be treated as being within that area if they are supplied with water using the undertaker's supply system, and
 - (b) any pipes of the water undertaker which are used for the purpose of supplying premises as mentioned in paragraph (a) are to be treated as being part of the undertaker's supply system (if they would not otherwise be part of it).
- (9) In this section and sections 66AA to 66C—
- (a) “prescribed” means, in relation to a water undertaker whose area is wholly or mainly in Wales, prescribed by regulations made by the Welsh Ministers by statutory instrument, which is subject to annulment in pursuance of a resolution of the Assembly;
 - (b) a reference to the supply system of a water undertaker is to be construed in accordance with section 17B;
 - (c) references to a retail authorisation or a restricted retail authorisation are to be construed in accordance with Schedule 2A.]

Textual Amendments

F693 S. 66A(3A) inserted (E.) (31.10.2021) by [The Water and Sewerage Undertakers \(Exit from Non-household Retail Market\) \(Consequential Provision\) Regulations 2021 \(S.I. 2021/1208\)](#), regs. 1(2), 2(5)

Water supply from water undertaker

F692 **66AA**

- (1) This section applies where a water supply licensee with a retail authorisation (“L”) requests a water undertaker to provide L with a supply of water for the purpose of supplying water to premises that—
- (a) L is to supply in accordance with L's retail authorisation, and
 - (b) are in the area of the undertaker.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) This section also applies where a water supply licensee with a restricted retail authorisation (“R”) requests a water undertaker to provide R with a supply of water for the purpose of supplying water to premises that—
- (a) R is to supply in accordance with R's restricted retail authorisation, and
 - (b) are in the area of the undertaker.
- (3) Where this section applies, the undertaker must in accordance with a section 66D agreement—
- (a) take such steps in respect of the undertaker's supply system as may be provided for in that agreement in order to enable the use of the undertaker's supply system for the purpose in subsection (1) or, as the case may be, subsection (2), and
 - (b) having taken such steps, provide the requested supply of water.
- (4) A water undertaker is not required by this section to provide a supply of water if both of the first and second grounds apply.
- (5) The first ground is that—
- (a) the premises to be supplied by L or, as the case may be, R do not consist in the whole or any part of a building, or
 - (b) the supply to be made by L or, as the case may be, R to those premises is for purposes other than domestic purposes.
- (6) The second ground is that provision of a supply of water by the water undertaker would—
- (a) require the undertaker, in order to meet all its existing obligations to supply water for domestic or other purposes, together with its probable future obligations to supply buildings and parts of buildings with water for domestic purposes, to incur unreasonable expenditure in carrying out works, or
 - (b) otherwise put at risk its ability to meet any of the existing or probable future obligations mentioned in paragraph (a).
- (7) Where—
- (a) a request has been made by a water supply licensee for the purposes of subsection (1) or (2), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,

the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 66D agreement provides for such liability as regards those steps.

66B Introduction of water into water undertaker's supply system

- (1) This section applies where—
- (a) a water supply licensee with a wholesale authorisation (“L”) requests a water undertaker to permit L to introduce water into the undertaker's supply system, with a view to the use of that system, in connection with that introduction of water, to supply water to particular premises in accordance with a retail authorisation (whether L's or another's), and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the premises in issue are in the area of the undertaker.
- (2) This section also applies where—
- (a) a water supply licensee with a supplementary authorisation (“R1”) requests a water undertaker to permit R1 to introduce water into the undertaker's supply system, with a view to the use of that system, in connection with that introduction of water, to supply water to particular premises in accordance with R1's restricted retail authorisation, and
 - (b) the premises in issue are in the area of the undertaker.
- (3) This section also applies where—
- (a) a water undertaker agrees to permit a water supply licensee with a supplementary authorisation (“R2”) to introduce water into the undertaker's treatment works,
 - (b) in connection with that introduction, R2 requests the undertaker to permit R2 to introduce water into the undertaker's supply system, with a view to the use of that system to supply water to particular premises in accordance with R2's restricted retail authorisation, and
 - (c) the premises in issue are in the area of the undertaker.
- (4) Where this section applies, the undertaker must in accordance with a section 66D agreement—
- (a) in a case falling within subsection (1), take such steps—
 - (i) for the purpose of connecting L's source of water with the undertaker's supply system, or
 - (ii) in respect of the undertaker's supply system,
as may be provided for in that agreement in order to enable L to make the requested introduction of water into the supply system;
 - (b) in a case falling within subsection (2), take such steps—
 - (i) for the purpose of connecting R1's treatment works with the undertaker's supply system,
 - (ii) for the purpose of connecting with the undertaker's supply system any source used by R1 for the purpose of supplying water other than for domestic or food purposes, or
 - (iii) in respect of the undertaker's supply system,
as may be provided for in that agreement in order to enable R1 to make the requested introduction of water into the supply system;
 - (c) in a case falling within subsection (3), take such steps in respect of the undertaker's supply system as may be provided for in that agreement in order to enable R2 to make the requested introduction of water into the supply system;
 - (d) having taken steps under paragraph (a), (b) or (c) (as the case may be), permit the requested introduction of water into that supply system.
- (5) A water undertaker is not required by this section to permit the introduction of water into its supply system, or to take any steps to enable such an introduction of water, if permitting the introduction of water into the undertaker's supply system would—
- (a) require the undertaker, in order to meet all its existing obligations to supply water for domestic or other purposes, together with its probable future obligations to supply buildings and parts of buildings with water for domestic purposes, to incur unreasonable expenditure in carrying out works, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) otherwise put at risk its ability to meet any of the existing or probable future obligations mentioned in paragraph (a).
- (6) Where—
- (a) a request has been made by a water supply licensee for the purposes of subsection (1), (2) or (3), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,
- the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 66D agreement provides for such liability as regards those steps.
- (7) In this section “treatment works” means—
- (a) in relation to a water undertaker whose area is wholly or mainly in Wales, the works designated as treatment works by the Secretary of State for the purposes of section 17B(6);
 - (b) in relation to a water supply licensee, the works designated from time to time by the Welsh Ministers as treatment works for the purposes of this paragraph.
- (8) A list of any works designated for the purposes of subsection (7)(b) must be published from time to time by the Welsh Ministers in such manner as the Welsh Ministers consider appropriate for the purpose of bringing the designations to the attention of persons likely to be affected by them.
- (9) A pipe laid because of subsection (4)(a)(i) or (b)(i) or (ii) is to be regarded as a water main for the purposes of this Act, subject to any provision to the contrary.
- (10) In this section and section 66C—
- (a) a reference to a wholesale authorisation is to be construed in accordance with Schedule 2A;
 - (b) a reference to a supplementary authorisation is to be construed in accordance with Schedule 2A.

66C Introduction of water provided by secondary water undertaker

- (1) This section applies where a water supply licensee with a wholesale authorisation (“L1”)—
- (a) requests a water undertaker other than L1's primary water undertaker (the “secondary water undertaker”) to provide a supply of water so that water may be supplied to particular premises, using the primary water undertaker's supply system and in accordance with a retail authorisation (whether L1's or another's), and
 - (b) requests L1's primary water undertaker to permit L1 to introduce that water into the primary water undertaker's supply system,
- and the premises in issue are in the area of the primary water undertaker.

A request under paragraph (a) may only be made to a water undertaker whose area is wholly or mainly in England.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) This section also applies where a water supply licensee with a wholesale authorisation (“L2”)—
- (a) requests a water undertaker whose area is wholly or mainly in Wales and which is not L2's primary water undertaker (the “secondary water undertaker”) to provide a supply of water so that L2 may supply water to particular premises, using the primary water undertaker's supply system and in accordance with L2's retail authorisation so far as that authorisation relates to L2's customers, and
 - (b) requests L2's primary water undertaker to permit L2 to introduce that water into the primary water undertaker's supply system,
- and the premises in issue are in the area of the primary water undertaker.
- (3) This section also applies where a water supply licensee with a wholesale authorisation (“L3”)—
- (a) agrees with a water undertaker whose area is wholly or mainly in Wales and which is not L3's primary undertaker (the “secondary water undertaker”) for the secondary water undertaker to provide a supply of water so that water may be supplied to particular premises, using the primary water undertaker's supply system and in accordance with—
 - (i) L3's retail authorisation except so far as that authorisation relates to L3's customers, or
 - (ii) a retail authorisation other than L3's, and
 - (b) requests L3's primary water undertaker to permit L3 to introduce that water into the primary water undertaker's supply system,
- and the premises in issue are in the area of the primary water undertaker.
- (4) This section also applies where a water supply licensee with a supplementary authorisation (“R”)—
- (a) requests a water undertaker other than R's primary water undertaker (the “secondary water undertaker”) to provide a supply of water so that R may supply water to particular premises, using the primary water undertaker's supply system and in accordance with R's restricted retail authorisation, and
 - (b) requests R's primary water undertaker to permit R to introduce that water into the primary water undertaker's supply system,
- and the premises in issue are in the area of the primary water undertaker.
- A request under paragraph (a) may be made to a water undertaker whose area is wholly or mainly in England or Wales.
- (5) Where this section applies by virtue of subsection (1), (2) or (4), the secondary water undertaker must in accordance with a section 66D agreement—
- (a) take such steps in respect of its supply system as may be provided for in that agreement in order to enable it to provide the requested supply, and
 - (b) having taken such steps, provide that supply.
- (6) Where this section applies, the primary water undertaker must in accordance with a section 66D agreement—
- (a) take such steps—
 - (i) for the purpose of connecting the secondary water undertaker's supply system with the primary water undertaker's supply system, or
 - (ii) in respect of its supply system,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- as may be provided for in that agreement in order to enable L1, L2, L3 or R to make the requested introduction of water into the primary undertaker's supply system, and
- (b) having taken such steps, permit the requested introduction.
- (7) A secondary water undertaker is not required by this section to provide a supply of water to L1, L2 or R if providing the supply of water would—
- (a) require the secondary undertaker, in order to meet all its existing obligations to supply water for domestic or other purposes, together with its probable future obligations to supply buildings and parts of buildings with water for domestic purposes, to incur unreasonable expenditure in carrying out works, or
- (b) otherwise put at risk its ability to meet any of the existing or probable future obligations mentioned in paragraph (a).
- (8) A primary water undertaker is not required by this section to permit the introduction of water into its supply system, or to take any steps to enable such an introduction of water, if permitting the introduction of a supply of water would—
- (a) require the primary undertaker, in order to meet all its existing obligations to supply water for domestic or other purposes, together with its probable future obligations to supply buildings and parts of buildings with water for domestic purposes, to incur unreasonable expenditure in carrying out works, or
- (b) otherwise put at risk its ability to meet any of the existing or probable future obligations mentioned in paragraph (a).
- (9) Where—
- (a) a request has been made by a water supply licensee to a water undertaker for the purposes of subsection (1), (2), (3) or (4), and
- (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,
- the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 66D agreement provides for such liability as regards those steps.
- (10) A pipe laid because of subsection (6)(a)(i) is to be regarded as a water main for the purposes of this Act, subject to any provision to the contrary.
- (11) For the purposes of this section, a water undertaker is the primary water undertaker of a water supply licensee if the undertaker's supply system is to be used for the purpose of making the supply to the premises mentioned in subsection (1), (2), (3) or (4).]

Determinations by Authority

¹_{F694} 66CA

- (1) The Authority may determine, in a case referred to it by a water supply licensee, whether any condition specified in the following provisions is satisfied—
- (a) section 66A(5) and (6);
- (b) section 66AA(5) and (6);
- (c) section 66B(5);
- (d) section 66C(7) and (8).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Before the Authority determines whether a condition specified in section 66B(5) is satisfied, it must consult the Secretary of State.
- (3) If a determination as to a condition specified in section 66B(5) relates to the introduction of water into the supply system of a water undertaker whose area is wholly or mainly in Wales, the Authority must consult the Welsh Ministers, not the Secretary of State.
- (4) Before the Authority determines whether a condition specified in section 66C(7) or (8) is satisfied, it must consult the Secretary of State and the appropriate agency.
- (5) If the case in which a determination as to a condition specified in section 66C(7) or (8) is made relates to—
 - (a) the supply of water by a water undertaker whose area is wholly or mainly in Wales, and
 - (b) the introduction of water into the supply system of a water undertaker whose area is wholly or mainly in Wales,the Authority must consult the Welsh Ministers, not the Secretary of State.
- (6) If the case in which a determination as to a condition specified in section 66C(7) or (8) is made relates to the supply of water by one water undertaker, and the introduction of water into the supply system of another water undertaker, and only one of those undertakers has an area wholly or mainly in Wales, the Authority must consult the Welsh Ministers as well as the Secretary of State.
- (7) In subsection (4), “the appropriate agency”, in relation to a determination as to a condition specified in section 66C(7) or (8) relating to the supply of water by one water undertaker, and the introduction of water into the supply system of another water undertaker means—
 - (a) the Environment Agency, in a case where the areas of both undertakers are wholly in England;
 - (b) the NRBW, in a case where the areas of both undertakers are wholly in Wales;
 - (c) both the Environment Agency and the NRBW, in any other case.]

[^{F695} 66D Agreements as to duties under sections 66A to 66C

- (1) On the application of—
 - (a) a water supply licensee that has made a request under sections 66A to 66C, or
 - (b) a water undertaker to which such a request has been made,the Authority may by order require a water undertaker to perform the duty in question under sections 66A to 66C, for such period and on such terms and conditions as may be specified in the order.
- (2) The Authority may make an order under subsection (1) only if—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) in the case of an application relating to a duty under section 66A, 66AA, 66B or 66C, it appears to the Authority that the water undertaker is required to perform that duty under that section, or
 - (b) in the case of an application relating to duties under section 66C, it appears to the Authority that both water undertakers in question are required to perform duties under that section,
- and it is satisfied that the parties cannot reach agreement within a reasonable time.
- (3) An order under subsection (1) has effect as an agreement between—
- (a) the water supply licensee, and
 - (b) the water undertaker required to perform the duty in question.
- (4) On the application of a party to a section 66D agreement, and if the Authority is satisfied that the parties cannot reach agreement on the variation or termination of the agreement within a reasonable time, the Authority may by order vary or terminate the agreement.
- (5) If an order under subsection (4) is made in relation to a section 66D agreement, the agreement—
- (a) has effect subject to the provision made by the order, or
 - (b) ceases to have effect, as the case may be.
- (6) An order under subsection (4) may require one party to the agreement to pay compensation to the other.
- (7) Neither the CMA nor the Authority may exercise, in respect of an agreement for the performance of a duty under sections 66A to 66C by a water undertaker, the powers conferred by—
- (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
- (8) Subsection (7)(b) does not apply to the exercise of powers in respect of conduct—
- (a) which is connected with an agreement for the performance of a duty under sections 66A to 66C by a water undertaker, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (9) In this Chapter a reference to a section 66D agreement is a reference to—
- (a) an agreement for the performance of a duty under sections 66A to 66C by a water undertaker, or
 - (b) an order deemed to be such an agreement under subsection (3), or
 - (c) an agreement varied by order under subsection (4).]

Codes in respect of section 66D agreements

66DA

- (1) The Authority may issue one or more codes in respect of section 66D agreements.
- (2) A code may make provision about—
 - (a) procedures in connection with making a section 66D agreement;
 - (b) procedures in connection with varying or terminating a section 66D agreement;
 - (c) the terms and conditions of a section 66D agreement, including terms as to the duration of such an agreement;
 - (d) principles for determining the terms and conditions that should or should not be incorporated into a section 66D agreement.
- (3) A code may make provision about the steps to be taken by the Authority in determining for the purposes of section 66D(2) whether a water undertaker is, in the particular case, required to perform a duty under sections 66A to 66C.
- (4) If the Authority considers that a water undertaker or a water supply licensee is not acting as required by a code, the Authority may give the undertaker or the licensee a direction to do, or not to do, a thing specified in the direction.
- (5) The Authority may not give a direction under subsection (4) requiring a person to enter into, vary or terminate an agreement.
- (6) It is the duty of a water undertaker or a water supply licensee to comply with a direction under subsection (4), and this duty is enforceable by the Authority under section 18.
- (7) A code may make—
 - (a) different provision for different persons or descriptions of person;
 - (b) different provision for different duties under sections 66A to 66C.
- (8) The Authority may from time to time revise a code issued under this section and issue a revised code.
- (9) A revised code may include provision for applying any of its revisions to section 66D agreements made before the revised code comes into effect.

Textual Amendments

66DB Codes under section 66DA: procedure

- (1) Before issuing a code under section 66DA, the Authority must—
 - (a) prepare a draft of the proposed code under section 66DA;
 - (b) consult persons in accordance with subsections (2) to (4).
- (2) If the proposed code relates to section 66D agreements made with water undertakers whose areas are wholly or mainly in England, the Authority must consult the following about the proposed code—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (a) the Secretary of State;
 - (b) the Chief Inspector of Drinking Water;
 - (c) the appropriate agency;
 - (d) the Council;
 - (e) any relevant undertakers likely to be affected by the proposed code;
 - (f) any water supply licensees likely to be affected by the proposed code;
 - (g) such other persons as the Authority thinks appropriate.
- (3) If the proposed code relates to section 66D agreements made with water undertakers whose areas are wholly or mainly in Wales, the Authority must consult the following about the proposed code—
- (a) the Welsh Ministers;
 - (b) the Chief Inspector of Drinking Water for Wales if there is one, or the Chief Inspector of Drinking Water if section 86(1B)(b) applies;
 - (c) the appropriate agency;
 - (d) the Council;
 - (e) any relevant undertakers likely to be affected by the proposed code;
 - (f) any water supply licensees likely to be affected by the proposed code;
 - (g) such other persons as the Authority thinks appropriate.
- (4) The Authority must specify the period (“the consultation period”) within which a person may make representations about the proposed code.
- (5) Before a code under section 66DA prepared by the Authority is issued, the Minister may direct the Authority—
- (a) not to issue the code, or
 - (b) to issue the code with specified modifications.
- (6) Subsection (5) is subject to subsections (8) and (9).
- (7) In subsection (5) “the Minister” means—
- (a) the Secretary of State, so far as a code prepared by the Authority relates to section 66D agreements affecting only the supply systems of water undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as a code prepared by the Authority relates to section 66D agreements affecting only the supply systems of water undertakers whose areas are wholly or mainly in Wales;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, so far as a code prepared by the Authority relates to section 66D agreements not falling within paragraph (a) or (b).
- (8) If the power under subsection (5) is exercised to give a direction in respect of such section 66D agreements as are referred to in paragraph (a), (b) or (c) of subsection (7), it may not be exercised again in respect of such section 66D agreements as are referred to in that paragraph.
- (9) If the power under subsection (5) to give a direction in respect of such section 66D agreements as are referred to in paragraph (a), (b) or (c) of subsection (7) is not exercised on the first occasion on which it may be so exercised, it may not be exercised in respect of such section 66D agreements as are referred to in that paragraph on a later occasion.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (10) A direction under subsection (5) must be given within the period of 28 days beginning with the day after the end of the consultation period, and a code prepared by the Authority in relation to which a direction may be given may not be issued before that period of 28 days has expired.
- (11) In this section “the appropriate agency” means—
- (a) the Environment Agency, in relation to section 66D agreements made with water undertakers whose areas are wholly in England;
 - (b) the NRW, in relation to section 66D agreements made with water undertakers whose areas are wholly in Wales;
 - (c) both the Environment Agency and the NRW, in relation to section 66D agreements made with water undertakers whose areas are partly in England and partly in Wales.
- (12) This section is subject to section 66DC.

66DC Codes under section 66DA: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue a revised code and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
- (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 66DB does not apply to the proposed revised code.
- (3) Once the Authority has issued the revised code, it must give notice as soon as reasonably practicable of—
- (a) the issuing of the revised code, and
 - (b) as regards each revision contained in it, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (4) Notice under subsection (3) is to be given to such persons as the Authority considers appropriate.
- (5) Unless the Authority gives notice that a revision in a revised code is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised code is issued.]

[^{F697} 66E Rules about charges

- (1) The Authority must issue rules about charges that may be imposed by a water undertaker under a section 66D agreement.
- (2) The rules may in particular make provision about—
 - (a) the types of charges that may be imposed;
 - (b) the amount or the maximum amount, or methods for determining the amount or maximum amount, of any type of charge;
 - (c) principles for determining what types of charges may or may not be imposed;
 - (d) principles for determining the amount of any charge that may be imposed;
 - (e) publication of the charges that may be imposed.
- (3) The rules must include provision for and in connection with requiring a water undertaker to impose on a water supply licensee only such charges as would enable the licensee, where the services it provides to a person under its retail authorisation or restricted retail authorisation are services to which a section 142(2)(b) agreement would apply if the undertaker had continued to provide the services, to charge for those services at the same rate or rates as would have applied if the section 142(2)(b) agreement had applied.
- (4) In subsection (3) “section 142(2)(b) agreement” means an agreement to which section 142(2)(b) applies.
- (5) If the Authority considers that a water undertaker is not acting as required by rules under this section, the Authority may—
 - (a) give the undertaker a direction to do, or not to do, a thing specified in the direction, or
 - (b) in a case where a section 66D agreement to which the undertaker is party requires modification in order to conform to the rules, give a direction to the undertaker and the water supply licensee in question to modify the agreement.
- (6) It is the duty of a water undertaker or a water supply licensee to comply with a direction under subsection (5), and this duty is enforceable by the Authority under section 18.
- (7) The rules may—
 - (a) make different provision for different persons or descriptions of person;
 - (b) make different provision for different purposes;
 - (c) make provision subject to exceptions.
- (8) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (9) The Authority must issue revised rules if—
 - (a) guidance is issued under section 66ED, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (10) Revised rules may include provision for applying any of their revisions to section 66D agreements made before the revised rules come into effect.]

Status: This version of this Act contains provisions that are prospective.

F697 Ss. 66E-66ED substituted (1.9.2015 for the substitution of s. 66EB(1)-(7), 1.9.2016 for the substitution of ss. 66E for specified purposes, 66EA, 66EB(8), 66EC, 66ED, 1.4.2017 in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), s. 94(3), [Sch. 2 para. 5](#); S.I. 2015/1469, art. 3(d)(ii); S.I. 2016/465, art. 3(e) (with [Sch. 2](#)) (as amended (22.3.2017) by S.I. 2017/462, art. 16); S.I. 2017/462, art. 3(i)(iv) (with arts. 6-9)

F697 66EA Rules about charges: provision about the reduction of charges

- (1) Rules under section 66E may make provision about the reduction of charges payable under a section 66D agreement where—
- (a) a water supply licensee that has a retail authorisation or a restricted retail authorisation is party to the section 66D agreement, and
 - (b) other conditions specified by the rules are satisfied.
- (2) Rules made by virtue of subsection (1) may in particular—
- (a) specify conditions relating to any party to the section 66D agreement;
 - (b) specify conditions about persons taking steps for the purpose of reducing or managing water consumption;
 - (c) specify conditions about the premises by reference to which such steps are to be taken;
 - (d) specify conditions about reducing charges payable by a person who—
 - (i) is not party to the section 66D agreement, and
 - (ii) takes or proposes to take such steps as satisfy or would satisfy a condition specified under paragraph (b).
- (3) The rules may provide that, where a charge falls to be reduced in accordance with rules made by virtue of subsection (1), the water undertaker to which the charges are payable must give notice of that reduction to the Authority.
- (4) Rules made by virtue of subsection (3) may—
- (a) make provision as to the content of the notice;
 - (b) specify the period within which an undertaker is to give notice to the Authority.
- (5) Provision under subsection (4)(a) may in particular require the notice to specify—
- (a) the amount of the charge, with and without the reduction;
 - (b) the period for which the reduction has effect.

66EB Rules under section 66E: procedure

- (1) Before issuing rules under section 66E, the Authority must—
 - (a) prepare a draft of the proposed rules, and
 - (b) consult the relevant persons about the draft.
- (2) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) the Council;
 - (d) any water undertakers likely to be affected by the rules;
 - (e) any water supply licensees likely to be affected by the rules;
 - (f) such other persons as the Authority thinks appropriate.
- (3) The Authority must specify the period (“the consultation period”) within which persons may make representations about the proposed rules.
- (4) The Authority must have regard to guidance issued under section 66ED in preparing rules under section 66E.
- (5) Before rules under section 66E prepared by the Authority are issued, the Minister may direct the Authority not to issue the rules.
- (6) In subsection (5) “the Minister” means—
 - (a) the Secretary of State, so far as rules prepared by the Authority relate to section 66D agreements affecting only the supply systems of water undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as rules prepared by the Authority relate to section 66D agreements affecting only the supply systems of water undertakers whose areas are wholly or mainly in Wales;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, so far as rules prepared by the Authority relate to section 66D agreements not falling within paragraph (a) or (b).
- (7) A direction under subsection (5) must be given within the period of 28 days beginning with the day after the end of the consultation period, and rules may not be issued before that period of 28 days has expired.
- (8) This section is subject to section 66EC.

Textual Amendments

- (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 66EB does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Minister of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Minister may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
 - (a) that period of 14 days expires, or
 - (b) the Minister notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.
- (8) Unless the Authority gives notice that a revision in revised rules is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised rules are issued.
- (9) In this section “the Minister” has the meaning given by section 66EB.

Textual Amendments

F697 Ss. 66E-66ED substituted (1.9.2015 for the substitution of s. 66EB(1)-(7), 1.9.2016 for the substitution of ss. 66E for specified purposes, 66EA, 66EB(8), 66EC, 66ED, 1.4.2017 in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), s. 94(3), [Sch. 2 para. 5](#); S.I. 2015/1469, art. 3(d)(ii); S.I. 2016/465, art. 3(e) (with [Sch. 2](#)) (as amended (22.3.2017) by S.I. 2017/462, art. 16); S.I. 2017/462, art. 3(i)(iv) (with arts. 6-9)

66ED Rules under section 66E: guidance

- (1) The Minister may issue guidance as to the content of rules under section 66E.
- (2) Before issuing the guidance, the Minister must—
 - (a) prepare a draft of any proposed guidance;
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) the Welsh Ministers;
 - (c) such other persons as the Minister thinks appropriate.
- (4) The Minister may from time to time revise guidance issued under this section and issue revised guidance.
- (5) Subsections (2) and (3) apply to revised guidance as they apply to the original guidance.
- (6) The Minister must arrange for the publication of guidance issued under this section.
- (7) In this section “the Minister” means—
- (a) the Secretary of State, in relation to section 66D agreements affecting only the supply systems of water undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, in relation to section 66D agreements affecting only the supply systems of water undertakers whose areas are wholly or mainly in Wales;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, in relation to section 66D agreements not falling within paragraph (a) or (b).]

66G Designation of strategic supply

- (1) Subsection (2) below applies if at any time the Authority determines that an introduction of water which a water undertaker is required to permit under section 66B or 66C above in accordance with [^{F699}a section 66D agreement] constitutes a strategic supply of water.
- (2) The Authority shall designate the introduction as a strategic supply.
- (3) Subsection (4) below applies if—
- (a) a water undertaker requests the Authority to make a determination that an introduction of water constitutes a strategic supply for the purposes of subsection (1) above, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the Authority otherwise proposes to make a determination that an introduction of water constitutes a strategic supply for the purposes of that subsection.
- (4) The Authority shall give notice of the request or proposed determination to—
- (a) the Secretary of State;
 - (b) the Assembly;
 - (c) the Environment Agency^{F700}, if the request or proposed determination relates to an introduction of water to the supply system of a water undertaker for the purpose of supplying water to premises in England];
 - ^{F701}[(ca) the NRBW, if the request or proposed determination relates to an introduction of water to the supply system of a water undertaker for the purpose of supplying water to premises in Wales;]
 - (d) the other party or parties, or the parties, to ^{F702}[the section 66D agreement]; and
 - (e) such other persons (if any) as the Authority thinks it appropriate to notify.
- (5) Any such notice shall specify the time (not being less than twenty-eight days from the date on which the notice was given) within which representations or objections with respect to the request or proposed determination may be made.
- (6) The Authority shall consider any representations or objections which are duly made and not withdrawn.
- (7) If the Authority determines that an introduction designated under this section as a strategic supply no longer constitutes such a supply, it shall cancel its designation.
- (8) If the Authority proposes to make a determination under subsection (7) above that an introduction no longer constitutes a strategic supply, it shall give notice of the proposed determination to the persons specified in paragraphs (a) to (d) of subsection (4) above.
- (9) Subsection (5) above applies to a notice under subsection (8) above as it applies to a notice under subsection (4) above (and subsection (6) above applies accordingly).
- (10) For the purposes of this section, an introduction of water is a strategic supply if, without that introduction being made, there is a substantial risk that the water undertaker would be unable to maintain supplies to its own customers^{F703}, and supplies which it is obliged to make under ^{F704}[section 66AA] or 66C,] as well as supplying ^{F705}[relevant customers of a water supply licensee] with water for domestic purposes.
- ^{F706}[A person is a relevant customer of a water supply licensee if the introduction of water (11) in question is made by reference to the supply of water to that person's premises in accordance with—
- (a) a retail authorisation (whether that retail authorisation is an authorisation of the licensee requesting the introduction of water or another water supply licensee's authorisation), or
 - (b) a restricted retail authorisation of the licensee requesting the introduction of water.]

66H Designation of collective strategic supply

- (1) Subsection (2) below applies if at any time the Authority determines that two or more introductions of water—
 - (a) which are made by a licensed water supplier; and
 - (b) which a water undertaker is required to permit under section 66B or 66C above in accordance with [^{F707}section 66D agreements],
 constitute a collective strategic supply of water.
- (2) The Authority shall designate the introductions as a collective strategic supply.
- (3) Subsection (4) below applies if—
 - (a) a water undertaker requests the Authority to make a determination that two or more introductions of water constitute a collective strategic supply for the purposes of subsection (1) above, or
 - (b) the Authority otherwise proposes to make a determination that two or more introductions of water constitute a collective strategic supply for the purposes of that subsection.
- (4) The Authority shall give notice of the request or proposed determination to—
 - (a) the Secretary of State;
 - (b) the Assembly;
 - (c) the Environment Agency [^{F708}, if the request or proposed determination relates to an introduction of water to the supply system of a water undertaker for the purpose of supplying water to premises in England];
 - ^{F709}(ca) [the NRBW, if the request or proposed determination relates to an introduction of water to the supply system of a water undertaker for the purpose of supplying water to premises in Wales;]
 - (d) the other party or parties, or the parties, to [^{F710}the section 66D agreements]; and
 - (e) such other persons (if any) as the Authority thinks it appropriate to notify.
- (5) Any such notice shall specify the time (not being less than twenty-eight days from the date on which the notice was given) within which representations or objections with respect to the request or proposed determination may be made.
- (6) The Authority shall consider any representations or objections which are duly made and not withdrawn.

Status: This version of this Act contains provisions that are prospective.

Offences

66I Prohibition on unauthorised use of supply system

- (1) Subject to subsections (2) and (3) and section 66K below, no person shall use a water undertaker's supply system for the purpose of supplying water to any premises [^{F715}of —
- (a) a customer,
 - (b) the person so using that system, or
 - (c) a person associated with that person].
- (2) Subsection (1) above shall not apply where the supply is made—
- (a) by the water undertaker, or
 - (b) by a [^{F716}water supply licensee] in pursuance of [^{F717}the licensee's licence].
- (3) The Secretary of State may by regulations specify further circumstances in which subsection (1) above shall not apply.
- (4) A person who contravenes subsection (1) above shall be guilty of an offence.
- (5) Any undertaking entered into which involves a contravention of subsection (1) above shall be unenforceable.
- (6) A person guilty of an offence under this section shall be liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum, and
 - (b) on conviction on indictment, to a fine.
- (7) No proceedings for an offence under this section shall be instituted except by—
- (a) the Secretary of State, or
 - (b) the Authority.
- (8) The functions of—
- (a) making regulations under subsection (3) above; and
 - (b) instituting proceedings under subsection (7)(a) above,
- are exercisable by the Assembly (and not by the Secretary of State) in relation to any supply system of a water undertaker whose area is wholly or mainly in Wales.
- [For the purposes of this section, a person (A) is associated with another person (B) if ^{F718}(8A) they would be associated with each other for the purposes of Schedule 2A if A were a water supply licensee.]
- (9) In this section and sections 66J and 66L below, references to the supply system of a water undertaker shall be construed in accordance with [^{F719}section 17B].

66K Sections 66I and 66J: exemptions

- (1) The Secretary of State may by order made by statutory instrument grant exemption from section 66I(1) or 66J(1) above to—
 - (a) a person or persons of a class;
 - (b) generally or to such extent as may be specified in the order; and
 - (c) unconditionally or subject to such conditions as may be so specified.
- (2) Before making an order under subsection (1) above the Secretary of State shall give notice—
 - (a) stating that he proposes to make such an order and setting out the terms of the proposed order;
 - (b) stating the reasons why he proposes to make the order in the terms proposed; and
 - (c) specifying the time (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposals may be made,
 and shall consider any representations or objections which are duly made and not withdrawn.
- (3) The notice required by subsection (2) above shall be given—
 - (a) by serving a copy of it on the Authority; and
 - (b) by publishing it in such manner as the Secretary of State considers appropriate for bringing it to the attention of those likely to be affected by the proposed order.
- (4) Notice of an exemption granted to a person shall be given—
 - (a) by serving a copy of the exemption on him; and
 - (b) by publishing the exemption in such manner as the Secretary of State considers appropriate for bringing it to the attention of other persons who may be affected by it.
- (5) Notice of an exemption granted to persons of a class shall be given by publishing the exemption in such manner as the Secretary of State considers appropriate for bringing it to the attention of—
 - (a) persons of that class; and
 - (b) other persons who may be affected by it.
- (6) An exemption may be granted—
 - (a) indefinitely; or
 - (b) for a period specified in, or determined by or under, the exemption.
- (7) Conditions included in an exemption by virtue of subsection (1)(c) above may, in particular, require any person carrying on any activity in pursuance of the exemption—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (a) to comply with any direction given by the Secretary of State or the Authority as to such matters as are specified in the exemption or are of a description so specified;
- (b) except in so far as the Secretary of State or the Authority consents to his doing or not doing them, not to do or to do such things as are specified in the exemption or are of a description so specified; and
- (c) to refer for determination by the Secretary of State or the Authority such questions arising under the exemption as are specified in the exemption or are of a description so specified.

66L Section 66K: supplementary

- (1) The Secretary of State may by order made by statutory instrument revoke an order by which an exemption was granted to a person under section 66K(1) above or vary an order by which more than one exemption was so granted so as to terminate any of the exemptions—
 - (a) at the person's request;
 - (b) in accordance with any provision of the order by which the exemption was granted; or
 - (c) if it appears to the Secretary of State inappropriate that the exemption should continue to have effect.
- (2) The Secretary of State may by order made by statutory instrument revoke an order by which an exemption was granted to persons of a class under section 66K(1) above or vary an order by which more than one exemption was so granted so as to terminate any of the exemptions—
 - (a) in accordance with any provision of the order by which the exemption was granted; or
 - (b) if it appears to the Secretary of State inappropriate that the exemption should continue to have effect.
- (3) The Secretary of State may by direction withdraw an exemption granted to persons of a class under section 66K(1) above from any person of that class—
 - (a) at the person's request;
 - (b) in accordance with any provision of the order by which the exemption was granted; or
 - (c) if it appears to the Secretary of State inappropriate that the exemption should continue to have effect in the case of the person.
- (4) Before making an order under subsection (1)(b) or (c) or (2) above or giving a direction under subsection (3)(b) or (c) above, the Secretary of State shall—
 - (a) consult the Authority; and
 - (b) give notice—
 - (i) stating that he proposes to make such an order or give such a direction;
 - (ii) stating the reasons why he proposes to make such an order or give such a direction; and
 - (iii) specifying the time (not being less than twenty-eight days from the date of publication of the notice) within which representations or objections with respect to the proposals may be made,and shall consider any representations or objections which are duly made and not withdrawn.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) The notice under subsection (4) above shall be given—
- (a) where the Secretary of State is proposing to make an order under subsection (1)(b) or (c) above, by serving a copy of it on the person to whom the exemption was granted;
 - (b) where he is proposing to make an order under subsection (2) above, by publishing it in such manner as the Secretary of State considers appropriate for bringing it to the attention of persons of the class of persons to whom the exemption was granted; and
 - (c) where he is proposing to give a direction under subsection (3)(b) or (c) above, by serving a copy of it on the person from whom he proposes to withdraw the exemption.
- (6) A statutory instrument containing an order under subsection (1) or (2) above or subsection (1) of section 66K above shall be subject to annulment in pursuance of a resolution of either House of Parliament.
- (7) The power to—
- (a) make an order under subsection (1) or (2) above or subsection (1) of section 66K above; or
 - (b) give a direction under subsection (3) above,
- is exercisable by the Assembly (and not by the Secretary of State) in relation to any supply system of a water undertaker whose area is wholly or mainly in Wales.
- (8) Accordingly, subsections (1) to (5) above and section 66K above apply in relation to an order made or a direction given by the Assembly by virtue of subsection (7) above as they apply in relation to an order made or direction given by the Secretary of State.]

CHAPTER III

QUALITY AND SUFFICIENCY OF SUPPLIES

Standards of wholesomeness

67 Standards of wholesomeness.

- (1) The Secretary of State may by regulations make provision that water that is supplied to any premises is or is not to be regarded as wholesome for the purposes of this Chapter if it satisfies or, as the case may be, fails to satisfy such requirements as may be prescribed.
- (2) Without prejudice to the generality of subsection (1) above, regulations under this section may, for the purpose of determining the wholesomeness of any water—
 - (a) prescribe general requirements as to the purposes for which the water is to be suitable;
 - (b) prescribe specific requirements as to the substances that are to be present in or absent from the water and as to the concentrations of substances which are or are required to be present in the water;
 - (c) prescribe specific requirements as to other characteristics of the water;
 - (d) provide that the question whether prescribed requirements are satisfied may be determined by reference to such samples as may be prescribed;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (e) enable the Secretary of State to authorise such relaxations of and departures from the prescribed requirements (or from any of them) as may be prescribed, to make any such authorisation subject to such conditions as may be prescribed and to modify or revoke any such authorisation or condition; and
- (f) enable the Secretary of State to authorise a local authority (either instead of the Secretary of State or concurrently with him) to exercise in relation to a private supply any power conferred on the Secretary of State by regulations made by virtue of paragraph (e) above.

68 Duties of water undertakers [^{F724}and [^{F725}water supply licensees]] with respect to water quality.

- (1) It shall be the duty of a water undertaker [^{F726}where its supply system is used for the purpose of supplying water to any premises for domestic or food production purposes]—
- (a) [^{F727}to ensure that any water so supplied] is wholesome at the time of supply; and
 - (b) so far as reasonably practicable, to ensure, in relation to each source or combination of sources from which [^{F728}water is so supplied], that there is, in general, no deterioration in the quality of the water which is supplied from time to time from that source or combination of sources.

[^{F729}and this section and section 69 below apply, in relation to the duty of an undertaker, whether or not the water supplied using the undertaker's supply system is supplied by the undertaker.]

[^{F730}(1A) It shall be the duty of a [^{F731}water supply licensee]—

- (a) when supplying water to any premises for domestic or food production purposes, in accordance with [^{F732}the licensee's retail authorisation or restricted retail authorisation], to ensure that the water is wholesome at the time of supply; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) so far as reasonably practicable, to ensure, in relation to each source or combination of sources from which [^{F733}that licensee] supplies water to premises for domestic or food production purposes, in accordance with [^{F734}the licensee's retail authorisation or restricted retail authorisation], that there is, in general, no deterioration in the quality of the water which is supplied from time to time from that source or combination of sources,
- ^{F735} ...]
- (2) For the purposes of this section and section 69 below and subject to subsection (3) below, [^{F736}where a water undertaker's supply system is used for the purpose of supplying water to any premises, any water so supplied] to any premises shall not be regarded as unwholesome at the time of supply where it has ceased to be wholesome only after leaving the undertaker's pipes.
- (3) For the purposes of [^{F737}subsection (1) above where a water undertaker's supply system is used for the purpose of supplying water to any premises, and the water so supplied] would not otherwise be regarded as unwholesome at the time of supply, that water shall be regarded as unwholesome at that time if—
- (a) it has ceased to be wholesome after leaving the undertaker's pipes but while in a pipe which is subject to water pressure from a water main or which would be so subject but for the closing of some valve; and
 - (b) it has so ceased in consequence of the failure of the undertaker, before [^{F738}the water is supplied, to ensure that such steps are taken] as may be prescribed for the purpose of securing the elimination, or reduction to a minimum, of any prescribed risk that the water would cease to be wholesome after leaving the undertaker's pipes.
- ^{F739}(3A) For the purposes of subsection (1A) above where water supplied by a [^{F740}water supply licensee] to any premises would not otherwise be regarded as unwholesome at the time of supply, that water shall be regarded as unwholesome at that time if—
- (a) it has ceased to be wholesome after leaving the relevant pipes but while in a pipe which is subject to water pressure from a water main or which would be so subject but for the closing of some valve; and
 - (b) it has so ceased in consequence of the failure of [^{F741}the licensee], before supplying the water, to ensure that such steps are taken as may be prescribed for the purpose of securing the elimination, or reduction to a minimum, of any prescribed risk that the water would cease to be wholesome after leaving the relevant pipes.
- (3B) In subsection (3A) above “relevant pipes” means the pipes of the water undertaker whose supply system is used for the purpose of the supply made by the [^{F742}water supply licensee].]
- (4) The provisions of this section shall apply in relation to water which is supplied by a water undertaker whether or not the water is water which the undertaker is required to supply by virtue of any provision of this Act.
- (5) The duties of a water undertaker [^{F743}and [^{F744}water supply licensee]] under this section shall be enforceable under section 18 above by the Secretary of State.
- ^{F745}(6) References in this section to a retail authorisation or a restricted retail authorisation are to be construed in accordance with Schedule 2A.
- (7) In this section “prescribed” means—

69 Regulations for preserving water quality.

- (1) The Secretary of State may by regulations require a water undertaker [^{F746}or a [^{F747}water supply licensee] to ensure that such steps are taken] as may be prescribed for the purpose of securing compliance with section 68 above.
- (2) Without prejudice to the generality of the power conferred by subsection (1) above, regulations under that subsection may impose an obligation on a water undertaker [^{F748}or [^{F749}water supply licensee]]—
 - (a) to [^{F750}ensure that all such steps are taken] as may be prescribed for monitoring and recording whether the water [^{F751}used for relevant supplies] to premises for domestic or food production purposes is wholesome at the time of supply;
 - (b) to [^{F752}ensure that all such steps are taken] as may be prescribed for monitoring and recording the quality of the water from any source, or combination of sources, which [^{F753}is used or is proposed to be used for making relevant supplies] to any premises for domestic or food production purposes;
 - (c) to ensure that a source which [^{F754}is used or proposed to be used for making relevant supplies] for domestic or food production purposes is not so used until prescribed requirements for establishing the quality of water which may be supplied from that source have been complied with;
 - (d) to [^{F755}ensure that records are kept] of the localities within which all the premises [^{F756}receiving relevant supplies] for domestic or food production purposes [^{F757}. . . are normally supplied from the same source or combination of sources];
 - (e) to [^{F758}ensure that prescribed requirements are complied with] with respect to the analysis of water samples or with respect to internal reporting or organisational arrangements.
- (3) Without prejudice to subsections (1) and (2) above, the Secretary of State may by regulations make provision [^{F759}imposing obligations on water undertakers or [^{F760}water supply licensees] with respect to the use for the purposes of or in connection with making relevant supplies]—
 - (a) of such processes and substances; and
 - (b) of products that contain or are made with such substances or materials,
 as he considers might affect the quality of any water.
- (4) Without prejudice to the generality of the power conferred by subsection (3) above, regulations under that subsection may—
 - (a) [^{F761}require water undertakers or [^{F762}water supply licensees] to ensure that] processes, substances and products which have not been approved under the regulations or which contravene the regulations [^{F763}are not used for the purposes of or in connection with relevant supplies];
 - (b) for the purposes of provision made by virtue of paragraph (a) above, require [^{F764}water undertakers and [^{F765}water supply licensees] to ensure

- that] processes, substances and products used [^{F766}for the purposes of or in connection with relevant supplies] conform to such standards as may be prescribed by or approved under the regulations;
- (c) impose such other requirements as may be prescribed with respect to the use [^{F767}for the purposes of or in connection with relevant supplies] of prescribed processes, substances and products;
 - (d) provide for the giving, refusal and revocation, by prescribed persons, of approvals required for the purposes of the regulations, for such approvals to be capable of being made subject to such conditions as may be prescribed and for the modification and revocation of any such condition;
 - (e) impose obligations to furnish prescribed persons with information reasonably required by those persons for the purpose of carrying out functions under the regulations;
 - (f) provide for a contravention of the regulations to constitute—
 - (i) a summary offence punishable, on summary conviction, by a fine not exceeding level 5 on the standard scale or such smaller sum as may be prescribed; or
 - (ii) an offence triable either way and punishable, on summary conviction, by a fine not exceeding the statutory maximum and, on conviction on indictment, by a fine;
- and
- (g) require prescribed charges to be paid to persons carrying out functions under the regulations.
- (5) The Secretary of State may by regulations ^{F768} . . . —
- (a) [^{F769}require a water undertaker]to publish information about the quality of water supplied for domestic or food production purposes to any premises [^{F770}using that undertaker’s supply system]; ^{F771} . . .
 - ^{F772}(aa) require a [^{F773}water supply licensee] to publish information about the quality of water supplied for domestic or food production purposes to any premises by [^{F774}that licensee].]
 - (b) [^{F775}require any such undertaker [^{F776}or licensee]] to provide information to prescribed persons about the quality of water [^{F777}supplied as referred to in paragraph (a) or (aa) above (as the case may be)].
- (6) Regulations under subsection (5) above—
- (a) shall prescribe both the information which is to be published or provided in pursuance of the regulations and the manner and circumstances in which it is to be published or provided;
 - (b) may require the provision of information by a water undertaker [^{F778}or [^{F779}water supply licensee]] to any person to be free of charge or may authorise it to be subject to the payment by that person to the undertaker [^{F780}or licensee] of a prescribed charge; and
 - (c) may impose such other conditions on the provision of information by a water undertaker [^{F781}or [^{F782}water supply licensee]] to any person as may be prescribed.
- ^{F783}(7) In this section, “relevant supplies” means—
- (a) in the case of an obligation imposed on a water undertaker, supplies of water—
 - (i) made by the undertaker in carrying out its functions; or

70 Offence of supplying water unfit for human consumption.

- (1) Subject to subsection (3) below, where a [^{F786}water undertaker’s supply system is used for the purposes of supplying water] to any premises and that water is unfit for human consumption, [^{F787}the relevant persons] shall be guilty of an offence and liable [^{F788}on summary conviction, or on conviction on indictment, to a fine].

[^{F789}(1A) For the purposes of subsection (1) above, the relevant persons are—

- (a) the water undertaker whose supply system is used for the purposes of supplying the water (in this section referred to as the “primary water undertaker”); and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) any employer of persons, or any self-employed person, who is concerned in the supply of the water.]
- (2) For the purposes of section 210 below and any other enactment under which an individual is guilty of an offence by virtue of subsection (1) above the penalty on conviction on indictment of an offence under this section shall be deemed to include imprisonment (in addition to or instead of a fine) for a term not exceeding two years.
- (3) In any proceedings against any [^{F790}relevant person] for an offence under this section it shall be a defence for [^{F791}that person] to show that it—
- (a) had no reasonable grounds for suspecting that the water would be used for human consumption; or
 - (b) took all reasonable steps and exercised all due diligence for securing that the water was fit for human consumption on leaving [^{F792}the primary water undertaker's] pipes or was not used for human consumption.
- [^{F793}(3A) For the purposes of paragraph (b) of subsection (3) above—
- (a) in the case of proceedings against a primary water undertaker, showing that the undertaker took all reasonable steps and exercised all due diligence as mentioned in that paragraph includes (among other things) showing that the relevant arrangements were reasonable in all the circumstances; and
 - (b) in the case of proceedings against any other relevant person, showing that the person took all reasonable steps and exercised all due diligence as mentioned in that paragraph includes (among other things) showing that it took all reasonable steps and exercised all due diligence for securing that all aspects of the relevant arrangements for which it was responsible were properly carried out.
- (3B) In subsection (3A) above, “relevant arrangements” means arrangements made by the primary water undertaker to ensure that all other relevant persons were required to take all reasonable steps and exercise all due diligence for securing that the water was fit for human consumption on leaving the undertaker’s pipes or was not used for human consumption.]
- (4) Proceedings for an offence under this section shall not be instituted except by the Secretary of State or the Director of Public Prosecutions.

Waste, contamination, misuse etc.

71 Waste from water sources.

- (1) Subject to subsections (2) and (3) below, a person shall be guilty of an offence under this section if—
 - (a) he causes or allows any underground water to run to waste from any well, borehole or other work; or
 - (b) he abstracts from any well, borehole or other work water in excess of his reasonable requirements.
- (2) A person shall not be guilty of an offence by virtue of subsection (1)(a) above in respect of anything done for the purpose—
 - (a) of testing the extent or quality of the supply; or
 - (b) of cleaning, sterilising, examining or repairing the well, borehole or other work in question.
- (3) Where underground water interferes or threatens to interfere with the carrying out or operation of any underground works (whether waterworks or not), it shall not be an offence under this section, if no other method of disposing of the water is reasonably practicable, to cause or allow the water to run to waste so far as may be necessary for enabling the works to be carried out or operated.
- (4) A person who is guilty of an offence under this section shall be liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (5) On the conviction of a person under this section, the court may—
 - (a) order that the well, borehole or other work to which the offence relates shall be effectively sealed; or
 - (b) make such other order as appears to the court to be necessary to prevent waste of water.
- (6) If any person fails to comply with an order under subsection (5) above, then, without prejudice to any penalty for contempt of court, the court may, on the application of [^{F794}the [^{F795}appropriate agency]], authorise [^{F796}the appropriate agency] to take such steps as may be necessary to execute the order; and any expenses incurred in taking any such steps shall be recoverable summarily as a civil debt from the person convicted.
- (7) Any person designated for the purpose by [^{F797}the [^{F795}appropriate agency]] shall, on producing some duly authenticated document showing his authority, have a right at all reasonable times—
 - (a) to enter any premises for the purpose of ascertaining whether there is, or has been, any contravention of the provisions of this section on or in connection with the premises;
 - (b) to enter any premises for the purpose of executing any order of the court under this section which [^{F797}the [^{F795}appropriate agency]] has been authorised to execute in those premises.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(8) Part I of Schedule 6 to this Act shall apply to the rights of entry conferred by subsection (7) above.

[^{F798}(9) In this section “the appropriate agency” means—

- (a) the Environment Agency, in relation to a well, borehole or other work in England;
- (b) the NRBW, in relation to a well, borehole or other work in Wales.]

Textual Amendments

72 Contamination of water sources.

- (1) Subject to subsections (2) and (3) below, a person is guilty of an offence under this section if he is guilty of any act or neglect whereby the water in any waterworks which is used or likely to be used—
- (a) for human consumption or domestic purposes; or
 - (b) for manufacturing food or drink for human consumption,
- is polluted or likely to be polluted.
- (2) Nothing in this section shall be construed as restricting or prohibiting any method of cultivation of land which is in accordance with the principles of good husbandry.
- (3) Nothing in this section shall be construed as restricting or prohibiting the reasonable use of oil or tar on any highway maintainable at public expense so long as the highway authority take all reasonable steps for preventing—
- (a) the oil or tar; and
 - (b) any liquid or matter resulting from the use of the oil or tar,
- from polluting the water in any waterworks.
- (4) A person who is guilty of an offence under this section shall be liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum and, in the case of a continuing offence, to a further fine not exceeding £50 for every day during which the offence is continued after conviction;
 - (b) on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.
- (5) In this section “waterworks” includes—
- (a) any spring, well, adit, borehole, service reservoir or tank; and
 - (b) any main or other pipe or conduit of a water undertaker; and

73 Offences of contaminating, wasting and misusing water etc.

- (1) If any person who is the owner or occupier of any premises to which a supply of water is provided by a water undertaker ^{F800}or ^{F801}water supply licensee] intentionally or negligently causes or suffers any water fitting for which he is responsible to be or remain so out of order, so in need of repair or so constructed or adapted, or to be so used—

- (a) that water in a water main or other pipe of a water undertaker, or in a pipe connected with such a water main or pipe, is or is likely to be contaminated by the return of any substance from those premises to that main or pipe;
- (b) that water that has been supplied by the undertaker ^{F802}or ^{F803}licensee] to those premises is or is likely to be contaminated before it is used; or
- (c) that water so supplied is or is likely to be wasted or, having regard to the purposes for which it is supplied, misused or unduly consumed,

that person shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

^{F804}(1A) In any proceedings under subsection (1) above it shall be a defence to prove—

- (a) that the contamination or likely contamination, or the wastage, misuse or undue consumption, was caused (wholly or mainly) by the installation, alteration, repair or connection of the water fitting on or after 1st July 1999;
- (b) that the works were carried out by or under the direction of an approved contractor within the meaning of the [Water Supply \(Water Fittings\) Regulations 1999](#); and
- (c) that the contractor certified to the person who commissioned those works that the water fitting complied with the requirements of those regulations.]

- (2) Any person who uses any water supplied to any premises by a water undertaker for a purpose other than one for which it is supplied to those premises shall, unless the other purpose is the extinguishment of a fire, be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

- (3) Where a person has committed an offence under subsection (2) above, the water undertaker in question shall be entitled to recover from that person such amount as may be reasonable in respect of any water wasted, misused or improperly consumed in consequence of the commission of the offence.

74 Regulations for preventing contamination, waste etc. and with respect to water fittings.

- (1) The Secretary of State may by regulations make such provision as he considers appropriate for any of the following purposes, that is to say—
- (a) for securing—
 - (i) that water in a water main or other pipe of a water undertaker is not contaminated; and
 - (ii) that its quality and suitability for particular purposes is not prejudiced, by the return of any substance from any premises to that main or pipe;
 - (b) for securing that water which is in any pipe connected with any such main or other pipe or which has been supplied to any premises by a water undertaker [^{F805}or [^{F806}water supply licensee]] is not contaminated, and that its quality and suitability for particular purposes is not prejudiced, before it is used;
 - (c) for preventing the waste, undue consumption and misuse of any water at any time after it has left the pipes of a water undertaker for the purpose of being supplied by that undertaker [^{F807}or [^{F808}that or another water supply licensee]] to any premises; and
 - (d) for securing that water fittings installed and used by persons to whom water is or is to be supplied by a water undertaker [^{F809}or [^{F810}water supply licensee]] are safe and do not cause or contribute to the erroneous measurement of any water or the reverberation of any pipes.
- (2) Without prejudice to the generality of subsection (1) above, regulations under this section may, for any of the purposes specified in that subsection, make provision in relation to such water fittings as may be prescribed—
- (a) for forbidding the installation, connection or use of the fittings if they have not been approved under the regulations or if they contravene the regulations;
 - (b) for requiring the fittings, for the purposes of provision made by virtue of paragraph (a) above, to be of such a size, nature, strength or workmanship, to be made of such materials or in such a manner or to conform to such standards as may be prescribed by or approved under the regulations;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) for imposing such other requirements as may be prescribed with respect to the installation, arrangement, connection, testing, disconnection, alteration and repair of the fittings and with respect to the materials used in their manufacture;
 - (d) for the giving, refusal and revocation, by prescribed persons, of approvals required for the purposes of the regulations; and
 - (e) for such approvals to be capable of being made subject to such conditions as may be prescribed and for the modification and revocation of any such condition.
- (3) Without prejudice as aforesaid, regulations under this section may—
- (a) impose separate or concurrent duties with respect to the enforcement of the regulations on water undertakers, local authorities and such other persons as may be prescribed;
 - (b) confer powers on a water undertaker or local authority to carry out works and take other steps, in prescribed circumstances, for remedying any contravention of the regulations;
 - (c) provide for the recovery by a water undertaker or local authority of expenses reasonably incurred by the undertaker or authority in the exercise of any power conferred by virtue of paragraph (b) above;
 - (d) repeal or modify the provisions of section 73 above or section 75 below;
 - (e) provide for a contravention of the regulations to constitute a summary offence punishable, on summary conviction, by a fine not exceeding level 5 on the standard scale or such smaller sum as may be prescribed;
 - (f) require prescribed charges to be paid to persons carrying out functions under the regulations;
 - (g) enable the Secretary of State to authorise such relaxations of and departures from such of the requirements of the regulations as may be prescribed, to make any such authorisation subject to such conditions as may be prescribed and to modify or revoke any such authorisation or condition;
 - (h) enable the Secretary of State to authorise a water undertaker or local authority (either instead of the Secretary of State or concurrently with him) to exercise any power conferred on the Secretary of State by regulations made by virtue of paragraph (g) above; and
 - (i) require disputes arising under the regulations to be referred to arbitration and for determinations under the regulations to be subject to such rights of appeal as may be prescribed.
- (4) Without prejudice to sections 84 and 170 below, any person designated in writing for the purposes of this subsection in such manner as may be prescribed may—
- (a) enter any premises for the purpose of—
 - (i) ascertaining whether any provision contained in or made or having effect under this Act with respect to any water fittings or with respect to the waste or misuse of water is being or has been contravened;
 - (ii) determining whether, and if so in what manner, any power or duty conferred or imposed on any person by regulations under this section should be exercised or performed; or
 - (iii) exercising any such power or performing any such duty;

or

- (b) carry out such inspections, measurements and tests on premises entered by that person or on water fittings or other articles found on any such premises, and take away such samples of water or of any land and such water fittings and other articles, as that person has been authorised to carry out or take away in accordance with regulations under this section.
- (5) Part II of Schedule 6 to this Act shall apply to the rights and powers conferred by subsection (4) above.
- (6) The power of the Secretary of State under this section to make regulations with respect to the matters specified in the preceding provisions of this section shall include power, by regulations under this section—
- (a) to modify the operation of Schedule 2 to the ^{M21}Water Consolidation (Consequential Provisions) Act 1991 in relation to any byelaws made under section 17 of the ^{M22}Water Act 1945 which have effect by virtue of paragraph 19 of Schedule 26 to the ^{M23}Water Act 1989 and that Schedule 2; and
- (b) to revoke or amend any such byelaws;
- but, so long as any such byelaws so have effect, the references in sections 47(2)(g), 53(2)(c) and 55(4) above to such regulations under this section as are prescribed shall have effect as including references to those byelaws.
- (7) Any sums received by the Secretary of State in consequence of the provisions of any regulations under this section shall be paid into the Consolidated Fund.
- (8) In this section “safe” has the same meaning as in Part II of the ^{M24}Consumer Protection Act 1987.

75 Power to prevent damage and to take steps to prevent contamination, waste etc.

(1) Without prejudice to any power conferred on water undertakers by regulations under section 74 above, where a water undertaker which provides a supply of water to any premises has reason for believing—

- (a) that damage to persons or property is being or is likely to be caused by any damage to, or defect in, any water fitting used in connection with the supply of water to those premises which is not a service pipe belonging to the undertaker;
- (b) that water in a water main or other pipe of the undertaker is being or is likely to be contaminated by the return of any substance from those premises to that main or pipe;
- (c) that water which is in any pipe connected with any such main or other pipe or which has been supplied by the undertaker to those premises is being or is likely to be contaminated before it is used; or
- (d) that water which has been or is to be so supplied is being or is likely to be wasted or, having regard to the purposes for which it is supplied, misused or unduly consumed,

the undertaker may exercise the power conferred by subsection (2) below in relation to those premises.

[^{F811}(1A) Without prejudice to any power conferred on water undertakers by regulations under section 74 above, where a water undertaker whose supply system is used for the purpose of a [^{F812}water supply licensee] making a supply of water to any premises has reason for believing—

- (a) that damage to persons or property is being or is likely to be caused by any damage to, or defect in, any water fitting used in connection with the supply of water to those premises which is not a service pipe belonging to the water undertaker;
- (b) that water in a water main or other pipe of the undertaker is being or is likely to be contaminated by the return of any substance from those premises to that pipe or main;
- (c) that water which is in any pipe connected with any such main or other pipe or which has been supplied by the supplier to those premises is being or is likely to be contaminated before it is used; or
- (d) that water which has been or is to be so supplied is being or is likely to be wasted or, having regard to the purposes for which it is supplied, misused or unduly consumed,

the undertaker may exercise the power conferred by subsection (2) below in relation to those premises.]

(2) The power conferred by this subsection in relation to any premises is—

- (a) where the case constitutes an emergency, power to disconnect the service pipe or otherwise to cut off the supply of water to those premises; and
- (b) in any other case, power to serve notice on the consumer requiring him to take such steps as may be specified in the notice as necessary to secure that the damage, contamination, waste, misuse or undue consumption ceases or, as the case may be, does not occur.

(3) Where a water undertaker, in exercise of the power conferred by virtue of subsection (2)(a) above, disconnects a service pipe to any premises or otherwise cuts off any supply of water to any premises, the undertaker shall, as soon as reasonably

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

practicable after the supply is disconnected or cut off, serve a notice on the consumer specifying the steps which that person is required to take before the undertaker will restore the supply.

(4) The steps specified in a notice under subsection (3) above shall be the steps necessary to secure that, as the case may be—

- (a) the damage, contamination, waste, misuse or undue consumption; or
- (b) the likelihood of damage, contamination, waste, misuse or undue consumption,

would not recur if the supply were restored.

(5) A water undertaker which fails, without reasonable excuse, to serve a notice in accordance with subsection (3) above shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

(6) A notice served for the purposes of subsection (2)(b) above shall—

- (a) specify the period, not being less than the period of seven days beginning with the day after the service of the notice, within which the steps specified in the notice are to be taken; and
- (b) set out the powers of the undertaker under subsections (7) to (9) below.

(7) Where a water undertaker has served a notice for the purposes of subsection (2)(b) above in relation to any premises and—

- (a) the case becomes an emergency; or
- (b) the premises appear to be unoccupied and the steps specified in the notice are not taken before the end of the period so specified,

the undertaker may disconnect the service pipe to those premises or otherwise cut off the supply of water to those premises.

(8) Subsections (3) to (5) above shall apply where a water undertaker exercises its power under subsection (7) above as they apply where such an undertaker exercises its power by virtue of subsection (2)(a) above.

(9) Where, in a case not falling within subsection (7)(a) or (b) above, any steps specified in a notice served by a water undertaker for the purposes of subsection (2)(b) above have not been taken by the end of the period so specified, the water undertaker shall have power—

- (a) to take those steps itself; and
- (b) subject to subsection (10) below, to recover any expenses reasonably incurred by the undertaker in taking those steps from the person on whom the notice was served;

and any steps taken by a water undertaker by virtue of paragraph (a) above shall be necessary works for the purposes of Chapter II of this Part.

(10) Where any steps are taken by virtue of this section and it is shown that, in the circumstances of the case, those steps were not necessary as mentioned in subsection (2) or, as the case may be, (4) above, the water undertaker in question—

- (a) shall not be entitled to recover any expenses incurred by it in taking those steps; and
- (b) shall be liable to pay to any other person who took any of those steps an amount equal to any expenses reasonably incurred by that person in taking any of those steps.

Status: This version of this Act contains provisions that are prospective.

- [^{F813}(11) Where the power conferred by subsection (2) above on a water undertaker is exercisable by virtue of subsection (1A) above—
- (a) the references to the consumer in subsections (2) and (3), in relation to a supply of water to any premises, shall be taken to be references to the person in respect of whom the supply is made; and
 - (b) the undertaker shall serve on the [^{F814}water supply licensee] providing the supply a copy of any notice under this section which is served on the person mentioned in paragraph (a) above.
- (12) In subsection (1A) above, the reference to the supply system of a water undertaker shall be construed in accordance with [^{F815}section 17B] above.]

[^{F816}76 Temporary bans on use

- (1) A water undertaker may prohibit one or more specified uses of water supplied [^{F817}by means of its supply system] if it thinks that it is experiencing, or may experience, a serious shortage of water for distribution.
- (2) Only the following uses of water may be prohibited—
- (a) watering a garden using a hosepipe;
 - (b) cleaning a private motor-vehicle using a hosepipe;
 - (c) watering plants on domestic or other non-commercial premises using a hosepipe;
 - (d) cleaning a private leisure boat using a hosepipe;
 - (e) filling or maintaining a domestic swimming or paddling pool;
 - (f) drawing water, using a hosepipe, for domestic recreational use;
 - (g) filling or maintaining a domestic pond using a hosepipe;
 - (h) filling or maintaining an ornamental fountain;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (i) cleaning walls, or windows, of domestic premises using a hosepipe;
 - (j) cleaning paths or patios using a hosepipe;
 - (k) cleaning other artificial outdoor surfaces using a hosepipe.
- (3) The Minister may by order—
- (a) add a non-domestic purpose to the list in subsection (2);
 - (b) remove a purpose from the list in subsection (2).
- (4) A prohibition must specify—
- (a) the date from which it applies, and
 - (b) the area to which it applies (which may be all or part of the undertaker's area).
- (5) A person who contravenes a prohibition—
- (a) is guilty of an offence, and
 - (b) is liable on summary conviction to a fine not exceeding level 3 on the standard scale.
- (6) A water undertaker which issues a prohibition must make arrangements for a reasonable reduction of charges which are made in respect of prohibited uses (including arrangements for repayment or credit where charges are paid in advance).
- (7) A water undertaker may vary or revoke a prohibition.

[The reference in subsection (1) to the supply system of a water undertaker is to be ^{F818}(8) construed in accordance with section 17B.]]

[^{F816}76A Temporary bans: supplemental

- (1) A prohibition may—
- (a) apply to one or more specified uses of water generally or only in specified cases or circumstances (which may be specified by reference to classes of user, timing or in any other way);
 - (b) be subject to exceptions (which may be absolute or conditional, and may be specified by reference to classes of user, timing or in any other way).
- (2) The Minister may by order—
- (a) provide for exceptions to a category of use in section 76(2) (whether or not added under section 76(3));
 - (b) provide that a specified activity, or an activity undertaken in specified circumstances, is to be or not to be treated as falling within a category of use in section 76(2) (whether or not added under section 76(3));

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (c) define a word or phrase used in section 76(2) (whether or not added under section 76(3)).
- (3) In particular, an order may—
 - (a) restrict a category of use by reference to how water is drawn;
 - (b) frame an exception by reference to ownership of land by a specified person or class of person;
 - (c) provide for a process that involves the use of a hosepipe at any point to be included in the meaning of “using a hosepipe”;
 - (d) provide for a reference to a thing to include a reference to something that is or may be used in connection with it (such as, for example, for a reference to a vehicle to include a reference to a trailer).
- (4) In this section and section 76 “the Minister” means—
 - (a) the Secretary of State in relation to prohibitions which may be issued by water undertakers whose areas are wholly or mainly in England, and
 - (b) the Welsh Ministers in relation to prohibitions which may be issued by water undertakers whose areas are wholly or mainly in Wales.
- (5) Subject to provision under subsection (2), a reference to a hosepipe in section 76 includes a reference to anything designed, adapted or used to serve the same purpose as a hosepipe.]

Local authority functions

77 **General functions of local authorities in relation to water quality.**

- (1) It shall be the duty of every local authority to take all such steps as they consider appropriate for keeping themselves informed about the wholesomeness and sufficiency of water supplies provided to premises in their area, including every private supply to any such premises.
- (2) It shall be the duty of a local authority to comply with any direction given by the Secretary of State to that authority, to authorities of a description applicable to that authority or to local authorities generally as to—
 - (a) the cases and circumstances in which they are or are not to exercise any of the powers conferred on them by this Chapter in relation to private supplies; and
 - (b) the manner in which those powers are to be exercised.
- (3) The Secretary of State may by regulations make such provision, supplementing the provisions of this section and of sections 78 and 79(2) below, as he considers appropriate for—
 - (a) imposing duties and conferring powers on local authorities with respect to the acquisition of information about the quality and sufficiency of water supplies provided to premises in their areas; and
 - (b) regulating the performance of any duty imposed by or under any of those provisions.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) Without prejudice to the generality of subsection (3) above, regulations under that subsection may—
- (a) prescribe the matters to be taken into account by a local authority in determining, for the purposes of subsection (1) above, what is appropriate;
 - (b) provide, for the purposes of the exercise or performance of any power or duty conferred or imposed on a local authority by or under any of the provisions mentioned in subsection (3) above, for such samples of water to be taken and analysed at such times and in such manner as may be prescribed;
 - (c) authorise local authorities to exercise or perform any such power or duty through prescribed persons;
 - (d) provide for the recovery by a local authority from prescribed persons of such amounts as may be prescribed in respect of expenses reasonably incurred by the authority in the exercise of any such power or the performance of any such duty.

78 Local authority functions in relation to undertakers' supplies.

- (1) It shall be the duty of a local authority to notify any water undertaker of anything appearing to the authority to suggest—
- (a) that any supply by that undertaker [^{F819}, or by a [^{F820}water supply licensee] using that undertaker's supply system,] of water for domestic or food production purposes to any premises in the area of that authority is, has been or is likely to become unwholesome or (so far as any such premises are concerned) insufficient for domestic purposes;
 - (b) that the unwholesomeness or insufficiency of any such supply is, was or is likely to be such as to cause a danger to life or health; or
 - (c) that the duty imposed on that undertaker by virtue of section 68(1)(b) above is being, has been or is likely to be so contravened as to affect any supply of water to premises in that area.
- (2) Where a local authority have notified a water undertaker of any such matter as is mentioned in subsection (1) above, it shall be the duty of that authority, if they are not satisfied that all such remedial action as is appropriate will be taken by the undertaker, to inform the Secretary of State about the contents of the notification.
- [^{F821}(3) In subsection (1)(a) above, the reference to the water undertaker's supply system shall be construed in accordance with [^{F822}section 17B] above.]

79 Local authority functions where piped supplies insufficient or unwholesome.

- (1) This section applies to a case in which it is not practicable at reasonable cost for a water undertaker, by supplying water in pipes, to provide or maintain such a supply of wholesome water to any particular premises in its area as (so far as those premises are concerned) is sufficient for domestic purposes.
- (2) In any case to which this section applies, it shall be the duty of the local authority in whose area the premises in question are situated, if they are satisfied—
 - (a) that the insufficiency or unwholesomeness of the supply of water for domestic purposes to those premises is such as to cause a danger to life or health; and
 - (b) that it is practicable at reasonable cost for the water undertaker, by providing it otherwise than in pipes, to provide to those premises such a supply of wholesome water as is sufficient for those purposes,
 to require the undertaker, under subsection (3) below, to provide a supply of water to those premises otherwise than in pipes.
- (3) Where, in a case to which this section applies—
 - (a) the insufficiency or unwholesomeness of the supply of water for domestic purposes to the premises in question is such as to cause a danger to life or health;
 - (b) it is practicable at reasonable cost for the water undertaker, by providing it otherwise than in pipes, to provide to those premises such a supply of wholesome water as (so far as those premises are concerned) is sufficient for domestic purposes; and
 - (c) the local authority in whose area those premises are situated notify the undertaker of the danger to life or health and require the undertaker to provide a supply otherwise than in pipes,

it shall be the duty of the undertaker, for such period as may be required by that local authority, to provide any supply to those premises which it is practicable at reasonable cost to provide otherwise than in pipes and which it is required to provide by that authority.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (4) Where under this section a local authority require the provision by a water undertaker of a supply of water to any premises, that authority—
- (a) shall be liable to the undertaker for any charges payable by virtue of Chapter I of Part V of this Act in respect of the provision of that supply; but
 - (b) shall have power to recover the whole or any part of any charges paid by virtue of this subsection from the owner or occupier of the premises to which the supply is provided.
- (5) In this section references to the provision of a supply of water to any premises otherwise than in pipes shall have effect, in a case in which it is practicable at reasonable cost to provide a supply (whether or not in pipes) to a place within a reasonable distance of those premises, as including references to the provision of a supply to that place.
- (6) The duty of a water undertaker under subsection (3) above shall be enforceable under section 18 above by the [^{F823}Director].

80 Remedial powers of local authorities in relation to private supplies.

- (1) Subject to the following provisions of this section, where a local authority are satisfied in relation to any premises in their area which are supplied with water for domestic or food production purposes by means of a private supply—
- (a) that any water which is being, has been or is likely to be supplied for those purposes to those premises by means of that private supply is not, was not or, as the case may be, is likely not to be wholesome; or
 - (b) that that private supply is failing, has failed or is likely to fail to provide to any house on those premises such a supply of wholesome water as (so far as that house is concerned) is sufficient for domestic purposes,
- the authority may serve a notice in relation to that private supply on one or more of the relevant persons.
- (2) A notice under this section in relation to a private supply of water to any premises shall-
- (a) give particulars of the matters mentioned in subsection (1) above in respect of which the notice is served;
 - (b) specify the steps which, in the opinion of the authority serving the notice, are required to be taken for ensuring that there is a supply of water to those premises which is both wholesome and (so far as any house on those premises is concerned) sufficient for domestic purposes;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (c) specify a period, ending not less than twenty-eight days after the day on which the notice is served, within which any representations or objections with respect to the notice must be received by that authority; and
 - (d) state the effect in relation to that notice of section 81(2) and (3) below.
- (3) Subject to sections 81 and 82 below, where a local authority serve a notice under this section on any relevant person they may do one or more of the following, that is to say—
- (a) by that notice designate as steps to be taken by the authority themselves such of the steps specified in the notice as they consider it appropriate so to designate;
 - (b) by that notice require that person, within such reasonable period as may be specified in the notice, to take one or more of the steps so specified;
 - (c) by that notice require that person, at such times as may be determined in accordance with provision contained in the notice, to make to another relevant person or to that authority such payments as may be so determined in respect of expenses reasonably incurred by that other person or that authority in taking any step specified in the notice;
 - (d) by that notice undertake from time to time to make such payments to that person as may be so determined in respect of expenses reasonably incurred by that person in taking any step specified in the notice.
- (4) The power of a local authority to serve a notice under this section specifying the steps which are required to be taken in relation to any source from which a private supply is provided both to premises in the area of that authority and to premises in the area of another local authority shall be exercisable only where—
- (a) the other authority consent to the service of the notice; or
 - (b) the authorities act jointly in exercising their respective powers under this section in relation to that source.
- (5) The powers conferred by this section and sections 81 and 82 below shall be so exercised in relation to a private supply of water to any premises where there is no house as to secure that no local authority are required to bear any of the expenses incurred (whether by the authority or by any other person) in taking any of the steps for ensuring that the supply is wholesome which are specified in a notice under this section.
- (6) The steps that a relevant person may be required by a notice under this section to take in relation to any premises shall include—
- (a) requiring a supply of water to be provided to those premises by a water undertaker or by any other person; and
 - (b) taking such steps for the purpose of securing that such a requirement is complied with, and of enabling such a supply to be so provided, as may be specified in the notice.
- (7) For the purposes of this section and sections 81 to 83 below the relevant persons, in relation to a private supply of water to any premises in the area of a local authority, are—
- (a) the owners and occupiers of those premises; and
 - (b) whether or not the source of the private supply is in that authority's area, the owners and occupiers of the premises where that source is situated and any

other person who exercises powers of management or control in relation to that source;

and in sections 81 to 83 below a notice under this section is referred to as a private supply notice.

81 Confirmation of private supply notices.

- (1) Subject to subsection (2) below, a private supply notice served by a local authority shall not take effect until the end of the period specified in the notice as the period within which representations or objections with respect to the notice must be received by that authority.
- (2) Where any written representation or objection with respect to a private supply notice served by a local authority is received by the authority, before the end of the period specified in the notice, from a person on whom the notice was served, that notice shall not take effect unless—
 - (a) the notice is submitted by the authority to the Secretary of State and is confirmed by him either with or without modifications; or
 - (b) the representation or objection is withdrawn.
- (3) If a local authority submit a private supply notice to the Secretary of State for confirmation, the Secretary of State—
 - (a) shall consider whether the notice should be confirmed and whether, if it is confirmed, it should be confirmed with or without modifications;
 - (b) may, with respect to the matters specified in the notice or any proposed modification of it, direct the local authority to serve a private supply notice, in such terms as may be specified in the direction, on any relevant person who has not previously been served with such a notice;
 - (c) may, for the purposes of paragraph (a) or (b) above cause a local inquiry to be held or afford—
 - (i) to the local authority; and
 - (ii) to every person who has made representations or objections with respect to the notice or any proposed direction under paragraph (b) above,
an opportunity of appearing before and being heard by a person appointed by the Secretary of State for the purpose; and
 - (d) if he is satisfied that the person on whom any notice to be served in pursuance of a direction under paragraph (b) above has had a proper opportunity of having his representations or objections with respect to the proposal for the direction considered, may dispense, in relation to the notice so served, with the provisions of subsections (1) and (2) above and of section 80(2)(c) and (d) above.
- (4) Where the Secretary of State confirms a private supply notice (whether with or without modifications)—
 - (a) he, or if he so directs, the local authority concerned shall serve notice of that confirmation on every person originally served with the notice under section 80 above; and
 - (b) that notice shall take effect, with any modifications made by the Secretary of State, at such time as may be specified in the notice served under this subsection.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

82 Enforcement and variation of private supply notice.

- (1) Where any relevant person who is required by virtue of a private supply notice to take any step in relation to any premises fails to take that step within the period specified in the notice, the authority which served the notice may, in accordance with any applicable provision having effect by virtue of section 83 or 84 below, take that step themselves.
- (2) Where any step is taken by a local authority in relation to any premises by virtue of subsection (1) above—
 - (a) the authority may recover from the person who failed to take that step within the specified period any expenses reasonably incurred by the authority in taking that step; and
 - (b) for the purposes of any requirement under which payments are required to be made to that person by any person other than the authority, sums paid by virtue of paragraph (a) above in respect of the taking of any step shall be deemed to be expenses incurred in the taking of that step by the person who failed to take it.
- (3) Nothing in this Act shall confer any right of action on any person in respect of any loss or damage sustained by that person in consequence of the failure by any other person to take any step specified in a private supply notice.
- (4) Any sum required to be paid to any person by virtue of any requirement or undertaking contained in a private supply notice shall be recoverable by that person from the person who is required to pay it.
- (5) Any requirement which—
 - (a) is imposed by virtue of a private supply notice on the owner or occupier of any premises; and
 - (b) is expressed to bind those premises in relation to the owners or occupiers from time to time,
 shall bind successive owners or, as the case may be, occupiers of those premises and shall be a local land charge.
- (6) Subject to subsection (7) below, a local authority may by notice served on any person modify or revoke the effect in relation to that person of any private supply notice or notice under this subsection (including a notice which has been confirmed, with or without modifications, by the Secretary of State).
- (7) Sections 80(2)(c) and (d) and 81 above shall apply, as they apply in relation to a private supply notice, in relation to any notice served by a local authority on any person under subsection (6) above except where the notice—
 - (a) extends the period within which any step is required to be taken by that person; or
 - (b) discharges, postpones or abates any obligation of that person to make a payment to the local authority.

