Notice of variation with introductory note

The Environmental Permitting (England & Wales) Regulations 2016

Thames Water Utilities Limited

Reading Sludge Treatment Centre
Reading Sewage Treatment Works
Island Road
Reading, Berkshire
RG2 0RP

Variation application number

EPR/MP3338LU/V004

Permit number

EPR/MP3338LU

Reading Sludge Treatment Centre

Permit number EPR/MP3338LU

Introductory note

This introductory note does not form a part of the permit

The Industrial Emissions Directive (IED) came into force on 7 January 2014 with the requirement to implement all relevant Best Available Techniques (BAT) Conclusions as described in the Commission Implementing Decision. The schedule of waste management activities includes the recovery of non-hazardous waste with a capacity exceeding 75 tonnes per day (or 100 tonnes per day if the only waste treatment activity is anaerobic digestion) involving biological treatment, but excludes activities covered by the Urban Waste Water Treatment Directive (UWWTD). However, UK environmental regulators concluded that the biological treatment of waste sewage sludge is not an activity covered by the UWWTD and is therefore within the scope of the IED. The BAT Conclusions for Waste Treatment (the BREF) was published on 17 August 2018 following a European Union wide review of BAT, implementing decision (EU) 2018/1147 of 10 August 2018. BAT applies to new waste sewage sludge treatment not covered by the UWWTD. The operations at Reading sewage treatment works are existing but will be brought into environmental regulation for the first time and are required to operate using BAT.

Brief description of the process

Reading Sludge Treatment Centre (STC) is located south of Reading, close to the A33. The facility is in the grounds of the wider Reading Wastewater Treatment Works (WwTW). The central point of the site is NGR SU 70724 70623.

The site will accept up to 915,000 tonnes per annum of indigenous and imported waste sludge. Sewage sludge produced at Reading WwTW (indigenous sludge), and sewage sludge produced at Thames Water satellite sites (imported sludge) is received at the two primary sludge tanks where it is transferred to two primary belt thickeners. Polymer is added to the two primary belt thickeners and liquor produced in the thickening process is discharged to the WwTW (which does not form part of the permit boundary) by emission point T3 and sampled at point S3.

Indigenous surplus activated sludge (SAS) is received at the SAS belt thickeners where polymer is added. Liquor produced in the thickening process is discharged to the WwTW (which does not form part of the permit boundary) by emission point T2 and sampled at point S2.

Once waste has been thickened and excess liquor removed, the thickened sludge is transferred into one of two sludge blending tanks before being transferred into two small and two large pasteurisation tanks which operate 24/7. Following pasteurisation, sludge is fed into one of four primary digesters where it then undergoes biological treatment in the form of mesophilic anaerobic digestion (AD). Digesters are capable of treating up to 600 tonnes per day. Digested sludge is then transferred to two digested sludge buffer tanks. The treatment of sludge in a biological AD process is a Section 5.4 Part A (1)(b)(i) scheduled activity of the above regulations. This variation adds the section 5.4 activity to the permit and consolidates the combustion activities which now form directly associated activities (DAA) to the installation.

Biogas produced as part of the AD process is stored in one of two double membraned gas holders prior to being used for combustion in two combined heat and power (CHP) engines (with a thermal input of 1.344 MWth each), and three dual fuel boilers (with a thermal input of 0.837MWth each). The electrical energy and heat produced, is used to power on-site processes and provide heat to pre digestion pasteurisation processes.

In the event of emergency, biogas is flared in a waste gas burner.

Biogas condensate produced from the CHP and boilers is discharged to sewer and returned to the Reading WwTW via emission point T1 and sampled at point S1.

Following AD treatment, the sludge is transferred to two dewatering centrifuges to produce a cake. Cake is stored in three cake silo's prior to being exported offsite for land spreading under the Sludge use in agriculture

regulations (SUiAR) and undergoes quality assurance under the Biosolids Assurance Scheme (BAS). Liquor produced from the dewatering of sludge is discharged to the WwTW (which does not form part of the permit boundary) by emission point T1 and sampled at point S1.

The site operates one odour control unit (OCU) at emission point A15 on the site plan in schedule 7, this unit uses a single wet scrubber to treat malodorous air before emitting it via a stack. The OCU also has one standby carbon filter if required.

This permit also allows a waste operation relating to the import of wastes sludge and liquid wastes to the head of works. Tankered wastes are discharged into the waste water treatment works directly and is subsequently mixed within the incoming sewer delivered urban waste water directive (UWWTD) main flow, and at this point and cease to be covered by this permit.

The head of works effluents in the form of sludge and liquid will be delivered by tanker to the head if the works import point. This activity involves a discharge to the main WwTW which is classed as an indirect emissions to water at emission point T5. We have imposed improvement conditions in the permit to determine the impact on the River Kennet from the tankered wastes imported and subsequently discharged to the WwTW.

There one special protection area (SPA), Thames Basin Heaths situated within 8,500m of the site and eight local wildlife sites within relevant screening distances of the installation.

The status log of the permit sets out the permitting history, including any changes to the permit reference number.

End of introductory note

Notice of variation

The Environmental Permitting (England and Wales) Regulations 2016

The Environment Agency in exercise of its powers under regulation 20 of the Environmental Permitting (England and Wales) Regulations 2016 varies

Permit number

EPR/MP3338LU

Issued to

Thames Water Utilities Limited (“the operator”)

whose registered office is

Clearwater Court

Vastern Road

Reading

Berkshire

RG1 8DB

company registration number 02366661

to operate a regulated facility at

Reading Sludge Treatment Centre

Reading Sewage Treatment Works

Island Road

Reading, Berkshire

RG2 0RP

to the extent set out in the schedules.

The notice shall take effect from 25/07/2023

Name	Date
Peter Maksymiw	25/07/2023

Authorised on behalf of the Environment Agency

Schedule 1

All conditions have been varied by the consolidated permit as a result of the application made by the operator.

Schedule 2 – consolidated permit

Consolidated permit issued as a separate document.

Permit

The Environmental Permitting (England and Wales) Regulations 2016

Permit number

EPR/MP3338LU

The Environment Agency hereby authorises, under regulation 13 of the Environmental Permitting (England and Wales) Regulations 2016

Thames Water Utilities Limited (“the operator”),

whose registered office is

Clearwater Court

Vastern Road

Reading

Berkshire

RG1 8DB

company registration number 02366661

to operate an installation and waste operations at

Reading Sludge Treatment Centre

Reading Sewage Treatment Works

Island Road

Reading, Berkshire

RG2 0RP

to the extent authorised by and subject to the conditions of this permit.

Name	Date
Peter Maksymiw	25/07/2023

Authorised on behalf of the Environment Agency

Conditions

Management

1.1 General management

- 1.1.1 The operator shall manage and operate the activities:
- (a) in accordance with a written management system that identifies and minimises risks of pollution, including those arising from operations, maintenance, accidents, incidents, non-conformances, closure and those drawn to the attention of the operator as a result of complaints; and
 - (b) using sufficient competent persons and resources.
- 1.1.2 Records demonstrating compliance with condition 1.1.1 shall be maintained.
- 1.1.3 Any person having duties that are or may be affected by the matters set out in this permit shall have convenient access to a copy of it kept at or near the place where those duties are carried out.
- 1.1.4 The operator shall comply with the requirements of an approved competence scheme.

1.2 Energy efficiency

- 1.2.1 For the following activities referenced in schedule 1, table S1.1, AR1 to AR10, the operator shall:
- (a) take appropriate measures to ensure that energy is used efficiently in the activities;
 - (b) review and record at least every four years whether there are suitable opportunities to improve the energy efficiency of the activities; and
 - (c) take any further appropriate measures identified by a review.

1.3 Efficient use of raw materials

- 1.3.1 For the following activities referenced in schedule 1, table S1.1, AR1 to AR10, the operator shall:
- (a) take appropriate measures to ensure that raw materials and water are used efficiently in the activities;
 - (b) maintain records of raw materials and water used in the activities;
 - (c) review and record at least every four years whether there are suitable alternative materials that could reduce environmental impact or opportunities to improve the efficiency of raw material and water use; and
 - (d) take any further appropriate measures identified by a review.

1.4 Avoidance, recovery and disposal of wastes produced by the activities

- 1.4.1 The operator shall take appropriate measures to ensure that:
- (a) the waste hierarchy referred to in Article 4 of the Waste Framework Directive is applied to the generation of waste by the activities; and
 - (b) any waste generated by the activities is treated in accordance with the waste hierarchy referred to in Article 4 of the Waste Framework Directive; and
 - (c) where disposal is necessary, this is undertaken in a manner which minimises its impact on the environment.

- 1.4.2 The operator shall review and record at least every four years whether changes to those measures should be made and take any further appropriate measures identified by a review.

Operations

2.1 Permitted activities

- 2.1.1 The operator is only authorised to carry out the activities specified in schedule 1 table S1.1 (the “activities”).
- 2.1.2 For the following activities referenced in schedule 1, table S1.1, AR1 to AR10, the activities shall be undertaken in accordance with best available techniques.
- 2.1.3 All process plant and equipment shall be commissioned, operated and maintained and shall be fully documented and recorded in accordance with the manufacturer’s recommendations.
- 2.1.4 For the following activities referenced in schedule 1, table S1.1, AR1 to AR10, waste authorised by this permit shall be clearly distinguished from any other waste on the site.

2.2 The site

- 2.2.1 The activities shall not extend beyond the site, being the land shown edged in green on the site plan at schedule 7 to this permit.

2.3 Operating techniques

- 2.3.1 The activities shall, subject to the conditions of this permit, be operated using the techniques and in the manner described in the documentation specified in schedule 1, table S1.2, unless otherwise agreed in writing by the Environment Agency.
- 2.3.2 If notified by the Environment Agency that the activities are giving rise to pollution, the operator shall submit to the Environment Agency for approval within the period specified, a revision of any plan or other documentation (“plan”) specified in schedule 1, table S1.2 or otherwise required under this permit which identifies and minimises the risks of pollution relevant to that plan, and shall implement the approved revised plan in place of the original from the date of approval, unless otherwise agreed in writing by the Environment Agency.
- 2.3.3 Any raw materials or fuels listed in schedule 2 table S2.1 shall conform to the specifications set out in that table.
- 2.3.4 Waste shall only be accepted if:
- (a) it is of a type and quantity listed in schedule 2 tables S2.2 and S2.3; and
 - (b) it conforms to the description in the documentation supplied by the producer and holder.
 - (c) the facility has sufficient free capacity to store and treat the waste.
- 2.3.5 The operator shall ensure that where waste produced by the activities is sent to a relevant waste operation, that operation is provided with the following information, prior to the receipt of the waste:
- (a) the nature of the process producing the waste;
 - (b) the composition of the waste;
 - (c) the handling requirements of the waste;
 - (d) the hazardous property associated with the waste, if applicable; and
 - (e) the waste code of the waste.

- 2.3.6 The operator shall ensure that where waste produced by the activities is sent to a landfill site, it meets the waste acceptance criteria for that landfill.
- 2.3.7 For the following activities referenced in schedule 1, table S1.1, AR1 to AR10, waste pre-acceptance and acceptance procedures shall be undertaken in accordance with best available techniques.
- 2.3.8 For the following activities referenced in schedule 1, table S1.1 (AR4):
- (a) each MCP must be operated in accordance with the manufacturer's instructions and records must be made and retained to demonstrate this.
 - (b) the operator must keep periods of start-up and shut-down of each MCP as short as possible.
 - (c) there must be no persistent emission of 'dark smoke' as defined in section 3(1) of the Clean Air Act 1993.

2.4 Improvement programme

- 2.4.1 The operator shall complete the improvements specified in schedule 1 table S1.3 by the date specified in that table unless otherwise agreed in writing by the Environment Agency.
- 2.4.2 Except in the case of an improvement which consists only of a submission to the Environment Agency, the operator shall notify the Environment Agency within 14 days of completion of each improvement.

Emissions and monitoring

3.1 Emissions to water, air or land

- 3.1.1 There shall be no point source emissions to water, air or land except from the sources and emission points listed in schedule 3 tables S3.1 and S3.2.
- 3.1.2 The limits given in schedule 3 shall not be exceeded.
- 3.1.3 Periodic monitoring shall be carried out at least once every 5 years for groundwater and 10 years for soil, unless such monitoring is based on a systematic appraisal of the risk of contamination.