83 Application of certain powers to local authorities in relation to private supplies.

- (1) For the purposes of the taking of any steps falling to be taken by a local authority by virtue of a designation under subsection (3)(a) of section 80 above the provisions of Part VI of this Act shall have effect—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) as if the relevant works powers, so far as conferred on a water undertaker for the purpose of carrying out its functions, were also conferred on a local authority for the purpose of ensuring that a supply of water provided by means of a private supply to any premises in the authority's area is both wholesome and (so far as any house on those premises is concerned) sufficient for domestic purposes;
 - (b) as if any such power, so far as it is conferred on a water undertaker in relation to things belonging to or operated or used by the undertaker for the purposes of its functions, were conferred by virtue of paragraph (a) above on a local authority in relation to things belonging to or operated or used by that authority, or a relevant person, in connection with the provision of water by means of a private supply;
 - (c) as if references to a water undertaker in any provision of Part VI of this Act relating to a relevant works power, except the references in sections 181 and 182 below, included references to a local authority; and
 - (d) as if the making by any person in pursuance of a private supply notice of any payment in respect of sums incurred in the laying of any pipe entitled that person, for the purposes of section 179(1) below, to an interest in the pipe.
- (2) Where by virtue of this Act a local authority have power under Part VII of the ^{M25}Local Government Act 1972 (miscellaneous powers of a local authority) to acquire (whether compulsorily or otherwise) any land or right over land for the purpose of ensuring that private supplies of water to premises in their area are both wholesome and (so far as houses on those premises are concerned) sufficient for domestic purposes, that power shall include power to acquire land or any interest or right in or over land in order, for that purpose, to dispose of the land or the interest or right to a person who is a relevant person in relation to such a private supply.
- (3) In this section “relevant works powers” means the powers conferred on water undertakers by sections 158, 159, 161, 163 and 165 below.

M25 1972 c. 70.

84 Local authority rights of entry etc.

- (1) Any person designated for the purpose by a local authority within whose area any waterworks are situated shall, on producing some duly authenticated document showing his authority, have a right at all reasonable hours to enter any premises for the purpose of ascertaining whether there is or has been any contravention of section 72 above in relation to those waterworks.
- (2) Any person designated in writing for the purpose by a local authority may—
 - (a) enter any premises for the purpose of—
 - (i) ascertaining whether any provision contained in or made or having effect under this Act with respect to any water fittings, or with respect to the waste or misuse of water, is being or has been contravened;
 - (ii) determining whether, and if so in what manner, any power or duty conferred or imposed on any person by regulations under section 74 above should be exercised or performed; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (iii) exercising any such power or performing any such duty;
 - or
 - (b) carry out such inspections, measurements and tests on premises entered by that person or on water fittings or other articles found on any such premises, and take away such samples of water or of any land and such water fittings and other articles, as that person has been authorised to carry out or take away in accordance with regulations under that section.
- (3) Any person designated in writing for the purpose by any local authority may—
- (a) enter any premises for the purpose, in relation to any private supply, of—
 - (i) determining whether, and if so in what manner, any power or duty conferred or imposed on that authority by or under any of sections 77 to 82 above should be exercised or performed; or
 - (ii) exercising any such power or performing any such duty;
 - (b) enter any premises to which a supply of water is provided by a water undertaker for the purpose, in relation to a supply so provided of—
 - (i) determining whether, and if so in what manner, any such power should be exercised or any such duty performed; or
 - (ii) exercising any such power or performing any such duty;
 - or
 - (c) carry out such inspections, measurements and tests on premises entered by that person or of articles found on any such premises, and take away such samples of water or of any land or articles, as the local authority—
 - (i) consider appropriate for the purposes of any such power or duty; and
 - (ii) have authorised that person to carry out or take away.
- (4) Part I of Schedule 6 to this Act shall apply to the right of entry conferred by subsection (1) above; but nothing in that subsection or in that Part of that Schedule shall entitle any person designated for the purposes of that subsection by a local authority to have access to any waterworks belonging to a water undertaker.
- (5) Part II of Schedule 6 to this Act shall apply to the rights and powers conferred by subsections (2) and (3) above.
- (6) In subsection (1) above the reference to a local authority includes a reference to a county council and to the Sub-Treasurer of the Inner Temple and the Under-Treasurer of the Middle Temple; and any expenses incurred by the Common Council of the City of London in the exercise of their functions under that subsection shall be defrayed as part of their general expenses.
- (7) In this section “waterworks” has the same meaning as in section 72 above.

85 **Local authority power to obtain information for the purposes of functions under Chapter III.**

- (1) Subject to subsection (2) below, a local authority may serve on any person a notice requiring him to furnish that authority, within a period or at times specified in the notice and in a form and manner so specified, with such information as is reasonably required by that authority for the purpose of exercising or performing any power or duty conferred or imposed on that authority by or under any of sections 77 to 82 above.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The Secretary of State may by regulations make provision for restricting the information which may be required under subsection (1) above and for determining the form in which the information is to be so required.
- (3) A person who fails without reasonable excuse to comply with the requirements of a notice served on him under subsection (1) above shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 5 on the standard scale.

Assessors for the enforcement of water quality

86 Assessors for the enforcement of water quality.

- (1) The Secretary of State may for the purposes of this section appoint persons to act on his behalf^{F824} . . . in relation to some or all of—
 - (a) the powers and duties conferred or imposed on him by or under sections 67 to 70 and 77 to 82 above; and
 - (b) such other powers and duties in relation to the quality and sufficiency of water supplied [^{F825}using a water undertaker's supply system] as are conferred or imposed on him by or under any other enactments.
- ^{F826}(1A) Subject to subsection (1B) below, the Secretary of State shall designate one such person as the Chief Inspector of Drinking Water.
- (1B) If the function of the Secretary of State under subsection (1) above is transferred to any extent to the Assembly—
 - (a) subject to paragraph (b) below, the Assembly may designate one such person appointed by it as the Chief Inspector of Drinking Water for Wales; but
 - (b) if the person designated by the Assembly is the same as the person designated by the Secretary of State as the Chief Inspector of Drinking Water, he shall be known as such in both capacities.]
- (2) [^{F827}An inspector] appointed under this section shall—
 - (a) carry out such investigations as the Secretary of State may require him to carry out for the purpose of—
 - (i) ascertaining whether any duty or other requirement imposed on that undertaker [^{F828}or a [^{F829}water supply licensee] by or under any of sections 68, 69 and 79 above or imposed on a relevant person (as defined in subsection (1A) of section 70 above) by or under that section] is being, has been or is likely to be contravened; or
 - (ii) advising the Secretary of State as to whether, and if so in what manner, any of the powers of the Secretary of State in relation to such a contravention, or any of the powers (including the powers to make regulations) which are conferred on him by or under any of sections 67 to 70 and 77 to 82 above should be exercised;
 - and
 - (b) make such reports to the Secretary of State with respect to any such investigation as the Secretary of State may require.
- (3) Without prejudice to the powers conferred by subsection (4) below, it shall be the duty of a water undertaker [^{F830}, [^{F831}water supply licensee] or other relevant person (as defined in section 70(1A) above)]—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) to give [^{F832}an inspector] appointed under this section all such assistance; and
- (b) to provide [^{F832}an inspector] so appointed with all such information,
- as that person may reasonably require for the purpose of carrying out any such investigation as is mentioned in subsection (2) above.
- (4) Any [^{F833}inspector] appointed under this section who is designated in writing for the purpose by the Secretary of State may—
- (a) enter any premises for the purpose of carrying out any such investigation as is mentioned in subsection (2) above;
- (b) carry out such inspections, measurements and tests on premises entered by that [^{F833}inspector] or of articles or records found on any such premises, and take away such samples of water or of any land or articles, as that [^{F833}inspector] considers appropriate for the purpose of enabling him to carry out any such investigation; or
- [^{F834}(c) at any reasonable time require—
- (i) any water undertaker or [^{F835}water supply licensee] to supply him with copies of, or extracts from, the contents of any records kept for the purpose of complying with any duty or other requirement imposed on that undertaker [^{F836}or licensee] by or under any of sections 68, 69 and 79 above; or
- (ii) any relevant person (as defined in subsection (1A) of section 70 above) to supply him with copies of, or extracts from, the contents of any records kept for the purpose of complying with any duty or other requirement imposed on that person by or under that section.]
- (5) Part II of Schedule 6 to this Act shall apply to the rights and powers conferred by subsection (4) above.
- (6) Any water undertaker [^{F837}, [^{F838}water supply licensee] or other relevant person] which fails to comply with the duty imposed on [^{F839}that person] by virtue of subsection (3) above shall be guilty of an offence and liable [^{F840}on summary conviction, or on conviction on indictment, to a fine].
- [^{F841}(7) Proceedings by the Secretary of State for an offence under this section or in relation to the quality and sufficiency of water supplied using a water undertaker's supply system may be instituted and carried on in the name of the Chief Inspector of Drinking Water.
- (8) Any such proceedings by the Assembly may be instituted and carried on in the name of the Chief Inspector of Drinking Water for Wales, if there is one (or, if subsection (1B) (b) above applies, in the name of the Chief Inspector of Drinking Water).
- (9) In this section “inspector” means the Chief Inspector of Drinking Water or any other person appointed under subsection (1) above.]

- (4) An order under this section may include consequential, supplementary, incidental or transitional provision, or savings.
- (5) A statutory instrument containing an order made by the Secretary of State under this section is subject to annulment in pursuance of a resolution of either House of Parliament.
- (6) A statutory instrument containing an order made by the Welsh Ministers under this section is subject to annulment in pursuance of a resolution of the Assembly.
- (7) Subsection (8) applies in relation to a statutory instrument containing both—
 - (a) an order under this section made by the Secretary of State, and
 - (b) an order under this section made by the Welsh Ministers.
- (8) If in accordance with subsection (5) or (6)—
 - (a) either House of Parliament resolves that an address be presented to Her Majesty praying that an instrument containing an order made by the Secretary of State be annulled, or
 - (b) the Assembly resolves that an instrument containing an order made by the Welsh Ministers be annulled,
 nothing further is to be done under the instrument after the date of the resolution and Her Majesty may by Order in Council revoke the instrument.]

Textual Amendments

F842 S. 86ZA inserted (14.7.2014) by [Water Act 2014 \(c. 21\)](#), ss. **40(1)**, 94(3); S.I. 2014/1823, art. 2(a)

[^{F843}Complaints

Textual Amendments

F843 S. 86A inserted (1.7.1992) by [Competition and Service \(Utilities\) Act 1992 \(c. 43\)](#), s. **29**; Competition and Service (Utilities) Act 1992 (Commencement No. 1) Order 1992, art. 3, Sch. Pt. I

86A ^{F844} **Procedure for dealing with complaints.**

- (1) Each water undertaker shall establish a procedure for dealing with complaints made by its customers or potential customers in connection with the supply of water.
- (2) No such procedure shall be established, and no modification of such a procedure shall be made, unless—
 - (a) the water undertaker has consulted the [^{F845}regional committee] to which it has been allocated; and
 - (b) the proposed procedure or modification has been approved by the Director.
- (3) The water undertaker shall—
 - (a) publicise the procedure in such manner as may be approved by the Director; and
 - (b) send a description of the procedure, free of charge, to any person who asks for one.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) The Director may give a direction to a water undertaker requiring the undertaker to review its procedure or the manner in which the procedure operates.
- (5) A direction under subsection (4) above—
 - (a) may specify the manner in which the review is to be conducted; and
 - (b) shall require a written report of the review to be made to the Director.
- (6) Where the Director receives a report under subsection (5)(b) above, he may, after consulting the water undertaker, direct the undertaker to make such modifications of—
 - (a) the procedure; or
 - (b) the manner in which the procedure operates,as may be specified in the direction.
- (7) Subsection (2) above does not apply to any modification made in compliance with a direction under subsection (6) above.
- (8) The duty of a water undertaker to comply with subsection (1) above and with any direction given to it under subsection (4) or (6) above shall be enforceable by the Director under section 18 above.
- (9) Where the Director is considering whether to exercise his powers under subsection (4) or (6) above in relation to a water undertaker, it shall be the duty of that undertaker to give him such information as he may reasonably require for the purpose of assisting him in coming to a decision.
- (10) Section 202 below shall have effect, with the necessary modifications, in relation to information which the Director requires for that purpose as it has effect in relation to information which the Secretary of State requires for purposes mentioned in subsection (1) of that section.]

Textual Amendments

- F845** Words in s. 86A(2)(a) substituted (1.10.2005) by [Water Act 2003 \(c. 37\), ss. 101\(1\), 105\(3\), Sch. 7 para. 27\(3\)](#); S.I. 2005/2714, [art. 2\(l\)\(v\)\(aa\)](#) (with Sch. para. 8)

CHAPTER IV

FLUORIDATION

Modifications etc. (not altering text)

- C95** Pt. 3 Ch. 4 modified (1.4.2013 for E.) by [Health and Social Care Act 2012 \(c. 7\), ss. 37\(1\), 306\(2\)\(3\)](#); S.I. 2013/160, [art. 2\(2\)](#) (with arts. 7-9)

^{F846}87 Fluoridation of water supplies

- (1) If requested in writing to do so by a relevant authority, a water undertaker shall enter into arrangements with the relevant authority to increase the fluoride content

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

of the water supplied by that undertaker to premises within the area specified in the arrangements.

(2) But a water undertaker shall not be required by subsection (1) above to enter into any such arrangements until an indemnity with respect to the arrangements has been given by virtue of section 90 below—

- (a) to the water undertaker; and
- (b) to any [^{F847}water supply licensee] which is entitled to one.

(3) In this section and the following provisions of this Chapter—

- (a) references to a relevant authority—
 - [^{F848}(i) in relation to areas in England, are to the Secretary of State;]
 - (ii) in relation to areas in Wales, are to the Assembly; and
- (b) references to water supplied by a water undertaker are to water supplied (whether by a water undertaker or a [^{F849}water supply licensee]) to premises using the supply system of that undertaker.

^{F850}(3A)

(4) The area specified in arrangements under this section may be—

- [^{F851}(a) in relation to England, such area [^{F852}in England as the Secretary of State may determine];]
- (b) in relation to Wales, such area comprising the whole or any part of Wales as the Assembly may determine.

(5) The arrangements shall be on such terms as may be agreed between the relevant authority and the water undertaker or, in the absence of agreement, determined in accordance with section 87B below.

(6) [^{F853}Subject to subsection (6A)] those terms shall include provision—

- (a) requiring the relevant authority to meet the reasonable capital and operating costs incurred by the water undertaker in giving effect to the arrangements;
- (b) specifying circumstances in which the requirement to increase the fluoride content may be temporarily suspended; and
- (c) for the variation of the arrangements at the request of the relevant authority.

[^{F854}(6A) The Secretary of State may by regulations provide that, in circumstances specified in the regulations, subsection (6)(a) is not to apply in relation to arrangements entered into by the Secretary of State.

(6B) The Secretary of State may by regulations require a public body specified in the regulations to make payments to the Secretary of State to meet any costs incurred by the Secretary of State under the terms of the arrangements.]

(7) The relevant authority shall consult the Authority in relation to the terms to be included in any arrangements under this section (in particular, terms which affect the operation of the water undertaker’s supply system).

^{F855}(7A)

^{F855}(7B)

[^{F856}(7G) Before making regulations under subsection (6A) or (6B) the Secretary of State must consult such persons as the Secretary of State considers appropriate.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

^{F860}87A Target concentration of fluoride

- (1) Arrangements under section 87(1) above shall include provision for securing that, so far as reasonably practicable, the concentration of fluoride in the water supplied to premises in the specified area is maintained at the general target concentration of one milligram per litre.
- (2) But the arrangements may provide for the concentration in the specified area (or any part of it) to be lower than that if the relevant authority considers that it is not reasonably practicable to achieve the general target concentration in the specified area (or that part of it).
- (3) Any such lower concentration must still be as high as is reasonably practicable in the circumstances.

^{F861}(3A)

- (4) If, in relation to any area (“area A”), an order under section 88A(1) below specifies a general target concentration lower than that for which any arrangements effective there provide (or, by the previous operation of this subsection, are taken to provide), the arrangements shall have effect from the coming into force of the order as if they provided for the general target concentration specified in the order (subject to the operation again of subsections (2) and (3) above).
- (5) If the result of the operation of subsection (4) above in relation to arrangements in area A is that in an area adjoining area A (“area B”) it is not reasonably practicable to maintain the concentration of fluoride in the water supplied by virtue of arrangements made in area B with the same water undertaker, the order shall be taken to extend also to area B so far as those arrangements are concerned, and subsection (4) above shall apply accordingly.
- (6) An order under section 88A(1) below which in relation to any area specifies a general target concentration higher than that for which any arrangements effective there provide (or are taken to provide by virtue of subsection (4) or (5) above) does not have effect to increase the concentration for which the arrangements provide (or are taken to provide).
- (7) In this section, “specified area” means the area specified in arrangements under section 87(1) above.]

Textual Amendments

F860 Ss. 87-87C substituted for s. 87 (1.8.2008 for E. for certain purposes as regards s. 87 and 25.2.2009 for E. for all other purposes) by [Water Act 2003 \(c. 37\)](#), [ss. 58\(2\)\(11\)-\(14\)](#), [105\(3\)](#); S.I. 2008/1922, [art. 2\(a\)](#); S.I. 2009/359, [art. 2](#), (with saving in art. 3, Sch. 3)

F861 S. 87A(3A) omitted (1.11.2022 for E.) by virtue of [Health and Care Act 2022 \(c. 31\)](#), [ss. 175\(3\)](#), [186\(6\)](#); S.I. 2022/1003, [reg. 3\(a\)](#)

^{F862}87B Fluoridation arrangements: determination of terms

- (1) This section applies if a relevant authority and a water undertaker fail to agree—
 - (a) the terms of arrangements requested by the relevant authority pursuant to subsection (1) of section 87 above; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) a variation in the terms of those arrangements following a request by the relevant authority pursuant to subsection (6)(c) of that section.
- (2) In relation to areas in England (except where subsection (4) below applies)—
 - ^{F863} [the Secretary of State may—
 - (a) (i) determine the terms of the arrangements as the Secretary of State sees fit; or
 - (ii) refer the matter for determination by such other person as the Secretary of State considers appropriate; and]
 - ^{F864} (b)
 - (c) the determination of the Secretary of State or, as the case may be, the other person shall be final.
- (3) In relation to areas in Wales (except where subsection (4) below applies)—
 - (a) the Assembly may—
 - (i) determine the terms of the arrangements itself as it sees fit; or
 - (ii) refer the matter for determination by such other person as it considers appropriate; and
 - (b) the determination of the Assembly or, as the case may be, the other person shall be final.
- (4) [^{F865}Where a combined reference is made under section 87(7C)(b) or 87(7F)] above—
 - (a) the terms of the arrangements shall be determined by a person appointed by the Secretary of State and the Assembly acting jointly; and
 - (b) the determination of that person shall be final.
- (5) Following determination under this section of the terms to be included in any arrangements—
 - (a) the relevant authority shall give notice of the determination to the water undertaker in question; and
 - (b) the undertaker shall be deemed to have entered into the arrangements under section 87(1) above on the terms determined under this section with effect from the day after the date of the notice.
- (6) References in this Chapter to arrangements entered into under section 87(1) above shall include arrangements deemed to have been entered into under that section by virtue of subsection (5)(b) above.]

[^{F866}87C Fluoridation arrangements: compliance

- (1) It shall be the duty of each water undertaker to comply with any arrangements entered into by it under section 87(1) above.
- (2) Where, pursuant to any such arrangements, the fluoride content of any water is increased, the increase may be effected only by the addition of one or more of the following compounds of fluorine—
 - hexafluorosilicic acid (H₂SiF₆)
 - disodium hexafluorosilicate (Na₂SiF₆).
- (3) Subject to subsection (4) below, water to which fluoride has been added pursuant to any such arrangements entered into by a water undertaker (with a view to its supply in an area) may be supplied by that or any other undertaker to premises in any other area (whether or not that other area is the subject of arrangements under section 87(1) above).
- (4) Subsection (3) above applies if (and only if) the undertaker or undertakers concerned consider that it is necessary for the water to be supplied in the other area—
 - (a) for the purpose of dealing with any serious deficiency in supply; or
 - (b) in connection with the carrying out of any works (including cleaning and maintenance) by the undertaker concerned or, as the case may be, by the undertakers concerned, or by a [^{F867}water supply licensee] supplying water using its or their supply system.
- (5) In this section—
 - (a) the reference, in subsection (3) above, to water to which fluoride has been added pursuant to arrangements includes a reference to water to which fluoride has been added by Scottish Water in exercise of the power conferred by section 1 of the Water (Fluoridation) Act 1985; and
 - (b) in relation to a supply of such water by a water undertaker, the reference, in subsection (4) above, to the water undertakers concerned shall have effect as references to the water undertaker and Scottish Water.
- (6) In subsection (4) above, “serious deficiency in supply” means any existing or threatened serious deficiency in the supply of water (whether in quantity or quality) caused by an exceptional lack of rain or by any accident or unforeseen circumstances.
- (7) Arrangements entered into under section 87(1) above shall remain in force until the relevant authority, after giving reasonable notice to the water undertaker, terminates them.

F868 S. 87C(8) omitted (1.4.2013 for E.) by virtue of [Health and Social Care Act 2012 \(c. 7\)](#), **ss. 35(12), 306(2)(3)**; [S.I. 2013/160](#), **art. 2(2)** (with arts. 7-9)

88 Power to vary permitted fluoridation agents.

- (1) The Secretary of State may by order amend section [^{F869}87C(2)] above by—
 - (a) adding a reference to another compound of fluorine; or
 - (b) removing any reference to a compound of fluorine.
- (2) The power of the Secretary of State to make orders under this section shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.

Textual Amendments

F869 Words in [s. 88\(1\)](#) substituted (25.2.2009 for E.) by [Water Act 2003 \(c. 37\)](#), **ss. 58(3), 105(3)**; [S.I. 2009/359](#), **arts. 2, 3, Sch.**

[^{F870}**88A Power to vary target concentration of fluoride**

- (1) The appropriate authority may by order made by statutory instrument provide that section 87A(1) above is to have effect as if for “one milligram per litre” there were substituted a lower concentration specified in the order.
- (2) An order under subsection (1) above may make different provision for different geographical areas, or for some such areas and not others.
- (3) A statutory instrument containing an order under subsection (1) above shall not be made by the Secretary of State (or by the Secretary of State and the Assembly acting jointly) unless a draft of the instrument has been laid before, and approved by a resolution of, each House of Parliament.
- (4) In subsection (1) above “appropriate authority”—
 - (a) in relation to an area which is partly in England and partly in Wales, means the Secretary of State and the Assembly acting jointly;
 - (b) in relation to an area which is wholly in England, means the Secretary of State; and
 - (c) in relation to an area which is wholly in Wales, means the Assembly.
- (5) An order amending or revoking an order under subsection (1) above made by virtue of subsection (4)(a) above must also be made by the Secretary of State and the Assembly acting jointly.]

[^{F881}90 Indemnities in respect of fluoridation.

- (1) The Secretary of State may, with the consent of the Treasury, agree to indemnify any water undertaker in respect of liabilities which it may incur in complying with arrangements entered into by it pursuant to section 87(1) above.
- (2) The Secretary of State may also, with the consent of the Treasury, agree to indemnify any [^{F882}water supply licensee] in respect of liabilities which [^{F883}the licensee] may incur—
 - (a) in supplying water to which fluoride has been added by a water undertaker by virtue of any such arrangements;
 - (b) (if the licensee is introducing water into the water undertaker’s supply system) in complying with any obligation imposed on [^{F883}the licensee] by the undertaker in consequence of the arrangements.
- (3) The Secretary of State may by regulations make provision with respect to—
 - (a) the matters in respect of which an indemnity may be given under subsection (1) or (2) above;
 - (b) the form and terms of any such indemnity; and
 - (c) such ancillary matters as he sees fit.]

[^{F886}**90B Old English fluoridation arrangements: transitional provision**

- (1) With effect from the day on which section 176 of the Health and Care Act 2022 comes into force, old English fluoridation arrangements are to be treated for the purposes of this Chapter as if they were arrangements entered into by the water undertaker with the Secretary of State under section 87(1).
- (2) The Secretary of State may request such modifications to the arrangements as the Secretary of State considers necessary in order to give effect to subsection (1) (for example to insert the terms mentioned in section 87(6)).
- (3) If the Secretary of State and the water undertaker fail to agree the modifications requested by the Secretary of State—
- (a) subsection (2) or, as the case may be, (4) of section 87B is to apply as if the parties had failed to agree the terms of the arrangements under section 87(1), and
- (b) following determination of the modifications—
- (i) the Secretary of State is to give notice of the determination to the water undertaker, and
- (ii) the arrangements are deemed to have been modified as so determined with effect from the day after the date of notice.
- (4) Sections 87(11) and 89(1) (which relate to consultation) do not apply to the deemed entry into, and modification of, arrangements by virtue of this section.
- (5) References in this Chapter to arrangements entered into under section 87(1) include arrangements entered into by a water undertaker by virtue of subsection (1).
- (6) In this section “old English fluoridation arrangements” means—
- (a) any arrangements entered into by a water undertaker with a Strategic Health Authority under section 87(1) of the Water Industry Act 1991 (before section 87(3) was amended by section 35(2) of the Health and Social Care Act 2012 in relation to England), and
- (b) any arrangements which were treated as arrangements falling within paragraph (a) by virtue of section 91 (as that section had effect immediately

Status: This version of this Act contains provisions that are prospective.

CHAPTER V

SUPPLEMENTAL PROVISIONS OF PART III

92 Power to give effect to international obligations [^{F897} etc.]

- (1) Subject to subsection (2) below, the Secretary of State may by regulations provide that the provisions of Chapters I to III of this Part shall have effect with such modifications as may be prescribed for the purpose of ^{F898}—
- [^{F899}(a) giving effect to any [^{F900}assimilated] obligations, or
- (b) [^{F901}enabling Her Majesty's Government in the United Kingdom to give effect] to any international agreement to which the United Kingdom is for the time being a party.
- (2) This section shall not authorise any modification of any of sections 71, 72 and 76 above or of any other provisions of this Part so far as they have effect for the purposes of or in relation to those sections.

F901 Words in s. 92(1)(b) inserted (31.12.2020) by [The Floods and Water \(Amendment etc.\) \(EU Exit\) Regulations 2019 \(S.I. 2019/558\)](#), regs. 1(1), **3(3)(b)(iii)**; 2020 c. 1, Sch. 5 para. 1(1)

93 Interpretation of Part III.

(1) In this Part—

“connection notice” shall be construed in accordance with section 45(8) above;

“consumer”, in relation to a supply of water provided by a water undertaker to any premises, means (except in Chapter IV) a person who is for the time being the person on whom liability to pay charges to the undertaker in respect of that supply of water would fall;

“food production purposes” means the manufacturing, processing, preserving or marketing purposes with respect to food or drink for which water supplied to food production premises may be used, and for the purposes of this definition “food production premises” means premises used for the purposes of a business of preparing food or drink for consumption otherwise than on the premises;

“necessary works” includes works carried out, in exercise of any power conferred by or under any enactment, by a person other than a water undertaker;

“private supply” means, subject to subsection (2) below, a supply of water provided otherwise than by a water undertaker [^{F902} or by a [^{F903} water supply licensee] in accordance with Chapter 1A of Part 2 of this Act] (including a supply provided for the purposes of the bottling of water), and cognate expressions shall be construed accordingly;

“private supply notice” shall be construed in accordance with section 80(7) above;

“water fittings” includes pipes (other than water mains), taps, cocks, valves, ferrules, meters, cisterns, baths, water closets, soil pans and other similar apparatus used in connection with the supply and use of water;

“wholesome” and cognate expressions shall be construed subject to the provisions of any regulations made under section 67 above.

- (2) For the purposes of any reference in this Part to a private supply, or to supplying water by means of a private supply, water shall be treated as supplied to any premises not only where it is supplied from outside those premises, but also where it is abstracted, for the purpose of being used or consumed on those premises, from a source which is situated on the premises themselves; and for the purposes of this subsection water shall be treated as used on any premises where it is bottled on those premises for use or consumption elsewhere.
- (3) For the purposes of this Part a service pipe shall be treated as connected with a water main other than a trunk main even if the connection is an indirect connection made by virtue of a connection with another service pipe.
- (4) The rights conferred by virtue of this Part as against the owner or occupier of any premises shall be without prejudice to any rights and obligations, as between themselves, of the owner and occupier of the premises.

Status: This version of this Act contains provisions that are prospective.

F910 Words in s. 93A(3) substituted (1.4.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), [Sch. 7 para. 80\(1\)\(b\)](#); [S.I. 2016/465](#), art. 2(m), [Sch. 1 para. 1\(o\)](#) (with [Sch. 2](#)) (as amended (22.3.2017) by [S.I. 2017/462](#), art. 16)

93B Power of Director to impose requirements on water undertakers.

- (1) The Director may require a water undertaker [^{F911}or [^{F912}water supply licensee]], in [^{F913}the performance of that undertaker's or licensee's duty] under section 93A above, to—
 - (a) take any such action; or
 - (b) achieve any such overall standards of performance,
 as he may specify in the document imposing the requirement.
- (2) Where the Director, in the document imposing a requirement on a water undertaker [^{F914}or [^{F915}water supply licensee]] under subsection (1) above, stipulates that any contravention of the requirement by the undertaker [^{F916}or licensee] will be a breach of [^{F917}the undertaker's or licensee's duty] under section 93A above, any contravention of that requirement by the undertaker shall be a breach of that duty.
- (3) Without prejudice to the generality of subsection (1) above, a requirement under that subsection may—
 - (a) require a water undertaker [^{F918}or [^{F919}water supply licensee]] to make available to [^{F920}that person's customers] or potential customers such facilities as may be specified in the document imposing the requirement;
 - (b) require a water undertaker [^{F918}or [^{F919}water supply licensee]] to provide or make available to [^{F920}that person's customers] or potential customers such information as may be specified in the document imposing the requirement, and may specify the form in which, the times at which or the frequency with which any such information is to be provided or made available.
- (4) In exercising his powers under this section in relation to any water undertaker [^{F921}or [^{F922}water supply licensee]] the Director shall have regard to the extent to which water resources are available to that undertaker [^{F923}or licensee].
- (5) Before imposing any requirement on a water undertaker [^{F924}or [^{F925}water supply licensee]] under subsection (1) above the Director shall consult that undertaker [^{F926}or licensee].
- (6) Nothing in this section authorises the Director to impose any requirement on a water undertaker [^{F927}or [^{F928}water supply licensee]] which has or may have the effect of authorising or requiring that undertaker [^{F929}or licensee] to impose any requirement on any of [^{F930}that person's customers] or potential customers.

93C Publicity of requirements imposed under section 93B.

- (1) Where, under section 93B(1) above, the Director imposes any requirement on a water undertaker [^{F931}or [^{F932}water supply licensee]], the Director may arrange for that requirement to be publicised in any such manner as he may consider appropriate for the purpose of bringing it to the attention of that undertaker's [^{F933}or licensee's] customers.
- (2) Without prejudice to the generality of subsection (1) above, the Director may arrange for such publicising of the requirement as is mentioned in that subsection by—
 - (a) himself publicising the requirement or causing it to be publicised; or
 - (b) directing the undertaker [^{F934}or licensee] to inform or arrange to inform its customers of the requirement.

- C99** Pt. IV saved (1.12.1991) by [Statutory Water Companies Act 1991 \(c. 58, SIF 130\)](#), **ss. 1(4)**, 17(2).

CHAPTER I

GENERAL FUNCTIONS OF SEWERAGE UNDERTAKERS [^{F945}ETC]

Textual Amendments

- F945** Word in Pt. 4 Ch. 1 heading inserted (1.4.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), **Sch. 7 para. 84**; S.I. 2016/465, art. 2(m), **Sch. 1 para. 1(o)** (with **Sch. 2**) (as amended (22.3.2017) by S.I. 2017/462, art. 16)

Principal duties and standards of performance

94 General duty to provide sewerage system.

- (1) It shall be the duty of every sewerage undertaker—
- (a) to provide, improve and extend such a system of public sewers (whether inside its area or elsewhere) and so to cleanse and maintain those sewers [^{F946}and any lateral drains which belong to or vest in the undertaker] as to ensure that that area is and continues to be effectually drained; and
 - (b) to make provision for the emptying of those sewers and such further provision (whether inside its area or elsewhere) as is necessary from time to time for effectually dealing, by means of sewage disposal works or otherwise, with the contents of those sewers.
- (2) It shall be the duty of a sewerage undertaker in performing its duty under subsection (1) above to have regard—
- (a) to its existing and likely future obligations to allow for the discharge of trade effluent into its public sewers; and
 - (b) to the need to provide for the disposal of trade effluent which is so discharged.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) The duty of a sewerage undertaker under subsection (1) above shall be enforceable under section 18 above—
- (a) by the Secretary of State; or
 - (b) with the consent of or in accordance with a general authorisation given by the Secretary of State, by the Director.
- (4) The obligations imposed on a sewerage undertaker by the following Chapters of this Part, and the remedies available in respect of contraventions of those obligations, shall be in addition to any duty imposed or remedy available by virtue of any provision of this section or section 95 below and shall not be in any way qualified by any such provision.
- (5) In this section “trade effluent” has the same meaning as in Chapter III of this Part.

Textual Amendments

F946 Words in s. 94(1)(a) inserted (28.5.2004) by [Water Act 2003 \(c. 37\)](#), **ss. 97(3)**, 105(3); [S.I. 2004/641](#), **art. 4(b)** (with [Sch. 3 para. 7](#))

Modifications etc. (not altering text)

C100 S. 94 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), **reg. 1(1)(b)**, **Sch. 1 para. 10(2)** (with **reg. 1(1)(c)**)

95 Standards of performance in connection with provision of sewerage services.

- (1) For the purpose-
- (a) of facilitating the determination of the extent to which breaches of the obligations imposed by virtue of the following provisions of this Part are to amount to breaches of the duty imposed by section 94 above; or
 - (b) of supplementing that duty by establishing overall standards of performance in relation to the provision of sewerage services by any sewerage undertaker, the Secretary of State may, in accordance with section 96 below, by regulations provide for contraventions of such requirements as may be prescribed to be treated for the purposes of this Act as breaches of that duty.
- (2) The Secretary of State may, in accordance with section 96 below, by regulations prescribe such standards of performance in connection with the provision of sewerage services as, in his opinion, ought to be achieved in individual cases.
- (3) Regulations under subsection (2) above may provide that, if a sewerage undertaker fails to meet a prescribed standard, it shall pay such amount as may be prescribed to any person who is affected by the failure and is of a prescribed description.
- (4) Without prejudice to the generality of the power conferred by subsection (2) above, regulations under that subsection may—
- (a) include in a standard of performance a requirement for a sewerage undertaker, in prescribed circumstances, to inform a person of his rights by virtue of any such regulations;
 - (b) provide for any dispute under the regulations to be referred by either party to the dispute to the Director;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) make provision for the procedure to be followed in connection with any such reference and for the Director's determination on such a reference to be enforceable in such manner as may be prescribed;
- (d) prescribe circumstances in which a sewerage undertaker is to be exempted from requirements of the regulations.

^{F947} [(5) Where the Director determines any dispute in accordance with regulations under this section he shall, in such manner as may be specified in the regulations, give his reasons for reaching his decision with respect to the dispute.]

^{F948} **95ZA Standards of performance in connection with provision of sewerage services: sewerage licensees**

- (1) For the purpose of establishing overall standards of performance in connection with the provision of sewerage services by sewerage licensees in accordance with their retail authorisations, the Secretary of State may, in accordance with section 96ZA, by regulations—
 - (a) impose requirements in connection with the provision of sewerage services;
 - (b) provide for a requirement so imposed to be enforceable under section 18 by—
 - (i) the Secretary of State, or
 - (ii) the Authority, with the consent of or in accordance with a general authorisation given by the Secretary of State.
- (2) The Secretary of State may, in accordance with section 96ZA, by regulations prescribe such standards of performance in connection with the provision of sewerage services as, in the Secretary of State's opinion, ought to be achieved in individual cases.
- (3) Regulations under subsection (2) may provide that if a sewerage licensee fails to meet a prescribed standard the licensee must pay such amount as may be prescribed to any person who—
 - (a) is affected by the failure, and
 - (b) is of a prescribed description.
- (4) Without prejudice to the generality of the power conferred by subsection (2), regulations under subsection (2) may—
 - (a) include in a standard of performance a requirement for a sewerage licensee, in prescribed circumstances, to inform a person of that person's rights by virtue of any such regulations;
 - (b) provide for a dispute under the regulations to be referred by either party to the dispute to the Authority;
 - (c) make provision for the procedure to be followed in connection with any such reference and for the Authority's determination on such a reference to be enforceable in such manner as may be prescribed;
 - (d) prescribe circumstances in which a sewerage licensee is to be exempted from requirements of the regulations.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) Where the Authority determines any dispute in accordance with regulations under this section it must, in such manner as may be specified in the regulations, give its reasons for reaching its decision with respect to the dispute.]

[95A ^{F949}Information with respect to levels of performance.

- (1) The Director shall from time to time collect information with respect to—
- (a) the compensation paid by sewerage undertakers under regulations under section 95(2) above; ^{F950} ...
 - ^{F951} [the compensation paid by sewerage licensees under regulations under section 95ZA(2); and]
 - (b) the levels of overall performance achieved by sewerage undertakers [^{F952}or sewerage licensees] in connection with the provision of sewerage services.
- (2) At such times as the Director may direct, each sewerage undertaker shall give the following information to the Director—
- (a) as respects each standard prescribed by regulations under section 95(2) above, the number of cases in which compensation was paid and the aggregate amount or value of that compensation; and
 - (b) as respects each standard established by regulations under section 95(1)(b) above, such information with respect to the level of performance achieved by the undertaker as may be so specified.
- ^{F953} [At such times as the Authority may direct, each sewerage licensee is to give the (2A) following information to the Authority—
- (a) as respects each standard established by regulations under section 95ZA(1), such information with respect to the level of performance achieved by the licensee as may be specified in the direction;
 - (b) as respects each standard prescribed by regulations under section 95ZA(2), the number of cases in which compensation was paid and the aggregate amount or value of that compensation.]
- ^{F954} [The requirements in subsections (2) and (2A) are enforceable by the Authority under (3) section 18.]
- (4) The Director shall, at least once in every year, arrange for the publication, in such form and in such manner as he considers appropriate, of such of the information collected by or given to him under this section as it may appear to him expedient to give to customers or potential customers of sewerage undertakers [^{F955}or sewerage licensees].
- (5) In arranging for the publication of any such information the Director shall have regard to the need for excluding, so far as practicable—
- (a) any matter which relates to the affairs of an individual, where publication of that matter would or might, in the opinion of the Director, seriously and prejudicially affect the interests of that individual; and
 - (b) any matter which relates specifically to the affairs of a particular body of persons, whether corporate or unincorporate, where publication of that matter

- (b) in the case of each phosphorus significant plant comprised in its sewerage system—
 - (i) secure that, by the upgrade date, the plant will be able to meet the phosphorus nutrient pollution standard, and
 - (ii) on and after the upgrade date, secure that the plant meets that standard.
- (2) In carrying out the duty under subsection (1), a sewerage undertaker must consider whether nature-based solutions, technologies and facilities relating to sewerage and water could be used to meet the standard.
- (3) “Nitrogen significant plant” means a plant in England that—
 - (a) discharges treated effluent into a nitrogen sensitive catchment area, and
 - (b) is not an exempt plant in relation to the nitrogen nutrient pollution standard.
- (4) “Phosphorus significant plant” means a plant in England that—
 - (a) discharges treated effluent into a phosphorus sensitive catchment area, and
 - (b) is not an exempt plant in relation to the phosphorus nutrient pollution standard.

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), **ss. 168(1), 255(6)** (with [s. 247](#))

96C Sensitive catchment areas

- (1) Where the Secretary of State considers that a habitats site that is wholly or partly in England is in an unfavourable condition by virtue of pollution from nutrients in water comprising nitrogen or compounds of nitrogen, the Secretary of State may designate the catchment area for the habitats site as a nitrogen sensitive catchment area.
- (2) Where the Secretary of State considers that a habitats site that is wholly or partly in England is in an unfavourable condition by virtue of pollution from nutrients in water comprising phosphorus or compounds of phosphorus, the Secretary of State may designate the catchment area for the habitats site as a phosphorus sensitive catchment area.
- (3) In determining—
 - (a) whether a habitats site is in an unfavourable condition by virtue of pollution from nutrients comprising nitrogen, phosphorus or compounds of nitrogen or phosphorus,
 - (b) the catchment area for a habitats site, or
 - (c) whether to exercise the power in subsection (4)(e),
 the Secretary of State may take into account, in particular, advice from, or guidance published by, Natural England, the Environment Agency or the Joint Nature Conservation Committee.
- (4) A designation under subsection (1) or (2)—
 - (a) must be in writing,
 - (b) must be published as soon as practicable after being made,
 - (c) takes effect—
 - (i) on the day specified in the designation, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) if none is specified, on the day on which it is made, (the “designation date”),
 - (d) if it takes effect after the end of the initial period, must specify the upgrade date (see section 96E(1)(b)), and
 - (e) may specify the concentration that applies to a plant (which discharges into the catchment area) in relation to a nutrient pollution standard instead of the standard concentration.
- (5) A date specified under subsection (4)(d) as the upgrade date must be at least 7 years after the designation date.
- (6) Before specifying a concentration under subsection (4)(e), the Secretary of State must consult the Environment Agency.
- (7) A concentration specified under subsection (4)(e) ceases to have effect if, after the day on which the designation is made, the plant becomes an exempt plant.
- (8) A designation under this section may not be revoked; and it is immaterial for the purposes of the continued designation of an area whether subsection (1) or (2) continues to be satisfied in relation to it.
- (9) In this section “catchment area”, in relation to a habitats site, means the area where water, if released, would drain into the site.

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), ss. 168(1), 255(6) (with s. 247)

96D Exempt sewage disposal works

- (1) A plant is exempt in relation to a nutrient pollution standard if—
- (a) it has a capacity of less than a population equivalent of 2000 when the designation of the associated catchment area takes effect,
 - (b) it has been designated by the Secretary of State as exempt in relation to the standard, or
 - (c) it is exempt in relation to the standard under regulations under subsection (8).

This is subject to subsection (2).

- (2) The Secretary of State may designate a plant as not being exempt in relation to a nutrient pollution standard, unless—
- (a) the plant has a capacity of less than a population equivalent of 250, and
 - (b) the designation takes effect after the designation of the associated catchment area takes effect.
- (3) A designation under subsection (1)(b) or (2)—
- (a) must be in writing,
 - (b) must be published as soon as practicable after being made, and
 - (c) takes effect—
 - (i) on the day specified in the designation, or
 - (ii) if none is specified, on the day on which it is made.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) A designation under subsection (2) that takes effect after the designation of the associated catchment area takes effect must specify the upgrade date (see section 96E(2)(a)).
 The upgrade date must be at least 7 years after the designation under subsection (2) takes effect.
- (5) A designation under subsection (2) may specify the concentration that applies to a plant in relation to a nutrient pollution standard instead of the standard concentration.
- (6) Before specifying a concentration under subsection (5), the Secretary of State must consult the Environment Agency.
- (7) A concentration specified under subsection (5) ceases to have effect if, after the day on which the designation is made, the plant again becomes an exempt plant.
- (8) The Secretary of State may by regulations specify plants or descriptions of plant that are to be exempt in relation to a nutrient pollution standard.
- (9) Subsections (10) and (11) apply where a plant that is exempt under regulations under subsection (8) can, by virtue of the regulations, cease to be exempt.
- (10) The regulations must specify or provide for determining the upgrade date (see section 96E(2)(b)) in relation to any plant that ceases, by virtue of the regulations, to be an exempt plant in relation to a standard after the designation of the associated catchment area takes effect.
 The upgrade date must be at least 7 years after the plant ceases to be exempt in relation to the standard.
- (11) The regulations may provide for the Secretary of State to specify the concentration that applies to a plant that ceases, by virtue of the regulations, to be an exempt plant in relation to a nutrient pollution standard instead of the standard concentration; and, if such provision is made, the regulations must—
- (a) require that the Secretary of State consult the Environment Agency before specifying a concentration;
 - (b) provide for any specified concentration to cease to have effect if, after the day on which the plant ceases to be an exempt plant, the plant again becomes an exempt plant.
- (12) A designation under subsection (2) in relation to a plant and a nutrient pollution standard is of no effect if the plant ceases, by virtue of regulations under subsection (8), to be exempt in relation to the standard before, or at the same time as, the designation would otherwise take effect.
- (13) In this section “population equivalent” has the meaning given by regulation 2(1) of the Urban Waste Water Treatment (England and Wales) Regulations 1994 ([S.I. 1994/2841](#)).
- (14) References in this section to the designation of an associated catchment area are to its designation as a sensitive catchment area.

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), [ss. 168\(1\), 255\(6\)](#) (with [s. 247](#))

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 96E Upgrade date

- (1) The upgrade date, in relation to a nutrient significant plant, is, unless subsection (2) or (3) applies—
 - (a) 1 April 2030, if the designation of the associated catchment area takes effect during the initial period;
 - (b) the date specified under section 96C(4)(d), if the designation of the associated catchment area takes effect after the end of the initial period.
- (2) But, if the plant becomes a nutrient significant plant after the designation of the associated catchment area takes effect, the upgrade date is—
 - (a) the date specified under section 96D(4), where it becomes a nutrient significant plant by virtue of a designation under section 96D(2);
 - (b) the date specified by or determined under provision made by virtue of section 96D(10), where it becomes a nutrient significant plant on ceasing, by virtue of regulations under section 96D(8), to be exempt.
- (3) Where the associated catchment area has ceased to be a catchment permitting area and a date has been specified under section 96H(4)(c), that date is the upgrade date.
- (4) “The initial period” means the period of 3 months beginning with the date on which the Levelling-up and Regeneration Act 2023 is passed.
- (5) References in this section to the designation of an associated catchment area are to its designation as a sensitive catchment area.

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), **ss. 168(1), 255(6)** (with [s. 247](#))

96F Nutrient pollution standards

- (1) A nitrogen significant plant meets the nitrogen nutrient pollution standard if—
 - (a) where the associated catchment area is not a catchment permitting area (see section 96G), the concentration of total nitrogen in treated effluent that the plant discharges is not more than—
 - (i) 10 mg/l, or
 - (ii) where a different concentration applies to the plant under section 96C(4)(e) or 96D(5) or by virtue of regulations made under section 96D(11), that concentration;
 - (b) where the associated catchment area is a catchment permitting area, the sewerage undertaker is complying with any condition in the environmental permit for the plant imposed in pursuance of section 96G(3)(b).
- (2) A phosphorus significant plant meets the phosphorus nutrient pollution standard if—
 - (a) where the associated catchment area is not a catchment permitting area, the concentration of total phosphorus in treated effluent that the plant discharges is not more than—
 - (i) 0.25 mg/l, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) where a different concentration applies to the plant under section 96C(4)(e) or 96D(5) or by virtue of regulations made under section 96D(11), that concentration;
- (b) where the associated catchment area is a catchment permitting area, the sewerage undertaker is complying with any condition in the environmental permit for the plant imposed in pursuance of section 96G(3)(b).
- (3) “Treated effluent”, in relation to a plant, means any effluent discharged by the plant, other than anything discharged—
 - (a) from a storm overflow, or
 - (b) by an emergency discharge.
- (4) For the purposes of subsection (3), in relation to a plant—
 - (a) “storm overflow” means any structure or apparatus comprised in the plant which, when the capacity of relevant parts of the sewerage system is exceeded, relieves them by discharging the excess contents into inland waters, underground strata or the sea, where—
 - “relevant parts of the sewerage system” means—
 - (a) storage tanks at the plant, and
 - (b) other parts of the sewerage system downstream of the plant;
 - “the sewerage system” means the undertaker’s sewerage system of which the plant forms part;
 - (b) “emergency discharge” means a discharge in circumstances where the plant’s normal treatment process has failed because of—
 - (i) electrical power failure, or
 - (ii) mechanical breakdown of duty and standby pumps.
- (5) Regulations made by the Secretary of State may specify how the concentration of total nitrogen or concentration of total phosphorus in treated effluent is to be determined.
- (6) Regulations under subsection (5) may, in particular—
 - (a) make provision for requiring regular sampling of the treated effluent that a plant discharges to ascertain the concentration of total nitrogen or concentration of total phosphorus;
 - (b) make provision for regarding a nutrient pollution standard as being met by a plant if, for example—
 - (i) it is met, with at least the frequency specified in the regulations, in samples taken in accordance with the regulations, or
 - (ii) the average concentration, calculated in accordance with the regulations, of total nitrogen or of total phosphorus in samples taken in accordance with the regulations would meet the standard;
 - (c) make provision for determining generally, or in a particular case, whether anything is, or is not, to be regarded as treated effluent discharged by a plant;
 - (d) make provision in relation to section 96G, including—
 - (i) the determination of compliance with conditions in environmental permits imposed in pursuance of section 96G(3)(b);
 - (ii) in connection with any kind of plant;
 - (e) confer any function on the Secretary of State, the Authority, the Environment Agency, statutory undertakers or any other person;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (f) make different provision for different purposes or different areas (including different plants within an area).

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), **ss. 168(1), 255(6)** (with [s. 247](#))

96G Nutrient pollution standards determined through environmental permitting

- (1) The Secretary of State may designate a sensitive catchment area as a catchment permitting area.
- (2) In determining whether to make a designation under [subsection \(1\)](#) or to revoke such a designation under [section 96H\(3\)\(c\)](#), the Secretary of State may take into account, in particular, advice from, or guidance published by, the Environment Agency or Natural England.
- (3) Where the Secretary of State makes a designation under [subsection \(1\)](#), the Environment Agency must—
- (a) review the environmental permits for the plants that discharge treated effluent into the catchment permitting area that are—
 - (i) nutrient significant plants, and
 - (ii) such other plants that the Environment Agency considers appropriate (including such plants within an area that may be determined by the Environment Agency), and
 - (b) impose conditions on those permits relating to nutrients in treated effluent discharged by those plants—
 - (i) under Chapter 3 of Part 2 of the Environmental Permitting (England and Wales) Regulations 2016, and
 - (ii) for the relevant purpose.
- (4) The “relevant purpose” is ensuring that, on and after the applicable date, the overall effect on the habitats site associated with the catchment permitting area of nutrients in treated effluent discharged by all the plants that discharge treated effluent into the catchment permitting area is less significant or the same as the overall effect on the site of nutrients in treated effluent that would be discharged by those plants if—
- (a) the standard concentration applied to nutrient significant plants, and
 - (b) the nutrient significant plants were (on that basis) meeting the nutrient pollution standard on and after the applicable date.
- (5) For that purpose, a condition imposed on an environmental permit in pursuance of [subsection \(3\)\(b\)](#) may, in particular—
- (a) require, or have the effect of requiring, that the concentration of nutrients in treated effluent discharged by a plant is higher or lower than, or equal to, the standard concentration;
 - (b) relate to any or all of the plants mentioned in [subsection \(3\)\(a\)](#), including the concentration of nutrients in treated effluent discharged by those plants.
- (6) In [subsection \(4\)](#)—
- (a) the “applicable date” means—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (i) where the designation under section 96C(1) or (2) of the area that is the catchment permitting area takes effect during the initial period, 1 April 2030, or
 - (ii) where that designation takes effect after the initial period, the date specified under section 96C(4)(d) in that designation;
 - (b) a habitats site is “associated” with a catchment permitting area if water released into the area would drain into the site.
- (7) The duty in subsection (3) applies in relation to the grant of an environmental permit for a plant that discharges (or will discharge) treated effluent into the catchment permitting area as if—
- (a) paragraph (a) were omitted, and
 - (b) in paragraph (b)—
 - (i) for “those permits” there were substituted “the permit”;
 - (ii) for “those plants” there were substituted “the plant”;
 - (iii) for “Chapter 3” there were substituted “Chapter 2”.
- (8) It is for the Environment Agency to determine the overall effect on a habitats site of nutrients in treated effluent.
- (9) Regulations made by the Secretary of State may specify how such determinations are to be made.
- (10) In this section “nutrients”, in relation to an area designated under—
- (a) section 96C(1), means nutrients in water comprising nitrogen or compounds of nitrogen;
 - (b) section 96C(2), means nutrients in water comprising phosphorus or compounds of phosphorus.

96H Section 96G: procedure and revocations

- (1) A designation under section 96G(1) or revocation of such a designation under subsection (3)(c)—
- (a) must be in writing,
 - (b) must be published as soon as practicable after being made, and
 - (c) takes effect in accordance with subsection (3) or (4) (as appropriate).
- (2) A designation under section 96G(1) may be made at the same time, or at any time after the time, that the designation under section 96C(1) or (2) of the area as a sensitive catchment area is made.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (3) A designation under section 96G(1)—
 - (a) if made before the time that the designation under section 96C(1) or (2) takes effect, takes effect at the same time as that designation;
 - (b) if made after the time that the designation under section 96C(1) or (2) takes effect, takes effect on the day specified in it;
 - (c) may be revoked.
- (4) A revocation under subsection (3)(c)—
 - (a) takes effect—
 - (i) on the day specified in the revocation, or
 - (ii) if none is specified, on the day on which it is made;
 - (b) has no effect in relation to the designation of the area under section 96C(1) or (2);
 - (c) may specify the upgrade date that is to apply in relation to nutrient significant plants (see section 96E(3)).
- (5) In determining whether an upgrade date should be specified under subsection (4)(c), the Secretary of State may take into account, in particular, advice from, or guidance published by, Natural England or the Environment Agency.

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), ss. **168(1)**, **255(6)** (with s. 247)

96I Information about catchment areas and nutrient significant plants

- (1) The Secretary of State must maintain and publish online a map showing—
 - (a) all the nitrogen sensitive catchment areas, and
 - (b) all the phosphorus sensitive catchment areas.
- (2) As soon as practicable after making a designation under section 96C (sensitive catchment areas), the Secretary of State must publish the revised map online.
- (3) The Secretary of State must maintain and publish online a document listing—
 - (a) all plants that are or have been—
 - (i) nitrogen significant plants, or
 - (ii) phosphorus significant plants;
 - (b) in relation to each plant listed under paragraph (a)—
 - (i) the upgrade date that applies for the time being;
 - (ii) if the plant becomes, or ceases to be, an exempt plant in relation to the related nutrient pollution standard, that fact and the date on which it occurred;
 - (iii) where the associated catchment area for a plant is not a catchment permitting area, the figure specified in section 96F(1)(a)(i) or (2)(a)(i), under section 96C(4)(e) or 96D(5) or by virtue of regulations made under section 96D(11) (total nitrogen concentration or total phosphorus concentration) that applies to the plant;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (iv) where a direction relating to the plant and the related nutrient pollution standard is made or revoked under regulation 85C or 110B of the Conservation of Habitats and Species Regulations 2017 ([S.I. 2017/1012](#)) (disapplication of assumption that the plant will meet the standard on and after the upgrade date or applicable date), that fact and the date on which the direction or revocation takes effect;
 - (c) all catchment permitting areas.
- (4) Where any change occurs in the information required to be listed, the Secretary of State must, as soon as practicable, publish a revised document online.

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), **ss. 168(1), 255(6)** (with [s. 247](#))

96J Section 96B: enforcement and interaction with other provisions

- (1) The duty of a sewerage undertaker under section 96B is enforceable under section 18—
- (a) by the Secretary of State, or
 - (b) with the consent of, or in accordance with a general authorisation given by, the Secretary of State, by the Authority.
- (2) The Environment Agency must exercise its functions (whether under environmental permitting regulations or otherwise) so as to secure compliance by sewerage undertakers with the duty imposed by section 96B; those functions include, in particular, functions of determining—
- (a) whether to grant or vary any permit under environmental permitting regulations, or
 - (b) any conditions to be included in any such permit.
- (3) The Environment Agency must exercise its functions under the Environmental Damage (Prevention and Remediation) (England) Regulations 2015 ([S.I. 2015/810](#)) so as to secure compliance by sewerage undertakers with the duties imposed by those regulations to prevent and remediate environmental damage (within the meaning of those regulations) that is treated as occurring by regulation 9A of those regulations (nutrient significant sewage disposal works: environmental damage).
- (4) Nothing in section 96B or 96G or this section affects—
- (a) any other obligation of a sewerage undertaker relating to nutrient levels in treated effluent of a plant, or any remedy available in respect of contravention of any such obligation;
 - (b) any power to impose an obligation relating to nutrient levels in treated effluent of a plant (including by means of a condition included in a permit under environmental permitting regulations); and, in particular, nothing in those sections or this section is to be taken to preclude any such power being exercised so as to require a lower concentration of total nitrogen or lower concentration of total phosphorus in treated effluent of a plant than section 96B requires.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), **ss. 168(1), 255(6)** (with s. 247)

96K Powers to amend sections 96D and 96F

- (1) The Secretary of State may by regulations amend any plant capacity for the time being specified in section 96D(1)(a) or (2)(a).
- (2) Regulations under subsection (1) may not have effect in relation to an area that is a sensitive catchment area when the regulations are made.
- (3) Subject to that, regulations under subsection (1)—
 - (a) may, in particular, amend section 96D so that different plant capacities are specified in relation to the nitrogen nutrient pollution standard and the phosphorus nutrient pollution standard;
 - (b) may, where different plant capacities will apply for different purposes or different areas as a result of regulations under subsection (1), amend section 96D so as to specify those capacities and the purposes or areas for which they apply.
- (4) The Secretary of State may by regulations—
 - (a) amend section 96F(1)(a)(i) so as to substitute a different concentration of total nitrogen;
 - (b) amend section 96F(2)(a)(i) so as to substitute a different concentration of total phosphorus.
- (5) Regulations under subsection (4) may not have effect in relation to an area that is a sensitive catchment area when the regulations are made.
- (6) Where, as a result of the regulations, different concentrations will apply for different purposes or different areas (including different plants within an area), the regulations may amend section 96F(1)(a)(i) or (2)(a)(i) to specify those concentrations and the purposes or areas for (or plants within an area to) which they apply.
- (7) A statutory instrument containing regulations under subsection (1) or (4) may not be made unless a draft of the instrument has been laid before and approved by a resolution of each House of Parliament.
- (8) If a draft of a statutory instrument containing regulations under subsection (1) or (4) would, apart from this subsection, be treated for the purposes of the standing orders of either House of Parliament as a hybrid instrument, it is to proceed in that House as if it were not a hybrid instrument.

96L Sections 96B to 96K, 96M and 96N: interpretation

(1) This section applies for the purposes of sections 96B to 96K, 96M and 96N.

(2) In those sections (and this section)—

“associated catchment area”—

- (a) in relation to a plant that is a nitrogen significant plant or is exempt in relation to the nitrogen nutrient pollution standard, means the nitrogen sensitive catchment area into which it discharges;
- (b) in relation to a plant that is a phosphorus significant plant or is exempt in relation to the phosphorus nutrient pollution standard, means the phosphorus sensitive catchment area into which it discharges;

“catchment permitting area” means a sensitive catchment area designated under section 96G(1) for the time being;

“environmental permit” means a permit granted under Chapter 2 of Part 2 of the Environmental Permitting (England and Wales) Regulations 2016; and a reference to a condition imposed on such a permit is to be construed in accordance with those regulations;

“environmental permitting regulations” means—

- (a) the Environmental Permitting (England and Wales) Regulations 2016 (S.I. 2016/1154) (as they have effect from time to time), or
- (b) any other provision made after the Levelling-up and Regeneration Act 2023 is passed that is, or could have been, made under section 2 of the Pollution Prevention and Control Act 1999;

“exempt plant”, in relation to a nutrient pollution standard, has the meaning given by section 96D;

“habitats site” means a European site within the meaning of the Conservation of Habitats and Species Regulations 2017 (S.I. 2017/1012) (see regulation 8);

“the initial period” has the meaning given by section 96E(4);

“nitrogen nutrient pollution standard”, in relation to references to a nitrogen significant plant meeting the standard, has the meaning given by section 96F(1);

“nitrogen sensitive catchment area” means an area designated under section 96C(1);

“nitrogen significant plant” has the meaning given by section 96B(3);

“nutrient pollution standard” means the nitrogen nutrient pollution standard or the phosphorus nutrient pollution standard;

“nutrient significant plant” means—

- (a) a nitrogen significant plant, or
- (b) a phosphorus significant plant;

“phosphorus nutrient pollution standard”, in relation to references to a phosphorus significant plant meeting the standard, has the meaning given by section 96F(2);

“phosphorus sensitive catchment area” means an area designated under section 96C(2);

“phosphorus significant plant” has the meaning given by section 96B(4);

“plant” means a sewage disposal works;

“related nutrient pollution standard”, in relation to a sensitive catchment area or a plant, means—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) if (or so far as) the area is a nitrogen sensitive catchment area or the plant is a nitrogen significant plant, the nitrogen nutrient pollution standard;
- (b) if (or so far as) the area is a phosphorus sensitive catchment area or the plant is a phosphorus significant plant, the phosphorus nutrient pollution standard;

“sensitive catchment area” means—

- (a) a nitrogen sensitive catchment area, or
- (b) a phosphorus sensitive catchment area;

“standard concentration”, in relation to the nutrient pollution standard that applies to a plant, means the concentration specified in section 96F(1)(a)(i) or (2)(a)(i) on the date that the designation of the associated catchment area as a sensitive catchment area takes effect;

“treated effluent” has the meaning given by section 96F(3);

“upgrade date”, in relation to a plant that discharges into a sensitive catchment area, has the meaning given by section 96E.

- (3) References to a plant discharging into a sensitive catchment area are to the plant discharging treated effluent into the area.
- (4) References to the sewerage system of a sewerage undertaker have the meaning given by section 17BA(7).

Textual Amendments

F983 Ss. 96B-96N inserted (26.12.2023) by [Levelling-up and Regeneration Act 2023 \(c. 55\)](#), **ss. 168(1), 255(6)** (with [s. 247](#))

96M New and altered plants: modifications

- (1) The Secretary of State may by regulations provide for sections 96B to 96L to apply with prescribed modifications in relation to any plant that, after the Levelling-up and Regeneration Act 2023 is passed—
 - (a) operates for the first time, or
 - (b) is altered.

This is subject to subsection (3).

- (2) Regulations under this section may in particular provide for sections 96C(5) and 96D(4) and (10) to apply as if they specified periods other than 7 years.
- (3) But regulations under this section may not modify section 96F(1) or (2) or section 96G(4) so as to apply a higher concentration of total nitrogen or higher concentration of total phosphorus than would otherwise apply.

96N Setting and enforcing nutrient pollution standards

- (1) The Secretary of State may by regulations make provision about the setting and enforcing of nutrient pollution standards.
- (2) The Secretary of State may only exercise the power under subsection (1) if the Secretary of State considers that the provisions about the setting and enforcing of nutrient pollution standards will be at least as effective as the provision already in force under sections 96B to 96M, the Environmental Damage (Prevention and Remediation) (England) Regulations 2015 ([S.I. 810/2015](#)) or this section as a result of the exercise of this power, including in relation to—
 - (a) overall environmental protection (within the meaning of section 45 of the Environment Act 2021),
 - (b) nutrient pollution levels discharged by plants or across catchment areas,
 - (c) enforcement, or
 - (d) costs.
- (3) The regulations may, in particular—
 - (a) amend, repeal, revoke or otherwise modify—
 - (i) sections 96B to 96M,
 - (ii) the Environmental Damage (Prevention and Remediation) (England) Regulations 2015, or
 - (iii) provision made under this section;
 - (b) provide for a sewerage undertaker’s compliance with the duty under section 96B (or an equivalent) to be determined by reference to matters other than the concentration of nitrogen or phosphorous in treated effluent discharged by a plant;
 - (c) include provision applying or corresponding to any provision in sections 96B to 96M (with or without modifications);
 - (d) include provision about the establishment of schemes involving sewerage undertakers and others for the purpose of encouraging or requiring sewerage undertakers to arrange or contribute to action in respect of the effect of nitrogen or phosphorous (from any source) on a habitats site;
 - (e) make different provision for different purposes or different areas.]

any adjacent relevant areas of other relevant authorities, as may be specified in the arrangements.

- (2) Arrangements entered into for the purposes of this section may contain any such provision as may be agreed between the relevant authority and the sewerage undertaker but shall not affect the availability to any person, other than the relevant authority, of any remedy against the undertaker in respect of the carrying out of the undertaker's sewerage functions or of any failure to carry them out.
- (3) It is hereby declared that, if arrangements entered into for the purposes of this section so provide, a relevant authority shall be entitled to exercise on behalf of a sewerage undertaker any power which by or under any enactment is exercisable by the undertaker for the purposes of, or in connection with, the carrying out of the undertaker's sewerage functions.
- (4) Where arrangements entered into for the purposes of this section provide for a local authority to carry out the sewerage functions of a sewerage undertaker on the undertaker's behalf, section 101 of the ^{M26}Local Government Act 1972 (delegation of functions), so far as it relates to the carrying out of functions by a committee, sub-committee or officer of a local authority, shall have effect in relation to those sewerage functions only in so far as the arrangements do not otherwise provide.
- [^{F984}(4A) Where arrangements entered into for the purposes of this section provide for a local authority which are operating executive arrangements to carry out the sewerage functions of a sewerage undertaker on that undertaker's behalf—
 - (a) those sewerage functions shall be treated as functions of the authority for the purposes of section 13 of the Local Government Act 2000; and
 - (b) if or to the extent that those sewerage functions are the responsibility of the executive of that authority—
 - (i) subsection (4) above shall not apply; and
 - (ii) sections 14 to 16 of the Local Government Act 2000 and any regulations made under sections 17 to 20 of that Act shall apply in relation to those sewerage functions only in so far as the arrangements do not provide otherwise.]
- (5) In this section—

[^{F985}“executive” and “executive arrangements” have the same meaning as in Part II of the Local Government Act 2000;]
“new town” has the same meaning as in the ^{M27}New Towns Act 1981;
“relevant area”—

 - (a) in relation to a local authority, means the area of the authority and the whole of any new town or urban development area any part of which is situated within the area of the authority;
 - (aa) [^{F986}in relation to the Mayoral development corporation for any Mayoral development area, means that area;]
 - (b) [^{F987}in relation to the English new towns residuary body, means any new town in England;
 - (ba) in relation to the Welsh new towns residuary body, means any new town in Wales;]
 - (c) in relation to the development corporation for any new town, means that new town; [^{F988}and]
 - (d) [^{F989}.....]

Status: This version of this Act contains provisions that are prospective.

CHAPTER II

PROVISION OF SEWERAGE SERVICES

Requisition of public sewer

98 Duty to comply with sewer requisition.

(1) It shall be the duty of a sewerage undertaker (in accordance with section 101 below) to provide a public sewer to be used for the drainage for domestic purposes of premises in a particular locality in its area if-

- (a) the undertaker is required to provide the sewer by a notice served on the undertaker by one or more of the persons who under subsection (2) below are entitled to require the provision of the sewer for that locality;
 - (b) the premises in that locality the drainage of which would be by means of that sewer are—
 - (i) premises on which there are buildings; or
 - (ii) premises on which there will be buildings when proposals made by any person for the erection of any buildings are carried out;
- and
- (c) the conditions specified in section 99 below are satisfied in relation to that requirement.

[^{F994}(1A) It shall be the duty of a sewerage undertaker (in accordance with section 101 below) to provide a lateral drain to communicate with a public sewer and to be used for the drainage for domestic purposes of premises in its area if—

- (a) the undertaker is required to provide the lateral drain by a notice served on the undertaker by one or more of the persons who under subsection (2A) below are entitled to require the provision of the lateral drain;
- (b) the premises the drainage of which would be by means of that lateral drain are—
 - (i) premises on which there are buildings; or
 - (ii) premises on which there will be buildings when proposals made by any person for the erection of any buildings are carried out; and
- (c) the conditions specified in section 99 below are satisfied in relation to that requirement.]

(2) Each of the following persons shall be entitled to require the provision of a public sewer for any locality, that is to say—

- (a) the owner of any premises in that locality;
- (b) the occupier of any premises in that locality;
- (c) any local authority within whose area the whole or any part of that locality is situated;

[^{F995}(ca) where the whole or any part of that locality is situated within a Mayoral development area, the Mayoral development corporation;]

- (d) where the whole or any part of that locality is situated in a new town, within the meaning of the ^{M29}New Towns Act 1981—
 - (i) the [^{F996}new towns residuary body]; and
 - (ii) ^{F997} . . . the development corporation for the new town ^{F997} . . . ;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

and

- (e) where the whole or any part of that locality is situated within an area designated as an urban development area under Part XVI of the ^{M30}Local Government, Planning and Land Act 1980, the urban development corporation.

^{F998}(2A) Each of the following persons shall be entitled to require the provision of a lateral drain, that is to say—

- (a) the owner of the premises the drainage of which would be by means of that lateral drain;
- (b) the occupier of those premises;
- (c) any local authority within whose area those premises are situated;
- (d) where those premises are situated in a new town, within the meaning of the New Towns Act 1981—
 - (i) the ^{F999}new towns residuary body]; and
 - (ii) the development corporation for the new town; and
- (e) where those premises are situated within an area designated as an urban development area under Part 16 of the Local Government, Planning and Land Act 1980, the urban development corporation.]

^{F1000}(2B)

- (3) The duty of a sewerage undertaker under this section to provide a public sewer ^{F1001}or, as the case may be, a lateral drain] shall be owed to the person who requires the provision of the sewer ^{F1002}or lateral drain] or , as the case may be, to each of the persons who joins in doing so.
- (4) Where a duty is owed by virtue of subsection (3) above to any person, any breach of that duty which causes that person to sustain loss or damage shall be actionable at the suit of that person; but, in any proceedings brought against a ^{F1003}sewerage] undertaker in pursuance of this subsection, it shall be a defence for the undertaker to show that it took all reasonable steps and exercised all due diligence to avoid the breach.
- (5) In this section the reference to domestic purposes, in relation to the drainage of premises ^{F1004} . . . to which a requirement under this section relates, is a reference—
 - (a) where there are buildings on ^{F1005}those premises] , to such domestic sewerage purposes as are specified in relation to those buildings in the requirement; and
 - (b) where any person is proposing to erect buildings on ^{F1006}those premises] , to such domestic sewerage purposes as are so specified in relation to the buildings and to times after the erection of the buildings.

100 Calculation of “relevant deficit” for the purposes of section 99.

- [^{F1021}(1) For the purposes of section 99 above the relevant deficit for any year on a public sewer is the amount (if any) by which the drainage charges payable for the use during that year of that sewer are exceeded by the annual borrowing costs of a loan of the amount required for the provision of that sewer.
- (2) The annual borrowing costs of a loan of the amount required for the provision of a public sewer is the aggregate amount which would fall to be paid in any year by way of payments of interest and repayments of capital if an amount equal to so much of the costs reasonably incurred in providing that sewer as were not incurred in the provision of additional capacity had been borrowed, by the sewerage undertaker providing the sewer, on terms—
- (a) requiring interest to be paid and capital to be repaid in twelve equal annual instalments; and
 - (b) providing for the amount of the interest to be calculated at such rate, and in accordance with such other provision, as may have been determined for the purposes of this subsection.
- (3) A determination for the purposes of subsection (2) above shall be made either—
- (a) by the undertaker with the approval of the Director; or
 - (b) in default of such a determination, by the Director.
- (4) For the purposes of this section the costs reasonably incurred in providing a public sewer (“the new sewer”) shall include—
- (a) the costs reasonably incurred in providing such other public sewers and such pumping stations as it is necessary to provide in consequence of the provision of the new sewer; and
 - (b) such proportion (if any) as is reasonable of the costs reasonably incurred in providing any such additional capacity in an earlier public sewer as falls to be used in consequence of the provision of the new sewer.
- (5) In subsection (4) above the reference to an earlier public sewer, in relation to the new sewer, is a reference to any public sewer which—
- (a) has been provided in the period of twelve years immediately before the provision of the new sewer; and
 - (b) was so provided in pursuance of a public sewer requisition.
- (6) Any reference in this section to the provision of additional capacity in a public sewer provided in pursuance of a requirement under any enactment is a reference to such works carried out or other things done in connection with the provision of that sewer as are carried out or done for the purpose of enabling that sewer to be used for purposes in addition to those for which it is necessary to provide the sewer in order to comply with the requirement.
- (7) Any reference in this section to the drainage charges payable for the use during any year of any sewer provided by a sewerage undertaker is a reference to so much of the

aggregate of any charges payable to the sewerage undertaker in respect of services provided in the course of that year as represents charges which—

- (a) have been imposed by the undertaker in relation to such of the premises connected with that sewer as are premises where there are buildings; and
 - (b) are reasonably attributable to the use of that sewer for the drainage for domestic sewerage purposes of those premises or to the disposal of effluent drained for any such purpose from those premises.
- (8) An approval or determination given or made by the Director for the purposes of subsection (2) above—
- (a) may be given or made in relation to the provision of a particular public sewer, in relation to the provision of sewers of a particular description or in relation to the provision of public sewers generally; and
 - (b) may be revoked at any time except in relation to a public sewer [^{F1022}in respect of which the conditions referred to in section 99(1) above have already been satisfied.]
- (9) In this section “public sewer requisition” means—
- (a) a requirement under section 98 above (including, by virtue of paragraph 1 of Schedule 2 to the ^{M31}Water Consolidation (Consequential Provisions) Act 1991, a requirement under section 71 of the ^{M32}Water Act 1989);
 - (b) a requirement under the provisions of section 16 of the ^{M33}Water Act 1973 (sewer requisitions); or
 - (c) a requirement under any local statutory provision corresponding to section 98 above or to any of the provisions of that section 16.]

[^{F1023}100] Calculation of “discounted aggregate deficit” for the purposes of section 99

- [^{F1024}(1) For the purposes of section 99 above the discounted aggregate deficit on a public sewer is the amount equal to the sum of the estimated relevant deficits for each of the twelve years following the provision of the sewer, in each case discounted in accordance with subsection (6) below.
- (2) The estimated relevant deficit for any year is the amount (if any) by which the estimated drainage charges payable for the use during that year of that sewer would be exceeded by the annual borrowing costs of a loan of the amount required for the provision of that sewer.
- (3) Subsections (2) to (6), (8) and (9) of section 100 above (which relate to the annual borrowing costs of a loan of the amount required for the provision of a public sewer)

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. shall apply for the purposes of this section as they apply for the purposes of that section.

- (4) Any reference in this section to the estimated drainage charges payable for the use during any year of any sewer is a reference to so much of the aggregate of any charges expected to be payable to the sewerage undertaker for the provision of services in the course of that year as would represent charges—
 - (a) imposed by the undertaker in relation to such of the premises with which the sewer is expected to be connected as are premises where there are buildings; and
 - (b) reasonably attributable to the use of that sewer for the drainage for domestic sewerage purposes of those premises or to the disposal of effluent drained for any such purposes from those premises.
- (5) For the purposes of subsection (4) above, a thing is expected to be the case if, at the time the relevant calculation is made, it is reasonably likely to occur.
- (6) The estimated relevant deficit for a year mentioned in subsection (1) above shall be discounted in order to determine its net present value by applying such factor, and in accordance with such other provision, as may be determined by the Authority.
- (7) A determination made by the Authority for the purposes of subsection (6) above—
 - (a) may be made in relation to the provision of a particular public sewer or in relation to the provision of public sewers generally; and
 - (b) may be revoked at any time except in relation to a public sewer in respect of which the conditions referred to in section 99(1) above have already been satisfied.]]

[^{F1025}10]Determination of completion date and route for requisitioned sewer or lateral drain.

- (1) A sewerage undertaker shall not be in breach of a duty imposed by section 98 above in relation to any locality or (in the case of a lateral drain) in relation to any premises unless—
 - (a) the period of six months beginning with the relevant day has expired; and
 - (b) the sewerage undertaker has not, before the end of that period, so laid (as the case may be)—
 - (i) the public sewer to be provided as to enable drains and private sewers to be used for the drainage of premises in the locality to communicate with the public sewer; or
 - (ii) the lateral drain to be provided as to enable the drain to be used for the drainage of premises to communicate with a public sewer vested in that undertaker,at the place or places determined under subsection (3) below.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The period mentioned in subsection (1)(a) above may be extended—
- (a) by agreement between the undertaker and the person or persons who required the provision of the public sewer or, as the case may be, lateral drain; or
 - (b) where there is a dispute as to whether the period should be extended, by the Authority on a reference under subsection (4) below.
- (3) The places mentioned in subsection (1)(b) above shall be—
- (a) such place or places as are determined by agreement between the sewerage undertaker and the person or persons who required the provision of the public sewer or, as the case may be, lateral drain; or
 - (b) in default of agreement, such place or places as are determined by the Authority on a reference under subsection (4) below to be the place or places at which it is reasonable, in all the circumstances—
 - (i) in relation to the provision of a public sewer, for drains or private sewers to be used for the drainage of premises in the locality in question to communicate with the public sewer; or
 - (ii) in relation to the provision of a lateral drain—
 - (a) for the lateral drain to communicate with a public sewer vested in the undertaker; and
 - (b) for the remainder of the drain of which the lateral drain forms part to connect with the lateral drain.
- (4) A reference for the purposes of subsection (2) or (3) above may be made to the Authority for determination under section 30A above by either party to the dispute.
- (5) In this section “relevant day”, in relation to a requirement to provide a public sewer for any locality or, as the case may be, a lateral drain, means the day after whichever is the later of the following—
- (a) the day on which the conditions specified in section 99 above are satisfied in relation to the requirement; and
 - (b) the day on which the place or places where (as the case may be)—
 - (i) drains or private sewers to be used for the drainage of premises in that locality will communicate with the public sewer; or
 - (ii) the lateral drain will communicate with a public sewer and the remainder of the drain will connect with the lateral drain,
 are determined under subsection (3) above.]

F1027 101A Further duty to provide sewers.