3.2 Emissions of substances not controlled by emission limits

- 3.2.1 Emissions of substances not controlled by emission limits (excluding odour, but including ammonia) shall not cause pollution. The operator shall not be taken to have breached this condition if appropriate measures, including, but not limited to, those specified in any approved emissions management plan, have been taken to prevent or where that is not practicable, to minimise, those emissions.
- 3.2.2 The operator shall:
- (a) if notified by the Environment Agency that the activities are giving rise to pollution, submit to the Environment Agency for approval within the period specified, an emissions management plan which identifies and minimises the risks of pollution from emissions of substances not controlled by emission limits;
 - (b) implement the approved emissions management plan, from the date of approval, unless otherwise agreed in writing by the Environment Agency.
- 3.2.3 Subject to condition 3.2.4, below, all liquids in containers, whose emission to water or land could cause pollution, shall be provided with secondary containment, unless other appropriate measures to prevent or where that is not practicable, to minimise, leakage and spillage from the primary container have been agreed in writing with the Environment Agency.
- 3.2.4 Condition 3.2.3, above, shall apply unless the operator strictly complies in full with IC9 below.

- 3.2.5 The operator shall implement a leak detection and repair (LDAR) programme to detect and mitigate the release of volatile organic compounds, including methane from diffuse sources.

3.3 Odour

- 3.3.1 Emissions from the activities shall be free from odour at levels likely to cause pollution outside the site, as perceived by an authorised officer of the Environment Agency, unless the operator has used appropriate measures, including, but not limited to, those specified in any approved odour management plan, to prevent or where that is not practicable to minimise the odour.

3.4 Noise and vibration

- 3.4.1 Emissions from the activities shall be free from noise and vibration at levels likely to cause pollution outside the site, as perceived by an authorised officer of the Environment Agency, unless the operator has used appropriate measures, including, but not limited to, those specified in any approved noise and vibration management plan to prevent or where that is not practicable to minimise the noise and vibration.
- 3.4.2 The operator shall:
- (a) if notified by the Environment Agency that the activities are giving rise to pollution outside the site due to noise and vibration, submit to the Environment Agency for approval within the period specified, a noise and vibration management plan which identifies and minimises the risks of pollution from noise and vibration;
 - (b) implement the approved noise and vibration management plan, from the date of approval, unless otherwise agreed in writing by the Environment Agency.

3.5 Monitoring

- 3.5.1 The operator shall, unless otherwise agreed in writing by the Environment Agency, undertake the monitoring specified in the following tables in schedule 3 to this permit:
- (a) point source emissions specified in tables S3.1 and S3.2;
 - (b) process monitoring specified in table S3.3;
 - (c) bioaerosols monitoring specified in tables S3.5.
- 3.5.2 The operator shall maintain records of all monitoring required by this permit including records of the taking and analysis of samples, instrument measurements (periodic and continual), calibrations, examinations, tests and surveys and any assessment or evaluation made on the basis of such data.
- 3.5.3 Monitoring equipment, techniques, personnel and organisations employed for the emissions monitoring programme and the environmental or other monitoring specified in condition 3.5.1 shall have either MCERTS certification or MCERTS accreditation (as appropriate), where available, unless otherwise agreed in writing by the Environment Agency.
- 3.5.4 Permanent means of access shall be provided to enable sampling/monitoring to be carried out in relation to the emission points specified in schedule 3 tables S3.1, S3.2, S3.3, S3.4, S3.5 and S3.6 unless otherwise agreed in writing by the Environment Agency.
- 3.5.5 Monitoring shall not take place during periods of start up or shut down.

3.6 Bioaerosols

- 3.6.1 The operator shall take all appropriate measures, to prevent or where that is not practicable to minimise the release of bioaerosols. Emissions of bioaerosols from the operational activities shall not exceed the emission action levels specified in tables S3.5.
- 3.6.2 The operator shall where the emission action levels are exceeded:

- (a) notify the Environment Agency and investigate and take remedial action;
- (b) submit to the Environment Agency for approval within the period specified, a bioaerosols management plan which identifies and minimises the risks of pollution from bioaerosols; and
- (c) implement the bioaerosols management plan from the date of approval and revise the plan periodically, unless otherwise agreed in writing by the Environment Agency.

3.7 Pests

3.7.1 The activities shall not give rise to the presence of pests which are likely to cause pollution, hazard or annoyance outside the boundary of the site. The operator shall not be taken to have breached this condition if appropriate measures, including, but not limited to, those specified in any approved pests management plan, have been taken to prevent or where that is not practicable, to minimise the presence of pests on the site.

3.7.2 The operator shall:

- (a) only use approved products for pest control;
- (b) treat pest infestations promptly;
- (c) reject pest-infected incoming waste;
- (d) if notified by the Environment Agency, submit to the Environment Agency for approval within the period specified, a pests management plan which identifies and minimises risks of pollution from pests;
- (e) implement the pests management plan, from the date of approval, unless otherwise agreed in writing by the Environment Agency.

3.8 Fire prevention

3.8.1 The operator shall take all appropriate measures to prevent fires on site and minimise the risk of pollution from them including, but not limited to, those specified in any approved fire prevention plan.

3.8.2 The operator shall:

- (a) if notified by the Environment Agency that the activities are giving rise to a risk of fire, submit to the Environment Agency for approval within the period specified, a fire prevention plan which prevents fires and minimises the risk of pollution from fires;
- (b) implement the fire prevention plan, from the date of approval, unless otherwise agreed in writing by the Environment Agency.

3.8.3 The operator shall undertake a DSEAR assessment and maintain an accident management plan.

Information

4.1 Records

4.1.1 All records required to be made by this permit shall:

- (a) be legible;
- (b) be made as soon as reasonably practicable;
- (c) if amended, be amended in such a way that the original and any subsequent amendments remain legible, or are capable of retrieval; and

(d) be retained, unless otherwise agreed in writing by the Environment Agency, for at least 6 years from the date when the records were made, or in the case of the following records until permit surrender:

- (i) off-site environmental effects; and
- (ii) matters which affect the condition of the land and groundwater.

4.1.2 The operator shall keep on site all records, plans and the management system required to be maintained by this permit, unless otherwise agreed in writing by the Environment Agency.

4.1.3 The operator shall maintain a record of the type and quantity of fuel used and the total annual hours of operation of each MCP.

4.2 Reporting

4.2.1 The operator shall send all reports and notifications required by the permit to the Environment Agency using the contact details supplied in writing by the Environment Agency.

4.2.2 For the following activities referenced in schedule 1, table S1.1, AR1 to AR10, a report or reports on the performance of the activities over the previous year shall be submitted to the Environment Agency by 31 January (or other date agreed in writing by the Environment Agency) each year. The report(s) shall include as a minimum:

- (a) a review of the results of the monitoring and assessment carried out in accordance with the permit including an interpretive review of that data;
- (b) the annual production/treatment data set out in schedule 4 table S4.2; and
- (c) the performance parameters set out in schedule 4 table S4.3 using the forms specified in table S4.4 of that schedule.

4.2.3 Within 28 days of the end of the reporting period the operator shall, unless otherwise agreed in writing by the Environment Agency, submit reports of the monitoring and assessment carried out in accordance with the conditions of this permit, as follows:

- (a) in respect of the parameters and emission points specified in schedule 4 table S4.1;
- (b) for the reporting periods specified in schedule 4 table S4.1 and using the forms specified in schedule 4 table S4.4; and
- (c) giving the information from such results and assessments as may be required by the forms specified in those tables.

4.2.4 The operator shall, unless notice under this condition has been served within the preceding four years, submit to the Environment Agency, within six months of receipt of a written notice, a report assessing whether there are other appropriate measures that could be taken to prevent, or where that is not practicable, to minimise pollution.

4.2.5 Within 1 month of the end of each quarter, the operator shall submit to the Environment Agency using the form made available for the purpose, the information specified on the form relating to the site and the waste accepted and removed from it during the previous quarter.

4.2.6 The operator shall keep records of non-waste materials leaving the site, including the type of material, the batch number, the date of export off-site and the tonnage exported on that date. These records shall be maintained for at least 2 years.

4.2.7 The operator shall submit an annual report detailing the efficiency of removal of non-digestible materials from feedstock prior to processing and the level of contamination in the final recovered digestate.

4.3 Notifications

4.3.1 In the event:

- (a) that the operation of the activities gives rise to an incident or accident which significantly affects or may significantly affect the environment, the operator must immediately—
 - (i) inform the Environment Agency,
 - (ii) take the measures necessary to limit the environmental consequences of such an incident or accident, and
 - (iii) take the measures necessary to prevent further possible incidents or accidents;
- (b) of a breach of any permit condition the operator must immediately—
 - (i) inform the Environment Agency, and
 - (ii) take the measures necessary to ensure that compliance is restored within the shortest possible time;
- (c) of a breach of permit condition which poses an immediate danger to human health or threatens to cause an immediate significant adverse effect on the environment, the operator must immediately suspend the operation of the activities or the relevant part of it until compliance with the permit conditions has been restored.

4.3.2 Any information provided under condition 4.3.1 (a)(i), or 4.3.1 (b)(i) where the information relates to the breach of a limit specified in the permit, shall be confirmed by sending the information listed in schedule 5 to this permit within the time period specified in that schedule.

4.3.3 Following the detection of an issue listed in condition 4.3.1, the operator shall review and revise the management system and implement any changes as necessary to minimise the risk of re-occurrence of the issue.

4.3.4 Where the Environment Agency has requested in writing that it shall be notified when the operator is to undertake monitoring and/or spot sampling, the operator shall inform the Environment Agency when the relevant monitoring and/or spot sampling is to take place. The operator shall provide this information to the Environment Agency at least 14 days before the date the monitoring is to be undertaken.

4.3.5 The Environment Agency shall be notified within 14 days of the occurrence of the following matters, except where such disclosure is prohibited by Stock Exchange rules:

Where the operator is a registered company:

- (a) any change in the operator's trading name, registered name or registered office address; and
- (b) any steps taken with a view to the operator going into administration, entering into a company voluntary arrangement or being wound up.

Where the operator is a corporate body other than a registered company:

- (a) any change in the operator's name or address; and
- (b) any steps taken with a view to the dissolution of the operator.

In any other case:

- (a) the death of any of the named operators (where the operator consists of more than one named individual);
- (b) any change in the operator's name(s) or address(es); and
- (c) any steps taken with a view to the operator, or any one of them, going into bankruptcy, entering into a composition or arrangement with creditors, or, in the case of them being in a partnership, dissolving the partnership.

- 4.3.6 Where the operator proposes to make a change in the nature or functioning, or an extension of the activities, which may have consequences for the environment and the change is not otherwise the subject of an application for approval under the Regulations or this permit:
- (a) the Environment Agency shall be notified at least 14 days before making the change; and
 - (b) the notification shall contain a description of the proposed change in operation.
- 4.3.7 The Environment Agency shall be given at least 14 days' notice before implementation of any part of the site closure plan.
- 4.3.8 The operator shall notify the Environment Agency as soon as is practicable, in writing of any change of medium combustion plant.

4.4 Interpretation

- 4.4.1 In this permit the expressions listed in schedule 6 shall have the meaning given in that schedule.
- 4.4.2 In this permit references to reports and notifications mean written reports and notifications, except where reference is made to notification being made "immediately", in which case it may be provided by telephone.

Schedule 1 – Operations

Table S1.1 activities			
Activity reference	Activity listed in Schedule 1 of the EP Regulations	Description of specified activity and WFD Annex I and II operations	Limits of specified activity and waste types
AR1	S5.4 A(1) (b) (i) Recovery or a mix of recovery and disposal of non-hazardous waste with a capacity exceeding 75 tonnes per day (or 100 tonnes per day if the only waste treatment activity is anaerobic digestion) involving biological treatment	R3: Recycling/reclamation of organic substances which are not used as solvents	From receipt of waste through to digestion and recovery of by-products (waste treated by digestate). Anaerobic digestion of waste in four tanks followed by burning of biogas produced from the process. Anaerobic digestion shall be limited to 600m ³ /day. Waste types suitable for acceptance are limited to those specified in Table S2.2.
Directly Associated Activity			
AR2	Storage of waste pending recovery or disposal	R13: Storage of waste pending the operations numbered R1 and R3 (excluding temporary storage, pending collection, on the site where it is produced)	Undertaken in relation to Activity AR1. From the receipt of permitted waste to pre-treatment and despatch for anaerobic digestion on site. Storage of residual wastes from pre-treatment to despatch off-site for recovery. Storage of waste in an enclosed building fitted with appropriate odour abatement and on an impermeable surface with a sealed drainage system. Waste types suitable for acceptance are limited to those specified in Table S2.2.
AR3	Physical treatment for the purpose of recycling	R3: Recycling/reclamation of organic substances which are not used as solvents	Undertaken in relation to Activity AR1. From the receipt of waste to despatch for anaerobic digestion or despatch off site for recovery. Pre-treatment of waste in enclosed building fitted with appropriate odour abatement and on an impermeable surface with a sealed drainage system, including shredding, sorting, screening, compaction, baling, mixing and maceration.