- (1) Without prejudice to section 98 above, it shall be the duty of a sewerage undertaker to provide a public sewer to be used for the drainage for domestic sewerage purposes of premises in a particular locality in its area if the conditions specified in subsection (2) below are satisfied.
- (2) The conditions mentioned in subsection (1) above are—
 - (a) that the premises in question, or any of those premises, are premises on which there are buildings ^{F1028} . . . ;
 - (b) that the drains or sewers used for the drainage for domestic sewerage purposes of the premises in question do not, either directly or through an intermediate drain or sewer, connect with a public sewer; and
 - (c) that the drainage of any of the premises in question ^{F1029} . . . is giving, or is likely to give, rise to such adverse effects to the environment or amenity that it is appropriate, having regard to any guidance issued under this section by the Secretary of State and all other relevant considerations, to provide a public sewer for the drainage for domestic sewerage purposes of the premises in question.
- (3) Without prejudice to the generality of subsection (2)(c) above, regard shall be had to the following considerations, so far as relevant, in determining whether it is appropriate for any sewer to be provided by virtue of this section—
 - (a) the geology of the locality in question or of any other locality;
 - (b) the number of premises, being premises on which there are buildings, which might reasonably be expected to be drained by means of that sewer;
 - (c) the costs of providing that sewer;
 - (d) the nature and extent of any adverse effects to the environment or amenity arising, or likely to arise, as a result of the premises or, as the case may be, the locality in question not being drained by means of a public sewer; and
 - (e) the extent to which it is practicable for those effects to be overcome otherwise than by the provision (whether by virtue of this section or otherwise) of public sewers, and the costs of so overcoming those effects.
- (4) Guidance issued by the Secretary of State under this section may—
 - (a) relate to how regard is to be had to the considerations mentioned in paragraphs (a) to (e) of subsection (3) above;
 - (b) relate to any other matter which the Secretary of State considers may be a relevant consideration in any case and to how regard is to be had to any such matter;
 - (c) set out considerations, other than those mentioned in paragraphs (a) to (e) of subsection (3) above, to which (so far as relevant) regard shall be had in determining whether it is appropriate for any sewer to be provided by virtue of this section;
 - (d) relate to how regard is to be had to any such consideration as is mentioned in paragraph (c) above;
 - (e) without prejudice to paragraphs (a) to (d) above, relate to how a sewerage undertaker is to discharge its functions under this section.
- (5) ^{F1030} . . . the Secretary of State shall arrange for any guidance issued by him under this section to be published in such manner as he considers appropriate.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) Subject to the following provisions of this section, the duty of a sewerage undertaker by virtue of subsection (1) above shall be enforceable under section 18 above—
- (a) by the Secretary of State; or
 - (b) with the consent of or in accordance with a general authorisation given by the Secretary of State, by the Director.
- (7) ^{F1031}Subsections (7A) and (7B) apply where there is a dispute] between a sewerage undertaker and an owner or occupier of any premises in its area as to—
- (a) whether the undertaker is under a duty by virtue of subsection (1) above to provide a public sewer to be used for any such drainage of those premises as is mentioned in that subsection;
 - (b) the domestic sewerage purposes for which any such sewer should be provided; or
 - (c) the time by which any such duty of the undertaker should be performed,
- ^{F1032} ...
- [The dispute is to be determined by the appropriate person and may be referred to the
- ^{F1033}(7A) appropriate person for determination by either of the parties to the dispute.
- (7B) If the dispute is between a sewerage undertaker and an owner or occupier of premises in Wales, the NRBW must provide advice in relation to any of the matters mentioned in subsection (7)(a) to (c) if so requested by—
- (a) either of the parties to the dispute, or
 - (b) the appropriate person.
- (7C) Any advice provided by the NRBW under subsection (7B) must be provided to both parties to the dispute and to the appropriate person.]
- (8) The ^{F1034}appropriate person] —
- (a) shall notify the parties of the reasons for its decision on any dispute referred to it under ^{F1035}subsection (7A)] above; and
 - (b) may make any such recommendations, or give any such guidance, relating to or in connection with the drainage of the premises or locality in question as it considers appropriate.
- (9) The decision of the ^{F1036}appropriate person] on any dispute referred to it under ^{F1037}subsection (7A)] above shall be final.
- (10) A sewerage undertaker shall only be taken to be in breach of its duty under subsection (1) above where, and to the extent that, it has accepted, or the ^{F1038}appropriate person] has determined under this section, that it is under such a duty and where any time accepted by it, or determined by the ^{F1038}appropriate person] under this section, as the time by which the duty is to that extent to be performed has passed.
- [In this section “the ^{F1040}appropriate person] ” means—
- ^{F1039}(11) (a) the Environment Agency, in relation to disputes between sewerage undertakers and owners or occupiers of premises in England;
- (b) ^{F1041}the Welsh Ministers] , in relation to disputes between sewerage undertakers and owners or occupiers of premises in Wales^{F1042}, or such person as the Welsh Ministers may from time to time appoint as the appropriate person in relation to such disputes.]]

Status: This version of this Act contains provisions that are prospective.

Adoption etc. of sewers and disposal works

102 Adoption of sewers and disposal works.

- (1) Subject to the following provisions of this section and to sections 103, 105 and 146(3) below, a sewerage undertaker may at any time declare that—
 - (a) any sewer which is situated within its area or which serves the whole or any part of that area,^{F1051} . . .
 - ^{F1052}(aa) any lateral drain which communicates or is to communicate with a public sewer which—
 - (i) is so situated or serves the whole or any part of that area; and
 - (ii) is vested in that undertaker; or]
 - (b) any sewage disposal works which are so situated or which serve the whole or any part of that area,shall, as from such date as may be specified in the declaration, become vested in the undertaker.
- (2) The owner, or any of the owners, of any sewer [^{F1053}, lateral drain] or sewage disposal works with respect to which a sewerage undertaker might make a declaration under this section may make an application to that undertaker requesting it to make a declaration under this section with respect to the sewer [^{F1053}, lateral drain] or works.
- (3) A declaration or application under this section may be made with respect to a part only of a sewer.
- (4) A sewerage undertaker which proposes to make a declaration under this section—
 - ^{F1054}(za) shall give notice of its proposal to any sewerage licensee which uses, or removes matter from, the undertaker's sewerage system in accordance with a retail, wholesale or disposal authorisation;]
 - (a) shall give notice of its proposal to the owner or owners of the sewer [^{F1055}, lateral drain] or works in question; and
 - (b) shall take no further action in the matter until two months have elapsed without an appeal against the proposal being lodged under section 105 below or, as the case may be, until any appeal so lodged has been determined.
- (5) A sewerage undertaker, in deciding whether a declaration should be made under this section, shall have regard to all the circumstances of the case and, in particular, to the following considerations, that is to say—
 - (a) whether the sewer or works in question is or are adapted to, or required for, any general system of sewerage or sewage disposal which the undertaker has provided, or proposes to provide, for the whole or any part of its area;
 - (b) whether the sewer [^{F1056}or lateral drain] is constructed under a highway or under land reserved by a planning scheme for a street;
 - (c) the number of buildings which the sewer [^{F1057}or lateral drain] is intended to serve, and whether, regard being had to the proximity of other buildings or the prospect of future development, it is likely to be required to serve additional buildings;
 - (d) the method of construction and state of repair of the sewer [^{F1058}, lateral drain] or works; and
 - (e) in a case where an owner objects, whether the making of the proposed declaration would be seriously detrimental to him.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) Any person who immediately before the making of a declaration under this section was entitled to use the sewer [F1059 or lateral drain] in question shall be entitled to use it, or any sewer [F1059 or lateral drain] substituted for it, to the same extent as if the declaration had not been made.
- (7) No declaration may be made under this section in respect of any sewer or works the construction of which was completed before 1st October 1937.

Modifications etc. (not altering text)

- C104** S. 102 excluded (28.6.2013) by The Water Industry (Specified Infrastructure Projects) (English Undertakers) Regulations 2013 (S.I. 2013/1582), regs. 1(1)(b), 5(2) (with reg. 1(1)(c))

103 Adoption of cross-border sewers etc.

- (1) Where a sewerage undertaker is about to take into consideration the question of making a declaration under section 102 above with respect to—
- (a) any sewer which is situated within the area of another sewerage undertaker or which, though situated within its own area, serves the whole or any part of the area of another sewerage undertaker; F1060 . . .
- [F1061(aa) any lateral drain which is situated within the area of another sewerage undertaker or which, though situated within its own area, communicates or is to communicate with a public sewer which is situated within or serves the whole or any part of the area of another sewerage undertaker; or]
- (b) any sewage disposal works which are situated within the area of another sewerage undertaker or which, though situated within its own area, serve the whole or any part of the area of another sewerage undertaker,
- it shall give notice to the other undertaker.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(2) Where a sewerage undertaker is required to give notice under subsection (1) above to another undertaker, no declaration under section 102 above shall be made by the former undertaker until either—

- (a) the other undertaker has consented to the declaration; or
- (b) the Secretary of State, on an application made to him, has dispensed with the necessity for such consent, either unconditionally or subject to such conditions as he may think fit to impose.

[^{F1062}(3) Where—

- (a) a sewer (or part of a sewer) or a lateral drain is vested, or any sewage disposal works are vested, in a relevant body; and
- (b) in the case of a sewer, part of a sewer, lateral drain or works vested in railway undertakers or dock undertakers, the sewer, part or lateral drain in question is, or the works are, situated in or on land belonging to those undertakers and held or used by them for the purposes of their undertaking,

a sewerage undertaker shall not make a declaration under section 102 above with respect to (as the case may be) the sewer, or part of it, or the lateral drain or the works, except on the application of the relevant body concerned.]

(4) Where a sewerage undertaker makes a declaration under section 102 above with respect to—

- (a) a sewer [^{F1063}or lateral drain] which is situated within the area of another sewerage undertaker; or
 - (b) any sewage disposal works which are so situated,
- it shall forthwith give notice of the fact to that other undertaker.

(5) In this section “relevant body” means any sewerage undertaker, any local authority or county council or any railway undertakers or dock undertakers.

[^{F1083}105ZA] Adoption at a future date: orders by Authority

- (1) This section applies where a person mentioned in section 104(1)(a) or (b) makes a request to a sewerage undertaker under section 104(2).
- (2) The person or the sewerage undertaker may apply to the Authority for an order under subsection (4) if the person and the sewerage undertaker have not made such agreement as was requested by the person.
- (3) The Authority may, on the application of the person or the sewerage undertaker, make an order under subsection (4) if the Authority is satisfied that—
 - (a) where the person is such person as is mentioned in section 104(1)(a), it is appropriate for work proposed to be done by a person other than the sewerage undertaker to be so done, and
 - (b) the person and the sewerage undertaker cannot reach agreement within a reasonable time.
- (4) The Authority may by order—
 - (a) require the sewerage undertaker to give such undertakings as to the vesting of the sewer, such part of the drain as constitutes the lateral drain or the works in the undertaker as the Authority may specify, and
 - (b) impose such terms and conditions as regards taking the benefit of the undertakings as the Authority may specify.
- (5) An order under subsection (4) has effect as an agreement under section 104 between the person and the sewerage undertaker.
- (6) The Authority may not make an order under subsection (4) with respect to—
 - (a) a sewer, drain or sewage disposal works situated in the area of another undertaker, or
 - (b) a drain which is intended to communicate with a sewer which—
 - (i) is so situated, or
 - (ii) is vested in another sewerage undertaker,until one of the conditions mentioned in subsection (7) is satisfied.
- (7) The conditions are that—
 - (a) the other sewerage undertaker has consented in writing to the making of the order, or
 - (b) the Minister, on an application made to the Minister, has disapplied paragraph (a), either unconditionally or subject to such conditions as the Minister thinks fit.
- (8) “The Minister” means—
 - (a) the Secretary of State, as regards the consent of a sewerage undertaker whose area is wholly or mainly in England;
 - (b) the Welsh Ministers, as regards the consent of a sewerage undertaker whose area is wholly or mainly in Wales.
- (9) Neither the CMA nor the Authority may exercise, in respect of an agreement for the vesting of a sewer, drain or sewage disposal works in a sewerage undertaker at a future date or on a future event, the powers conferred by—
 - (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (10) Subsection (9)(b) does not apply to the exercise of powers in respect of conduct—
- (a) which is connected with an agreement for the vesting of a sewer, drain or sewage disposal works in a sewerage undertaker at a future date or on a future event, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (11) In exercising its functions under this section, the Authority must have regard to the desirability of—
- (a) facilitating effective competition within the sewerage services industry;
 - (b) the recovery by the sewerage undertaker of the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the ability of the sewerage undertaker to meet its existing obligations, and likely future obligations, to provide sewerage services without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the sewerage undertaker to meet its existing obligations, or likely future obligations, to provide sewerage services.

Textual Amendments

F1083 Ss. 105ZA-105ZI inserted (18.12.2015 for the insertion of ss. 105ZF-105ZI, 1.4.2017 for E. for the insertion of s. 105ZD, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), [ss. 11\(3\), 94\(3\)](#); [S.I. 2015/1938, art. 2\(c\)\(ii\)](#); [S.I. 2017/462, arts. 3\(e\)\(ii\), 4\(b\)](#); [S.I. 2017/1288, art. 3\(d\)](#)

105ZB Variation and termination of section 104 agreements

- (1) On the application of a party to a section 104 agreement to vary (or terminate) the agreement, the Authority may—
- (a) if it appears to the Authority that it is necessary or expedient that the section 104 agreement should be varied (or terminated),
 - (b) if the Authority is satisfied, in the case of an application to vary the agreement involving such person as is mentioned in section 104(1)(a), that it is appropriate for work proposed to be done by a person other than the sewerage undertaker to be so done, and
 - (c) if the Authority is satisfied that variation (or termination) cannot be achieved by agreement within a reasonable time,
- by order vary (or terminate) the section 104 agreement.
- (2) If an order under subsection (1) is made in relation to a section 104 agreement, the agreement—
- (a) has effect subject to the provision made by the order, or
 - (b) ceases to have effect, as the case may be.
- (3) An order under subsection (1) may require any party to the agreement to pay compensation to any other party.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) Neither the CMA nor the Authority may exercise, in respect of an agreement to vary or terminate a section 104 agreement, the powers conferred by—
 - (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
- (5) Subsection (4)(b) does not apply to the exercise of powers in respect of conduct—
 - (a) which is connected with an agreement to vary or terminate a section 104 agreement, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (6) In exercising its functions under this section, the Authority must have regard to the expenses incurred by the sewerage undertaker in complying with its obligations under the section 104 agreement in question and to the desirability of—
 - (a) facilitating effective competition within the sewerage services industry;
 - (b) the recovery by the sewerage undertaker of the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the ability of the sewerage undertaker to meet its existing obligations, and likely future obligations, to provide sewerage services without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the sewerage undertaker to meet its existing obligations, or likely future obligations, to provide sewerage services.
- (7) In this section and sections 105ZC to 105ZI “section 104 agreement” means an agreement with a sewerage undertaker for the vesting of a sewer, drain or sewage disposal works in a sewerage undertaker at a future date or on a future event and includes—
 - (a) an order under section 105ZA which is deemed to be an agreement by virtue of section 105ZA(5), and
 - (b) any agreement which has been varied by order under subsection (1).

105ZC Codes in respect of section 104 agreements

- (1) The Authority must issue a code in respect of section 104 agreements.
- (2) The code may make provision about—
 - (a) procedures in connection with making an agreement under section 104;
 - (b) procedures in connection with varying or terminating a section 104 agreement;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) procedures to be followed by the Authority in determining whether to make an order under section 105ZA(4) or 105ZB(1);
 - (d) the circumstances in which it is, or is not, appropriate for work to be done by a person other than a sewerage undertaker;
 - (e) the terms and conditions of a section 104 agreement;
 - (f) principles for determining the terms and conditions that should or should not be incorporated into a section 104 agreement;
 - (g) the steps to be taken by the Authority in determining whether a person is complying with the code.
- (3) Provision under subsection (2)(d) may include in particular provision about circumstances relating to—
- (a) the nature of the work;
 - (b) the kind of premises supplied or to be supplied.
- (4) Provision under subsection (2)(e) may include in particular provision about terms and conditions as regards—
- (a) constructing associated infrastructure;
 - (b) vesting associated infrastructure in a sewerage undertaker;
 - (c) making a communication with public sewers.
- (5) If the Authority considers that a sewerage undertaker is not acting as required by the code, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (6) The Authority may not give a direction under subsection (5) requiring a person to enter into, vary or terminate an agreement.
- (7) It is the duty of a sewerage undertaker to comply with a direction under subsection (5), and this duty is enforceable by the Authority under section 18.
- (8) The code may make different provision for different persons or descriptions of person.
- (9) The Authority must from time to time review the code and, if appropriate, issue a revised code.
- (10) A revised code may include provision for applying any of its revisions to section 104 agreements made before the revised code comes into force.

Textual Amendments

F1083 Ss. 105ZA-105ZI inserted (18.12.2015 for the insertion of ss. 105ZF-105ZI, 1.4.2017 for E. for the insertion of s. 105ZD, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 11(3), 94(3)**; [S.I. 2015/1938, art. 2\(c\)\(ii\)](#); [S.I. 2017/462, arts. 3\(e\)\(ii\), 4\(b\)](#); [S.I. 2017/1288, art. 3\(d\)](#)

105ZD Codes under section 105ZC: procedure

- (1) Before issuing a code under section 105ZC, the Authority must—
- (a) prepare a draft of the proposed code under section 105ZC, and
 - (b) consult such persons about the proposed code as it considers appropriate.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The Authority must specify the period (“the consultation period”) within which a person may make representations about the proposed code.
- (3) Before a code under section 105ZC prepared by the Authority is issued, the Minister may direct the Authority—
 - (a) not to issue the code, or
 - (b) to issue the code with specified modifications.
- (4) Subsection (3) is subject to subsections (6) and (7).
- (5) In this section “the Minister” means—
 - (a) the Secretary of State, so far as the code relates to section 104 agreements for the vesting of sewers, drains or sewage disposal works in sewerage undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as the code relates to section 104 agreements for the vesting of sewers, drains or sewage disposal works in sewerage undertakers whose areas are wholly or mainly in Wales.
- (6) The power under subsection (3) may not be exercised more than once by the Secretary of State or the Welsh Ministers.
- (7) If the power under subsection (3) is not exercised by the Secretary of State or the Welsh Ministers on the first occasion on which it may be exercised by the Secretary of State or (as the case may be) the Welsh Ministers, it may not be exercised by the Secretary of State or (as the case may be) the Welsh Ministers on a later occasion.
- (8) A direction under subsection (3) must be given within the period of 28 days beginning with the day after the end of the consultation period, and a code in relation to which a direction may be given may not be issued before that period of 28 days has expired.
- (9) This section is subject to section 105ZE.

Textual Amendments

F1083 Ss. 105ZA-105ZI inserted (18.12.2015 for the insertion of ss. 105ZF-105ZI, 1.4.2017 for E. for the insertion of s. 105ZD, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), [ss. 11\(3\), 94\(3\)](#); [S.I. 2015/1938](#), [art. 2\(c\)\(ii\)](#); [S.I. 2017/462](#), [arts. 3\(e\)\(ii\), 4\(b\)](#); [S.I. 2017/1288](#), [art. 3\(d\)](#)

105ZE Codes under section 105ZC: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue a revised code under section 105ZC and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 105ZD does not apply to the proposed revised code.
- (3) Once the Authority has issued the revised code, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised code, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) as regards each revision contained in it, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (4) Notice under subsection (3) is to be given to such persons as the Authority considers appropriate.
- (5) Unless the Authority gives notice that a revision in a revised code is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised code is issued.

Textual Amendments

F1083 Ss. 105ZA-105ZI inserted (18.12.2015 for the insertion of ss. 105ZF-105ZI, 1.4.2017 for E. for the insertion of s. 105ZD, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), [ss. 11\(3\), 94\(3\)](#); [S.I. 2015/1938, art. 2\(c\)\(ii\)](#); [S.I. 2017/462, arts. 3\(e\)\(ii\), 4\(b\)](#); [S.I. 2017/1288, art. 3\(d\)](#)

105ZF Rules about charges in connection with a section 104 agreement

- (1) The Authority may issue rules about charges that may be imposed by a sewerage undertaker under a section 104 agreement.
- (2) The rules may in particular make provision about—
 - (a) what types of charge may be imposed;
 - (b) the amount or the maximum amount, or a method for determining the amount or maximum amount, of any type of charge;
 - (c) principles for determining what types of charge may or may not be imposed;
 - (d) principles for determining the amount of any charge that may be imposed;
 - (e) publication of the charges that may be imposed.
- (3) The rules may require a sewerage undertaker, upon declaring a sewer, drain or sewage disposal works to be vested in the undertaker in accordance with a section 104 agreement, to pay to the other party to the agreement an amount (which may be nil) determined in accordance with the rules.
- (4) Rules made by virtue of subsection (3) may, in particular, provide for the determination to take into account—
 - (a) revenue that might be derived from the sewer, drain or sewage disposal works in question;
 - (b) costs that might have been incurred in providing such a sewer, drain or sewage disposal works.
- (5) The rules may also make provision as to—
 - (a) the amount of security that may be required by a sewerage undertaker for the purposes of any charges imposed by the sewerage undertaker under a section 104 agreement;
 - (b) the type of security that may be required;
 - (c) the payment of interest on a sum deposited with a sewerage undertaker by way of security.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) If the Authority considers that a sewerage undertaker is not acting as required by rules under this section, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (7) It is the duty of a sewerage undertaker to comply with a direction under subsection (6), and this duty is enforceable by the Authority under section 18.
- (8) The rules may make different provision for different sewerage undertakers or descriptions of undertaker.
- (9) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (10) The Authority must issue revised rules if—
 - (a) guidance is issued under section 105ZI, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (11) Revised rules may include provision for applying any of their revisions to section 104 agreements made before the revised rules come into effect.

Textual Amendments

F1083 Ss. 105ZA-105ZI inserted (18.12.2015 for the insertion of ss. 105ZF-105ZI, 1.4.2017 for E. for the insertion of s. 105ZD, 1.10.2017 for E. in so far as not already in force, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 11(3), 94(3)**; S.I. 2015/1938, art. 2(c)(ii); S.I. 2017/462, arts. 3(e)(ii), 4(b); S.I. 2017/1288, art. 3(d)

105ZG Rules under section 105ZF: procedure

- (1) Before issuing rules under section 105ZF, the Authority must—
 - (a) prepare a draft of the proposed rules, and
 - (b) consult the relevant persons about the draft.
- (2) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) the Council;
 - (d) any sewerage undertakers or other persons likely to be affected by the rules;
 - (e) such other persons as the Authority thinks appropriate.
- (3) The Authority must specify the period (“the consultation period”) within which the relevant persons may make representations about the proposed rules.
- (4) The Authority must have regard to guidance issued under section 105ZI in making rules under section 105ZF.
- (5) Before rules under section 105ZF prepared by the Authority are issued, the Minister may direct the Authority not to issue the rules.
- (6) In subsection (5) “the Minister” means—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 105ZH Rules under section 105ZF: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue revised rules under section 105ZF and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
- (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 105ZG does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Minister of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Minister may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
- (a) that period of 14 days expires, or
 - (b) the Minister notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,
- whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
- (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.

Status: This version of this Act contains provisions that are prospective.

105ZI Rules under section 105ZF: guidance

- (1) The Minister may issue guidance as to the content of rules under section 105ZF.
- (2) Before issuing the guidance, the Minister must—
 - (a) prepare a draft of the proposed guidance;
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) such other persons as the Minister thinks appropriate.
- (4) The Minister may from time to time revise the guidance and issue revised guidance.
- (5) Subsections (2) and (3) apply to revised guidance as they apply to the original guidance.
- (6) The Minister must arrange for the publication of guidance issued under this section.
- (7) In this section “the Minister” means—
 - (a) the Secretary of State, so far as the guidance is as to the content of rules relating to section 104 agreements for the vesting of sewers, drains or sewage disposal works in sewerage undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as the guidance is as to the content of rules relating to section 104 agreements for the vesting of sewers, drains or sewage disposal works in sewerage undertakers whose areas are wholly or mainly in Wales.]

[^{F1084}105] Schemes for the adoption of sewers, lateral drains and sewage disposal works

- (1) The Secretary of State may by regulations provide for him to make schemes for the adoption by sewerage undertakers of sewers, lateral drains and sewage disposal works of the descriptions set out in paragraphs (a), (aa) and (b) of section 102(1) above.
- (2) The regulations may require sewerage undertakers to prepare draft schemes and to submit them to the Secretary of State.
- (3) Each scheme shall relate to—
 - (a) the area of a sewerage undertaker, or part or parts of it; or
 - (b) the areas of more than one sewerage undertaker, or part or parts of them.
- (4) It shall be the duty of a sewerage undertaker, in specified circumstances, to exercise its powers under section 102 above with a view to making the declaration referred to in subsection (1) of that section in relation to sewers, lateral drains or sewage disposal works which—
 - (a) fall within the area to which a scheme relates; and
 - (b) satisfy specified criteria.
- (5) The circumstances and the criteria shall each be—
 - (a) specified in the regulations; or
 - (b) determined in accordance with the regulations and specified in the scheme.
- (6) In relation to the exercise of those powers pursuant to that duty—
 - (a) section 102 above shall have effect—
 - (i) with the omission of subsections (2), (5) and (7);
 - (ii) as if in subsection (1) the words “sections 103, 105 and 146(3) below” read “section 105B below”;
 - (iii) with the omission of the words “or application” in subsection (3);
 - (iv) as if for subsection (4)(a) there were substituted—
 - “(a) shall give notice of its proposal to the owner or owners of the sewer, lateral drain or works in question unless, after diligent enquiry, he or they cannot be traced;
 - (aa) shall publish notice of its proposal in the prescribed manner; and”;
 - (v) as if in subsection (4)(b) “two months” read “two months or, if longer, the period specified by virtue of section 105B(5) below” and “section 105 below” read “section 105B(4) or (5) below, or”; and
 - (vi) as if section 96(3) of the Water Act 2003 did not apply;
 - (b) sections 103 and 105 above shall not apply; and
 - (c) if the regulations so provide, section 146(3) below shall not apply in circumstances or cases specified in the regulations.
- (7) A duty imposed on a sewerage undertaker under subsection (4) above shall be enforceable by the Secretary of State under section 18 above.
- (8) A statutory instrument containing regulations under subsection (1) above shall not be made unless a draft of the instrument has been laid before, and approved by a resolution of, each House of Parliament.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F1084Ss. 105A-105C inserted (1.4.2007) by [Water Act 2003 \(c. 37\)](#), **ss. 98, 105(3)**; [S.I. 2007/1021](#), **art. 2(b)**

[^{F1085}105A] Adoption schemes: appeals

- (1) Any person falling within subsection (2) below may appeal to the Authority if he is aggrieved by—
 - (a) the proposal of a sewerage undertaker to make a declaration under section 102 above in relation to a sewer, lateral drain or sewage disposal works, pursuant to the undertaker’s duty to do so under section 105A(4) above (the “relevant duty”); or
 - (b) the failure of a sewerage undertaker to make such a proposal pursuant to that duty.
- (2) The persons referred to are—
 - (a) an owner of a sewer, lateral drain or sewage disposal works;
 - (b) any other person affected by the proposal, or the failure, in question.
- (3) The grounds upon which a person may appeal are—
 - (a) in a subsection (1)(a) case, that the relevant duty is not owed in relation to the sewer, lateral drain or sewage disposal works, or that the making of the proposed declaration would be seriously detrimental to him;
 - (b) in a subsection (1)(b) case, that the relevant duty is owed in relation to the sewer, lateral drain or sewage disposal works; or
 - (c) any other prescribed ground.
- (4) An appeal under subsection (1)(a) above shall be made within two months after notice of the proposal is—
 - (a) served on the owner of the sewer, lateral drain or sewage disposal works; or
 - (b) published in accordance with section 102(4) above as modified by section 105A(6) above,(or, if both occur, within two months after whichever is the later).
- (5) An appeal under subsection (1)(b) above shall be made within such period as is specified in the scheme (not being less than two months).
- (6) On the hearing of an appeal under subsection (1) above, the Authority may—
 - (a) in a subsection (1)(a) case, allow or disallow the proposal of the sewerage undertaker; or
 - (b) in a subsection (1)(b) case, determine that the undertaker was not under the relevant duty in relation to the sewer, lateral drain or sewage disposal works in question,or, in either case, make any declaration that the sewerage undertaker might have made, unless the proposal is disallowed.
- (7) If, in a subsection (1)(a) case, the Authority finds that the making of the proposed declaration would be seriously detrimental to the appellant, it shall disregard any duty on the part of the sewerage undertaker to make the proposal for the purpose of determining whether to allow or disallow the proposal.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (8) If, in a subsection (1)(a) case, the Authority disallows the proposal of the sewerage undertaker, the scheme pursuant to which it was made shall have effect as if there were no duty under section 105A(4) above on the sewerage undertaker in relation to the sewer, lateral drain or sewage disposal works in question.
- (9) Where the Authority makes a declaration under subsection (6) above, it may, if it thinks fit—
- (a) specify conditions, including conditions as to the payment of compensation by the sewerage undertaker; and
 - (b) direct that its declaration shall not take effect unless any conditions so specified are accepted.
- (10) A declaration made under subsection (6) above shall have the same effect as if it had been made by the undertaker.
- (11) The Secretary of State may by regulations make further provision in connection with appeals under this section.
- (12) The regulations may, in particular, require the Authority to have regard to prescribed matters when determining an appeal under this section.]

Textual Amendments

F1085Ss. 105A-105C inserted (1.4.2007) by [Water Act 2003 \(c. 37\)](#), **ss. 98**, 105(3); S.I. 2007/1021, **art. 2(b)**

[^{F1086}**105A** adoption schemes: supplementary

- (1) The Secretary of State may vary any scheme, or revoke it.
- (2) Before making regulations or any scheme under section 105A above, and before amending or revoking the regulations or varying or revoking a scheme, the Secretary of State shall consult—
- (a) each sewerage undertaker which would be affected;
 - [any sewerage licensee which uses, or removes matter from, the sewerage
 - ^{F1087}(aa) system of any such sewerage undertaker in accordance with a retail, wholesale or disposal authorisation;]
 - (b) the Authority;
 - (c) the Council;
 - (d) such other persons as the Secretary of State considers appropriate.
- (3) The Secretary of State shall publish each scheme he makes, and any such scheme as varied, in the way he considers best for the purpose of bringing it to the attention of those likely to be affected by it.]

Communication of drains and private sewers with public sewers

106 Right to communicate with public sewers.

[^{F1088}(1) Subject to the provisions of this section—

- (a) the owner or occupier of any premises, or
- (b) the owner of any private sewer which drains premises,

shall be entitled to have his drains or sewer communicate with the public sewer of any sewerage undertaker and thereby to discharge foul water and surface water from those premises or that private sewer.]

[^{F1089}(1A) In this section, and in sections 107 to 109, 111, 113 to 116, 118, 119, 124, 127, 139 and 146 below—

- (a) references (however expressed) to a public sewer include a public lateral drain which satisfies sewer standards; and
- (b) for the purposes of paragraph (a) above—
 - (i) a “public lateral drain” is a lateral drain which either belongs to the sewerage undertaker or is vested in the sewerage undertaker by virtue of a declaration made under section 102 above or under an agreement made under section 104 above; and
 - (ii) “sewer standards” means such standards of construction and repair as the undertaker would require if the public lateral drain or part of it were to become a public sewer.]

[^{F1090}(1B) The right under subsection (1) is subject to section 106A.]

(2) Subject to the provisions of Chapter III of this Part, nothing in subsection (1) above shall entitle any person—

- (a) to discharge directly or indirectly into any public sewer—
 - (i) any liquid from a factory, other than domestic sewage or surface or storm water, or any liquid from a manufacturing process; or
 - (ii) any liquid or other matter the discharge of which into public sewers is prohibited by or under any enactment; or
- (b) where separate public sewers are provided for foul water and for surface water, to discharge directly or indirectly—
 - (i) foul water into a sewer provided for surface water; or
 - (ii) except with the approval of the undertaker, surface water into a sewer provided for foul water; or
- (c) to have his drains or sewer made to communicate directly with a storm-water overflow sewer.

(3) A person desirous of availing himself of his entitlement under this section shall give notice of his proposals to the sewerage undertaker in question.

(4) At any time within twenty-one days after a sewerage undertaker receives a notice under subsection (3) above, the undertaker may by notice to the person who gave the notice refuse to permit the communication to be made, if it appears to the undertaker that the mode of construction or condition of the drain or sewer

- [^{F1091}(a) does not satisfy the standards reasonably required by the undertaker; or
- (b) is such that the making of the communication would be prejudicial to the undertaker’s sewerage system.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) For the purpose of examining the mode of construction and condition of a drain or sewer to which a notice under subsection (3) above relates a sewerage undertaker may, if necessary, require it to be laid open for inspection.
- [^{F1092}(5A) Where the sewer or drain satisfies the standards reasonably required by it, a sewerage undertaker may, as a condition of permitting the communication to be made, require that the sewer or that part of the drain forming the lateral drain be vested in it by virtue of a declaration under section 102 above.]
- (6) Any question arising under subsections [^{F1093}(3) to (5A)] above between a sewerage undertaker and a person proposing to make a communication as to—
- (a) the reasonableness of the undertaker’s refusal to permit a communication to be made; or
 - (b) as to the reasonableness of any requirement under subsection (5) [^{F1094}or (5A)] above,
- may, on the application of that person, be determined by [^{F1095}the Director under section 30A above][^{F1096}(and, accordingly, section 105 above shall not apply to any requirement under subsection (5A) above).]
- ^{F1097}(7)
- (8) Where a person proposes under this section to make a communication between a drain or sewer and such a public sewer in Greater London as is used for the general reception of sewage from other public sewers and is not substantially used for the reception of sewage from private sewers and drains—
- (a) the grounds on which a sewerage undertaker may refuse to permit the communication shall be such grounds as the undertaker thinks fit; and
 - (b) no application to [^{F1098}the Director] may be made under subsection (6) above in respect of any refusal under this subsection.
- (9) In this section “factory” has the same meaning as in the ^{M34}Factories Act 1961.

- C126** S. 106 applied (2.10.2014) by The Clocaenog Forest Wind Farm Order 2014 (S.I. 2014/2441), arts. 1, **18(2)** (with art. 33)
- C127** S. 106 applied (2.10.2014) by The North Killingholme (Generating Station) Order 2014 (S.I. 2014/2434), arts. 1, **14(2)** (with arts. 6, 13, 14(7), Sch. 8 Pt. 1 para. 6, Sch. 8 Pt. 3 paras. 4(3), 6, 17, Sch. 8 Pt. 5 para. 9)
- C128** S. 106 applied (21.10.2014) by The Central Bedfordshire Council (Woodside Link Houghton Regis) Development Consent Order 2014 (S.I. 2014/2637), arts. 1, **16(2)**
- C129** S. 106 applied (23.10.2014) by The South Hook Combined Heat and Power Plant Order 2014 (S.I. 2014/2846), arts. 1, **10(2)**
- C130** S. 106 modified (29.10.2014) by The Able Marine Energy Park Development Consent Order 2014 (S.I. 2014/2935), **art. 20(2)** (with arts. 30(4), 53)
- C131** S. 106 applied (28.11.2014) by The Walney Extension Offshore Wind Farm Order 2014 (S.I. 2014/2950), arts. 1, **15(2)** (with arts. 38, 39)
- C132** S. 106 applied (15.12.2014) by The London Underground (Northern Line Extension) Order 2014 (S.I. 2014/3102), arts. 1, **16(2)** (with Sch. 8 para. 45)
- C133** S. 106 applied (31.12.2014) by The Hornsea One Offshore Wind Farm Order 2014 (S.I. 2014/3331), arts. 1, **12(2)** (with arts. 37, 38)
- C134** S. 106 applied (7.1.2015) by The Willington C Gas Pipeline Order 2014 (S.I. 2014/3328), arts. 1, **14(2)**
- C135** S. 106 applied (2.2.2015) by The Northumberland County Council (A1 – South East Northumberland Link Road (Morpeth Northern Bypass)) Development Consent Order 2015 (S.I. 2015/23), arts. 1, **18(2)** (with art. 18(7))
- C136** S. 106 applied (25.2.2015) by The A160/A180 (Port of Immingham Improvement) Development Consent Order 2015 (S.I. 2015/129), arts. 1, **16(2)**
- C137** S. 106 applied (11.3.2015) by The Dogger Bank Creyke Beck Offshore Wind Farm Order 2015 (S.I. 2015/318), arts. 1, **17(2)** (with art. 17(7)(9), 40, 41, Sch. 12 Pt. 1 paras. 4, 9(2), 10, Sch. 12 Pt. 2 paras. 4(2)(3), 19, Sch. 12 Pt. 4 paras. 3, 4, 16)
- C138** S. 106 applied (1.4.2015) by The Knottingley Power Plant Order 2015 (S.I. 2015/680), arts. 1, **15(2)** (with art. 15(7), Sch. 8 para. 10)
- C139** S. 106 applied (21.4.2015) by The Network Rail (Ordsall Chord) Order 2015 (S.I. 2015/780), arts. 1, **17(2)** (with arts. 17(2), 36(2))
- C140** S. 106 applied (9.6.2015) by The White Moss Landfill Order 2015 (S.I. 2015/1317), arts. 1, **9(2)** (with art. 5)
- C141** S. 106 applied (23.6.2015) by The Norfolk County Council (Norwich Northern Distributor Road (A1067 to A47(T))) Order 2015 (S.I. 2015/1347), arts. 1, **17(2)**
- C142** S. 106 applied (30.6.2015) by The Swansea Bay Tidal Generating Station Order 2015 (S.I. 2015/1386), arts. 1, **13(2)** (with arts. 51, 53)
- C143** S. 106 applied (7.8.2015) by The Preesall Underground Gas Storage Facility Order 2015 (S.I. 2015/1561), arts. 1, **15(2)** (with art. 44)
- C144** S. 106 applied (14.8.2015) by The Progress Power (Gas Fired Power Station) Order 2015 (S.I. 2015/1570), arts. 1, **15(2)**
- C145** S. 106 applied (14.8.2015) by The Hirwaun Generating Station Order 2015 (S.I. 2015/1574), arts. 1, **14(2)**
- C146** S. 106 applied (26.8.2015) by The Dogger Bank Teesside A and B Offshore Wind Farm Order 2015 (S.I. 2015/1592), arts. 1, **18(2)** (with arts. 40, 41)
- C147** S. 106 applied (19.11.2015) by The Ferrybridge Multifuel 2 Power Station Order 2015 (S.I. 2015/1832), arts. 1(2), **12(2)**
- C148** S. 106 applied (16.12.2015) by The Network Rail (Tinsley Chord) Order 2015 (S.I. 2015/1876), arts. 1, **8(2)**
- C149** S. 106 modified (30.12.2015) by The Port Talbot Steelworks Generating Station Order 2015 (S.I. 2015/1984), arts. 1, **10(2)** (with art. 26)
- C150** S. 106 applied (2.2.2016) by The East Midlands Gateway Rail Freight Interchange and Highway Order 2016 (S.I. 2016/17), arts. 1, **22(2)**

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- C151** S. 106 applied (9.2.2016) by The National Grid (Hinkley Point C Connection Project) Order 2016 (S.I. 2016/49), arts. 1, **16(2)** (with art. 16(7)(8), 32)
- C152** S. 106 applied (18.2.2016) by The A19/A1058 Coast Road (Junction Improvement) Development Consent Order 2016 (S.I. 2016/73), arts. 1, **15(2)** (with art. 37)
- C153** S. 106 applied (25.3.2016) by The Thorpe Marsh Gas Pipeline Order 2016 (S.I. 2016/297), arts. 1, **17(2)** (with art. 39)
- C154** S. 106 applied (1.6.2016) by The A14 Cambridge to Huntingdon Improvement Scheme Development Consent Order 2016 (S.I. 2016/547), arts. 1, **17(2)** (with arts. 4, 5(3), 17(6))
- C155** S. 106 applied (14.6.2016) by The Midland Metro (Birmingham City Centre Extension, etc.) (Land Acquisition and Variation) Order 2016 (S.I. 2016/545), arts. 1, **15(2)** (with art. 39)
- C156** S. 106 applied (2.8.2016) by The Meaford Gas Fired Generating Station Order 2016 (S.I. 2016/779), arts. 1, **16(2)**
- C157** S. 106 applied (2.8.2016) by The Midland Metro (Wolverhampton City Centre Extension) Order 2016 (S.I. 2016/684), arts. 1, **20(2)** (with arts. 46, 47, Sch. 9 para. 4, Sch. 10 para. 12(2))
- C158** S. 106 applied (10.8.2016) by The York Potash Harbour Facilities Order 2016 (S.I. 2016/772), arts. 1, **14(2)** (with arts. 14(7), 35, 36)
- C159** S. 106 applied (19.8.2016) by The North Wales Wind Farms Connection Order 2016 (S.I. 2016/818), arts. 1, **16(2)** (with art. 35)
- C160** S. 106 applied (7.9.2016) by The Hornsea Two Offshore Wind Farm Order 2016 (S.I. 2016/844), arts. 1(2), **15(2)** (with arts. 37, 38)
- C161** S. 106 applied (15.9.2016) by The River Humber Gas Pipeline Replacement Order 2016 (S.I. 2016/853), arts. 1, **18(2)** (with art. 43)
- C162** S. 106 applied (23.9.2016) by The M4 Motorway (Junctions 3 to 12) (Smart Motorway) Development Consent Order 2016 (S.I. 2016/863), arts. 1, **17(2)**
- C163** S. 106 applied (27.9.2016) by The Triton Knoll Electrical System Order 2016 (S.I. 2016/880), arts. 1(2), **12(2)** (with arts. 39, 40, Sch. 8 para. 19)
- C164** S. 106 applied (28.10.2016) by The Brechfa Forest Wind Farm Connection Order 2016 (S.I. 2016/987), arts. 1, **15(2)** (with arts. 15(7), 37)
- C165** S. 106 applied (24.11.2016) by The Transport for Greater Manchester (Light Rapid Transit System) (Trafford Park Extension) Order 2016 (S.I. 2016/1035), arts. 1, **21(2)** (with arts. 21(7), 43, 44)
- C166** S. 106 applied (18.3.2017) by The North London Heat and Power Generating Station Order 2017 (S.I. 2017/215), arts. 1, **16(6)**
- C167** S. 106 applied (29.3.2017) by The Glyn Rhonwy Pumped Storage Generating Station Order 2017 (S.I. 2017/330), arts. 1, **17(2)** (with art. 31)
- C168** S. 106 applied (5.4.2017) by The Keuper Underground Gas Storage Facility Order 2017 (S.I. 2017/433), arts. 1, **16(2)**
- C169** S. 106 applied (8.8.2017) by The Wrexham Gas Fired Generating Station Order 2017 (S.I. 2017/766), arts. 1, **15(2)**
- C170** S. 106 applied (24.8.2017) by The National Grid (Richborough Connection Project) Development Consent Order 2017 (S.I. 2017/817), arts. 1, **16(2)** (with arts. 16(7), 22)
- C171** S. 106 applied (29.8.2017) by The East Anglia THREE Offshore Wind Farm Order 2017 (S.I. 2017/826), arts. 1, **13(2)** (with arts. 5(9), 36, 37, Sch. 8 para. 34)
- C172** S. 106 applied (5.9.2017) by The London Overground (Barking Riverside Extension) Order 2017 (S.I. 2017/830), arts. 1, **14(2)** (with art. 14(7), Sch. 8 para. 20)
- C173** S. 106 applied (19.12.2017) by The Network Rail (Buxton Sidings Extension) Order 2017 (S.I. 2017/1150), arts. 1, **15(2)** (with art. 32(2))
- C174** S. 106 applied (22.12.2017) by The M20 Junction 10a Development Consent Order 2017 (S.I. 2017/1202), arts. 1, **18(2)** (with arts. 4, 37)
- C175** S. 106 applied (2.1.2018) by The Boston Barrier Order 2017 (S.I. 2017/1329), arts. 1, **19(2)** (with arts. 55-57, Sch. 8 para. 13)
- C176** S. 106 applied (4.1.2018) by The Blackpool Tramway (Blackpool North Extension) Order 2017 (S.I. 2017/1214), arts. 1, **19(2)** (with arts. 19(7), 58, 59)

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - C177** S. 106 applied (18.4.2018) by The Network Rail (Hope Valley Capacity) Order 2018 (S.I. 2018/446), arts. 1, **14(2)** (with arts. 14(7), 24(8), 33(2))
- C178** S. 106 applied (31.5.2018) by The Silvertown Tunnel Order 2018 (S.I. 2018/574), arts. 1(2), **14(2)**
- C179** S. 106 applied (24.8.2018) by The Network Rail (Werrington Grade Separation) Order 2018 (S.I. 2018/923), arts. 1, **16(2)** (with arts. 16(7), 31(2))
- C180** S. 106 applied (3.10.2018) by The A19/A184 Testo’s Junction Alteration Development Consent Order 2018 (S.I. 2018/994), arts. 1, **17(2)(7)** (with arts. 3(3), 5)
- C181** S. 106 applied (12.10.2018) by The Eggborough Gas Fired Generating Station Order 2018 (S.I. 2018/1020), arts. 1, **14(2)** (with arts. 6, 42)
- C182** S. 106 applied (13.3.2019) by The Port of Tilbury (Expansion) Order 2019 (S.I. 2019/359), arts. 1, **18(2)** (with arts. 18(6), 55, 56)
- C183** S. 106 applied (3.4.2019) by The Millbrook Gas Fired Generating Station Order 2019 (S.I. 2019/578), arts. 1, **16(2)**
- C184** S. 106 applied (10.10.2019) by The Abergelli Power Gas Fired Generating Station Order 2019 (S.I. 2019/1268), arts. 1, **16(2)**
- C185** S. 106 applied (25.10.2019) by The Drax Power (Generating Stations) Order 2019 (S.I. 2019/1315), arts. 1, **16(2)**
- C186** S. 106 applied (30.10.2019) by The Northampton Gateway Rail Freight Interchange Order 2019 (S.I. 2019/1358), arts. 1, **21(2)** (with art. 21(8), Sch. 13 Pt. 1 para. 19)
- C187** S. 106 applied (25.2.2020) by The Network Rail (East West Rail) (Bicester to Bedford Improvements) Order 2020 (S.I. 2020/114), arts. 1, **19(2)** (with arts. 19(7), 37(2))
- C188** S. 106 applied (27.2.2020) by The A30 Chiverton to Carland Cross Development Consent Order 2020 (S.I. 2020/121), arts. 1, **20(2)** (with art. 3(1))
- C189** S. 106 applied (14.4.2020) by The Reinforcement to the North Shropshire Electricity Distribution Network Order 2020 (S.I. 2020/325), arts. 1, **15(2)** (with arts. 7, 15(7))
- C190** S. 106 applied (30.4.2020) by The A585 Windy Harbour to Skippool Highway Development Consent Order 2020 (S.I. 2020/402), arts. 1, **17(2)** (with arts. 5, 17(7), 44)
- C191** S. 106 applied (1.5.2020) by The Riverside Energy Park Order 2020 (S.I. 2020/419), arts. 1, **18(2)** (with arts. 7, 18(6))
- C192** S. 106 applied (21.5.2020) by The Lake Lothing (Lowestoft) Third Crossing Order 2020 (S.I. 2020/474), arts. 1, **15(2)** (with arts. 15(6), 51, 56)
- C193** S. 106 applied (25.5.2020) by The West Midlands Rail Freight Interchange Order 2020 (S.I. 2020/511), arts. 1, **21(2)** (with art. 21(7))
- C194** S. 106 applied (11.6.2020) by The M42 Junction 6 Development Consent Order 2020 (S.I. 2020/528), arts. 1, **21(2)** (with art. 37)
- C195** S. 106 applied (18.6.2020) by The A63 (Castle Street Improvement, Hull) Development Consent Order 2020 (S.I. 2020/556), arts. 1, **17(2)** (with arts. 5, 44)
- C196** S. 106 applied (19.6.2020) by The Cleve Hill Solar Park Order 2020 (S.I. 2020/547), arts. 1, **13(2)** (with art. 37)
- C197** S. 106 applied (22.7.2020) by The Norfolk Vanguard Offshore Wind Farm Order 2020 (S.I. 2020/706), arts. 1, **15(2)** (with arts. 41, 42, Sch. 16 para. 66)
- C198** S. 106 applied (6.8.2020) by The A19 Downhill Lane Junction Development Consent Order 2020 (S.I. 2020/746), arts. 1, **17(2)** (with arts. 5, 17(7))
- C199** S. 106 applied (1.9.2020) by The Immingham Open Cycle Gas Turbine Order 2020 (S.I. 2020/847), arts. 1, **15(2)** (with Sch. 9 para. 144)
- C200** S. 106 applied (15.10.2020) by The Great Yarmouth Third River Crossing Development Consent Order 2020 (S.I. 2020/1075), arts. 1, **20(2)**
- C201** S. 106 applied (29.10.2020) by The Southampton to London Pipeline Development Consent Order 2020 (S.I. 2020/1099), arts. 1, **18(2)** (with art. 32, Sch. 9 para. 36)
- C202** S. 106 applied (11.11.2020) by The West Burton C (Gas Fired Generating Station) Order 2020 (S.I. 2020/1148), arts. 1, **11(2)** (with reg. 11(7))
- C203** S. 106 applied (31.12.2020) by The Network Rail (Cambridgeshire Level Crossing Reduction) Order 2020 (S.I. 2020/1485), arts. 1, **17(2)**

Status: This version of this Act contains provisions that are prospective.

^{F1099}106A Sustainable drainage

- (1) This section applies to a drainage system construction of which required approval under Schedule 3 to the Flood and Water Management Act 2010 (sustainable drainage).
- (2) A person may exercise the right under section 106(1) in respect of surface water only if—
 - (a) the construction of the drainage system was approved under that Schedule, and
 - (b) the proposals for approval included a proposal for the communication with the public sewer.
- (3) Where subsection (2) is satisfied, the connection may not be refused—
 - (a) under section 106(4), or
 - (b) on grounds that the drainage system absorbs water from more than one set of premises or sewer, or from land that is neither premises nor a sewer.]

Textual Amendments

F1099S. 106A inserted (2.5.2018 for W. for specified purposes, 7.1.2019 for W. in so far as not already in force) by [Flood and Water Management Act 2010 \(c. 29\)](#), s. 49(3), [Sch. 3 para. 16\(2\)](#) (with s. 49(1)(6)); S.I. 2018/557, arts. 2(b), 3(b)

^{F1100}106B Requirement to enter into agreement before construction

- (1) A person may exercise the right under section 106(1) in respect of a lateral drain or sewer constructed after the commencement of this section only if Conditions 1 and 2 are satisfied.
- (2) Condition 1 is that an agreement was entered into under section 104 in respect of the drain or sewer.
- (3) Condition 2 is that the agreement included—
 - (a) provision about the standards according to which the drain or sewer was to be constructed, and
 - (b) provision about adoption of the drain or sewer by the sewerage undertaker.
- (4) Provision for the purposes of Condition 2(a) must either—
 - (a) incorporate or accord with standards published by the Minister, or
 - (b) depart from those standards by express consent of the parties to the agreement.
- (5) Provision for the purposes of Condition 2(b) must—
 - (a) include provision for adoption to occur automatically upon the occurrence of specified events, and
 - (b) comply with any regulations made by the Minister (which may concern the provision required by paragraph (a) of this subsection).
- (6) Subsection (1) does not apply—
 - (a) to drainage systems required to be approved in accordance with Schedule 3 to the Flood and Water Management Act 2010, or
 - (b) in other circumstances specified by the Minister in regulations.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (7) Where a person seeks to exercise the right under section 106(1) in reliance on satisfying Conditions 1 and 2, an undertaker may not refuse connection—
- (a) whether or not in reliance on section 106(4), and
 - (b) whether or not the terms of the agreement under section 104 (including terms required by this section) have been complied with.
- (8) In this section “the Minister” means—
- (a) the Secretary of State, in relation to sewerage undertakers whose areas are wholly or mainly in England, and
 - (b) the Welsh Ministers, in relation to sewerage undertakers whose areas are wholly or mainly in Wales.]

Textual Amendments

F1100 S. 106B inserted (1.10.2010 for specified purposes, 1.10.2012 for specified purposes) by [Flood and Water Management Act 2010 \(c. 29\)](#), **ss. 42(1), 49(3)** (with [s. 49\(1\)\(6\)](#)); [S.I. 2010/2169](#), art. 4; [S.I. 2012/2048](#), art. 2 (with art. 3)

107 Right of sewerage undertaker to undertake the making of communications with public sewers.

- (1) Where a person gives to a sewerage undertaker notice under section 106 above of his proposal to have his drains or sewer made to communicate with a public sewer of that undertaker, the undertaker may—
- (a) within fourteen days after the receipt of the notice; or
 - (b) if any question arising under the notice requires to be determined by ^{F1101}the Director], within fourteen days after the determination of that question, give notice to that person that the undertaker intends itself to make the communication.
- ^{F1102}(1A) A sewerage undertaker may not give notice to a person under subsection (1) if—
- (a) the undertaker and the person entered into an agreement under section 104, and
 - (b) the agreement provides for the communication to which the person's proposal relates to be made by the person.]
- (2) If, after a notice has been given to any person under subsection (1) above, that person proceeds himself to make the communication, he shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 4 on the standard scale.
- (3) Where a sewerage undertaker has given a notice under subsection (1) above—
- (a) the undertaker shall have all such rights in respect of the making of the communication as the person desiring it to be made would have; but
 - (b) it shall not be obligatory on the undertaker to make the communication until either—
 - (i) there has been paid to the sewerage undertaker any such sum, not exceeding the undertaker's reasonable estimate of ^{F1103}the amount by way of charges that the undertaker may impose in accordance with charging rules for making the connection] , as the undertaker may have required to be paid to it; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. (ii) there has been given to the undertaker [F1104such security for the payment of that amount as charging rules allow and it may have required.]

[F1105(4) If a payment to a sewerage undertaker under subsection (3) exceeds the charges that may, in the event, be imposed in accordance with charging rules for making the connection in question, the excess is to be repaid by the undertaker; and, if and so far as those charges are not covered by a payment under subsection (3), those charges are to be paid by the person for whom the work was undertaken.]

F1106[(4A) Any dispute between a sewerage undertaker and any other person as to—

(a) whether the undertaker’s estimate [F1107of the amount of charges] given under subsection (3)(b)(i) above is reasonable,

[F1108(b) the security required by the undertaker, or]

[F1109(c) whether any excess is repayable, or any charges are payable, under subsection (4), or the amount of any such excess or charges,]

may be referred to the Director for determination under section 30A above by either party to the dispute.]

(5) Sections 291, 293 and 294 of the M35Public Health Act 1936 (which provide for the means of, and for limitations on, the recovery of expenses incurred by a local authority) shall apply in relation to the recovery by a sewerage undertaker of any sums under this section as they apply in relation to the recovery of expenses under that Act by a local authority.

(6) For the purposes of this section, the making of the communication between a drain or private sewer and a public sewer includes all such work as involves the breaking open of a street.

[F1110(7) A reference in this section to an agreement under section 104 includes a reference to—

(a) an order under section 105ZA which is deemed to be an agreement by virtue of section 105ZA(5), and

(b) an agreement which has been varied by order under section 105ZB(1).]

108 Communication works by person entitled to communication.

- (1) Where a sewerage undertaker does not under section 107 above elect itself to make a communication to which a person is entitled under section 106 above [^{F1111}or may not make such an election because of section 107(1A)], the person making it shall—
 - (a) before commencing the work, give reasonable notice to any person directed by the undertaker to superintend the carrying out of the work; and
 - (b) afford any such person all reasonable facilities for superintending the carrying out of the work.
- (2) For the purpose—
 - (a) of exercising his rights under section 106 above; or
 - (b) of examining, repairing or renewing any drain or private sewer draining his premises into a public sewer,

the owner or occupier of any premises shall be entitled to exercise the same powers as, for the purpose of carrying out its functions, are conferred on a sewerage undertaker by sections 158 and 161(1) below.
- (3) The provisions of Part VI of this Act shall apply, with the necessary modifications, in relation to the power conferred by subsection (2) above as they apply in relation to the power conferred by sections 158 and 161(1) below.

Textual Amendments

F1111 Words in s. 108(1) inserted (1.4.2019 for W.) by [Water Act 2014 \(c. 21\)](#), **ss. 11(5)**, 94(3); S.I. 2017/1288, art. 3(d)

109 Unlawful communications.

- (1) Any person who causes a drain or sewer to communicate with a public sewer—
 - (a) in contravention of any of the provisions of section 106 or 108 above; or
 - (b) before the end of the period mentioned in subsection (4) of that section 106,

shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 4 on the standard scale.
- (2) Whether proceedings have or have not been taken by a sewerage undertaker in respect of an offence under this section, such an undertaker may—
 - (a) close any communication made in contravention of any of the provisions of section 106 or 108 above; and
 - (b) recover from the offender any expenses reasonably incurred by the undertaker in so doing.

Status: This version of this Act contains provisions that are prospective.

Connections between public sewers

110 Determination of disputes with respect to cross boundary sewers.

- (1) Where any part of a sewer is vested in a sewerage undertaker by virtue of section 70 of the ^{M37}Water Act 1989 (cross boundary sewers), the terms on which that part of that sewer—
- (a) communicates with such parts of that sewer or of any other sewer; or
 - (b) discharges into any such sewage disposal works,
- as immediately before 1st September 1989 were vested in the same water authority as that part of that sewer but, by virtue of that section, are vested in another sewerage undertaker shall be determined, in default of agreement, by the Director.
- (2) A determination by the Director under this section shall have effect as an agreement between the sewerage undertakers in question but may be varied or revoked by a subsequent determination made by the Director on the application of either of those undertakers, as well as by agreement between the undertakers.
- (3) In making a determination under this section, the Director shall have regard to the desirability of a sewerage undertaker’s recovering the costs resulting from its allowing the sewers of other sewerage undertakers to communicate with its sewers or to discharge into its sewage disposal works and of its securing a reasonable return on its capital.

[^{F1112}110] Main connections

- (1) This section applies where—
- (a) a qualifying person requests a sewerage undertaker to permit a main connection into the established undertaker’s sewerage system for the benefit of the qualifying person, or
 - (b) a sewerage undertaker proposes such an arrangement;
- and references in this section to the established undertaker are references to the sewerage undertaker who is to permit the main connection.
- (2) In this section “qualifying person” means—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) a sewerage undertaker, or
 - (b) a person who has made an application for an appointment or variation under section 8 which has not been determined.
- (3) On the application of the qualifying person or the established undertaker, the Authority may—
- (a) if it appears to the Authority that it is necessary or expedient for the purposes of this Part that the established undertaker should permit a main connection into its sewerage system, and
 - (b) if the Authority is satisfied that the established undertaker and qualifying person cannot reach agreement,
- by order require the established undertaker to permit the connection for such period and on such terms and conditions as may be specified in the order.
- (4) Before making an order under subsection (3), the Authority must consult the appropriate agency.
- (5) Subject to subsection (6), an order under subsection (3) has effect as an agreement between the established undertaker and the qualifying person.
- (6) If the Authority makes an order under subsection (3) on the application of a person who is a qualifying person by virtue of subsection (2)(b), the Authority must frame the order so that it does not have effect until—
- (a) the person becomes a sewerage undertaker for the area specified in the order, or
 - (b) the person becomes a sewerage undertaker for an area that includes the area specified in the order (in the case of a sewerage undertaker applying for a variation).
- (7) Neither the CMA nor the Authority may exercise, in respect of an agreement with a sewerage undertaker for it to permit a main connection into its sewerage system for the benefit of a qualifying person, the powers conferred by—
- (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
- (8) Subsection (7)(b) does not apply to the exercise of powers in respect of conduct—
- (a) which is connected with such agreement as is mentioned in subsection (7), and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (9) In exercising its functions under this section, the Authority must have regard to the desirability of—
- (a) facilitating effective competition within the sewerage services industry;
 - (b) the established undertaker's recovering the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the established undertaker's being able to meet its existing obligations, and likely future obligations, to provide sewerage services without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the established undertaker to meet its existing obligations, or likely future obligations, to provide such services.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (10) In this section and section 110B “the appropriate agency”, in relation to a determination whether to make an order under subsection (3) or section 110B(1) which would result in, or which would vary or terminate, a main connection agreement, means—
- (a) the Environment Agency, in a case where all parties to the main connection agreement are or would be—
 - (i) a sewerage undertaker whose area is wholly in England, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a sewerage undertaker;
 - (b) the NRBW, in a case where all parties to the main connection agreement are or would be—
 - (i) a sewerage undertaker whose area is wholly in Wales, or
 - (ii) a person who would, if the person's application for an appointment or variation is determined in accordance with the application, be such a sewerage undertaker;
 - (c) both the Environment Agency and the NRBW, in any other case.
- (11) In this section and sections 110B to 110J—
- “main connection” means—
- (a) a connection between a sewer or disposal main and a sewer or disposal main, or
 - (b) a connection which allows a sewer or disposal main to discharge directly into a sewage disposal works;
- “main connection agreement” means an agreement with one or more sewerage undertakers for that undertaker or each of them to permit a main connection into its sewerage system and includes—
- (a) an order under subsection (3) which is deemed to be an agreement by virtue of subsection (5), and
 - (b) any agreement which has been varied by order under section 110B(1).]

F1112 Ss. 110A-110J substituted for s. 110A (1.11.2016 for the substitution of ss. 110A, 110B, 110J, 1.4.2018 for E. for specified purposes, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014](#) (c. 21), [ss. 9\(1\), 94\(3\)](#) (with s. 9(2)(3)); S.I. 2016/1007, art. 2(c)(i); S.I. 2017/1288, art. 3(b); S.I. 2018/397, art. 2(b)

[^{F1112}110B] Variation and termination of main connection agreements

- (1) On the application of any party to a main connection agreement, the Authority may—
- (a) if it appears to the Authority that it is necessary or expedient for the purpose of this Part that the main connection agreement should be varied or terminated, and
 - (b) if the Authority is satisfied that variation or termination cannot be achieved by agreement,
- by order vary or terminate the main connection agreement.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Before making an order under subsection (1), the Authority must consult the appropriate agency.
- (3) If an order under subsection (1) is made in relation to a main connection agreement, the agreement—
 - (a) has effect subject to the provision made by the order, or
 - (b) ceases to have effect (as the case may be).
- (4) An order under subsection (1) may require any party to the agreement to pay compensation to any other party.
- (5) Neither the CMA nor the Authority may exercise, in respect of an agreement to vary or terminate a main connection agreement, the powers conferred by—
 - (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
- (6) Subsection (5)(b) does not apply to the exercise of powers in respect of conduct—
 - (a) which is connected with an agreement to vary or terminate a main connection agreement, and
 - (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (7) In exercising its functions under this section, the Authority must have regard to the expenses incurred by the established undertaker in complying with its obligations under the main connection agreement in question and to the desirability of—
 - (a) facilitating effective competition within the sewerage services industry;
 - (b) the established undertaker's recovering the expenses of complying with its obligations by virtue of this section and securing a reasonable return on its capital;
 - (c) the established undertaker's being able to meet its existing obligations, and likely future obligations, to provide sewerage services without having to incur unreasonable expenditure in carrying out works;
 - (d) not putting at risk the ability of the established undertaker to meet its existing obligations, or likely future obligations, to provide such services.
- (8) In this section and sections 110C to 110J “established undertaker”, in relation to a sewerage agreement, means the sewerage undertaker which is required by the agreement to permit a main connection into its sewerage system.

Textual Amendments

110C Codes in respect of main connection agreements

- (1) The Authority may issue one or more codes in respect of main connection agreements.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) A code may make provision about—
 - (a) procedures in connection with making an agreement to permit a main connection into a sewerage undertaker's sewerage system;
 - (b) procedures in connection with varying or terminating a main connection agreement;
 - (c) procedures to be followed by the Authority in determining whether to make an order under section 110A(3) or 110B(1);
 - (d) the terms and conditions of a main connection agreement, including terms as to the duration of such an agreement;
 - (e) principles for determining the terms and conditions that should or should not be incorporated into a main connection agreement;
 - (f) the steps to be taken by the Authority in determining whether a person is complying with the code.
- (3) If the Authority considers that a sewerage undertaker is not acting as required by a code, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (4) The Authority may not give a direction under subsection (3) requiring a person to enter into, vary or terminate an agreement.
- (5) It is the duty of a sewerage undertaker to comply with a direction under subsection (3), and this duty is enforceable by the Authority under section 18.
- (6) A code may make different provision for different persons or different descriptions of person.
- (7) The Authority may from time to time revise a code issued under this section and issue a revised code.
- (8) A revised code may include provision for applying any of its revisions to main connection agreements made before the revised code comes into force.

- (b) to issue the code with specified modifications.
- (4) Subsection (3) is subject to subsections (6) and (7).
- (5) In subsection (3) “the Minister” means—
- (a) the Secretary of State, so far as a code prepared by the Authority relates to main connection agreements under which—
 - (i) the main connection into a sewerage system, or
 - (ii) each such connection,
 is or would be a main connection into the sewerage system of a sewerage undertaker whose area is wholly or mainly in England for the benefit of another such undertaker;
 - (b) the Welsh Ministers, so far as a code prepared by the Authority relates to main connection agreements under which—
 - (i) the main connection into a sewerage system, or
 - (ii) each such connection,
 is or would be a main connection into the sewerage system of a sewerage undertaker whose area is wholly or mainly in Wales for the benefit of another such undertaker;
 - (c) the Secretary of State and the Welsh Ministers acting jointly, so far as a code prepared by the Authority relates to main connection agreements under which one main connection into a sewerage system is or would be—
 - (i) a main connection into the sewerage system of a sewerage undertaker whose area is wholly or mainly in England for the benefit of a sewerage undertaker whose area is wholly or mainly in Wales, or
 - (ii) a main connection into the sewerage system of a sewerage undertaker whose area is wholly or mainly in Wales for the benefit of a sewerage undertaker whose area is wholly or mainly in England.
- (6) If the power under subsection (3) is exercised to give a direction in respect of such main connection agreements as are referred to in paragraph (a), (b) or (c) of subsection (5), it may not be exercised again in respect of such main connection agreements as are referred to in that paragraph.
- (7) If the power under subsection (3) to give a direction in respect of such main connection agreements as are referred to in paragraph (a), (b) or (c) of subsection (5) is not exercised on the first occasion on which it may be so exercised, it may not be exercised in respect of such main connection agreements as are referred to in that paragraph on a later occasion.
- (8) A direction under subsection (3) must be given within the period of 28 days beginning with the day after the end of the consultation period, and a code in relation to which a direction may be given may not be issued before that period of 28 days has expired.

110E Codes under section 110C: minor or urgent revisions

- (1) This section applies if the Authority propose to issue a revised code under section 110C and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 110D does not apply to the revised code.
- (3) Once the Authority has issued the revised code, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised code, and
 - (b) as regards each revision contained in it, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (4) Notice under subsection (3) is to be given to such persons as the Authority considers appropriate.
- (5) Unless the Authority gives notice that a revision in a revised code is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised code is issued.

110F Rules about charges for permitting main connections

- (1) The Authority may issue rules about charges that may be imposed by a sewerage undertaker under a main connection agreement.
- (2) The rules may in particular make provision about—
 - (a) what types of charge may be imposed;
 - (b) the amount or the maximum amount, or a method for determining the amount or maximum amount, of any type of charge;
 - (c) principles for determining what types of charge may or may not be imposed;
 - (d) principles for determining the amount of any charge that may be imposed;
 - (e) publication of the charges that may be imposed.
- (3) If the Authority considers that a sewerage undertaker is not acting as required by rules under this section, the Authority may give the undertaker a direction to do, or not to do, a particular thing specified in the direction.
- (4) It is the duty of a sewerage undertaker to comply with a direction under subsection (3), and this duty is enforceable by the Authority under section 18.
- (5) The rules may—

- (a) make different provision for different sewerage undertakers or different descriptions of sewerage undertaker;
 - (b) make different provision for different purposes;
 - (c) make provision subject to exceptions.
- (6) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (7) The Authority must issue revised rules if—
- (a) guidance is issued under section 110J, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (8) Revised rules may include provision for applying any of the revisions to main connection agreements made before the revised rules come into effect.

110G Rules under section 110F: provision about the reduction of charges

- (1) Rules under section 110F may provide for the reduction of charges payable under a main connection agreement where conditions specified by the rules are satisfied.
- (2) Rules made by virtue of subsection (1) may in particular—
- (a) specify conditions by reference to any party to a main connection agreement;
 - (b) require that steps be taken for the purpose of reducing the cost to a sewerage undertaker of permitting a main connection into its sewerage system;
 - (c) specify conditions about reducing charges payable by a person who—
 - (i) is not party to the agreement, and
 - (ii) takes or proposes to take such steps as satisfy or would satisfy a condition falling within paragraph (b).
- (3) The rules may provide that, where a charge falls to be reduced in accordance with rules made by virtue of subsection (1), the sewerage undertaker to which the charges are payable must give notice of that reduction to the Authority.
- (4) Rules made by virtue of subsection (3) may—
- (a) make provision as to the content of the notice;
 - (b) specify the period within which an undertaker is to give notice to the Authority.
- (5) Provision under subsection (4)(a) may in particular require the notice to specify—
- (a) the provision of the rules that brings about the reduction in the charge;
 - (b) the amount of the charge, with and without the reduction;
 - (c) the period for which the reduction has effect.

Status: This version of this Act contains provisions that are prospective.

Textual Amendments

F1112 Ss. 110A-110J substituted for s. 110A (1.11.2016 for the substitution of ss. 110A, 110B, 110J, 1.4.2018 for E. for specified purposes, 1.4.2019 for W. in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 9(1), 94(3)** (with s. 9(2)(3)); S.I. 2016/1007, art. 2(c)(i); S.I. 2017/1288, art. 3(b); S.I. 2018/397, art. 2(b)

110I Rules under section 110F: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue revised rules under section 110F and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 110H does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Minister of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Minister may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
 - (a) that period of 14 days expires, or
 - (b) the Minister notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,
 whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.
- (8) Unless the Authority gives notice that a revision in revised rules is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised rules are issued.
- (9) In this section “the Minister” has the meaning given by section 110H.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. ^{F1113} Provision of sewerage services by sewerage licensees etc

Textual Amendments

F1113 Ss. 110K-110O and cross-heading inserted (6.3.2017 for the insertion of s. 110K, 1.4.2017 in so far as not already in force) by [Water Act 2014](#) (c. 21), **ss. 32, 94(3)**; S.I. 2017/58, art. 2(a) (with art. 3(2)); S.I. 2017/462, art. 3(g)

110K Provision by sewerage licensee

- (1) The owner or occupier of any premises may serve a notice on a sewerage undertaker—
 - (a) informing the undertaker that sewerage services to the premises are to be provided by a sewerage licensee, and
 - (b) specifying the time after which the undertaker will no longer be required to provide sewerage services to the premises.
- (2) Where the charges for the sewerage services provided by the undertaker are, under Chapter 1 of Part 5 of this Act, fixed in relation to the premises by reference to volume, the time specified in the notice is to fall at least two working days after the notice is served.
- (3) In this section a reference to two working days is a reference to a period of 48 hours calculated after disregarding any time falling on—
 - (a) a Saturday or Sunday, or
 - (b) Christmas Day, Good Friday or any day which is a bank holiday in England and Wales under the Banking and Financial Dealings Act 1971.

110L Interim duty: sewerage undertakers and sewerage licensees

- (1) This section applies where—
 - (a) a sewerage licensee (“the previous licensee”) ceases to provide sewerage services to any premises, and
 - (b) the owner or occupier of the premises has not notified the sewerage undertaker in whose area the premises are that—
 - (i) he has made arrangements for the continuation of the provision of sewerage services to the premises, or
 - (ii) he intends any provision of sewerage services to the premises to cease.
- (2) It is to be the duty of the sewerage undertaker to continue to provide the sewerage services to the premises which were provided by the previous licensee.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) But the Authority may give a direction to an eligible sewerage licensee (an “interim licensee”) providing that it is to be the duty of that licensee to provide the sewerage services instead.
- [Where the premises are in a retail exit area the Authority must give a direction under ^{F1114}(3A) subsection (3).]
- (4) An “eligible sewerage licensee” is a sewerage licensee with a retail authorisation who has elected to be an eligible sewerage licensee for the purposes of this section in accordance with the code issued under section 110O.
- (5) If the Authority proposes to give a direction under subsection (3) to an eligible sewerage licensee—
- (a) the Authority must give notice of the proposed direction to the licensee, and
 - (b) the licensee may, in accordance with the code issued under section 110O, temporarily suspend the election made by the licensee as mentioned in subsection (4), so that the proposed direction cannot be given to the licensee.
- (6) Where sewerage services are provided by an undertaker under subsection (2)—
- (a) the charges payable in respect of the provision of the services are to be fixed from time to time by a charges scheme under section 143, and
 - (b) the services are to be provided until—
 - (i) services are provided by an interim licensee by virtue of a direction under subsection (3),
 - (ii) services are provided by a sewerage licensee following the service of a notice under section 110K, or
 - (iii) services are provided to the premises by another sewerage undertaker following the service of a notice by the owner or occupier of the premises on the undertaker providing services under subsection (2) specifying the time after which the undertaker will no longer be required to provide sewerage services to the premises (see section 110M(5)),whichever is the earlier.
- (7) Where sewerage services are provided by an interim licensee by virtue of a direction given under subsection (3)—
- (a) the provision of services by the interim licensee is to be treated as having begun on the date on which the previous licensee ceased to provide services to the premises,
 - (b) the terms and conditions in accordance with which the services are to be provided are to be—
 - (i) those provided for by a scheme made under section 110N, or
 - (ii) such other terms and conditions as may be agreed between the interim licensee and the owner or occupier of the premises, and
 - (c) the services are to be provided until they are discontinued in accordance with the terms and conditions mentioned in paragraph (b).
- (8) Subsections (9) and (10) apply if, within a period of three months beginning with the date on which the previous licensee ceased to provide sewerage services to the premises, the owner or occupier of the premises serves notice—
- (a) under section 110K, on the sewerage undertaker continuing the provision of services under subsection (2), or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) in accordance with the terms and conditions mentioned in subsection (7)(b), on the interim licensee continuing the provision of services by virtue of a direction given under subsection (3),
that instead another sewerage licensee (“the new licensee”) is to continue the provision of the services to the premises which were provided by the previous licensee.
- (9) The notice must—
- (a) specify the time from which the new licensee is to continue the provision of the services in question, and
- (b) be served in accordance with the code issued under section 110O.
- (10) In the case of a notice served as mentioned in subsection (8)(a), the provision of services by the new licensee is to be treated as having begun on the date on which the previous licensee ceased to provide services to the premises.

Textual Amendments

F1114 S. 110L(3A) inserted (3.10.2016) by [The Water and Sewerage Undertakers \(Exit from Non-household Retail Market\) Regulations 2016 \(S.I. 2016/744\)](#), reg. 1(2), **Sch. 2 para. 8**

110M Interim duty: supplementary

- (1) Where a duty is imposed by section 110L(2), or by virtue of a direction given under section 110L(3), in respect of any premises, any breach of the duty which causes the owner or occupier of the premises to sustain loss or damage is actionable at the suit of that owner or occupier.
- (2) But in any proceedings brought against a sewerage undertaker or sewerage licensee in pursuance of subsection (1), it is a defence for the undertaker or licensee to show that the undertaker or, as the case may be, the licensee took all reasonable steps and exercised all due diligence to avoid the breach.
- (3) For the purposes of section 110L, premises which are outside a sewerage undertaker's area are to be treated as being within that area if they are provided with sewerage services using the undertaker's sewerage system.
- (4) In subsection (3), the reference to the undertaker's sewerage system is to be construed in accordance with section 17BA(7).
- (5) Section 110K(2) and (3) apply to a notice served under section 110L(6)(b)(iii) as they apply to a notice served under section 110K.

110N Interim licensees: schemes for terms and conditions

- (1) A person who is an eligible sewerage licensee for the purposes of section 110L must make, and from time to time revise, a scheme containing the terms and conditions which, in the absence of agreed terms and conditions, are to apply to the provision of sewerage services by the licensee by virtue of a direction given under section 110L(3).
- (2) A scheme under this section may make different provision for different purposes, or for different areas.
- (3) As soon as practicable after a sewerage licensee makes or revises a scheme under this section the licensee is to—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) publish the scheme, or revised scheme, on the licensee's website, and
 - (b) send a copy of the scheme, or revised scheme, to the Authority.
- (4) The Authority may give a direction that terms and conditions applying to the provision of sewerage services in accordance with a scheme under this section must be modified as specified in the direction.
- (5) A direction under subsection (4) may apply—
- (a) generally to terms and conditions applying in accordance with a scheme under this section, or
 - (b) to terms and conditions so applying in any particular case.
- (6) It is the duty of a sewerage licensee to comply with a direction under subsection (4), and this duty is enforceable under section 18.

110O Interim duty: code

- (1) The Authority must issue a code in relation to—
- (a) the provision of sewerage services under section 110L, and
 - (b) its power of direction under section 110L(3) (power to direct that eligible sewerage licensee provides interim sewerage services).
- (2) The code may, in particular, make provision about—
- (a) the procedure for electing to be an eligible sewerage licensee for the purposes of section 110L;
 - (b) the procedure for temporarily suspending such an election under section 110L(5)(b);
 - (c) the circumstances in which the Authority's power of direction under section 110L(3) or 110N(4) may or may not be exercised;
 - (d) how the Authority will determine the date on which a sewerage licensee ceased to provide sewerage services to premises for the purposes of section 110L;
 - (e) terms and conditions contained in schemes made under section 110N;
 - (f) eligible sewerage licensees informing owners or occupiers of premises of their schemes for terms and conditions made under section 110N, before agreeing any terms and conditions as mentioned in section 110L(7)(b)(ii);
 - (g) the giving of notices as mentioned in section 110L(8) (that a new licensee is to continue the provision of the sewerage services provided by the previous licensee) including, in particular, provision about—
 - (i) the earliest time that a notice may specify as the time from which a new licensee is to continue the provision of the sewerage services provided by a previous licensee;
 - (ii) the procedure for serving a notice.
- (3) If the Authority considers that a sewerage licensee is not acting as required by provision contained in the code as mentioned in subsection (2)(e) or (f), the Authority may give the licensee a direction to do, or not to do, a particular thing specified in the direction.
- (4) It is the duty of a sewerage licensee to comply with a direction under subsection (3), and this duty is enforceable under section 18.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (5) The Authority must from time to time review the code and, if appropriate, issue a revised code.
- (6) References in section 110L to the code issued under this section are to the code issued under this section that has effect at the time in question.]

Provisions protecting sewerage system

111 Restrictions on use of public sewers.

- (1) Subject to the provisions of Chapter III of this Part, no person shall throw, empty or turn, or suffer or permit to be thrown or emptied or to pass, into any public sewer, or into any drain or sewer communicating with a public sewer—
 - (a) any matter likely to injure the sewer or drain, to interfere with the free flow of its contents or to affect prejudicially the treatment and disposal of its contents; or
 - (b) any such chemical refuse or waste steam, or any such liquid of a temperature higher than [^{F1115}forty-three degrees Celsius] , as by virtue of subsection (2) below is a prohibited substance; or
 - (c) any petroleum spirit or carbide of calcium.
- (2) For the purposes of subsection (1) above, chemical refuse, waste steam or a liquid of a temperature higher than that mentioned in that subsection is a prohibited substance if (either alone or in combination with the contents of the sewer or drain in question) it is or, in the case of the liquid, is when so heated—
 - (a) dangerous;
 - (b) the cause of a nuisance; or
 - (c) injurious, or likely to cause injury, to health.
- (3) A person who contravenes any of the provisions of this section shall be guilty of an offence and liable—
 - (a) on summary conviction, to a fine not exceeding the statutory maximum and to a further fine not exceeding £50 for each day on which the offence continues after conviction;
 - (b) on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.
- (4) For the purposes of so much of subsection (3) above as makes provision for the imposition of a daily penalty—
 - (a) the court by which a person is convicted of the original offence may fix a reasonable date from the date of conviction for compliance by the defendant with any directions given by the court; and
 - (b) where a court has fixed such a period, the daily penalty shall not be imposed in respect of any day before the end of that period.
- (5) In this section the expression “petroleum spirit” means any such—
 - (a) crude petroleum;
 - (b) oil made from petroleum or from coal, shale, peat or other bituminous substances; or
 - (c) product of petroleum or mixture containing petroleum,

112 Requirement that proposed drain or sewer be constructed so as to form part of general system.

- (1) Where—
 - (a) a person proposes to construct a drain or sewer; and
 - (b) a sewerage undertaker considers that the proposed drain or sewer is, or is likely to be, needed to form part of a general sewerage system which that undertaker provides or proposes to provide,
the undertaker may require that person to construct the drain or sewer in a manner differing, as regards material or size of pipes, depth, fall, direction or outfall or otherwise, from the manner in which that person proposes, or could otherwise be required by the undertaker, to construct it.
- (2) If any person on whom requirements are imposed under this section by a sewerage undertaker is aggrieved by the requirements, he may within twenty-eight days appeal to the [^{F1117}Director].
- (3) On an appeal under subsection (2) above with respect to any requirements, the [^{F1117}Director] may either disallow the requirements or allow them with or without modification.
- (4) It shall be the duty of a person on whom requirements are imposed by a sewerage undertaker under this section to comply with those requirements.
- (5) The duty of any person by virtue of subsection (4) above to comply with the requirements of a sewerage undertaker shall be owed to the undertaker; and any breach of that duty which causes the undertaker to sustain loss or damage shall be actionable at the suit of the undertaker.
- (6) A sewerage undertaker which exercises the powers conferred on it by this section shall—

[^{F1122}Sustainable drainage

Textual Amendments

F1122S. 114A and cross-heading inserted (14.7.2014) by [Water Act 2014 \(c. 21\)](#), **ss. 21(1)**, 94(2)(d)

114A Drainage systems relieving public sewers

- (1) Sewerage undertakers may construct, on their own or on another's land, drainage systems for the purpose of reducing the volume of surface water entering public sewers or the rate at which it does so.
- (2) A sewerage undertaker may maintain and operate a drainage system constructed by it under subsection (1).
- (3) In this section—
 - “drainage system” means a structure designed to receive rainwater and other surface water, other than a natural watercourse;
 - “natural watercourse” means a river or stream;
 - “rainwater” includes snow and other precipitation;
 - “structure” includes—
 - (a) any part of an existing or proposed structure, and
 - (b) any feature or aspect of a design that is intended to receive or facilitate the receipt of rainwater or other surface water.
- (4) The powers conferred by subsections (1) and (2) are not to be regarded as functions of a sewerage undertaker for the purposes of section 155 (compulsory purchase of land required for the purposes of carrying out functions of relevant undertakers).]

Use of pipes for sewerage purposes

115 Use of highway drains as sewers and vice versa.

- (1) Subject to the provisions of this section, a relevant authority and a sewerage undertaker may agree that—
 - (a) any drain or sewer which is vested in the authority in their capacity as a highway authority may, upon such terms as may be agreed, be used by the undertaker for the purpose of conveying surface water from premises or streets;
 - (b) any public sewer vested in the undertaker may, upon such terms as may be agreed, be used by the authority for conveying surface water from roads repairable by the authority.
- (2) Where a sewer or drain with respect to which a relevant authority and a sewerage undertaker propose to make an agreement under this section discharges, whether directly or indirectly, into the sewers or sewage disposal works of another sewerage undertaker, the agreement shall not be made without the consent of that other undertaker.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) Subject to subsection (4) below, a consent given by a sewerage undertaker for the purposes of subsection (2) above may be given on such terms as that undertaker thinks fit.
- (4) Neither a relevant authority nor a sewerage undertaker shall—
- (a) unreasonably refuse to enter into an agreement for the purposes of this section; or
 - (b) insist unreasonably upon terms unacceptable to the other party;
- and a sewerage undertaker shall not unreasonably refuse to consent to the making of such an agreement or insist unreasonably upon terms unacceptable to either party.
- (5) Any question arising under this section as to whether or not any authority or undertaker is acting unreasonably shall be referred to the Secretary of State, whose decision shall be final.
- [^{F1123}(5A) A sewerage undertaker must accept any use by a highway authority which is in accordance with a drainage system approved under Schedule 3 to the Flood and Water Management Act 2010.]
- (6) The powers by virtue of paragraph (a) of subsection (1) above of a relevant authority and a sewerage undertaker to enter into an agreement shall be exercisable by two relevant authorities as they would be exercisable if one of them were a sewerage undertaker.
- (7) Nothing in this section shall be construed as limiting the rights of a relevant authority under section 264 of the ^{M39}Highways Act 1980.
- (8) Part XII of the ^{M40}Public Health Act 1936 shall apply for the purposes of the provisions of this section which confer functions on relevant authorities as they apply for the purposes of the provisions of that Act.
- (9) In this section “relevant authority” means a county council or any local authority except a non-metropolitan district council.
- (10) The provisions of this section are subject to the provisions of section 146(4) below.

Duties of sewerage undertakers as regards enabling the provision of sewerage services

117A Use of undertaker's sewerage system

- (1) This section applies where a sewerage licensee with a retail authorisation (“L”) requests a sewerage undertaker to permit the use of the undertaker's sewerage system for the purpose of enabling L to provide sewerage services in respect of premises that—
- (a) L is to serve in accordance with L's retail authorisation, and
 - (b) are in the area of the sewerage undertaker.

- (2) Where this section applies, the undertaker must in accordance with a section 117E agreement take such steps—
- (a) for the purpose of connecting the drains or sewers of the premises in question to the undertaker's sewerage system, or
 - (b) in respect of that system,
- as may be provided for in that agreement in order to enable the requested use of that system.

^{F1130} [A sewerage undertaker is not required by this section to take any steps to enable the use of its sewerage system at a time when it is required to take those steps by virtue of a notice under section 98(1) or (1A) or a request under section 101B(1).]

- (3) A sewerage undertaker is not required by this section to permit the use of its sewerage system, or to take any steps to enable its use, if the sewerage licensee making a request has not secured by means of—
- (a) a request under section 117B made by the licensee, or
 - (b) a request under section 117C made by the licensee or another sewerage licensee,

that there is to be provision for dealing with or removing matter from the sewerage system in quantities determined by reference to the extent of sewerage services provided in respect of the premises in question.

- (4) Where—
- (a) a request has been made by a sewerage licensee for the purposes of subsection (1), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,

the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 117E agreement provides for such liability as regards those steps.

- (5) For the purposes of this section and sections 117B and 117C—
- (a) premises which are outside a sewerage undertaker's area are to be treated as being within that area if they are provided with sewerage services using the undertaker's sewerage system, and
 - (b) any sewers or drains of the sewerage undertaker which are used for the purpose of serving premises as mentioned in paragraph (a) are to be treated as

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. being part of the undertaker's sewerage system (if they would not otherwise be part of it).

- (6) In this section and sections 117B to 117D—
- (a) references to the sewerage system of a sewerage undertaker are to be construed in accordance with section 17BA(7);
 - (b) references to the retail authorisation of a sewerage licensee are to be construed in accordance with Schedule 2B.

Textual Amendments

F1130 S. 117A(2A) inserted (E.) (31.10.2021) by [The Water and Sewerage Undertakers \(Exit from Non-household Retail Market\) \(Consequential Provision\) Regulations 2021 \(S.I. 2021/1208\)](#), regs. 1(2), 2(7)

117B Matter dealt with by sewerage undertaker

- (1) This section applies where a sewerage licensee with a retail authorisation (“L”) requests a sewerage undertaker to deal effectually with certain quantities of matter in its sewerage system in circumstances where—
- (a) sewerage services are to be provided in accordance with L's retail authorisation in respect of particular premises in the area of the undertaker, and
 - (b) the quantities to be dealt with are to be determined by reference to the extent of sewerage services provided in respect of those premises.
- (2) Where this section applies, the sewerage undertaker must in accordance with a section 117E agreement—
- (a) take such steps in respect of the undertaker's sewerage system as may be provided for in that agreement in order to enable the use of that system for the purpose in subsection (1), and
 - (b) having taken those steps, deal with matter as requested.
- (3) Where—
- (a) a request has been made by a sewerage licensee for the purposes of subsection (1), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,

the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 117E agreement provides for such liability as regards those steps.

117C Removal of matter from sewerage system by a sewerage licensee

- (1) This section applies where a sewerage licensee with a wholesale authorisation (“L”) requests a sewerage undertaker to permit L to remove certain quantities of matter from the undertaker's sewerage system in circumstances where—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) sewerage services are to be provided in accordance with a retail authorisation (whether L's or another's) in respect of particular premises in the area of the undertaker, and
 - (b) the quantities to be removed are to be determined by reference to the extent of sewerage services provided in respect of those premises.
- (2) Where this section applies, the sewerage undertaker must in accordance with a section 117E agreement—
 - (a) take such steps, including steps in respect of the undertaker's sewerage system, as may be provided for in that agreement in order to enable L to remove matter from the undertaker's sewerage system as requested, and
 - (b) having taken those steps, permit that requested removal of matter from that sewerage system.
- (3) Where—
 - (a) a request has been made by a sewerage licensee for the purposes of subsection (1), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or agreement to, any exercise by it of any of its powers or the carrying out by it of any works,

the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 117E agreement provides for such liability as regards those steps.
- (4) A pipe connecting a sewerage undertaker's sewerage system to a sewage disposal works that is laid because of subsection (2)(a) is to be regarded as a disposal main for the purposes of this Act, subject to any provision to the contrary.
- (5) In this section, a reference to a wholesale authorisation is to be construed in accordance with Schedule 2B.

117D Connections for the purposes of a disposal authorisation

- (1) This section applies where a sewerage licensee with a disposal authorisation (“L”) requests a sewerage undertaker to permit L to remove matter from the undertaker's sewerage system.
- (2) Where this section applies, the sewerage undertaker must in accordance with a section 117E agreement—
 - (a) take such steps, including steps in respect of the undertaker's sewerage system, as may be provided for in that agreement in order to enable L to remove matter from the undertaker's sewerage system as requested, and
 - (b) having taken those steps, permit that requested removal of matter from that sewerage system.
- (3) Where—
 - (a) a request has been made by a sewerage licensee for the purposes of subsection (1), and
 - (b) the steps which the undertaker is required to take by virtue of that request include steps for the purpose of obtaining any necessary authority for, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. agreement to, any exercise by it of any of its powers or the carrying out by it of any works,

the failure of the undertaker to acquire the necessary authority or agreement does not affect the liability of the licensee to reimburse the undertaker in respect of some or all of the expenses incurred by it in taking those steps, if the section 117E agreement provides for such liability as regards those steps.

- (4) A pipe connecting a sewerage undertaker's sewerage system to a sewage disposal works that is laid because of subsection (2)(a) is to be regarded as a disposal main for the purposes of this Act, subject to any provision to the contrary.
- (5) In this section, a reference to a disposal authorisation is to be construed in accordance with Schedule 2B.

117E Agreements as to duties under sections 117A to 117D

- (1) On the application of—
 - (a) a sewerage licensee that has made a request under sections 117A to 117D, or
 - (b) a sewerage undertaker to which such a request has been made,
 the Authority may by order require a sewerage undertaker to perform the duty in question under sections 117A to 117D, for such period and on such terms and conditions as may be specified in the order.
- (2) The Authority may make an order under subsection (1) only if—
 - (a) it appears to the Authority that the sewerage undertaker is required to perform the duty in question, and
 - (b) it is satisfied that the parties cannot reach agreement within a reasonable time.
- (3) An order under subsection (1) has effect as an agreement between—
 - (a) the sewerage licensee, and
 - (b) the sewerage undertaker required to perform the duty in question.
- (4) On the application of a party to a section 117E agreement, the Authority may, if it is satisfied that the parties cannot reach agreement on the variation or termination of the agreement, by order vary or terminate the agreement.
- (5) If an order under subsection (4) is made in relation to a section 117E agreement, the agreement—
 - (a) has effect subject to the provision made by the order, or
 - (b) ceases to have effect, as the case may be.
- (6) An order under subsection (4) may require one party to the agreement to pay compensation to the other.
- (7) Neither the CMA nor the Authority may exercise, in respect of an agreement for the performance of a duty under sections 117A to 117D by a sewerage undertaker, the powers conferred by—
 - (a) section 32 of the Competition Act 1998 (directions in relation to agreements);
 - (b) section 35(2) of that Act (interim directions).
- (8) Subsection (7)(b) does not apply to the exercise of powers in respect of conduct—
 - (a) which is connected with an agreement for the performance of a duty under sections 117A to 117D by a sewerage undertaker, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) in respect of which section 35(1) of the Competition Act 1998 applies because of an investigation under section 25 of that Act relating to a suspected infringement of the Chapter 2 prohibition imposed by section 18(1) of that Act.
- (9) In this Chapter a reference to a section 117E agreement is a reference to—
- (a) an agreement for the performance of a duty under sections 117A to 117D by a sewerage undertaker, or
 - (b) an order deemed to be such an agreement under subsection (3), or
 - (c) an agreement varied by order under subsection (4).

117F Codes in respect of section 117E agreements

- (1) The Authority may issue one or more codes in respect of section 117E agreements.
- (2) A code may make provision about—
- (a) procedures in connection with making a section 117E agreement;
 - (b) procedures in connection with varying or terminating a section 117E agreement;
 - (c) the terms and conditions of a section 117E agreement, including terms as to the duration of such an agreement;
 - (d) principles for determining the terms and conditions that should or should not be incorporated into a section 117E agreement.
- (3) A code may make provision about the steps to be taken by the Authority in determining for the purposes of section 117E(2) whether a sewerage undertaker is, in the particular case, required to perform a duty under sections 117A to 117D.
- (4) If the Authority considers that a sewerage undertaker or a sewerage licensee is not acting as required by a code, the Authority may give the undertaker or the licensee a direction to do, or not to do, a thing specified in the direction.
- (5) The Authority may not give a direction under subsection (4) requiring a person to enter into, vary or terminate an agreement.
- (6) It is the duty of a sewerage undertaker or a sewerage licensee to comply with a direction under subsection (4), and this duty is enforceable by the Authority under section 18.
- (7) A code may make—
- (a) different provision for different persons or descriptions of person;
 - (b) different provision for different duties under sections 117A to 117D.
- (8) The Authority may from time to time revise a code issued under this section and issue a revised code.
- (9) A revised code may include provision for applying any of its revisions to section 117E agreements made before the revised code comes into effect.

117G Codes under section 117F: procedure

- (1) Before issuing a code under section 117F, the Authority must—
- (a) prepare a draft of the proposed code under section 117F, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) consult persons in accordance with subsections (2) and (3).
- (2) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the appropriate agency;
 - (c) the Council;
 - (d) any sewerage undertakers likely to be affected by the proposed code;
 - (e) any sewerage licensees likely to be affected by the proposed code;
 - (f) such other persons as the Authority thinks appropriate.
- (3) The Authority must specify the period (“the consultation period”) within which a person may make representations about the proposed code.
- (4) Before a code under section 117F prepared by the Authority is issued for the first time, the Secretary of State may direct the Authority—
 - (a) not to issue the code, or
 - (b) to issue the code with specified modifications.
- (5) A direction under subsection (4) must be given within the period of 28 days beginning with the day after the end of the consultation period, and a code in relation to which a direction may be given may not be issued before that period of 28 days has expired.
- (6) In this section “the appropriate agency” means—
 - (a) the Environment Agency, in relation to section 117E agreements made with sewerage undertakers whose areas are wholly in England;
 - (b) both the Environment Agency and the NRBW, in relation to section 117E agreements made with sewerage undertakers whose areas are partly in England and partly in Wales.
- (7) This section is subject to section 117H.

117H Codes under section 117F: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue a revised code under section 117F and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 117G does not apply to the proposed revised code.
- (3) Once the Authority has issued the revised code, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised code, and
 - (b) as regards each revision contained in it, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (4) Notice under subsection (3) is to be given to such persons as the Authority considers appropriate.
- (5) Unless the Authority gives notice that a revision in a revised code is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have

Status: This version of this Act contains provisions that are prospective.

effect at the end of the period of six months beginning with the day after that on which the revised code is issued.

117I Rules about charges

- (1) The Authority must issue rules about charges that may be imposed by sewerage undertakers under a section 117E agreement.
- (2) The rules may in particular make provision about—
 - (a) the types of charges that may be imposed;
 - (b) the amount or the maximum amount, or methods for determining the amount or maximum amount, of any type of charge;
 - (c) principles for determining what types of charges may or may not be imposed;
 - (d) principles for determining the amount of any charge that may be imposed;
 - (e) publication of the charges that may be imposed.
- (3) The rules must include provision for and in connection with requiring a sewerage undertaker to impose on a sewerage licensee only such charges as would enable the licensee, where the services it provides to a person under its retail authorisation are services to which a section 142(2)(b) agreement would apply if the undertaker had continued to provide the services, to charge for those services at the same rate or rates as would have applied if the section 142(2)(b) agreement had applied.
- (4) In subsection (3) “section 142(2)(b) agreement” means an agreement to which section 142(2)(b) applies.
- (5) If the Authority considers that a sewerage undertaker is not acting as required by rules under this section, the Authority may—
 - (a) give the undertaker a direction to do, or not to do, a thing specified in the direction, or
 - (b) in a case where a section 117E agreement to which the undertaker is party requires modification in order to conform to the rules, give a direction to the undertaker and the sewerage licensee in question to modify the agreement.
- (6) It is the duty of a sewerage undertaker or a sewerage licensee to comply with a direction under subsection (5), and this duty is enforceable by the Authority under section 18.
- (7) The rules may—
 - (a) make different provision for different persons or descriptions of person;
 - (b) make different provision for different purposes;
 - (c) make provision subject to exceptions.
- (8) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (9) The Authority must issue revised rules if—
 - (a) guidance is issued under section 117M, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (10) Revised rules may include provision for applying any of the revisions to section 117E agreements made before the revised rules come into effect.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

117J Rules about charges: provision about the reduction of charges

- (1) Rules under section 117I may provide for the reduction of charges payable under a section 117E agreement where—
 - (a) a sewerage licensee that has a retail authorisation is party to the section 117E agreement, and
 - (b) other conditions specified by the rules are satisfied.
- (2) Rules made by virtue of subsection (1) may in particular—
 - (a) specify conditions relating to any party to the section 117E agreement;
 - (b) specify conditions about persons taking steps for the purpose of reducing or managing demand for sewerage services;
 - (c) specify conditions about the premises by reference to which such steps are to be taken;
 - (d) specify conditions about reducing charges payable by a person who—
 - (i) is not party to the section 117E agreement, and
 - (ii) takes or proposes to take such steps as satisfy or would satisfy a condition specified under paragraph (b).
- (3) The rules may provide that, where a charge falls to be reduced in accordance with rules made by virtue of subsection (1), the sewerage undertaker to which the charges are payable must give notice of that reduction to the Authority.
- (4) Rules made by virtue of subsection (3) may—
 - (a) make provision as to the content of the notice;
 - (b) specify the period within which an undertaker is to give notice to the Authority.
- (5) Provision under subsection (4)(a) may in particular require the notice to specify—
 - (a) the amount of the charge, with and without the reduction;
 - (b) the period for which the reduction has effect.

117K Rules under section 117I: procedure

- (1) Before issuing rules under section 117I, the Authority must—
 - (a) prepare a draft of the proposed rules, and
 - (b) consult the relevant persons about the draft.
- (2) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the appropriate agency;
 - (c) the Council;
 - (d) any sewerage undertakers likely to be affected by the proposed rules;
 - (e) any sewerage licensees likely to be affected by the proposed rules;
 - (f) such other persons as the Authority thinks appropriate.
- (3) The Authority must specify the period (“the consultation period”) within which persons may make representations about the proposed rules.
- (4) The Authority must have regard to guidance issued under section 117M in making rules under section 117I.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) Before rules under section 117I prepared by the Authority are issued, the Secretary of State may direct the Authority not to issue the rules.
- (6) A direction under subsection (5) must be given within the period of 28 days beginning with the day after the end of the consultation period, and rules may not be issued before that period of 28 days has expired.
- (7) In this section “the appropriate agency” means—
 - (a) the Environment Agency, in relation to section 117E agreements made with sewerage undertakers whose areas are wholly in England;
 - (b) both the Environment Agency and the NRBW, in relation to section 117E agreements made with sewerage undertakers whose areas are partly in England and partly in Wales.
- (8) This section is subject to section 117L.

117L Rules under section 117I: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue revised rules under section 117I and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 117K does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Secretary of State of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Secretary of State may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
 - (a) that period of 14 days expires, or
 - (b) the Secretary of State notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.
- (8) Unless the Authority gives notice that a revision in revised rules is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised rules are issued.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

117M Rules under section 117I: guidance

- (1) The Minister may issue guidance as to the content of rules under section 117I.
- (2) Before issuing the guidance, the Minister must—
 - (a) prepare a draft of the proposed guidance;
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are such persons as the Minister thinks appropriate.
- (4) The Minister may from time to time revise the guidance and issue revised guidance.
- (5) Subsections (2) and (3) apply to revised guidance as they apply to the original guidance.
- (6) The Minister must arrange for the publication of guidance issued under this section.
- (7) In this section “the Minister” means the Secretary of State.

117N Designation of strategic sewerage provision

- (1) Subsection (2) applies if at any time the Authority determines that the removal of matter from a sewerage undertaker's sewerage system that the undertaker is required to permit under section 117C or 117D in accordance with a section 117E agreement constitutes strategic sewerage provision.
- (2) The Authority must designate the removal of matter as strategic sewerage provision.
- (3) Subsection (4) applies if—
 - (a) a sewerage undertaker requests the Authority to make a determination that a particular removal of matter constitutes strategic sewerage provision for the purposes of subsection (1), or
 - (b) the Authority otherwise proposes to make a determination that a particular removal of matter constitutes strategic sewerage provision for the purposes of subsection (1).
- (4) The Authority must give notice of the request or proposed determination to—
 - (a) the Secretary of State;
 - (b) the appropriate agency;
 - (c) the other party or parties, or the parties, to the section 117E agreement; and
 - (d) such other persons (if any) as the Authority thinks it appropriate to notify.
- (5) A notice under subsection (4) must specify the time within which representations or objections with respect to the request or proposed determination may be made.

The time specified may not be less than 28 days from the date on which the notice was given.
- (6) The Authority must consider any representations or objections which are duly made and not withdrawn.
- (7) If the Authority determines that a particular removal of matter designated under this section as strategic sewerage provision no longer constitutes such provision, it must cancel its designation.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (8) If the Authority proposes to make a determination under subsection (7) that a particular removal of matter no longer constitutes strategic sewerage provision, it must give notice of the proposed determination to—
- (a) the Secretary of State;
 - (b) the appropriate agency; and
 - (c) the parties to the section 117E agreements in question.
- (9) Subsection (5) applies to a notice under subsection (8) as it applies to a notice under subsection (4), and subsection (6) applies accordingly.
- (10) For the purposes of this section, a removal of matter from a sewerage system is strategic sewerage provision if, without that removal of matter, there is a substantial risk that the sewerage undertaker would be unable—
- (a) to maintain its services to its own customers, and
 - (b) to fulfil its obligations under section 117B to deal with matter in its sewerage system.
- (11) In this section and section 117O “the appropriate agency”, in relation to a determination in respect of the removal of matter from a sewerage undertaker's system, means—
- (a) the Environment Agency, in a case where the undertaker's area is wholly in England;
 - (b) both the Environment Agency and the NRBW, in a case where the undertaker's area is partly in England and partly in Wales.

117O Designation of collective strategic sewerage provision

- (1) Subsection (2) applies if at any time the Authority determines that two or more cases of the removal of matter from a sewerage system—
- (a) each of which is a removal by a sewerage licensee, and
 - (b) each of which is a removal that a sewerage undertaker is required to permit under section 117C or 117D in accordance with a section 117E agreement, constitute collective strategic sewerage provision.
- (2) The Authority must designate the cases of the removal of matter as collective strategic sewerage provision.
- (3) Subsection (4) applies if—
- (a) a sewerage undertaker requests the Authority to make a determination that two or more cases of the removal of matter from a sewerage system constitute collective strategic sewerage provision for the purposes of subsection (1), or
 - (b) the Authority otherwise proposes to make a determination that two or more cases of the removal of matter from a sewerage system constitute collective strategic sewerage provision for the purposes of subsection (1).
- (4) The Authority must give notice of the request or proposed determination to—
- (a) the Secretary of State;
 - (b) the appropriate agency;
 - (c) the other party or parties, or the parties, to the section 117E agreements in question; and
 - (d) such other persons (if any) as the Authority thinks it appropriate to notify.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) A notice under subsection (4) must specify the time within which representations or objections with respect to the request or proposed determination may be made.
- The time specified may not be less than 28 days from the date on which the notice was given.
- (6) The Authority must consider any representations or objections which are duly made and not withdrawn.
- (7) If the Authority determines that the cases of the removal of matter from a sewerage system designated under this section as collective strategic sewerage provision no longer constitute such provision, it must cancel their designation.
- (8) If the Authority proposes to make a determination under subsection (7) that the cases of the removal of matter from a sewerage system no longer constitute collective strategic sewerage provision, it must give notice of the proposed determination to—
- (a) the Secretary of State;
 - (b) the appropriate agency; and
 - (c) the parties to the section 117E agreements in question.
- (9) Subsection (5) applies to a notice under subsection (8) as it applies to a notice under subsection (4), and subsection (6) applies accordingly.
- (10) For the purposes of this section, two or more cases of the removal of matter from a sewerage system are collective strategic sewerage provision if, without those cases of the removal of matter, there is a substantial risk that the sewerage undertaker would be unable—
- (a) to maintain its services to its own customers, and
 - (b) to fulfil its obligations under section 117B to deal with matter in its sewerage system.

Offences

117P ^{F1129} **Prohibition on unauthorised use of sewerage system**

- (1) No person may use the sewerage system of a sewerage undertaker whose area is wholly or mainly in England for the purpose of providing sewerage services to premises of—
- (a) a customer,
 - (b) the person so using that system, or
 - (c) a person associated with that person.
- (2) Subsection (1) is subject to subsections (3) and (4) and section 117R.
- (3) Subsection (1) does not apply where that use of the system is made by—
- (a) the sewerage undertaker, or
 - (b) a sewerage licensee in pursuance of its sewerage licence.
- (4) The Secretary of State may by regulations specify further circumstances in which subsection (1) does not apply.
- (5) A person who contravenes subsection (1) is guilty of an offence.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) An undertaking entered into which involves a contravention of subsection (1) is unenforceable.
- (7) A person guilty of an offence under this section is liable—
 - (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (8) Proceedings for an offence under this section may not be instituted except by—
 - (a) the Secretary of State, or
 - (b) the Authority.
- (9) For the purposes of this section, a person (A) is associated with another person (B) if they would be associated with each other for the purposes of Schedule 2B if A were a sewerage licensee.
- (10) In this section and sections 117Q and 117R, references to the sewerage system of a sewerage undertaker are to be construed in accordance with section 17BA(7).

Modifications etc. (not altering text)

C261 S. 117P(1) excluded (1.4.2017) by [The Sewerage Services \(Exception from Sewerage System Prohibition\) \(England\) Regulations 2017 \(S.I. 2017/244\)](#), regs. 1, **2(1)**

117Q Prohibition on unauthorised removal of matter from sewerage system

- (1) No person other than the undertaker may remove matter from the sewerage system of a sewerage undertaker whose area is wholly or mainly in England.
- (2) Subsection (1) is subject to subsections (3) and (4) and section 117R.
- (3) Subsection (1) does not apply where —
 - (a) matter is removed by a sewerage licensee in pursuance of its sewerage licence, or
 - (b) matter is removed by another sewerage undertaker under a main connection agreement (within the meaning of section 110A).
- (4) The Secretary of State may by regulations specify further circumstances in which subsection (1) does not apply.
- (5) An undertaking entered into which involves a contravention of subsection (1) is unenforceable.
- (6) A person who contravenes subsection (1) is guilty of an offence.
- (7) A person guilty of an offence under this section is liable—
 - (a) on summary conviction, to a fine not exceeding £20,000;
 - (b) on conviction on indictment, to a fine.
- (8) For the purposes of section 210, the penalty on conviction on indictment of an offence under this section is to be deemed to include imprisonment for a term not exceeding two years (in addition to or instead of a fine).
- (9) Proceedings for an offence under this section may not be instituted except by—
 - (a) the Secretary of State, or

Status: This version of this Act contains provisions that are prospective.

- (b) the Authority.

117R Sections 117P and 117Q: exemptions

- (1) The Secretary of State may by order made by statutory instrument grant exemption from section 117P(1) or 117Q(1) to—
 - (a) a person or persons of a class;
 - (b) generally or to such extent as may be specified in the order;
 - (c) unconditionally or subject to such conditions as may be specified in the order.
- (2) Before making an order under subsection (1), the Secretary of State must give notice—
 - (a) stating that the Secretary of State proposes to make such an order and setting out the terms of the proposed order;
 - (b) stating the reasons why the Secretary of State proposes to make the order in the terms proposed; and
 - (c) specifying the time (not being less than 28 days from the date of publication of the notice) within which representations or objections with respect to the proposals may be made,

and must consider any representations or objections which are duly made and not withdrawn.
- (3) The notice required by subsection (2) is to be given—
 - (a) by serving a copy of it on the Authority, and
 - (b) by publishing it in such manner as the Secretary of State considers appropriate for bringing it to the attention of those likely to be affected by the proposed order.
- (4) Notice of an exemption granted to a particular person is to be given—
 - (a) by serving a copy of the exemption on the person, and
 - (b) by publishing the exemption in such manner as the Secretary of State considers appropriate for bringing it to the attention of other persons who may be affected by it.
- (5) Notice of an exemption granted to persons of a particular class is to be given by publishing the exemption in such manner as the Secretary of State considers appropriate for bringing it to the attention of—
 - (a) persons of that class, and
 - (b) other persons who may be affected by it.
- (6) An exemption may be granted—
 - (a) indefinitely, or
 - (b) for a period specified in, or determined by or under, the exemption.
- (7) The conditions that may be specified may, in particular, require any person carrying on any activity allowed by the exemption—
 - (a) to comply with any direction given by the Secretary of State or the Authority as to such matters as are specified in the exemption or are of a description so specified;
 - (b) except in so far as the Secretary of State or the Authority consents to the person's doing or not doing them, not to do or to do such things as are specified in the exemption or are of a description so specified;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (c) to refer for determination by the Secretary of State or the Authority such questions arising under the exemption as are specified in the exemption or are of a description so specified.

117S Section 117R: supplementary

- (1) The Secretary of State may by order made by statutory instrument revoke an order by which an exemption was granted to a particular person under section 117R(1) or vary an order by which more than one exemption was so granted so as to terminate any of the exemptions—
 - (a) at the person's request,
 - (b) in accordance with any provision of the order by which the exemption was granted, or
 - (c) if it appears to the Secretary of State inappropriate that the exemption should continue to have effect.
- (2) The Secretary of State may by order made by statutory instrument revoke an order by which an exemption was granted to persons of a particular class under section 117R(1) or vary an order by which more than one exemption was so granted so as to terminate any of the exemptions—
 - (a) in accordance with any provision of the order by which the exemption was granted, or
 - (b) if it appears to the Secretary of State inappropriate that the exemption should continue to have effect.
- (3) The Secretary of State may by direction withdraw an exemption granted to persons of a particular class under section 117R(1) from any person of that class—
 - (a) at the person's request,
 - (b) in accordance with any provision of the order by which the exemption was granted, or
 - (c) if it appears to the Secretary of State inappropriate that the exemption should continue to have effect in the case of the person.
- (4) Before making an order under subsection (1)(b) or (c) or (2) or giving a direction under subsection (3)(b) or (c), the Secretary of State must—
 - (a) consult the Authority, and
 - (b) give notice—
 - (i) stating that the Secretary of State proposes to make such an order or give such a direction,
 - (ii) stating the reasons why the Secretary of State proposes to make such an order or give such a direction, and
 - (iii) specifying the time (not being less than 28 days from the date of publication of the notice) within which representations or objections with respect to the proposals may be made,and must consider any representations or objections which are duly made and not withdrawn.
- (5) The notice required by subsection (4)(b) is to be given—
 - (a) where the Secretary of State is proposing to make an order under subsection (1)(b) or (c), by serving a copy of it on the person to whom the exemption was granted;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) where the Secretary of State is proposing to make an order under subsection (2), by publishing it in such manner as the Secretary of State considers appropriate for bringing it to the attention of persons of the class of persons to whom the exemption was granted;
 - (c) where the Secretary of State is proposing to give a direction under subsection (3)(b) or (c), by serving a copy of it on the person from whom the Secretary of State proposes to withdraw the exemption.
- (6) A statutory instrument containing—
- (a) an order under subsection (1) or (2), or
 - (b) an order under section 117R(1),
- is subject to annulment in pursuance of a resolution of either House of Parliament.]

Consent for discharge of trade effluent into public sewer

118 Consent required for discharge of trade effluent into public sewer.

- (1) Subject to the following provisions of this Chapter, the occupier of any trade premises [^{F1131}in England] in the area of a sewerage undertaker may discharge any trade effluent proceeding from those premises into the undertaker's public sewers if he does so with the undertaker's consent.
- [^{F1132}(1A) Subject to the following provisions of this Chapter and section 34D of the Environmental Protection Act 1990, the occupier of any trade premises in Wales in the area of a sewage undertaker may discharge any trade effluent proceeding from those premises into the undertaker's public sewers if the occupier does so with the undertaker's consent.]
- (2) Nothing in this Chapter shall authorise the discharge of any effluent into a public sewer otherwise than by means of a drain or sewer.
- (3) The following, that is to say—
 - (a) the restrictions imposed by paragraphs (a) and (b) of section 106(2) above; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) section 111 above so far as it relates to anything falling within paragraph (a) or (b) of subsection (1) of that section,
shall not apply to any discharge of trade effluent which is lawfully made by virtue of this Chapter.
- (4) Accordingly, subsections (3) to (8) of section 106 above and sections 108 and 109 above shall have effect in relation to communication with a sewer for the purpose of making any discharge which is lawfully made by virtue of this Chapter as they have effect in relation to communication with a sewer for the purpose of making discharges which are authorised by subsection (1) of section 106 above.
- (5) If, in the case of any trade premises, any trade effluent is discharged without such consent or other authorisation as is necessary for the purposes of this Chapter, the occupier of the premises shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum; and
 - (b) on conviction on indictment, to a fine.

Consents on an application

119 Application for consent.

- (1) An application to a sewerage undertaker for a consent to discharge trade effluent from any trade premises into a public sewer of that undertaker shall be by notice served on the undertaker by the owner or occupier of the premises.
- (2) An application under this section with respect to a proposed discharge of any such effluent shall state—
- (a) the nature or composition of the trade effluent;
 - (b) the maximum quantity of the trade effluent which it is proposed to discharge on any one day; and
 - (c) the highest rate at which it is proposed to discharge the trade effluent.

120 Applications for the discharge of special category effluent.

- (1) Subject to subsection (3) below, where a notice containing an application under section 119 above is served on a sewerage undertaker with respect to discharges of any special category effluent, it shall be the duty of the undertaker to refer to ^{F1133}the appropriate agency] the questions—
- (a) whether the discharges to which the notice relates should be prohibited; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) whether, if they are not prohibited, any requirements should be imposed as to the conditions on which they are made.
- (2) Subject to subsection (3) below, a reference which is required to be made by a sewerage undertaker by virtue of subsection (1) above shall be made before the end of the period of two months beginning with the day after the notice containing the application is served on the undertaker.
- (3) There shall be no obligation on a sewerage undertaker to make a reference under this section in respect of any application if, before the end of the period mentioned in subsection (2) above, there is a refusal by the undertaker to give any consent on the application.
- (4) It shall be the duty of a sewerage undertaker where it has made a reference under this section not to give any consent, or enter into any agreement, with respect to the discharges to which the reference relates at any time before [^{F1133}the appropriate agency] serves notice on the undertaker of his determination on the reference.
- (5) Every reference under this section shall be made in writing and shall be accompanied by a copy of the notice containing the application in respect of which it is made.
- (6) It shall be the duty of a sewerage undertaker, on making a reference under this section, to serve a copy of the reference on the owner or the occupier of the trade premises in question, according to whether the discharges to which the reference relates are to be by the owner or by the occupier.
- ^{F1134}(9) If a sewerage undertaker fails, within the period provided by subsection (2) above, to refer to [^{F1133}the appropriate agency] any question which he is required by subsection (1) above to refer to [^{F1133}the appropriate agency], the undertaker shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum;
- (b) on conviction on indictment, to a fine.
- (10) If [^{F1133}the appropriate agency] becomes aware of any such failure as is mentioned in subsection (9) above, [^{F1133}the appropriate agency] may—
- (a) if a consent under this Chapter to make discharges of any special category effluent has been granted on the application in question, exercise its powers of review under section 127 or 131 below, notwithstanding anything in subsection (2) of the section in question; or
- (b) in any other case, proceed as if the reference required by this section had been made.]

Textual Amendments

F1133 Words in s. 120 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 239** (with Sch. 7)

F1134 S. 120(9)(10) substituted (1.4.1996) for s. 120(7)(8) by 1995 c. 25, s. 120(1), **Sch. 22 para. 105(1)(4)** (with ss. 7(6), 115, 117); S.I. 1996/186, **art. 3**

121 Conditions of consent.

- (1) The power of a sewerage undertaker, on an application under section 119 above, to give a consent with respect to the discharge of any trade effluent shall be a power to

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

give a consent either unconditionally or subject to such conditions as the sewerage undertaker thinks fit to impose with respect to—

- (a) the sewer or sewers into which the trade effluent may be discharged;
- (b) the nature or composition of the trade effluent which may be discharged;
- (c) the maximum quantity of trade effluent which may be discharged on any one day, either generally or into a particular sewer; and
- (d) the highest rate at which trade effluent may be discharged, either generally or into a particular sewer.

(2) Conditions with respect to all or any of the following matters may also be attached under this section to a consent to the discharge of trade effluent from any trade premises—

- (a) the period or periods of the day during which the trade effluent may be discharged from the trade premises into the sewer;
- (b) the exclusion from the trade effluent of all condensing water;
- (c) the elimination or diminution, in cases falling within subsection (3) below, of any specified constituent of the trade effluent, before it enters the sewer;
- (d) the temperature of the trade effluent at the time when it is discharged into the sewer, and its acidity or alkalinity at that time;
- (e) the payment by the occupier of the trade premises to the undertaker of charges for the reception of the trade effluent into the sewer and for the disposal of the effluent;
- (f) the provision and maintenance of such an inspection chamber or manhole as will enable a person readily to take samples, at any time, of what is passing into the sewer from the trade premises;
- (g) the provision, testing and maintenance of such meters as may be required to measure the volume and rate of discharge of any trade effluent being discharged from the trade premises into the sewer;
- (h) the provision, testing and maintenance of apparatus for determining the nature and composition of any trade effluent being discharged from the premises into the sewer;
- (i) the keeping of records of the volume, rate of discharge, nature and composition of any trade effluent being discharged and, in particular, the keeping of records of readings of meters and other recording apparatus provided in compliance with any other condition attached to the consent; and
- (j) the making of returns and giving of other information to the sewerage undertaker concerning the volume, rate of discharge, nature and composition of any trade effluent discharged from the trade premises into the sewer.

(3) A case falls within this subsection where the sewerage undertaker is satisfied that the constituent in question, either alone or in combination with any matter with which it is likely to come into contact while passing through any sewers—

- (a) would injure or obstruct those sewers, or make the treatment or disposal of the sewage from those sewers specially difficult or expensive; or
- (b) in the case of trade effluent which is to be or is discharged—
 - (i) into a sewer having an outfall in any harbour or tidal water; or
 - (ii) into a sewer which connects directly or indirectly with a sewer or sewage disposal works having such an outfall,

would cause or tend to cause injury or obstruction to the navigation on, or the use of, the harbour or tidal water.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) In the exercise of the power conferred by virtue of subsection (2)(e) above, regard shall be had—
- (a) to the nature and composition and to the volume and rate of discharge of the trade effluent discharged;
 - (b) to any additional expense incurred or likely to be incurred by a sewerage undertaker in connection with the reception or disposal of the trade effluent; and
 - (c) to any revenue likely to be derived by the undertaker from the trade effluent.
- (5) If, in the case of any trade premises, a condition imposed under this section is contravened, the occupier of the premises shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum; and
 - (b) on conviction on indictment, to a fine.
- (6) In this section “harbour” and “tidal water” have the same meanings as in the [F1135Merchant Shipping Act 1995].
- (7) This section has effect subject to the provisions of sections 133 and 135(3) below.

Textual Amendments

F1135 Words in s. 121(6) substituted (1.1.1996) by 1995 c. 21, ss. 314(2), 316(2), Sch. 13 para. 89(a) (with s. 312(1))

122 Appeals to the Director with respect to decisions on applications etc.

- (1) Any person aggrieved by—
- (a) the refusal of a sewerage undertaker to give a consent for which application has been duly made to the undertaker under section 119 above;
 - (b) the failure of a sewerage undertaker to give such a consent within the period of two months beginning with the day after service of the notice containing the application; or
 - (c) any condition attached by a sewerage undertaker to such a consent,
- may appeal to the Director.
- (2) On an appeal under this section in respect of a refusal or failure to give a consent, the Director may give the necessary consent, either unconditionally or subject to such conditions as he thinks fit to impose for determining any of the matters as respects which the undertaker has power to impose conditions under section 121 above.
- (3) On an appeal under this section in respect of a condition attached to a consent, the Director may take into review all the conditions attached to the consent, whether appealed against or not, and may—
- (a) substitute for them any other set of conditions, whether more or less favourable to the appellant; or
 - (b) annul any of the conditions.
- (4) The Director may, under subsection (3) above, include provision as to the charges to be made in pursuance of any condition attached to a consent for any period before the determination of the appeal.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) On any appeal under this section, the Director may give a direction that the trade effluent in question shall not be discharged until a specified date.
- (6) Any consent given or conditions imposed by the Director under this section in respect of discharges of trade effluent shall have effect for the purposes of this Chapter as if given or imposed by the sewerage undertaker in question.
- (7) The powers of the Director under this section shall be subject to the provisions of sections 123, 128, 133, 135 and 137 below.

123 Appeals with respect to the discharge of special category effluent.

- (1) Where a reference is made to [F1136the [F1137appropriate agency]] under section 120 above, the period mentioned in paragraph (b) of subsection (1) of section 122 above shall not begin to run for the purposes of that subsection, in relation to the application to which the reference relates, until the beginning of the day after [F1136the [F1137appropriate agency]] serves notice on the sewerage undertaker in question of his determination on the reference.
- (2) If, on an appeal under section 122 above, it appears to the Director—
 - (a) that the case is one in which the sewerage undertaker in question is required to make a reference under section 120 above before giving a consent; and
 - (b) that the undertaker has not made such a reference, whether because the case falls within subsection (3) of that section or otherwise,the Director shall not be entitled to determine the appeal, otherwise than by upholding a refusal, except where the conditions set out in subsection (3) below are satisfied.
- (3) The conditions mentioned in subsection (2) above are satisfied if the Director—
 - (a) has himself referred the questions mentioned in section 120(1) above to [F1136the [F1137appropriate agency]]; and
 - (b) has been sent a copy of the notice of [F1136the [F1138appropriate agency's]] determination on the reference.
- (4) Every reference under this section shall be made in writing and shall be accompanied by a copy of the notice containing the application in respect of which the appeal and reference is made.
- (5) It shall be the duty of the Director, on making a reference under this section, to serve a copy of the reference—
 - (a) on the owner or the occupier of the trade premises in question, according to whether the discharges to which the reference relates are to be by the owner or by the occupier; and
 - (b) on the sewerage undertaker in question.

124 Variation of consents.

- (1) Subject to sections 128, 133 and 135(3) below, a sewerage undertaker may from time to time give a direction varying the conditions which have been attached to any of its consents under this Chapter to the discharge of trade effluent into a public sewer.
- (2) Subject to subsections (3) and (4) and section 125 below, no direction shall be given under this section with respect to a consent under this Chapter—
 - (a) within two years from the date of the consent; or
 - (b) where a previous direction has been given under this section with respect to that consent, within two years from the date on which notice was given of that direction.
- (3) Subsection (2) above shall not prevent a direction being given before the time specified in that subsection if it is given with the consent of the owner and occupier of the trade premises in question.
- (4) A direction given with the consent mentioned in subsection (3) above shall not affect the time at which any subsequent direction may be given.
- (5) The sewerage undertaker shall give to the owner and occupier of the trade premises to which a consent under this Chapter relates notice of any direction under this section with respect to that consent.
- (6) A notice under subsection (5) above shall—
 - (a) include information as to the right of appeal conferred by subsection (1) of section 126 below; and
 - (b) state the date, being a date not less than two months after the giving of the notice, on which (subject to subsection (2) of that section) the direction is to take effect.
- (7) For the purposes of this section references to the variation of conditions include references to the addition or annulment of a condition and to the attachment of a condition to a consent to which no condition was previously attached.

125 Variations within time limit.

- (1) A sewerage undertaker may give a direction under section 124 above before the time specified in subsection (2) of that section and without the consent required by subsection (3) of that section if it considers it necessary to do so in order to provide proper protection for persons likely to be affected by the discharges which could lawfully be made apart from the direction.
- (2) Subject to section 134(3) below, where a sewerage undertaker gives a direction by virtue of subsection (1) above, the undertaker shall be liable to pay compensation to the owner and occupier of the trade premises to which the direction relates, unless the undertaker is of the opinion that the direction is required—
 - (a) in consequence of a change of circumstances which—
 - (i) has occurred since the beginning of the period of two years in question; and
 - (ii) could not reasonably have been foreseen at the beginning of that period;

and

Status: This version of this Act contains provisions that are prospective.

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) otherwise than in consequence of consents for discharges given after the beginning of that period.
- (3) Where a sewerage undertaker gives a direction by virtue of subsection (1) above and is of the opinion mentioned in subsection (2) above, it shall be the duty of the undertaker to give notice of the reasons for its opinion to the owner and occupier of the premises in question.
- (4) For the purposes of this section the circumstances referred to in subsection (2)(a) above may include the information available as to the discharges to which the consent in question relates or as to the interaction of those discharges with other discharges or matter.
- (5) The Secretary of State may by regulations make provision as to the manner of determining the amount of any compensation payable under this section, including the factors to be taken into account in determining that amount.

126 Appeals with respect to variations of consent.

- (1) The owner or occupier of any trade premises may—
 - (a) within two months of the giving to him under subsection (5) of section 124 above of a notice of a direction under that section; or
 - (b) with the written permission of the Director, at any later time, appeal to the Director against the direction.
- (2) Subject to subsection (3) below, if an appeal against a direction is brought under subsection (1) above before the date specified under section 124(6)(b) above in the notice of the direction, the direction shall not take effect until the appeal is withdrawn or finally disposed of.
- (3) In so far as the direction which is the subject of an appeal relates to the making of charges payable by the occupier of any trade premises, it may take effect on any date after the giving of the notice.
- (4) On an appeal under subsection (1) above with respect to a direction, the Director shall have power—
 - (a) to annul the direction given by the sewerage undertaker; and
 - (b) to substitute for it any other direction, whether more or less favourable to the appellant;and any direction given by the Director may include provision as to the charges to be made for any period between the giving of the notice by the sewerage undertaker and the determination of the appeal.
- (5) A person to whom notice is given in pursuance of section 125(3) above may, in accordance with regulations made by the Secretary of State, appeal to the Director against the notice on the ground that compensation should be paid in consequence of the direction to which the notice relates.
- (6) On an appeal under subsection (5) above the Director may direct that section 125 above shall have effect as if the sewerage undertaker in question were not of the opinion to which the notice relates.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (7) Any consent given or conditions imposed by the Director under this section in respect of discharges of trade effluent shall have effect for the purposes of this Chapter as if given or imposed by the sewerage undertaker in question.
- (8) The powers of the Director under this section shall be subject to the provisions of sections 133, 135 and 137 below.

127 Review by ^{F1139}[the ^{F1140}appropriate agency]] of consents relating to special category effluent.

- (1) Where any person, as the owner or occupier of any trade premises, is (whether or not in accordance with a notice under section 132 below) for the time being authorised by virtue of a consent under this Chapter to make discharges of any special category effluent from those premises into a sewerage undertaker's public sewer, ^{F1141}[the ^{F1140}appropriate agency]] may review the questions—
- (a) whether the discharges authorised by the consent should be prohibited; and
 - (b) whether, if they are not prohibited, any requirements should be imposed as to the conditions on which they are made.
- (2) Subject to subsection (3) below, ^{F1142}the ^{F1140}appropriate agency]] shall not review any question under this section unless—
- (a) the consent or variation by virtue of which the discharges in question are made has not previously been the subject-matter of a review and was given or made—
 - (i) before 1st September 1989; or
 - (ii) in contravention of section 133 below;
 - (b) a period of more than two years has elapsed since the time, or last time, when notice of ^{F1142}the ^{F1143}appropriate agency's]] determination on any reference or review relating to that consent or the consent to which that variation relates was served under section 132 below on the owner or occupier of the trade premises in question; or
 - (c) there has, since the time, or last time, when such a notice was so served, been a contravention of any provision which was included in compliance with a requirement of a notice under section 132 below in the consent or variation by virtue of which the discharges in question are made.
- (3) Subsection (2) above shall not apply if the review is carried out—
- (a) for the purpose of ^{F1144}giving effect to any ^{F1145}assimilated] obligation or enabling Her Majesty's Government in the United Kingdom to give effect] to any international agreement to which the United Kingdom is for the time being a party; or
 - (b) for the protection of public health or of flora and fauna dependent on an aquatic environment.

Application for variation of time for discharge

128 Application for variation of time for discharge.

- (1) If, after a direction has been given under any of the preceding provisions of this Chapter requiring that trade effluent shall not be discharged until a specified date, it appears to the sewerage undertaker in question that in consequence—
- (a) of a failure to complete any works required in connection with the reception and disposal of the trade effluent; or
 - (b) of any other exceptional circumstances,
- a later date ought to be substituted for the date so specified in the direction, the undertaker may apply to the Director for such a substitution.
- (2) The Director shall have power, on an application under subsection (1) above, to vary the direction so as to extend the period during which the trade effluent may not be discharged until the date specified in the application or, if he thinks fit, any earlier date.
- (3) Not less than one month before making an application under subsection (1) above a sewerage undertaker shall give notice of its intention to the owner and occupier of the trade premises from which the trade effluent is to be discharged.
- (4) The Director, before varying a direction on an application under subsection (1) above, shall take into account any representations made to him by the owner or occupier of the trade premises in question.

Agreements with respect the disposal etc. of trade effluent

129 Agreements with respect to the disposal etc of trade effluent.

- (1) Subject to sections 130 and 133 below, a sewerage undertaker may enter into and carry into effect—
- (a) an agreement with the owner or occupier of any trade premises within its area for the reception and disposal by the undertaker of any trade effluent produced on those premises;
 - (b) an agreement with the owner or occupier of any such premises under which it undertakes, on such terms as may be specified in the agreement, to remove and dispose of substances produced in the course of treating any trade effluent on or in connection with those premises.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Without prejudice to the generality of subsection (1) above, an agreement such as is mentioned in paragraph (a) of that subsection may, in particular, provide—
- (a) for the construction or extension by the sewerage undertaker of such works as may be required for the reception or disposal of the trade effluent; and
 - (b) for the repayment by the owner or occupier, as the case may be, of the whole or part of the expenses incurred by the undertaker in carrying out its obligations under the agreement.
- (3) It is hereby declared that the power of a sewerage undertaker to enter into an agreement under this section includes a power, by that agreement, to authorise such a discharge as apart from the agreement would require a consent under this Chapter.
- 130 Reference to [F1146the [F1147appropriate agency]] of agreements relating to special category effluent.**
- (1) Where a sewerage undertaker and the owner or occupier of any trade premises are proposing to enter into an agreement under section 129 above with respect to, or to any matter connected with, the reception or disposal of any special category effluent, it shall be the duty of the undertaker to refer to [F1146the [F1147appropriate agency]] the questions—
- (a) whether the operations which would, for the purposes of or in connection with the reception or disposal of that effluent, be carried out in pursuance of the proposed agreement should be prohibited; and
 - (b) whether, if they are not prohibited, any requirements should be imposed as to the conditions on which they are carried out.
- (2) It shall be the duty of a sewerage undertaker where it has made a reference under this section not to give any consent or enter into any agreement with respect to any such operations as are mentioned in subsection (1)(a) above at any time before [F1146the [F1147appropriate agency]] serves notice on the undertaker of his determination on the reference.
- (3) Every reference under this section shall be made in writing and shall be accompanied by a copy of the proposed agreement.
- (4) It shall be the duty of a sewerage undertaker, on making a reference under this section, to serve a copy of the reference on the owner or the occupier of the trade premises in question, according to whether it is the owner or occupier who is proposing to be a party to the agreement.
- ^{F1148}(7) If a sewerage undertaker fails, before giving any consent or entering into any agreement with respect to any such operations as are mentioned in paragraph (a) of subsection (1) above, to refer to the [F1147appropriate agency] any question which he is required by that subsection to refer to [F1149the appropriate agency], the undertaker shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (8) If the [F1147appropriate agency] becomes aware—
- (a) that a sewerage undertaker and the owner or occupier of any trade premises are proposing to enter into any such agreement as is mentioned in subsection (1) above, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 131 Review by ^{F1150}[the ^{F1151}appropriate agency]] of agreements relating to special category effluent.

- (1) Where any person, as the owner or occupier of any trade premises, is (whether or not in accordance with a notice under section 132 below) for the time being a party to any agreement under section 129 above with respect to, or to any matter connected with, the reception or disposal of special category effluent, ^{F1152}the ^{F1151}appropriate agency]] may review the questions—
- (a) whether the operations which, for the purposes of or in connection with the reception or disposal of that effluent, are carried out in pursuance of the agreement should be prohibited; and
- (b) whether, if they are not prohibited, any requirements should be imposed as to the conditions on which they are carried out.
- (2) Subject to subsection (3) below, ^{F1152}the ^{F1151}appropriate agency]] shall not review any question under this section unless—
- (a) the agreement by virtue of which the operations in question are carried out has not previously been the subject-matter of a review and was entered into—
- (i) before 1st September 1989; or
- (ii) in contravention of section 133 below;
- (b) a period of more than two years has elapsed since the time, or last time, when notice of ^{F1152}the ^{F1153}appropriate agency's]] determination on any reference or review relating to that agreement was served under section 132 below on the owner or occupier of the trade premises in question; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) there has, since the time, or last time, when such a notice was so served, been a contravention of any provision which was included in compliance with a requirement of a notice under section 132 below in the agreement by virtue of which the operations in question are carried out.
- (3) Subsection (2) above shall not apply if the review is carried out—
- (a) for the purpose of [^{F1154}giving effect to any [^{F1155}assimilated] obligation or enabling Her Majesty's Government in the United Kingdom to give effect] to any international agreement to which the United Kingdom is for the time being a party; or
 - (b) for the protection of public health or of flora and fauna dependent on an aquatic environment.
- (4) References in this section to an agreement include references to an agreement as varied from time to time by a notice under section 132 below.

References and reviews relating to special category effluent

132 Powers and procedure on references and reviews.

- (1) This section applies to—
- (a) any reference to [^{F1156}the [^{F1157}appropriate agency]] under section 120, 123 or 130 above; and
 - (b) any review by [^{F1156}the [^{F1157}appropriate agency]] under section 127 or 131 above.
- (2) On a reference or review to which this section applies, it shall be the duty of [^{F1156}the [^{F1158}appropriate agency]], before determining the questions which are the subject-matter of the reference or review—
- (a) to give an opportunity of making representations or objections to [^{F1159}the [^{F1160}appropriate agency]]—
 - [^{F1161}(ai) where the Environment Agency is the appropriate agency, to the NRBW if the discharge or proposed discharge of special category effluent is from trade premises in England;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (bi) where the NRBW is the appropriate agency, to the Environment Agency if the discharge or proposed discharge of special category effluent is from trade premises in Wales;]
 - (i) to the sewerage undertaker in question; and
 - (ii) to the following person, that is to say, the owner or the occupier of the trade premises in question, according to whether it is the owner or the occupier of those premises who is proposing to be, or is, the person making the discharges or, as the case may be, a party to the agreement;
- and
- (b) to consider any representations or objections which are duly made to [F1162the [F1163appropriate agency]] with respect to those questions by a person to whom [F1162the [F1163appropriate agency]] is required to give such an opportunity and which are not withdrawn.
- (3) On determining any question on a reference or review to which this section applies, F1164[the [F1165appropriate agency]] shall serve notice on [F1166any person consulted under subsection (2)(a)] above.
 - (4) A notice under this section shall state, according to what has been determined-
 - (a) that the discharges or operations to which, or to the proposals for which, the reference or review relates, or such of them as are specified in the notice, are to be prohibited; or
 - (b) that those discharges or operations, or such of them as are so specified, are to be prohibited except in so far as they are made or carried out in accordance with conditions which consist in or include conditions so specified; or
 - (c) that F1167[the [F1168appropriate agency]] has no objection to those discharges or operations and does not intend to impose any requirements as to the conditions on which they are made or carried out.
 - (5) Without prejudice to section 133 below, a notice under this section, in addition to containing such provision as is specified in sub-paragraph (4) above, may do one or both of the following, that is to say—
 - (a) vary or revoke the provisions of a previous notice with respect to the discharges or operations in question; and
 - (b) for the purpose of giving effect to any prohibition or other requirement contained in the notice, vary or revoke any consent under this Chapter or any agreement under section 129 above.
 - (6) Nothing in subsection (1) or (2) of section 121 above shall be construed as restricting the power of [F1169the appropriate agency], by virtue of subsection (4)(b) above, to specify such conditions as [F1169the appropriate agency] considers appropriate in a notice under this section.
 - F1170(7)
 - (8) F1171[The [F1172appropriate agency]] shall send a copy of every notice served under this section to the Director.

133 Effect of determination on reference or review.

- (1) Where a notice under section 132 above has been served on a sewerage undertaker, it shall be the duty—
 - (a) of the undertaker; and
 - (b) in relation to that undertaker, of the Director,
 so to exercise the powers to which this section applies as to secure compliance with the provisions of the notice.
- (2) This paragraph applies to the following powers, that is to say-
 - (a) in relation to a sewerage undertaker, its power to give a consent under this Chapter, any of its powers under section 121 or 124 above and any power to enter into or vary an agreement under section 129 above; and
 - (b) in relation to the Director, any of his powers under this Chapter.
- (3) Nothing in subsection (1) or (2) of section 121 above shall be construed as restricting the power of a sewerage undertaker, for the purpose of complying with this section, to impose any condition specified in a notice under section 132 above.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - ^{F1173}[(5) A sewerage undertaker which fails to perform its duty under subsection (1) above shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (6) The [^{F1174}appropriate agency] may, for the purpose of securing compliance with the provisions of a notice under section 132 above, by serving notice on [^{F1175}any person consulted under section 132(2)(a)] above, vary or revoke—
- (a) any consent given under this Chapter to make discharges of any special category effluent, or
 - (b) any agreement under section 129 above.]

Textual Amendments

F1173 S. 133(5)(6) substituted (1.4.1996) for s. 133(4) by 1995 c. 25, s. 120(1), **Sch. 22 para. 111** (with s. 7(6), 115, 117); S.I. 1996/186, **art. 3**

F1174 Words in s. 133(6) substituted (1.4.2013) by The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755), art. 1(2), **Sch. 2 para. 245(a)** (with Sch. 7)

F1175 Words in s. 133(6) substituted (1.4.2013) by The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755), art. 1(2), **Sch. 2 para. 245(b)** (with Sch. 7)

134 Compensation in respect of determinations made for the protection of public health etc.

- (1) Subject to subsection (2) below, [^{F1176}the [^{F1177}appropriate agency]] shall be liable to pay compensation to the relevant person in respect of any loss or damage sustained by that person as a result of any notice under section 132 above containing [^{F1176}the [^{F1177}appropriate agency's]] determination on a review which—
- (a) has been carried out for the protection of public health or of flora and fauna dependent on an aquatic environment; and
 - (b) but for being so carried out would have been prohibited by virtue of section 127(2) or 131(2) above.
- (2) [^{F1176}The [^{F1178}appropriate agency]] shall not be required to pay any compensation under this section if the determination in question is shown to have been given in consequence of—
- (a) a change of circumstances which could not reasonably have been foreseen at the time when the period of two years mentioned in section 127(2) or, as the case may be, section 131(2) above began to run; or
 - (b) consideration by [^{F1176}the [^{F1178}appropriate agency]] of material information which was not reasonably available to [^{F1179}the appropriate agency] at that time.
- (3) No person shall be entitled to any compensation under section 125 above in respect of anything done in pursuance of section 133 above.
- (4) In this section “the relevant person”, in relation to a review, means the owner or the occupier of the trade premises in question, according to whether it is the owner or the occupier who makes the discharges to which the review relates or, as the case may be, is a party to the agreement to which it relates.

Supplemental provisions of Chapter III

135 Restrictions on power to fix charges under Chapter III.

- (1) On any appeal under section 122 or 126(1) above conditions providing for the payment of charges to the sewerage undertaker in question shall not be determined by the Director except in so far as no provision is in force by virtue of a charges scheme under section 143 below in respect of any such receptions, discharges, removals or disposals of effluent or substances as are of the same description as the reception, discharge, removal or disposal which is the subject-matter of the appeal.
- (2) In so far as any such conditions as are mentioned in subsection (1) above do fall to be determined by the Director, they shall be determined having regard to the desirability of that undertaker's—
 - (a) recovering the expenses of complying with its obligations in consequence of the consent or agreement to which the conditions relate; and
 - (b) securing a reasonable return on its capital.
- (3) To the extent that subsection (1) above excludes any charges from a determination on an appeal those charges shall be fixed from time to time by a charges scheme under section 143 below but not otherwise.

[135A] ^{F1180}Power of the [^{F1181}appropriate agency] to acquire information for the purpose of its functions in relation to special category effluent.

- (1) For the purpose of the discharge of its functions under this Chapter, the [^{F1182}appropriate agency] may, by notice in writing served on any person, require that person to furnish such information specified in the notice as [^{F1183}that appropriate agency] reasonably considers it needs, in such form and within such period following service of the notice, or at such time, as is so specified.
- (2) A person who—
 - (a) fails, without reasonable excuse, to comply with a requirement imposed under subsection (1) above, or
 - (b) in furnishing any information in compliance with such a requirement, makes any statement which he knows to be false or misleading in a material particular, or recklessly makes a statement which is false or misleading in a material particular,
 shall be guilty of an offence.

136 Evidence from meters etc.

Any meter or apparatus provided in pursuance of this Chapter in any trade premises for the purpose of measuring, recording or determining the volume, rate of discharge, nature or composition of any trade effluent discharged from those premises shall be presumed in any proceedings to register accurately, unless the contrary is shown.

137 Statement of case on appeal.

- (1) At any stage of the proceedings on an appeal under section 122 or 126(1) above, the Director may, and if so directed by the High Court shall, state in the form of a special case for the decision of the High Court any question of law arising in those proceedings.
- (2) The decision of the High Court on a special case under this section shall be deemed to be a judgment of the Court within the meaning of section 16 of the [^{F1184}Senior Courts Act 1981](which relates to the jurisdiction of the Court of Appeal); but no appeal to the Court of Appeal shall be brought by virtue of this subsection except with the leave of the High Court or of the Court of Appeal.

Textual Amendments

- F1184** Words in s. 137(2) substituted (1.10.2009) by Constitutional Reform Act 2005 (c. 4), ss. 59, 148(1), **Sch. 11 para. 1(2)**; S.I. 2009/1604, **art. 2(d)**

138 Meaning of “special category effluent”.

- (1) Subject to [^{F1185}subsections (1A) and] (2) below, trade effluent shall be special category effluent for the purposes of this Chapter if—
- (a) such substances as may be prescribed under this Act are present in the effluent or are present in the effluent in prescribed concentrations; or
 - (b) the effluent derives from any such process as may be so prescribed or from a process involving the use of prescribed substances or the use of such substances in quantities which exceed the prescribed amounts.

Status: This version of this Act contains provisions that are prospective.

- [^{F1186}(1A) If trade effluent is produced, or to be produced, by operating [^{F1187}any Part A installation or Part A mobile plant or otherwise carrying on any Part A activity] , the operation or carrying on of which requires a permit, that effluent shall not be special category effluent for the purposes of this Chapter as from the determination date relating to the installation, plant or activity in question.
- (1B) In subsection (1A)—
- (a) “determination date”, in relation to an installation, plant or activity, means—
- (i) in the case of an installation, plant or activity in relation to which a permit is granted, the date on which it is granted, whether in pursuance of the application, or on an appeal, of a direction to grant it;
- (ii) in the case of an installation, plant or activity in relation to which the grant of a permit is refused, the date of refusal or, on appeal, of the affirmation of the refusal,
- and in this paragraph the references to an appeal are references to an appeal under [^{F1188}the Environmental Permitting (England and Wales) Regulations 2016 (S.I. 2016/1154)];
- [^{F1189}(aa) the expressions “Part A activity”, “Part A installation” and “Part A mobile plant” have the same meaning as in [^{F1190}those Regulations];]
- (b) “permit” means a permit [^{F1191}granted under [^{F1192}those Regulations]].]
- (2) Trade effluent shall not be special category effluent for the purposes of this Chapter if it is produced, or to be produced, in any process which is a prescribed process designated for central control as from the date which is the determination date for that process.
- (3) In subsection (2) above “determination date”, in relation to a prescribed process, means—
- (a) in the case of a process for which authorisation is granted, the date on which the enforcing authority grants it, whether in pursuance of the application or, on an appeal, of a direction to grant it;
- (b) in the case of a process for which authorisation is refused, the date of refusal or, on appeal, of the affirmation of the refusal.
- (4) [^{F1193}In subsection (2) and (3) above]—
- (a) “authorisation”, “enforcing authority” and “prescribed process” have the meanings given by section 1 of the ^{M42}Environmental Protection Act 1990; and
- (b) the references to designation for central control and to an appeal are references, respectively, to designation under section 4 of that Act and to an appeal under section 15 of that Act.
- (5) Without prejudice to the power in subsection (3) of section 139 below, nothing in this Chapter shall enable regulations under this section to prescribe as special category effluent any liquid or matter which is not trade effluent but falls to be treated as such for the purposes of this Chapter by virtue of an order under that section.

139 Power to apply Chapter III to other effluents.

- (1) The Secretary of State may by order provide that, subject to section 138(5) above, this Chapter shall apply in relation to liquid or other matter of any description specified in the order which is discharged into public sewers as it applies in relation to trade effluent.
- (2) An order applying the provisions of this Chapter in relation to liquid or other matter of any description may provide for it to so apply subject to such modifications (if any) as may be specified in the order and, in particular, subject to any such modification of the meaning for the purposes of this Chapter of the expression “trade premises” as may be so specified.
- (3) The Secretary of State may include in an order under this section such provisions as appear to him expedient for modifying any enactment relating to sewage as that enactment applies in relation to the discharge into sewers of any liquid or other matter to which any provisions of this Chapter are applied by an order under this section.
- (4) The Secretary of State may include in an order under this section such other supplemental, incidental and transitional provision as appears to him to be expedient.
- (5) The power to make an order under this section shall be exercisable by statutory instrument; and no order shall be made under this section unless a draft of it has been laid before, and approved by a resolution of, each House of Parliament.

140 Pre-1989 Act authority for trade effluent discharges etc.

Schedule 8 to this Act shall have effect (without prejudice to the provisions of the ^{M43}Water Consolidation (Consequential Provisions) Act 1991 or to sections 16 and 17 of the ^{M44}Interpretation Act 1978) for the purpose of making provision in respect of certain cases where trade effluent was discharged in accordance with provision made before the coming into force of the ^{M45}Water Act 1989.

M45 1989 c. 15.

Interpretation of Chapter III

141 Interpretation of Chapter III.

- (1) In this Chapter, except in so far as the context otherwise requires—
- [^{F1194}“appropriate agency” means—
- (a) in relation to the discharge or proposed discharge of special category effluent to a public sewer that directly or indirectly discharges or is to discharge (other than via a storm-water overflow sewer) that effluent to any controlled waters in England, the Environment Agency;
- (b) in relation to the discharge or proposed discharge of special category effluent to a public sewer that directly or indirectly discharges or is to discharge (other than via a storm-water overflow sewer) that effluent to any controlled waters in Wales, the NRBW;]
- “special category effluent” has the meaning given by section 138 above;
- “trade effluent”—
- (a) means any liquid, either with or without particles of matter in suspension in the liquid, which is wholly or partly produced in the course of any trade or industry carried on at trade premises; and
- (b) in relation to any trade premises, means any such liquid which is so produced in the course of any trade or industry carried on at those premises,
- but does not include domestic sewage;
- “trade premises” means, subject to subsection (2) below, any premises used or intended to be used for carrying on any trade or industry.
- (2) For the purposes of this Chapter any land or premises used or intended for use (in whole or in part and whether or not for profit)—
- (a) for agricultural or horticultural purposes or for the purposes of fish farming; or
- (b) for scientific research or experiment,
- shall be deemed to be premises used for carrying on a trade or industry; and the references to a trade or industry in the definition of “trade effluent” in subsection (1) above shall include references to agriculture, horticulture, fish farming and scientific research or experiment.
- (3) Every application or consent made or given under this Chapter shall be made or given in writing.
- (4) Nothing in this Chapter shall affect any right with respect to water in a river stream or watercourse, or authorise any infringement of such a right, except in so far as any such right would dispense with the requirements of this Chapter so far as they have effect by virtue of any regulations under section 138 above.

[^{F1195}CHAPTER 4

STORM OVERFLOWS

Textual Amendments

F1195 Pt. 4 Ch. 4 inserted (9.1.2022) by [Environment Act 2021 \(c. 30\)](#), ss. 80(1), 147(2)(j) (with s. 144)

141A Storm overflow discharge reduction plan

- (1) The Secretary of State must prepare a plan for the purposes of—
 - (a) reducing discharges from the storm overflows of sewerage undertakers whose area is wholly or mainly in England, and
 - (b) reducing the adverse impacts of those discharges.
- (2) The reference in subsection (1)(a) to reducing discharges of sewage includes—
 - (a) reducing the frequency and duration of the discharges, and
 - (b) reducing the volume of the discharges.
- (3) The reference in subsection (1)(b) to reducing adverse impacts includes—
 - (a) reducing adverse impacts on the environment, and
 - (b) reducing adverse impacts on public health.
- (4) The plan may in particular include proposals for—
 - (a) reducing the need for anything to be discharged by the storm overflows;
 - (b) treating sewage that is discharged by the storm overflows;
 - (c) monitoring the quality of watercourses, bodies of water or water in underground strata into which the storm overflows discharge;
 - (d) obtaining information about the operation of the storm overflows.
- (5) When preparing the plan the Secretary of State must consult—
 - (a) the Environment Agency,
 - (b) the Authority,
 - (c) the Council,
 - (d) Natural England,
 - (e) sewerage undertakers whose area is wholly or mainly in England, or persons representing them, and
 - (f) such other persons as the Secretary of State considers appropriate.
- (6) The Secretary of State must publish the plan before 1 September 2022.
- (7) The Secretary of State may at any time revise the plan, having consulted the persons referred to in subsection (5), and must publish any revised version.
- (8) The plan, and any revised version of it, must be laid before Parliament once it is published.

141B Progress reports on storm overflow discharge reduction plan

- (1) The Secretary of State must publish reports (“progress reports”) relating to the plan under section 141A.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) A progress report is to contain the Secretary of State’s assessment of—
 - (a) the progress made, during the period to which the report relates, in implementing the proposals in the plan (or any revised version of it), and
 - (b) the effect of that progress on the matters referred to in section 141A(1)(a) and (b).
- (3) The first progress report must relate to the period of three years beginning with the day on which the plan under section 141A is first published.
- (4) Subsequent progress reports must relate to successive periods of five years after the period referred to in subsection (3).
- (5) A progress report must be published within 12 weeks following the last day of the period to which it relates.
- (6) A progress report must be laid before Parliament once it is published.

141C Annual reports on discharges from storm overflows

- (1) A sewerage undertaker whose area is wholly or mainly in England must publish annual reports in relation to the undertaker’s storm overflows (“storm overflow reports”).
- (2) A storm overflow report must specify, for each of the sewerage undertaker’s storm overflows—
 - (a) the location of the storm overflow;
 - (b) the watercourse, body of water or underground strata into which the storm overflow discharges;
 - (c) the frequency and duration of discharges from the storm overflow in the period to which the report relates;
 - (d) where the information is available, the volume of each discharge in that period;
 - (e) information on any investigations that have taken place or improvement works that have been undertaken in relation to the storm overflow during that period.
- (3) Storm overflow reports are to relate to successive calendar years, starting with 2021.
- (4) A storm overflow report must be published by a sewerage undertaker before 1 April in the year after the calendar year to which it relates.
- (5) A storm overflow report must—
 - (a) be in a form which allows the public readily to understand the information contained in the report, and
 - (b) be published in a way which makes the report readily accessible to the public.
- (6) The duties of a sewerage undertaker under this section are enforceable under section 18 by—
 - (a) the Secretary of State, or
 - (b) the Authority, with the consent of or in accordance with a general authorisation given by the Secretary of State.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

141D Environment Agency reports

- (1) The Environment Agency must publish annual reports in relation to the operation of storm overflows of sewerage undertakers whose area is wholly or mainly in England.
- (2) A report under this section must specify—
 - (a) the location of the storm overflows;
 - (b) the watercourse, body of water or underground strata into which the storm overflows discharge;
 - (c) the frequency and duration of discharges from the storm overflows in the period to which the report relates;
 - (d) where the information is available, the volume of each discharge in that period.
- (3) Reports under this section are to relate to successive calendar years, starting with 2021.
- (4) A storm overflow report must be published by the Environment Agency —
 - (a) before 1 April in the year after the calendar year to which it relates, and
 - (b) in such manner as the Environment Agency thinks fit.

141DB Monitoring quality of water potentially affected by discharges from storm overflows and sewage disposal works

- (1) A sewerage undertaker whose area is wholly or mainly in England must continuously monitor the quality of water upstream and downstream of an asset within subsection (2) for the purpose of obtaining the information referred to in subsection (3).
- (2) The assets referred to in subsection (1) are—
 - (a) a storm overflow of the sewerage undertaker, and
 - (b) sewage disposal works comprised in the sewerage system of the sewerage undertaker,where the storm overflow or works discharge into a watercourse.
- (3) The information referred to in subsection (1) is information as to the quality of the water by reference to—
 - (a) levels of dissolved oxygen,
 - (b) temperature and pH values,
 - (c) turbidity,
 - (d) levels of ammonia, and
 - (e) anything else specified in regulations made by the Secretary of State.
- (4) The duty of a sewerage undertaker under this section is enforceable under section 18 by—
 - (a) the Secretary of State, or
 - (b) the Authority, with the consent of or in accordance with a general authorisation given by the Secretary of State.
- (5) The Secretary of State may by regulations make —
 - (a) provision as how the duty under subsection (1) is to be carried out (for example, provision as to the type of monitor to be used and where monitors must be placed);

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) provision for exceptions from the duty in subsection (1) (for example, by reference to descriptions of asset, frequency of discharge from an asset or the level of risk to water quality);
 - (c) provision for the publication by sewerage undertakers of information obtained pursuant to subsection (1).
- (6) Before making regulations under this section the Secretary of State must consult such persons as the Secretary of State considers appropriate.
- (7) The Secretary of State may not make regulations under this section unless a draft of the statutory instrument containing the regulations has been laid before, and approved by resolution of, each House of Parliament.]

Textual Amendments

F1196S. 141DB inserted (3.11.2023 for specified purposes) by [Environment Act 2021 \(c. 30\)](#), ss. **82(1)**, **147(3)** (with s. 144); S.I. 2023/1170, reg. 2(a)(i)

141E Interpretation of Chapter 4

- (1) In this Chapter, references to a storm overflow of a sewerage undertaker are to any structure or apparatus—
- (a) which is comprised in the sewerage system of the sewerage undertaker, and
 - (b) which, when the capacity of other parts of the system downstream or of storage tanks at sewage disposal works is exceeded, relieves them by discharging their excess contents into inland waters, underground strata or the sea.
- (2) References in this Chapter to discharges from a storm overflow do not include discharges occurring as a result of—
- (a) electrical power failure at sewage disposal works,
 - (b) mechanical breakdown at sewage disposal works,
 - (c) rising main failure, or
 - (d) blockage of any part of the sewerage system downstream of the storm overflow.
- (3) Section 17BA(7) (meaning of sewerage system of a sewerage undertaker) applies for the purposes of subsection (1).]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

PART V

FINANCIAL PROVISIONS

CHAPTER I

CHARGES

Manner of fixing charges

142 Powers of undertakers to charge.

- (1) Subject to the following provisions of this Chapter, the powers of every relevant undertaker shall include power—
- (a) to fix charges for any services provided in the course of carrying out its functions and, in the case of a sewerage undertaker, charges to be paid in connection with the carrying out of its trade effluent functions; and
 - (b) to demand and recover charges fixed under this section from any persons to whom the undertaker provides services or in relation to whom it carries out trade effluent functions.

- (2) [^{F1197}Subject to subsections (2A), (3) and (3A)] below, the powers conferred by subsection (1) above shall be exercisable—
- (a) by or in accordance with a charges scheme under section 143 below; or
 - (b) by or in accordance with agreements with the persons to be charged.

- [^{F1198}(2A) Paragraph (b) of subsection (2) above shall not have effect in relation to—
- (a) charges for the supply of water to a dwelling, or
 - (b) charges for the provision of sewerage services in respect of a dwelling,
- but this subsection does not affect any agreement made before the commencement of section 3 of the Water Industry Act 1999.