Table S1.1 activities			
Activity reference	Activity listed in Schedule 1 of the EP Regulations	Description of specified activity and WFD Annex I and II operations	Limits of specified activity and waste types
			<p>Post-treatment of digestate in an enclosed building fitted with appropriate odour abatement and on an impermeable surface with a sealed drainage system, including separation, screening to remove contraries, centrifuge or pressing and addition of thickening agents (polymers) or drying for use as a fertiliser or soil conditioner (drying for the purpose of use as a fuel is not permitted).</p> <p>Heat treatment (pasteurisation) of waste in four tanks for the purpose of recovery.</p> <p>Gas cleaning by biological or physical (carbon filtration) or chemical scrubbing.</p> <p>Waste types suitable for acceptance are limited to those specified in Table S2.2.</p>
AR4	Steam and electrical power supply	R1: Use principally as a fuel to generate energy	<p>Undertaken in relation to Activity AR1.</p> <p>From the receipt of biogas produced at the on-site anaerobic digestion process to combustion with the release of combustion gases.</p> <p>Combustion of biogas in two combined heat and power (CHP) engines with an aggregated thermal input of 2.688 MWth.</p> <p>Combustion of biogas in three auxiliary boilers with an aggregated thermal input of 2.511 MWth.</p>
AR5	Emergency flare operation	D10: Incineration on land	<p>Undertaken in relation to Activity AR1.</p> <p>From the receipt of biogas produced at the on-site anaerobic digestion process to incineration with the release of combustion gases.</p> <p>There shall be no venting or flaring of gas for disposal.</p>

Table S1.1 activities			
Activity reference	Activity listed in Schedule 1 of the EP Regulations	Description of specified activity and WFD Annex I and II operations	Limits of specified activity and waste types
			Use of one auxiliary flare required only during periods of breakdown or maintenance of the CHP engines, and/or auxiliary boilers.
AR6	Raw material storage	Storage of raw materials including lubrication oil, antifreeze, ferric chloride, activated carbon, diesel.	From the receipt of raw materials to despatch for use within the facility.
AR7	Gas storage	R13: Storage of waste pending any of the operations numbered R1 to R12 (excluding temporary storage, pending collection, on the site where it is produced)	<p>Undertaken in relation to Activity AR1.</p> <p>Storage of biogas produced from on-site anaerobic digestion of permitted waste in two stand-alone tanks or roof space of digesters.</p> <p>From the receipt of biogas produced at the on-site anaerobic digestion process to despatch for use within the facility.</p> <p>Emissions of unburnt biogas shall be minimised.</p>
AR8	Digestate storage	R13: Storage of waste pending any of the operations numbered R1 to R12 (excluding temporary storage, pending collection, on the site where it is produced)	<p>Undertaken in relation to Activity AR1.</p> <p>From the receipt of processed uncertified digestate produced from the on-site anaerobic digestion process to despatch for use off-site.</p> <p>Storage of processed uncertified liquid digestate in two digested sludge buffer tanks.</p> <p>Storage of processed uncertified solid digestate in three cake silos and on an impermeable surface with sealed drainage system.</p>
AR9	Surface water collection and storage	Collection and storage of uncontaminated roof and site surface water	From the collection of uncontaminated roof and site surface water from non-operational areas only to re-use within the facility or discharge off-site.
AR10	Air abatement	Collection and treatment of air from the buildings or plant using abatement system [carbon filter, and wet scrubber]	From the collection of air from site processes to treatment and release of treated air to atmosphere.

Table S1.1 activities			
Activity reference	Activity listed in Schedule 1 of the EP Regulations	Description of specified activity and WFD Annex I and II operations	Limits of specified activity and waste types
		prior to release to atmosphere.	Collection and treatment of air from the buildings, tanks or plant using abatement system – [1x wet scrubber and one standby carbon filter]
Activity reference	Description of activities for waste operations		Limits of activities
A11 – Acceptance of waste at the head of works prior to discharge to the WwTW.	D13: D 13 Blending or mixing prior to submission to any of the operations numbered D 1 to D 12		<p>Operations shall be limited to the import of tankered liquid and sludge waste discharged directly into the head of works.</p> <p>There shall be no treatment of incoming wastes.</p> <p>Discharge of tankered liquid and sludge waste shall take place on an impermeable surface with a sealed drainage system.</p> <p>Waste types as specified in Table 2.3</p>

Table S1.2 Operating techniques		
Description	Parts	Date Received

Application EPR/MP3338LU/V004 Response to request for further information dated 04/01/2023	Response to section 3a – technical standards, Part C3 of the application form. Best available techniques as described in the BAT Reference Document for Waste Treatment (the BREF) and BAT conclusions. Reading Sludge Treatment Facility Environmental Permit Site Condition Report, dated January 2023.	18/01/2023
Response to request for further information dated 20/01/2023	Reading STC Bioaerosol Risk Assessment date 27/01/2023.	30/01/2023
Response to Schedule 5 Notice dated 02/03/2023	Response to question 8 'Waste water emissions during storm conditions at the WwTW'. Application Variation OMP Reading STW RA. Application Variation OMP Reading STW-OIP.	31/03/2023
Response to request for further information dated 26/04/2023	Figure 2 Installation boundary and air emissions points.	18/05/2023
Response to request for further information dated 23/05/2023	Process flow diagram. Asset Management Asset Standard Odour Management Plan, dated March 2023. Reading STC – Containment Options Report, dated May 2023.	30/05/2023
Response to request for further information dated 02/06/2023	Acceptance of Third-Party Waste Imports, dated 12/06/2023. Acceptance of TWUL Inter-site Sludge, Cake and Sludge Liquors, dated 12/06/2023.	12/06/2023

Table S1.3 Improvement programme requirements		
Reference	Requirement	Date
IC1	<p>The operator shall develop a monitoring plan to be submitted to the Agency in writing, that shall detail the proposed methodology's to be used within the installation to carry out the monitoring of air emissions and performance measure identified within Tables S3.1, S4.1 and S4.4. The methodology for the monitoring of the emissions to air from emission points A1-A5 shall comply with the requirements of Agency monitoring guidance documents:</p> <ul style="list-style-type: none"> • M1 – Sampling Requirements For Stack Emission Monitoring; • M2 – Monitoring Of Stack Emissions To Air; and • Section 2.10 of Agency Combustion Technical Guidance Note. <p>The plan shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
IC2	<p>A written report shall be submitted to the Agency for approval, detailing the measures to be taken to ensure that the containment for the storage of all liquids, in the tanks detailed below, used at the installation (including drums and IBCs) meet the requirements given in Box 5 of Agency Technical Guidance Note IPPC H7:</p> <ul style="list-style-type: none"> • Lubrication oil storage tank • Waste lubrication oil storage tank • Gas oil storage tank <p>Special note should be taken of the requirements for fill points and outlets.</p> <p>The plan shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
IC3	<p>A written plan shall be submitted to the Agency for approval detailing the installation of oil/water interceptors or any other pollution prevention measures at the fuel delivery area to prevent contamination of surface water. The operator shall use the guidelines within the Agency Combustion Technical Guidance Note and the Agency PPG03 Guidance Note.</p> <p>The plan shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
IC4	<p>The Operator shall review the level of NOx and SO2 emissions following completion of the monitoring exercise carried out in accordance with IC1 above to determine actual values for the releases to air.</p> <p>The Operator shall use this detailed release data to establish the actual impact on air quality through the use of an appropriate air dispersion model.</p> <p>The results of the review and modelling shall be submitted to the Agency in a written report.</p>	Completed

IC5	<p>A revised Accident Management Plan shall be submitted to the Agency for approval, and the measures to comply with the requirements set out in Section 2.8 of the Agency Combustion Technical Guidance Note, such that environmental accidents are adequately addressed. Where appropriate the plan shall contain dates for the implementation of individual measures.</p> <p>The plan shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
IC6	<p>A written training plan shall be submitted to the Agency for approval, and the measures to comply with the requirements set out in Section 2.3 of the Agency Combustion Technical Guidance Note.</p> <p>The plan shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
IC7	<p>The Operator shall undertake a review to identify all options for reducing the emissions to air to the benchmark standards in the Agency Technical Guidance Note for Combustion and to ensure that the releases to air do not result in a significant contribution to an exceedance of an air quality standard, objective or European Union Limit Value. Where an exceedance of an EU limit Value is predicted and the operations would provide a significant contribution to the exceedance, then the review shall assess whether it is necessary to implement measures beyond indicative BAT in order to ensure that the contribution is minimised.</p> <p>The review shall include, but not be limited to, the primary and secondary measures for the reduction of the relevant pollutants listed in the Agency Technical Guidance Note for Combustion identification of the most appropriate stack height for dispersion of the waste gases and either pre-treatment of fuel or abatement of releases to air post combustion as appropriate. Where measures can be undertaken to limit the impact on air quality in the short term whilst long term solutions are implemented then the report should include proposals for both short term and long term measures as appropriate.</p> <p>The operator shall submit a written report detailing the elements of the review and its conclusions and shall include a programme for implementation of the appropriate measures, including a timetable for their implementation.</p> <p>The programme shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
IC8	<p>A written Site Closure Plan shall be submitted to the Agency for approval, and the measures to comply with the requirements set out in Section 2.11 of the Agency Combustion Technical Guidance Note.</p> <p>The plan shall be implemented by the operator from the date of approval in writing by the Agency.</p>	Completed
Improvement condition for secondary containment design		
IC9	<p>The operator shall submit a written 'secondary containment implementation plan' and shall obtain the Environment Agency's written approval to it. The plan shall contain the finalised designs and an implementation schedule for the identified secondary containment systems proposed in the document, <i>Reading STC – Containment Options Report</i>, dated May 2023. The finalised design(s) and specifications shall be produced by appropriate competent individuals</p>	6 months of permit issue or such other date as agreed in writing with the Environment Agency

	<p>(qualified civil or structural engineer), in accordance with the risk assessment methodology detailed within CIRIA C736 (2014) guidance. The plan should include but not be limited to the following components:</p> <ul style="list-style-type: none"> • An updated BAT assessment with specific regard to BAT 19 of the Waste Treatment BREF. • An assessment of the suitability for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure. • Finalised designs and specifications of the proposed secondary containment proposal completed by appropriate competent individuals. • A program of works with timescales for the commissioning of the secondary containment systems to comply with CIRIA C736 (2014) guidance, or equivalent. • An updated site and infrastructure plan. • A preventative maintenance and inspection regime. <p>The plan shall be implemented in accordance with the Environment Agency's prior written approval.</p>	<p>Implementation of all required and approved containment improvements must be completed by 31/12/2024</p>
<p>Improvement conditions for primary containment tanks</p>		
<p>IC10</p>	<p>The operator shall submit a written 'primary containment plan' and shall obtain the Environment Agency's written approval to it. The plan shall contain the results of an inspection and program of works undertaken by an appropriately qualified engineer and shall assess the extent, design specification and condition of primary containment systems (including associated pipework) where polluting liquids and solids are being stored, treated, and/or handled.</p> <p>The plan shall include:</p> <ul style="list-style-type: none"> • An assessment of the physical condition of all primary containment systems (storage and treatment vessels and associated pipework) using a Written Scheme of Examination and their suitability for providing primary containment when subjected to dynamic and static loads. • A program of works with timescales for the implementation of individual improvement measures necessary to demonstrate that the primary containment is fit for purpose or alternative appropriate measures to ensure all polluting materials will be contained on site. • A preventative maintenance and inspection regime. <p>The plan shall be implemented in accordance with the Environment Agency's written approval.</p>	<p>12 months of permit issue or such other date as agreed in writing with the Environment Agency.</p>
<p>Improvement conditions for establishing an inventory of liquid waste water discharged from anaerobic digestion and associated activities (AR1 – AR10)</p>		
<p>IC11a</p>	<p>The operator shall submit a sampling programme in relation to waste water streams and shall obtain the Environment Agency's written approval to it. The sampling programme shall be designed to fully characterise the waste water emissions discharged to Reading</p>	<p>A sampling programme shall be submitted within 6</p>