- ^{F1198}(2B) In subsection (2A) above, “dwelling” has the meaning given by paragraph 1(2) of Schedule 4A to this Act.]

- (3) Paragraph (b) of subsection (2) above shall have effect in relation to the exercise of powers with respect to charges in connection with the carrying out of a sewerage undertaker’s trade effluent functions only in so far as provision for the fixing, demanding or recovery of such charges may be contained in an agreement entered into in accordance with section 129 above.

- ^{F1199}[(3A) The power of a sewerage undertaker to charge, by virtue of subsection (1) above, for any services provided in the course of carrying out its duty under section 101A(1) above shall be exercisable only by or in accordance with a charges scheme under section 143 below.]

- (4) Except in so far as this Chapter otherwise provides, a relevant undertaker may fix charges under this section by reference to such matters, and may adopt such methods and principles for the calculation and imposition of the charges, as appear to the undertaker to be appropriate.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) The powers in relation to which this section has effect shall not be exercised so as to contravene any local statutory provision which expressly provides that no charge shall be made for a particular service.
- (6) Nothing in subsections (1) to (5) above or in any charges scheme under section 143 below shall affect any power of a relevant undertaker to fix charges under any power conferred otherwise than by virtue of this Chapter.
- [^{F1200}(6A) If an undertaker makes an agreement that falls within subsection (2)(b), it must notify the Authority of the provisions of the agreement.
- (6B) The requirement in subsection (6A) is enforceable by the Authority under section 18.]
- (7) References in this section to a sewerage undertaker’s trade effluent functions are references to its functions under Chapter III of Part IV of this Act.

Textual Amendments

F1197 Words in s. 142(2) substituted (1.4.2000) by 1999 c. 9, s. 3(1); S.I. 1999/3440, art. 3

F1198 S. 142(2A)(2B) inserted (1.4.2000) by 1999 c. 9, s. 3(1); S.I. 1999/3440, art. 3

F1199 S. 142(3A) inserted (1.4.1996) by 1995 c. 25, s. 120(1), Sch. 22 para. 114(1)(2) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3

F1200 S. 142(6A)(6B) inserted (14.7.2014) by Water Act 2014 (c. 21), ss. 33(2), 94(2)(h)

Modifications etc. (not altering text)

C266 S. 142 applied (with modifications) (28.6.2013) by The Water Industry (Specified Infrastructure Projects) (English Undertakers) Regulations 2013 (S.I. 2013/1582), reg. 1(1)(b), Sch. 1 para. 11(1) (with reg. 1(1)(c))

143 Charges schemes.

- (1) A relevant undertaker may make a scheme (“a charges scheme”) which [^{F1201}has effect in relation to a specified period of twelve months and]does any one or more of the following, that is to say—
- (a) fixes the charges to be paid for any services provided by the undertaker in the course of carrying out its functions;
 - (b) in the case of a sewerage undertaker, requires such charges as may be fixed by the scheme to be paid to the undertaker where, in the circumstances set out in the scheme—
 - (i) a notice containing an application for a consent is served on the undertaker under section 119 above;
 - (ii) such a consent as is necessary for the purposes of Chapter III of Part IV of this Act is given by the undertaker; or
 - (iii) a discharge is made in pursuance of such a consent;
 and
 - (c) makes provision with respect to the times and methods of payment of the charges fixed by the scheme.
- (2) The persons who may be required by a charges scheme to pay any charge fixed by virtue of subsection (1)(b) above shall be the person who serves the notice, the person to whom the consent is given or, as the case may be, any person who makes a discharge

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

in pursuance of the consent at any time during the period to which, in accordance with the scheme, the charge relates.

- (3) A charges scheme which requires the payment of charges where a discharge has been made in pursuance of such a consent as is mentioned in subsection (1)(b) above may impose—
- (a) a single charge in respect of the whole period for which the consent is in force;
 - (b) separate charges in respect of different parts of that period; or
 - (c) both such a single charge and such separate charges.
- [^{F1202}(3A) A sewerage undertaker is under a duty to ensure that any charges scheme made by the undertaker, so far as having effect to recover the undertaker's costs of providing a sewer by virtue of its duty under section 101A(1) above, causes those costs to be borne by the undertaker's customers generally; and a sewerage undertaker's duty under this subsection shall be enforceable under section 18 above—
- (a) by the Secretary of State; or
 - (b) with the consent of or in accordance with a general authorisation given by the Secretary of State, by the Director.]
- (4) A charges scheme may—
- (a) make different provision for different cases, including different provision in relation to different circumstances or localities; and
 - (b) contain supplemental, consequential and transitional provision for the purposes of the scheme;
- and such a scheme may revoke or amend a previous charges scheme.
- (5) Nothing in any charges scheme shall affect—
- (a) any power of a relevant undertaker [^{F1203}in a case not falling within section 142(2A) above]to enter into such an agreement with any person in any particular case as determines the charges to be made for the services provided to that person by the undertaker; or
 - (b) the power of a sewerage undertaker to enter into any agreement under section 129 above on terms that provide for the making of payments to the undertaker.
- [^{F1204}(6) If the Authority considers that a relevant undertaker's charges scheme does not comply with—
- (a) subsection (2), (3) or (5),
 - (b) regulations under section 143A,
 - (c) rules under section 143B, or
 - (d) section 144A(9), (10) or (11)(a),
- the Authority may give the undertaker a direction to do, or not to do, a thing specified in the direction.
- (6A) The Authority must issue rules (and, if it revises rules it has issued, must issue revised rules) about consulting the Council about proposed charges schemes.
- (6B) The rules must require a relevant undertaker that proposes to make a charges scheme to consult the Council about its proposed scheme.
- (6C) If the Authority considers that a relevant undertaker has not complied with those rules, it may give the undertaker a direction to do, or not to do, a thing specified in the direction.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(6D) It is the duty of a relevant undertaker to comply with a direction under subsection (6) or (6C), and this duty is enforceable by the Authority under section 18.]

Modifications etc. (not altering text)

C267 S. 143 applied (with modifications) (28.6.2013) by The Water Industry (Specified Infrastructure Projects) (English Undertakers) Regulations 2013 (S.I. 2013/1582), reg. 1(1)(b), Sch. 1 para. 11(2) (with reg. 1(1)(c)) (as amended (31.3.2017) by The Water Act 2014 (Consequential Amendments etc.) Order 2017 (S.I. 2017/506), arts. 1(1), 30(12)(b))

^{F1205} 143 Regulations as to provisions to be included in charges schemes.

- (1) The provisions of any charges scheme under section 143 above must comply with any requirements prescribed by the Secretary of State by regulations.
- (2) Without prejudice to the generality of subsection (1) above, regulations under this section may—
 - (a) prescribe items with respect to which a consumer is, or is not, to be liable to pay a charge;
 - (b) make provision as to the matters by reference to which charges may be fixed and as to methods and principles to be adopted in calculating and imposing charges;
 - (c) require alternative bases of charging to be made available to consumers; and
 - (d) require special provision, including exemption from specified charges, to be made for the purpose of assisting individuals who are or would be liable to pay any charges and who fall within any class of individuals appearing to the Secretary of State to require special provision.
- (3) Regulations under this section imposing requirements for the purpose mentioned in subsection (2)(d) may—
 - (a) prescribe the classes of persons for whom special provision is to be made in relation to any premises by reference to matters such as age, ill-health or disability, the age, ill-health or disability of any of their dependants or of any other persons who have their homes in the premises, or their financial circumstances;
 - (b) make provision as to the method by which a person may establish his entitlement to assistance under the regulations; and
 - (c) make provision as to responsibility for costs incurred for the purpose of establishing that entitlement.
- (4) The power to make regulations under this section may not be exercised for the purpose of limiting the total revenues of relevant undertakers from charges fixed by or in accordance with charges schemes.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F1205S. 143A inserted (30.6.1999 for certain purposes and 23.12.1999 otherwise) by ss. 5, 17(2); [S.I. 1999/3440](#), [art. 2](#)

Modifications etc. (not altering text)

C268 S. 143A: certain functions transferred to the National Assembly for Wales (15.11.1999) by [S.I. 1999/2787](#), [art. 3](#)

[^{F1206}143] **Rules about charges schemes**

- (1) The Authority may issue rules about charges schemes under section 143.
- (2) Rules under this section may in particular—
 - (a) make provision about the types of charges that may be imposed;
 - (b) make provision about the amount or maximum amount, or the methods for determining the amount or maximum amount, of any type of charge;
 - (c) make provision about the principles for determining what types of charges may or may not be imposed;
 - (d) make provision about principles for determining the amount of any charge that may be imposed;
 - (e) require particular schemes of charges to be available in specified cases;
 - (f) make provision about the timing of payment of charges;
 - (g) require charges schemes to be published;
 - (h) make provision about how charges schemes are to be published.
- (3) The rules may provide for the reduction of charges under a charges scheme where conditions specified by the rules are satisfied.
- (4) Rules made by virtue of subsection (3) may in particular specify conditions about—
 - (a) taking steps for the purpose of reducing or managing water consumption;
 - (b) taking steps for the purpose of reducing or managing the discharge of matter from premises;
 - (c) taking steps for the purpose of reducing the volume of surface water entering public sewers or the rate at which it does so.
- (5) The provisions of charges schemes must comply with rules issued under this section.
- (6) The rules may make different provision for different cases, including different provision in relation to different, or different descriptions of, persons, circumstances or localities.
- (7) The power to make rules under this section may not be exercised for the purpose of limiting the total revenues of relevant undertakers from charges fixed by or in accordance with charges schemes.
- (8) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (9) The Authority must issue revised rules if—
 - (a) guidance is issued under section 143E, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.
- (10) Revised rules may include provision for applying any of their revisions to charges schemes under section 143 made before the revised rules come into effect.

Textual Amendments

F1206Ss. 143B-143E inserted (15.7.2015 for the insertion of s. 143C(1)-(7), 1.11.2015 in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 16(2), 94(3)**; S.I. 2015/1469, arts. 2(a), 4(a) (with art. 5(4)(5))

C269 S. 143B applied (with modifications) by S.I. 2013/1582, Sch. 11(2A) (as inserted (31.3.2017) by [The Water Act 2014 \(Consequential Amendments etc.\) Order 2017 \(S.I. 2017/506\)](#), arts. 1(1), **30(12)(d)**)

143C Rules under section 143B: procedure

- (1) The Authority must have regard to guidance issued under section 143E in making rules under section 143B (as well as to any guidance issued under section 43 or 44 of the Flood and Water Management Act 2010).
- (2) Before issuing rules under section 143B, the Authority must—
 - (a) prepare a draft of the proposed rules, and
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) the Council;
 - (d) any relevant undertakers likely to be affected by the rules;
 - (e) such other persons as the Authority thinks appropriate.
- (4) The Authority must specify the period (“the consultation period”) within which a person may make representations about the proposed rules.
- (5) Before rules under section 143B prepared by the Authority are issued, the Minister may direct the Authority not to issue the rules.
- (6) In subsection (5) “the Minister” means—
 - (a) the Secretary of State, so far as the rules in question affect relevant undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as the rules in question affect relevant undertakers whose areas are wholly or mainly in Wales.
- (7) A direction under subsection (5) must be given within the period of 28 days beginning with the day after the end of the consultation period, and rules prepared by the Authority may not be issued before that period of 28 days has expired.
- (8) This section is subject to section 143D.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. F1206Ss. 143B-143E inserted (15.7.2015 for the insertion of s. 143C(1)-(7), 1.11.2015 in so far as not already in force) by [Water Act 2014 \(c. 21\)](#), **ss. 16(2)**, 94(3); S.I. 2015/1469, arts. 2(a), 4(a) (with art. 5(4)(5))

Modifications etc. (not altering text)

C270 S. 143C applied (with modifications) by S.I. 2013/1582, Sch. 11(2B) (as inserted (31.3.2017) by [The Water Act 2014 \(Consequential Amendments etc.\) Order 2017 \(S.I. 2017/506\)](#), arts. 1(1), **30(12)(d)**)

143D Rules under section 143B: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue revised rules under section 143B and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.
- (2) Section 143C does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Minister of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Minister may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
 - (a) that period of 14 days expires, or
 - (b) the Minister notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.
- (8) Unless the Authority gives notice that a revision in revised rules is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised rules are issued.
- (9) In this section “the Minister” has the meaning given by section 143C.

Status: This version of this Act contains provisions that are prospective.

143E Rules under section 143B: guidance

- (1) The Minister may issue guidance as to the content of rules under section 143B.
- (2) Before issuing the guidance, the Minister must—
 - (a) prepare a draft of the proposed guidance;
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) such other persons as the Minister thinks appropriate.
- (4) The Minister may from time to time revise the guidance and issue revised guidance.
- (5) Subsections (2) and (3) apply to revised guidance as they apply to the original guidance.
- (6) The Minister must arrange for the publication of guidance issued under this section.
- (7) In this section “the Minister” means—
 - (a) the Secretary of State, in relation to relevant undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, in relation to relevant undertakers whose areas are wholly or mainly in Wales.]

144 Liability of occupiers etc. for charges.

- (1) Subject to the following provisions of this section and except in so far as provision to the contrary is made by any agreement to which the undertaker is a party—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) supplies of water provided by a water undertaker shall be treated for the purposes of this Chapter as services provided to the occupiers for the time being of any premises supplied; and
 - (b) sewerage services provided by a sewerage undertaker shall be treated for the purposes of this Chapter as provided to the occupiers for the time being of any premises which—
 - (i) are drained by a sewer or drain connecting, either directly or through an intermediate sewer or drain, with such a public sewer of the undertaker as is provided for foul water or surface water or both; or
 - (ii) are premises the occupiers of which have, in respect of the premises, the benefit of facilities which drain to a sewer or drain so connecting.
- (2) Subject to subsection (3) below, charges which, under the preceding provisions of this Chapter, are fixed in relation to any premises by reference to volume may be imposed so that a person is made liable in relation to those premises to pay charges for services provided by a relevant undertaker after that person has ceased to be the occupier of the premises.
- (3) A person shall not be made liable by virtue of subsection (2) above for any charges fixed in relation to any premises by any relevant undertaker, except where—
 - (a) he fails to inform the undertaker of the ending of his occupation of the premises at least two working days before he ceases to occupy them; and
 - (b) the charges are in respect of a period ending no later than with the first relevant day.
- (4) For the purposes of subsection (3) above, “the first relevant day”, in relation to a case in which a person has ceased to be the occupier of any premises in relation to which charges are fixed by a relevant undertaker, means whichever of the following first occurs after he ceases to occupy the premises, that is to say—
 - (a) where that person informs the undertaker of the ending of his occupation of the premises less than two working days before, or at any time after, he ceases to occupy them, the twenty-eighth day after he so informs the undertaker;
 - (b) any day on which any meter would normally have been read in order for the amount of the charges to be determined;
 - (c) any day on which any other person informs the undertaker that he has become the new occupier of the premises.
- (5) Where—
 - (a) any person who is the occupier of any premises to which a supply of water is provided by a water undertaker has served notice on the undertaker for the purposes of section 62 above; and
 - (b) that notice is given otherwise than in connection with that person’s ceasing to be the occupier of the premises in a case in which provision is made by virtue of subsection (2) above for a person who has ceased to be the occupier of the premises to be made liable for any charges,then, notwithstanding that that person continues to be the occupier of those premises, he shall not be liable to the undertaker (otherwise than in pursuance of a demand for a supply made since the service of the notice) for any charges in respect of any supply of water to those premises after the appropriate time.
- (6) In subsection (5) above “the appropriate time”, in relation to a case in which a notice has been served for the purposes of section 62 above, means whichever is the later of—

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) the expiry of the notice; and
 - (b) the end of the period of two working days beginning with the service of the notice.
- (7) In this section any reference to two working days is a reference to a period of forty-eight hours calculated after disregarding any time falling on—
- (a) a Saturday or Sunday; or
 - (b) Christmas Day, Good Friday or any day which is a bank holiday in England and Wales under the ^{M46}Banking and Financial Dealings Act 1971.
- (8) Where, in the case of any premises—
- (a) the person who was liable, immediately before 1st September 1989, to pay charges in respect of a supply of water to those premises was the owner of those premises, rather than the occupier;
 - (b) that person was so liable (under section 54 of Schedule 3 to the ^{M47}Water Act 1945 or any other local statutory provision) otherwise than by virtue of an agreement; and
 - (c) the person who was in fact the occupier of the premises on that date has not ceased to be the occupier before the coming into force of this Act,
- then the person who is the owner from time to time of those premises shall continue, until the person mentioned in paragraph (c) above does cease to be the occupier of the premises, to be the person liable and, accordingly, shall be treated for the purposes of this section as if he were the occupier of the premises.

Modifications etc. (not altering text)

144ZA Rules about charges for connections etc

- (1) The Authority may issue rules about charges that may be imposed by a relevant undertaker under—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) section 42(2)(a) (provision of new water main);
 - (b) section 45(6) (connections with water main);
 - (c) section 46(7)(b) (ancillary works for domestic connection);
 - (d) section 99(2)(a) or (2A)(a) (provision of public sewer or lateral drain);
 - (e) section 101B(3) (lateral drains);
 - (f) section 107(3)(b)(i) (communications with public sewers);
 - (g) section 185(5) (moving of pipes etc).
- (2) Rules under this section may in particular—
- (a) make provision about the types of charges that may be imposed;
 - (b) make provision about the amount or maximum amount, or the methods for determining the amount or maximum amount, of any type of charge;
 - (c) make provision about the principles for determining what types of charges may or may not be imposed;
 - (d) make provision about the principles for determining the amount of any charge that may be imposed;
 - (e) provide for charges to be payable over a period;
 - (f) make provision about publication of the charges that may be imposed.
- (3) The charges that may be imposed by a water undertaker under section 42(2)(a) for the provision of a new water main may include charges for—
- (a) providing such other infrastructure, including other water mains, as it is necessary to provide in consequence of the provision of the new water main;
 - (b) doing works to increase the capacity of an existing water main, or procuring the doing of such works, where the use of that increased capacity is a consequence of the provision of the new water main.
- (4) The charges that may be imposed by a sewerage undertaker under section 99(2)(a) for the provision of a new public sewer may include charges for—
- (a) providing such other infrastructure, including other public sewers, as it is necessary to provide in consequence of the provision of the new public sewer;
 - (b) doing works to increase the capacity of an existing public sewer, where the use of that increased capacity is a consequence of the provision of the new public sewer.
- (5) The rules may make provision as to—
- (a) the amount of security that may be required by a relevant undertaker under section 42(1)(b), 47(2)(a), 99(1)(b), 101B(3A), 107(3)(b)(ii) or 185(4);
 - (b) the type of security that may be required;
 - (c) the payment of interest on a sum deposited with a relevant undertaker by way of security.
- (6) If the Authority considers that a relevant undertaker is not acting as required by rules under this section, the Authority may give the undertaker a direction to do, or not to do, a thing specified in the direction.
- (7) It is the duty of a relevant undertaker to comply with a direction under subsection (6), and this duty is enforceable by the Authority under section 18.
- (8) The rules may make—
- (a) different provision for different persons or different descriptions of person;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) different provision for different powers to impose charges or different descriptions of such powers.
- (9) The Authority may from time to time revise rules issued under this section and issue revised rules.
- (10) The Authority must issue revised rules if—
 - (a) guidance is issued under section 144ZD, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise the rules.

144ZB Rules under section 144ZA: procedure

- (1) The Authority must have regard to guidance issued under section 144ZD in making rules under section 144ZA.
- (2) Before issuing rules under section 144ZA, the Authority must—
 - (a) prepare a draft of the proposed rules, and
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) the Council;
 - (d) any relevant undertakers likely to be affected by the rules;
 - (e) any water supply or sewerage licensees likely to be affected by the rules;
 - (f) such other persons as the Authority thinks appropriate.
- (4) The Authority must specify the period (“the consultation period”) within which a person may make representations about the proposed rules.
- (5) Before rules under section 144ZA prepared by the Authority are issued, the Minister may direct the Authority not to issue the rules.
- (6) In subsection (5) “the Minister” means—
 - (a) the Secretary of State, so far as the rules in question affect relevant undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, so far as the rules in question affect relevant undertakers whose areas are wholly or mainly in Wales.
- (7) A direction under subsection (5) must be given within the period of 28 days beginning with the day after the end of the consultation period, and rules prepared by the Authority may not be issued before that period of 28 days has expired.
- (8) This section is subject to section 144ZC.

144ZC Rules under section 144ZA: minor or urgent revisions

- (1) This section applies if the Authority proposes to issue revised rules under section 144ZA and, in the view of the Authority, the revision or each of the revisions proposed to be made is—
 - (a) a revision for which consultation is unnecessary, or
 - (b) a revision that it is necessary or desirable to make without delay.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Section 144ZB does not apply to the proposed revised rules.
- (3) Before issuing the revised rules, the Authority must give notice to the Minister of its intention to issue revised rules.
- (4) Before the revised rules are issued, the Minister may direct the Authority not to issue the revised rules.
- (5) A direction under subsection (4) must be given within the period of 14 days beginning with the day after the day on which notice is given under subsection (3), and the Authority may not issue the revised rules in question before—
 - (a) that period of 14 days expires, or
 - (b) the Minister notifies the Authority that no direction under subsection (4) will be given in relation to the revised rules,whichever is the sooner.
- (6) Once the Authority has issued the revised rules, it must give notice as soon as reasonably practicable of—
 - (a) the issuing of the revised rules, and
 - (b) as regards each revision contained in them, whether in the view of the Authority the revision falls within paragraph (a) or (b) of subsection (1).
- (7) Notice under subsection (6) is to be given to such persons as the Authority considers appropriate.
- (8) Unless the Authority gives notice that a revision in revised rules is in the view of the Authority a revision falling within subsection (1)(a), the revision ceases to have effect at the end of the period of six months beginning with the day after that on which the revised rules are issued.
- (9) In this section “the Minister” has the meaning given by section 144ZB.

144ZD Rules under section 144ZA: guidance

- (1) The Minister must issue guidance as to the content of rules under section 144ZA.
- (2) Before issuing the guidance, the Minister must—
 - (a) prepare a draft of the proposed guidance;
 - (b) consult the relevant persons about the draft.
- (3) The relevant persons are—
 - (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) such other persons as the Minister thinks appropriate.
- (4) The Minister may from time to time revise the guidance and issue revised guidance.
- (5) Subsections (2) and (3) apply to revised guidance as they apply to the original guidance.
- (6) The Minister must arrange for the publication of guidance issued under this section.
- (7) In this section “the Minister” means—

144ZE General guidance on charges

- (1) The Minister must issue guidance about the principles to be applied by the Authority in determining the provisions of—
 - (a) rules under section 66E;
 - (b) rules under section 117I;
 - (c) rules under section 143B.
- (2) The Minister may issue guidance about the principles to be applied by the Authority in determining the provisions of—
 - (a) rules under section 40E;
 - (b) rules under section 51CD;
 - (c) rules issued in accordance with regulations under section 66M;
 - (d) rules under section 105ZF;
 - (e) rules under section 110F;
 - (f) rules under section 144ZA.
- (3) Guidance under subsection (1) or (2) may include other guidance about the provisions of any of the rules mentioned in subsection (1) or (2).
- (4) The Minister may issue guidance about the principles to be applied by the Authority in determining the contents of other documents produced by the Authority about charges that may be imposed by relevant undertakers or water supply or sewerage licensees.
- (5) Guidance under subsection (4) may include other guidance about the contents of the documents mentioned in subsection (4).
- (6) The Authority must have regard to guidance issued under this section when making rules to which the guidance relates (as well as to any guidance relating to those rules issued under another provision of this Act).
- (7) If—
 - (a) the Minister issues guidance under this section in respect of rules made under a particular provision, and
 - (b) the Authority, having regard to that guidance, considers that it is appropriate to revise rules made by it under that provision,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. the Authority must issue revised rules under that provision.

- (8) Before issuing guidance under this section, the Minister must—
- (a) prepare a draft of the proposed guidance;
 - (b) consult the relevant persons about the draft;
 - (c) comply with the requirements of section 144ZF.
- (9) The relevant persons are—
- (a) the Secretary of State;
 - (b) the Welsh Ministers;
 - (c) the Council;
 - (d) any relevant undertakers likely to be affected by the proposed guidance;
 - (e) any water supply licensees or sewerage licensees likely to be affected by the proposed guidance;
 - (f) such other persons as the Minister thinks appropriate.
- (10) The Minister may from time to time revise guidance issued under this section and issue revised guidance.
- (11) Subsections (8) and (9) apply to revised guidance as they apply to the original guidance.
- (12) The Minister must arrange for the publication of guidance issued under this section.
- (13) In this section “the Minister” means—
- (a) the Secretary of State, in relation to relevant undertakers whose areas are wholly or mainly in England;
 - (b) the Welsh Ministers, in relation to relevant undertakers whose areas are wholly or mainly in Wales.

144ZF Guidance under section 144ZE: procedure

- (1) Before issuing guidance under section 144ZE, the Secretary of State must lay a draft of the proposed guidance before both Houses of Parliament.
- (2) The Secretary of State must not issue the guidance until after the period of 40 days beginning with—
 - (a) the day on which the draft is laid before both Houses of Parliament, or
 - (b) if the draft is laid before the House of Lords on one day and the House of Commons on another, the later of those two days.
- (3) If before the end of that period either House resolves that the guidance should not be issued, the Secretary of State may not issue it.
- (4) In reckoning any period of 40 days for the purposes of subsection (2), no account is to be taken of any time during which—
 - (a) Parliament is dissolved or prorogued, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. ^{F1209} Restrictions on charging

Textual Amendments

F1209S. 144A and crossheading preceding it inserted (1.4.2000) by [1999 c. 9, s. 6; S.I. 1999/3440, art. 3](#)

^{F1210}144A **Right of consumer to elect for charging by reference to volume.**

- (1) Where—
- (a) water is supplied by a water undertaker to premises in which, or in any part of which, a person has his home, and
 - (b) charges in respect of those premises are fixed by virtue of any charges scheme under section 143 above without reference to the volume of water supplied,
- the consumer may at any time give the undertaker a notice (in this section referred to as a “measured charges notice”) requiring the undertaker to fix charges in respect of the supply by reference to the volume of water supplied.
- (2) Subject to subsection (3) below, a water undertaker must give effect to a measured charges notice before the end of a period determined in accordance with the undertaker’s charges scheme.
- (3) A water undertaker is not obliged to give effect to a measured charges notice if—
- (a) it is not reasonably practicable to fix charges in respect of the premises by reference to the volume of water supplied, or
 - (b) to do so would involve the incurring by the undertaker of unreasonable expense.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) Any dispute between a water undertaker and a consumer as to the application of paragraph (a) or (b) of subsection (3) above may be referred to the Director for determination under section 30A above by either party to the dispute.
- (5) Where—
- (a) either the conditions in subsection (6) below or the conditions in subsection (7) below are satisfied in relation to premises in respect of which a measured charges notice has been given, and
 - (b) such other conditions as may be prescribed are also satisfied in relation to the premises,
- the consumer may, at any time before the end of the period of twelve months beginning with the day on which the supply began to be measured by volume for charging purposes, revoke the measured charges notice by notice to the water undertaker.
- (6) The conditions in this subsection are—
- (a) that the person who gave the measured charges notice had not given any previous measured charges notice in relation to the premises, and
 - (b) that he remains the consumer in respect of the premises.
- (7) The conditions in this subsection are—
- (a) that the person who gave the measured charges notice has, since the notice was given, ceased to be the consumer in respect of the premises,
 - (b) that neither he nor the person who has become the consumer had given any previous measured charges notice in respect of the premises, and
 - (c) that any person who was in occupation of the premises when the measured charges notice was given remains in occupation.
- (8) Where a measured charges notice has been revoked under subsection (5) above, the water undertaker must—
- (a) if reasonably practicable, before the end of the period of twelve months referred to in that subsection, or
 - (b) in any other case, as soon as reasonably practicable after the end of that period, revert to fixing the charges for the supply in respect of the premises without reference to the volume of water supplied.
- (9) If and so long as a water undertaker is obliged under subsection (2) above to fix charges for the supply of water in respect of any premises by reference to the volume of water supplied, a sewerage undertaker is under a corresponding obligation to fix charges in respect of foul water drainage provided by the sewerage undertaker in respect of those premises by reference to that volume.
- (10) If a water undertaker is obliged under subsection (8) above to fix charges without reference to volume, a sewerage undertaker is under a corresponding obligation in respect of charges for services provided by it.
- (11) Any charges scheme under section 143 above—
- (a) must contain provision for determining the period mentioned in subsection (2) above, and
 - (b) shall have effect subject to the preceding provisions of this section.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. F1210S. 144A and crossheading preceding it inserted (1.4.2000) by [1999 c. 9, s. 6](#); [S.I. 1999/3440, art. 3](#)

Modifications etc. (not altering text)

C276 S. 144A: certain functions transferred to the National Assembly for Wales (15.11.1999) by [S.I. 1999/2787, art. 3](#)

C277 S. 144A applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 11\(4\)](#) (with reg. 1(1)(c))

Restriction on undertakers' power to require fixing of charges by reference to volume.

- (1) Subsection (2) below applies where—
- (a) water is supplied to any premises in which, or in any part of which, a person has his home,
 - (b) charges in respect of those premises have previously been fixed without reference to volume, and
 - (c) such conditions as may be prescribed are satisfied in relation to the premises.
- (2) Where this subsection applies, a relevant undertaker may not by virtue of any charges scheme under section 143 above begin to fix the charges in respect of those premises by reference to volume unless either—
- (a) the consumer—
 - (i) has given the undertaker a measured charges notice under section 144A above which has not been revoked under that section, or
 - (ii) has consented to the charges in respect of the premises being so fixed and has not revoked that consent under section 144A, or
 - (b) there has been a change in the occupation of the premises and no charges have yet been demanded from the person who has become the consumer.
- (3) A change in the persons occupying any premises does not constitute a change in the occupation of the premises for the purposes of subsection (2)(b) above if any person who was in occupation of the premises before the change remains in occupation after the change.
- (4) Where a consumer gives consent for the purposes of subsection (2)(a)(ii) above in relation to premises in which, or in any part of which, a person has his home, he shall be treated for the purposes of subsections (5) to (8) of section 144A above as having given a measured charges notice under that section.]]

[^{F1212}144C] Non-owner occupiers

- (1) This section applies to residential premises which are occupied by one or more persons other than the owner (and not by the owner).
- (2) The owner must arrange for the undertaker to be given information about the occupiers.
- (3) If the owner fails to comply with subsection (2), the occupiers' liability for charges under this Chapter becomes shared jointly and severally with the owner.
- (4) The Minister may make regulations—
 - (a) about the information to be given under subsection (2);
 - (b) about timing and procedure in connection with subsection (2) or (3).
- (5) The Minister may make regulations exempting owners from liability under subsection (3) where—
 - (a) information supplied by them is false or incomplete, but
 - (b) they have taken steps specified by the regulations to ensure its accuracy or completeness.
- (6) “Residential premises” means premises that are—
 - (a) occupied by one or more persons as a home (but not necessarily as their only or main home), and
 - (b) a “dwelling”, a “house in multiple occupation” or “accommodation for the elderly” within the meaning of paragraphs 1 to 3 of Schedule 4A.
- (7) Where a person is the “owner” of premises by virtue of being agent or trustee (see section 219(1)) the duty and liability under this section attach to the principal (and not to the agent or trustee).
- (8) “The Minister” means—
 - (a) the Secretary of State, in relation to services provided by an undertaker whose area is wholly or mainly in England, and
 - (b) the Welsh Ministers, in relation to services provided by an undertaker whose area is wholly or mainly in Wales (for which purpose section 213 applies with references to the Secretary of State and either House of Parliament being taken as references to the Welsh Ministers and the National Assembly for Wales).]

Textual Amendments

F1213S. 145 and the heading preceding it repealed (30.6.1999) by 1999 c. 9, ss. 8, 15(2), 17(2), Sch. 4 Pt. I

146 Connection charges etc. and charges for highway drainage.

- (1) Subject to subsection (2) below, nothing in this Chapter or in any other enactment shall entitle any relevant undertaker to fix, demand or recover an initial charge for its becoming, or for its taking steps for the purpose of becoming—
 - (a) the person who provides a supply of water for domestic purposes to any premises; or
 - (b) the person who provides sewerage services for the purposes of the drainage for domestic sewerage purposes of any premises.
 - (2) Subject to subsection (3) below, nothing in subsection (1) above or in any other enactment shall be construed as prohibiting the fixing, demand or recovery by a relevant undertaker of—
 - (a) a charge for the connection to a water supply of premises which have never at any previous time (whether before or after the coming into force of the restriction contained in this section) been connected to a supply of water provided for domestic purposes by a water undertaker or by any other authority or body which at that time provided supplies of water in the course of carrying out functions under any enactment; or
 - (b) a charge for the connection to a public sewer of premises which have never at any previous time (whether before or after the coming into force of the restriction contained in this section) been connected to a sewer used for the drainage for domestic sewerage purposes of those premises by a sewerage undertaker or by any other authority or body which at that time provided sewerage services in the course of carrying out functions under any enactment.
 - (3) Nothing in this Chapter or in any other enactment or in the terms of any agreement under section 104 above shall authorise a sewerage undertaker to require any payment to be made to the undertaker in respect of the making by the undertaker of any declaration of vesting under Chapter II of Part IV of this Act or in respect of any agreement to make such a declaration.
- [^{F1214}(3A) The reference in subsection (3) to an agreement under section 104 includes a reference to—
- (a) an order under section 105ZA which is deemed to be an agreement by virtue of section 105ZA(5), and
 - (b) an agreement which has been varied by order under section 105ZB(1).]
- (4) Nothing in this Chapter or in any other enactment shall authorise a sewerage undertaker [^{F1215}or a sewerage licensee] to require any payment to be made to the undertaker [^{F1216}or the licensee (as the case may be)] by a highway authority in respect of the drainage of any highway or the disposal of the contents of any drain or sewer used for draining any highway.
 - (5) The preceding provisions of this section, so far as they restrict the making of certain charges [^{F1217}by relevant undertakers] , shall be without prejudice—
 - (a) to enactments by virtue of which a relevant undertaker may recover expenses incurred by it in [^{F1218}, or charges imposed by it for,] carrying out works; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Charging for services provided with the help of an undertaker

150 Fixing maximum charges for services provided with the help of undertakers' services.

(1) The Director may from time to time by order fix maximum charges which a person who is not a relevant undertaker may recover from another such person in respect of water supplies or sewerage services provided to that other person with the help of services provided by a relevant undertaker.

[^{F1231}(1A) This section does not apply to—

- (a) water supplies provided by a water supply licensee, or
- (b) sewerage services provided by a sewerage licensee,

to premises of customers in accordance with Chapter 1A of Part 2.]

(2) For the purposes of this section water supplies or sewerage services are provided to a person with the help of services provided by a relevant undertaker if—

- (a) a facility for that person to have access to a supply of water provided by a water undertaker in pipes, or to make use of sewerage services provided by a sewerage undertaker, is made available to that person otherwise than by the undertaker;
- (b) that person is provided with a supply of water in pipes by a person to whom the water is supplied, directly or indirectly, by a water undertaker; or
- (c) that person is provided with sewerage services by a person who, for the purpose of providing those services, makes use of sewerage services provided, directly or indirectly, by a sewerage undertaker.

[^{F1232}(2A) An order under this section may require the person providing the supplies or services to furnish the person who is provided with them with such information as may be specified or described in the order.

(2B) An order containing such a requirement may also provide that, in the event of the failure of the person providing the supplies or services to furnish that information, the maximum charges he is entitled to recover from the person provided with them in respect of those supplies or services shall be such as may be fixed by the order.]

(3) It shall be the duty of the Director to publish any order under this section in such manner as he considers appropriate for the purpose of bringing it to the attention of persons likely to be affected by it.

(4) An order under this section may make different provision for different cases, including different provision in relation to different persons, circumstances or localities, and may fix a maximum charge either by specifying the maximum amount of the charge or by specifying a method of calculating that amount.

(5) Where a person pays a charge in respect of anything to which an order under this section relates and

- [^{F1233}(a) the amount of the excess; and
- (b) if the order so provides, interest on that amount at a rate specified or described in the order,

shall be recoverable by that person from the person to whom he paid the charge.]

Status: This version of this Act contains provisions that are prospective.

PROSPECTIVE

[150A ^{F1234} **Billing disputes.**

- (1) The Secretary of State may by regulations make provision for billing disputes to be referred to the Director for determination in accordance with the regulations.
- (2) In this section “billing dispute” means a dispute between a relevant undertaker and a customer concerning the amount of the charge which the undertaker is entitled to recover from the customer in connection with—
 - (a) the supply of water for domestic purposes, in the case of a water undertaker; and
 - (b) the provision of sewerage services other than by the carrying out of trade effluent functions, in the case of a sewerage undertaker.
- (3) Regulations under this section may only be made after consulting—
 - (a) the Director; and
 - (b) persons or bodies appearing to the Secretary of State to be representative of persons likely to be affected by the regulations.
- (4) Regulations under this section may provide that, where a billing dispute is referred to the Director, he may either—
 - (a) determine the dispute, or
 - (b) appoint an arbitrator to determine it.
- (5) Any person determining any billing dispute in accordance with regulations under this section shall, in such manner as may be specified in the regulations, give his reasons for reaching his decision with respect to the dispute.
- (6) Regulations under this section may provide—
 - (a) that disputes may be referred to the Director under this section only by prescribed persons; and
 - (b) for any determination to be final and enforceable as if it were a judgment of [^{F1235}the county court] .
- (7) Except in such circumstances (if any) as may be prescribed—
 - (a) the Director or an arbitrator appointed by him shall not determine any billing dispute which is the subject of proceedings before, or with respect to which judgment has been given by, any court; and
 - (b) neither party to any billing dispute which has been referred to the Director for determination in accordance with regulations under this section shall

commence proceedings before any court in respect of that dispute pending its determination in accordance with the regulations.

- (8) No relevant undertaker may commence proceedings before any court in respect of any charge in connection with the supply of water for domestic purposes or (as the case may be) the provision of sewerage services other than by the carrying out of trade effluent functions unless, not less than 28 days before doing so, the customer concerned was informed by it, in such form and manner as may be prescribed, of—
- (a) its intention to commence proceedings;
 - (b) the customer’s rights by virtue of this section; and
 - (c) such other matters (if any) as may be prescribed.
- (9) Where a dispute is referred to the Director in accordance with regulations made under this section, it shall be the duty of the undertaker concerned to give him such information as he may reasonably require for the purpose of assisting him in determining the dispute.
- (10) Section 202 below shall have effect, with the necessary modifications, in relation to information which the Director requires for that purpose as it has effect in relation to information which the Secretary of State requires for purposes mentioned in subsection (1) of that section.
- (11) For the purposes of this section—
- “charge” means any charge fixed by a scheme made under section 143 above;
 - “customer” means any person to whom the relevant undertaker provides services;
- and references to a sewerage undertaker’s trade effluent functions are references to its functions under Chapter III of Part IV of this Act.]

153 Government financial assistance where special administration orders made.

- (1) Where a special administration order is for the time being in force in relation to a company, the Secretary of State, may, with the consent of the Treasury—
- (a) make to the company grants or loans of such sums as appear to him to be appropriate for the purpose of facilitating the achievement of the purposes of the order;
 - ^[F1240](b) offer indemnities in respect of liabilities or loss incurred or sustained in the course of functions under the order.]
- ^[F1241](1A) An indemnity under subsection (1)(b) may be offered to—
- (a) the special administrator,
 - (b) an employee of the special administrator,
 - (c) a member or employee of a firm of which the special administrator is or was a member or employee (or a successor of that firm),
 - (d) a body corporate of which the special administrator is or was an employee, or
 - (e) an officer, employee or member of a body corporate within paragraph (d).]
- (2) The Secretary of State may, with the consent of the Treasury, guarantee, in such manner and on such conditions as he may think fit, the repayment of the principal of, the payment of interest on and the discharge of any other financial obligation in connection with any sum which is borrowed from any person by a company in relation to which a special administration order is in force at the time when the guarantee is given.
- (3) Without prejudice to any provision applied in relation to the company ^[F1242]by or under section 23] —
- (a) the terms and conditions on which a grant is made to any company under this section may require the whole or a part of the grant to be repaid to the Secretary of State if there is a contravention of the other terms and conditions on which the grant is made; and
 - (b) any loans which the Secretary of State makes to a company under this section shall be repaid to him at such times and by such methods, and interest on the loans shall be paid to him at such rates and at such times, as he may, with the consent of the Treasury, from time to time direct.
- ^[F1243](3A) Arrangements for a grant, loan or indemnity which are made while a special administration order is in force may continue to have effect after the order ceases to have effect.]
- (4) Any grant or loan made under this section and any sums required to be paid by the Secretary of State in respect of an indemnity given under this section shall be paid out of money provided by Parliament.
- (5) Any sums received under subsection (3) above by the Secretary of State shall be paid into the Consolidated Fund.

[^{F1262}154] Financial assistance for major works

- (1) If the Secretary of State considers it desirable to do so, the Secretary of State may give financial assistance in connection with—
- (a) the construction of water or sewerage infrastructure, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the carrying out of works in respect of existing water or sewerage infrastructure.
- (2) Financial assistance may be given under subsection (1) only if constructing the infrastructure in question or carrying out the works in question, or doing a combination of those things, involves exceptionally large or complex works.
- (3) Financial assistance may be given under subsection (1) only if the use or intended use of the infrastructure includes use by an English undertaker in carrying out a duty under section 37 or 94.
- (4) The power under subsection (1) includes power to give financial assistance or further financial assistance for the purposes described in subsection (1) after completion of the infrastructure or the works in question.
- (5) Financial assistance under subsection (1) may be given in any form and in particular may be given by way of—
- (a) grant,
 - (b) loan,
 - (c) guarantee or indemnity,
 - (d) the provision of insurance, or
 - (e) the acquisition of shares in or securities of a body corporate.
- (6) Financial assistance under subsection (1) may be given on such terms and conditions as the Secretary of State considers appropriate.
- (7) In this section—
- “English undertaker” means a water undertaker or sewerage undertaker whose area is wholly or mainly in England;
- “sewerage infrastructure” means infrastructure relating to the provision of a system of sewers or the provision of means for emptying, or dealing effectually with the contents of, sewers;
- “water infrastructure” means infrastructure relating to the provision of a system of water supply or the securing of supplies of water.]

CHAPTER I

UNDERTAKERS' POWERS

Powers in relation to land

155 **Compulsory purchase.**

- (1) A relevant undertaker may be authorised by the Secretary of State to purchase compulsorily any land anywhere in England and Wales which is required by the undertaker for the purposes of, or in connection with, the carrying out of its functions.
- (2) The power of the Secretary of State under subsection (1) above shall include power—
 - (a) to authorise the acquisition of interests in and rights over land by the creation of new interests and rights; and
 - (b) by authorising the acquisition by a relevant undertaker of any rights over land which is to be or has been acquired by that undertaker, to provide for the extinguishment of those rights.
- (3) Without prejudice to the generality of subsection (1) above, the land which a relevant undertaker may be authorised under that subsection to purchase compulsorily shall include land which is or will be required for the purpose of being given in exchange for, or for any right over, any other land which for the purposes of the ^{M48}Acquisition of Land Act 1981 is or forms part of a common, open space or a fuel or field garden allotment.
- (4) Subject to section 188 below, the ^{M49}Acquisition of Land Act 1981 shall apply to any compulsory purchase under subsection (1) above of any land by a relevant undertaker; and Schedule 3 to the said Act of 1981 shall apply to the compulsory acquisition under that subsection of rights by the creation of new rights.
- (5) Schedule 9 to this Act shall have effect for the purpose of modifying enactments relating to compensation and the provisions of the ^{M50}Compulsory Purchase Act 1965 in their application in relation to the compulsory acquisition under subsection (1) above of a right over land by the creation of a new right.
- (6) The provisions of Part I of the ^{M51}Compulsory Purchase Act 1965 (so far as applicable), other than sections 4 to 8, 10, 21, 27(1) and 31 and Schedule 4, shall apply in relation to any power to acquire land by agreement which is conferred (whether by virtue of the [^{F1263}articles] of the company for the time being carrying out the functions of the undertaker or any enactment or otherwise) on a relevant undertaker, as if—
 - (a) any reference in those provisions to the acquiring authority were a reference to that undertaker; and
 - (b) any reference to land subject to compulsory purchase were a reference to land which may be purchased by agreement under that power.

156 Restriction on disposals of land.

- (1) A company holding an appointment under Chapter I of Part II of this Act shall not dispose of any of its protected land, or of any interest or right in or over any of that land, except with the consent of, or in accordance with a general authorisation given by, the Secretary of State.
- (2) A consent or authorisation for the purposes of this section—
 - (a) shall be set out in a notice served by the Secretary of State on the company which is or may be authorised, by virtue of the provision contained in the notice, to dispose of land or of interests or rights in or over land or, as the case may be, on every such company; and
 - (b) in the case of an authorisation, may be combined with an authorisation for the purposes of section 157 of the ^{M52}Water Resources Act 1991.
- (3) A consent or authorisation for the purposes of this section may be given on such conditions as the Secretary of State considers appropriate.
- (4) Without prejudice to the generality of subsection (3) above and subject to subsection (5) below, the conditions of a consent or authorisation for the purposes of this section may include—
 - (a) a requirement that, before there is any disposal, an opportunity of acquiring the land in question, or an interest or right in or over that land, is to be made available, in such manner and on such terms as may be specified in or determined under provision contained in the notice setting out the consent or authorisation, to such person as may be so specified or determined;
 - (b) a requirement that the company making the disposal has complied with such of the conditions of its appointment under Chapter I of Part II of this Act as relate to the disposal of its protected land or of any interest or right in or over that land;
 - (c) a requirement that the company, before making a disposal in a case in which the land in question is situated in a National Park, in the Broads or in an area of outstanding natural beauty or special scientific interest, should do one or both of the following, that is to say—
 - (i) [^{F1264}consult with Natural England (as respects land in England) or [^{F1265}the NRBW] (as respects land in Wales); and
 - (ii) enter into such management agreements or such covenants under subsection (6) below as the Secretary of State may determine;]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (d) provision requiring determinations under or for the purposes of the consent or authorisation to be made, in such cases as are mentioned in paragraph (c) above, either by [^{F1266}Natural England] or [^{F1265}the NRBW] or only after consultation with [^{F1267}Natural England or [^{F1265}the NRBW]] .
- (5) A consent or authorisation shall not be given on any such condition as is mentioned in subsection (4)(a) above except where the Secretary of State is satisfied that the condition will have effect in relation only to—
- (a) land which, or any interest in or right over which, was acquired by the relevant undertaker in question, or any predecessor of that undertaker, either compulsorily or at a time when the undertaker or that predecessor was authorised to acquire it compulsorily; or
 - (b) land situated in a National Park, in the Broads or in an area of outstanding natural beauty or special scientific interest.
- (6) Where a company holding an appointment under Chapter I of Part II of this Act is proposing, in such a case as is mentioned in subsection (4)(c) above, to dispose of, or of any interest or right in or over, any of its protected land, it may enter into a covenant with the Secretary of State by virtue of which it accepts obligations with respect to—
- (a) the freedom of access to the land that is to be afforded to members of the public or to persons of any description; or
 - (b) the use or management of the land;
- and a covenant under this subsection shall bind all persons deriving title from or under that company and shall be enforceable by the Secretary of State accordingly.
- (7) Section 3 above shall have effect for the purposes of this section as if every proposal which—
- (a) is made by a company holding an appointment as a relevant undertaker with respect to land in a National Park, in the Broads or in an area of outstanding natural beauty or special scientific interest, or with respect to any interest or right in or over any such land; and
 - (b) is a proposal for which the Secretary of State's consent or authorisation is required under this section,
- were a proposal relating to the functions of such an undertaker.
- (8) In this section—
- “area of outstanding natural beauty or special scientific interest” means an area which—
- (a) is for the time being designated as an area of outstanding natural beauty [^{F1268}under section 82 of the Countryside and Rights of Way Act 2000 of the ^{M53}Countryside and Rights of Way Act 2000]; or
 - [^{F1269}(b) is a site of special scientific interest within the meaning of the ^{M54}Wildlife and Countryside Act 1981;]
- and the reference in subsection (4)(c) above to an area of special scientific interest shall, accordingly, be construed as a reference to an area such as is mentioned in paragraph (b) of this definition,^{F1270} . . .
- “the Broads” has the same meaning as in the ^{M55}Norfolk and Suffolk Broads Act 1988.
- [^{F1271}“management agreement” means—

157 Byelaws with respect to undertakers’ waterways and land.

- (1) Every relevant undertaker shall have power to make such byelaws as are mentioned in subsection (2) below with respect to any waterway owned or managed by that body and with respect to any land held or managed with the waterway.
- (2) The byelaws referred to in subsection (1) above in relation to any waterway or to any land held or managed with any such waterway are byelaws for any of the following purposes, that is to say—
 - (a) the preservation of order on or in any such waterway or land;
 - (b) the prevention of damage to anything on or in any such waterway or land or to any such land;
 - (c) securing that persons resorting to any such waterway or land so behave as to avoid undue interference with the enjoyment of the waterway or land by others.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (3) Without prejudice to the generality of any of the paragraphs of subsection (2) above, the byelaws mentioned in that subsection include byelaws—
- (a) regulating sailing, boating, bathing and fishing and other forms of recreation;
 - (b) prohibiting the use of the waterway in question by boats which are not for the time being registered, in such manner as may be required by the byelaws, with the undertaker making the byelaws;
 - (c) requiring the provision of such sanitary appliances as may be necessary for the purpose of preventing pollution;
 - (d) providing for a contravention of the byelaws to constitute a summary offence punishable, on summary conviction, by a fine not exceeding level 5 on the standard scale or such smaller sum as may be specified in the byelaws; and
 - (e) authorising the making of reasonable charges in respect of the registration of boats for the purposes of the byelaws.
- (4) Schedule 10 to this Act shall have effect with respect to byelaws under this section.
- (5) Byelaws made under this section shall cease to have effect at the end of the period of ten years beginning with the day on which they were made; but the Secretary of State may by order made by statutory instrument make provision in relation to any particular byelaws for those byelaws to continue to have effect for such period after the time when they would otherwise cease to have effect as may be specified in the order.
- (6) In this section—
- “boat” includes a vessel of any description, and “boating” shall be construed accordingly;
- “waterway” has the same meaning as in the National Parks and Access to the ^{M56}Countryside Act 1949.

Pipe-laying

158 Powers to lay pipes in streets.

- (1) Subject to the following provisions of this section, to section 162(9) below and to the provisions of Chapter III of this Part, every relevant undertaker shall, for the purpose of carrying out its functions, have power—
- (a) to lay a relevant pipe in, under or over any street and to keep that pipe there;
 - (b) to inspect, maintain, adjust, repair or alter any relevant pipe which is in, under or over any street; and
 - (c) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) or (b) above, including for those purposes the following kinds of works, that is to say—
 - (i) breaking up or opening a street;
 - (ii) tunnelling or boring under a street;
 - (iii) breaking up or opening a sewer, drain or tunnel;
 - (iv) moving or removing earth and other materials.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Without prejudice to the generality of subsection (1)(c) above, every water undertaker shall have power to erect and keep in any street notices indicating the position of such underground accessories for its relevant pipes as may be used for controlling the flow of water in those pipes.
- (3) The power conferred by subsection (2) above shall include power to attach any such notice as is mentioned in that subsection to any building, fence or other structure which is comprised in premises abutting on the street in question.
- (4) A stopcock fitted to any service pipe in a street shall be situated as near as reasonably practicable to the boundary of the street; and a water undertaker shall consult with the highway authority concerned before determining in accordance with this subsection where to fit a stopcock in a highway.
- (5) Where a water undertaker exercises its powers under this section for the purpose of carrying out works of maintenance, repair or renewal in relation to a service pipe belonging to a person other than the undertaker, the undertaker shall be entitled to recover from the occupier of the premises supplied by means of that pipe the expenses reasonably incurred by that undertaker in so exercising that power.
- (6) Until the coming into force of its repeal by the ^{M57}New Roads and Street Works Act 1991 section 20 of the ^{M58}Highways Act 1980 (works in special roads) shall have effect as if the reference in that section to a power under any enactment to lay down or erect apparatus included a reference to any power to lay any relevant pipe which is conferred by this section.
- (7) Subject to section 161(7) below, in this section references to a relevant pipe shall be construed—
 - (a) in relation to a water undertaker, as references to a water main (including a trunk main ^{F1273}but not including a pipe laid in pursuance of section 66B(3) (a)(ii) above which is used for the purpose of supplying water other than for domestic or food production purposes or laid in pursuance of section 66B(3) (a)(iii) above), resource main, discharge pipe or service pipe; and
 - ^{F1274}(b) in relation to a sewerage undertaker, as references to—
 - (i) any sewer or disposal main; ^{F1275}...
 - (ii) in relation to the exercise of a power to lay a pipe under paragraph (a) of subsection (1) above or a power related to that power under paragraph (c) of that subsection, any lateral drain which the undertaker is to lay by virtue of section 98 or 101B ^{F1276}or any lateral drain which the undertaker is required to lay by virtue of section 117A(2) for the purpose of enabling the use of its sewerage system to provide sewerage services to premises in a retail exit area] above; ^{F1277}...
 - (iii) in relation to the exercise of any other power under subsection (1) above, any lateral drain which belongs to or is vested for the time being in the undertaker ^{F1278}or
 - (iv) any pipe forming part of, or required in connection with, a drainage system constructed under section 114A.]]
- ^{F1279}^{F1280}(8) Subsections (9) and (11) below apply where—
 - (a) an appointment or variation has been made under section 7 above replacing a company as a relevant undertaker,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the appointment or variation relates only to parts of the area to which the company's appointment as relevant undertaker related, and
- (c) the conditions mentioned in subsection (5) of that section were required to be satisfied in relation to each of the premises in those parts served by that company.

[Where the company which has replaced the relevant undertaker has done so as water
^{F1280}(9) undertaker, in the application of this section and section 159 below in relation to that company any pipe supplying, or intended to supply, any of the premises referred to in subsection (8)(c) above with a supply of water which exceeds, or is likely to exceed, in any period of twelve months—

- (a) if the area of the relevant undertaker concerned is wholly or mainly in Wales, 250 megalitres;
- (b) in all other cases, [^{F1281}50 megalitres] ,

shall, for the purposes of subsection (7) above, be deemed to be a water main.]]

(10) Where the Secretary of State makes regulations under section 7(6) above amending section 7(5)(a) above he shall by regulations make the corresponding amendment in subsection (9) above.

(11) Where the company which has replaced the relevant undertaker has done so as sewerage undertaker, in the application of this section and section 159 below in relation to that company any pipe draining, or intended to drain, any of those premises shall, for the purposes of subsection (7) above, be deemed to be a sewer.

159 Power to lay pipes in other land.

- (1) Subject to the following provisions of this section, to section 162(9) below and to the provisions of Chapter III of this Part, every relevant undertaker shall, for the purpose of carrying out its functions, have power—
 - (a) to lay a relevant pipe (whether above or below the surface) in any land which is not in, under or over a street and to keep that pipe there;
 - (b) to inspect, maintain, adjust, repair or alter any relevant pipe which is in any such land;
 - (c) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) or (b) above.
- (2) Nothing in subsection (1) above shall authorise a water undertaker to lay a service pipe in, on or over any land except where—
 - (a) there is already a service pipe where that pipe is to be laid; ^{F1282}...
 - (b) the undertaker is required to lay the pipe in, on or over that land by virtue of any of subsections (3) to (5) of section 46 above; [^{F1283}or]
 - ^{F1284}(c) the undertaker is required to lay the pipe in, on or over that land by virtue of section 66A(3) for the purpose of enabling the use of its supply system to supply premises in a retail exit area.]
- (3) The power conferred by virtue of paragraph (b) of subsection (1) above, and the power conferred in relation to that paragraph by virtue of paragraph (c) of that subsection shall be exercisable in relation to a service pipe irrespective of the person to whom the pipe belongs; but expenses incurred in exercising those powers in relation to any pipe shall be recoverable from the person to whom the pipe belongs only if and to the extent that that person has agreed to pay them.
- (4) The powers conferred by this section shall be exercisable only after reasonable notice of the proposed exercise of the power has been given to the owner and to the occupier of the land where the power is to be exercised.
- (5) Subject to subsection (6) below, in relation to any exercise of the powers conferred by this section for the purpose of laying or altering a relevant pipe, the minimum period that is capable of constituting reasonable notice for the purposes of subsection (4) above shall be deemed—
 - (a) where the power is exercised for the purpose of laying a relevant pipe otherwise than in substitution for an existing pipe of the same description, to be three months; and
 - (b) where the power is exercised for the purpose of altering an existing pipe, to be forty-two days.
- (6) Subsection (5) above shall not apply in the case of any notice given with respect to the exercise of any power in an emergency or for the purpose of—
 - (a) laying or altering a service pipe; or
 - (b) complying with a duty imposed under section 41 or 98 above.

Status: This version of this Act contains provisions that are prospective.

Other works powers

160 Power to carry out works for sewerage purposes.

- (1) A sewerage undertaker may, by agreement with the owner or occupier of any premises, carry out at that person’s expense—
- (a) any work in connection with the construction, laying, alteration or repair of a sewer or drain which that person is entitled to carry out; or
 - (b) any work which the undertaker has required that person to carry out under Part IV of this Act;
- and for that purpose the undertaker shall have all such rights as that person would have.
- (2) Sections 291, 293 and 294 of the ^{M59}Public Health Act 1936 (which provide for the means of, and for limitations on, the recovery of expenses incurred by a local authority) shall apply in relation to the recovery by a sewerage undertaker of any sums under this section as they apply in relation to the recovery of expenses under that Act by a local authority.

161 Power to deal with foul water and pollution.

(1) Subject to the provisions of Chapter III of this Part, every relevant undertaker shall, for the purpose of carrying out its functions, have power—

- (a) to carry out in a street all such works as are requisite for securing that the water in any relevant waterworks is not polluted or otherwise contaminated; and
- (b) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) above, including for those purposes the following kinds of works, that is to say—
 - (i) breaking up or opening a street;
 - (ii) tunnelling or boring under a street;
 - (iii) breaking up or opening a sewer, drain or tunnel;
 - (iv) moving or removing earth and other materials;

and the provisions of section 158 above shall, so far as applicable, have effect in relation to the powers conferred by this subsection as they have effect in relation to the powers conferred by subsection (1) of that section.

(2) Subject to the provisions of Chapter III of this Part, every relevant undertaker shall, for the purpose of carrying out its functions, have power—

- (a) to carry out on any land which is not in, under or over a street all such works as are requisite for securing that the water in any relevant waterworks is not polluted or otherwise contaminated; and
- (b) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) above;

and the provisions of section 159 above shall, so far as applicable, have effect in relation to the powers conferred by this subsection as they have effect in relation to the powers conferred by subsection (1) of that section.

(3) Without prejudice to the powers conferred by subsections (1) and (2) above but subject to the provisions of Chapter III of this Part, every water undertaker shall have power, on any land which belongs to that undertaker or over or in which that undertaker has acquired the necessary easements or rights, to construct and maintain drains, sewers, watercourses, catchpits and other works for the purpose—

- (a) of intercepting, treating or disposing of any foul water arising or flowing upon that land; or
- (b) of otherwise preventing the pollution—
 - (i) of any waters, whether on the surface or underground, which belong to ^{F1286}the Environment Agency^{F1287} or the NRBW] or any water undertaker or from which ^{F1286}the Environment Agency^{F1287} or the NRBW] or any water undertaker is authorised to take water;
 - (ii) without prejudice to sub-paragraph (i) above, of any reservoir which belongs to or is operated by ^{F1286}the Environment Agency^{F1287} or the NRBW] or any water undertaker or which ^{F1286}the Environment Agency^{F1287} or the NRBW] or any water undertaker is proposing to acquire or construct for the purpose of being so operated; or
 - (iii) of any underground strata from which ^{F1286}the Environment Agency^{F1287} or the NRBW] or any water undertaker is for the time being authorised to abstract water in pursuance of a licence under Chapter II of Part II of the ^{M60}Water Resources Act 1991.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (4) Where any water undertaker is proposing to carry out any such works as are mentioned in subsection (3) above and the proposed works will affect any watercourse, the undertaker shall consult [^{F1286}the Environment Agency]^{F1288}, where the proposed works will affect any watercourse in England, and the NRBW, where the proposed works will affect any watercourse in Wales,] before carrying out the works.
- (5) Without prejudice to the protective provisions of Chapter III of this Part, nothing in subsection (3) above shall authorise any water undertaker, without the consent of the navigation authority in question, to intercept or take any water which a navigation authority are authorised to take or use for the purposes of their undertaking.
- (6) Any dispute as to whether any consent for the purposes of subsection (5) above is being unreasonably withheld shall be referred to the arbitration of a single arbitrator to be appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (7) In section 158 above the references to the laying of a relevant pipe shall include references-
- (a) to the laying of any drain or sewer for any of the purposes mentioned in subsection (3)(a) and (b) above; and
 - (b) to the construction of a watercourse for any of those purposes.
- (8) In this section—
- “the protective provisions of Chapter III of this Part” means the provisions of sections 183 to 191 below;
- “relevant waterworks” means any waterworks which contain water which is or may be used by a water undertaker for providing a supply of water to any premises; and
- “waterworks” includes any water main, resource main, service pipe or discharge pipe and any spring, well, adit, borehole, service reservoir or tank.

Powers to discharge water

165 Discharges for works purposes.

- (1) Subject to the following provisions of this section and to section 166 below, where any water undertaker—
- (a) is exercising or about to exercise any power conferred by section 158, 159, 161 or 163 above (other than the power conferred by section 161(3) above); or
 - (b) is carrying out, or is about to carry out, the construction, alteration, repair, cleaning, or examination of any reservoir, well, borehole, or other work belonging to or used by that undertaker for the purposes of, or in connection with, the carrying out of any of its functions,
- the undertaker may cause the water in any relevant pipe or in any such reservoir, well, borehole or other work to be discharged into any available watercourse.
- (2) Nothing in this section shall authorise any discharge which—
- (a) damages or injuriously affects the works or property of any railway undertakers or navigation authority; or
 - (b) floods or damages any highway.
- (3) If any water undertaker fails to take all necessary steps to secure that any water discharged by it under this section is as free as may be reasonably practicable from—
- (a) mud and silt;
 - (b) solid, polluting, offensive or injurious substances; and

- (c) any substances prejudicial to fish or spawn, or to spawning beds or food of fish,
the undertaker shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (4) In this section “relevant pipe” means any water main (including a trunk main), resource main, discharge pipe or service pipe.

Modifications etc. (not altering text)

C292 S. 165 restricted (1.4.1996) by 1980 c. 66, s. 100(6B)(b) (as inserted (1.4.1996) by 1994 c. 19, s. 22(1), Sch. 7 Pt. I para. 9 (with ss. 54(5)(7), 55(5)); S.I. 1996/396, art. 3, Sch. 1)

166 Consents for certain discharges under section 165.

- (1) Except in an emergency, no discharge through any pipe the diameter of which exceeds two hundred and twenty-nine millimetres shall be made under section 165 above except with the consent of [^{F1301}the appropriate agency] and of any navigation authority which carries out functions in relation to—
- (a) the part of the watercourse where the discharge is made; or
- (b) any part of that watercourse which is less than three miles downstream from the place of the discharge.
- (2) Where a water undertaker makes an application to any authority for a consent for the purposes of this section—
- (a) that application shall be accompanied or supplemented by all such information as that authority may reasonably require; and
- (b) the undertaker shall serve a copy of the application, and of any consent given on that application, on every person who—
- (i) is registered with the undertaker in respect of any premises which are within three miles of the place where the discharge to which the application relates is proposed to be made and are not upstream from that place; and
- (ii) has not agreed in writing that he need not be served with such a copy;
- but, subject to subsection (4) below and without prejudice to the effect (if any) of any other contravention of the requirements of this section in relation to such an application, a failure to provide information in pursuance of the obligation to supplement such an application shall not invalidate the application.
- (3) Subject to subsection (4) below, an application for a consent for the purposes of this section shall be determined—
- (a) in the case of an application with respect to a particular discharge, before the end of the period of seven days beginning with the day after the application is made; and
- (b) in any other case, before the end of the period of three months beginning with that day;
- and, subject to that subsection, where an application for any consent is required to be determined within the period specified in paragraph (a) above and is not so determined, the consent applied for shall be deemed to have been given unconditionally.

- (4) Where—

- (a) an undertaker which has made an application to any authority for a consent for the purposes of this section has failed to comply with its obligation under subsection (2)(a) above to supplement that application with information required by that authority; and
 - (b) that requirement was made by that authority at such a time before the end of the period within which that authority is required to determine the application as gave the undertaker a reasonable opportunity to provide the required information within that period,
- that authority may delay his determination of the application until a reasonable time after the required information is provided.
- (5) A consent for the purposes of this section may relate to a particular discharge or to discharges of a particular description and may be made subject to such reasonable conditions as may be specified by the person giving it; but a consent for those purposes shall not be unreasonably withheld.
- (6) Any dispute as to whether a consent for the purposes of this section should be given or withheld, or as to whether the conditions to which any such consent is made subject are reasonable, shall be referred to the arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (7) Where any discharge under section 165 above is made in an emergency without the consent which, if there were no emergency, would be required by virtue of this section, the undertaker which made the discharge shall, as soon as practicable after making the discharge, serve a notice which—
- (a) states that the discharge has been made; and
 - (b) gives such particulars of the discharge and of the emergency as the persons served with the notice might reasonably require,
- on every person on whom that undertaker would have been required to serve the application for that consent or any copy of that application.
- (8) If any water undertaker contravenes, without reasonable excuse, any of the requirements of this section or any condition of a consent given for the purposes of this section, it shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (9) Nothing in this section shall require any consent to be obtained, or any notice to be served, in respect of any discharge if the requirements of section 34 of the ^{M62}Water Act 1945 (temporary discharges into watercourses) in relation to that discharge had been satisfied before 1st September 1989.
- [^{F1302}(10) In this section “the appropriate agency” means—
- (a) the Environment Agency, in relation to discharges of water in England;
 - (b) the NRBW, in relation to discharges of water in Wales.]

Compulsory works orders

167 Compulsory works orders.

- (1) Where a water undertaker^{F1303} ... is proposing, for the purposes of, or in connection with, the carrying out of any of its functions^{F1303} ... —
- (a) to carry out any engineering or building operations; or
 - (b) to discharge water into any inland waters or underground strata,
- the undertaker may apply to the Secretary of State for an order under this section (“a compulsory works order”).
- (2) Subject to the following provisions of this section, the Secretary of State may, on an application under subsection (1) above, by order made by statutory instrument—
- (a) confer such compulsory powers; and
 - (b) grant such authority,
- as he considers necessary or expedient for the purpose of enabling any engineering or building operations or discharges of water to be carried out or made for the purposes of, or in connection with, the carrying out of the functions with respect to which the application was made.
- [^{F1304}(2A) The Secretary of State may not exercise the power under subsection (2) in respect of anything to be done in England.]
- (3) Schedule 11 to this Act shall have effect with respect to applications for compulsory works orders and with respect to such orders.
- (4) Subject to the provisions of Schedule 11 to this Act, a compulsory works order may—
- (a) without prejudice to section 155 above, confer power to acquire compulsorily any land, including—
 - (i) power to acquire interests in and rights over land by the creation of new rights and interests; and
 - (ii) power, by the compulsory acquisition by any water undertaker of any rights over land which is to be or has been acquired by that undertaker, to extinguish any such rights;
 - (b) apply for the purposes of the order, either with or without modifications, any of the relevant provisions of this Part of this Act which do not apply for those purposes apart from by virtue of this paragraph;
 - (c) make any authority granted by the order subject to such conditions as may be specified in the order;
 - (d) amend or repeal any local statutory provision;
 - (e) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (5) Without prejudice to any duty imposed by virtue of section 191 below, where—
- (a) the Secretary of State makes a compulsory works order authorising a water undertaker to carry out works for or in connection with the construction or operation of a reservoir or conferring compulsory powers for that purpose on such an undertaker; and
 - (b) it appears to him that the works to be carried out may permanently affect the area in which they are situated and are not primarily intended to benefit the inhabitants of that area,
- he may include in the order provision with respect to facilities for recreation or other leisure-time occupation for the benefit of those inhabitants.
- (6) Nothing in any compulsory works order shall exempt any water undertaker from any restriction imposed by Chapter II of Part II of the ^{M63}Water Resources Act 1991 (abstraction and impounding of water).
- (7) It is hereby declared that a compulsory works order may grant authority for discharges of water by a water undertaker where the undertaker has no power to take water, or to require discharges to be made, from the inland waters or other source from which the discharges authorised by the order are intended to be made; but nothing in so much of any such order as grants authority for any discharges of water shall have the effect of conferring any such power.
- (8) In this section the reference to the relevant provisions of this Part is a reference to the provisions of this Part except sections 172 and 173, the provisions of Chapter II and any provision of this Part which is one of the relevant sewerage provisions.

 - or
 - (b) carry out such inspections, measurements and tests on premises entered by that person or on water fittings or other articles found on any such premises, and take away such samples of water or of any land and such water fittings and other articles, as that person has been authorised to carry out or take away in accordance with regulations under that section.
- (4) During any period when a prohibition or restriction under section 76 above is in force, any person designated for the purpose by the water undertaker which imposed the prohibition or restriction shall, on producing some duly authenticated document showing his authority, have a right at all reasonable hours to enter any premises to which the prohibition or restriction applies for the purpose of ascertaining whether there is, or has been, any contravention of the prohibition or restriction.
- (5) The power by virtue of subsection (1) above of a person designated by a water undertaker to enter any premises for the purpose of carrying out any survey or tests shall include power to take away such samples of water or effluent or of any land or articles as the undertaker—
 - (a) considers necessary for the purpose of determining any of the matters mentioned in paragraph (a) or (c) of that subsection; and
 - (b) has authorised that person to carry out or take away.
- (6) Expressions used in this section and in any provision of Part III of this Act in relation to which this section has effect shall have the same meaning in this section as in that provision; and, without prejudice to the generality of this provision, subsections (2) and (3) of section 68 above and the definitions of “food production purposes” and “wholesome” in section 93(1) above shall apply for the purposes of any power

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

conferred by virtue of subsection (1)(c)(i) above as they apply for the purposes of that section.

- (7) Part I of Schedule 6 to this Act shall apply to the rights of entry conferred by subsections (2) and (4) of this section; and Part II of that Schedule shall apply to the rights and powers conferred by the other provisions of this section.
- (8) The provisions of this section shall be without prejudice to the other rights and powers conferred by this Part.

171 Entry for sewerage purposes.

- (1) Any person designated in writing for the purpose by a sewerage undertaker shall, on producing any duly authenticated document showing his authority, have a right to enter any premises at all reasonable hours-
- (a) for the purpose of ascertaining whether there is or has been, on or in connection with the premises, any contravention of any of the relevant sewerage provisions which it is the function of the undertaker to enforce;
 - (b) for the purpose of ascertaining whether or not circumstances exist which would authorise or require the undertaker to take any action or carry out any works under any of the relevant sewerage provisions;
 - (c) for the purpose of taking action or carrying out any works authorised by or under any of the relevant sewerage provisions to be taken or carried out by the undertaker;
 - (d) generally for the purpose of carrying out the undertaker's functions under the relevant sewerage provisions.
- (2) Part I of Schedule 6 to this Act shall apply to the right of entry conferred by subsection (1) above.
- (3) Any person designated by a sewerage undertaker under subsection (1) above for the purpose of exercising any power under this section for the purposes of Chapter III of Part IV of this Act may, on any occasion on which he so exercises that power in relation to any premises, obtain and take away any sample of any trade effluent which is passing (either directly or through [^{F1307}a drain or private sewer]) from those premises into any of the undertaker's public sewers.

^{F1308}(4)

^{F1308}(5)

- (6) In this section "trade effluent" and "trade premises" have the same meanings as in Chapter III of Part IV of this Act; and, accordingly, section 139 above shall have effect for the purposes of this section as it has effect for the purposes of that Chapter.

Textual Amendments

F1307 Words in s. 171(3) substituted (28.5.2004) by [Water Act 2003 \(c. 37\)](#), **ss. 97(6)**, 105(3); [S.I. 2004/641](#), **art. 4(b)** (with [Sch. 3 para. 7](#))

F1308 S. 171(4)(5) repealed (1.4.1996) by [1995 c. 25](#), s. 111(1)(c), 120(3), **Sch. 24** (with [ss. 7\(6\)](#), 115, 117); [S.I. 1996/186](#), **art. 3**

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

172 Entry for metering purposes.

- (1) Where the conditions set out in section 162(1) above are satisfied in relation to any premises, any person designated in writing for the purpose by the relevant undertaker in question may enter those premises, or any land occupied with those premises, for any of the purposes specified in subsection (2) below.
- (2) The purposes mentioned in subsection (1) above are—
 - (a) the carrying out of any survey or tests for the purpose of determining—
 - (i) whether the carrying out of any works by virtue of paragraph (a) or (b) of subsection (3) of section 162 above is practicable;
 - (ii) whether it is necessary or expedient for any purpose connected with the carrying out of any works by virtue of either of those paragraphs for any other works to be carried out; or
 - (iii) how any works specified in that subsection should be carried out;
 - (b) the carrying out of any works so specified;
 - (c) the inspection, examination or testing of any meter which is on those premises or of any pipes or apparatus installed in the course of any works which were carried out for any purpose that is connected with the installation, connection, testing, maintenance or repair of any such meter;
 - (d) the ascertainment from any meter of the volume of water supplied to, or of effluent discharged from, those premises.
- (3) Part II of Schedule 6 to this Act shall apply in relation to the rights and powers conferred by the preceding provisions of this section.
- (4) Where any meter or other recording apparatus is provided in any premises in pursuance of Chapter III of Part IV of this Act for the purpose of assessing any charge, a sewerage undertaker may (instead of exercising its powers under this section) for the purpose of reading that meter or apparatus exercise the power conferred by section 171 above as if that purpose were included in the purposes mentioned in subsection (1) of that section.

173 Impersonation of persons entitled to entry.

- (1) A person who, without having been designated or authorised for the purpose by a relevant undertaker, purports to be entitled to enter any premises or vessel in exercise of a power exercisable in pursuance of any such designation or authorisation shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 4 on the standard scale.
- (2) For the purposes of this section it shall be immaterial, where a person purports to be entitled to enter any premises or vessel, that the power which that person purports to be entitled to exercise does not exist or would not be exercisable even if that person had been designated or authorised by a relevant undertaker.

Status: This version of this Act contains provisions that are prospective.

CHAPTER II

PROTECTION OF UNDERTAKERS' WORKS, APPARATUS ETC.

Protection of apparatus in general

174 Offences of interference with works etc.

Subject to subsection (2) below, if any person without the consent of the water undertaker—

- (1) (a) intentionally or recklessly interferes with any resource main, water main or other pipe vested in any water undertaker or with any structure, installation or apparatus belonging to any water undertaker; or
- (b) by any act or omission negligently interferes with any such main or other pipe or with any such structure, installation or apparatus so as to damage it or so as to have an effect on its use or operation,

that person shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

[^{F1309}(1A) Subject to subsection (2) below, if any person without the consent of [^{F1310}the water supply licensee]—

- (a) intentionally or recklessly interferes with any pipe or any structure, installation or apparatus which—
 - (i) is vested in [^{F1311}any water supply licensee] (in the case of a pipe) or belongs to [^{F1312}any such licensee] (in any other case); and
 - (ii) is used in connection with the carrying on by [^{F1313}the licensee] of the activities authorised by [^{F1314}the licensee's licence]; or
- (b) by any act or omission negligently interferes with any such pipe or with any such structure, installation or apparatus so as to damage it or so as to have an effect on its use or operation,

that person shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.]

- (2) A person shall not be guilty of an offence under subsection (1) [^{F1315}or (1A)] above—
 - (a) by reason of anything done in an emergency to prevent loss or damage to persons or property; or
 - (b) by reason of his opening or closing the stopcock fitted to a service pipe by means of which water is supplied to any premises by a water undertaker [^{F1316}or [^{F1317}water supply licensee]] if—
 - (i) he has obtained the consent of every consumer whose supply is affected by the opening or closing of that stopcock or, as the case may be, of every other consumer whose supply is so affected; and
 - (ii) in the case of opening a stopcock, [^{F1318}subsection (2A) below applies].

[^{F1319}(2A) This subsection applies—

- (a) in the case of a stopcock belonging to a water undertaker, if the stopcock was closed otherwise than by the undertaker;
- (b) in the case of a stopcock belonging to [^{F1320}a water supply licensee]—
 - (i) if the stopcock was closed otherwise than by [^{F1321}the licensee]; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) if the stopcock was closed by [F1322the licensee] and the person in question for the purposes of subsection (2) above is the water undertaker whose supply system is used for the purpose of the supply made by [F1322the licensee],

and in this subsection the reference to the supply system of a water undertaker shall be construed in accordance with [F1323section 17B] above.]

- (3) Any person who, without the consent of the water undertaker—

- (a) attaches any pipe or apparatus—
- (i) to any resource main, water main or other pipe vested in a water undertaker; or
- (ii) to any service pipe which does not belong to such an undertaker but which is a pipe by means of which water is supplied by such an undertaker to any premises;
- (b) makes any alteration in a service pipe by means of which water is so supplied, or in any apparatus attached to any such pipe; or
- (c) subject to subsection (4) below, uses any pipe or apparatus which has been attached or altered in contravention of this [F1324subsection],

shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

- [F1325(3A) Any person who, without the consent of [F1326the water supply licensee]—

- (a) attaches any pipe or apparatus to any pipe which is—
- (i) vested in [F1327a water supply licensee]; and
- (ii) used in connection with the carrying on by [F1328the licensee] of the activities authorised by [F1329the licensee's licence];
- (b) attaches any pipe or apparatus to any service pipe which does not belong to such [F1330a licensee] or a water undertaker but which is a pipe by means of which water is supplied by such [F1330a licensee] to any premises;
- (c) makes any alteration in a service pipe by means of which water is so supplied, or in any apparatus attached to any such pipe; or
- (d) subject to subsection (4) below, uses any pipe or apparatus which has been attached or altered in contravention of this subsection,

shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.]

- (4) In proceedings against any person for an offence by virtue of paragraph (c) of subsection (3) above [F1331or paragraph (d) of subsection (3A) above] it shall be a defence for that person to show that he did not know, and had no grounds for suspecting, that the pipe or apparatus in question had been attached or altered as mentioned in [F1332subsection (3) or (3A) above (as the case may require)].