	<p>wastewater treatment works (WwTW) from sampling points S1, S2, and S3 in (table S3.2 of this permit).</p> <p>The programme should include but not be limited to a methodology for a minimum of one 24-hour flow proportional sample a month, for each emission point, for a period of 12 months. The programme shall detail the sampling methods/standards used. Sampling methods shall be in line with BAT conclusion 20 of the Waste Treatment BREF. The programme shall include the National Grid Reference (NGR) of the sampling point(s) location(s).</p> <p>The programme shall establish the characteristics of the liquid waste water streams and shall include as a minimum for each emission point:</p> <ul style="list-style-type: none"> • Average values and variability of flow, pH, temperature and conductivity. • Average concentration and load values of all relevant substances and their variability. • Data on bioeliminability. <p>The programme shall sample for all relevant substances which must include:</p> <ul style="list-style-type: none"> • Hydrocarbon oil index (HOI) (mg/l) • Free cyanide (CN⁻) (mg/l) • Adsorbable organically bound halogens (AOX) (mg/l) • Metals and metalloids; arsenic (expressed as As), cadmium (expressed as Cd), chromium (expressed as Cr), hexavalent chromium (expressed as Cr(VI)), copper (expressed as Cu), lead (expressed as Pb), nickel (expressed as Ni), mercury (expressed as Hg), zinc (expressed as Zn) (µg/l) <p>The operator shall submit the collected monitoring data in writing to the Environment Agency according to agreed reporting periods.</p> <p>The sampling programme shall be produced in line with Environment Agency guidance:</p> <ul style="list-style-type: none"> • Specific substances and priority hazardous substances – <i>Surface water pollution risk for your environmental permit</i> <u>Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk)</u>. • <i>Monitoring discharges to water: guidance on selecting a monitoring approach</i> <u>Monitoring discharges to water: guidance on selecting a monitoring approach - GOV.UK (www.gov.uk)</u> <p>The programme must be carried out as approved or agreed in advance in writing by the Environment Agency.</p> <p>The monitoring programme shall be carried out and the monitoring data submitted in accordance with the Environment Agency's written approval.</p>	<p>months of issue of this permit</p>
<p>Improvement conditions for indirect discharges to water discharged from anaerobic digestion and associated activities (AR1 – AR10)</p>		
<p>IC11b</p>	<p>The operator shall submit a report for approval by the Environment Agency, following completion of the sampling programme referred to in IC11a. The report shall include but not be limited to; a summary of the</p>	<p>Within 12 months of the Environment Agency's</p>

	<p>sample results, a completed H1 risk assessment(s) and modelling outputs where appropriate.</p> <p>The operator shall provide conclusions on whether the waste waters discharged from S1, S2 and S3 will have any adverse impact on the receiving waters once discharged from Reading WwTW. An assessment shall be made against the parameters specified in the relevant environmental standards as specified within our guidance as follows:</p> <ul style="list-style-type: none"> • Specific substances and priority hazardous substances – <u>Surface water pollution risk for your environmental permit</u> <u>Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk)</u>. • Sanitary substances – <u>H1 annex D2: assessment of sanitary and other pollutants in surface water discharges 1076 14 H1 Annex D2 - Assessment of sanitary and other pollutants within Surface Water Discharges (publishing.service.gov.uk)</u> <p>The report shall include any proposals and/or additional measures required to prevent or minimise any significant emissions from the installation along with timescales for implementation.</p>	<p>written approval of the sampling programme submitted under IC11a or such other date as agreed in writing with the Environment Agency</p>
IC11c	<p>The operator shall implement any improvements identified within the report approved under IC11b in accordance with the Environment Agency's written approval and provide written confirmation to the Environment Agency that the improvements have been completed.</p>	<p>Within 12 months of the report in relation to IC11b being submitted to the Environment Agency or such other date as agreed in writing with the Environment Agency</p>
<p>Improvement condition to address methane slip emissions from gas engines burning biogas</p>		
IC12	<p>The operator shall establish the methane emissions in the exhaust gas from engines burning biogas and compare these to the manufacturer's specification agreed in writing with the Environment Agency. The operator shall, as part of the methane leak detection and repair (LDAR) programme, develop proposals to assess the potential for methane slip and take corrective actions where emissions above the manufacturer's specification are identified.</p>	<p>Within 12 months of the permit issue or such other date as agreed in writing with the Environment Agency</p>
<p>Improvement condition for review of effectiveness of abatement plant</p>		
IC13	<p>The operator shall carry out a review of the abatement plant at emission point A15 on the site plan in schedule 7, to determine whether the measures have been effective and adequate to prevent and where not possible minimise emissions released to air including but not limited to odour and ammonia.</p> <p>The operator shall submit a written report to the Environment Agency following this review for assessment and approval.</p>	<p>6 months of permit issue or such other date as agreed in writing with the Environment Agency</p>

	<p>The report shall include but not be limited to the following aspects:</p> <ul style="list-style-type: none"> • Full investigation and characterisation of the waste gas streams. • Evidence that the pollutants of the waste gas stream will be controlled and/or abated either by the abatement plant or by the proposed abatement systems. • Abatement stack monitoring results (including but not limited to odour and ammonia). • Abatement process monitoring results (including but not limited to odour and ammonia). • Details of air quality quantitative impact assessment including modelling and a proposal for site-specific “action levels” (not limited to odour concentration, hydrogen sulphide and ammonia). • Odour monitoring results at the site boundary. • Records of odour complaints and odour related incidents. • Recommendations for improvement including the replacement or upgrading of the abatement plant. • Timescales for implementation of improvements to the abatement plant. <p>The operator shall implement the improvements in line with the timescales as approved by the Environment Agency.</p>	
--	---	--

Improvement condition for establishing an inventory of liquid waste water discharged from the Head of works waste operation (AR11)

<p>IC14a</p>	<p>The operator shall submit a sampling programme in relation to waste water streams and shall obtain the Environment Agency’s written approval to it. The sampling programme shall be designed to fully characterise the waste waters discharged to Reading wastewater treatment works (WwTW) from emission point T5 in (table S3.2 of the permit).</p> <p>The programme should include but not be limited to a methodology for a minimum of one 24-hour flow proportional sample a month, for the emission point, for a period of 12 months. The programme shall detail the sampling methods/standards used. Sampling methods shall be in line with Non-hazardous and inert waste: appropriate measures for permitted facilities (https://www.gov.uk/guidance/non-hazardous-and-inert-waste-appropriate-measures-for-permitted-facilities).</p> <p>The programme shall include the National Grid Reference (NGR) of the sampling point(s) location(s).</p> <p>The programme shall establish the characteristics of the liquid waste water streams and shall include as a minimum for each emission point:</p> <ul style="list-style-type: none"> • Average values and variability of flow, pH, temperature and conductivity. • Average concentration and load values of all relevant substances and their variability. • Data on bioeliminability. 	<p>Within 6 months of issue of the permit</p>
--------------	--	---

	<p>The operator shall submit the collected monitoring data in writing to the Environment Agency according to agreed reporting periods.</p> <p>The sampling programme shall be produced in line with Environment Agency guidance:</p> <ul style="list-style-type: none"> • Specific substances and priority hazardous substances – <u>Surface water pollution risk for your environmental permit</u> <u>Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk)</u>. • <u>Monitoring discharges to water: guidance on selecting a monitoring approach</u> <u>Monitoring discharges to water: guidance on selecting a monitoring approach - GOV.UK (www.gov.uk)</u> <p>The monitoring programme shall be carried out and the monitoring data submitted in accordance with the Environment Agency's written approval.</p>	
<p>Improvement conditions for indirect discharges to water discharged from the Head of works waste operation (AR11)</p>		
IC14b	<p>The operator shall submit a report for audit and approval by the Environment Agency, following completion of the sampling programme referred to in IC14a. The report shall include but not be limited to; a summary of the sample results, a completed H1 risk assessment(s) and modelling outputs where appropriate.</p> <p>The operator shall provide conclusions on whether the waste waters discharged to T5 will have any adverse impact on the receiving waters once discharged from Reading WwTW. An assessment shall be made against the parameters specified in the relevant environmental standards as specified within our guidance as follows:</p> <ul style="list-style-type: none"> • Specific substances and priority hazardous substances – <u>Surface water pollution risk for your environmental permit</u> <u>Surface water pollution risk assessment for your environmental permit - GOV.UK (www.gov.uk)</u>. • Sanitary substances – <u>H1 annex D2: assessment of sanitary and other pollutants in surface water discharges 1076 14 H1 Annex D2 - Assessment of sanitary and other pollutants within Surface Water Discharges (publishing.service.gov.uk)</u> <p>The report shall include any proposals and/or additional measures required to prevent or minimise any significant emissions from the installation along with timescales for implementation.</p>	<p>Within 12 months of the Environment Agency's written approval of the sampling programme submitted under IC14a or such other date as agreed in writing by the Environment Agency</p>
IC14c	<p>The operator shall implement the improvements identified within the report approved under IC14b in accordance with the Environment Agency's written approval and provide written confirmation to the Environment Agency that the improvements have been completed.</p>	<p>Within 6 months of the report in relation to IC14b being submitted to the Environment Agency or such other date as agreed</p>

		in writing with the Environment Agency

Schedule 2 – Waste types, raw materials and fuels

Table S2.1 Raw materials and fuels	
Raw materials and fuel description	Specification
--	--

Table S2.2 Permitted waste types and quantities for anaerobic digestion (AR1 – AR10)	
Maximum quantity	Annual throughput shall not exceed 915,000 tonnes
Exclusions	<p>Wastes having any of the following characteristics shall not be accepted:</p> <ul style="list-style-type: none"> • Biodegradable wastes that is significantly contaminated with non-compostable or digestible contaminants, in particular plastic and litter shall be no more than 5% w/w and shall be as low as reasonably practicable by 31 December 2025. • Wastes containing wood-preserving agents or other biocides and post-consumer wood. • Wastes containing persistent organic pollutants. • Wastes containing Japanese Knotweed or other invasive plant species listed in the Invasive Species (Amendment etc.) (EU Exit) Regulations 2019. • Manures, slurries and spoiled bedding and straw from farms where animals have notifiable diseases as stipulated in the Animal By-Products (Enforcement) (England) Regulations 2013. • Pest infested waste.
Waste code	Description
19	Wastes from waste management facilities, off-site waste water treatment plants and the preparation of water intended for human consumption and water for industrial use
19 02	wastes from physico/chemical treatments of waste (including dechromatation, decyanidation, neutralisation)
19 02 06	sludges from physico/chemical treatment other than those mentioned in 19 02 05 (sewage sludge only)
19 06	wastes from anaerobic treatment of waste
19 06 06	digestate from anaerobic treatment of animal and vegetable waste (digested sewage sludge only)
19 08	wastes from waste water treatment plants not otherwise specified
19 08 05	sludges from the treatment of urban waste water
19 12	wastes from the mechanical treatment of waste (for example sorting, crushing, compacting, pelletising) not otherwise specified
19 12 12	other wastes (including mixtures of materials) from mechanical treatment of wastes other than those mentioned in 19 12 11 (sewage sludge only) subjected to mechanical treatment only from a process that treats waste which are listed in this table, Table S2.3

Table S2.3 Permitted waste types and quantities for Non-Hazardous Waste Storage and Treatment (AR11)

Maximum quantity	Annual throughput shall not exceed 100,000 tonnes per annum
Exclusions	<p>Wastes having any of the following characteristics shall not be accepted:</p> <ul style="list-style-type: none"> • Wastes containing persistent organic pollutants. • Wastes containing Japanese Knotweed or other invasive plant species listed in the Invasive Species (Amendment etc.) (EU Exit) Regulations 2019. • Manures, slurries and spoiled bedding and straw from farms where animals have notifiable diseases as stipulated in the Animal By-Products (Enforcement) (England) Regulations 2013. • Pest infested waste. • Hazardous waste • Solid wastes (only wastes of liquid free flowing form shall be accepted)
Waste code	Description
16	Wastes not otherwise specified in the list
16 10	aqueous liquid wastes destined for off-site treatment
16 10 02	Aqueous liquid wastes other than those mentioned in 16 10 01

Schedule 3 – Emissions and monitoring

Table S3.1 Point source emissions to air – emission limits and monitoring requirements						
Emission point ref. & location	Source	Parameter	Limit (including unit)	Reference period	Monitoring frequency	Monitoring standard or method
Point A1 on site plan in Schedule 7	CHP engine 1 stack [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	1,033 mg/m ³ [Note 2]	--	Annual	BS EN 14792
Point A2 on site plan in Schedule 7	CHP engine 2 stack [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	1,033 mg/m ³ [Note 2]	--	Annual	BS EN 14792
Point A1 on site plan in Schedule 7	CHP engine 1 stack [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	500 mg/m ³ [note 3]	Average over sample period	Annual	BS EN 14792
		Sulphur dioxide	162 mg/m ³ [note 3]			BS EN 14791 or CEN TS 17021 or by calculation based on fuel sulphur
		Carbon monoxide	1400 mg/m ³ [note 3]			BS EN 15058
		Total VOCs	No limit set [note 3]	--	--	BS EN 12619
Point A2 on site plan in Schedule 7	CHP engine 2 stack [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	500 mg/m ³ [note 3]	Average over sample period	Annual	BS EN 14792
		Sulphur dioxide	162 mg/m ³ [note 3]			BS EN 14791 or CEN TS 17021 or by calculation based on fuel sulphur
		Carbon monoxide	1400 mg/m ³ [note 3]			BS EN 15058
		Total VOCs	No limit set [note 3]	--	--	BS EN 12619

Table S3.1 Point source emissions to air – emission limits and monitoring requirements

Emission point ref. & location	Source	Parameter	Limit (including unit)	Reference period	Monitoring frequency	Monitoring standard or method
Point A3 on site plan in Schedule 7	Boiler 2a stack [burning biogas or gas oil] [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	150 mg/m ³	--	Annual	BS EN 14792
Point A4 on site plan in Schedule 7	Boiler 2b stack [burning biogas or gas oil] [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	150 mg/m ³	--	Annual	BS EN 14792
Point A5 on site plan in Schedule 7	Boiler 2c stack [burning biogas or gas oil] [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	150 mg/m ³	--	Annual	BS EN 14792
Point A6 on site plan in schedule 7	Emergency flare stack [note 1]	Oxides of Nitrogen (NO and NO ₂ expressed as NO ₂)	150 mg/m ³	Average over sample period	[note 4]	BS EN 14792
		Carbon monoxide	50 mg/m ³			BS EN 15058
		Total VOCs	10 mg/m ³			BS EN 12619
Point A15 on site plan in schedule 7	Channelled emissions such as odour abatement stack [note 6]	Hydrogen sulphide	No limit set	Average over sample period	Once every 6 months	CEN TS 13649 for sampling NIOSH 6013 for analysis
		Ammonia	20 mg/m ³	Average over sample period	Once every 6 months	EN ISO 21877
		Odour concentration	No limit set	--	Once every 6 months	BS EN 13725
Point A15 on site plan in schedule 7	Channelled emissions to air from treatment of water-based liquid waste	Hydrogen chloride (HCl) [note 5]	5 mg/m ³ [note 5]	Average over sample period	Once every 6 months	EN 1911
		TVOC	20 mg/m ³ [note 5]	Average over sample period	Once every 6 months	EN 12619
Pressure relief valves [Point A11 – A14 on site plan in schedule 7]	Digesters	Biogas release and operational events	No limit set	Recorded duration and frequency	Daily inspection	--
Pressure relief valves [Point A9 & A10 on site]	Biogas holder	Biogas release and operational events	No limit set	Recorded duration and frequency	Daily inspection	--

Table S3.1 Point source emissions to air – emission limits and monitoring requirements						
Emission point ref. & location	Source	Parameter	Limit (including unit)	Reference period	Monitoring frequency	Monitoring standard or method
plan in schedule 7						
Vents from tanks	Oil/Fuel Storage tank	No parameter set	No limit set	--	--	--
<p>Note 1 – These emission limits are based on normal operating conditions and load - temperature 0°C (273 K); pressure 101.3 kPa and oxygen 5% (for gas engines burning biogas) and oxygen 3% (for emergency flares and medium combustion plants other than engines and gas turbines burning biogas or gas oil such as boilers).</p> <p>Note 2 – This emission limit applies until 31 December 2029, unless the gas engine is replaced.</p> <p>Note 3 – This emission limit applies from 1 January 2030, unless otherwise advised by the Environment Agency.</p> <p>Note 4 – Monitoring to be undertaken in the event the emergency flare has been operational for more than 10 per cent of a year (876 hours). Record of operating hours to be submitted annually to the Environment Agency.</p> <p>Note 5 – Monitoring and limits only apply where the substance concerned is identified as relevant in the waste gas inventory IC13.</p> <p>Note 6 -The monitoring of NH3 and H2S can be used as an alternative to the monitoring of the odour concentration.</p>						

Table S3.2 Point source emissions to sewer, effluent treatment plant or other transfers off-site – emission limits and monitoring requirements						
Emission point ref. & location	Source	Parameter [Note 1]	Limit (incl. unit) [Note 1]	Reference Period	Monitoring frequency [Note 2]	Monitoring standard or method
S1, S2 and S3 on site plan in schedule 7 emission to River Kennet via Reading WwTW	Post digestion liquors, SAS thickener liquors and sludge dewatering centrifuge liquors	Oil and grease	No visible oil or grease	--	Weekly	Visual assessment
		Benzene, toluene, ethylbenzene, xylene (BTEX)	--	Spot sample or flow-proportional composite sample	Once every month	EN ISO 15680
		Hydrocarbon oil index (HOI)	10 mg/l		Once every day	EN ISO 9377-2
		Free cyanide (CN ⁻)	0.1 mg/l			EN ISO 14403-1 or EN ISO 14403-2
		Adsorbable organically bound halogens (AOX)	1 mg/l			EN ISO 9562
		Arsenic (As)	0.1 mg/l	Spot sample or flow-proportional composite sample	Once every day	EN ISO 11885,
		Cadmium (Cd)	0.1 mg/l			EN ISO 17294-2 or
		Chromium (Cr)	0.3 mg/l			EN ISO 15586

Table S3.2 Point source emissions to sewer, effluent treatment plant or other transfers off-site – emission limits and monitoring requirements

Emission point ref. & location	Source	Parameter [Note 1]	Limit (incl. unit) [Note 1]	Reference Period	Monitoring frequency [Note 2]	Monitoring standard or method
		Copper (Cu)	0.5 mg/l			
		Lead (Pb)	0.3 mg/l			
		Nickel (Ni)	1 mg/l			
		Zinc (Zn)	2 mg/l			
		Mercury (Hg)	10 µg/l	Spot sample or flow-proportional composite sample	Once every day	EN ISO 17852 or EN ISO 12846
		Manganese (Mn)	--			EN ISO 11885, EN ISO 17294-2 or EN ISO 15586
		Hexavalent chromium (Cr(VI))	0.1 mg/l			EN ISO 10304-3 or EN ISO 23913
	PFOA and PFOS	--		Once every six months	--	
T4 on site plan in schedule 7 emission to River [Reading WwTW]	Uncontaminated site surface water from roofs and non-operational areas	Oil and grease	No visible oil or grease	--	Weekly	Visual assessment
T5 on site plan in schedule 7 emission to River [Reading WwTW]	Discharge of tankered effluent to the head of works	-- [Note 3]	-- [Note 3]	-- [Note 3]	-- [Note 3]	-- [Note 3]

Note 1 – Monitoring and limits only apply where the substance concerned is identified as relevant in the waste water inventory as determined by improvement condition IC11b

Note 2 – Monitoring frequency as specified unless the Environment Agency has agreed in writing other alternative appropriate monitoring frequencies.

Note 3 – Emission limits and monitoring requirements to be set following the completion of IC14a, IC14b and IC14c.

Table S3.3 Process monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
Digester feed (digestion process)	pH	As described in site operating techniques	As described in site operating techniques	Process monitoring to be recorded using a SCADA system where relevant.
	Alkalinity			
	Temperature			
	Hydraulic loading rate			
	Organic loading rate			
	Volatile fatty acids concentration			
	Ammonia			
Liquid /foam level				
Biogas in digester & Biogas storage holders	Flow	Continuous	In accordance with EU weights and measures Regulations	Process monitoring to be recorded using a SCADA system where relevant. Gas monitors to be calibrated every 6 months or in accordance with the manufacturer's recommendations.
	Methane	Continuous	None specified	
	CO ₂	Continuous	None specified	
	O ₂	Continuous	None specified	
	Hydrogen sulphide	Daily	None specified	
	Pressure	Continuous	None specified	
Digestate batch	Volatile fatty acids concentration	One sample at the end of each batch (hydraulic retention time) cycle.	As described in site operating techniques	--
	Ammonia			
Digesters and storage tanks	Integrity checks	Weekly	Visual assessment	In accordance with design specification and tank integrity checks.
Digesters	Agitation /mixing	Continuous	Systems controls	Records maintained in daily operational records.
	Tank capacity and sediment assessment	Once every 5 years from date of commission	Non-destructive pressure testing integrity assessment every 5 years or as specified	In accordance with design specification and tank integrity checks.

Table S3.3 Process monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
			by manufacturers technical specification.	
Waste reception building or area; Digesters and storage tanks	Odour	Daily	Olfactory monitoring	Odour detection at the site boundary.
Diffuse emissions from all sources identified in the Leak Detection and Repair (LDAR) programme	VOCs including methane	Every 6 months or otherwise agreed in accordance with the LDAR programme	BS EN 15446 In accordance with the LDAR programme	Monitoring points as specified in a DSEAR risk assessment and LDAR programme. Limit as agreed with the Environment Agency as a percentage of the overall gas production.
CHP engine stacks	VOCs including methane	Annually	BS EN 12619	Total annual VOCs emissions from the CHP engine(s) to be calculated and submitted to the Environment Agency.
	Exhaust gas temperature		Traceable to National Standards	--
	Exhaust gas pressure		Traceable to National Standards	--
	Exhaust gas water vapour content		BS EN 14790-1	Unless gas is dried before analysis of emissions.
	Exhaust gas oxygen		BS EN 14789	--
	Exhaust gas flow		BS EN 16911-1	--
Meteorological conditions	Wind speed, air temperature, wind direction	Continuous	Method as specified in management system	Conditions to be recorded in operational diary and records. Equipment shall be calibrated on a 4 monthly basis,

Table S3.3 Process monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
				in accordance with manufacturer's recommendations or as agreed in writing by the Environment Agency.
Emergency flare	Operating hours	Continuous	Recorded duration and frequency. Recording using a SCADA system or similar system	Date, time and duration of use of auxiliary flare shall be recorded.
	Quantity of gas sent to emergency flare			Quantity can be estimated from gas flow composition, heat content, ratio of assistance, velocity, purge gas flow rate, pollutant emissions.
Pressure relief valves and vacuum systems	Gas pressure	Continuous	Recording using a SCADA system	Continuous gas pressure shall be monitored.
	Re-seating	Weekly inspection	Visual	Operator must ensure that valves are re-seated after release in accordance with the manufacturer's design.
	Inspection, maintenance, calibration, repair and validation	Following foaming or overtopping or at 3 yearly intervals whichever is sooner	Written scheme of examination in accordance with condition 1.1.1	After a foaming event or sticking, build-up of debris, obstructions or damage, operator must ensure that pressure relief valve function remains within designed gas pressure in accordance with the manufacturer's design by suitably trained and qualified personnel.

Table S3.3 Process monitoring requirements				
Emission point reference or source or description of point of measurement	Parameter	Monitoring frequency	Monitoring standard or method	Other specifications
	Inspection, calibration and validation report	In accordance with design and construction specifications or after over topping or foaming event	Written scheme of examination in accordance with condition 1.1.1	<p>Operator must ensure that valves are re-seated after release, after a foaming event or sticking, build-up of debris, obstructions or damage.</p> <p>Operator must ensure that PRV function remains within designed operation gas pressure in accordance with the manufacturer's design by suitably trained/qualified personnel.</p> <p>Inspection, calibration and validation report. In accordance with industry Approved Code of Practice</p>
Storage tanks	Volume	Daily	Visual or flow meter measurement	.Records of volume must be maintained.

T4 on site plan in schedule 7 emission to River Kennet [Reading WwTW]	Effluent monitoring	SU 70768 70652	Point T4 [Discharge to WwTW] in Schedule 7
T5 on site plan in schedule 7 emission to River Kennet [Reading WwTW]	Effluent monitoring	SU 70893 70751	Point T5 [Discharge to WwTW] in Schedule 7

Schedule 4 – Reporting

Parameters, for which reports shall be made, in accordance with conditions of this permit, are listed below.

Table S4.1 Reporting of monitoring data			
Parameter	Emission or monitoring point/reference	Reporting period	Period begins
Emissions to air from CHP engines and boilers Parameters as required by condition 3.5.1.	A1, A2, A3, A4 and A5	Every 12 months	1 January
Emissions to air from odour abatement plant Parameters as required by condition 3.5.1.	A15	Every 6 months	1 January, 1 July
IC13 for effectiveness of air abatement systems for waste water treatment plant. Parameters as required by condition 3.5.1.	A15	Every 6 months	1 January, 1 July
Emissions to sewer Parameters as required by condition 3.5.1	S1, S2, S3 and T5	Upon completion of IC11 and IC 14	Upon completion of IC11 and IC14
Process monitoring – digester tank integrity Parameters as required by condition 3.5.1	As specified in schedule 3 table S3.3	Every 5 years from the date of commissioning or as per the manufacturer's recommendation, whichever is sooner	1 January
Process monitoring – under and over pressure relief systems Parameters as required by condition 3.5.1	As specified in schedule 3 table S3.3	Every 12 months Yearly summary report of over-pressure and under-pressure events detailing mass balance release	1 January
Process monitoring – leak detection and repair (inspection, calibration and maintenance) Parameters as required by condition 3.5.1	As specified in schedule 3 table S3.3	Every 3 years	1 January
Process monitoring – use of emergency flare Parameters as required by condition 3.5.1	As specified in schedule 3 table S3.3	Every 12 months	1 January
Total annual VOCs emissions from gas engines (calculated)	As specified in schedule 3 table S3.3	Every 12 months	1 January
Bioaerosols monitoring Parameters as required by condition 3.5.1	As specified in schedule 3 table S3.5	Every 3 months or as agreed in writing by the	1 January, 1 April, 1 July, 1 October

Table S4.1 Reporting of monitoring data			
Parameter	Emission or monitoring point/reference	Reporting period	Period begins
		Environment Agency	

Table S4.2 Annual production/treatment	
Parameter	Units
Electricity generated	MWh
Liquid digestate	m ³
Solid digestate	tonnes
Recovered outputs	tonnes or m ³

Table S4.3 Performance parameters		
Parameter	Frequency of assessment	Units
Water usage	Annually	tonnes or m ³
Energy usage	Annually	MWh
Raw material usage	Annually	tonnes or m ³
Emergency flare operation	Annually	hours
Electricity exported	Annually	MWh
CHP engine usage	Annually	hours
CHP engine efficiency	Annually	%
Auxiliary boiler usage	Annually	hours

Table S4.4 Reporting forms		
Media/parameter	Reporting format	Date of form
Air	Form air 1 or other form as agreed in writing by the Environment Agency	25/07/2023
Bioaerosols	As specified in the Technical Guidance Note M9 or other form as agreed in writing by the Environment Agency	--
Process monitoring	Form process 1 or other form as agreed in writing by the Environment Agency	25/07/2023
Sewer	Form sewer 1 or other form as agreed in writing by the Environment Agency	25/07/2023
Energy usage	Form energy 1 or other form as agreed in writing by the Environment Agency	25/07/2023
Other performance indicators	Form performance 1 or other form as agreed in writing by the Environment Agency	25/07/2023
Waste returns	E-waste Return Form or other form as agreed in writing by the Environment Agency	--

Schedule 5 – Notification

These pages outline the information that the operator must provide.