- (5) If any person wilfully or negligently injures or suffers to be injured any water fitting belonging to a water undertaker, he shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 1 on the standard scale.

- [F1333(5A) If any person wilfully or negligently injures or suffers to be injured any water fitting which—

- (a) belongs to [F1334a water supply licensee]; and
- (b) is used in connection with the carrying on by [F1335the licensee] of the activities authorised by [F1336the licensee's licence],

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

he shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 1 on the standard scale.]

- (6) An offence under subsection (1) or (3) above shall constitute a breach of a duty owed to the water undertaker in question; and any such breach of duty which causes the undertaker to sustain loss or damage shall be actionable at the suit of the undertaker.
- (7) The amount recoverable by virtue of subsection (6) above from a person who has committed an offence under subsection (3) above shall include such amount as may be reasonable in respect of any water wasted, misused or improperly consumed in consequence of the commission of the offence.
- (8) A water undertaker may—
- (a) do all such work as is necessary for repairing any injury done in contravention of subsection (5) above; and
 - (b) recover the expenses reasonably incurred by the undertaker in doing so from the offender summarily as a civil debt.

[^{F1337}(8A) In this section “consumer”—

- (a) in relation to a supply of water provided by a water undertaker to any premises, means a person who is for the time being the person on whom liability to pay charges to the undertaker in respect of that supply of water would fall;
- (b) in relation to a supply of water provided by [^{F1338}a water supply licensee] to any premises, means a person who is for the time being the person on whom liability to pay charges to [^{F1339}the licensee] in respect of that supply of water would fall.]

- (9) In this section [^{F1340}“water fitting” has the same meaning] as in Part III of this Act; and in subsection (1) above the references to apparatus belonging to a water undertaker do not include references to any meter which belongs to such an undertaker and is used by it for the purpose of determining the amount of any charges which have been fixed by the undertaker by reference to volume.

Protection of meters

175 Offence of tampering with meter.

(1) If any person—

- (a) so interferes with a meter used by any relevant undertaker [^{F1341}, water supply licensee or sewerage licensee] in determining the amount of any charges fixed in relation to any premises as intentionally or recklessly to prevent the meter from showing, or from accurately showing, the volume of water supplied to, or of effluent discharged from, those premises; or
- (b) carries out any works which he knows are likely to affect the operation of such a meter or which require the disconnection of such a meter,

he shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

(2) A person shall not be guilty of an offence under this section in respect of anything done by him with the [^{F1342}appropriate consent] .

[^{F1343}(3) In subsection (2) above, the “appropriate consent” means—

- (a) if the meter is used by one relevant undertaker, the consent of that undertaker;
- [^{F1344}(b) if the meter is used by one water supply licensee, the consent of that licensee;
- (ba) if the meter is used by one sewerage licensee, the consent of that licensee;]
- (c) if the meter is used by two or more of the following persons—
 - (i) a relevant undertaker;
 - [^{F1345}(ii) a water supply licensee;
 - (iii) a sewerage licensee,]

the consent of each of those persons.

(4) In subsection (3) above, references to the consent of a relevant undertaker are references to consent under section 176 below.]

Textual Amendments

- F1341** Words in s. 175(1) substituted (1.4.2016) by [Water Act 2014 \(c. 21\), s. 94\(3\), Sch. 7 para. 109\(2\)](#); S.I. 2016/465, art. 2(m), Sch. 1 para. 1(v) (with Sch. 2) (as amended (22.3.2017) by S.I. 2017/462, art. 16)

Status: This version of this Act contains provisions that are prospective.

F1343 S. 175(3)(4) inserted (1.12.2005) by [Water Act 2003 \(c. 37\)](#), ss. 101(1), 105(3), **Sch. 8 para. 40(4)**; S.I. 2005/2714, **art. 3(b)** (with Sch. para. 8)

F1344 S. 175(3)(b)(ba) substituted for s. 175(3)(b) (1.4.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), **Sch. 7 para. 109(3)(a)**; S.I. 2016/465, art. 2(m), Sch. 1 para. 1(v) (with Sch. 2) (as amended (22.3.2017) by S.I. 2017/462, art. 16)

F1345 S. 175(3)(c)(ii)(iii) substituted for s. 175(3)(c)(ii) (1.4.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), **Sch. 7 para. 109(3)(b)**; S.I. 2016/465, art. 2(m), Sch. 1 para. 1(v) (with Sch. 2) (as amended (22.3.2017) by S.I. 2017/462, art. 16)

176 Consent for the purposes of section 175.

- (1) Where an application is made to any relevant undertaker for a consent for the purposes of section 175 above, the undertaker—
 - (a) shall give notice of its decision with respect to the application as soon as reasonably practicable after receiving it; and
 - (b) subject to subsection (2) below, may make it a condition of giving any consent that the undertaker itself should carry out so much of any works to which the application relates as is specified in the notice of its decision.
- (2) On such an application a relevant undertaker shall not refuse its consent, or impose any such condition as is mentioned in subsection (1)(b) above, unless it is reasonable to do so.
- (3) Where any relevant undertaker has given a notice to any person imposing any such condition as is mentioned in subsection (1)(b) above, the undertaker—
 - (a) shall carry out those works as soon as reasonably practicable after giving the notice; and
 - (b) may recover from that person any expenses reasonably incurred by it in doing so.
- (4) Any dispute between a relevant undertaker and any other person (including another such undertaker)—
 - (a) as to whether the undertaker or that other person should bear any expenses under subsection (3) above; or
 - (b) as to the amount of any expenses to be borne by any person under that subsection,
 shall be referred to the arbitration of a single arbitrator appointed by agreement between the undertaker and that person or, in default of agreement, by the Director.
- (5) Subsection (3) above shall not apply where the person who was given the notice notifies the undertaker that the carrying out of the works to which the condition relates is no longer required.

177 Financial obligations with respect to any interference with a meter.

- (1) A relevant undertaker which carries out any works made necessary by the commission of an offence under section 175 above shall be entitled to recover any expenses reasonably incurred in carrying out those works from the person who committed the offence.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Any person who sustains any loss or damage in consequence of any failure by any relevant undertaker—
- (a) to comply with any obligation imposed on it by section 176 above; or
 - (b) to exercise reasonable care in the performance of the duty imposed by subsection (3)(a) of that section,
- shall be entitled to recover compensation from the undertaker.
- (3) Any dispute between a relevant undertaker and any other person (including another such undertaker)—
- (a) as to whether the undertaker or that other person should bear any expenses under this section;
 - (b) as to whether the undertaker should pay any compensation under this section; or
 - (c) as to the amount of any expenses to be borne by any person under this section or as to the amount of any such compensation,
- shall be referred to the arbitration of a single arbitrator appointed by agreement between the undertaker and that person or, in default of agreement, by the Director.

Obstruction of sewerage works etc.

178 Obstruction of sewerage works etc.

- (1) A person who wilfully obstructs any person acting in the execution of any of the relevant sewerage provisions shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 1 on the standard scale.
- (2) If on a complaint made by the owner of any premises, it appears to a magistrates' court that the occupier of those premises is preventing the owner of those premises from carrying out any work which he is required to carry out by or under any of the relevant sewerage provisions, the court may order the occupier to permit the carrying out of the work.
- (3) Sections 300 to 302 of the Public Health Act 1936 (which relate to the determination of questions by courts of summary jurisdiction and to appeals against such determinations) shall apply for the purposes of and in relation to the determination under subsection (2) above of any matter by a magistrates' court—
 - (a) as they apply for the purposes of or in relation to a determination by such a court under that Act; and
 - (b) in the case of section 302, as if the reference to a decision of a local authority included a reference to a decision of a sewerage undertaker.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. CHAPTER III

SUPPLEMENTAL PROVISIONS WITH RESPECT TO UNDERTAKERS' POWERS

Vesting of works in undertaker

179 Vesting of works in undertaker.

- (1) [^{F1346}Subject to subsections (1A) and (3) below]—
- (a) every relevant pipe which has been laid, in exercise of any power conferred by this Part or otherwise, by a relevant undertaker; and
 - (b) every sewage disposal works constructed by a sewerage undertaker,
- shall vest in the undertaker which laid it or, as the case may be, the undertaker which constructed them.

[^{F1347}(1A) Subsection (1) above is subject to any provision to the contrary contained in an agreement between the relevant undertaker and the person in whom an interest in the pipe or works is or is to be vested; ^{F1348} ...]

- (2) In addition to the sewers and works which vest in a sewerage undertaker by virtue of subsection (1) above, the following shall also vest in such an undertaker, that is to say—
- (a) every sewer [^{F1349}, lateral drain] or sewage disposal works with respect to which a declaration of vesting made by that undertaker under Chapter II of Part IV of this Act takes effect; and
 - (b) every sewer which is laid in the area of that undertaker under Part XI of the ^{M64}Highways Act 1980 (making up private streets) and is not a sewer belonging to a road maintained by a highway authority.

[^{F1350}(2A) In addition to the water mains and service pipes which vest in a water undertaker by virtue of subsection (1) above, every water main and so much of each service pipe with respect to which a declaration of vesting made by a water undertaker under Chapter 2 of Part 3 of this Act takes effect shall also vest in that undertaker.]

- (3) Subsection (1) above shall not apply to a service pipe laid in a street other than the street in which the water main with which it connects is situated and shall not apply to a service pipe laid otherwise than in a street where that pipe is laid—
- (a) in pursuance of the duty imposed by virtue of section 46(4) above; or
 - (b) in substitution for a service pipe belonging to a person other than the person who lays the replacement pipe.
- (4) If any water fittings let for hire by a water undertaker are suitably marked, they—
- (a) shall continue to be the property of and removable by the undertaker, even if they are fixed to some part of the premises in which they are situated or are laid in the soil under any premises; and
 - (b) shall not be subject to distress ^{F1351}... or be liable [^{F1352}to be taken control of under Schedule 12 to the Tribunals, Courts and Enforcement Act 2007, or] to be taken in execution under any process of any court or in any proceedings in bankruptcy against a person in whose possession they are;

but nothing in this subsection shall affect the valuation for rating of any rateable hereditament.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) It is hereby declared that anything which, in pursuance of any arrangements under section 97 above, is done on behalf of a sewerage undertaker by a relevant authority within the meaning of that section is, subject to any provision to the contrary contained in any such arrangements, to be treated for the purposes of this section as done by the undertaker.
- (6) The preceding provisions of this section are without prejudice, in relation to any company appointed to be a relevant undertaker, to the vesting of anything in that company by virtue of any scheme under Schedule 2 to this Act or of the exercise by any relevant undertaker of any power to acquire property by agreement or compulsorily.
- (7) In this section—
- “relevant pipe”—
- (a) in relation to a water undertaker, means any water main (including a trunk main), resource main, discharge pipe or service pipe; and
- (b) in relation to a sewerage undertaker, means any sewer [^{F1353}, lateral drain] or disposal main;

and

“water fittings” has the same meaning as in Part III of this Act;

and water fittings let on hire by a water undertaker shall be treated as suitably marked for the purposes of this section if and only if they bear either such a distinguishing metal plate affixed to them or such a distinguishing brand or other mark conspicuously impressed or made on them as sufficiently indicates the undertaker as the actual owner of the fittings.

Damage etc. caused by works

180 Compensation for damage caused by works etc.

Schedule 12 to this Act shall have effect for making provision for imposing obligations for the purpose of minimising the damage caused in the exercise of certain powers conferred on undertakers and for imposing obligations as to the payment of compensation.

Modifications etc. (not altering text)

C298 S. 180 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 13\(2\)](#) (with reg. 1(1)(c))

181 Complaints with respect to the exercise of works powers on private land.

- (1) Subject to subsection (2) below, it shall be the duty of the Director to investigate any complaint made or referred to him with respect to the exercise by a relevant undertaker of any powers conferred on that undertaker by or by virtue of section 159 or 161(2) above.
- (2) The Director shall not be required to investigate any such complaint as is mentioned in subsection (1) above if—
 - (a) the complaint appears to the Director to be vexatious or frivolous;
 - (b) the Director is not satisfied that the complaint has been brought by the complainant to the attention of the relevant undertaker in question and that that undertaker has been given a reasonable opportunity of investigating and dealing with it; or
 - (c) the complaint was first made to the Director or [^{F1354}the Council] more than twelve months, or such longer period as the Director may for special reasons allow, after the matters to which the complaint relates first came to the notice of the complainant.
- (3) Where the Director, in pursuance of his duty under this section, investigates a complaint with respect to the exercise of any powers by a relevant undertaker—
 - (a) it shall be the duty of that undertaker to provide the Director with all such information and assistance as he may reasonably require for the purposes of his investigation; and
 - (b) it shall be the duty of the Director, before giving any direction under subsection (4) below, to consider any representations made to him by the complainant or by that undertaker with respect to the subject-matter of the complaint.
- (4) If on a complaint under subsection (1) above with respect to the exercise of any powers by a relevant undertaker, the Director is satisfied that that undertaker—
 - (a) has failed adequately to consult the complainant, before and in the course of exercising those powers, about the manner in which they are exercised; or
 - (b) by acting unreasonably in the manner of its exercise of those powers, has caused the complainant to sustain loss or damage or to be subjected to inconvenience,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

the Director may direct the undertaker to pay to the complainant an amount, not exceeding £5,000, in respect of that failure, loss, damage or inconvenience.

- (5) The Director shall not under subsection (4) above direct a relevant undertaker to pay any amount to a complainant in respect of any loss, damage or inconvenience for which compensation is recoverable under any other enactment except in so far as it appears to him appropriate to do so by reason of any failure of the amount of any such compensation to reflect the fact that it was not reasonable for the undertaker to cause the complainant to sustain the loss or damage or to be subjected to the inconvenience.
- (6) The duties of a relevant undertaker by virtue of subsection (3)(a) above shall be enforceable under section 18 above by the Director.
- (7) A person to whom any amount is required, in pursuance of a direction under subsection (4) above, to be paid by a relevant undertaker shall be entitled to recover that amount from that undertaker by virtue of this section.
- (8) The Secretary of State may by regulations substitute a different amount for the amount for the time being specified in subsection (4) above.

Textual Amendments

F1354 Words in s. 181(2)(c) substituted (1.10.2005) by [Water Act 2003 \(c. 37\)](#), ss. 101(1), 105(3), [Sch. 7 para. 27\(4\)](#); [S.I. 2005/2714](#), [art. 2\(1\)\(v\)\(aa\)](#) (with [Sch. para. 8](#))

C299 [S. 181](#) applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 13\(4\)](#) (with reg. 1(1)(c))

182 Codes of practice with respect to work on private land.

- (1) For the purposes of section 181 above it shall be the duty of every company holding an appointment under Chapter I of Part II of this Act as a relevant undertaker—
 - (a) as soon as reasonably practicable after its appointment takes effect, to submit to the Secretary of State for his approval a code of practice with respect to its exercise of any powers conferred by or by virtue of section 159 or 161(2) above; and
 - (b) if required to do so by the Secretary of State at any subsequent time, to submit proposed modifications of that code to the Secretary of State for his approval.
- (2) The Secretary of State, if he considers it appropriate to do so for the purpose of promoting what appear to him to be desirable practices with respect to the exercise, by any company holding an appointment under Chapter I of Part II of this Act as a relevant undertaker, of any powers conferred by or by virtue of section 159 or 161(2) above, may at any time by order made by statutory instrument, in relation to that company—
 - (a) approve any code of practice with respect to the exercise of those powers which has been submitted to him (whether or not under subsection (1) above) by that company for his approval;
 - (b) approve any modifications of such a code which have been so submitted; or
 - (c) withdraw his approval for any such code or modification.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) A contravention of a code of practice as for the time being approved under this section in relation to a company shall not—
- (a) affect the powers conferred on that company as a relevant undertaker by this Part;
 - (b) of itself entitle any person to be paid any amount under subsection (4) of section 181 above; or
 - (c) give rise to any criminal or civil liability;
- but the Director shall take into account whether there has been any such contravention in determining whether to give a direction under that subsection to that company and in determining the amount to which any such direction relates.
- (4) The Secretary of State shall not make an order under subsection (2) above unless he has first consulted all such persons as he considers it appropriate to consult.
- (5) The duties of a relevant undertaker under subsection (1) above shall be enforceable under section 18 above by the Secretary of State.

Modifications etc. (not altering text)

C300 S. 182 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), **Sch. 1 para. 13(5)** (with reg. 1(1)(c))

Protective provisions

183 Protection for particular undertakings.

Schedule 13 to this Act shall have effect for the protection of particular undertakings in connection with the carrying out of works and other activities by relevant undertakers.

Modifications etc. (not altering text)

C301 S. 183 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), **Sch. 1 para. 13(6)** (with reg. 1(1)(c))

184 Power of certain undertakers to alter public sewers etc.

- (1) The [^{F1355}Environment Agency][^{F1356}or the NRBW] or the Civil Aviation Authority or any internal drainage board, dock undertakers, railway undertakers [^{F1357}, airport operator or licence holder] may, after giving reasonable notice to the sewerage undertaker concerned, at their own expense and on substituting an equivalent, take up, divert or alter the level of any sewers, drains, culverts or other pipes which—
- (a) are vested in the undertaker; and
 - (b) pass under or interfere with, or interfere with the alteration or improvement of, as the case may be—
 - (i) any watercourse or other works vested in or under the control of the [^{F1355}Environment Agency][^{F1356}or the NRBW] or that internal drainage board;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (ii) any property of the Civil Aviation Authority;
 - (iii) any river, canal towing path or works forming part of the undertaking of those dock undertakers;
 - (iv) the railway of the railway undertakers; ^{F1358} . . .
 - (v) the airport in question. [^{F1359}; or
 - (vi) any property of a licence holder which is used by the licence holder for the purpose of carrying out activities authorised by the licence.]
- (2) In subsection (1) above “an equivalent”, in relation to any sewers, drains, culverts or pipes means other sewers, drains, culverts or pipes which will be equally effectual and will entail no additional expense for the sewerage undertaker in question.
- (3) Any difference of opinion which arises under this section between a sewerage undertaker and any person as to whether any sewers, drains, culverts or pipes substituted or proposed to be substituted for sewers, drains, culverts or pipes of that undertaker—
- (a) are or will be equally effectual; or
 - (b) entail or will entail additional expense for the sewerage undertaker,
- may, at the option of the party complaining, be referred to a single arbitrator appointed by agreement between the parties or, in default of agreement, by the President of the Institution of Civil Engineers.
- (4) In this section—
- “airport operator” means the person who is the airport operator for the purposes of Part V of the ^{M65}Airports Act 1986 in relation to an airport to which that Part of that Act applies; ^{F1360} . . .
- “dock undertakers” has the same meaning as in Chapter II of Part IV of this Act. [^{F1361}; and
- “licence holder” means a person who holds a licence under Chapter I of Part I of the Transport Act 2000 and “licence” shall be construed accordingly.]

185 Duty to move pipes etc. in certain cases.

- (1) Where any relevant pipe or other apparatus is for the time being kept installed by a relevant undertaker on, under or over any land, any person with an interest in that land or in adjacent land may by notice to the undertaker require the undertaker to alter or remove that pipe or apparatus on the ground that the alteration or removal of that pipe or apparatus is necessary to enable that person to carry out a proposed improvement of the land in which he has an interest.
- (2) Subject to subsections (3) and (4) below, where a notice is served on a relevant undertaker under subsection (1) above, it shall be the duty of the undertaker to comply with the requirement contained in the notice except to the extent that that requirement is unreasonable.
- (3) Nothing in this section shall require a relevant undertaker to alter or remove any pipe or apparatus which is kept installed in, under or over any street.
- (4) A relevant undertaker may make it a condition of complying with the duty to which it is subject by virtue of a notice served by any person under subsection (1) above that such security [^{F1362}as charging rules allow and the undertaker requires] has been provided for the discharge of any obligation of that person under subsection (5) below.
- (5) Where a relevant undertaker carries out any works under this section by virtue of a notice having been served by any person under subsection (1) above, [^{F1363}the person serving the notice is liable to pay to the undertaker such charges as the undertaker may impose in accordance with charging rules].

^{F1364}(6)

^{F1364}(7)

(8) The duty of a relevant undertaker under this section shall be enforceable under section 18 above by the Director.

(9) In this section—

“improvement”, in relation to any land, includes any development or change of use but does not include an improvement with respect to the supply of water, or the provision of sewerage services, to any premises; and

“relevant pipe” has the same meaning as in section 158 above.

- (a) with any sluices, floodgates, groynes, sea defences or other works used by any person for draining, preserving or improving any land under any local statutory provision; or
 - (b) with any such works used by any person for irrigating any land.
- (2) Without prejudice to the construction of subsection (1) above for the purposes of its application in relation to the other provisions of this Act, that subsection shall have effect in its application in relation to the relevant sewerage provisions as if any use of or injury to any such works as are mentioned in paragraph (a) or (b) of that subsection were such an interference as is mentioned in that subsection.
- (3) Nothing in the relevant sewerage provisions shall authorise a sewerage undertaker injuriously to affect—
 - (a) any reservoir, canal, watercourse, river or stream, or any feeder thereof; or
 - (b) the supply, quality or fall of water contained in, or in any feeder of, any reservoir, canal, watercourse, river or stream,
 without the consent of any person who would, apart from this Act, have been entitled by law to prevent, or be relieved against, the injurious affection of, or of the supply, quality or fall of water contained in, that reservoir, canal, watercourse, river, stream or feeder.
- (4) Nothing in the relevant sewerage provisions, except sections 113 and 116 above, shall be taken to affect any right of drainage acquired by any person by prescription or otherwise before 1st October 1937.
- (5) Where a relevant undertaker proposes, otherwise than in exercise of any compulsory powers, to construct or alter any relevant inland waters in any internal drainage district or to construct or alter any works on or in any such inland waters, the undertaker shall consult the drainage board for that district before doing so.
- (6) A consent for the purposes of subsection (1) above may be given subject to reasonable conditions but shall not be unreasonably withheld.
- (7) Any dispute—
 - (a) as to whether anything done or proposed to be done interferes or will interfere as mentioned in subsection (1) above;
 - (b) as to whether any consent for the purposes of this section is being unreasonably withheld;
 - (c) as to whether any condition subject to which any such consent has been given was reasonable; or
 - (d) as to whether the supply, quality or fall of water in any reservoir, canal, watercourse, river, stream or feeder is injuriously affected by the exercise of powers under the relevant sewerage provisions,
 shall be referred (in the case of a dispute falling within paragraph (d) above, at the option of the party complaining) to the arbitration of a single arbitrator to be appointed by agreement between the parties or, in default of agreement, by the President of the Institution of Civil Engineers.
- (8) In this section “relevant inland waters” means any inland waters other than any which form part of a main river for the purposes of Part IV of the ^{M66}Water Resources Act 1991.
- (9) The provisions of this section shall be without prejudice to the provisions of Schedule 13 to this Act.

Status: This version of this Act contains provisions that are prospective.

- (b) are not before the end of three days from the date of their removal claimed by the owner and taken away by him.
- (2) Where a sewerage undertaker sells any materials under this section, they shall pay the proceeds to the person to whom the materials belonged after deducting the amount of any expenses recoverable by the undertaker from him.
- (3) This section is subject to any rights conferred by virtue of paragraph 1 of Schedule 14 to this Act, does not apply to refuse removed by a sewerage undertaker and is not to be taken as prejudicing the determination of the rights and liabilities of a relevant undertaker when exercising a power in any case to which the preceding provisions of this section do not apply.

190 Saving for planning controls.

Without prejudice to the operation of section 90 of the ^{M68}Town and Country Planning Act 1990 (planning permission deemed to be granted in certain cases) in relation to any provision made by or under this Act or any other enactment which by virtue of this Act or the ^{M69}Water Act 1989 relates to the functions of a relevant undertaker, nothing in this Act or in any such enactment shall be construed as authorising the carrying out of any development (within the meaning of that Act of 1990) without the grant of such planning permission as may be required by that Act of 1990.

Modifications etc. (not altering text)

191 Duties to make recreational facilities available when building reservoirs in Wales.

- (1) Where a water undertaker carries out any works for or in connection with the construction or operation of a reservoir in Wales which—
 - (a) permanently affect one or more communities; and
 - (b) are not primarily intended by that undertaker to benefit the inhabitants of that or those communities,
 it shall be the duty of that undertaker to make available facilities for recreation or other leisure-time occupation for the benefit of those inhabitants or to assist others to make such facilities available.
- (2) It shall be the duty of every water undertaker, in performing its duty under subsection (1) above, to consult—
 - (a) the community councils of the communities affected, in the case of communities having such councils; and
 - (b) in any case, the council of any [^{F1365}county or county borough] in which any community affected is situated.

- (3) The duties of a water undertaker under this section shall be enforceable under section 18 above by the Secretary of State.

Textual Amendments

F1365 Words in s. 191(2)(b) substituted (1.4.1996) by 1994 c. 19, s. 22(5), **Sch. 11 Pt. I para. 2(1)** (with ss. 54(5)(7), 55(5)); S.I. 1996/396, art. 3, **Sch. 1**

Interpretation of Part VI

192 Interpretation of Part VI.

- (1) In this Part “discharge pipe” means a pipe from which discharges are or are to be made under section 165 above.
- (2) In this Part references to maintaining a pipe include references to cleansing it and references to altering a pipe include references to altering its size or course, to moving or removing it and to replacing it with a pipe which is of the same description of relevant pipe (within the meaning of section 158 above) as the pipe replaced.
- (3) The powers conferred by this Part on a relevant undertaker shall be exercisable both inside and outside the undertaker’s area.
- ^{F1366}[(3A) A relevant undertaker proposing to exercise any of its powers under section 158 or 159 above outside its own area shall, if subsection (3B) below applies, give notice of its proposal to the water undertaker or (as the case may be) sewerage undertaker for the area in question and, if that subsection applies, shall not carry out its proposal—
- (a) without the consent of that other undertaker; or
 - (b) where that other undertaker refuses to give its consent, or fails to give its consent before the end of the period of 28 days beginning with the day on which it is notified of the proposal, without the consent of the Director.
- (3B) This subsection applies where the proposal is to lay—
- (a) a water main which is not intended to be—
 - (i) a trunk main; or
 - (ii) a water main used solely for the purpose of supplying water otherwise than for domestic purposes; or
 - (b) a sewer which is intended to be a public sewer but not a storm-water overflow sewer.]

(4) In so far as any powers conferred by this Part on a relevant undertaker authorise the removal of any pipe or the alteration of its size or course, those powers shall be subject to such obligations by virtue of which the undertaker is required—

 - (a) to maintain a pipe or a connection with it; or
 - (b) to alter a pipe only where certain conditions are satisfied, as are imposed on the undertaker by or under any enactment.

(5) The powers conferred by virtue of this Part are without prejudice to any power conferred by virtue of any agreement and are cumulative.

Status: This version of this Act contains provisions that are prospective.

PART VII

INFORMATION PROVISIONS

Reports

[^{F1367}192] Forward work programmes

- (1) The Authority and the Council shall, before each financial year, each publish a document (the “forward work programme”) containing a general description of the projects, other than those comprising routine activities in the exercise of its functions, which it plans to undertake during the year.
- (2) That description must include the objectives of each project.
- (3) The forward work programme for any year shall also include an estimate of the overall expenditure which the Authority or the Council expects to incur during the year in the exercise of its functions.

[The forward work programme for any year must also include an explanation of how
^{F1368}(3A) the projects described in it reflect any strategic priorities or objectives published under section 2A or 2B.]

- (4) Before publishing the forward work programme for any year, the Authority or the Council shall give notice—
 - (a) containing a draft of the forward work programme; and
 - (b) specifying the time within which representations or objections to the proposals contained in it may be made,
 and shall consider any representations or objections which are duly made and not withdrawn.
- (5) The notice under subsection (4) above must be published by the Authority or the Council in such manner as it considers appropriate for the purpose of bringing the matters contained in it to the attention of persons likely to be affected by them.
- (6) The Authority must send a copy of any notice given by it under subsection (4) above to the Council, the Secretary of State and the Assembly.
- (7) The Council must send a copy of any notice given by it under subsection (4) above to the Authority, the Secretary of State and the Assembly.

192B Annual and other reports

- (1) The Authority shall, as soon as practicable after the end of each financial year, make to the Secretary of State [^{F1369}and the Welsh Ministers] a report (the “annual report” for that year) on—
 - (a) its activities during that year; and
 - (b) the activities of the [^{F1370}CMA] during that year in respect of any references made [^{F1371}by the Authority].
- (2) The annual report for each year shall include—
 - (a) a general survey of developments in respect of matters falling within the scope of the Authority’s functions;
 - (b) a report on the progress of the projects described in the forward work programme for that year;
 - (c) a summary of final and provisional orders made and penalties imposed by the Authority during the year;
 - (d) a report on such matters relating to any relevant undertaker whose area is wholly or mainly in Wales as the Assembly may from time to time require; and
 - (e) a report on such other matters as the Secretary of State may from time to time require.
- (3) The annual report for each year shall set out any general directions given by the Secretary of State under section 27(3) above.
- (4) The Secretary of State or (as the case may be) the Assembly shall consult the Authority before exercising the power under subsection (2)(d) or (e) above in relation to any matter.
- (5) The Secretary of State shall—
 - (a) lay a copy of each annual report before each House of Parliament; and
 - (b) arrange for the report to be published in such manner as he considers appropriate.
- [The Welsh Ministers shall—
- ^{F1372}(5A)
 - (a) lay a copy of each annual report before the Assembly; and
 - (b) arrange for the report to be published in such manner as they consider appropriate.]
- (6) The Authority may also prepare other reports with respect to any matter falling within the scope of its functions and may arrange for any such report to be published in such manner as it considers appropriate.
- (7) The Authority shall send a copy of each annual or other report under this section to ^{F1373}... the Council and the Chief Inspector of Drinking Water.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (8) In making or preparing any report under this section the Authority shall have regard to the need for excluding, so far as that is practicable, any matter which relates to the affairs of a particular individual or body of persons (corporate or unincorporate), where publication of that matter would or might, in the opinion of the Authority, seriously and prejudicially affect the interests of that individual or body.]

 - (bc) every determination made by the Authority under section 17E or ^{F1381}66CA(1)] above ^{F1382}or regulation 19 of the Water and Sewerage Undertakers (Exit from Non-household Retail Market) Regulations 2016 (S.I. 2016/744)];]
 - (c) every final enforcement order made under section 18 above, every provisional enforcement order made or confirmed under that section and every revocation of such a final or provisional enforcement order;
 - (d) every undertaking given to and accepted by the Secretary of State or the Director for the purposes of subsection (1)(b) of section 19 above and every notice under subsection (3) of that section, ^{F1383} . . .
 - (e) every special administration order and every discharge of such an order.
 - ^{F1384}(f) every penalty imposed under section 22A(1) or (2) above and every notice under section 22A(6) above;]] ^{F1385}and
 - (g) every designation made by the Authority under section 66G ^{F1386}, 66H, 117N or 117O].]
- (3) If it appears to the Secretary of State that the entry of any provision ^{F1387}or, in the case of information that falls to be entered under subsection (3B), any information] in the register would be against the public interest, he may direct the Director not to enter that provision ^{F1388}or that information] in the register; and the Director shall comply with any such direction.
- ^{F1389}(3AA) Before giving a direction under subsection (3) above which relates to a ^{F1390}water supply licensee], the Secretary of State shall consult the Assembly.]
- ^{F1391}(3A)
- ^{F1392}(3B) Subject to any direction given under subsection (3), the Authority must cause to be entered on the register such information about an agreement falling within section 142(2)(b) as the Authority thinks fit.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(3C) Subsection (3B) has effect in relation to agreements made after the coming into force of section 33 of the Water Act 2014.]

[^{F1393}(4) The Authority must publish a notice setting out—

- (a) the times at which the contents of the register are for the time being available for inspection by the public;
- (b) the fees that must be paid for, or in connection with, an inspection of the contents of the register;
- (c) the fees that must be paid for, or in connection with, the supply by the Authority of—
 - (i) a copy of the contents of the register, certified by the Authority as being a true copy, or
 - (ii) an extract from the contents of the register, certified by the Authority as being a true extract.

[^{F1394}(3D) Subject to any direction given under subsection (3), the Authority must cause to be entered on the register the provisions of—

- (a) a notice under section 40F(3) (reduction in charges payable under a bulk supply agreement);
- (b) a notice under section 66EA(3) (reduction in charges payable under a section 66D agreement);
- (c) a notice under section 110G(3) (reduction in charges payable under a main connection agreement);
- (d) a notice under section 117J(3) (reduction in charges payable under a section 117E agreement).]

(4A) The Authority must publish the notice in such manner as the Authority thinks appropriate for bringing it to the attention of the persons who, in the Authority's opinion, are likely to be affected by it.

(4B) The Authority must make the contents of the register available for inspection by the public—

- (a) during such hours, and
- (b) on payment of such fees,

as are set out in the notice under subsection (4) that is for the time being in force.]

(7) Any sums received by the Director under this section shall be paid into the Consolidated Fund.

^{F1395}195 Reasons for decisions

- (1) This section applies to the following decisions of the Authority, the Secretary of State or the Assembly, namely—
- (a) the modification of the conditions of an appointment under Chapter 1 of Part 2 of this Act or the variation of the area to which an appointment relates;
 - (b) the modification of the conditions of a licence under Chapter 1A of that Part;
 - (c) the termination of such an appointment or the revocation of such a licence;
 - (d) the giving of any directions or consent in pursuance of a condition included in such an appointment by virtue of section 12(1) above or in such a licence by virtue of section 17G(3)(a) or (b) above;
 - (e) the determination of a question referred in pursuance of a condition included in such an appointment by virtue of section 12(2) above or in such a licence by virtue of section 17G(3)(c) above;
 - (f) the making of a determination under section 17E or ^{F1396}66CA(1)] above; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (g) the making of a final enforcement order, the making or confirmation of a provisional enforcement order or the revocation of a final order or of a provisional order which has been confirmed.
- (2) As soon as reasonably practicable after making such a decision the Authority, the Secretary of State or the Assembly shall publish a notice stating the reasons for the decision in such manner as it considers appropriate for the purpose of bringing the matters to which the notice relates to the attention of persons likely to be interested.
- (3) A person publishing a notice under subsection (2) above shall serve a copy on the company holding the appointment or [^{F1397}the person holding the] licence to which the decision relates.
- (4) A person preparing a notice under subsection (2) above shall have regard to the need for excluding, so far as that is practicable, any matter which relates to the affairs of a particular individual or body of persons (corporate or unincorporate), where he considers that publication of that matter would or might seriously and prejudicially affect the interests of that individual or body.
- (5) This section does not apply in relation to a decision of the Authority resulting in any provision which the Authority was directed under section 195(3) above not to enter in the register required to be kept under that section.]

196 Trade effluent registers.

- (1) It shall be the duty of every sewerage undertaker to secure that copies of—
- (a) every consent given or having effect as if given by the undertaker under Chapter III of Part IV of this Act;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) every direction given or having effect as if given by the undertaker under that Chapter;
 - (c) every agreement entered into or having effect as if entered into by the undertaker under section 129 above; and
 - (e) every notice served on the undertaker under section 132 above,
- are kept available, at all reasonable times, for inspection by the public free of charge at the offices of the undertaker.
- (2) It shall be the duty of every sewerage undertaker, on the payment of such sum as may be reasonable, to furnish a person who requests it with a copy of, or of an extract from, anything kept available for inspection under this section.
 - (3) The duties of a sewerage undertaker under this section shall be enforceable under section 18 above by the Director.

197 Register for the purposes of works discharges.

- (1) Every water undertaker shall keep a register of persons and premises for the purposes of section 166 above.
- (2) A water undertaker shall enter the name and address of a person in that register in respect of any premises which abut on any watercourse if that person has requested to be so registered and is either—
 - (a) the owner or occupier of those premises; or
 - (b) an officer of an association of owners or occupiers of premises which abut on that watercourse and include those premises.
- (3) If any water undertaker contravenes, without reasonable excuse, any of the requirements of this section, it shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

198 Maps of waterworks.

- (1) Subject to subsections (4) and (5) below, it shall be the duty of every water undertaker to keep records of the location of—
 - (a) every resource main, water main or discharge pipe which is for the time being vested in that undertaker; and
 - (b) any other underground works, other than a service pipe, which are for the time being vested in that undertaker.
- ^{F1398}(1A) Subject to subsection (4) below, it shall also be the duty of every water undertaker to keep records of the location and (in the case of a water main) other relevant particulars of—
 - (a) every water main in relation to which a declaration of vesting has been made by the undertaker under Chapter 2 of Part 3 of this Act but has not taken effect; and
 - (b) every water main which is the subject of any agreement to make such a declaration which has been entered into by (or on behalf of) the undertaker.
- (1B) For the purposes of this section the other relevant particulars of a water main are (in addition to its location) particulars of whether it is a water main in relation to which a declaration has been made under Chapter 2 of Part 3 of this Act or a water main which is the subject of an agreement to make such a declaration.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) It shall be the duty of every water undertaker to secure that the contents of any records for the time being kept by it under this section are available, at all reasonable times, for inspection by the public free of charge at an office of the undertaker.
- (3) Any information which is required under this section to be made available by a water undertaker for inspection by the public shall be so made available in the form of a map.
- (4) For the purpose of determining whether any failure to make a modification of any records kept under this section constitutes a breach of the duty imposed by subsection (1) [^{F1399} or (1A)] above, that duty shall be taken to require any modification of the records to be made as soon as reasonably practicable after the completion of the works which make the modification necessary; and, where records kept under this section are modified, the date of the modification and of the completion of the works making the modification necessary shall be incorporated in the records.
- (5) Nothing in this section shall require a water undertaker, at any time before 1st September 1999, to keep records of—
 - (a) any pipe which was laid before 1st September 1989; or
 - (b) any underground works which were completed before 1st September 1989, unless those particulars were shown on 31st August 1989 on a map kept by a water authority or statutory water company under section 12 of Schedule 3 to the ^{M70}Water Act 1945 (maps of underground works).
- (6) The reference in subsection (5) above to section 12 of Schedule 3 to the ^{M71}Water Act 1945 shall have effect, without prejudice to section 20(2) of the ^{M72}Interpretation Act 1978 (references to enactments to include references to enactments as amended, extended or applied), as including a reference to that section as applied, with or without modifications, by any local statutory provision.
- (7) The duties of a water undertaker under this section shall be enforceable under section 18 above by the Secretary of State.
- (8) In this section “discharge pipe” has the same meaning as in Part VI of this Act.

199 Sewer maps.

- (1) Subject to subsections (6) to (8) below, it shall be the duty of every sewerage undertaker to keep records of the location and other relevant particulars—
 - (a) of every public sewer [^{F1400}, lateral drain] or disposal main which is vested in the undertaker;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) of every sewer [^{F1401}or lateral drain] in relation to which a declaration of vesting has been made by the undertaker under Chapter II of Part IV of this Act but has not taken effect; and
 - (c) of every drain or sewer which is the subject of any agreement to make such a declaration which has been entered into by the undertaker under section 104 above.
- (2) For the purposes of this section the relevant particulars of a drain, sewer or disposal main are (in addition to its location) particulars—
- (a) of whether it is a drain, sewer or disposal main and of the descriptions of effluent for the conveyance of which it is or is to be used; and
 - (b) of whether it is vested in the undertaker or, if it is not, of whether it is a sewer in relation to which a declaration has been made under Chapter II of Part IV of this Act or a drain or sewer which is the subject of an agreement under section 104 above.
- (3) The records kept by a sewerage undertaker under this section shall be kept separately in relation to the area of each local authority within whose area there is any drain, sewer or disposal main of which that undertaker is required to keep records and to whom the undertaker is required under section 200 below to provide copies of the contents of those records.
- (4) It shall be the duty of every sewerage undertaker to secure that the contents of all the records for the time being kept by it under this section are available, at all reasonable times, for inspection by the public free of charge at an office of the undertaker.
- (5) Any information which is required under this section to be made available by a sewerage undertaker for inspection by the public shall be so made available in the form of a map.
- (6) For the purpose of determining whether any failure to make a modification of any records kept under this section constitutes a breach of the duty imposed by subsection (1) above, that duty shall be taken to require any modification of the records to be made as soon as reasonably practicable after the completion of the works which make the modification necessary; and, where records kept under this section are modified, the date of the modification and of the completion of the works making the modification necessary shall be incorporated in the records.
- (7) Nothing in this section shall require a sewerage undertaker to keep records of any particulars of a drain, sewer or disposal main laid before 1st September 1989 if—
- (a) the undertaker does not know of, or have reasonable grounds for suspecting, the existence of the drain, sewer or disposal main; or
 - (b) it is not reasonably practicable for the undertaker to discover the course of the drain, sewer or disposal main and it has not done so.
- (8) Nothing in this section shall require a sewerage undertaker, at any time before 1st September 1999, to keep records of any particulars of any such drain, sewer or disposal main laid before 1st September 1989 as would not be excluded from its records by virtue of subsection (7) above unless—
- (a) those particulars were shown on 31st August 1989 on a map kept by a local authority under section 32 of the ^{M73}Public Health Act 1936 (sewer maps); or
 - (b) it is a drain or sewer in relation to which a declaration of vesting, or an agreement to make such a declaration, has been made since 31st August 1989.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 200 Provision of sewer maps to local authorities.

- (1) It shall be the duty of every sewerage undertaker so to provide local authorities, free of charge, with—
- (a) copies of the contents of records kept under section 199 above; and
 - (b) copies of any modifications of those records,
- as to ensure that every local authority to whose area any of those records relate are at all times informed of the contents for the time being of the records relating to their area.
- (2) A local authority shall secure that so much of any information provided to them by virtue of this section as consists in the contents for the time being of records kept by a sewerage undertaker under section 199 above is available, at all reasonable times, for inspection by the public free of charge at an office of the authority.
- (3) Any information which is required under this section to be provided to a local authority or to be made available by a local authority for inspection by the public shall be so provided or made available in the form of a map.
- (4) The duties of a sewerage undertaker under this section shall be enforceable under section 18 above by the Secretary of State.
- (5) In this section and, accordingly, in section 199(3) above “local authority”, in relation to the Inner Temple and the Middle Temple, includes, respectively, the Sub-Treasurer of the Inner Temple and the Under-Treasurer of the Middle Temple.

Publication of certain information and advice

201 Publication of certain information and advice.

- (1) The Secretary of State may arrange for the publication, in such form and in such manner as he considers appropriate, of such information
 - ^{F1402}(a) relating to any matter which is connected with the carrying out by a company holding an appointment under Chapter 1 of Part 2 of this Act of the functions of a relevant undertaker; or
 - (b) relating to any matter which is connected with the carrying on by a ^{F1403}person] holding a licence under Chapter 1A of that Part of the activities authorised by the licence,
 as it may] appear to him to be in the public interest to publish.
- (2) The Director may arrange for the publication, in such form and in such manner as he considers appropriate, of such information and advice as it may appear to him to be expedient to give to any customer or potential customer of a company holding an appointment under Chapter I of Part II of this Act or ^{F1404}a person holding]]^{F1405} a licence under Chapter 1A of that Part].
- (3) In arranging for the publication of any such information or advice the Secretary of State or the Director shall have regard to the need for excluding, so far as that is practicable—
 - (a) any matter which relates to the affairs of an individual, where the publication of that matter would or might, in the opinion of the Secretary of State or (as the case may be) the Director, seriously and prejudicially affect the interests of that individual; and
 - (b) any matter which relates specifically to the affairs of a particular body of persons, whether corporate or unincorporate, where publication of that matter would or might, in the opinion of the Secretary of State or (as the case may be) the Director, seriously and prejudicially affect the interests of that body.
- ^{F1406}(4) The ^{F1407}CMA] shall consult the Director before publishing under section 6 of the Enterprise Act 2002 any information or advice which may be published by the Director under subsection (2) of this section.]

C317 S. 201 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), [Sch. 1 para. 14\(5\)](#) (with reg. 1(1)(c))

Powers to acquire and duties to provide information

202 Duties of undertakers to furnish the Secretary of State with information.

- (1) It shall be the duty of a company holding an appointment as a relevant undertaker to furnish the Secretary of State with all such information relating to any matter which—
 - (a) is connected with, or with any proposals relating to, the carrying out by that company of the functions of a relevant undertaker; or
 - (b) is material to the carrying out by the Secretary of State of any of his functions under this Act, any of the other consolidation Acts or the ^{M74}Water Act 1989, as the Secretary of State may reasonably require.
- ^{F1408}(1A) It shall be the duty of a ^{F1409}person] holding a licence under Chapter 1A of Part 2 of this Act to furnish the Secretary of State with all such information relating to any matter which—
 - (a) is connected with, or with any proposals relating to, the carrying on by that ^{F1409}person] of the activities authorised by the licence; or
 - (b) is material to the carrying out by the Secretary of State of any of his functions under this Act, any of the other consolidation Acts or the Water Act 1989, as the Secretary of State may reasonably require.]
- (2) Information required under this section shall be furnished in such form and manner, and be accompanied or supplemented by such explanations, as the Secretary of State may reasonably require.
- (3) The information which a ^{F1410}person] may be required to furnish to the Secretary of State under this section shall include information which, although it is not in the possession of that ^{F1410}person] or would not otherwise come into the possession of that ^{F1410}person], is information which it is reasonable to require that ^{F1410}person] to obtain.
- (4) A requirement for the purposes of this section shall be contained in a direction which—
 - (a) may describe the information to be furnished in such manner as the Secretary of State considers appropriate;
 - (b) may require the information to be furnished on a particular occasion, in particular circumstances or from time to time; and
 - (c) may be given to a particular company ^{F1411}or person], to companies ^{F1412}or persons] of a particular ^{F1413}description,] to all the companies holding appointments under Chapter I of Part II of this Act ^{F1414}or ^{F1415}to all the persons holding] licences under Chapter 1A of that Part].
- (5) The obligations of a relevant undertaker ^{F1416}, water supply licensee or sewerage licensee] under this section shall be enforceable under section 18 above by the Secretary of State.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 203 Power to acquire information for enforcement purposes.

^{F1420}(1) The Minister or the Authority may serve a notice under subsection (2) in respect of—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) a company that holds an appointment as a relevant undertaker, if of the opinion that Condition 1 is satisfied, or
- (b) a person who holds a licence under Chapter 1A of Part 2, if of the opinion that Condition 2 is satisfied.

(1A) Condition 1 is that the company—

- (a) may be contravening, or may have contravened, a condition of the appointment or a statutory or other requirement enforceable under section 18,
- (b) may be causing or contributing to, or may have caused or contributed to, a contravention by another company holding an appointment as a relevant undertaker of a condition of the appointment or a statutory or other requirement enforceable under section 18,
- (c) may be causing or contributing to, or may have caused or contributed to, a contravention by a person holding a licence under Chapter 1A of Part 2 of a condition of the licence or a statutory or other requirement enforceable under section 18,
- (d) has not met the standards prescribed under section 38(2) in connection with the provision of supplies of water, or
- (e) has not met the standards prescribed under section 95(2) in connection with the provision of sewerage services.

(1B) Condition 2 is that the person—

- (a) may be contravening, or may have contravened, a condition of the licence or a statutory or other requirement enforceable under section 18,
- (b) may be causing or contributing to, or may have caused or contributed to, a contravention by a company holding an appointment as a relevant undertaker of a condition of the appointment or a statutory or other requirement enforceable under section 18,
- (c) may be causing or contributing to, or may have caused or contributed to, a contravention by another person holding a licence under Chapter 1A of Part 2 of a condition of the licence or a statutory or other requirement enforceable under section 18,
- (d) has not met the standards prescribed under section 38ZA(2) in connection with the provision of water supplies, or
- (e) has not met the standards prescribed under section 95ZA(2) in connection with the provision of sewerage services.

(1C) The notice may be served—

- (a) on any person;
- (b) for any purpose connected with powers under Chapter 2 of Part 2.]

(2) A notice under this subsection is a notice signed by the [^{F1421}Minister] or the Director and—

- (a) requiring the person on whom it is served to produce, at a time and place specified in the notice, to—
 - (i) the [^{F1421}Minister] or the Director; or
 - (ii) any person appointed by the [^{F1421}Minister] or the Director for the purpose,

any documents which are specified or described in the notice and are in that person's custody or under his control; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) requiring that person, if he is carrying on a business, to furnish, at the time and place and in the form and manner specified in the notice, the [^{F1421}Minister] or the Director with such information as may be specified or described in the notice.
- (3) No person shall be required under this section to produce any documents which he could not be compelled to produce in civil proceedings in the High Court or, in complying with any requirement for the furnishing of information, to give any information which he could not be compelled to give in evidence in any such proceedings.
- (4) A person who, without reasonable excuse, fails to do anything required of him by a notice under subsection (2) above shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 5 on the standard scale.
- (5) A person who intentionally alters, suppresses or destroys any document which he has been required by any notice under subsection (2) above to produce shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (6) If a person makes default in complying with a notice under subsection (2) above, the High Court may, on the application of the [^{F1422}Minister] or the Director, make such order as the Court thinks fit for requiring the default to be made good; and any such order may provide that all the costs or expenses of and incidental to the application shall be borne by the person in default or by any officers of a company or other association who are responsible for its default.
- (7) Nothing in this section shall be construed as restricting any power of the Secretary of State or the Director under section 202 above or the conditions of an appointment under Chapter I of Part II of this Act [^{F1423} or of a licence under Chapter 1A of that Part] to require a company holding such an appointment [^{F1424} or a person holding such a licence] to produce any document to him or to furnish him with any information.
- [^{F1425}(8) The Minister” means—
- (a) the Secretary of State, in respect of—
 - (i) any relevant undertaker whose area is wholly or mainly in England;
 - (ii) any water supply licensee or sewerage licensee carrying out licensed activities using the supply system or sewerage system of any such undertaker;
 - (b) the Welsh Ministers, in respect of—
 - (i) any relevant undertaker whose area is wholly or mainly in Wales;
 - (ii) any water supply licensee or sewerage licensee carrying out licensed activities using the supply system or sewerage system of any such undertaker.
- (9) In this section—
- (a) references to the supply system of a water undertaker are to be construed in accordance with section 17B;
 - (b) references to the sewerage system of a sewerage undertaker are to be construed in accordance with section 17BA(7).]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. 204 Provision of information to sewerage undertakers with respect to trade effluent discharges.

- (1) The owner or occupier of any land on or under which is situated any sewer, drain, pipe, channel or outlet used or intended to be used for discharging any trade effluent into a sewer of a sewerage undertaker shall, when requested to do so by the undertaker—
 - (a) produce to the undertaker all such plans of the sewer, drain, pipe, channel or outlet as the owner or, as the case may be, occupier possesses or is able without expense to obtain;
 - (b) allow copies of the plans so produced by him to be made by, or under the directions of, the undertaker; and
 - (c) furnish to the undertaker all such information as the owner or, as the case may be, occupier can reasonably be expected to supply with respect to the sewer, drain, pipe, channel or outlet.
- (2) A request by a sewerage undertaker for the purposes of this section shall be made in writing.
- (3) Every person who fails to comply with this section shall be guilty of an offence and liable, on summary conviction to a fine not exceeding level 3 on the standard scale.
- (4) Expressions used in this section and in Chapter III of Part IV of this Act have the same meanings in this section as in that Chapter; and, accordingly, section 139 above shall have effect for the purposes of this section as it has effect for the purposes of that Chapter.

205 Exchange of metering information between undertakers.

- (1) Where—
 - (a) different services are provided in relation to the same premises by different [^{F1426}service providers] ;
 - (b) one of those [^{F1427}providers] has obtained a reading from a meter used in determining the amount of any charges fixed in relation to those premises;
 - (c) the charges in relation to those premises of another of those [^{F1427}providers] are fixed by reference to any matter to which the reading is relevant; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (d) that other [F1428 provider] has agreed to bear a reasonable proportion of the expenses of obtaining the reading together with the reasonable expenses of the disclosure of the reading to it,
it shall be the duty of the [F1429 provider] who obtained the reading to disclose the reading to the other [F1429 provider] .
- (2) Any dispute between a [F1430 service provider] and any other person (including another [F1431 such provider])—
- (a) as to the terms to be contained in any agreement for the purposes of subsection (1)(d) above; or
- (b) as to the amount of any expenses to be borne by any person under any such agreement,
- shall be referred to the arbitration of a single arbitrator appointed by agreement between [F1432 the provider] and that person or, in default of agreement, by the Director.
- [F1433 (3) The duties of a service provider under this section shall be enforceable under section 18 above by the Authority.
- (4) For the purposes of this section, the following are service providers—
- (a) any relevant undertaker; F1434 ...
- (b) any [F1435 water supply licensee].]
- [F1436 (c) any sewerage licensee.]

Modifications etc. (not altering text)

C320 S. 205 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013](#) (S.I. 2013/1582), reg. 1(1)(b), [Sch. 1 para. 14\(8\)](#) (with reg. 1(1)(c))

Restriction on disclosure of information

206 Restriction on disclosure of information.

- (1) Subject to the following provisions of this section, no information with respect to any particular business which—
 - (a) has been obtained by virtue of any of the provisions of this Act; and
 - (b) relates to the affairs of any individual or to any particular business,
 shall, during the lifetime of that individual or so long as that business continues to be carried on, be disclosed without the consent of that individual or the person for the time being carrying on that business.
- (2) No person shall disclose any information furnished to him under section ^{F1437} . . . 204 above or under Chapter III of Part IV of this Act except—
 - (a) with the consent of the person by whom the information was furnished;
 - (b) in connection with the execution of that Chapter;
 - (c) for the purposes of any proceedings arising under that Chapter (including any appeal, application to the Secretary of State or the Director or an arbitration);
 - (d) for the purposes of any criminal proceedings (whether or not so arising); or
 - (e) for the purposes of any report of any proceedings falling within paragraph (c) or (d) above.
- (3) Subsection (1) above does not apply to any disclosure of information which is made—
 - (a) for the purpose of facilitating the carrying out by the Secretary of State, the Minister, [^{F1438}the Environment Agency, [^{F1439}the NRBW,] the Scottish Environment Protection Agency], the Director [^{F1440}, the Council] , the [^{F1441}CMA] or a county council or local authority of any of his, its or, as the case may be, their functions by virtue of this Act, any of the other consolidation Acts [^{F1442}, ^{M78}the Water Act 1989, Part I or IIA of the Environmental Protection Act 1990 [^{F1443}, the ^{M79}Environment Act 1995][^{F1444}, regulations under section 2 of the Pollution Prevention and Control Act 1999, [^{F1445}the Water Act 2003 [^{F1446}, the Water Act 2014] or the Natural Resources Body for Wales (Establishment) Order 2012 (S.I.2012/1903)]];
 - (b) for the purpose of facilitating the performance by a relevant undertaker of any of the duties imposed on it by or under this Act, any of the other consolidation Acts [^{F1447}, the Water Act 1989 [^{F1448}, the Water Act 2003 or ^{F1449} . . . the Water Act 2014]] [^{F1450} or by [^{F1451}a water supply licensee or sewerage licensee of any of the duties imposed on the licensee] by or under this Act[^{F1452}, the Water Act 2003 or the Water Act 2014];
 - (c) in pursuance [^{F1453}of any duty imposed by section 27H above or] section 197(1)(a) or (2) or [^{F1454}203(1), (1A), (2) or (2A)] of the ^{M80}Water Resources Act 1991 (information about water flow and pollution);
 - [^{F1455}(ca) for the purpose of complying with a request under section 14 of the Flood and Water Management Act 2010;]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (d) for the purpose of facilitating the carrying out by any person mentioned in Part I of Schedule 15 to this Act of any of his functions under any of the enactments or instruments specified in Part II of that Schedule;
 - [^{F1456}(e) for the purpose of enabling or assisting the Secretary of State, the Treasury]^{F1457}, the Financial Conduct Authority, the Prudential Regulation Authority or the Bank of England] to exercise any powers conferred by or under the Financial Services and Markets Act 2000 or by the enactments relating to companies or insolvency;
 - (ea) for the purpose of enabling or assisting any inspector appointed under enactments relating to companies to carry out his functions;]
 - (f) for the purpose of enabling an official receiver to carry out his functions under the enactments relating to insolvency or for the purpose of enabling or assisting a recognised professional body for the purposes of section 391 of the ^{M81}Insolvency Act 1986 to carry out its functions as such;
 - (g) for the purpose of facilitating the carrying out by ^{F1458} . . . the Health and Safety Executive of any of its functions under any enactment or of facilitating the carrying out by any enforcing authority, within the meaning of Part I of the ^{M82}Health and Safety at Work etc. Act 1974, of any functions under a relevant statutory provision, within the meaning of that Act;
 - [^{F1459}(ga) for the purpose of facilitating the carrying out by the Office for Nuclear Regulation of any of its functions under any enactment;]
 - (h) for the purpose of facilitating the carrying out by the Comptroller and Auditor General of any of his functions under any enactment;
 - (i) in connection with the investigation of any criminal offence or for the purposes of any criminal proceedings;
 - (j) for the purposes of any civil proceedings brought under or by virtue of this Act, any of the other consolidation Acts, [^{F1460}, the Water Act 2003][^{F1461}, the Water Act 2014] or any of the enactments or instruments specified in Part II of Schedule 15 to this Act, or of any arbitration under this Act, any of the other consolidation Acts [^{F1462}, the Water Act 1989 [^{F1463}, the Water Act 2003 or the Water Act 2014]]; or
 - (k) in pursuance of [^{F1464}[^{F1465}an assimilated] obligation].
- (4) Nothing in subsection (1) above shall be construed—
- (a) as limiting the matters which may be published under section [^{F1466}38A, 95A or] 201 above or may be included in, or made public as part of, a report of [^{F1467}the Environment Agency, [^{F1468}the NRBW,] the Scottish Environment Protection Agency], the Director, [^{F1469}the Council (or any regional committee)] or the [^{F1470}CMA] under any provision of this Act [^{F1471}, Part I or IIA of ^{M83}the Environmental Protection Act 1990, the ^{M84}Water Resources Act 1991][^{F1443}, the ^{M85}Environment Act 1995 [^{F1472}, regulations under section 2 of the Pollution Prevention and Control Act 1999, or the Water Act 2003]]; or
 - (b) as applying to any information which has been so published or has been made public as part of such a report or to any information exclusively of a statistical nature.
- (5) Subject to subsection (6) below, nothing in subsection (1) above shall preclude the disclosure of information—
- (a) if the disclosure is of information relating to a matter connected with the carrying out of the functions of a relevant undertaker[^{F1473}, or with the carrying

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- on by [^{F1474}a water supply licensee or sewerage licensee of activities under the licence held by the licensee],] and is made by one Minister of the Crown or government department to another; or
- (b) if the disclosure is for the purpose of enabling or assisting any public or other authority for the time being designated for the purposes of this section by an order made by the Secretary of State to discharge any functions which are specified in the order.
- (6) The power to make an order under subsection (5) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament; and where such an order designates an authority for the purposes of paragraph (b) of that subsection, the order may—
- (a) impose conditions subject to which the disclosure of information is permitted by virtue of that paragraph; and
- (b) otherwise restrict the circumstances in which disclosure is so permitted.
- (7) Any person who discloses any information in contravention of the preceding provisions of this section shall be guilty of an offence.
- (8) A person who is guilty of an offence under this section by virtue of subsection (1) above shall be liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum;
- (b) on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.
- (9) A person who is guilty of an offence under this section by virtue of subsection (2) above shall be liable, on summary conviction, to imprisonment for a term not exceeding three months or to a fine not exceeding level 3 on the standard scale or to both .
- ^{F1475}[(9A) Information obtained by the Director in the exercise of functions which are exercisable concurrently with the [^{F1476}CMA] under Part I of the Competition Act 1998 is subject to [^{F1477}Part 9 of the Enterprise Act 2002 (Information)] and not to subsections (1) to (9) of this section.]
- (10) In this section “the other consolidation Acts” means the ^{M86}Water Resources Act 1991, ^{F1478}... the ^{M87}Land Drainage Act 1991 and the ^{M88}Water Consolidation (Consequential Provisions) Act 1991.
- ^{F1479}(11) In this section the reference to the Bank of England does not include the Bank acting in its capacity as the Prudential Regulation Authority.]

Textual Amendments

F1437 Words in s. 206(2) repealed (1.4.1996) by 1995 c. 25, s. 120(1)(3), Sch. 22 para. 121(1), Sch. 24 (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3

F1438 Words in s. 206(3)(a) substituted (1.4.1996) by 1995 c. 25, s. 120(1), Sch. 22 para. 121(2)(a) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3

F1439 Words in s. 206(3)(a) inserted (1.4.2013) by The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755), art. 1(2), Sch. 2 para. 255(2)(a) (with Sch. 7)

F1440 Words in s. 206(3)(a) inserted (1.10.2005) by Water Act 2003 (c. 37), ss. 101(1), 105(3), Sch. 7 para. 27(5)(a)(i); S.I. 2005/2714, art. 2(I)(v)(bb) (with Sch. 2 para. 8)

Status: This version of this Act contains provisions that are prospective.

Provision of false information

207 Provision of false information.

- (1) If any person, in furnishing any information or making any application under or for the purposes of any provision of this Act, makes any statement which he knows to be false in a material particular, or recklessly makes any statement which is false in a material particular, he shall be guilty of an offence and liable—
 - (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (2) Proceedings for an offence under subsection (1) above shall not be instituted except by or with the consent of the Secretary of State ^{F1480} . . . or the Director of Public Prosecutions.

Textual Amendments

F1480 Words in s. 207(2) repealed (27.3.2002) by [The Ministry of Agriculture, Fisheries and Food \(Dissolution\) Order 2002 \(S.I. 2002/794\)](#), art. 5(2), **Sch. 2** (with art. 6)

FURTHER PROVISION ABOUT REGULATION

Textual Amendments

F1481 Pt. 7A inserted (1.4.2016) by [Water Act 2014 \(c. 21\)](#), **ss. 37(2), 94(3)**; [S.I. 2016/465](#), art. 2(g) (with **Sch. 2**) (as amended (22.3.2017) by [S.I. 2017/462](#), art. 16)

Appeals relating to revisions of codes

207A Appeals to the CMA

- (1) The Secretary of State may by regulations provide for an appeal to lie to the CMA from—
 - (a) a decision by the Authority to make a revision to a designated code;
 - (b) a decision by the Authority, following consultation under this Act about a proposed revision to a designated code, not to make the proposed revision.
- (2) For the purposes of this section a designated code is a code, or a part of a code, issued by the Authority under or by virtue of this Act that is designated for the purposes of this section by regulations under this section.
- (3) The regulations may specify descriptions of revisions by reference to which an appeal under the regulations may not be brought.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) Regulations made under subsection (3) may provide—
- (a) for the exclusion of certain descriptions of revisions to operate only in such cases as may be determined in accordance with the regulations;
 - (b) for a determination in accordance with the regulations to be made—
 - (i) by such persons,
 - (ii) in accordance with such procedures, and
 - (iii) by reference to such matters and the opinions of such persons (including the Authority),
 as may be provided for in the regulations.
- (5) The regulations may—
- (a) specify the persons or descriptions of persons eligible to bring an appeal;
 - (b) specify conditions to be satisfied by a person wishing to bring an appeal.
- (6) Regulations made under subsection (5) may—
- (a) make different provision in relation to different codes or different parts of a code;
 - (b) provide for a representative body or association to bring an appeal.
- (7) The regulations must—
- (a) provide for appeals to be brought only where the CMA grants permission for an appeal;
 - (b) provide for the grounds on which the CMA may refuse permission.
- (8) Before making regulations under this section the Secretary of State must consult—
- (a) the Welsh Ministers;
 - (b) the Authority;
 - (c) such other persons as the Secretary of State considers appropriate.

207B Procedure on appeals

- (1) Except where otherwise provided, the functions of the CMA with respect to appeals under section 207A are to be carried out on behalf of the CMA by a group constituted for the purpose by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013.
- (2) Schedule 16 (provision as to procedure on appeals) has effect.

207C Determination of appeals

- (1) The Secretary of State may by regulations provide for the determination by the CMA of an appeal under section 207A.
- (2) The regulations must require the CMA in determining the appeal to have regard, to the same extent as is required of the Authority, to the matters to which the Authority must have regard in exercising or performing the powers and duties mentioned in section 2(1).
- (3) The regulations must provide that the CMA in determining the appeal—
 - (a) may have regard to any matter to which the Authority was not able to have regard in the case of the decision appealed against, but

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) must not, in the exercise of that power, have regard to any matter to which the Authority would not have been entitled to have regard in that case had it had the opportunity of doing so.
- (4) The regulations may specify the grounds on which an appeal may be allowed.
- (5) The grounds specified by the regulations may include the following—
 - (a) that the Authority failed properly to have regard to the matters mentioned in subsection (2);
 - (b) that the Authority failed properly to have regard to the purposes for which the code in question is issued;
 - (c) that the Authority failed to give the appropriate weight to one or more of those matters or purposes.
- (6) The regulations may make provision for the steps that the CMA is to take—
 - (a) if it allows the appeal;
 - (b) if it does not allow the appeal.
- (7) Provision under subsection (6)(a) may include remitting a matter to the Authority for reconsideration and redetermination in accordance with directions given by the CMA.
- (8) The regulations may make provision as to the decision of the CMA on the appeal, including in particular provision for the decision—
 - (a) to be contained in an order made by the CMA;
 - (b) to set out the reasons for the decision;
 - (c) to take effect—
 - (i) at the time specified in the order, or
 - (ii) at the time determined in accordance with provision set out in the order;
 - (d) to be notified to the persons who were parties to the appeal (see paragraph 2 of Schedule 16); and
 - (e) to be published.
- (9) Provision under subsection (8)(e) may allow the CMA to exclude from publication any information which it is satisfied is—
 - (a) commercial information the disclosure of which would, or might, significantly harm the legitimate business interests of an undertaking to which it relates;
 - (b) information relating to the private affairs of an individual the disclosure of which would, or might, in its opinion, significantly harm his interests.]

PART VIII

MISCELLANEOUS AND SUPPLEMENTAL

Miscellaneous

208 Directions in the interests of national security.

- (1) The Secretary of State may, after consultation with a relevant undertaker^[F1482], water supply licensee or sewerage licensee], give to that undertaker^[F1483]^[F1484] or licensee] (as the case may be)] such directions of a general character as appear to the Secretary of

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- State to be requisite or expedient in the interests of national security or for the purpose of mitigating the effects of any civil emergency which may occur.
- (2) If it appears to the Secretary of State to be requisite or expedient to do so in the interests of national security or for the purpose of mitigating the effects of any civil emergency which has occurred or may occur, he may, after consultation with a relevant undertaker [^{F1485}, water supply licensee or sewerage licensee], give to that undertaker [^{F1483} [^{F1486} or licensee] (as the case may be)] a direction [^{F1487} requiring that undertaker or licensee] to do, or not to do, a particular thing specified in the direction.
- (3) It shall be the duty of a relevant undertaker [^{F1488}, water supply licensee or sewerage licensee], notwithstanding any other duty imposed [^{F1489} on that undertaker or licensee] (whether or not by or under this Act), to comply with any direction given [^{F1490} to that undertaker or licensee] by the Secretary of State under this section; and the duty of a relevant undertaker [^{F1488}, water supply licensee or sewerage licensee] to comply with any such direction shall be enforceable under section 18 above by the Secretary of State.
- [^{F1491}(3A) The Secretary of State may, after consultation with the Council, give to the Council such directions of a general character as appear to the Secretary of State to be requisite or expedient—
- (a) in the interests of national security; or
 - (b) in connection with any civil emergency which may occur.
- (3B) If it appears to the Secretary of State to be requisite or expedient to do so—
- (a) in the interests of national security; or
 - (b) in connection with any civil emergency which has occurred or may occur,
- he may, after consultation with the Council, give to the Council a direction requiring it to do, or not to do, a particular thing specified in the direction.
- (3C) The Council shall comply with any direction given to it by the Secretary of State under this section.]
- (4) The Secretary of State shall lay before each House of Parliament a copy of every direction given under this section unless he is of the opinion that disclosure of the direction is against the interests of national security.
- (5) A person shall not disclose, or be required by virtue of any enactment or otherwise to disclose, anything done by virtue of this section if the Secretary of State has notified him that the Secretary of State is of the opinion that disclosure of that thing is against the interests of national security.
- (6) Any person who discloses any matter in contravention of subsection (5) above shall be guilty of an offence and liable, on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.
- (7) Any reference in this section to a civil emergency is a reference to any natural disaster or other emergency which, in the opinion of the Secretary of State, is or may be likely, in relation to any area—
- (a) so to disrupt water supplies or sewerage services; or
 - (b) to involve such destruction of or damage to life or property in that area,
- as seriously and adversely to affect all the inhabitants of that area, or a substantial number of them, whether by depriving them of any of the essentials of life or otherwise.

Judicial disqualification

212 Judicial disqualification.

No judge of any court or justice of the peace shall be disqualified from acting in relation to any proceedings to which a relevant undertaker is a party by reason only that he is or may become liable to pay a charge to that undertaker in respect of any service that is not the subject-matter of the proceedings.

Modifications etc. (not altering text)

C328 S. 212 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 16\(1\)](#) (with reg. 1(1)(c))

Powers to make regulations

213 Powers to make regulations.

- (1) The powers of the Secretary of State to make regulations under this Act shall be exercisable by statutory instrument subject (except in the case of regulations under section 8(1) or (2) [^{F1496}, 17D(8), 36A][^{F1497}, 87(6A)][^{F1498}96K, 96N,][^{F1499}[^{F1500} or 105A]][^{F1499}105A, 141DA or 141DB] above) to annulment in pursuance of a resolution of either House of Parliament.

[^{F1501}(1A) But on the occasion of the first exercise by the Secretary of State of the power to make regulations under]^{F1502}—

- (a) each of sections 89 and 90, and
- (b) each of sections 207A and 207C and Schedule 16;

the instrument] containing the regulations shall not be made unless a draft of the instrument has been laid before, and approved by a resolution of, each House of Parliament.

- (1B) The power of the Assembly to make regulations under section 89 above shall be exercisable by statutory instrument.]

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) Subject to subsection (3) below, the provisions of any regulations made by the Secretary of State under this Act may include-
- (a) provision for any duty or other requirement imposed by the regulations on a water undertaker [^{F1503}, sewerage undertaker, water supply licensee or sewerage licensee] to be enforceable under section 18 above by the Secretary of State, by the Director or by either of them;
 - (b) provision, where such a duty or requirement is so enforceable by either of them, for enforcement by the Director to be subject to such consent or authorisation as may be prescribed;
 - (c) provision which, in relation to the furnishing of any information or the making of any application under the regulations, makes provision corresponding to section 207 above;
 - (d) provision for anything that may be prescribed by the regulations to be determined under the regulations and for anything falling to be so determined to be determined by such persons, in accordance with such procedure and by reference to such matters, and to the opinion of such persons, as may be prescribed;
 - [^{F1504}(dd) as to awarding costs or expenses of proceedings in any determination under the regulations, including the amount of the costs or expenses and the enforcement of the awards;]
 - (e) different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
 - (f) such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.
- [^{F1505}(2A) Such regulations may include provision—
- (a) for the determination of questions of fact or of law which may arise in giving effect to the regulations;
 - (b) for regulating (otherwise than in relation to any court proceedings) any matters relating to the practice and procedure to be followed in connection with the determination of such questions;
 - (c) as to the mode of proof of any matter;
 - (d) as to parties and their representation; and
 - (e) for the right to appear before and be heard by the Secretary of State, the Director and other authorities.
- (2B) Any such regulations which prescribe a period within which things are to be done may provide for extending the period so prescribed.]
- (3) Except to the extent that they would do so apart from this section, the power to make regulations under section 113, 125 or 126 above or under section 214 below or Schedule 8 to this Act—
- (a) shall not include the powers conferred by virtue of paragraphs (a) to (d) of subsection (2) above; and
 - (b) in the case of the power to make regulations under section 214 below, shall also not include the powers conferred by virtue of paragraphs (e) and (f) of that subsection.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Construction of Act

216 Provisions relating to the service of documents.

- (1) Any document required or authorised by virtue of this Act to be served on any person may be served—
- (a) by delivering it to him or by leaving it at his proper address or by sending it by post to him at that address; or
 - (b) if the person is a body corporate, by serving it in accordance with paragraph (a) above on the secretary or clerk of that body; or
 - (c) if the person is a partnership, by serving it in accordance with paragraph (a) above on a partner or a person having the control of management of the partnership business.
- (2) For the purposes of this section and section 7 of the ^{M100}Interpretation Act 1978 (which relates to the service of documents by post) in its application to this section, the proper address of any person on whom a document is to be served shall be his last known address, except that—
- (a) in the case of service on a body corporate or its secretary or clerk, it shall be the address of the registered or principal office of the body;
 - (b) in the case of service on a partnership or a partner or a person having the control or management of a partnership business, it shall be the principal office of the partnership;
- and for the purposes of this subsection the principal office of a company registered outside the United Kingdom or of a partnership carrying on business outside the United Kingdom is its principal office within the United Kingdom.
- (3) If a person to be served by virtue of this Act with any document by another has specified to that other an address within the United Kingdom other than his proper address (as determined in pursuance of subsection (2) above) as the one at which he or someone on his behalf will accept documents of the same description as that document,

Status: This version of this Act contains provisions that are prospective.

that address shall also be treated as his proper address for the purposes of this section and for the purposes of the said section 7 in its application to this section.

(4) Where under any provision of this Act any document is required to be served on the owner, on a lessee or on the occupier of any premises then—

- (a) if the name or address of the owner, of the lessee or, as the case may be, of the occupier of the premises cannot after reasonable inquiry be ascertained; or
- (b) in the case of service on the occupier, if the premises appear to be or are unoccupied,

that document may be served either by leaving it in the hands of a person who is or appears to be resident or employed on the land or by leaving it conspicuously affixed to some building or object on the land.

[^{F1509}(4A) Any document required or authorised by virtue of this Act to be served on any person may be served by electronic means.

(4B) But a document may be served by electronic means on a person who is a consumer only if—

- (a) the person has consented in writing to the receipt of documents by electronic means (and has not withdrawn that consent), and
- (b) the document is sent to the number or address most recently specified by the person for that purpose.

(4C) For the purposes of subsection (4B) “consumer” means a person who is liable to pay charges in respect of—

- (a) the supply of water to any premises, or
- (b) the provision of sewerage services to any premises,

but does not include a water undertaker, a water supply licensee, a sewerage undertaker, a sewerage licensee, or the Authority.]

(5) This section shall not apply to any document in relation to the service of which provision is made by rules of court.

- (2) For the purposes to which this section applies the functions of every relevant undertaker shall be taken to include joining with or acting on behalf of—
- (a) the [^{F1510}Environment Agency][^{F1511}or the NRBW];
 - (b) one or more other relevant undertakers; or
 - (c) the [^{F1510}Environment Agency][^{F1511}or the NRBW] and one or more other such undertakers,
- for the purpose of carrying out any works or acquiring any land which at least one of the bodies with which it joins, or on whose behalf it acts, is authorised to carry out or acquire for the purposes of that body's functions under any enactment or of any function which is taken to be a function of that body for the purposes to which this section or section 3 of the ^{M101}Water Resources Act 1991 (functions of [^{F1510}Environment Agency] for certain purposes) applies.
- (3) For the purposes to which this section applies the functions of every relevant undertaker shall be taken to include the protection against pollution—
- (a) of any waters, whether on the surface or underground, which belong to the [^{F1510}Environment Agency][^{F1512}or the NRBW] or any water undertaker or from which the [^{F1510}Environment Agency][^{F1512}or the NRBW] or any water undertaker is authorised to take water;
 - (b) without prejudice to paragraph (a) above, of any reservoir which belongs to or is operated by the [^{F1510}Environment Agency][^{F1512}or the NRBW] or any water undertaker or which the [^{F1510}Environment Agency][^{F1512}or the NRBW] or any water undertaker is proposing to acquire or construct for the purpose of being so operated; and
 - (c) of any underground strata from which the [^{F1510}Environment Agency][^{F1512}or the NRBW] or any water undertaker is for the time being authorised to abstract water in pursuance of a licence under Chapter II of Part II of the ^{M102}Water Resources Act 1991.
- (4) For the purposes to which this section applies the functions of every relevant undertaker shall be taken to include the furtherance of research into matters in respect of which functions are conferred by or under this Act, the other consolidation Acts or the ^{M103}Water Act 1989 on the [^{F1510}Environment Agency], [^{F1513}on the NRBW,] on water undertakers or on sewerage undertakers.
- (5) For the purposes to which this section applies the functions of every relevant undertaker shall be taken to include the provision of houses and other buildings for the use of persons employed by that undertaker and the provision of recreation grounds for persons so employed.
- (6) For the purposes to which this section applies the functions of every water undertaker shall be taken to include the provision of supplies of water in bulk, whether or not such supplies are provided for the purposes of, or in connection with, the carrying out of any other function of that undertaker.
- (7) For the purposes to which this section applies the functions of every water undertaker shall be taken to include the doing of anything in pursuance of any arrangements under section 20 of the Water Resources Act 1991 between that undertaker and the [^{F1510}Environment Agency][^{F1514}or the NRBW].
- (8) In this section “the other consolidation Acts” has the same meaning as in section 206 above.

Status: This version of this Act contains provisions that are prospective.

218 Meaning of “domestic purposes” in relation to water supply.

- (1) Subject to the following provisions of this section, in this Act references to domestic purposes, in relation to a supply of water to any premises or in relation to any cognate expression, are references to the drinking, washing, cooking, central heating and sanitary purposes for which water supplied to those premises may be used.
- (2) Where the whole or any part of the premises are or are to be occupied as a house, those purposes shall be taken to include—
 - (a) the purposes of a profession carried on in that house or, where—
 - (i) that house and another part of the premises are occupied together; and
 - (ii) the house comprises the greater part of what is so occupied,
 in that other part; and
 - (b) such purposes outside the house (including the washing of vehicles and the watering of gardens) as are connected with the occupation of the house and may be satisfied by a supply of water drawn from a tap inside the house and without the use of a hosepipe or similar apparatus.
- (3) No such reference to domestic purposes shall be taken to include a reference—
 - (a) to the use of a bath having a capacity, measured to the centre line of overflow or in such other manner as may be prescribed, of more than two hundred and thirty litres;
 - (b) to the purposes of the business of a laundry; or
 - (c) to any purpose of a business of preparing food or drink for consumption otherwise than on the premises.