Units of measurement used in information supplied under Part A and B requirements shall be appropriate to the circumstances of the emission. Where appropriate, a comparison should be made of actual emissions and authorised emission limits.

If any information is considered commercially confidential, it should be separated from non-confidential information, supplied on a separate sheet and accompanied by an application for commercial confidentiality under the provisions of the EP Regulations.

Part A

Permit Number	
Name of operator	
Location of Facility	
Time and date of the detection	

(a) Notification requirements for any malfunction, breakdown or failure of equipment or techniques, accident, or emission of a substance not controlled by an emission limit which has caused, is causing or may cause significant pollution	
To be notified within 24 hours of detection	
Date and time of the event	
Reference or description of the location of the event	
Description of where any release into the environment took place	
Substances(s) potentially released	
Best estimate of the quantity or rate of release of substances	
Measures taken, or intended to be taken, to stop any emission	
Description of the failure or accident.	

(b) Notification requirements for the breach of a limit	
To be notified within 24 hours of detection unless otherwise specified below	
Emission point reference/ source	
Parameter(s)	
Limit	
Measured value and uncertainty	
Date and time of monitoring	

(b) Notification requirements for the breach of a limit	
To be notified within 24 hours of detection unless otherwise specified below	
Measures taken, or intended to be taken, to stop the emission	

Time periods for notification following detection of a breach of a limit	
Parameter	Notification period

(c) Notification requirements for the detection of any significant adverse environmental effect	
To be notified within 24 hours of detection	
Description of where the effect on the environment was detected	
Substances(s) detected	
Concentrations of substances detected	
Date of monitoring/sampling	

Part B – to be submitted as soon as practicable

Any more accurate information on the matters for notification under Part A.	
Measures taken, or intended to be taken, to prevent a recurrence of the incident	
Measures taken, or intended to be taken, to rectify, limit or prevent any pollution of the environment which has been or may be caused by the emission	
The dates of any unauthorised emissions from the facility in the preceding 24 months.	

Name*	
Post	
Signature	
Date	

* authorised to sign on behalf of the operator

Schedule 6 – Interpretation

“accident” means an accident that may result in pollution.

“anaerobic digestion” means a process of controlled decomposition of biodegradable materials under managed conditions where free oxygen is absent, at temperatures suitable for naturally occurring mesophilic or thermophilic anaerobes and facultative anaerobe bacteria species, which convert the inputs to a methane-rich biogas and whole digestate.

“animal waste” means any waste consisting of animal matter that has not been processed into food for human consumption.

“application” means the application for this permit, together with any additional information supplied by the operator as part of the application and any response to a notice served under Schedule 5 to the EP Regulations.

“appropriate abatement system” means the appropriate treatment technique for channelled emissions to air defined in 6.6.1 ‘Channelled emissions to air’ from the ‘Best Available Techniques (BAT) Reference Document for Waste Treatment’.

“authorised officer” means any person authorised by the Environment Agency under section 108(1) of The Environment Act 1995 to exercise, in accordance with the terms of any such authorisation, any power specified in section 108(4) of that Act.

“Best available techniques” means the most effective and advanced stage in the development of activities and their methods of operation which indicates the practical suitability of particular techniques for providing the basis for emission limit values and other permit conditions designed to prevent and, where that is not practicable, to reduce emissions and the impact on the environment as a whole:

(a) ‘techniques’ includes both the technology used and the way in which the installation is designed, built, maintained, operated and decommissioned;

(b) ‘available techniques’ means those developed on a scale which allows implementation in the relevant industrial sector, under economically and technically viable conditions, taking into consideration the costs and advantages, whether or not the techniques are used or produced inside the Member State in question, as long as they are reasonably accessible to the operator;

(c) ‘best’ means most effective in achieving a high general level of protection of the environment as a whole.

“bioaerosols action levels” mean the acceptable bioaerosols concentrations at the nearest sensitive receptor, or at an equivalent distance downwind of the biowaste treatment operations, which are attributable to the biowaste treatment operations. The acceptable concentrations are respectively 1000 and 500 CFU m⁻³ for total bacteria and *Aspergillus fumigatus*. Where these action levels are elevated, the operator must take action to mitigate the impact on sensitive receptors.

“Biodegradable” means a material is capable of undergoing biological anaerobic or aerobic degradation leading to the production of CO₂, H₂O, methane, biomass, and mineral salts, depending on the environmental conditions of the process.

“building” means a construction that has the objective of providing sheltering cover and minimising emissions of noise, particulate matter, odour and litter.

“BREF” means Best Available Techniques (BAT) Reference Document.

“Capacity” means the potential capacity and not historical or actual production levels or throughput. This means that the designed capacity is the maximum rate at which the site can operate. Biological treatment of waste usually takes place over more than one day, so the physical daily capacity can be calculated by dividing the maximum quantity of waste that could be subject to biological treatment at any one time by the minimum residence time. For in-vessel composting, the residence time for sanitisation should be calculated separately and then aggregated to the complete composting time. Further guidance [‘RGN2: Understanding the meaning of regulated facility Definition of regulated facility’](#) is available.

“channelled emissions” means the emissions of pollutants into the environment through any kind of duct, pipe, stack, etc. This also includes emissions from open top biofilters.

“combined heat and power” (CHP) or Cogeneration means the simultaneous generation in one process of thermal energy and electrical or mechanical energy.

“competent persons and resources” means that a technically competent person accredited to a relevant scheme must attend site and record their attendance, and that all roles and responsibilities are clearly stated in the management systems along with records of operatives’ training. See the guidance on the [level of competence and duration of attendance](#)

“compost” means solid particulate material that is the result of composting, which has been sanitised and stabilised, and which confers beneficial effects when added to soil, used as a component of growing media or used in another way in conjunction with plants.

“compostable plastics” means waste containing packaging or non-packaging items (or both) with a valid certificate of conformity to EN 13432 or an equivalent standard for compostable and digestible items, the certificate issued by an independent certification body capable of fully biodegrading by a biological process to create compost or digest.

“composting” means the managed biological decomposition of biodegradable waste organic materials, under conditions that are predominantly aerobic and that allow the development of thermophilic temperatures as a result of biologically produced heat and that result in compost.

“composting batch” means an identifiable quantity of material that progresses through the composting system and when fully processed has similar characteristics throughout. For composting systems that operate on a continuous- or plug-flow basis, batches will be taken to mean a series of “portions of production”.

“direct discharge” means discharge to a receiving water body.

“diffuse emissions” mean non-channelled emissions (e.g. of dust, organic compounds, odour) which can result in ‘area’ sources (e.g. tanks) or ‘point’ sources (e.g. pipe flanges). This also includes emissions from open-air windrow composting.

“digestate” means material resulting from an anaerobic digestion process.

“disposal” means any of the operations provided for in Annex I to Directive 2008/98/EC of the European Parliament and of the Council on waste.

“DSEAR” means the Dangerous Substances and Explosive Atmospheres Regulations 2002.

“emissions of substances not controlled by emission limits” means emissions of substances to air, water or land from the activities, either from the emission points specified in schedule 3 or from other localised or diffuse sources, which are not controlled by an emission limit.

“emissions to land” includes emissions to groundwater.

“EP Regulations” means The Environmental Permitting (England and Wales) Regulations SI 2016 No.1154 and words and expressions used in this permit which are also used in the Regulations have the same meanings as in those Regulations.

“existing medium combustion plant” means an MCP which was put into operation before 20 December 2018.

“generator” means any combustion plant which is used to generate electricity, excluding mobile, unless it is connected to the national grid.

“groundwater” means all water, which is below the surface of the ground in the saturation zone and in direct contact with the ground or subsoil.

“head of works” means the discharge location where imported wastes are discharged into the WwTW. The waste operations associated with the head of works is either via the direct discharge of tankered waste into the WwTW or the temporary storage of waste in a storage tank before discharge of waste into the WwTW. The waste water treatment works are operated under the requirements of the Urban Waste Water Treatment Directive.

“impermeable surface” means a surface or pavement constructed and maintained to a standard sufficient to prevent the transmission of liquids beyond the pavement surface.

“Indirect discharge” means a discharge to a sewer or off-site waste water treatment plant.

“Industrial Emissions Directive” and/or “IED” means DIRECTIVE 2010/75/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 24 November 2010 on industrial emissions, as read in accordance with Schedule 1A to the Environmental Permitting (England and Wales) Regulations 2016.

“Leak detection and repair (LDAR) programme” means a structured approach to reduce fugitive emissions of organic compounds by detection and subsequent repair or replacement of leaking components. Currently, sniffing (described by EN 15446) and optical gas imaging methods are available for the identification of leaks as set out in BAT 14 and section 6.6.2 of the Waste Treatment BAT Conclusions.

“maturation” means optional period of treatment or storage of separated fibre digestate under predominantly aerobic conditions.

“MCERTS” means the Environment Agency’s Monitoring Certification Scheme.

“medium combustion plant” or “MCP” means a combustion plant with a rated thermal input equal to or greater than 1 MW but less than 50 MW.

“Medium Combustion Plant Directive” or “MCPD” means Directive 2015/2193/EU of the European Parliament and of the Council on the limitation of emissions of certain pollutants into the air from medium combustion plants, as read in accordance with Schedule 1A to the Environmental Permitting (England and Wales) Regulations 2016.

“new medium combustion plant” means an MCP which was put into operation after 20 December 2018. This includes replacement MCP and Generators.

“operational area” means any part of a facility used for the handling, storing and treatment of waste.

“operator” means in relation to a regulated facility:

- (a) the person who has control over the operation of the regulated facility,
- (b) if the regulated facility has not yet been put into operation, the person who will have control over the regulated facility when it is put into operation, or
- (c) if a regulated facility authorised by an environmental permit ceases to be in operation, the person who holds the environmental permit

“pests” means Birds, Vermin and Insects.

“PFOA” means Perfluorooctanoic acid.

“PFOS” means Perfluorooctanesulphonic acid.

“pollution” means emissions as a result of human activity which may—

- (a) be harmful to human health or the quality of the environment,
- (b) cause offence to a human sense,
- (c) result in damage to material property, or
- (d) impair or interfere with amenities and other legitimate uses of the environment.

“quarter” means a calendar year quarter commencing on 1 January, 1 April, 1 July or 1 October.

“recovery” means any of the operations provided for in Annex II to Directive 2008/98/EC of the European Parliament and of the Council on waste.

“sanitisation” means the actively managed and intensive stage of composting, lasting for at least 5 days, characterised by high oxygen demand and temperatures of over 55°C, during which biological processes, together with conditions in the composting mass, eradicate human and animal pathogens or reduce them to acceptably low levels. The operator also needs to meet ABPR requirements.

“sealed drainage system” in relation to an impermeable surface, means a drainage system with impermeable components which does not leak and which will ensure that:

- no liquids will run off the surface otherwise than via the system
- all liquids entering the system are collected in a sealed sump, except where liquids may be lawfully discharged to foul sewer.

“specified generator” means a group of generators other than excluded between 1 and 50 megawatts or less than 50 megawatts as defined in Schedule 25B(2) of SI 2018 No.110 of the EPR.

“stable” and/or “stabilised” means the degree of processing and biodegradation at which the rate of biological activity has slowed to an acceptably low and consistent level and will not significantly increase under favourable, altered conditions.

“VOC” means Volatile organic compounds as defined in Article 3(45) of Directive 2010/75/EU – ‘volatile organic compound’ means any organic compound as well as the fraction of creosote, having at 293.15K a vapour pressure of 0.01 kPa or more, or having a corresponding volatility under the particular conditions of use.

“Waste code” means the six-digit code referable to a type of waste in accordance with the List of Wastes (England) Regulations 2005, or List of Wastes (Wales) Regulations 2005, as appropriate, and in relation to hazardous waste, includes the asterisk.

“Waste Framework Directive” and/or “WFD” means Waste Framework Directive 2008/98/EC of the European Parliament and of the Council on waste, as read in accordance with Schedule 1A to the Environmental Permitting (England and Wales) Regulations 2016.

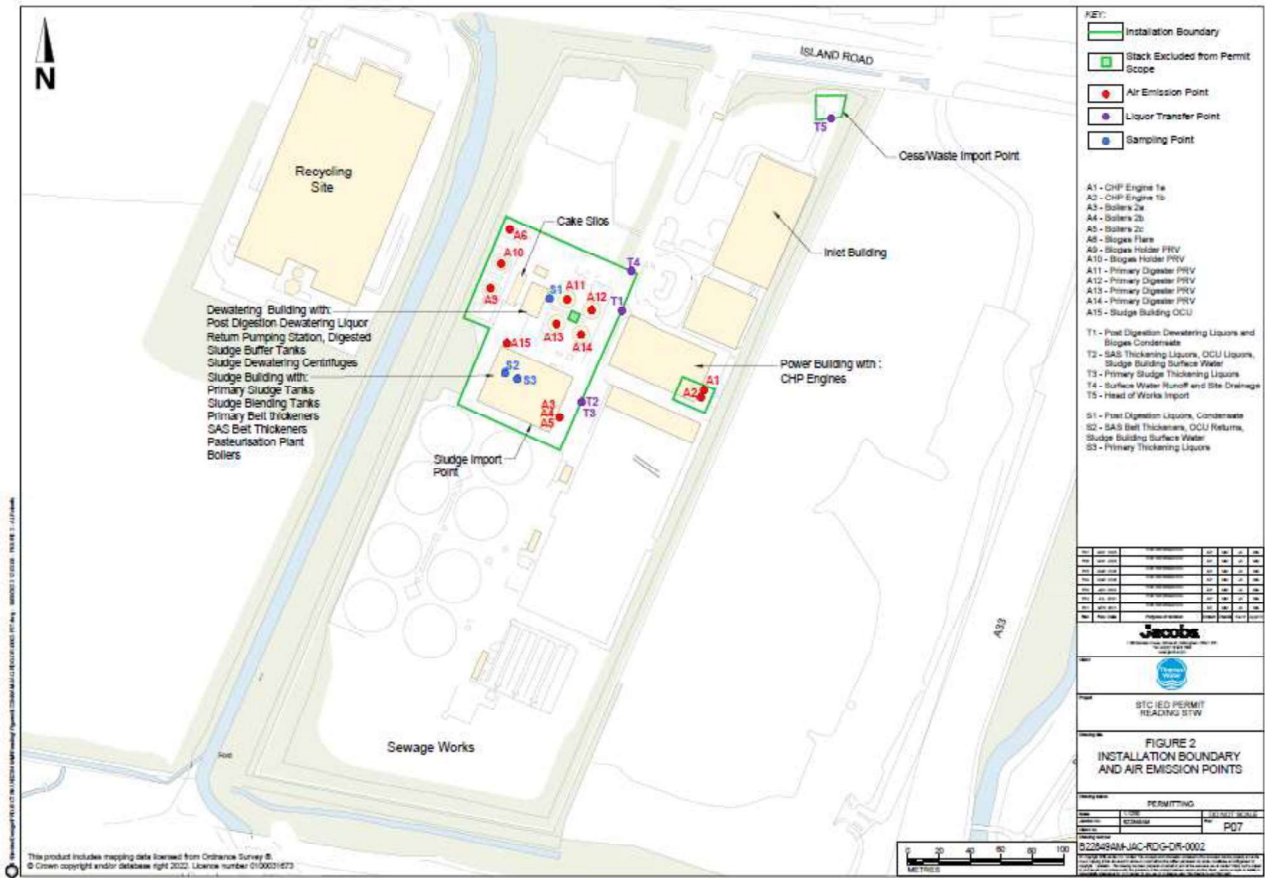

Where a minimum limit is set for any emission parameter, for example pH, reference to exceeding the limit shall mean that the parameter shall not be less than that limit.

Unless otherwise stated, any references in this permit to concentrations of substances in emissions into air means:

- in relation to emissions from combustion processes, the concentration in dry air at a temperature of 273K, at a pressure of 101.3 kPa and with an oxygen content of 3% dry for liquid fuels and gaseous fuels, 6% dry for solid fuels; and/or
- in relation to emissions from non-combustion sources, the concentration at a temperature of 273K and at a pressure of 101.3 kPa, with no correction for water vapour content.

“year” means a calendar year ending on 31 December.

Schedule 7 – Site plan

Annex 1 of MCP

<p>1. Rated thermal input (MW) of the medium combustion plant.</p>	<p>CHP 1- 1.344 MWth CHP 2 - 1.344 MWth</p>
<p>2. Type of the medium combustion plant (diesel engine, gas turbine, dual fuel engine, other engine or other medium combustion plant).</p>	<p>2 x CHP engines on Biogas</p>
<p>3. Type and share of fuels used according to the fuel categories laid down in Annex II.</p>	<p>Gaseous fuels other than natural gas</p>
<p>4. Date of the start of the operation of the medium combustion plant or, where the exact date of the start of the operation is unknown, proof of the fact that the operation started before 20 December 2018.</p>	<p>CHP 1 - 2006 CHP 2 - 2006</p>
<p>5. Sector of activity of the medium combustion plant or the facility in which it is applied (NACE code).</p>	<p>37.00</p>
<p>6. Expected number of annual operating hours of the medium combustion plant and average load in use.</p>	<p>CHP 1- 8,760 hours per year CHP 2 - 8,760 hours per year</p>
<p>7. Where the option of exemption under Article 6(3) or Article 6(8) is used, a declaration signed by the operator that the medium combustion plant will not be operated more than the number of hours referred to in those paragraphs.</p>	<p>N/A</p>
<p>8. Name and registered office of the operator and, in the case of stationary medium combustion plants, the address where the plant is located.</p>	<p>Company name and registered office: Thames Water Utilities Limited, Clearwater Court, Vastern Road, Reading, Berkshire, RG1 8DB</p> <p>Address where the plant is located: Thames Water Utilities Limited Reading Sludge Treatment Centre, Reading Sewage Treatment Works, Island Road, Reading, Berkshire, RG2 0RP</p>

END OF PERMIT

Secondary Containment Discussion - Reading STC IED permit

Agenda

- Introductions and update on IED permit application submissions
- Background – Secondary containment
- Current proposal
- Assessment and an alternative approach
- Discussion
- Additional questions on:
 1. Sampling Plans for IC11a and IC14a for Reading
 2. Odour Monitoring/Management for Reading (IC13)
 3. LDAR/Methane Slip testing (IC12)
 4. Reading CAR – integrity tests
- Next Steps

Background

Improvement Condition for secondary containment design

The plan should include but not be limited to the following components:

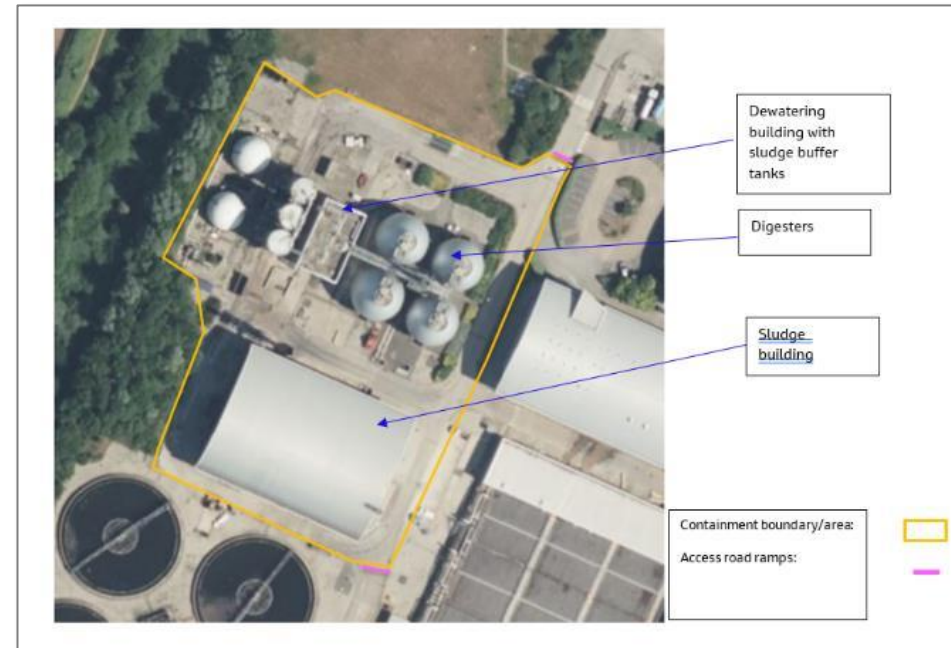

- An updated BAT assessment with specific regard to BAT 19 of the Waste Treatment BREF.
- An assessment of the suitability for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure.
- Finalised designs and specifications of the proposed secondary containment proposal completed by appropriate competent individuals.
- A program of works with timescales for the commissioning of the secondary containment systems to comply with CIRIA C736 (2014) guidance, or equivalent.
- An updated site and infrastructure plan.
- A preventative maintenance and inspection regime.

The plan shall be implemented in accordance with the Environment Agency's prior written approval.

- Improvement Condition (IC) 9 requires these 6 points to be delivered by the 24th January 2024
- The IC states the plan shall contain the finalised designs and an implementation schedule for the identified secondary containment systems proposed in the document, 'Reading STC – Containment Options Report' (May 2023)

Current Proposal – catastrophic failure

- Reading STC – Containment Options Report' (May 2023), submitted as part of the permit application identified a secondary containment system based on:
 - A single feasible solution, but on the worst-case failure scenario.
 - Assuming catastrophic failure of largest (concrete) tank and requirement to contain 25% of total tank volumes.
 - Previous assessment gave site hazard rating 'Medium' (from ADBA)

Current proposal - 350m long bund wall (500 - 1000mm high)

BAT Risk Assessment – change in approach

- The BAT risk assessment approach seeks to identify relevant provisions within BAT reference document for waste treatment, other guiding documents and CIRIA736. Appropriate Measures - implement CIRIA736 – allows risk-based approach:

Clause 1.3.3 states that “*The application of this guidance to existing facilities should be **based on risk**, and any upgrades completed to reduce risk sufficiently to satisfy the law and to be in accordance with guidance under the relevant legislative regime. Upgrades may be subject to as **low as reasonably practicable (ALARP) and/ or best available techniques (BAT)** ‘tests’ and **supporting cost-benefit analyses (CBA)** depending on the legislative regime (COMAH, EPR etc). It is, however, recognised that **the costs of upgrading existing facilities might outweigh the environmental benefits**, and therefore not be viable, or that other equally effective risk reduction measures to those suggested in this guidance may be implemented”.*

- This assessment has identified opportunities that will determine how we deliver the remainder of the IC. It has:
 - considered credible failure scenarios, and therefore the containment provision to be applied.
 - suggested a smaller volume of containment and further consideration of local containment and/or with operational intervention.
 - not changed the site hazard rating – it remains at ‘Medium’

Alternative solution – credible failure

- The risk-based assessment concluded:
 - a) to contain only 100% of the largest tank (concrete digester)
 - b) Concluded 3 x medium risk and 7 x low risk events. The medium events being:
 - i. Failure at a penetration (pipe or mixer e.g. flow of 250l/s)
 - ii. Leak (e.g. flow of 10l/s)
 - iii. Operator / human error (e.g. flow of 250 or 10 l/s)
- This could facilitate an operational solution (10l/s) whereby the spill is managed by temporary bunding, directed to tertiary containment or controlled return to the adjacent WwTWs.
- For the 250l/s event – allow a wider spill area.

250l/s after 2 hours

Or 350m long bund wall (height reduced with lower volume adopted)

Discussion Points

EA Initial thoughts on alternative solution?

- Discussion is specifically for Reading, but also applies to how we address BAT risk assessments for all 24 STC sites and how that affects the secondary containment solutions.