219 General interpretation.

- (1) In this Act, except in so far as the context otherwise requires—

“accessories”, in relation to a water main, sewer or other pipe, includes any manholes, ventilating shafts, inspection chambers, settling tanks, wash-out pipes, pumps, ferrules or stopcocks for the main, sewer or other pipe,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. “functions”, in relation to a relevant undertaker, means the functions of the undertaker under or by virtue of any enactment and shall be construed subject to section 217 above;

“harbour authority” means a person who is a harbour authority within the meaning of [F1524Chapter II of Part VI of the Merchant Shipping Act 1995] and is not a navigation authority;

“highway” and “highway authority” have the same meanings as in the M104Highways Act 1980;

“house” means any building or part of a building which is occupied as a dwelling-house, whether or not a private dwelling-house, or which, if unoccupied, is likely to be so occupied;

“information” includes anything contained in any records, accounts, estimates or returns;

“inland waters”, has the same meaning as in the M105Water Resources Act 1991;

[F1525“lateral drain” means—

- (a) that part of a drain which runs from the curtilage of a building (or buildings or yards within the same curtilage) to the sewer with which the drain communicates or is to communicate; or
- (b) (if different and the context so requires) the part of a drain identified in a declaration of vesting made under section 102 above or in an agreement made under section 104 above;]

F1526
...

[F1527“limited company” means a company (as defined in section 1(1) of the Companies Act 2006) that—

- (a) is registered in England and Wales or Scotland, and
- (b) is limited by shares.]

“local authority” means the council of a district or of a London borough or the Common Council of the City of London [F1528but, in relation to Wales, means the council of a county or county borough];

“local statutory provision” means—

- (a) a provision of a local Act (including an Act confirming a provisional order);
- (b) a provision of so much of any public general Act as has effect with respect to a particular area, with respect to particular persons or works or with respect to particular provisions falling within any paragraph of this definition;
- (c) a provision of an instrument made under any provision falling within paragraph (a) or (b) above; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(d) a provision of any other instrument which is in the nature of a local enactment;

“meter” means any apparatus for measuring or showing the volume of water supplied to, or of effluent discharged from, any premises;

“micro-organism” includes any microscopic biological entity which is capable of replication;

“modifications” includes additions, alterations and omissions, and cognate expressions shall be construed accordingly;

F1529

...

F1530

...

[^{F1531}“the NRBW” means the Natural Resources Body for Wales;]

“navigation authority” means any person who has a duty or power under any enactment to work, maintain, conserve, improve or control any canal or other inland navigation, navigable river, estuary, harbour or dock;

[^{F1532}“new towns residuary body” means—

(a) in relation to a new town in England, the Homes and Communities Agency so far as exercising functions in relation to anything transferred (or to be transferred) to it as mentioned in section 52(1)(a) or (b) of the Housing and Regeneration Act 2008 [^{F1533}or the Greater London Authority so far as exercising its new towns and urban development functions] (and references to the “English new towns residuary body” are to be read accordingly); and

(b) in relation to a new town in Wales, the Welsh Ministers so far as exercising functions in relation to anything transferred (or to be transferred) to them as mentioned in section 36(1)(a)(i) or (ii) of the New Towns Act 1981 (and references to the “Welsh new towns residuary body” are to be read accordingly);]

“notice” means notice in writing;

F1534

...

“owner”, in relation to any premises, means the person who—

(a) is for the time being receiving the rack-rent of the premises, whether on his own account or as agent or trustee for another person; or

(b) would receive the rack-rent if the premises were let at a rack-rent,

and cognate expressions shall be construed accordingly;

“prescribed” means prescribed by regulations made by the Secretary of State;

“protected land”, in relation to a company holding an appointment under Chapter I of Part II of this Act, means any land which, or any interest or right in or over which—

(a) was transferred to that company in accordance with a scheme under Schedule 2 to the ^{M106}Water Act 1989 or, where that company is a statutory water company, was held by that company at any time during the financial year ending with 31st March 1990;

(b) is or has at any time on or after 1st September 1989 been held by that company for purposes connected with the carrying out of its functions as a water undertaker or sewerage undertaker (including any functions which for the purposes for which [^{F1535}section 217] above has effect are taken to be such functions by virtue of subsection (6) or (7) of that section); or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(c) has been transferred to that company in accordance with a scheme under Schedule 2 to this Act from another company in relation to which that land was protected land when the other company held an appointment under that Chapter;

“public authority” means any Minister of the Crown or government department, [^{F1536}the Environment Agency], [^{F1537}the NRBW,] any local authority or county council or any person certified by the Secretary of State to be a public authority for the purposes of this Act;

“public sewer” means [^{F1538}(subject to section 106(1A) above)] a sewer for the time being vested in a sewerage undertaker in its capacity as such, whether vested in that undertaker by virtue of a scheme under Schedule 2 to the ^{M107}Water Act 1989 or Schedule 2 to this Act or under section 179 above or otherwise, and “private sewer” shall be construed accordingly;

“railway undertakers” means the British Railways Board, [^{F1539}Transport for London or any subsidiary (within the meaning of the Greater London Authority Act 1999) of Transport for London,] or any other person authorised by any enactment, or by any order, rule or regulation made under any enactment, to construct, work or carry on any railway;

“records” includes computer records and any other records kept otherwise than in a document;

[^{F1540}“regional committee” means a regional committee of the Council established under section 27A above;]

“the relevant sewerage provisions” means the following provisions of this Act, that is to say—

- (a) Chapters II and III of Part IV (except sections 98 to 101 and 110 and so much of Chapter III of that Part as provides for regulations under section 138 or has effect by virtue of any such regulations);
- (b) sections 160, 171, 172(4), 178, 184, 189, 196 and 204 and paragraph 4 of Schedule 12; and
- (c) the other provisions of this Act so far as they have effect for the purposes of any provision falling within paragraph (a) or (b) of this definition;

“relevant undertaker” means a water undertaker or sewerage undertaker;

“resource main” means (subject to subsection (2) below) any pipe, not being a trunk main, which is or is to be used for the purpose of—

- (a) conveying water from one source of supply to another, from a source of supply to a regulating reservoir or from a regulating reservoir to a source of supply; or
- (b) giving or taking a supply of water in bulk;

[^{F1541}“ retail exit area ” has the meaning given by section 42 of the Water Act 2014;]

“service pipe” means (subject to subsection (2) below [^{F1542}and to section 51E(3) above]) so much of a pipe which is, or is to be, connected with a water main for supplying water from that main to any premises as—

- (a) is or is to be subject to water pressure from that main; or
- (b) would be so subject but for the closing of some valve,

and includes part of any service pipe;

“services” includes facilities;

“sewer” includes (without prejudice to subsection (2) below) all sewers and drains (not being drains within the meaning given by this subsection) which are used for the drainage of buildings and yards appurtenant to buildings;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

[^{F1519}“ sewerage licensee ” is to be construed in accordance with section 17BA(6);]

“sewerage services” [^{F1543}—

(a) in the case of a sewerage undertaker, includes] the disposal of sewage and any other services which are required to be provided by a sewerage undertaker for the purpose of carrying out its functions; [^{F1544}or

(b) in the case of a sewerage licensee, means the services provided by that person in that person's capacity as a sewerage licensee;]

“special administration order” has the meaning given by section 23 above;

“statutory water company” means any company which was a statutory water company for the purposes of the ^{M108}Water Act 1973 immediately before 1st September 1989;

“stopcock” includes any box or pit in which a stopcock is enclosed and the cover to any such box or pit;

“street” has, subject to subsection (5) below, the same meaning as in Part III of the ^{M109}New Roads and Street Works 1991;

“subordinate legislation” has the same meaning as in the ^{M110}Interpretation Act 1978;

“substance” includes micro-organisms and any natural or artificial substance or other matter, whether it is in solid or liquid form or in the form of a gas or vapour;

“supply of water in bulk” means a supply of water for distribution by a water undertaker taking the supply;

“surface water” includes water from roofs;

“trunk main” means a water main which is or is to be used by a water undertaker for the purpose of—

(a) conveying water from a source of supply to a filter or reservoir or from one filter or reservoir to another filter or reservoir; or

(b) conveying water in bulk, whether in the course of taking a supply of water in bulk or otherwise, between different places outside the area of the undertaker, from such a place to any part of that area or from one part of that area to another part of that area;

“underground strata” means strata subjacent to the surface of any land;

“vessel” includes a hovercraft within the meaning of the ^{M111}Hovercraft Act 1968;

“water main” means (subject to subsection (2) below) any pipe, not being a pipe for the time being vested in a person other than the undertaker, which is used or to be used by a water undertaker [^{F1545}or [^{F1546}water supply licensee]] for the purpose of making a general supply of water available to customers or potential customers of the undertaker [^{F1547}or licensee], as distinct from for the purpose of providing a supply to particular customers;

“watercourse” includes all rivers, streams, ditches, drains, cuts, culverts, dykes, sluices, sewers and passages through which water flows except mains and other pipes which belong to [^{F1536}the Environment Agency][^{F1548}, the NRBW] or a water undertaker or are used by a water undertaker or any other person for the purpose only of providing a supply of water to any premises.

[^{F1519}“ water supply licensee ” is to be construed in accordance with section 17A(7);]

(2) In this Act—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) references to a pipe, including references to a main, a drain or a sewer, shall include references to a tunnel or conduit which serves or is to serve as the pipe in question and to any accessories for the pipe; and
 - (b) references to any sewage disposal works shall include references to the machinery and equipment of those works and any necessary pumping stations and outfall pipes;
- and, accordingly, references to the laying of a pipe shall include references to the construction of such a tunnel or conduit, to the construction or installation of any such accessories and to the making of a connection between one pipe and another.
- (3) Nothing in Part III or IV of this Act by virtue of which a relevant undertaker owes a duty to any particular person to lay any water main, resource main or service pipe or any sewer, [^{F1549}lateral drain,] disposal main or discharge pipe shall be construed—
- (a) as conferring any power in addition to the powers conferred apart from those Parts; or
 - (b) as requiring the undertaker to carry out any works which it has no power to carry out.
- (4) References in this Act to the fixing of charges in relation to any premises by reference to volume are references to the fixing of those charges by reference to the volume of water supplied to those premises, to the volume of effluent discharged from those premises, to both of those factors or to one or both of those factors taken together with other factors.
- [^{F1550}(4A) In this Act, unless otherwise stated, references to the supply system of a water undertaker are to the water mains and other pipes which it is the undertaker's duty to develop and maintain by virtue of section 37 above.]
- (5) Until the coming into force of Part III of the ^{M112}New Roads and Street Works Act 1991, the definition of "street" in subsection (1) above shall have effect as if the reference to that Part were a reference to the ^{M113}Public Utilities Street Works Act 1950; but nothing in this section shall be taken—
- (a) to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing Part III of that Act into force on different days for different purposes (including the purposes of this section); or
 - (b) in the period before the coming into force of that Part, to prevent references in this Act to a street, where the street is a highway which passes over a bridge or through a tunnel, from including that bridge or tunnel.
- (6) For the purposes of any provision of this Act by or under which power is or may be conferred on any person to recover the expenses incurred by that person in doing anything, those expenses shall be assumed to include such sum as may be reasonable in respect of establishment charges or overheads.
- (7) References in this Act to the later or latest of two or more different times or days are, in a case where those times or days coincide, references to the time at which or, as the case may be, the day on which they coincide.
- (8) Where by virtue of any provision of this Act any function of a Minister of the Crown is exercisable concurrently by different Ministers, that function shall also be exercisable jointly by any two or more of those Ministers.
- (9) Sub-paragraph (1) of paragraph 1 of Schedule 2 to the ^{M114}Water Consolidation (Consequential Provisions) Act 1991 has effect (by virtue of sub-paragraph (2)(b) of

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

that paragraph) so that references in this Act to things done under or for the purposes of provisions of this Act or the ^{M115}Water Resources Act 1991 include references to things done, or treated as done, under or for the purposes of the corresponding provisions of the law in force before the commencement of this Act.

[^{F1551}(10) If the Assembly designates a person as Chief Inspector of Drinking Water for Wales under section 86(1B) above, references in this Act to the Chief Inspector of Drinking Water, as respects anything to be done in relation to him, shall be taken as references to the person designated as the Chief Inspector of Drinking Water by the Secretary of State and also the person designated by the Assembly as the Chief Inspector of Drinking Water for Wales.]

[^{F1552}(11) Subsection (10) does not apply to references to the Chief Inspector of Drinking Water in sections 8, 17AA, 51CA, 51CB, 66DB, 66P and 86ZA.]

220 Effect of local Acts.

Subject to any provision to the contrary which is contained in Schedule 26 to the Water Act 1989 or in the Water Consolidation (Consequential Provisions) Act 1991, nothing in any local statutory provision passed or made before 1st September 1989 shall be construed as relieving any relevant undertaker from any liability arising by virtue of this Act in respect of any act or omission occurring on or after that date.

Other supplemental provisions

[221 ^{F1553}**Crown application.**

- (1) Subject to the provisions of this section, this Act shall bind the Crown.
- (2) No contravention by the Crown of any provision made by or under this Act shall make the Crown criminally liable; but the High Court may, on the application of the [^{F1554}appropriate agency], a water undertaker or a sewerage undertaker, declare unlawful any act or omission of the Crown which constitutes such a contravention.
- (3) Notwithstanding anything in subsection (2) above, any provision made by or under this Act shall apply to persons in the public service of the Crown as it applies to other persons.
- (4) If the Secretary of State certifies that it appears to him, as respects any Crown premises and any powers of entry exercisable in relation to them specified in the certificate, that it is requisite or expedient that, in the interests of national security, the powers should not be exercisable in relation to those premises, those powers shall not be exercisable in relation to those premises.
- (5) Nothing in this section shall be taken as in any way affecting Her Majesty in her private capacity; and this subsection shall be construed as if section 38(3) of the ^{M116}Crown Proceedings Act 1947 (interpretation of references to Her Majesty in her private capacity) were contained in this Act.

Status: This version of this Act contains provisions that are prospective.

- (6) Subject to subsections (4) and (5) above, the powers conferred by sections 155, 159, 161(2) and 167 above shall be exercisable in relation to land in which there is a Crown or Duchy interest only with the consent of the appropriate authority.
- (7) In this section—
- [^{F1555}“the appropriate agency” means-
- (a) in relation to any act or omission of the Crown in England, the Agency;
- (b) in relation to any act or omission of the Crown in Wales, the NRBW;]
- “the appropriate authority” has the same meaning as it has in Part XIII of the ^{M117}Town and Country Planning Act 1990 by virtue of section 293(2) of that Act;
- “Crown or Duchy interest” means an interest which belongs to Her Majesty in right of the Crown or of the Duchy of Lancaster, or to the Duchy of Cornwall, or belonging to a government department or held in trust for Her Majesty for the purposes of a government department;
- “Crown premises” means premises held by or on behalf of the Crown.
- (8) The provisions of subsection (3) of section 293 of the ^{M118}Town and Country Planning Act 1990 (questions relating to Crown application) as to the determination of questions shall apply for the purposes of this section.]

Membership

- 1 (1) The Authority shall consist of a chairman, and at least two other members, appointed by the Secretary of State.
- (2) The Secretary of State shall consult—
 - (a) the Assembly, before appointing any member; and
 - (b) the chairman, before appointing any other member.

Terms of appointment, remuneration, pensions etc

- 2 (1) Subject to this Schedule, the chairman and other members of the Authority shall hold and vacate office as such in accordance with the terms of their respective appointments.
- (2) Their terms of appointment shall be determined by the Secretary of State.

Terms of appointment, remuneration, pensions etc

- 3 (1) An appointment of a person to hold office as chairman or as one of the other members of the Authority shall be for a term not exceeding five years.
- (2) A person holding office as chairman or other member—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) may resign that office by giving notice in writing to the Secretary of State; and
 - (b) may be removed from office by the Secretary of State on the ground of incapacity or misbehaviour.
- (3) The Secretary of State shall consult the Assembly before removing from office a person holding office as chairman or other member.
 - (4) A previous appointment as chairman or other member does not affect a person's eligibility for appointment to either office.

Terms of appointment, remuneration, pensions etc

- 4 (1) The Authority shall pay to its chairman and its other members such remuneration, and such travelling and other allowances, as may be determined by the Secretary of State.
- (2) The Authority shall, if required to do so by the Secretary of State—
 - (a) pay such pension, allowances or gratuities as may be determined by the Secretary of State to or in respect of a person who is or has been the chairman or a member of the Authority; or
 - (b) make such payments as may be so determined towards provision for the payment of a pension, allowances or gratuities to or in respect of such a person.
- (3) If the Secretary of State determines that there are special circumstances which make it right for a person ceasing to hold office as chairman or other member of the Authority to receive compensation, the Authority shall pay to him a sum by way of compensation of such amount as may be determined by the Secretary of State.

Staff

- 5 The Authority may, with the approval of the Minister for the Civil Service as to numbers and terms and conditions of service, appoint such staff as it may determine.

Committees

- 6 (1) The Authority may establish committees and any committee of the Authority may establish sub-committees.
- (2) The members of a committee of the Authority may include persons who are not members of the Authority (and the members of a sub-committee may include persons who are not members of the committee or the Authority).

Proceedings etc

- 7 (1) The Authority may regulate its own procedure.
- (2) The validity of anything done by the Authority is not affected by a vacancy among its members or by a defect in the appointment of a member.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Proceedings etc

- 8 A document purporting to be duly executed under the seal of the Authority, or signed on its behalf, shall be received in evidence and, unless the contrary is proved, shall be taken to be so executed or signed.

Code of Practice

- 9 (1) The Authority shall prepare, and may revise, a code of practice governing the discharge by it of its functions.
- (2) The Authority shall, in exercising its functions, have regard to the provisions of the code.
- (3) In preparing or revising the code, the Authority shall consult—
- (a) the Secretary of State;
 - (b) the Assembly;
 - (c) the Environment Agency;
 - [the NRBW;]
 - ^{F1559}(ca) the Council;
 - (e) relevant undertakers;
 - [^{F1560}(f) water supply licensees;
 - (fa) sewerage licensees; and]
 - (g) such other persons as the Authority considers appropriate.
- (4) The Authority shall publish in such manner as it considers appropriate the code as for the time being in force.

Textual Amendments

Textual Amendments

F1561 Sch. 1A para. 10(3) inserted (E.W.) (1.4.2014) by Enterprise and Regulatory Reform Act 2013 (c. 24), s. 103(3), **Sch. 15 para. 6**; S.I. 2014/416, art. 2(1)(f) (with Sch.)

Payments to the Authority

- 11 The Secretary of State shall make payments out of money provided by Parliament to the Authority of such amounts, at such times and on such conditions (if any) as he considers appropriate.

Supplementary powers

- 12 (1) The Authority has power to do anything which is calculated to facilitate, or is conducive or incidental to, the performance of its functions.
- (2) That power includes the formation of advisory bodies.]

SCHEDULE 2

Sections 10 and 23.

TRANSITIONAL PROVISION ON TERMINATION OF APPOINTMENTS

Modifications etc. (not altering text)

C335 Sch. 2: power to amend conferred (1.10.2010) by Flood and Water Management Act 2010 (c. 29), s. 49(3), **Sch. 5 para. 5(2)-(4)** (with s. 49(1)(6)); S.I. 2010/2169, art. 4, **Sch.**

C336 Sch. 2 applied (with modifications) (28.6.2013) by The Water Industry (Specified Infrastructure Projects) (English Undertakers) Regulations 2013 (S.I. 2013/1582), reg. 1(1)(b), **Sch. 1 para. 3(3)(a)** (with reg. 1(1)(c))

Cases where Schedule applies

- 1 (1) This Schedule shall apply in each of the cases specified in sub-paragraphs (2) [^{F1562}to (3A)] below.
- (2) The first case in which this Schedule applies is where—
- (a) the Secretary of State or the Director is proposing to make an appointment or variation replacing a company as a relevant undertaker; and
- (b) by virtue of that appointment a company (“the new appointee”) will hold an appointment as the water undertaker or sewerage undertaker for an area which is or includes the whole or any part of the area for which, until the relevant date, another company (“the existing appointee”) holds an appointment as the water undertaker or, as the case may be, sewerage undertaker.
- (3) The second case in which this Schedule applies is where—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) the High Court has made a special administration order in relation to any company [^{F1563}holding an appointment under Chapter 1 of this Part] (“the existing appointee”); and
- (b) it is proposed that on and after the relevant date another company (“the new appointee”) should, without any such appointment or variation as is mentioned in sub-paragraph (2) above having been made, hold an appointment as water undertaker or sewerage undertaker for an area which is or includes the whole or any part of the area for which until that date the existing appointee holds an appointment as water undertaker or, as the case may be, sewerage undertaker.

[^{F1564}(3A) The third case in which this Schedule applies is where—

- (a) the High Court has made a special administration order in relation to any company which is [^{F1565}a qualifying water supply licensee or a qualifying sewerage licensee] (“the transferor”); and
- (b) it is proposed that on and after the relevant date another company (“the transferee”) should [^{F1566}carry on—
 - (i) activities] relating to the introduction or introductions of water mentioned in section 23(6)(b) of this Act which were carried on by the transferor until that date[^{F1567}; or
 - (ii) activities relating to the removal or removals of matter mentioned in section 23(9) of this Act which were carried on by the transferor until that date (as the case may be).]]

(4) In this Schedule—

“existing appointee” and “new appointee” shall be construed in accordance with sub-paragraph (2) or (3) above according to whether this Schedule is applying in the case mentioned in the first or second of those sub-paragraphs;

[^{F1568}“new owner” means, where securities are transferred to a company as described in paragraph 2A(1)(b) or (2)(b), the company to which the transfer is made;]

“other appointees” means any companies, other than the existing appointee and the new appointee, which are likely on or at a time after the relevant date to be holding appointments as water undertakers or sewerage undertakers for any area which is or includes any part of the area for which the existing appointee has at any time held an appointment as water undertaker or sewerage undertaker;

[^{F1569}“other relevant companies” means any companies, other than the transferor and the transferee, which are likely on or at a time after the relevant date [^{F1570}to be—

- (a) holding] appointments as water undertakers for any area in which, or in part of which, the activities relating to the introduction or introductions of water mentioned in section 23(6)(b) of this Act will be carried on by the transferee; [^{F1571}or
- (b) holding appointments as sewerage undertakers for any area in which, or in part of which, the activities relating to the removal or removals of matter mentioned in section 23(9) of this Act will be carried on by the transferee (as the case may be);]]

“the relevant date” means—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) where this Schedule applies by virtue of sub-paragraph (2) above, the coming into force of the appointment or variation mentioned in paragraph (a) of that sub-paragraph; and
- (b) where this Schedule applies by virtue of sub-paragraph (3) [^{F1572}or (3A)] above, such day, being a day before the discharge of the special administration order takes effect, as the High Court may appoint for the purposes of this Schedule; and
- “special administrator”, in relation to a company in relation to which a special administration order has been made, means the person for the time being holding office for the purposes of section 23(1) of this Act;
- [^{F1573}“transferor” and “transferee” shall be construed in accordance with sub-paragraph (3A) above.]

Making and modification of transfer schemes

- 2 (1) The existing appointee, acting with the consent of the new appointee [^{F1574}and, in relation to the matters affecting them, of any other appointees], may make a scheme under this Schedule for the transfer of property, rights and liabilities from the existing appointee to the new appointee.
- (2) A scheme under this Schedule shall not take effect unless it is approved by the Secretary of State or the Director.
- (3) Where a scheme under this Schedule is submitted to the Secretary of State or the Director for his approval, he may, with the consent of the new appointee [^{F1575}and the existing appointee] modify the scheme before approving it.
- (4) If at any time after a scheme under this Schedule has come into force in relation to the property, rights and liabilities of any company the Secretary of State considers it appropriate to do so and the existing appointee [^{F1576}and the new appointee] consent to the making of the order, the Secretary of State may by order provide that that scheme shall for all purposes be deemed to have come into force with such modifications as may be specified in the order.
- (5) An order under sub-paragraph (4) above may make, with effect from the coming into force of the scheme to which it relates, any such provision as could have been made by the scheme and, in connection with giving effect to that provision from that time, may contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.
- (6) In determining, in accordance with his duties under Part I of this Act, whether and in what manner to exercise any power conferred on him by this paragraph the Secretary of State or the Director shall have regard to the need to ensure that any provision for the transfer of property, rights and liabilities in accordance with a scheme under this Schedule allocates property, rights and liabilities to the different companies affected by the scheme in such proportions as appear to him to be appropriate in the context of the different functions which will, by virtue of this Act, be carried out at different times on and after the relevant date by the new appointee, by the existing appointee and by any other appointees.
- (7) It shall be the duty of the new appointee, of the existing appointee and of any other appointees to provide the Secretary of State or the Director with all such information and other assistance as he may reasonably require for the purposes of, or in connection with, the exercise of any power conferred on him by this paragraph.

[^{F1577}(7ZA) In a case where—

- (a) another scheme under this Schedule provides for the transfer of the property, rights and liabilities of the existing appointee, and
- (b) that other scheme makes provision for a transfer that is effected as described in paragraph 2A (hive down),

the duty in sub-paragraph (7) also applies to the new owner in relation to that other scheme.]

[^{F1578}(7A) In a case specified in paragraph 1(3A) above—

- (a) the preceding provisions of this paragraph shall have effect as if—
 - (i) any reference to the existing appointee were a reference to the transferor;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (ii) any reference to the new appointee were a reference to the transferee; and
 - (iii) any reference to other appointees were a reference to other relevant companies; and
- (b) sub-paragraph (6) above shall have effect as if the reference to functions were, in relation to a company which is a [^{F1579}water supply licensee or sewerage licensee], a reference to activities authorised by its licence and any statutory functions imposed on it in consequence of its licence.]
- (8) A company which without reasonable excuse fails to do anything required of it by virtue of sub-paragraph (7) above shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 5 on the standard scale.
- (9) Without prejudice to the other provisions of this Act relating to the special administrator of a company, anything which is required by this paragraph to be done by a company shall, where that company is a company in relation to which a special administration order is in force, be effective only if it is done on the company's behalf by its special administrator.

- (a) the transfer of property, rights and liabilities from the existing appointee to a new appointee that is a wholly-owned subsidiary of the existing appointee, and
 - (b) the subsequent transfer of securities in the new appointee to another company.
- (2) In a case specified in paragraph 1(3A) (special administration order in relation to a qualifying licensee) where the transferor is a qualifying water supply licensee, a scheme under this Schedule may provide for a transfer under section 23(2A) that is effected by—
- (a) the transfer of property, rights and liabilities from the transferor to a transferee that is a wholly-owned subsidiary of the transferor, and
 - (b) the subsequent transfer of securities in the transferee to another company.
- (3) In a case where a transfer is effected or proposed to be effected as described in sub-paragraph (1) or (2), paragraph 2 has effect as if—
- (a) in sub-paragraphs (1) and (3) of paragraph 2, the references to the consent of the new appointee were references to the consent of the new owner;
 - (b) in sub-paragraph (4), the persons whose consent is required included the new owner;
 - (c) in sub-paragraph (7), the persons subject to the duty imposed by that sub-paragraph included the new owner.]

Transfers by scheme

- 3 (1) A scheme under this Schedule for the transfer of the existing appointee's property, rights and liabilities shall come into force on the relevant date and, on coming into force, shall have effect, in accordance with its provisions and without further assurance, so as to transfer the property, rights and liabilities to which the scheme relates to the new appointee.
- [^{F1581}(1A) Where a scheme under this Schedule provides for a transfer of securities as described in paragraph 2A(1)(b) or (2)(b), that transfer has effect in accordance with the provisions of the scheme and without further assurance, immediately after the transfer of property, rights and liabilities mentioned in paragraph 2A(1)(a) or (2)(a).]
- (2) For the purpose of making any division of property, rights or liabilities which it is considered appropriate to make in connection with the transfer of property, rights and liabilities in accordance with a scheme under this Schedule, the provisions of that scheme may—
- (a) create for the existing appointee, the new appointee or any other appointees an interest in or right over any property to which the scheme relates;
 - (b) create new rights and liabilities as between any two or more of those companies [^{F1582}(but may not impose new liabilities on any other appointee);] and
 - (c) in connection with any provision made by virtue of paragraph (a) or (b) above, make incidental provision as to the interests, rights and liabilities of other persons with respect to the subject-matter of the scheme.
- (3) A scheme under this Schedule may contain provision for the consideration to be provided by the new appointee and by any other appointees in respect of the transfer or creation of property, rights and liabilities by means of the scheme; and any such provision shall be enforceable in the same way as if the property, rights and liabilities

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. had been created or transferred, and (if the case so requires) had been capable of being created or transferred, by agreement between the parties.

- [^{F1583}(3A) Where a scheme under this Schedule provides for a transfer of securities as described in paragraph 2A(1)(b) or (2)(b), the scheme may contain provision for the consideration to be provided by the new owner in respect of the transfer; and any such provision is enforceable in the same way as if the securities had been transferred, and (if the case so requires) had been capable of being transferred, by agreement between the parties.]
- (4) The property, rights and liabilities of the existing appointee that shall be capable of being transferred in accordance with a scheme under this Schedule shall include—
- (a) property, rights and liabilities that would not otherwise be capable of being transferred or assigned by the existing appointee;
 - (b) such property, rights and liabilities to which the existing appointee may become entitled or subject after the making of the scheme and before the relevant date as may be described in the scheme;
 - (c) property situated anywhere in the United Kingdom or elsewhere;
 - (d) rights and liabilities under enactments;
 - (e) rights and liabilities under the law of any part of the United Kingdom or of any country or territory outside the United Kingdom.
- (5) The provision that may be made by virtue of sub-paragraph (2)(b) above includes—
- (a) provision for treating any person who is entitled by virtue of a scheme under this Schedule to possession of a document as having given another person an acknowledgement in writing of the right of that other person to the production of the document and to delivery of copies thereof; and
 - (b) provision applying section 64 of the ^{M120}Law of Property Act 1925 (production and safe custody of documents) in relation to any case in relation to which provision falling within paragraph (a) above has effect.
- (6) For the avoidance of doubt, it is hereby declared that the transfers authorised by paragraph (a) of sub-paragraph (4) above include transfers which, by virtue of that paragraph, are to take effect as if there were no such contravention, liability or interference with any interest or right as there would be, in the case of a transfer or assignment otherwise than in accordance with a scheme under this Schedule, by reason of any provision having effect (whether under any enactment or agreement or otherwise) in relation to the terms on which the existing appointee is entitled or subject to the property, right or liability in question.
- [^{F1584}(7) In a case specified in paragraph 1(3A) above the preceding provisions of this paragraph shall have effect as if—
- (a) any reference to the existing appointee were a reference to the transferor;
 - (b) any reference to the new appointee were a reference to the transferee; and
 - (c) any reference to other appointees were a reference to other relevant companies.]

Duties of existing appointee after the scheme comes into force

- 6 (1) A scheme under this Schedule may provide for the imposition of duties on the existing appointee and on the new appointee to take all such steps as may be requisite to secure that the vesting in the new appointee, by virtue of the scheme, of any foreign property, right or liability is effective under the relevant foreign law.
- (2) The provisions of a scheme under this Schedule may require the existing appointee to comply with any directions of the new appointee in performing any duty imposed on the existing appointee by virtue of a provision included in the scheme under subparagraph (1) above.
- (3) A scheme under this Schedule may provide that, until the vesting of any foreign property, right or liability of the existing appointee in the new appointee is effective under the relevant foreign law, it shall be the duty of the existing appointee to hold that property or right for the benefit of, or to discharge that liability on behalf of, the new appointee.
- (4) Nothing in any provision included by virtue of this paragraph in a scheme under this Schedule shall be taken as prejudicing the effect under the law of any part of the United Kingdom of the vesting by virtue of the scheme in the new appointee of any foreign property, right or liability.
- (5) A scheme under this Schedule may provide that, in specified cases, foreign property, rights or liabilities that are acquired or incurred by an existing appointee after the scheme comes into force are immediately to become property, rights or liabilities of the new appointee; and such a scheme may make the same provision in relation to any such property, rights or liabilities as can be made, by virtue of the preceding provisions of this paragraph, in relation to foreign property, rights and liabilities vested in the existing appointee when the scheme comes into force.
- (6) References in this paragraph to any foreign property, right or liability are references to any property, right or liability as respects which any issue arising in any proceedings would have to be determined (in accordance with the rules of private international law) by reference to the law of a country or territory outside the United Kingdom.
- (7) Any expenses incurred by an existing appointee in consequence of any provision included by virtue of this paragraph in a scheme under this Schedule shall be met by the new appointee.

Status: This version of this Act contains provisions that are prospective.

- (8) Duties imposed on a company by virtue of this paragraph shall be enforceable in the same way as if they were imposed by a contract between the existing appointee and the new appointee.
- [^{F1590}(9) In a case specified in paragraph 1(3A) above, the preceding provisions of this paragraph shall have effect as if—
- (a) any reference to the existing appointee were a reference to the transferor; and
 - (b) any reference to the new appointee were a reference to the transferee.]

Textual Amendments

F1590 Sch. 2 para. 6(9) inserted (1.12.2005) by [Water Act 2003 \(c. 37\)](#), ss. 101(1), 105(3), [Sch. 8 para. 51\(10\)](#); S.I. 2005/2714, [art. 3\(c\)](#) (with [Sch. para. 8](#))

Modifications etc. (not altering text)

C342 Sch. 2 para. 6 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 3\(3\)\(g\)](#) (with reg. 1(1)(c))

Further transitional provision and local statutory provisions

- 7 (1) The Secretary of State may, if he thinks it appropriate to do so for the purposes of, or in connection with, any appointment or variation replacing a company as a relevant undertaker or any scheme under this Schedule, by order made by statutory instrument—
- (a) make any provision which corresponds, in relation to any enactment referred to at the passing of the ^{M121}Water Act 1989 in Schedule 26 to that Act, to any provision originally made by that Schedule or makes similar provision in relation to any other enactment; or
 - (b) amend or repeal any local statutory provision.
- (2) An order under this paragraph may—
- (a) make provision applying generally in relation to local statutory provisions of a description specified in the order;
 - (b) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
 - (c) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.

Modifications etc. (not altering text)

C343 Sch. 2 para. 7 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), [Sch. 1 para. 3\(3\)\(h\)](#) (with reg. 1(1)(c))

[^{F1591}SCHEDULE 2ZA

Section 12E

PROCEDURE FOR APPEALS UNDER SECTION 12D

Textual Amendments

F1591 Sch. 2ZA inserted (24.1.2022) by Environment Act 2021 (c. 30), ss. 86(6), 147(3), Sch. 13 (with s. 144); S.I. 2022/48, reg. 2(m)

Application for permission to bring appeal

- 1 (1) An application for permission to bring an appeal may be made only by sending a notice to the CMA requesting the permission.
- (2) Only a person entitled under section 12D to bring the appeal if permission is granted may apply for permission.
- (3) Where the Authority publishes a decision to modify the conditions of any appointment under section 12A(9), any application for permission to appeal is not to be made after the end of 20 working days beginning with the first working day after the day on which the decision is published.
- (4) An application for permission to appeal must be accompanied by all such information as may be required by appeal rules.
- (5) Appeal rules may require information contained in an application for permission to appeal to be verified by a statement of truth.
- (6) A person who applies for permission to bring an appeal in accordance with this paragraph is referred to in this Schedule as the appellant.
- (7) The appellant must send the Authority—
 - (a) a copy of the application for permission to appeal at the same time as it is sent to the CMA, and
 - (b) such other information as may be required by appeal rules.
- (8) The CMA's decision whether to grant permission to appeal is to be taken by an authorised member of the CMA.
- (9) Before the authorised member decides whether to grant permission under this paragraph, the Authority must be given an opportunity of making representations or observations, in accordance with paragraph 3(2).
- (10) The CMA's decision on an application for permission to appeal must be made—
 - (a) where the Authority makes representations or observations in accordance with paragraph 3(2), before the end of 10 working days beginning with the first working day after the day on which those representations or observations are received;
 - (b) in any other case, before the end of 14 working days beginning with the first working day after the day on which the application for permission was received.
- (11) The grant of permission may be made subject to conditions, which may include—

Changes to legislation: *Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) conditions which limit the matters that are to be considered on the appeal in question,
 - (b) conditions for the purpose of expediting the determination of the appeal, and
 - (c) conditions requiring that appeal to be considered together with other appeals (including appeals relating to different matters or decisions and appeals brought by different persons).
- (12) Where a decision is made to grant or to refuse an application for permission, an authorised member of the CMA must notify the decision, giving reasons—
- (a) to the appellant, and
 - (b) to the Authority.
- (13) A decision of the CMA under this paragraph must be published, in a way an authorised member of the CMA considers appropriate, as soon as reasonably practicable after it is made.
- (14) Section 12I(2) applies to the publication of a decision under sub-paragraph (13) as it does to the publication under section 12I of a determination by the CMA on an appeal.

Suspension of decision

- 2 (1) The CMA may direct that, pending the determination of an appeal against a decision of the Authority—
- (a) the decision is not to have effect, or
 - (b) the decision is not to have effect to such extent as may be specified in the direction.
- (2) In the case of an appeal against a decision of the Authority which already has effect by virtue of section 12B, the CMA may direct that the modification that is the subject of the decision—
- (a) ceases to have effect entirely or to such extent as may be specified in the direction, and
 - (b) does not have effect, or does not have effect to the specified extent, pending the determination of the appeal.
- (3) The power to give a direction under this paragraph is exercisable only where—
- (a) an application for its exercise has been made by the appellant at the same time the appellant made an application in accordance with paragraph 1(3) for permission to bring an appeal against a decision of the Authority,
 - (b) the Authority has been given an opportunity of making representations or observations, in accordance with paragraph 3(2),
 - (c) the appellant (or, where the appellant is within section 12D(2)(c) or (d), those represented by the appellant, or consumers, respectively) would incur significant costs if the decision were to have effect before the determination of the appeal, and
 - (d) the balance of convenience does not otherwise require effect to be given to the decision pending that determination.
- (4) The CMA's decision on an application for a direction under this paragraph must be made—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) where the Authority makes representations or observations in accordance with paragraph 3(2), before the end of 10 working days beginning with the first working day after the day on which those representations or observations are received;
 - (b) in any other case, before the end of 14 working days beginning with the first working day following the day on which the application under sub-paragraph (3)(a) is received.
- (5) The appellant must send the Authority a copy of the application for a direction under this paragraph at the same time as it is sent to the CMA.
- (6) A direction under this paragraph must be—
- (a) given by an authorised member of the CMA, and
 - (b) published, in a way an authorised member of the CMA considers appropriate, as soon as reasonably practicable after it is given.
- (7) Section 12I(2) applies to the publication of a direction under sub-paragraph (6) as it does to the publication under section 12I of a determination by the CMA on an appeal.

Time limit for representations and observations by the Authority

- 3 (1) Sub-paragraph (2) applies where the Authority wishes to make representations or observations to the CMA in relation to—
- (a) an application for permission to bring an appeal under paragraph 1;
 - (b) an application for a direction under paragraph 2.
- (2) The Authority must make the representations or observations in writing before the end of 10 working days beginning with the first working day after the day on which it received a copy of the application under paragraph 1(7) or 2(5) as the case may be.
- (3) Sub-paragraph (4) applies where an application for permission to bring an appeal has been granted and the Authority wishes to make representations or observations to the CMA in relation to—
- (a) the Authority’s reasons for the decision in relation to which the appeal is being brought, and
 - (b) any grounds on which that appeal is being brought against that decision.
- (4) The Authority must make the representations or observations in writing before the end of 15 working days beginning with the first working day after the day on which permission to bring the appeal was granted.
- (5) The Authority must send a copy of the representations and observations it makes under this paragraph to the appellant.

Consideration and determination of appeal by group

- 4 (1) A group constituted by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013 for the purpose of carrying out functions of the CMA with respect to an appeal under section 12D must consist of three members of the CMA panel.
- (2) A decision of the group is effective if, and only if—
- (a) all the members of the group are present when it is made, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) at least two members of the group are in favour of the decision.

Matters to be considered on appeal

- 5 (1) The CMA, if it thinks it necessary to do so for the purpose of securing the determination of an appeal within the period provided for by section 12H, may disregard—
- (a) any or all matters raised by an appellant that were not raised by that appellant at the time of the relevant application, and
 - (b) any or all matters raised by the Authority that were not contained in representations or observations made for the purposes of the appeal in accordance with paragraph 3.
- (2) In this paragraph “relevant application” means an application under paragraph 1 or 2.

Production of documents etc

- 6 (1) For the purposes of this Schedule, the CMA may, by notice, require—
- (a) a person to produce to the CMA the documents specified or otherwise identified in the notice;
 - (b) any person who carries on a business to supply to the CMA such estimates, forecasts, returns or other information as may be specified or described in the notice in relation to that business.
- (2) The power to require the production of a document, or the supply of any estimate, forecast, return or other information, is a power to require its production or, as the case may be, supply—
- (a) at the time and place specified in the notice, and
 - (b) in a legible form.
- (3) No person is to be compelled under this paragraph to produce a document or supply an estimate, forecast, return or other information that the person could not be compelled to produce in civil proceedings in the High Court.
- (4) An authorised member of the CMA may, for the purpose of the exercise of the functions of the CMA, make arrangements for copies to be taken of a document produced or an estimate, forecast, return or other information supplied under this paragraph.
- (5) A notice for the purposes of this paragraph—
- (a) may be issued on the CMA’s behalf by an authorised member of the CMA;
 - (b) must include information about the possible consequences of not complying with the notice (as set out in paragraph 10).

Oral hearings

- 7 (1) For the purposes of this Schedule an oral hearing may be held, and evidence may be taken on oath—
- (a) by a person considering an application for permission to bring an appeal under paragraph 1,
 - (b) by a person considering an application for a direction under paragraph 2, or
 - (c) by a group with the function of determining an appeal,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

and, for that purpose, such a person or group may administer oaths.

- (2) The CMA may, by notice, require a person—
 - (a) to attend at a time and place specified in the notice, and
 - (b) at that time and place, to give evidence to a person or group mentioned in sub-paragraph (1).
- (3) At any oral hearing, the person or group conducting the hearing may require—
 - (a) the appellant, or the Authority, if present at the hearing to give evidence or to make representations or observations, or
 - (b) a person attending the hearing as a representative of the appellant or of the Authority to make representations or observations.
- (4) A person who gives oral evidence at the hearing may be cross-examined by or on behalf of any party to the appeal.
- (5) If the appellant, the Authority, or the appellant’s or Authority’s representative is not present at a hearing—
 - (a) there is no requirement to give notice to that person under sub-paragraph (2), and
 - (b) the person or group conducting the hearing may determine the application or appeal without hearing that person’s evidence, representations or observations.
- (6) No person is to be compelled under this paragraph to give evidence which that person could not be compelled to give in civil proceedings in the High Court.
- (7) Where a person is required under this paragraph to attend at a place more than 10 miles from that person’s place of residence, an authorised member of the CMA must arrange for that person to be paid the necessary expenses of attendance.
- (8) A notice for the purposes of this paragraph may be issued on the CMA’s behalf by an authorised member of the CMA.

Written statements

- 8 (1) The CMA may, by notice, require a person to produce a written statement with respect to a matter specified in the notice to—
 - (a) a person who is considering, or is to consider, an application for a direction under paragraph 2, or
 - (b) a group with the function of determining an appeal.
- (2) The power to require the production of a written statement includes power—
 - (a) to specify the time and place at which it is to be produced, and
 - (b) to require it to be verified by a statement of truth,
 and a statement required to be so verified must be disregarded unless it is so verified.
- (3) No person is to be compelled under this paragraph to produce a written statement with respect to any matter about which that person could not be compelled to give evidence in civil proceedings in the High Court.
- (4) A notice for the purposes of this paragraph may be issued on the CMA’s behalf by an authorised member of the CMA.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Expert advice

- 9 Where permission to bring an appeal is granted under paragraph 1, the CMA may commission expert advice with respect to any matter raised by a party to that appeal.

Defaults in relation to evidence

- 10 (1) This paragraph applies if a person (“the defaulter”)—
- (a) fails to comply with a notice issued or other requirement imposed under paragraph 6, 7 or 8,
 - (b) in complying with a notice under paragraph 8, makes a statement that is false in any material particular, or
 - (c) in providing information verified in accordance with a statement of truth required by appeal rules, provides information that is false in a material particular.
- (2) An authorised member of the CMA may certify the failure, or the fact that such a false statement has been made or such false information has been given, to the High Court.
- (3) The High Court may inquire into a matter certified to it under this paragraph and if, after having heard—
- (a) any witness against or on behalf of the defaulter, and
 - (b) any statement in the defaulter’s defence,
- it is satisfied that the defaulter, without reasonable excuse, failed to comply with the notice or other requirement, or made the false statement, or gave the false information, that court may punish that defaulter as if the person had been guilty of contempt of court.
- (4) Where the High Court has power under this paragraph to punish a body corporate for contempt of court, it may so punish any director or other officer of that body (either instead of or as well as punishing the body).
- (5) A person who wilfully alters, suppresses or destroys a document that the person has been required to produce under paragraph 6 is guilty of an offence and shall be liable—
- (a) on summary conviction to a fine;
 - (b) on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine, or to both.

Appeal rules

- 11 (1) The CMA Board may make rules of procedure regulating the conduct and disposal of appeals under section 12D.
- (2) Those rules may include provision supplementing the provisions of this Schedule in relation to any application, notice, hearing, power or requirement for which this Schedule provides; and that provision may, in particular, impose time limits or other restrictions on—
- (a) the taking of evidence at an oral hearing, or
 - (b) the making of representations or observations at such a hearing.
- (3) The CMA Board must publish rules made under this paragraph in a way it considers appropriate for bringing them to the attention of those likely to be affected by them.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) Before making rules under this paragraph, the CMA Board must consult such persons as it considers appropriate.
- (5) Rules under this paragraph may make different provision for different cases.

Costs

- 12 (1) A group that determines an appeal must make an order requiring the payment to the CMA of the costs incurred by the CMA in connection with the appeal.
- (2) An order under sub-paragraph (1) must require those costs to be paid—
 - (a) where the appeal is allowed in full, by the Authority,
 - (b) where the appeal is dismissed in full, by the appellant, or
 - (c) where the appeal is partially allowed, by one or more parties in such proportions as the CMA considers appropriate in all the circumstances.
- (3) The group that determines an appeal may also make such order as it thinks fit for requiring a party to the appeal to make payments to another party in respect of costs reasonably incurred by that other party in connection with the appeal.
- (4) A person who is required by an order under this paragraph to pay a sum to another person must comply with the order before the end of the period of 28 days beginning with the day after the making of the order.
- (5) Sums required to be paid by an order under this paragraph but not paid within the period mentioned in sub-paragraph (4) shall bear interest at such rate as may be determined in accordance with provision contained in the order.
- (6) Any costs payable by virtue of an order under this paragraph and any interest that has not been paid may be recovered as a civil debt by the person in whose favour that order is made.

Interpretation of Schedule

- 13 (1) In this Schedule—
 - “appeal” means an appeal under section 12D;
 - “appeal rules” means rules of procedure under paragraph 11;
 - “authorised member of the CMA”—
 - (a) in relation to a power exercisable in connection with an appeal in respect of which a group has been constituted by the chair of the CMA under Schedule 4 to the Enterprise and Regulatory Reform Act 2013, means a member of that group who has been authorised by the chair of the CMA to exercise that power;
 - (b) in relation to a power exercisable in connection with an application for permission to bring an appeal, or otherwise in connection with an appeal in respect of which a group has not been so constituted by the chair of the CMA, means—
 - (i) any member of the CMA Board who is also a member of the CMA panel, or
 - (ii) any member of the CMA panel authorised by the Secretary of State (whether generally or specifically) to exercise the power in question;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

“CMA Board” and “CMA panel” have the same meaning as in Schedule 4 to the Enterprise and Regulatory Reform Act 2013;

“statement of truth”, in relation to the production of a statement or provision of information by a person, means a statement that the person believes the facts stated in the statement or information to be true;

“working day” means any day other than—

- (a) Saturday or Sunday;
- (b) Christmas Day or Good Friday;
- (c) a day which is a bank holiday in England and Wales under the Banking and Financial Dealings Act 1971.

(2) References in this Schedule to a party to an appeal are references to—

- (a) the appellant, or
- (b) the Authority.]

[^{F1592}SCHEDULE 2A

WATER SUPPLY LICENCES: AUTHORISATIONS

Textual Amendments

F1592Sch. 2A inserted (1.1.2016) by [Water Act 2014 \(c. 21\)](#), s. 94(3), [Sch. 1](#); S.I. 2015/1938, art. 3(d)

Operation of the authorisations in England and Wales

- 1 In the descriptions of the following authorisations, a reference to the supply system of a water undertaker is a reference to the supply system of a water undertaker whose area is wholly or mainly in England—
 - (a) a retail authorisation;
 - (b) a wholesale authorisation.
- 2 In the descriptions of the following authorisations, a reference to the supply system of a water undertaker is a reference to the supply system of a water undertaker whose area is wholly or mainly in Wales—
 - (a) a restricted retail authorisation;
 - (b) a supplementary authorisation.

Retail authorisation

- 3 A retail authorisation given by a water supply licence is an authorisation to the water supply licensee to use the supply system of a water undertaker for the purpose of supplying water to the premises of—
 - (a) the licensee,
 - (b) persons associated with the licensee, or
 - (c) the licensee's customers.
- 4 None of the premises supplied by a water supply licensee under a retail authorisation may be household premises (as defined in section 17C).

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Wholesale authorisation

- 5 A wholesale authorisation given by a water supply licence is an authorisation to the water supply licensee to introduce water into the supply system of a water undertaker—
- (a) by means of which system any particular supply in accordance with a retail authorisation (whether the licensee's or another water supply licensee's) is to take place, and
 - (b) where that introduction is to be made in connection with that intended supply.

Modifications etc. (not altering text)

C344 Sch. 2A para. 5 modified (temp.) (22.3.2017) by [The Water Act 2014 \(Commencement No. 9 and Transitional Provisions\) Order 2017 \(S.I. 2017/462\)](#), **art. 11(5)**

Restricted retail authorisation

- 6 A restricted retail authorisation given by a water supply licence is an authorisation to the water supply licensee to use the supply system of a water undertaker for the purpose of supplying water to the premises of the licensee's customers.
- 7 The following requirements must be satisfied in relation to each of the premises to be supplied by a water supply licensee under a restricted retail authorisation—
- (a) the requirement that the premises are not household premises (as defined in section 17C);
 - (b) the threshold requirement (construed in accordance with section 17D).

Supplementary authorisation

- 8 A supplementary authorisation given by a water supply licence is an authorisation to the water supply licensee to introduce water into the supply system of a water undertaker—
- (a) by means of which system any particular supply in accordance with the licensee's restricted retail authorisation is to take place, and
 - (b) where that introduction is to be made in connection with that intended supply.

Enforcement and guidance

- 9 The requirements in paragraphs 4 and 7 are enforceable by the Authority under section 18.
- 10 (1) The Authority may from time to time, with the approval of the Secretary of State, issue guidance as to the factors that are, or are not, to be taken into account in determining the extent of any premises for the purposes of paragraphs 4 and 7.
- (2) Before giving approval under sub-paragraph (1) the Secretary of State must consult the Welsh Ministers.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Interpretation

- 11 For the purposes of this Schedule, a person (A) is associated with a water supply licensee (L) if—
- (a) where A and L are bodies corporate, one of them is a subsidiary of the other or both are subsidiaries of the same body corporate;
 - (b) where A or L is an individual or an unincorporated association and the other is a body corporate, that individual or unincorporated association controls the other or a body corporate of which the other is a subsidiary;
 - (c) A is a partnership of which L is a member.
- 12 In paragraph 11 “subsidiary” has the meaning given by section 1159 of the Companies Act 2006; and sections 450(1) to (4) and 451(1) to (3) of the Corporation Taxes Act 2010 (control of a company) apply for the purposes of paragraph 11 as they apply for the purposes of Part 10 of that Act.”]

[^{F1593}SCHEDULE 2B

SEWERAGE LICENCES: AUTHORISATIONS

Textual Amendments

F1593 Sch. 2B inserted (1.1.2016) by [Water Act 2014 \(c. 21\), s. 94\(3\)](#), [Sch. 3](#); [S.I. 2015/1938, art. 3\(e\)](#)

Retail authorisation

- 1 A retail authorisation given by a sewerage licence is an authorisation to the sewerage licensee to use the sewerage system of a sewerage undertaker for the purpose of enabling the licensee to provide sewerage services in respect of the premises of—
- (a) the licensee,
 - (b) persons associated with the licensee, or
 - (c) the licensee's customers.
- 2 None of the premises served by a sewerage licensee under a retail authorisation may be household premises (as defined in section 17C).
- 3 The requirement in paragraph 2 is enforceable by the Authority under section 18.
- 4 The Authority may from time to time, with the approval of the Secretary of State, issue guidance as to the factors which are, or are not, to be taken into account in determining the extent of any premises for the purposes of paragraph 2.

Wholesale authorisation

- 5 A wholesale authorisation given by a sewerage licence is an authorisation to the sewerage licensee to remove matter from the sewerage system of a sewerage undertaker where—
- (a) the sewerage system is being used to enable a sewerage licensee (whether the licensee or another sewerage licensee) to provide sewerage services in respect of premises in accordance with a retail authorisation, and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the removing of matter from the sewerage system is done in connection with sewerage services so provided.

Disposal authorisation

- 6 A disposal authorisation given by a sewerage licence is an authorisation to the sewerage licensee to remove matter from the sewerage system of a sewerage undertaker.
- 7 If a sewerage licensee with a disposal authorisation has, or a person associated with the licensee has, a retail authorisation—
- (a) the licensee or the person associated with it, or both of them, must obtain a wholesale authorisation, and
- (b) neither the licensee nor the person associated with it (if that person has a disposal authorisation) may remove matter from a sewerage system in accordance with the disposal authorisation (or either disposal authorisation, if both have such an authorisation) while matter may be removed in accordance with the wholesale authorisation (or either wholesale authorisation, if both have such an authorisation).

Interpretation

- 8 For the purposes of this Schedule, a person (A) is associated with a sewerage licensee (L) if—
- (a) where A and L are bodies corporate, one of them is a subsidiary of the other or both are subsidiaries of the same body corporate;
- (b) where A or L is an individual or an unincorporated association and the other is a body corporate, that individual or unincorporated association controls the other or a body corporate of which the other is a subsidiary;
- (c) A is a partnership of which L is a member.
- 9 In paragraph 8 “subsidiary” has the meaning given by section 1159 of the Companies Act 2006; and sections 450(1) to (4) and 451(1) to (3) of the Corporation Taxes Act 2010 (control of a company) apply for the purposes of paragraph 8 as they apply for the purposes of Part 10 of that Act.]

SCHEDULE 3

Section 23.

SPECIAL ADMINISTRATION ORDERS

Modifications etc. (not altering text)

C345 Sch. 3 applied (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), **Sch. 1 para. 7(4)** (with reg. 1(1)(c))

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

PART I

MODIFICATIONS OF THE 1986 ACT

General application of provisions of 1986 Act

- 1 Where a special administration order has been made, sections 11 to 15, 17 to 23 and 27 of the 1986 Act (which relate to administration orders under Part II of that Act) shall apply, with the modifications specified in the following provisions of this Part of this Schedule—
- (a) as if references in those sections to an administration order were references to a special administration order and references to an administrator were references to a special administrator; ^{F1594} ...
- ^{F1594}(b)

Textual Amendments

F1594Sch. 3 para. 1(b) and word omitted (26.5.2015) by virtue of [Deregulation Act 2015 \(c. 20\), s. 115\(3\)\(r\)](#), [Sch. 23 para. 28\(4\)\(e\)\(i\)](#)

Effect of order

- 2 In section 11 of the 1986 Act (effect of order), as applied by this Part of this Schedule—
- (a) the requirement in subsection (1)(a) that any petition for the winding up of the company shall be dismissed shall be without prejudice to the special administration order in a case where the order is made by virtue of section 25 of this Act; and
- ^{F1595}(b) and
- (c) the reference in subsection (3)(d) to proceedings shall include a reference to any proceedings under or for the purposes of section 18 of this Act.

Textual Amendments

F1595Sch. 3 para. 2(b) omitted (26.5.2015) by virtue of [Deregulation Act 2015 \(c. 20\), s. 115\(3\)\(r\)](#), [Sch. 23 para. 28\(4\)\(e\)\(ii\)](#)

Appointment of special administrator

- 3 In section 13 of the 1986 Act (appointment of administrator), as applied by this Part of this Schedule, for subsection (3) there shall be substituted the following subsection—
- “(3) An application for an order under subsection (2) may be made—
- (a) by the Secretary of State;
- (b) with the consent of the Secretary of State, by the Director General of Water Services;
- (c) by any continuing special administrator of the company or, where there is no such special administrator, by the company, the directors or any creditor or creditors of the company.”

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

General powers of special administrator

- 4 In section 14 of the 1986 Act (general powers of administrator), as applied by this Part of this Schedule
- (a) in subsection (1)(b), the reference to the powers specified in Schedule 1 to that Act shall be deemed to include a reference to a power to act on behalf of the company for the purposes of this Act, any local statutory provision or the exercise or performance of any power or duty which is conferred or imposed on the company by virtue of its holding an appointment under Chapter I of Part II of this Act [^{F1596}or a licence under Chapter 1A of that Part] ; and
 - (b) in subsection (4), the reference to a power conferred by the company's [^{F1597}articles of association] shall be deemed to include a reference to a power conferred by a local statutory provision or by virtue of the company's holding such an appointment [^{F1598}or licence] .

Textual Amendments

F1596 Words in Sch. 3 para. 4(a) inserted (1.12.2005) by Water Act 2003 (c. 37), ss. 101(1), 105(3), Sch. 8 para. 52(2)(a); S.I. 2005/2714, art. 3(c) (with Sch. para. 8)

F1597 Words in Sch. 3 para. 4(b) substituted (1.10.2009) by The Companies Act 2006 (Consequential Amendments, Transitional Provisions and Savings) Order (S.I. 2009/1941), art. 2(1), {Sch. 1 para. 126(4)} (with art. 10)

F1598 Words in Sch. 3 para. 4(b) inserted (1.12.2005) by Water Act 2003 (c. 37), ss. 101(1), 105(3), Sch. 8 para. 52(2)(b); S.I. 2005/2714, art. 3(c) (with Sch. para. 8)

Power to deal with charged property

- 5 (1) Section 15 of the 1986 Act (power to deal with charged property), as applied by this Part of this Schedule, shall have effect as follows.
- (2) In subsection (5)(b) (amount to be paid to chargeholder not to be less than open market value), for the words “in the open market by a willing vendor” there shall be substituted the words “ for the best price which is reasonably available on a sale which is consistent with the purposes of the special administration order ”.

^{F1599}(3)

Textual Amendments

F1599 Sch. 3 para. 5(3) omitted (26.5.2015) by virtue of Deregulation Act 2015 (c. 20), s. 115(3)(r), Sch. 23 para. 28(4)(e)(iii)

Duties of special administrator

- 6 (1) Section 17 of the 1986 Act (duties of administrator), as applied by this Part of this Schedule, shall have effect as follows.
- (2) For subsection (2) there shall be substituted the following subsection—
- “(2) Subject to any directions of the court, it shall be the duty of the special administrator to manage the affairs, business and property of the company

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

in accordance with proposals, as for the time being revised under section 23, which have been prepared for the purposes of that section by him or any predecessor of his.”

- (3) In subsection (3), paragraph (a) (right of creditors to require the holding of a creditors’ meeting) shall be omitted.

Discharge of order

- 7 (1) Section 18 of the 1986 Act (discharge and variation of administration order), as applied by this Part of this Schedule, shall have effect as follows.

- (2) For subsections (1) and (2) there shall be substituted the following subsection—

“(1) An application for a special administration order to be discharged may be made—

- (a) by the special administrator, on the ground that the purposes of the order have been achieved; or
- (b) by the Secretary of State or, with the consent of the Secretary of State, the Director General of Water Services, on the ground that it is no longer necessary that those purposes are achieved.”

- (3) In subsection (3), the words “or vary” shall be omitted.

- (4) In subsection (4), the words “or varied” and “or variation” shall be omitted and for the words “to the registrar of companies” there shall be substituted—

^{F1600}(a)

- (b) ^{F1601}... the words “to the registrar of companies and to the Director General of Water Services”.

Textual Amendments

F1600Sch. 3 para. 7(4)(a) and word omitted (26.5.2015) by virtue of [Deregulation Act 2015 \(c. 20\), s. 115\(3\)\(r\)](#), [Sch. 23 para. 28\(4\)\(e\)\(iv\)](#)

F1601Words in Sch. 3 para. 7(4)(b) omitted (26.5.2015) by virtue of [Deregulation Act 2015 \(c. 20\), s. 115\(3\)\(r\)](#), [Sch. 23 para. 28\(4\)\(e\)\(v\)](#)

Notice of making of order

- 8 In section 21(2) of the 1986 Act (notice of order to be given by administrator), as applied by this Part of this Schedule, for the words “to the registrar of companies” there shall be substituted—

^{F1602}(a)

- (b) ^{F1603}... the words “to the registrar of companies, to the Director General of Water Services”.

Textual Amendments

F1602Sch. 3 para. 8(a) and word omitted (26.5.2015) by virtue of [Deregulation Act 2015 \(c. 20\), s. 115\(3\)\(r\)](#), [Sch. 23 para. 28\(4\)\(e\)\(vi\)](#)

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

F1603 Words in Sch. 3 para. 8(b) omitted (26.5.2015) by virtue of Deregulation Act 2015 (c. 20), s. 115(3)(r), Sch. 23 para. 28(4)(e)(vii)

Statement of proposals

9 In section 23 of the 1986 Act (statement of proposals), as applied by this Part of this Schedule, for subsections (1) and (2) there shall be substituted the following subsections—

“(1) Where a special administration order has been made, the special administrator shall, within 3 months (or such longer period as the court may allow) after the making of the order, send a statement of his proposals for achieving the purposes of the order—

- (a) to the Secretary of State and to the Director General of Water Services;
- (b) so far as he is aware of their addresses, to all creditors of the company; and
- (c) ^{F1604} ... to the registrar of companies;

and may from time to time revise those proposals.

(2) If at any time—

- (a) the special administrator proposes to make revisions of the proposals for achieving the purposes of the special administration order; and
- (b) those revisions appear to him to be substantial,

the special administrator shall, before making those revisions, send a statement of the proposed revisions to the Secretary of State, to the Director General of Water Services, (so far as he is aware of their addresses) to all creditors of the company and ^{F1605} ... to the registrar of companies.

(2A) Where the special administrator is required by subsection (1) or (2) to send any person a statement before the end of any period or before making any revision of any proposals, he shall also, before the end of that period or, as the case may be, before making those revisions either—

- (a) send a copy of the statement (so far as he is aware of their addresses) to all members of the company; or
- (b) publish in the prescribed manner a notice stating an address to which members should write for copies of the statement to be sent to them free of charge.”

Textual Amendments

F1604 Words in Sch. 3 para. 9 omitted (26.5.2015) by virtue of Deregulation Act 2015 (c. 20), s. 115(3)(r), Sch. 23 para. 28(4)(e)(viii)

F1605 Words in Sch. 3 para. 9 omitted (26.5.2015) by virtue of Deregulation Act 2015 (c. 20), s. 115(3)(r), Sch. 23 para. 28(4)(e)(ix)

Applications to court

10 (1) Section 27 of the 1986 Act (protection of interests of creditors and members), as applied by this Part of this Schedule, shall have effect as follows.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(2) After subsection (1) there shall be inserted the following subsection—

“(1A) At any time when a special administration order is in force the Secretary of State or, with the consent of the Secretary of State, the Director General of Water Services may apply to the High Court by petition for an order under this section on the ground that the special administrator has exercised or is exercising, or proposing to exercise, his powers in relation to the company in a manner which—

- (a) will not best ensure the achievement of the purposes of the order; or
- (b) without prejudice to paragraph (a) above, involves either a contravention of the conditions of the company’s appointment under Chapter I of Part II of the Water Industry Act 1991 [^{F1606}or its licence under Chapter 1A of that Part] or of any statutory or other requirement imposed on the company in consequence of that appointment [^{F1607}or licence].”

(3) In subsection (3) (order not to prejudice or prevent voluntary arrangements or administrator’s proposals), for paragraphs (a) and (b) there shall be substituted the words “ the achievement of the purposes of the order ”.

(4) Subsections (4)(d) and (6) (power of court to order discharge) shall be omitted.

Textual Amendments

F1606Words in Sch. 3 para. 10(2) inserted (1.12.2005) by Water Act 2003 (c. 37), ss. 101(1), 105(3), Sch. 8 para. 52(3)(a); S.I. 2005/2714, art. 3(e) (with Sch. para. 8)

F1607Words in Sch. 3 para. 10(2) inserted (1.12.2005) by Water Act 2003 (c. 37), ss. 101(1), 105(3), Sch. 8 para. 52(3)(b); S.I. 2005/2714, art. 3(e) (with Sch. para. 8)

PART II

SUPPLEMENTAL

General adaptations and saving

- 11 (1) Subject to the preceding provisions of this Schedule, references in the 1986 Act (except in sections 8 to 10 and 24 to 26), or in any other enactment passed before 6th July 1989, to an administration order under Part II of that Act, to an application for such an order and to an administrator shall include references, respectively, to a special administration order, to an application for a special administration order and to a special administrator.
- (2) Subject as aforesaid and to sub-paragraph (3) below, references in the 1986 Act, or in any other enactment passed before 6th July 1989, to an enactment contained in Part II of that Act shall include references to that enactment as applied by section 24 of this Act or Part I of this Schedule.
- (3) Sub-paragraphs (1) and (2) above shall apply in relation to a reference in an enactment contained in Part II of the 1986 Act only so far as necessary for the purposes of the operation of the provisions of that Part as so applied.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) The provisions of this Schedule shall be without prejudice to the power conferred by section 411 of the 1986 Act (company insolvency rules), as modified by subparagraphs (1) and (2) above.

Interpretation

- 12 (1) In this Schedule “the 1986 Act” means the ^{M122}Insolvency Act 1986.
- (2) In this Schedule, and in any modification of the 1986 Act made by this Schedule, “special administrator”, in relation to a special administration order, means any person appointed in relation to that order for the purposes of section 23(1) of this Act; and in any such modification “special administration order” has the same meaning as in this Act.

[^{F1608}SCHEDULE 3A

Section 27A(11)

THE CONSUMER COUNCIL FOR WATER

Textual Amendments

F1608Sch. 3A inserted (1.10.2005) by [Water Act 2003 \(c. 37\)](#), ss. 35(2), 105(3), [Sch. 2](#); [S.I. 2005/2714](#), [art. 2\(a\)\(i\)](#) (with [Sch. para. 8](#))

Membership of Council

- 1 (1) The Council shall consist of—
- (a) a chairman appointed by the Secretary of State;
 - (b) one other member appointed by the Assembly; and
 - (c) such other members as may be appointed by the Secretary of State.
- (2) The Secretary of State shall consult the Assembly before appointing the chairman.
- (3) The Secretary of State and the Assembly shall consult the chairman before appointing any other member.
- (4) An appointment under this paragraph shall be for a term not exceeding five years.
- (5) In appointing persons under this paragraph the Secretary of State and the Assembly shall have regard to the desirability of including among the members one or more persons who—
- (a) have experience of work among, and the special needs of, disabled persons;
 - or
 - (b) have or have had a disability.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Membership of Council

- 2 (1) A person holding office as chairman or other member may resign that office by giving notice to the Secretary of State (in the case of a member appointed by him), or to the Assembly (in the case of a member appointed by the Assembly).
- (2) The Secretary of State may remove any person appointed by him from office as chairman or other member on the ground of incapacity or misbehaviour.
- (3) The Secretary of State shall consult the Assembly before removing any person appointed by him as chairman.
- (4) The Assembly may remove any person appointed by it from office as member on the ground of incapacity or misbehaviour.
- (5) Otherwise, the chairman and other members shall hold and vacate office as such in accordance with the terms of their respective appointments.
- (6) A previous appointment as chairman or other member does not affect a person's eligibility for appointment to either office.

Terms of appointment, remuneration, pensions etc

- 3 The Council shall pay to the chairman and other members of the Council such remuneration, and such travelling and other allowances, as the Secretary of State may determine.

Terms of appointment, remuneration, pensions etc

- 4 (1) If the Secretary of State so determines in the case of any holder of the office of chairman or other member, the Council shall pay—
 - (a) such pension, allowance or gratuity to or in respect of him, or
 - (b) such contributions or payments towards provision for such a pension, allowance or gratuity,as the Secretary of State may determine.
- (2) If, when any person ceases to hold office as chairman or other member, the Secretary of State determines that there are special circumstances which make it right that he should receive compensation, the Council shall pay to him a sum by way of compensation of such amount as may be determined by the Secretary of State.

Members appointed by Assembly

- 5 In relation to any member of the Council appointed by the Assembly, the matters mentioned in paragraphs 3 and 4 above shall be determined by the Assembly instead of by the Secretary of State.

Staff

- 6 (1) The Council shall, with the approval of the Secretary of State, appoint a principal officer on such terms of employment as it may, with that approval, determine.
- (2) The Council may, with the approval of the Secretary of State as to numbers and terms of employment, appoint such other employees as it may determine.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) The persons to whom section 1 of the Superannuation Act 1972 (persons to or in respect of whom benefits may be provided by schemes under that section) applies shall include employees of the Council.
- (4) The Council shall pay to the Minister for the Civil Service, at such times as he may direct, such sums as he may determine in respect of any increase attributable to sub-paragraph (3) above in the sums payable out of money provided by Parliament under the Superannuation Act 1972.

Annual reports

- 7 (1) As soon as practicable after the end of each financial year the Council shall report to the Secretary of State on its activities during the year.
- (2) The annual report for each year shall include a report on the progress of the projects described in the Council's forward work programme for that year.
- (3) In making any report under this paragraph the Council shall not include any information which relates to the affairs of a particular individual or body of persons (corporate or unincorporate) unless one or more of paragraphs (a) to (c) of sub-paragraph (4) below applies to the information.
- (4) Information relating to a particular individual or body may be included in the report if—
 - (a) that individual or body has consented to its inclusion;
 - (b) it is information that is available to the public from some other source; or
 - (c) it is not information the publication of which would or might, in the opinion of the Council, seriously and prejudicially affect the interests of that individual or body.
- (5) Before deciding to include any information relating to a particular individual or body in pursuance of sub-paragraph (4)(c) above, the Council shall—
 - (a) consult that person or body; and
 - (b) have regard to any opinion expressed by the Authority as to the application of sub-paragraph (4)(c) above to the information or as to the desirability or otherwise of its publication,
 and paragraph (b) applies whether the opinion is given in relation to information itself or to information of a description which applies to that information.
- (6) In making any report under this paragraph the Council shall not include any information which it considers relates to any matter which is, or is likely to be, the subject of criminal proceedings.
- (7) In considering whether information relates to any matter as mentioned in sub-paragraph (6) above, the Council shall have regard to any opinion expressed (whether in relation to the information itself or to information of a description which applies to that information) by the Secretary of State, the Assembly or the Director of Public Prosecutions.
- (8) The Secretary of State shall lay a copy of each annual report of the Council before each House of Parliament.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (9) The Council shall send a copy of each annual report to the Authority and the Assembly and shall arrange for the report to be published in such further manner as it considers appropriate.

Financial provisions and accounts

- 8 (1) It shall be the duty of the Council to comply with any notice given by the Secretary of State requiring it to perform duties of a financial nature specified in the notice.
- (2) The Secretary of State shall consult the Assembly before giving any notice to the Council under sub-paragraph (1) above.

Financial provisions and accounts

- 9 (1) The Council shall prepare, in respect of each financial year, a statement of accounts giving a true and fair view of the state of affairs and the income and expenditure of the Council.
- (2) The statement of accounts shall comply with any requirement which the Secretary of State has notified to the Council.
- (3) The Council shall, within such period after the end of the financial year to which it relates as the Secretary of State may specify by notice given to the Council, send copies of each statement of accounts of the Council to—
- (a) the Secretary of State and the Assembly; and
 - (b) the Comptroller and Auditor General.
- (4) The Comptroller and Auditor General shall—
- (a) examine, certify and report on every statement sent to him under sub-paragraph (3) above; and
 - (b) lay a copy of the statement and of his report before each House of Parliament.

Financial provisions and accounts

- 10 The Secretary of State and the Assembly shall pay to the Council such sums as he or it thinks fit to enable it to meet its expenses.

Regional committees

- 11 (1) The Council shall not establish or abolish a regional committee, or alter the allocation of a relevant undertaker to a regional committee, without the approval of the appropriate authority.
- (2) If the Council proposes to do anything mentioned in sub-paragraph (1) above it shall, after consulting the appropriate authority, give notice—
- (a) describing its proposals; and
 - (b) specifying the time from the date of the notice (not being less than two months) within which representations may be made with respect to the proposals;
- and shall consider any representations that are duly made and not withdrawn.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) A notice under sub-paragraph (2) above shall be given by publishing it in such manner as the Council considers appropriate for bringing the proposals to the attention of those likely to be affected.
- (4) An appropriate authority shall not give its approval under sub-paragraph (1) above until after the time specified in the notice under sub-paragraph (2) above.

Regional committees

- 12 (1) A regional committee of the Council shall consist of—
 - (a) a chairman appointed by the appropriate authority;
 - (b) such other members as the Council may appoint.
- (2) Any regional committee may establish sub-committees.
- (3) The members of a regional committee of the Council may include persons who are not members of the Council (and the members of a sub-committee of the committee may include persons who are not members of the committee or the Council).
- (4) In appointing members of a regional committee the Council shall take account of any guidance given to them by the appropriate authority.
- (5) The Council may pay to the chairman and other members of a regional committee, or a sub-committee, such remuneration, and such travelling and other allowances, as the appropriate authority may determine.

Regional committees

- 13 (1) If the appropriate authority so determines in the case of any holder of the office of chairman or other member of a regional committee, or of any sub-committee of a regional committee, the Council shall pay—
 - (a) such pension, allowance or gratuity to or in respect of him; or
 - (b) such contributions or payments towards provision for such a pension, allowance or gratuity,
 as the appropriate authority may determine.
- (2) If, when any person ceases to hold office as chairman or other member of a regional committee, the appropriate authority determines that there are special circumstances which make it right that he should receive compensation, the Council shall pay to him a sum by way of compensation of such amount as may be determined by the appropriate authority.

Regional committees

- 14 In paragraphs 11 to 13 above the “appropriate authority” means—
 - (a) the Assembly, in relation to committees established (or proposed to be established) for relevant undertakers whose areas are wholly or mainly in Wales, to sub-committees of those committees, and to any relevant undertaker whose area is wholly or mainly in Wales;
 - (b) the Secretary of State, in relation to committees established (or proposed to be established) for other relevant undertakers, to sub-committees of those committees, and to any other relevant undertaker.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Other committees

- 15 (1) The Council may establish committees other than regional committees and any such committee may establish sub-committees.
- (2) The members of any such committee may include persons who are not members of the Council (and the members of a sub-committee may include persons who are not members of the relevant committee or the Council).
- (3) The Council may pay to the chairman and other members of any such committee, or of a sub-committee, such remuneration, and such travelling and other allowances, as the Secretary of State may determine.

Other committees

- 16 (1) If the Secretary of State so determines in the case of any holder of the office of chairman or other member of any such committee, or of any sub-committee of such a committee, the Council shall pay—
- (a) such pension, allowance or gratuity to or in respect of him; or
 - (b) such contributions or payments towards provision for such a pension, allowance or gratuity,
- as the Secretary of State may determine.
- (2) If, when any person ceases to hold office as chairman or other member of any such committee, or of any sub-committee of such a committee, the Secretary of State determines that there are special circumstances which make it right that he should receive compensation, the Council shall pay to him a sum by way of compensation of such amount as may be determined by the Secretary of State.

Performance of functions of the Council

- 17 Anything authorised or required to be done by the Council may be done by any member or employee of the Council who, or any regional or other committee of the Council which, is authorised for the purpose by the Council (whether generally or specially).

Performance of functions of the Council

- 18 The validity of anything done by the Council is not affected by a vacancy among its members or by a defect in the appointment of a member.

Supplementary powers

- 19 (1) The Council shall have power to do anything which is calculated to facilitate, or is incidental or conducive to, the performance of any of its functions.
- (2) That power includes, among other things, power to enter into agreements and to acquire and dispose of property.
- (3) The Council may make charges for facilities or services provided by it at the request of any person.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

First financial year of the Council

- 20 (1) If the period beginning with the day on which the Council is established and ending with the next 31st March is six months or more, the first financial year of the Council is that period.
- (2) If the period mentioned in sub-paragraph (1) above is less than six months, the first financial year of the Council is the period beginning with the day on which the body is established and ending with 31st March in the following year.

Compensation for members of customer service committees

- 21 The Authority may pay to any person who immediately before the abolition by the Water Act 2003 of a customer service committee established under section 28(1) of this Act is the chairman of that body such sums by way of compensation for loss of office, or loss or diminution of pension rights, as the Secretary of State may determine.]

SCHEDULE 5

Section 65.

PROCEDURE FOR ORDERS RELATING TO PRESSURE AND CONSTANCY OF SUPPLY

Applications for orders

- 1 (1) Where the Director or a water undertaker applies to the Secretary of State for an order under section 65(5) of this Act, the applicant shall—
- (a) submit to the Secretary of State a draft of the order applied for;
 - (b) publish a notice with respect to the application, at least once in each of two successive weeks, in one or more newspapers circulating in the locality which would be affected by the provision proposed to be made by the order;
 - (c) not later than the date on which that notice is first published serve a copy of the notice on every affected local authority and every affected water undertaker; and
 - (d) publish a notice in the London Gazette which—
 - (i) states that the draft order has been submitted to the Secretary of State;
 - (ii) names every local authority on whom a notice is required to be served under this paragraph;
 - (iii) specifies a place where a copy of the draft order and of any relevant map or plan may be inspected; and
 - (iv) gives the name of every newspaper in which the notice required by virtue of paragraph (b) above was published and the date of an issue containing the notice.
- (2) The notice required by virtue of sub-paragraph (1)(b) above to be published with respect to an application for an order shall—
- (a) state the general effect of the order applied for;
 - (b) specify a place where a copy of the draft order and of any relevant map or plan may be inspected by any person free of charge at all reasonable times during the period of twenty-eight days beginning with the date of the first publication of the notice; and
 - (c) state that any person may, within that period, by notice to the Secretary of State object to the making of the order.
- (3) For the purposes of subsection (1)(c) above a local authority or a water undertaker which is not the applicant shall be affected by an application for an order if its area includes the whole or any part of the locality which would be affected by the provision proposed to be made by the order.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Supply of copies of draft orders

- 2 The applicant for an order under section 65(5) of this Act shall, at the request of any person and on payment by that person of such charge (if any) as the applicant may reasonably require, furnish that person with a copy of the draft order submitted to the Secretary of State under paragraph 1 above.

Modifications of proposals

- 3 (1) On an application for an order under section 65(5) of this Act, the Secretary of State may make the order either in the terms of the draft order submitted to him or, subject to sub-paragraph (2) below, in those terms as modified in such manner as he thinks fit, or may refuse to make an order.
- (2) The Secretary of State shall not make such a modification of a draft order submitted to him as he considers is likely adversely to affect any persons unless he is satisfied that the applicant for the order has given and published such additional notices, in such manner, as the Secretary of State may have required.

Consideration of objections etc.

- 4 Where an application for an order to which this Schedule applies has been made, the Secretary of State may, if he considers it appropriate to do so, hold a local inquiry before making any order on the application.

SCHEDULE 6

Sections 71 to 84 & 162 to 172.

SUPPLEMENTAL PROVISIONS RELATING TO RIGHTS OF ENTRY

PART I

RIGHTS REQUIRING NOTICE FOR ENTRY TO NON-BUSINESS PREMISES

Notice of entry

- 1 (1) Where this Part of this Schedule applies to any right of entry conferred by a provision of this Act, admission to any premises which are not business premises shall not be demanded as of right by virtue of that provision, unless twenty-four hours notice of the intended entry has been given to the occupier of the premises.
- (2) In this paragraph “business premises” means—
- (a) any factory; or
 - (b) any place in which persons are employed otherwise than in domestic service;
- and in this sub-paragraph “factory” has the same meaning as in the ^{M131}Factories Act 1961.

Warrants to exercise right

- 2 (1) Subject to sub-paragraph (3) below, if it is shown to the satisfaction of a justice of the peace, on sworn information in writing—
- (a) that any one or more of the conditions specified in sub-paragraph (2) below is fulfilled in relation to any premises which a person is entitled to enter by virtue of a right of entry to which this Part of this Schedule applies; and
 - (b) that there is reasonable ground for entry to the premises for any purpose for which the right is exercisable,
- the justice may by a warrant under his hand authorise that person to enter the premises, if need be by force.
- (2) The conditions mentioned in sub-paragraph (1) above are—
- (a) that admission to the premises has been refused to the person having the right to enter them;
 - (b) that such refusal is apprehended;
 - (c) that the premises are unoccupied or the occupier is temporarily absent;
 - (d) that the case is one of urgency;
 - (e) that an application for admission would defeat the object of the entry.
- (3) A warrant under this Part of this Schedule shall not be issued by a justice of the peace in a case in which he is satisfied that the condition mentioned in paragraph (a) or (b) of sub-paragraph (2) above is fulfilled unless he is also satisfied—
- (a) that notice of the intention to apply for a warrant has been given to the occupier;
 - (b) that a condition mentioned in either of paragraphs (c) and (d) of that sub-paragraph is also fulfilled in relation to the premises; or
 - (c) that the giving of such notice as is mentioned in paragraph (a) above would defeat the object of the entry.
- (4) Every warrant under this Part of this Schedule shall continue in force until the purpose for which the entry is necessary has been fulfilled.
- (5) A person leaving any unoccupied premises which he has entered by virtue of a warrant under this Part of this Schedule shall leave them as effectually secured against trespassers as he found them.

Supplementary power of person making entry

- 3 Any person entitled to enter any premises by virtue of a right to which this Part of this Schedule applies, or of a warrant under this Part of this Schedule, may take with him such other persons as may be necessary.

Obstruction of person exercising right

- 4 Any person who wilfully obstructs any person upon whom a right of entry has been conferred by virtue of—
- (a) any provision of this Act relating to a right of entry to which this Part of this Schedule applies; or
 - (b) a warrant under this Part of this Schedule,
- shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 1 on the standard scale.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Duty of persons exercising rights to maintain confidentiality

- 5 (1) Without prejudice to section 206 of this Act and subject to sub-paragraphs (2) and (3) below, any person who is admitted to any premises in compliance—
- (a) with any provision of this Act relating to a right of entry to which this Part of this Schedule applies; or
 - (b) with a warrant under this Part of this Schedule,
- shall be guilty of an offence under this paragraph if he discloses to any person any information obtained by him there with regard to any manufacturing process or trade secret.
- (2) A person shall not be guilty of an offence under this paragraph in respect of any disclosure made in the performance of his duty.
- (3) For the purposes of the application of this Part of this Schedule to the right conferred by section 171 of this Act, the reference to premises in subsection (1) above shall have effect as a reference only to business premises, within the meaning of paragraph 1 above.
- (4) A person who is guilty of an offence under this paragraph, other than such a person as is mentioned in sub-paragraph (5) below, shall be liable—
- (a) on summary conviction, to imprisonment for a term not exceeding three months or to a fine not exceeding the statutory maximum or to both;
 - (b) on conviction on indictment, to imprisonment for a term not exceeding three months or to a fine or to both.
- (5) A person who is guilty of an offence under this paragraph by virtue of the application of this Part of this Schedule to the rights conferred by section 171 of this Act shall be liable, on summary conviction, to imprisonment for a term not exceeding three months or to a fine not exceeding level 3 on the standard scale or to both.

PART II

OTHER RIGHTS OF ENTRY AND RELATED POWERS

Modifications etc. (not altering text)

C346 Sch. 6 Pt. 2 applied (29.3.2017) by [The Glyn Rhonwy Pumped Storage Generating Station Order 2017 \(S.I. 2017/330\)](#), art. 1, **Sch. 6 para. 8(2)** (with art. 31)

Notice of entry

- 6 (1) Without prejudice to any power exercisable by virtue of a warrant under this Part of this Schedule, no person shall make an entry into any premises by virtue of any right or power to which this Part of this Schedule applies except—
- (a) in an emergency; or
 - (b) at a reasonable time and after the required notice of the intended entry has been given to the occupier of the premises.
- (2) For the purposes of this paragraph the required notice is—

- (a) in the case of the rights and powers conferred by virtue of any of sections 74(4), 84(2) and (3), 86(4) and 170(1)(c) and (3) of this Act, twenty-four hours' notice; and
 - (b) in any other case, seven days' notice.
- (3) For the purposes of the application of this Part of this Schedule to any right or power conferred by section 168 of this Act the reference in sub-paragraph (1) above to an emergency—
- (a) in relation to any entry to premises for the purposes of, or for purposes connected with, the exercise or proposed exercise of any power in relation to a street, includes a reference to any circumstances requiring the carrying out of emergency works within the meaning of Part III of the ^{M132}New Roads and Street Works Act 1991; and
 - (b) in relation to any other entry to premises, includes a reference to any danger to property and to any interruption of a supply of water provided to any premises by any person and to any interruption of the provision of sewerage services to any premises.
- (4) Until the coming into force of section 52 of the New Roads and Street Works Act 1991, sub-paragraph (3)(a) above shall have effect as if the reference to Part III of that Act were a reference to the ^{M133}Public Utilities Street Works Act 1950; but nothing in this sub-paragraph shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing that section 52 into force on different days for different purposes (including the purposes of this paragraph).
- (5) For the purposes of the application of this Part of this Schedule to the rights and other powers conferred by section 172 of this Act sub-paragraph (1) above shall have effect as if the power in an emergency to make an entry to any premises otherwise than at a reasonable time and after the required notice were omitted.

Warrant to exercise right or power

- 7 (1) If it is shown to the satisfaction of a justice of the peace on sworn information in writing—
- (a) that there are reasonable grounds for the exercise in relation to any premises of a right or power to which this Part of this Schedule applies; and
 - (b) that one or more of the conditions specified in sub-paragraph (2) below is fulfilled in relation to those premises,
- the justice may by warrant authorise the relevant authority to designate a person who shall be authorised to exercise the right or power in relation to those premises in accordance with the warrant and, if need be, by force.
- (2) The conditions mentioned in sub-paragraph (1)(b) above are—
- (a) that the exercise of the right or power in relation to the premises has been refused;
 - (b) that such a refusal is reasonably apprehended;

Status: This version of this Act contains provisions that are prospective.

Compensation

- 11 (1) Where any person exercises any right or power to which this Part of this Schedule applies, it shall be the duty of the relevant authority to make full compensation to any person who has sustained loss or damage by reason of—
- (a) the exercise by the designated person of that right or power or of any power to take any person or equipment with him when entering the premises in relation to which the right or power is exercised; or
 - (b) the performance of, or failure of the designated person to perform, the duty imposed by paragraph 10 above.
- (2) Compensation shall not be payable by virtue of sub-paragraph (1) above in respect of any loss or damage if the loss or damage—
- (a) is attributable to the default of the person who sustained it; or
 - (b) is loss or damage in respect of which compensation is payable by virtue of any other provision of this Act.
- (3) Any dispute as to a person's entitlement to compensation under this paragraph or as to the amount of any such compensation, shall be referred to the arbitration of a single arbitrator appointed by agreement between the relevant authority and the person who claims to have sustained the loss or damage or, in default of agreement—
- (a) by the [^{F1649}Upper Tribunal] where the relevant authority is the Secretary of State; and
 - (b) by the Secretary of State, in any other case.

Interpretation of Part II

- 13 (1) In this Part of this Schedule “relevant authority”, in relation to a right or power to which this Part of this Schedule applies, means the person who, by virtue of—
- (a) the provision by which the right or power is conferred; or
 - (b) (except in paragraph 7 above) the warrant,
- is entitled to designate the person by whom the right or power may be exercised.
- (2) References in this Part of this Schedule, except in paragraph 7 above, to a right or power to which this Part of this Schedule applies include references to a right or power exercisable by virtue of a warrant under this Part of this Schedule.
- (3) For the purposes of paragraphs 10 and 11 above a person enters any premises by virtue of a right or power to which this Part of this Schedule applies notwithstanding that he has failed (whether by virtue of the waiver of the requirement by the occupier of the premises or otherwise) to comply with—
- (a) any requirement to enter those premises at a reasonable time or after giving notice of his intended entry; or
 - (b) the requirement imposed by paragraph 8 above.

F1650 SCHEDULE 7

Section 91.

PRE-1985 FLUORIDATION SCHEMES

Textual Amendments

F1650 Sch. 7 repealed (26.3.2010 for E.) by Water Act 2003 (c. 37), ss. 58(9), 105(3), Sch. 9 Pt. 3; S.I. 2010/975, art. 2

Operation of pre-1985 schemes

- 1 (1) Where in pursuance of any such arrangements entered into by a water authority or statutory water company before 20th December 1984 as have effect immediately before the coming into force of this Act as arrangements entered into by a water undertaker—
- (a) a scheme for increasing the fluoride content of water supplied by the authority or company in any part of England and Wales was in operation immediately before that date; or
 - (b) work had been begun by the authority or company before that date for enabling such a scheme to be brought into operation,
- that water undertaker may, while the conditions mentioned in sub-paragraph (2) below are satisfied, operate the scheme.
- (2) The conditions referred to in sub-paragraph (1) above are that the arrangements require—
- (a) fluoridation to be effected only by the addition of one or more of the compounds of fluorine mentioned in subsection (4) of section 87 of this Act; and
 - (b) the concentrations of fluoride in the water supplied to consumers to be maintained, so far as reasonably practicable, at one milligram per litre.

Supplies by other undertakers and revocation or variation of scheme

- 2 (1) Where a water undertaker is operating a fluoridation scheme by virtue of this Schedule—
- (a) subsections (6) and (7) of section 87 of this Act shall apply in relation to the scheme as they apply in relation to any scheme operated in exercise of the power conferred by that section or section 1 of the ^{M134}Water (Fluoridation) Act 1985;
 - (b) the scheme shall cease to have effect upon the appropriate authority giving to the undertaker reasonable notice of the authority's desire to terminate it; and
 - (c) the arrangements under which the scheme is operated may be varied to take account of any amendment of section 87(2) of this Act which is made under section 88 of this Act.
- (2) In this paragraph “appropriate authority”, in relation to a fluoridation scheme which is operated under this Schedule, means the [^{F1651}Strategic Health Authority or][^{F1652}Health Authority] to which the water undertaker concerned is answerable in accordance with the arrangements under which the scheme is operated.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Authorisations having effect as deemed consents under the Control of Pollution Act 1974

- 2 (1) Where, by virtue of section 43(2) of the ^{M137}Control of Pollution Act 1974 there is, immediately before the commencement of this Act, a deemed consent for the purposes of the ^{M138}Public Health (Drainage of Trade Premises) Act 1937 which has effect under the ^{M139}Water Act 1989 in relation to any sewerage undertaker, that deemed consent shall have effect as a deemed consent for the purposes of Chapter III of Part IV of this Act subject to the following provisions of this paragraph.
- (2) The sewerage undertaker—
- (a) may at any time; and
 - (b) shall if requested to do so by any person entitled to make a discharge in pursuance of the deemed consent,
- by notice served on the owner and any occupier of the premises in question cancel the deemed consent and, subject to sub-paragraph (3) below, give its actual consent for such discharges as were authorised by the deemed consent.
- (3) An actual consent given under sub-paragraph (2) above shall be so given either conditionally or subject to any conditions which may be attached to consents by virtue of section 121 of this Act.
- [^{F1657}(3A) If a sewerage undertaker serves a notice under sub-paragraph (2) in relation to premises in respect of which a sewerage licensee provides sewerage services, the sewerage undertaker must send a copy of the notice to the sewerage licensee.]
- (4) It is hereby declared that the provisions of Chapter III of Part IV of this Act with respect to the variation of conditions of a consent apply in relation to an actual consent under sub-paragraph (2) above as they apply in relation to any other actual consent under Chapter III of Part IV of this Act.
- (5) A notice signifying an actual consent under sub-paragraph (2) above shall indicate that a right of appeal is conferred under the following paragraph in respect of the notice.

Regulations as to residue of agreements

- 5 The Secretary of State may by regulations make provisions in relation to the provisions of any agreement to which subsection (1) of section 43 of the ^{M141}Control of Pollution Act 1974 applied and which apart from that section would be in force after the commencement of this Act—
- (a) for determining, by arbitration or otherwise, whether any such agreement continues to have effect as relating to a matter other than the discharge of trade effluent into a sewerage undertaker's sewer;
 - (b) for determining, by arbitration or otherwise, what modifications (if any) are appropriate in consequence of any prescribed provision of section 43 of that Act or any provision of this Schedule re-enacting any such provision; and
 - (c) in a case in which the conditions on which any discharges authorised by such an agreement included, immediately before the coming into force of section 43 of that Act, a condition as to charges in respect of the discharges and other matters—
 - (i) for determining, by arbitration or otherwise, the proportion of the charges attributable to the discharges; and
 - (ii) for limiting accordingly the conditions which are to be treated by virtue of section 43 of that Act as included in the deemed consent which has effect by virtue of this Schedule.

SCHEDULE 9

Section 155.

MODIFICATION OF COMPENSATION PROVISIONS ETC.
IN RELATION TO THE CREATION OF NEW RIGHTS*Compensation enactments*

- 1 Subject to the following provisions of this Schedule, the enactments for the time being in force with respect to compensation for the compulsory purchase of land shall apply with the necessary modifications as respects compensation in the case of a compulsory acquisition under section 155 of this Act of a right by the creation of a new right as they apply as respects compensation on the compulsory purchase of land and interests in land.

Adaptation of the Compulsory Purchase Act 1965

- 2 The Compulsory Purchase Act 1965 (in the following provisions of this Schedule referred to as “the 1965 Act”) shall have effect with the modifications necessary to make it apply to the compulsory acquisition under section 155 of this Act of a right by the creation of a new right as it applies to the compulsory acquisition under that section of land, so that, in appropriate contexts, references in that Act to land are to be read (according to the requirements of the particular context) as referring to, or as including references to—
- (a) the right acquired or to be acquired; or
 - (b) the land over which the right is or is to be exercisable.
- (2) Without prejudice to the generality of sub-paragraph (1) above, Part I of the 1965 Act shall apply in relation to the compulsory acquisition under section 155 of this Act of a right by the creation of a new right with the modifications specified in the following provisions of this Schedule.

Section 7 of the 1965 Act

- 3 For section 7 of the 1965 Act (measure of compensation) there shall be substituted the following section—
- “7 In assessing the compensation to be paid by the acquiring authority under this Act regard shall be had not only to the extent (if any) to which the value of the land over which the right is to be acquired is depreciated by the acquisition of the right but also to the damage (if any) to be sustained by the owner of the land by reason of its severance from other land of his, or injuriously affecting that other land by the exercise of the powers conferred by this or the special Act.”

Section 8 of the 1965 Act

- [^{F1658}4 Section 8(1) of the Compulsory Purchase Act 1965 has effect as if references to acquiring land were to acquiring a right in the land, and Schedule 2A to that Act is to be read as if, for that Schedule, there were substituted—

“SCHEDULE 2A

COUNTER-NOTICE REQUIRING PURCHASE OF LAND

Introduction

- 1 (1) This Schedule applies where an acquiring authority serve a notice to treat in respect of a right over the whole or part of a house, building or factory.
- (2) But see section 2A of the Acquisition of Land Act 1981 (under which a compulsory purchase order can exclude from this Schedule land that is 9 metres or more below the surface).
- 2 In this Schedule “house” includes any park or garden belonging to a house.

Counter-notice requiring purchase of land

- 3 A person who is able to sell the house, building or factory (“the owner”) may serve a counter-notice requiring the authority to purchase the owner’s interest in the house, building or factory.
- 4 A counter-notice under paragraph 3 must be served within the period of 28 days beginning with the day on which the notice to treat was served.

Response to counter-notice

- 5 On receiving a counter-notice the acquiring authority must decide whether to—
- (a) withdraw the notice to treat,
 - (b) accept the counter-notice, or
 - (c) refer the counter-notice to the Upper Tribunal.
- 6 The authority must serve notice of their decision on the owner within the period of 3 months beginning with the day on which the counter-notice is served (“the decision period”).
- 7 If the authority decide to refer the counter-notice to the Upper Tribunal they must do so within the decision period.
- 8 If the authority do not serve notice of a decision within the decision period they are to be treated as if they had served notice of a decision to withdraw the notice to treat at the end of that period.
- 9 If the authority serve notice of a decision to accept the counter-notice, the compulsory purchase order and the notice to treat are to have effect as if they included the owner’s interest in the house, building or factory.

Determination by Upper Tribunal

- 10 On a referral under paragraph 7 the Upper Tribunal must determine whether the acquisition of the right would—
- (a) in the case of a house, building or factory, cause material detriment to the house, building or factory, or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (b) in the case of a park or garden, seriously affect the amenity or convenience of the house to which the park or garden belongs.
- 11 In making its determination, the Upper Tribunal must take into account—
- (a) the effect of the acquisition of the right,
 - (b) the proposed use of the right, and
 - (c) if the right is proposed to be acquired for works or other purposes extending to other land, the effect of the whole of the works and the use of the other land.
- 12 If the Upper Tribunal determines that the acquisition of the right would have either of the consequences described in paragraph 10 it must determine how much of the house, building or factory the authority ought to be required to take.
- 13 If the Upper Tribunal determines that the authority ought to be required to take some or all of the house, building or factory the compulsory purchase order and the notice to treat are to have effect as if they included the owner's interest in that land.
- 14 (1) If the Upper Tribunal determines that the authority ought to be required to take some or all of the house, building or factory, the authority may at any time within the period of 6 weeks beginning with the day on which the Upper Tribunal makes its determination withdraw the notice to treat in relation to that land.
- (2) If the acquiring authority withdraws the notice to treat under this paragraph they must pay the person on whom the notice was served compensation for any loss or expense caused by the giving and withdrawal of the notice.
- (3) Any dispute as to the compensation is to be determined by the Upper Tribunal.”]

Textual Amendments

F1658Sch. 9 para. 4 substituted (3.2.2017) by [Housing and Planning Act 2016 \(c. 22\)](#), s. 216(3), Sch. 17 paras. 6, 7; [S.I. 2017/75](#), reg. 3(g) (with reg. 5)

Effect of deed poll

- 5 The following provisions of the 1965 Act (being provisions stating the effect of a deed poll executed in various circumstances where there is no conveyance by persons with interests in the land), that is to say—
- (a) section 9(4) (refusal by owners to convey);
 - (b) paragraph 10(3) of Schedule 1 (owners under incapacity);
 - (c) paragraph 2(3) of Schedule 2 (absent and untraced owners); and
 - (d) paragraphs 2(3) and 7(2) of Schedule 4 (common land),
- shall be so modified as to secure that, as against persons with interests in the land which are expressed to be overridden by the deed, the right which is to be compulsorily acquired is vested absolutely in the acquiring authority.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Section 11 of the 1965 Act

- 6 Section 11 of the 1965 Act (powers of entry) shall be so modified as to secure that, as from the date on which the acquiring authority have served notice to treat in respect of any right, they have power, exercisable in the like circumstances and subject to the like conditions, to enter for the purpose of exercising that right (which shall be deemed for this purpose to have been created on the date of service of the notice); and sections 12 (penalty for unauthorised entry) and 13 (entry on warrant in the event of obstruction) shall be modified correspondingly.

Section 20 of the 1965 Act

- 7 Section 20 of the 1965 Act (protection for interests of tenants at will etc.) shall apply with the modifications necessary to secure that persons with such interests as are mentioned in that section are compensated in a manner corresponding to that in which they would be compensated on a compulsory acquisition under section 155 of this Act of that land, but taking into account only the extent (if any) of such interference with such an interest as is actually caused, or likely to be caused, by the exercise of the right in question.

Section 22 of the 1965 Act

- 8 Section 22 of the 1965 Act (protection of acquiring authority's possession where by inadvertence an estate, right or interest has not been got in) shall be so modified as to enable the acquiring authority, in circumstances corresponding to those referred to in that section, to continue entitled to exercise the right acquired, subject to compliance with that section as respects compensation.

SCHEDULE 10

Section 157.

PROCEDURE RELATING TO BYELAWS UNDER SECTION 157

Confirmation of byelaws

- 1 (1) No byelaw made by a relevant undertaker under section 157 of this Act shall have effect until confirmed by the Secretary of State under this Schedule.
- (2) At least one month before it applies for the confirmation of any such byelaw, a relevant undertaker shall—
- (a) cause a notice of its intention to make the application to be published in the London Gazette and in such other manner as it considers appropriate for the purpose of bringing the proposed byelaw to the attention of persons likely to be affected by it; and
 - (b) cause copies of the notice to be served on any persons carrying out functions under any enactment who appear to it to be concerned.
- (3) For at least one month before an application is made by a relevant undertaker for the confirmation of any such byelaw, a copy of it shall be deposited at one or more of the offices of the relevant undertaker, including (if there is one) at an office in the area to which the byelaw would apply.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: *Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (4) A relevant undertaker shall provide reasonable facilities for the inspection free of charge of a byelaw deposited under sub-paragraph (3) above.
- (5) Every person shall be entitled, on application to a relevant undertaker, to be furnished free of charge with a printed copy of a byelaw so deposited.

Confirmation with or without modifications

- 2 (1) The Secretary of State, with or without a local inquiry, may refuse to confirm any byelaw submitted to him by a relevant undertaker for confirmation under this Schedule, or may confirm the byelaw either without or, if the relevant undertaker consents, with modifications.
- (2) The relevant undertaker which has so submitted a byelaw shall, if so directed by the Secretary of State, cause notice of any proposed modifications to be given in accordance with his directions.

Commencement of byelaw

- 3 (1) The Secretary of State may fix the date on which any byelaw confirmed under this Schedule is to come into force.
- (2) If no date is so fixed, the byelaw shall come into force at the end of the period of one month beginning with the date of confirmation.

Availability of confirmed byelaws

- 4 (1) Every byelaw made by a relevant undertaker and confirmed under this Schedule shall be printed and deposited at one or more of the offices of the relevant undertaker, including (if there is one) at an office in the area to which the byelaw applies; and copies of the byelaw shall be available at those offices, at all reasonable times, for inspection by the public free of charge.
- (2) Every person shall be entitled, on application to a relevant undertaker and on payment of such reasonable sum as the relevant undertaker may determine, to be furnished with a copy of any byelaw so deposited by that undertaker.

Revocation of byelaws

- 5 Without prejudice to subsection (5) of section 157 of this Act and subject to paragraph 4(4) of Schedule 2 to the ^{M142}Water Consolidation (Consequential Provisions) Act 1991, if it appears to the Secretary of State that the revocation of a byelaw under that section is necessary or expedient, he may, after—
 - (a) giving notice to the relevant undertaker which made the byelaw;
 - (b) considering any representations or objections made by that undertaker; and
 - (c) if required by that undertaker, holding a local inquiry,
 revoke that byelaw.

Modifications etc. (not altering text)

C364 Sch. 10 para. 5 amended (01.12.1991) by [Water Consolidation \(Consequential Provisions\) Act 1991](#) (c. 60, SIF 130), ss. 2(2), 4(2), **Sch. 2 Pt. I para. 4(4)**.

Status: This version of this Act contains provisions that are prospective.

M142 1991 c. 60.

Proof of byelaws etc.

- 6 The production of a printed copy of a byelaw purporting to be made by a relevant undertaker upon which is indorsed a certificate, purporting to be signed on its behalf, stating—
- (a) that the byelaw was made by that undertaker;
 - (b) that the copy is a true copy of the byelaw;
 - (c) that on a specified date the byelaw was confirmed under this Schedule; and
 - (d) the date, if any, fixed under paragraph 3 above for the coming into operation of the byelaw,
- shall be prima facie evidence of the facts stated in the certificate, and without proof of the handwriting or official position of any person purporting to sign the certificate.

Applications for orders

- 1 (1) Where a water undertaker applies to the Secretary of State for a compulsory works order, it shall—
- (a) submit to the Secretary of State a draft of the order applied for;
 - (b) publish a notice with respect to the application, at least once in each of two successive weeks, in one or more newspapers circulating in each relevant locality;
 - (c) not later than the date on which that notice is first published—
 - (i) serve a copy of the notice on each of the persons specified in relation to the application in sub-paragraph (3) below; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) in the case of a draft order which would authorise the stopping-up or diversion of a footpath or bridleway, cause such a copy, together with a plan showing the general effect of the draft order so far as it relates to the footpath or bridleway, to be displayed in a prominent position at the ends of the part of the path or way to be stopped up or diverted;
- and
- (d) publish a notice in the London Gazette which—
 - (i) states that the draft order has been submitted to the Secretary of State;
 - (ii) names every local authority on whom a notice is required to be served under this paragraph;
 - (iii) specifies a place where a copy of the draft order and of any relevant map or plan may be inspected; and
 - (iv) gives the name of every newspaper in which the notice required by virtue of paragraph (b) above was published and the date of an issue containing the notice.
- (2) The notice required by virtue of sub-paragraph (1)(b) above to be published with respect to an application for an order by a water undertaker shall—
 - (a) state the general effect of the order applied for;
 - (b) in the case of an application made wholly or partly for the purpose of enabling any discharges of water to be made—
 - (i) contain particulars of the proposed discharges, stating the purposes of the discharges and specifying each place of discharge;
 - (ii) specify the places at which the water to be comprised in the proposed discharges is to be taken and the treatment (if any) which the draft order proposes to require the water, or any of it, to receive before being discharged under the order; and
 - (iii) state the effect which, in the opinion of the undertaker, the proposed discharges would have on the flow, level and quality of water in any inland waters or underground strata;
 - (c) specify a place where a copy of the draft order and of any relevant map or plan may be inspected by any person free of charge at all reasonable times during the period of twenty-eight days beginning with the date of the first publication of the notice; and
 - (d) state that any person may, within that period, by notice to the Secretary of State object to the making of the order.
- (3) The persons mentioned in sub-paragraph (1)(c) above in relation to an application for a compulsory works order a draft of which has been submitted to the Secretary of State are—
 - (a) [F1659the Environment Agency][F1660], if the whole or any part of a relevant locality is in England;
 - [F1661](aa) the NRBW, if the whole or any part of a relevant locality is in Wales;
 - (b) every local authority whose area is or includes the whole or any part of a relevant locality;
 - (c) every water undertaker, not being the applicant, whose area is or includes the whole or any part of such a locality;

Status: This version of this Act contains provisions that are prospective.

Supply of copies of draft orders

- 2 A water undertaker applying for a compulsory works order shall, at the request of any person and on payment by that person of such charge (if any) as the undertaker may reasonably require, furnish that person with a copy of the draft order submitted to the Secretary of State under paragraph 1 above and of any relevant map or plan.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Powers on an application

- 3
- (1) On an application for a compulsory works order, the Secretary of State may make the order either in the terms of the draft order submitted to him or, subject to sub-paragraphs (2) and (3) below, in those terms as modified in such manner as he thinks fit, or may refuse to make an order.
 - (2) The Secretary of State shall not make such a modification of a draft order submitted to him by any water undertaker as he considers is likely adversely to affect any persons unless he is satisfied that the undertaker has given and published such additional notices, in such manner, as the Secretary of State may have required.
 - (3) The Secretary of State shall not, unless all interested parties consent, make a compulsory works order so as to confer in relation to any land any powers of compulsory acquisition which would not have been conferred in relation to that land if the order were made in the terms of the draft order submitted to him under paragraph 1 above.
 - (4) Where, on an application by a water undertaker for a compulsory works order, the Secretary of State refuses to make an order, the undertaker shall, as soon as practicable after the refusal, notify the refusal to every person on whom it was, by virtue of paragraph 1(1)(c)(i) above, required to serve a copy of the notice with respect to the application.
 - (5) The duty of a water undertaker under sub-paragraph (4) above shall be enforceable under section 18 of this Act by the Secretary of State.

Consideration of objections etc.

- 4
- (1) If, where an application for a compulsory works order has been made by a water undertaker, any notice of an objection to it is received, before the end of the relevant period, by the Secretary of State from—
 - (a) any person on whom a notice under paragraph 1 or 3 above is required to be served; or
 - (b) from any other person appearing to the Secretary of State to be affected by the order as submitted to him or as proposed to be modified under paragraph 3 above,then, unless the objection is withdrawn, the Secretary of State shall, before making the order, either cause a local inquiry to be held or afford to the objector and to the undertaker an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose.
 - (2) Where any objection received by the Secretary of State as mentioned in sub-paragraph (1) above relates to any powers of compulsory acquisition, the Secretary of State may require the objector to state in writing the grounds of his objection; and if the Secretary of State is satisfied that the objection relates exclusively to matters that can be dealt with in the assessment of compensation, he may disregard the objection for the purposes of that sub-paragraph.
 - (3) In this paragraph “the relevant period”, in relation to an application for any order, means the period ending with whichever is the later of—
 - (a) the end of the period of twenty-eight days beginning with the date of the first publication of the notice published with respect to the application for the purposes of paragraph 1(1)(b) above; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

(b) the end of the period of twenty-five days beginning with the date of the publication in the London Gazette of the notice published for the purposes of the application by virtue of paragraph 1(1)(d) above, together, in the case of an application for an order modifications to which have been proposed by the Secretary of State, with any further periods specified with respect to the modifications in notices under paragraph 3(2) above.

Notice after making of order

- 5 (1) As soon as practicable after a compulsory works order has been made, the undertaker on whose application it is made shall—
- (a) publish a notice of the making of the order, at least once in each of two successive weeks, in one or more newspapers circulating in each relevant locality; and
 - (b) not later than the date on which that notice is first published—
 - (i) serve a copy of the notice on every person on whom that undertaker was, by virtue of paragraph 1(1)(c)(i) above, required to serve a copy of the notice with respect to the application for the order; and
 - (ii) in the case of an order authorising the stopping-up or diversion of a footpath or bridleway, cause such a copy, together with a plan showing the general effect of the order so far as it relates to the footpath or bridleway, to be displayed in a prominent position at the ends of the appropriate part of the path or way.
- (2) The notice required by virtue of sub-paragraph (1)(a) above to be published with respect to a compulsory works order shall—
- (a) state the general effect of the order;
 - (b) in the case of an order made wholly or partly for the purpose of enabling any discharges of water to be made—
 - (i) contain particulars of the discharges, stating the purposes of the discharges and specifying each place of discharge;
 - (ii) specify the places at which the water to be comprised in the discharges is to be taken and the treatment (if any) which the order requires the water, or any of it, to receive before being discharged under the order; and
 - (iii) state the effect which, in the opinion of the applicant undertaker, the discharges would have on the flow, level and quality of water in any inland waters or underground strata;
- and
- (c) specify a place where a copy of the order and of any relevant map or plan may be inspected by any person free of charge at all reasonable times.
- (3) Where a compulsory works order has been made, the undertaker on whose application it was made shall, at the request of any person and on payment by that person of such charge (if any) as that undertaker may reasonably require, furnish that person with a copy of the order and of any relevant map or plan.
- (4) The duties of a water undertaker under this paragraph shall be enforceable under section 18 of this Act by the Secretary of State.
- (5) In this paragraph “relevant locality”, in relation to any compulsory works order, means—

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) any locality which is affected by any provision made by the order for the purpose of enabling any engineering or building operations to be carried out; and
- (b) where provision is made by the order for the purpose of enabling discharges of water to be made, each locality in which the place of any of the discharges is situated or in which there appears to the undertaker which applied for the order to be any inland waters or underground strata the flow, level or quality of water in which may be affected by any of the discharges.

Compulsory acquisition provisions

- 6 (1) Without prejudice to the provisions of Schedule 14 to this Act—
- (a) Part I of the ^{M143}Compulsory Purchase Act 1965;
 - (b) [^{F1663}sections 2A and] 4 and Part III of, and Schedule 3 to, the ^{M144}Acquisition of Land Act 1981; and
 - (c) the enactments for the time being in force with respect to compensation for the compulsory purchase of land,

shall apply in relation to so much of a compulsory works order as confers powers of compulsory acquisition as they apply in relation to a compulsory purchase order made by virtue of section 155 of this Act and, accordingly, shall so apply, where the case so requires, with the modifications made by Schedule 9 to this Act.

- (2) Subject to the provisions of sub-paragraph (6) below, if any person aggrieved by a compulsory works order containing powers of compulsory acquisition, or by a certificate given under the special land provisions in connection with such an order, desires—
- (a) to question the validity of the order, or of any provision of the order, on the grounds that any powers of compulsory acquisition conferred by the order are not authorised by this Act to be so conferred, or that any of the relevant requirements have not been complied with in relation to the order; or
 - (b) to question the validity of the certificate on the grounds that any of the relevant requirements have not been complied with in relation to the certificate,

he may make an application for the purpose to the High Court at any time before the end of the period of six weeks beginning with the date on which notice of the making of the order is first published in accordance with paragraph 5 above or, as the case may be, notice of the giving of the certificate is first published in accordance with the special land provisions.

- (3) On any application under sub-paragraph (2) above with respect to any order or certificate, the High Court—
- (a) may by interim order suspend the operation of the order, or any provision of the order, or of the certificate (either generally or in so far as it affects any property of the applicant to the High Court) until the final determination of the proceedings; and
 - (b) if satisfied—
 - (i) that any powers of compulsory acquisition conferred by the order are not authorised by this Act to be so conferred; or
 - (ii) that the interests of that applicant have been substantially prejudiced by a failure to comply with any of the relevant requirements in relation to the order or the certificate,

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

may quash the order, or any provision of the order, or the certificate (either generally or in so far as it affects any property of that applicant).

- (4) Except as provided by sub-paragraph (2) above, the validity of any such order or certificate as is mentioned in that sub-paragraph shall not, either before or after the order or certificate has been made or given, be questioned in any legal proceedings whatsoever.
- (5) Subject to any order of the High Court under sub-paragraph (3) above, any such order or certificate as is mentioned in sub-paragraph (2) above shall become operative (except, in the case of an order, where it is subject by virtue of the special land provisions to special parliamentary procedure) on the date on which notice of the making or giving of the order or certificate is published as mentioned in the said sub-paragraph (2).
- (6) Where an order such as is mentioned in sub-paragraph (2) above is subject to special parliamentary procedure, sub-paragraphs (2) to (4) of this paragraph—
- (a) shall not apply to the order if it is confirmed by Act of Parliament under section [^{F1664}4 or] 6 of the ^{M145}Statutory Orders (Special Procedure) Act 1945; and
 - (b) in any other case, shall have effect as if the reference in sub-paragraph (2) of this paragraph to the date on which notice of the making of the order is first published in accordance with paragraph 5 above were a reference to the date on which the order becomes operative under the said Act of 1945.
- (7) In this paragraph—
- “the special land provisions” means the provisions, as applied by virtue of sub-paragraph (1) above, of Part III of the ^{M146}Acquisition of Land Act 1981 or, as the case may require, of Part II of Schedule 3 to that Act; and
- “the relevant requirements”, in relation to an order or certificate, means the requirements of this Schedule and such requirements of the special land provisions or of any other enactment as are applicable to that order or certificate by virtue of this paragraph.

Compensation in respect of powers other than acquisition powers

- 8 (1) If the value of any interest in any relevant land is depreciated by the coming into force of so much of any compulsory works order as—
- (a) confers compulsory powers, other than powers of compulsory acquisition, for the purpose of enabling any engineering or building operations to be carried out; and
- (b) grants authority for the carrying out of the operations,
- the person entitled to that interest shall be entitled to compensation from the applicant for the order of an amount equal to the amount of the depreciation.
- (2) Where the person entitled to an interest in any relevant land sustains loss or damage which—
- (a) is attributable to so much of any compulsory works order as—
- (i) confers compulsory powers, other than powers of compulsory acquisition, for the purpose of enabling any engineering or building operations to be carried out; and
- (ii) grants authority for the carrying out of the operations;
- (b) does not consist in depreciation of the value of that interest; and
- (c) is loss or damage for which he would have been entitled to compensation by way of compensation for disturbance, if his interest in that land had been compulsorily acquired under section 155 of this Act in pursuance of a notice to treat served on the date on which the order comes into force,
- he shall be entitled to compensation from the applicant for the order in respect of that loss or damage, in addition to compensation under sub-paragraph (1) above.
- (3) Where any damage to, or injurious affection of, any land which is not relevant land is attributable to so much of any compulsory works order as—
- (a) confers compulsory powers, other than powers of compulsory acquisition, for the purpose of enabling any engineering or building operations to be carried out; and
- (b) grants authority for the carrying out of the operations,
- the applicant for the order shall pay compensation in respect of that damage or injurious affection to every person entitled to an interest in that land.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. - (4) A person who sustains any loss or damage which is attributable to any discharge of water made by a water undertaker in pursuance of a compulsory works order shall be entitled to recover compensation from the undertaker in respect of the loss or damage.
- (5) For the purposes of sub-paragraph (4) above any extra expenditure—
- (a) which it becomes reasonably necessary for any water undertaker or public authority (other than the undertaker making the discharge) to incur for the purpose of properly carrying out any statutory functions; and
 - (b) which is attributable to any such discharge of water as is mentioned in that sub-paragraph,
- shall be deemed to be a loss sustained by the undertaker or public authority and to be so attributable.
- (6) Any question of disputed compensation under this paragraph, shall be referred to and determined by the ^{F1665}Upper Tribunal]; and in relation to the determination of any such compensation the provisions of ^{F1666}section] 4 of the ^{M148}Land Compensation Act 1961 shall apply, subject to any necessary modifications.
- (7) For the purpose of assessing any compensation under this paragraph, so far as that compensation is in respect of loss or damage consisting in depreciation of the value of an interest in land, the rules set out in section 5 of the ^{M149}Land Compensation Act 1961 shall, so far as applicable and subject to any necessary modifications, have effect as they have effect for the purpose of assessing compensation for the compulsory acquisition of an interest in land.
- (8) Where the interest in land in respect of which any compensation falls to be assessed in accordance with sub-paragraph (7) above is subject to a mortgage—
- (a) the compensation shall be assessed as if the interest were not subject to the mortgage;
 - (b) a claim for compensation may be made by any mortgagee of the interest, but without prejudice to the making of a claim by the person entitled to the interest;
 - (c) no such compensation shall be payable in respect of the interest of the mortgagee (as distinct from the interest which is subject to the mortgage); and
 - (d) any such compensation which is payable in respect of the interest which is subject to the mortgage shall be paid to the mortgagee, or, if there is more than one mortgagee, to the first mortgagee, and shall in either case be applied by him as if it were proceeds of sale.
- (9) In this paragraph “relevant land”, in relation to a compulsory works order, means any land which is not land in relation to which powers of compulsory acquisition are conferred by the order but is—
- (a) land where any operations for which authority is granted by the order are to be carried out;
 - (b) land in relation to which compulsory powers are conferred by the order; or
 - (c) land held with any land falling within paragraph (a) or (b) above.

Protection of public undertakings

- 9 The provisions of section 186 of this Act and of Part I of Schedule 13 to this Act shall apply, as they apply in relation to the carrying out of works in exercise of powers under this Act, in relation to the carrying out of works by virtue of an authority granted by so much of any compulsory works order as makes provision other than provision conferring powers of compulsory acquisition.

Interpretation

- 10 In this Schedule—
“bridleway” and “footpath” have the same meanings as in the ^{M150}Highways Act 1980;
“compulsory works order” means an order under section 167 of this Act;
“powers of compulsory acquisition” means any such powers as are mentioned in subsection (4)(a) of section 167 of this Act;

SCHEDULE 12

Section 180.

COMPENSATION ETC. IN RESPECT OF PIPE-LAYING AND OTHER WORKS POWERS

Modifications etc. (not altering text)

C370 Sch. 12 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), **Sch. 1 para. 13(3)** (with reg. 1(1)(c))

Compensation in respect of street works powers

- 1 (1) This paragraph applies, in relation to a relevant undertaker, to the powers conferred on it in relation to streets by sections 158, 161 and 162 of this Act.
- (2) It shall be the duty of every relevant undertaker—
 - (a) to do as little damage as possible in the exercise of the powers to which this paragraph applies; and
 - (b) to pay compensation for any loss caused or damage done in the exercise of those powers.
- (3) Any dispute as to whether compensation should be paid under sub-paragraph (2) above, or as to the amount of any such compensation, shall be referred to the arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the [^{F1668}Director].
- (4) Until the coming into force of Part III of the ^{M151}New Roads and Street Works Act 1991, a payment of compensation under this paragraph shall be treated for the purposes of section 32 of the ^{M152}Public Utilities Street Works Act 1950 (provisions against duplication of compensation) as made under an enactment passed before that Act of 1950; but nothing in this sub-paragraph shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing Part III of that Act into force on different days for different purposes (including the purposes of this paragraph).

land, the person entitled to that interest shall be entitled to compensation from the undertaker of an amount equal to the amount of the depreciation.

- (2) Where the person entitled to an interest in any relevant land sustains loss or damage which—
- (a) is attributable to the exercise by any relevant undertaker of any power to carry out pipe-laying works on private land;
 - (b) does not consist in depreciation of the value of that interest; and
 - (c) is loss or damage for which he would have been entitled to compensation by way of compensation for disturbance, if his interest in that land had been compulsorily acquired under section 155 of this Act,
- he shall be entitled to compensation from the undertaker in respect of that loss or damage, in addition to compensation under sub-paragraph (1) above.
- (3) Where any damage to, or injurious affection of, any land which is not relevant land is attributable to the exercise by any relevant undertaker, of any power to carry out pipe-laying works on private land, the undertaker shall pay compensation in respect of that damage or injurious affection to every person entitled to an interest in that land.
- (4) The Secretary of State may by regulations make provision requiring a relevant undertaker, where it is proposing or has begun, in a prescribed case, to exercise any power to carry out pipe-laying works on private land, to make advance payments on account of compensation that will become payable in respect of the exercise of that power.
- (5) In this paragraph “relevant land”, in relation to any exercise of a power to carry out pipe-laying works on private land, means the land where the power is exercised or land held with that land.
- (6) In this paragraph the references to a power to carry out pipe-laying works on private land are references to any of the powers conferred by virtue of sections 159, 161(2) and 163 of this Act.

Assessment of compensation under paragraph 2

- 3 (1) Any question of disputed compensation under paragraph 2 above shall be referred to and determined by the [^{F1669}Upper Tribunal]; and in relation to the determination of any such compensation the provisions of [^{F1670}section] 4 of the ^{M153}Land Compensation Act 1961 shall apply, subject to any necessary modifications.
- (2) For the purpose of assessing any compensation under paragraph 2 above, so far as that compensation is in respect of loss or damage consisting in depreciation of the value of an interest in land, the rules set out in section 5 of the Land Compensation Act 1961 shall, so far as applicable and subject to any necessary modifications, have effect as they have effect for the purpose of assessing compensation for the compulsory acquisition of an interest in land.
- (3) Where the interest in land in respect of which any compensation falls to be assessed in accordance with sub-paragraph (2) above is subject to a mortgage—
- (a) the compensation shall be assessed as if the interest were not subject to the mortgage;
 - (b) a claim for compensation may be made by any mortgagee of the interest, but without prejudice to the making of a claim by the person entitled to the interest;

Status: This version of this Act contains provisions that are prospective.

- (c) no such compensation shall be payable in respect of the interest of the mortgagee (as distinct from the interest which is subject to the mortgage); and
 - (d) any such compensation which is payable in respect of the interest which is subject to the mortgage shall be paid to the mortgagee or, if there is more than one mortgagee, to the first mortgagee, and shall in either case be applied by him as if it were proceeds of sale.
- (4) Where, apart from this sub-paragraph, any person entitled to an interest in any land would be entitled under paragraph 2 above to an amount of compensation in respect of any works, there shall be deducted from that amount an amount equal to the amount by which the carrying out of the works has enhanced the value of any other land which—
- (a) is contiguous or adjacent to that land; and
 - (b) is land to an interest in which that person is entitled in the same capacity.

arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.

SCHEDULE 13

Section 183.

PROTECTIVE PROVISIONS IN RESPECT OF CERTAIN UNDERTAKINGS

Modifications etc. (not altering text)

C371 Sch. 13 applied (with modifications) (28.6.2013) by [The Water Industry \(Specified Infrastructure Projects\) \(English Undertakers\) Regulations 2013 \(S.I. 2013/1582\)](#), reg. 1(1)(b), **Sch. 1 para. 13(7)** (with reg. 1(1)(c))

PART I

PROVISIONS APPLYING GENERALLY

General provisions protecting undertakings

- 1 (1) Nothing in this Act conferring power on a relevant undertaker to carry out any works shall confer power to do anything, except with the consent of the persons carrying on an undertaking protected by this paragraph, which, whether directly or indirectly, so interferes or will so interfere—
 - (a) with works or property vested in or under the control of the persons carrying on that undertaking, in their capacity as such; or
 - (b) with the use of any such works or property,
 as to affect injuriously those works or that property or the carrying on of that undertaking.
- (2) Without prejudice to the construction of sub-paragraph (1) above for the purposes of its application in relation to the other provisions of this Act, that sub-paragraph shall have effect in its application in relation to the relevant sewerage provisions as if any use of, injury to or interference with any sluices, floodgates, sewers, groynes, sea defences or other works which are vested in or under the control of ^[F1676]the Environment Agency^[F1677] or the NRBW] or an internal drainage board were such an interference with works or property vested in or under the control of ^[F1676]the Environment Agency^[F1677] or the NRBW] or that board as to affect injuriously the works or property or the carrying on of the undertaking of ^[F1676]the Environment Agency^[F1677] or the NRBW] or of that board.
- (3) A consent for the purposes of sub-paragraph (1) above may be given subject to reasonable conditions but shall not be unreasonably withheld.
- (4) Subject to the following provisions of this Schedule, any dispute—
 - (a) as to whether anything done or proposed to be done interferes or will interfere as mentioned in sub-paragraph (1) above;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: *Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (b) as to whether any consent for the purposes of this paragraph is being unreasonably withheld; or
- (c) as to whether any condition subject to which any such consent has been given was reasonable,

shall be referred to the arbitration of a single arbitrator to be appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.

- (5) The following are the undertakings protected by this paragraph, that is to say-
- (a) the undertakings of [^{F1676}the Environment Agency], [^{F1678}the NRBW,] the Civil Aviation Authority, [^{F1679}the Coal Authority] and [^{F1680}a universal service provider (so far as it is the provider’s undertaking in relation to the provision of a universal postal service)];
 - (b) the undertaking of any relevant undertaker;
 - [^{F1681}(c) any undertaking consisting in the provision of an electronic communications network;]
 - (d) any airport to which Part V of the ^{M154}Airports Act 1986 applies;
 - (e) the undertaking of any public gas supplier within the meaning of Part I of the ^{M155}Gas Act 1986;
 - (f) the undertaking of any person authorised by a licence under Part I of the ^{M156}Electricity Act 1989 to generate, [^{F1682}supply or participate in the transmission of] electricity;
 - (g) the undertaking of any navigation, harbour or conservancy authority or of any internal drainage board;
 - (h) the undertaking of any railway undertakers;
 - (i) any public utility undertaking carried on by a local authority under any Act or under any order having the force of an Act.
 - ^{F1683}[(j) the undertaking of any licensed operator, within the meaning of the Coal Industry Act 1994;]
 - [^{F1684}(k) the undertaking of a person who holds a licence under Chapter I of Part I of the Transport Act 2000 (air traffic services) to the extent that it is the person’s undertaking as licence holder.]

[^{F1685}(5A) In sub-paragraph (5)(a) above “universal service provider” has the same meaning as in [^{F1686}Part 3 of the Postal Services Act 2011]; and the reference to the provision of a universal postal service shall be construed in accordance with [^{F1687}that Part].]

- (6) For the purposes of this paragraph any reference in this paragraph, in relation to any such airport as is mentioned in sub-paragraph (5)(d) above, to the persons carrying on the undertaking is a reference to the airport operator.

Protection for statutory powers and jurisdiction

- 2 Nothing in any provision of this Act conferring power on a relevant undertaker to carry out any works shall confer power to do anything which prejudices the exercise of any statutory power, authority or jurisdiction from time to time vested in or exercisable by any persons carrying on an undertaking protected by paragraph 1 above.

Special protection for certain undertakings in respect of street works

- 3 (1) Subject to the following provisions of this paragraph and without prejudice to the other provisions of this Schedule, the powers under the street works provisions to break up or open a street shall not be exercisable where the street, not being a highway maintainable at public expense (within the meaning of the^{M157}Highways Act 1980)—
- (a) is under the control or management of, or is maintainable by, railway undertakers or a navigation authority; or
 - (b) forms part of a level crossing belonging to any such undertakers or to such an authority or to any other person,
- except with the consent of the undertakers or authority or, as the case may be, of the person to whom the level crossing belongs.
- (2) Sub-paragraph (1) above shall not apply to any exercise of the powers conferred by the street works provisions for the carrying out of emergency works, within the meaning of Part III of the^{M158}New Roads and Street Works Act 1991.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) A consent given for the purposes of sub-paragraph (1) above may be made subject to such reasonable conditions as may be specified by the person giving it but shall not be unreasonably withheld.
- (4) Any dispute—
- (a) as to whether a consent for the purposes of sub-paragraph (1) above should be given or withheld; or
 - (b) as to whether the conditions to which any such consent is made subject are reasonable,
- shall be referred to the arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (5) If any relevant undertaker contravenes, without reasonable excuse, the requirements of sub-paragraph (1) above, it shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (6) The restrictions contained in paragraphs (1) to (5) of section 32 of the ^{M159}Tramways Act 1870 (protection of tramways) shall apply in relation to any exercise of a power conferred by the street works provisions—
- (a) as they apply in relation to the powers mentioned in that section; and
 - (b) as if references in that section to a tramway included references to a trolley vehicle system.
- (7) In this paragraph “the street works provisions” means so much of sections 158, 161 and 162 of this Act as relates to powers exercisable in relation to streets.
- (8) Until the coming into force of section 52 of the ^{M160}New Roads and Street Works Act 1991, sub-paragraph (2) above shall have effect as if the reference to Part III of that Act were a reference to the ^{M161}Public Utilities Street Works Act 1950; but nothing in this sub-paragraph shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing that section 52 into force on different days for different purposes (including the purposes of this paragraph).

PART II

FURTHER PROTECTIVE PROVISIONS IN RESPECT OF SEWERAGE POWERS

Protection for dock undertakers

- 5 (1) Subject to the provisions of this paragraph, nothing in the relevant sewerage provisions shall authorise a sewerage undertaker, without the consent of the dock undertakers concerned—
- (a) to interfere with any river, canal, dock, harbour, basin, lock or reservoir so as injuriously to affect navigation thereon or the use thereof or the access thereto, or to interfere with any towing path, so as to interrupt the traffic thereon;
 - (b) to interfere with any bridges crossing any river, canal, dock, harbour or basin;
 - (c) to carry out any works in, across or under any dock, harbour, basin, wharf, quay or lock, or any land which belongs to dock undertakers and is held or used by them for the purposes of their undertaking;
 - (d) to carry out any works which will interfere with the improvement of, or the access to, any river, canal, dock, harbour, basin, lock, reservoir, or towing path, or with any works appurtenant thereto or any land necessary for the enjoyment or improvement thereof.
- (2) For the purposes of this paragraph dock undertakers shall be deemed to be concerned with any river, canal, dock, harbour, basin, lock, reservoir, towing path, wharf, quay or land if—
- (a) it belongs to them and forms part of their undertaking; or

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: *Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (b) they have statutory rights of navigating on or using it or of demanding tolls or dues in respect of navigation thereon or the use thereof.
- (3) A consent under this paragraph shall not be unreasonably withheld.
- (4) Any dispute as to whether or not consent under this paragraph is unreasonably withheld shall be referred, if either party so require, to the arbitration of a single arbitrator appointed by agreement between the parties or, in default of agreement, by the President of the Institution of Civil Engineers.
- (5) Upon an arbitration under this paragraph, the arbitrator shall determine—
- (a) whether any works which the sewerage undertaker proposes to carry out are such works as under this paragraph the undertaker is not entitled to carry out without the consent of any dock undertakers;
 - (b) if they are such works, whether the injury, if any, to the undertakers will be of such a nature as to admit of being fully compensated by money; and
 - (c) if the works are of such a nature, the conditions subject to which the sewerage undertaker may carry out the works, including the amount of the compensation (if any) to be paid by the sewerage undertaker to the dock undertakers.
- (6) The sewerage undertaker in question shall not proceed to carry out any proposed works if, on an arbitration under this paragraph, the arbitrator determines—
- (a) that the proposed works are such works as the sewerage undertaker is not entitled to carry out without the consent of the dock undertakers; and
 - (b) that the works would cause injury to the dock undertakers of such a nature as not to admit of being fully compensated by money,
- but, in any other case, the sewerage undertaker may carry out the works subject to compliance with such conditions, including the payment of such compensation, as the arbitrator may have determined.
- (7) Nothing in this paragraph shall be construed as limiting the powers of a sewerage undertaker under this Act in respect of the opening and the breaking up of streets and bridges for the purpose of constructing, laying and maintaining sewers, drains and pipes.

Protection for airports, railways etc.

- 6 (1) Subject to the provisions of this paragraph, nothing in the relevant sewerage provisions shall authorise a sewerage undertaker, without the consent of the Civil Aviation Authority or, as the case may be, of the airport operator or railway undertakers concerned, to carry out any works along, across or under—
- (a) any property of the Civil Aviation Authority;
 - (b) an airport to which Part V of the ^{M162}Airports Act 1986 applies; or
 - (c) any railway of any railway undertakers.
- (2) Sub-paragraphs (3) to (7) of paragraph 5 above shall apply for the purposes of this paragraph as they apply for the purposes of sub-paragraph (1) of that paragraph but as if references to the dock undertakers were references, as the case may require, to the Civil Aviation Authority, to the relevant airport operator or to the railway undertakers.

Status: This version of this Act contains provisions that are prospective.

M162 1986 c. 31.

Saving for Part I and other powers

- 7 The provisions of this Part of this Schedule are without prejudice to the provisions of Part I of this Schedule or to any power conferred on a sewerage undertaker otherwise than by the relevant sewerage provisions.

SCHEDULE 14

Section 188.

MINERAL RIGHTS

Acquisition of mineral rights

- 1 (1) This paragraph applies in each of the following cases, that is to say—
- (a) where a relevant undertaker acquires any land (whether compulsorily in exercise of any power conferred by or under this Act or otherwise); and
 - (b) where a relevant undertaker carries out any works in relation to any land for the purposes of, or in connection with, the carrying out of any of its functions.
- (2) Subject to sub-paragraph (3) below, a relevant undertaker shall not, by virtue only of its acquisition of the land or the carrying out of the works, become entitled to any mines or minerals lying under the land; and, accordingly, any such mines or minerals shall be deemed to be excepted from any instrument by virtue of which the land vests in the relevant undertaker unless express provision to the contrary is contained—
- (a) where the land vests in the relevant undertaker by virtue of a conveyance, in the conveyance; or
 - (b) where the land is acquired by the relevant undertaker in pursuance of any power of compulsory acquisition conferred by or under this Act, in the order authorising the acquisition.
- (3) A relevant undertaker shall be entitled to such parts of any mines or minerals that lie under the land as it may be necessary for it to dig, carry away or use in carrying out any works for the purposes of constructing, making, erecting or laying any part of its undertaking.

Notice required for the working of underlying mines

- 2 (1) If the owner of any mines or minerals underlying any part of a relevant undertaker's undertaking proposes to work them, he shall, not less than thirty days before the commencement of working, serve notice of his intention to do so on the relevant undertaker.
- (2) On receipt of a notice under sub-paragraph (1) above the relevant undertaker may cause the mines or minerals to be inspected by a person designated by it for the purpose.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (3) Subject to sub-paragraph (5) and paragraph 3 below, if, where notice has been served under this paragraph, the relevant undertaker—
 - (a) considers that the working of the underlying mines or minerals is likely to damage any part of its undertaking;
 - (b) is willing to compensate the owner of the mines or minerals for the restriction imposed by virtue of this sub-paragraph; and
 - (c) serves notice to that effect on the owner of the mines or minerals before the end of the period of thirty days mentioned in sub-paragraph (1) above,the owner shall not work the mines or minerals except to such extent as may be determined by the relevant undertaker, and the relevant undertaker shall so compensate the owner.
- (4) Any dispute as to the amount of any compensation payable by virtue of sub-paragraph (3) above shall be referred to and determined by the [^{F1693}Upper Tribunal].
- (5) If before the end of the period of thirty days mentioned in sub-paragraph (1) above, no notice has been served under sub-paragraph (3)(c) above by the relevant undertaker, the entitlement of the owner of the mines and minerals to work them shall be an entitlement to work them by proper methods and in the usual manner of working such mines or minerals in the district in question.
- (6) If any damage to the undertaking of a relevant undertaker is caused by the working otherwise than as authorised by this paragraph of any mines or minerals underlying any part of its undertaking—
 - (a) the owner of the mines or minerals shall, at his own expense, forthwith repair the damage; and
 - (b) the relevant undertaker may, without waiting for the owner to perform his duty, repair the damage and may recover the expenses reasonably incurred by it in doing so from the owner.

Textual Amendments

F1693 Words in [Sch. 12 para. 2\(4\)](#) substituted (1.6.2009) by The Transfer of Tribunal Functions (Lands Tribunal and Miscellaneous Amendments) Order ([S.I. 2009/1307](#)), art. 5(1)(2), {Sch. 1 para. 225} (with Sch. 5)

Mining communications

- 3 (1) If the working of any mines or minerals is prevented by reason of any of the preceding provisions of this Schedule, the owner of the mines or minerals may cut and make such communication works through the mines or minerals, or the strata in which they are situated, as are required for the ventilation, drainage and working of mines or minerals which are not underlying any part of the undertaking of the relevant undertaker in question.
- (2) Communication works cut or made under this paragraph—
 - (a) shall not, in a case where—
 - (i) the part of the undertaking in question was constructed, made, erected or laid in pursuance of an order made under any enactment or is situated on land acquired by the relevant undertaker in pursuance of any powers of compulsory acquisition; and

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (ii) the order authorising the works or acquisition designates dimensions or sections for the communication works, exceed those dimensions or fail to conform to those sections; and
 - (b) in any other case, shall not be more than 2.44 metres high or more than 2.44 metres wide.
- (3) Communication works cut or made under this paragraph shall not be cut or made on the land where the part of the undertaking is situated so as to cause damage to that part of the undertaking.
- (4) Where works carried out under this paragraph by the owner of any mines or minerals cause loss or damage to the owner or occupier of land lying over the mines or minerals, the relevant undertaker shall pay full compensation to him for the loss or damage.
- (5) Sub-paragraph (4) above shall not apply where the person sustaining the loss or damage is the owner of the mines.
- (6) In this paragraph “communication works” means airways, headways, gateways or water levels.

Compensation relating to severance

- 4 (1) Where mines or minerals underlying any part of a relevant undertaker’s undertaking are situated so as, on two or more sides of that land, to extend beyond the land on which that part of the undertaking is situated, the relevant undertaker shall from time to time pay to the owner of the mines or minerals (in addition to any compensation under paragraph 2 above) any expenses and losses incurred by him in consequence of—
- (a) the severance by the undertaking of the land lying over the mines;
 - (b) the interruption of continuous working of the mines in consequence of paragraph 2(3) above;
 - (c) the mines being so worked in accordance with restrictions imposed by virtue of this Act or any order made under this Act,
- and shall pay for any minerals not purchased by the relevant undertaker which cannot be got or won by reason of the part of the undertaking in question being situated where it is or by reason of the requirement to avoid damage to any part of the relevant undertaker’s undertaking.
- (2) Any dispute as to whether any sum should be paid under this paragraph or as to the amount payable shall be referred to the arbitration of a single arbitrator appointed by agreement between the relevant undertaker and the owner of the mines or minerals or, in default of agreement, by the Secretary of State.

Powers of entry

- 5 (1) Any person designated in writing for the purpose by a relevant undertaker may, for any purpose specified in sub-paragraph (2) below—
- (a) enter on any land in which the mines or minerals are, or are thought to be, being worked, and which is in or near to the land where any part of that undertaker’s undertaking is situated; and
 - (b) enter the mines and any works connected with the mines.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) The purposes mentioned in sub-paragraph (1) above are—
- (a) carrying out any inspection under paragraph 2(2) above;
 - (b) ascertaining whether any mines or minerals have been worked so as to damage the undertaking of the relevant undertaker in question; and
 - (c) carrying out any works and taking any other steps which the relevant undertaker in question is authorised to carry out or take under paragraph 2(6) above.
- (3) A person authorised to enter any premises under this paragraph may—
- (a) make use of any equipment belonging to the owner of the mines or minerals in question; and
 - (b) use all necessary means for discovering the distance from any part of the undertaking of the relevant undertaker to the parts of the mines or the minerals which are, or are about to be, worked.
- (4) Part II of Schedule 6 to this Act shall apply to the rights and other powers conferred by this paragraph.

No exemption for injury to mines and minerals

- 6 Nothing in any provision of this Act or of any order made under this Act shall be construed as exempting a relevant undertaker from any liability to which it would, apart from that provision, have been subject in respect of any damage to any mines or minerals underlying any part of its undertaking or in respect of any loss sustained in relation to any such mines or minerals by a person having an interest therein.

Interpretation

- 7 (1) In this Schedule—
- “conveyance” has the same meaning as in the ^{M163}Law of Property Act 1925;
 - “designated distance”, in relation to any part of a relevant undertaker’s undertaking, means, subject to sub-paragraph (6) below, thirty-seven metres;
 - “mines” means mines of coal, ironstone, slate or other minerals;
 - “owner”, in relation to mines and minerals, includes a lessee or occupier; and
 - “underlying”, in relation to any part of the undertaking of a relevant undertaker, means lying under, or within the designated distance from, that part of that undertaking.
- (2) For the purposes of this Schedule the undertaking of a relevant undertaker shall be taken to consist of so much of any of the following as is for the time being vested in or held by that undertaker for the purposes of, or in connection with, the carrying out of any of its functions, that is to say—
- (a) any buildings, reservoirs, wells, boreholes or other structures; and
 - (b) any pipes or other underground works particulars of which fall or would fall to be incorporated in any records kept under section 198 or 199 of this Act.
- (3) References in this Schedule to the working of any mines or minerals include references to the draining of mines and to the winning or getting of minerals.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (4) For the purposes of this Schedule land shall be treated as acquired by a relevant undertaker in pursuance of powers of compulsory acquisition if it—
- (a) was so acquired by a water authority established under section 2 of the ^{M164}Water Act 1973 or any predecessor of such a water authority or by a predecessor of a statutory water company; and
 - (b) is now vested in that undertaker in accordance with a scheme under Schedule 2 to the ^{M165}Water Act 1989 or Schedule 2 to this Act or otherwise.

(5) In relation—

- (a) to any land treated by virtue of sub-paragraph (4) above as acquired in pursuance of powers of compulsory acquisition; or
- (b) to any land acquired by a statutory water company before 1st September 1989 in pursuance of any such powers,

references in this Schedule to the order authorising the acquisition include references to any local statutory provision which immediately before 1st September 1989 had effect in relation to that land for the purposes of any provisions corresponding to the provisions of this Schedule.

(6) For the purposes of this Schedule where—

- (a) any part of a relevant undertaker's undertaking was constructed, made, erected or laid in pursuance of an order made under any enactment or is situated on land acquired by the relevant undertaker in pursuance of any powers of compulsory acquisition; and
- (b) the order authorising the works or acquisition designates any distance for the purposes of any enactment relating to mines or minerals underlying that part of the undertaking,

then for the purposes of this Schedule that distance shall be the designated distance in relation to that part of the undertaking, instead of the distance specified in sub-paragraph (1) above.

F1709 Words in Sch. 15 Pt. 2 repealed (26.5.2008) by The Consumer Protection from Unfair Trading Regulations (S.I. 2008/1277), reg. 30(1)(3), Sch. 2 para. 49(a), {Sch. 4 Pt. 1} (with reg. 28(2)(3))

[^{F1710}Any subordinate legislation made for the purpose of securing compliance with Directive 2005/29/EC of the European Parliament and of the Council of 11 May 2005 concerning unfair business-to-consumer commercial practices in the internal market.

Textual Amendments

F1710 Words in Sch. 15 Pt. 2 inserted (26.5.2008) by The Consumer Protection from Unfair Trading Regulations (S.I. 2008/1277), reg. 30(1), {Sch. 2 para. 49(b)} (with reg. 28(2)(3))

Any subordinate legislation made for the purpose of securing compliance with Directive 2006/114/EC of the European Parliament and of the Council of 12 December 2006 concerning misleading and comparative advertising.]

[^{F1711}Parts 3 and 4 of the Enterprise and Regulatory Reform Act 2013.]

Textual Amendments

F1711 Words in Sch. 15 Pt. 2 inserted (1.4.2014) by The Enterprise and Regulatory Reform Act 2013 (Competition) (Consequential, Transitional and Saving Provisions) Order 2014 (S.I. 2014/892), art. 1(1), Sch. 1 para. 94(b) (with art. 3)

[^{F1712}SCHEDULE 16

PROCEDURE ON APPEALS UNDER SECTION 207A

Textual Amendments

F1712 Sch. 16 inserted (1.4.2016) by Water Act 2014 (c. 21), s. 94(3), Sch. 6; S.I. 2016/465, art. 2(1) (with Sch. 2) (as amended (22.3.2017) by S.I. 2017/462, art. 16)

Regulations as to procedure

- 1 The Secretary of State may by regulations make provision about the procedure applying to appeals under section 207A.

Particular provision

- 2 Regulations under this Schedule may in particular make provision about—
 - (a) making an application for permission to bring an appeal;
 - (b) imposing conditions on the granting of permission to appeal (including conditions requiring an appeal to be considered together with other appeals, whether relating to the same revision or the same code or not);

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) the persons who may be party to an appeal;
- (d) making an application for permission to be made party to an appeal;
- (e) imposing conditions on the granting of permission to become party to an appeal;
- (f) enabling a member of the CMA to make decisions as to the matters referred to in paragraphs (a), (b), (d) and (e);
- (g) enabling a member of the CMA to direct, pending the determination of the appeal, that the code in question—
 - (i) is to have effect without the revision, or
 - (ii) is to have effect with the revision but with modifications specified by the direction;
- (h) the number of persons in a group constituted to hear an appeal;
- (i) the making of a decision by the group;
- (j) the participation of the Authority in the appeal (including provision as to the making of representations and observations by the Authority otherwise than in connection with the consideration of the appeal);
- (k) the imposing of time limits (including provision for time limits to be waived in certain cases by a member of the CMA);
- (l) orders for costs;
- (m) the recovery of the CMA's costs.

Consideration and determination of appeals

- 3 (1) Regulations under this Schedule may make provision about—
 - (a) the consideration and determination of the appeal;
 - (b) giving effect to the determination.
- (2) Provision under sub-paragraph (1)(a) may include in particular—
 - (a) provision for disregarding, when determining an appeal, matters not raised as required by the regulations;
 - (b) provision as to the time within which an appeal is to be determined.

Evidence

- 4 (1) Regulations under this Schedule may make provision about—
 - (a) requiring the production of documents;
 - (b) requiring persons to attend an oral hearing;
 - (c) requiring persons attending an oral hearing—
 - (i) to give evidence at the hearing;
 - (ii) to make representations and observations;
 - (d) requiring persons—
 - (i) to produce a written statement;
 - (ii) to verify the statement by a statement of truth.
- (2) No person is to be compelled under the regulations—
 - (a) to produce a document that the person could not be compelled to produce in civil proceedings in the High Court;
 - (b) to give evidence which the person could not be compelled to give in civil proceedings in the High Court;

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) to produce a written statement with respect to a matter about which the person could not be compelled to give evidence in civil proceedings in the High Court.
- (3) The regulations may provide for a notice requiring the production of documents, attendance of a person, or the production of a written statement to be issued by any member of the CMA.
- 5 (1) Regulations under this Schedule may provide for penalties to be imposed where—
 - (a) a person fails without reasonable excuse to comply with a requirement imposed in accordance with regulations under paragraph 4;
 - (b) having been required to produce a document in accordance with paragraph 4, a person wilfully alters, suppresses or destroys the document;
 - (c) having been required to produce a written statement in accordance with paragraph 4, a person makes without reasonable excuse a false statement in the written statement produced;
 - (d) having been required by appeal rules to verify information with a statement of truth, a person provides without reasonable excuse information that is false in a material particular.
- (2) The regulations may provide for conduct falling within sub-paragraph (1)(a), (c) or (d) to be punished by the High Court as if the person had been guilty of contempt.
- (3) The regulations may provide that, where a body corporate may be punished for contempt of court, the High Court has power to punish for contempt of court any director or other officer of the body (instead of or as well as the body).
- (4) The regulations may provide for conduct falling within sub-paragraph (1)(b) to be an offence triable either summarily or on indictment.
- (5) The regulations may provide for such an offence to be punishable—
 - (a) on summary conviction, by a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, by imprisonment for a term not exceeding two years or by a fine, or by both.

Appeal rules

- 6 (1) The CMA may make rules regulating the conduct and disposal of appeals.
- (2) The rules may include provision supplementing regulations made under this Schedule; and that provision may, in particular, impose time limits or other restrictions on—
 - (a) the taking of evidence at an oral hearing;
 - (b) the making of representations or observations at such a hearing.
- (3) The CMA must publish rules made under this paragraph in such manner as it considers appropriate for the purpose of bringing them to the attention of those likely to be affected by them.
- (4) Before making rules under this paragraph, the CMA must consult such persons as it considers appropriate.
- (5) Rules under this paragraph may make different provision for different cases.

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: *Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

Interpretation

- 7 In this Schedule—
- “appeal” means an appeal under section 207A;
 - “appeal rules” means rules under paragraph 6;
 - “statement of truth” means a statement that the person producing the document believes the facts stated in the document to be true.]

TABLE OF DERIVATIONS

Notes:

1. The following abbreviations are used in this Table:—

1936 =	The Public Health Act 1936 (c. 49)
1937 =	The Public Health (Drainage of Trade Premises) Act 1937 (c. 40)
1945 =	The Water Act 1945 (c. 42)
1948 =	The Water Act 1948 (c. 22)
1961(F) =	The Factories Act 1961 (c. 34)
1961 =	The Public Health Act 1961 (c. 64)
1963(L) =	The London Government Act 1963 (c. 33)
1973 =	The Water Act 1973 (c. 37)
1974 =	The Control of Pollution Act 1974 (c. 40)
1977 =	The Criminal Law Act 1977 (c. 45)
1980 =	The Highways Act 1980 (c. 66)
1981 =	The Water Act 1981 (c. 12)
1981(SC) =	[^{F1713} Senior Courts Act 1981]
1982(CA) =	The Civil Aviation Act 1982 (c. 16)
1982(CJA) =	The Criminal Justice Act 1982 (c. 43)
1985(LG) =	The Local Government Act 1985 (c. 51)
1985 =	The Water (Fluoridation) Act 1985 (c. 63)
1986(AA) =	The Airports Act 1986 (c. 31)
1986(GA) =	The Gas Act 1986 (c. 44)
1989 =	The Water Act 1989 (c. 15)
1989(EA) =	The Electricity Act 1989 (c. 29)
1990(FS) =	The Food Safety Act 1990 (c. 16)
1990(EP) =	The Environmental Protection Act 1990 (c. 43)

Status: This version of this Act contains provisions that are prospective.

Changes to legislation: Water Industry Act 1991 is up to date with all changes known to be in force on or before 09 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

1991(NR) =	The New Roads and Street Works Act 1991 (c. 22)
R: (followed by a number) =	The recommendation so numbered as set out in the Appendix to the Report of the Law Commission (Cm. 1483).

Textual Amendments

F1713 Table of Derivations: for the words "Supreme Court Act 1981" wherever they occur there is substituted (1.10.2009) the words "Senior Courts Act 1981" by virtue of [Constitutional Reform Act 2005 \(c. 4\)](#), ss. 59, 148(1), [Sch. 11 para. 1\(2\)](#); S.I. 2009/1604, [art. 2](#)

2. The functions originally vested in the Minister of Health under 1936 and 1937 have become vested in the Secretary of State as a result of the following transfer of functions orders ("TFOs"): SI 1951/142; SI 1951/1900; SI 1965/319; 1970/1681. Other TFOs, where applicable in relation to a provision re-enacted in this Bill, are specified at the appropriate place in column 2 of this Table.

3. General provisions contained in section 32 of the Magistrates' Courts Act 1980 (c. 43) and section 46 of the Criminal Justice Act 1982 (c. 48) provide, respectively, for the maximum fine on summary conviction of an either way offence to be the statutory maximum and for a reference to the amount of the maximum fine to which a person is liable in respect of a summary offence to become a reference to a level on the standard scale. Where the effect of one of these enactments is consolidated it is not referred to separately in column 2 of this Table.

Subject: Credible Scenario and Secondary Containment

Hello Maria,

Following on from the meeting that Thames Water requested in relation to Maple Lodge we would like to clarify our position on 'credible scenarios' for use in containment proposals.

Guidance Best Available Techniques (BAT) Reference Document for Waste Treatment (https://eippcb.jrc.ec.europa.eu/sites/default/files/2019-11/JRC113018_WT_Bref.pdf) BAT conclusion 19 requires that "in order to optimise water consumption, to reduce the volume of waste water generated and to prevent or, where that is not practicable, to reduce emissions to soil and water, BAT is to use an appropriate combination of the techniques given below.". Technique C identifies Impermeable surfacing, and technique D identifies techniques to reduce the likelihood and impact of overflows and failures from tanks and vessels which includes providing suitable secondary containment for tanks containing liquids.

Section 4.2.1 of CIRIA 736 is clear that;

"Where two or more tanks are installed within the same bund, the recommended capacity of the bund is the greater of:

- 1) 110 per cent of the capacity of the largest tank within the bund*
- 2) 25 per cent of the total capacity of all the tanks within the bund, except where tanks are hydraulically linked in which case they should be treated as if they were a single tank"*

We note that CIRIA 736 provides that the total bund volume may be "based on risk assessment based on credible scenario for multi tank installation" which you raised at our meeting, and we would like to clarify our position on the use of 'credible scenarios'.

BAT is clear that you must provide secondary containment which we would expect to include impermeable surfacing and application of the 110% or 25% rule in line with CIRIA 736. Any deviation to this would be classed as an 'alternative approach' to BAT which you would need to demonstrate with detailed evidence in the determination of your application (not through an IC) that the 'alternative approach' proposed would provide the same level of environmental protection at the relevant BAT technique.

We would also highlight at this point that cost would not be a factor for an alternative approach as BAT is considered to be affordable across the industry sector as a whole for both newly built plant and a "typical" existing plant. A cost benefit analysis is only relevant in cases which qualify for a derogation from BAT and the derogation process only applies to associated emission levels (AELs) which are not applicable to containment as the relevant BAT technique requires that, "in order to optimise water consumption, to reduce the volume of waste water generated and to prevent or, where that is not practicable, to reduce emissions to soil and water, BAT is to use an appropriate combination of the techniques." Any deviation from identified BAT would require evidence to demonstrate either that:

- Any alternative technique would provide at least the same level of environmental protection that is equivalent to the BAT.
- There are specific and demonstrable reasons why the BAT should not apply in this case.
- There are specific and demonstrable reasons why a lower standard of environmental protection should be permitted.

In relation to evidence to be provided to support a 'credible scenario' / 'alternative BAT approach' we would expect the provision of your final containment proposal as part of your permit application to be provided with as a minimum, and information to be provided as per below.

- A written 'secondary containment improvement and implementation plan' including final detailed designs, specifications and an implementation schedule for the proposed secondary containment systems. The finalised designs and specifications must be produced by appropriate competent individuals (qualified civil or structural engineer), in accordance with the risk assessment methodology detailed within CIRIA C736 (2014) guidance. The plan shall include but not be limited to the following components:
 - An updated BAT assessment with specific regard to BAT 19 of the Waste Treatment BREF.
 - An assessment of the suitability of the proposals for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure.
 - Finalised designs and specifications of the proposed secondary containment proposals completed by appropriate competent individuals.
 - A program of works with timescales for the commissioning of the proposed secondary containment systems to comply with CIRIA C736 (2014) guidance, or equivalent.
 - An updated site and infrastructure plan.
 - A preventative maintenance and inspection regime.

- If the plan proposes containment volumes that do not comply with the requirements of section 4.2.1 of CIRIA C736 (2014) guidance, or an alternative approach to BAT, then the plan shall also include a written quantitative risk assessment undertaken by appropriate competent individuals (qualified civil or structural engineer) to demonstrate that the containment volume proposed will provide sufficient secondary containment in accordance with the risk assessment methodology detailed within CIRIA C736 (2014) guidance to protect the environment. The quantitative risk assessment shall include but not be limited to the following components:
 - A quantitative risk assessment of all scenarios for tank and pipework failure and multiple tank and pipework failure, to determine credible scenarios with supporting evidence for decision outcomes.
 - An assessment of the capability of adjacent tanks and pipework to withstand the hydrostatic and hydrodynamic pressures from the material released in the event of a single tank failure.
 - Integrity testing results of all relevant tanks and pipework.

Should this not be provided at the 'Duly making' stage we will be unable to 'Duly make' any application where you are proposing an 'alternative approach' to BAT for secondary containment as we will not have sufficient evidence to assess in relation to compliance with BAT.

We hope the above provides clarity on our approach.

Kind regards

Sarah Raymond