Timing

- Reading IC9 (secondary containment) is to be submitted by 24th January 2024
- The subsequent 5 steps of the IC will be addressed in the finalised designs – but rely on feedback from the EA on the first step = BAT assessment
- Request an extension on delivering the 5 subsequent steps of IC9

Additional Questions

- 1) IC11a and IC14a – liquor sampling plans
- 2) Odour monitoring and management IC13
- 3) LDAR/methane slip IC12
- 4) Reading STC – CAR notice, in regards digester capacity and inspection

1) Questions on Reading IC11a & 14a – liquor sample plans

- Reading IED IC11a and 14a sample plans to characterise wastewater streams (150+ contaminants (through SW guidelines)) is due 24th January.
- Can we get a statement from the EA putting these sample plan ICs ‘on hold’ due to combined EA / industry concerns of UK lab capacity and capability to sample and analyse to the required standards?
- Please note: we have had WRc investigating for a sampling/analysis plan. Initial cost estimate are £7000/sample for characterisation – not including H1 or WM3 assessments.
- In addition - we understand the purpose of the sample plan submission IC11a and IC14a is to demonstrate how the 150+ contaminants may be reduced to a smaller number, although the exact number of elements and compounds to be considered will vary from site to site, based on the catchment and what is imported to the site.
- We would like to request guidance on what would the EA consider to be robust justification for the exclusion of any parameter?

2) Questions on Odour Monitoring/Management

- We seek clarity on the classification of the waste treatment process:
 - We have both 'Biological treatment of waste' and 'water-based liquid waste' referenced in the permit.
 - What is the waste treatment process in relation to monitoring requirements
 - If assessment of BAT for our permit conditions assesses against both waste treatment processes, please define what aspects of STCs are considered for Treatment of water-based liquid waste and biological treatment of waste. As it is not clear in the guidance or BAT any key differentiation to understand the expected monitoring frequency and methods.

Please note: there are different requirements on frequency and monitoring requirements – e.g. with regards to odour monitoring: Biological treatment of waste / water-based liquid waste requires monitoring of HCl/TVOC

- We would like to request a review on the monitoring requirement of the standby carbon OCU at Reading, which is only in use less than once in 10-year operation – is this required?
- Can we request the process monitoring requirements of OCUs on table S3.4 be reviewed? Our specialist contractors have suggested that in general these are excessive.
- BAT does not specify a frequency for Sniff Testing – our current OMP states that it “is to be undertaken in response to complaints or if a risk of odour nuisance at sensitive receptors is expected and/or has been substantiated” – is this acceptable?
- We would like to request an extension to IC13 (due January 24th)
 - We need to redo the odour monitoring of the OCU – will delay the monitoring and finalising full report against IC13 – could we get extension until end of March 2024 (we will submit as soon as received from Olfasense)

3) LDAR / Methane Slip (IC12)

- We would like to request an extension to IC12 (due January 24th)
 - Activity outside of existing frameworks
 - We have engaged Socotec to carry out the LDAR/methane slip testing for Reading.
 - Socotec's programme is 44 working days to deliver a final report being issued once they commence work.
 - Could IC12 be delivered by end of March 2024?

4) Questions on Reading CAR – integrity tests

- In Table S3.3 Process Monitoring requirements, and a subsequent CAR for Reading, we have the requirement for:

- Digesters tank capacity and sediment assessment – permit requires non destructive pressure testing every 5 years or as specified by manufacturers technical specification. TWUL propose capacity and integrity checks every 10 years as per industry wide approach unless PPM requires further investigation.

- We would like to seek clarity on what this permit requirement is measuring?
 - Is it to measure the working volume of the tank / how quickly it will fill with grit? If so, why does it refer to integrity checks?
- A subsequent action in the Reading CAR:

ACTION - The permit requires testing every 5 years OR as specified by manufacturers technical specifications. If you are proposing every 10 years, please provide evidence from the manufacturer that this is in accordance with their technical specifications. If this is not provided and agreed then we will require testing every 5 years.

- Can this action be dealt with under IC10 for primary containment plan? Tank integrity will be assessed within the primary containment assessments.

Next steps – post meeting with EA

- Thames Water to submit paper on BAT risk assessment approach to secondary containment to the EA local officer / Site inspector (IC9-first)
- Feedback requested from the EA local officer on risk assessment approach and applicability to Reading and meeting subsequent BAT19 requirements, which will affect the delivery of Reading IC9 final 5 steps
- Thames Water to issue this slide deck to all attendees with the outstanding queries for EA - on Reading IC11a and 14a – sample plans; odour monitoring/management and Reading CAR
- Thames Water to formally write to Holly Linham to request extensions to:
 - IC9 (final 5 steps)
 - IC11a and 14a,
 - IC12 and
 - IC13

17th January 2024

Dear Holly Linham,

**RE: Improvement Conditions (9, 11, 13 and 14) for Reading IED Permit
EPR/MP338LU/V004**

Thank you for meeting with us on the 3rd January 2024 to discuss the general risk assessment approach to secondary containment of Thames Water Utilities Limited's (TWUL) Sludge Treatment Centres (and specifically to that at TWUL's Reading Site) and the additional questions we raised on the Reading IED Permit and the Improvement Conditions which included deadlines (for certain aspects of those Improvement Conditions) of 24 January 2024. We thought it was a useful and productive meeting.

As discussed in the meeting, we would like to formally request extensions to the deadlines set in the Reading IED Permit for the following Improvement Conditions,:

1. IC9 - Improvement condition for secondary containment design
2. IC11 - Improvement conditions for establishing an inventory of liquid waste water discharged from anaerobic digestion and associated activities (AR1 – AR10) – (a) Sampling programme
3. IC13 - Improvement condition for review of effectiveness of abatement plan
4. IC14 - Improvement condition for establishing an inventory of liquid waste water discharged from the Head of works waste operation/installation activity - (AR11) – (a) Sampling programme

The following sections sets out the rationale behind each extension request, the actions we are currently undertaking and the date we anticipate we will be able to achieve delivery.

1. IC9 - Improvement condition for secondary containment design

The Improvement Condition IC9 is as follows, with a current deadline for submission to the Environment Agency (EA) of the 'secondary containment implementation plan' by the 24th January 2024 (being 6 months after permit issue):

Ref	Requirement	Date
IC9	<p>The operator shall submit a written 'secondary containment implementation plan' and shall obtain the Environment Agency's written approval to it. The plan shall contain the finalised designs and an implementation schedule for the identified secondary containment systems proposed in the document <i>Reading STC IED Containment Options Report, dated May 2023</i>. The finalised design(s) and specifications shall be produced by appropriate competent individuals (qualified civil or structural engineer), in accordance with the risk assessment methodology detailed within CIRIA C736 (2014) guidance.</p> <p>The plan shall include but not be limited to the following components:</p> <ul style="list-style-type: none"> • An updated BAT assessment with specific regard to BAT 19 of the Waste Treatment BREF. • An assessment of the suitability for providing containment when subjected to the dynamic and static loads caused by catastrophic tank failure. • Finalised designs and specifications of the proposed secondary containment proposal completed by appropriate competent individuals. • A program of works with timescales for the commissioning of the secondary containment systems to comply with CIRIA C736 (2014) guidance, or equivalent. • An updated site and infrastructure plan. • A preventative maintenance and inspection regime 	<p>6 months of permit issue or such other date as agreed in writing with the EA</p> <p>Implementation of all required and approved containment improvements must be completed by 31/12/2024</p>

As discussed in the presentation provided by TWUL on the 3rd January and the accompanying paper, TWUL have been developing the 'secondary containment implementation plan' and as part of this have reviewed the risk-based assessment that was included in the Reading STC IED Containment Options Report, dated May 2023. We would like to request that TWUL is granted an extended deadline to submit the Secondary Containment Implementation Plan to the EA, of 30th June 2024 for the following reasons:

- a) as discussed in the meeting we said that it would take around 4 months to complete a detailed design and we have added an additional month to cover the quotation and instruction period.
- b) The updated BAT assessment has identified opportunities that will determine how we deliver the remainder of IC9. It has considered credible failure scenarios, and therefore the containment provision that is required. This review (which we submit to satisfy the first requirement of IC9 of an updated BAT assessment with specific regard to BAT19) concludes that a different risk assessment approach than stated in the permit is appropriate, i.e., a smaller volume of containment and further consideration of local containment and/or with operational intervention. Alternatives being considered are at the concept stage. Please see the paper included in

Appendix A. This makes clear that there are alternative options which may provide the same degree of environmental protection but at a lower cost.

- c) TWUL met with Defra, Ofwat and the EA on the 13th December 2023 to discuss the assumptions underlying the scope of the IED Enhancement Case in the PR24 submission. Questions were raised on the CIRIA C736 guidance on credible failure, which could not be answered in the meeting. TWUL were asked to follow-up with an email query to all attendees. The questions were directed to Clive Humphreys on the 14th December and acknowledged on the same day, but a formal response is yet to be received. This could impact the approach to risk assessment in the updated BAT assessment.
- d) In order to prepare finalised design(s) and specifications including the five subsequent bullet point actions required to be included in the containment plan under IC9, we require the EA’s feedback on the paper included as Appendix A so as to revise the final containment options accordingly.

As such, we request that TWUL is granted an extension of 5 months to the deadline applicable to its submission of the plan to the EA. This is likely to have a potential delay to the implementation programme and timescale.

In addition to the above, we would like to apply the approach to risk assessment of secondary containment to all TWUL IED facilities, as you are likely aware currently 23 of TWUL’s permit applications for such facilities are being considered by the EA, and 2 have currently been granted (Reading, see above and Camberley). As such, this has wider application and it is critical to TWUL to fully understand how to approach this issue.

2. IC11a – for establishing an inventory of liquid waste water discharged from anaerobic digestion and associated activities (AR1 – AR10)

The Improvement Condition IC11a is as follows, with a current deadline for TWUL to submit a sampling programme by the 24th January 2024:

Ref	Requirement	Date
IC11a	<p>The operator shall submit a sampling programme in relation to waste water streams and shall obtain the Environment Agency’s written approval to it. The sampling programme shall be designed to fully characterise the waste waters discharged to Reading wastewater treatment works (WwTW) from emission points S1, S2 and S3 in (table S3.2 of this permit).</p> <p>The programme shall include but not be limited to a methodology for a minimum of one 24-hour flow proportional sample a month, for each emission point, for a period of 12 months. The programme shall detail the sampling methods/standards used. Sampling methods shall be in accordance with BAT conclusion 20 of the Waste Treatment BREF.</p> <p>The programme shall include the National Grid Reference (NGR) of the sampling point(s) location(s). The programme shall establish the characteristics of the liquid waste water streams and shall include as a minimum for each emission point:</p> <ul style="list-style-type: none"> • Average values and variability of flow, pH, temperature and conductivity. • Average concentration and load values of all relevant substances and their variability. 	<p>A sampling programme shall be submitted within 6 months of issue of this permit</p>

	<ul style="list-style-type: none"> • Data on bioeliminability. <p>The programme shall sample for all relevant substances and must include:</p> <ul style="list-style-type: none"> • Hydrocarbon oil index (HOI) (mg/l) • Free cyanide (CN⁻) (mg/l) • Adsorbable organically bound halogens (AOX) (mg/l) • Metals and metalloids; arsenic (expressed as As), cadmium (expressed as Cd), chromium (expressed as Cr), hexavalent chromium (expressed as Cr(VI)), copper (expressed as Cu), lead (expressed as Pb), nickel (expressed as Ni), mercury (expressed as Hg), zinc (expressed as Zn) (µg/l) <p>The operator shall submit the collected monitoring data in writing to the EA according to agreed reporting periods.</p> <p>The sampling programme shall be produced in accordance with EA guidance:</p> <ul style="list-style-type: none"> • Specific substances and priority hazardous substances – Surface water pollution risk for your environmental permit Surface water pollution risk assessment for your environmental permit – GOV.UK (www.gov.uk). • Monitoring discharges to water: guidance on selecting a monitoring approach Monitoring discharges to water: guidance on selecting a monitoring approach – GOV.UK (www.gov.uk). The programme must be carried out as approved or agreed in advance in writing by the Environment Agency. <p>The monitoring programme shall be carried out and the monitoring data submitted in accordance with the Environment Agency’s written approval.</p>	
--	---	--

As discussed in our meeting with you on the 3rd January we would like to request this IC is put ‘on hold’ pending the outcome of the Water UK/EA Task & Finish (TaF) Group discussions, which the National EA is involved in. Those discussions will impact how the sampling programme is designed. Alternatively, a delayed delivery date could be included (e.g. the delivery date extended by 4 months). However, there is a risk that if there is not a resolution as part of the wider discussions this may need to be delayed further. The key reasons for this request are:

- UKAS labs are not able to assess a waste sample to the accredited method for all the parameters (~156 parameters including specific substances and priority hazardous substances) detailed in the EA’s guidance on Surface water pollution risk assessment for your environmental permit.
- Discussions are ongoing with the Water UK/EA Task & Finish (TaF) Group as to the UK lab capacity and its capability to sample and analyse to the required standards and the industry’s proposal is that a site-specific sample list be determined.
- Pending the outcome of these discussions with the Water UK/EA Task and Finish (TaF) group the liquor sampling requirements may change and the practicalities of the forthcoming IC deadlines has been recognised by the National EA (Clive Humphreys). The WaSCs (Water and Sewerage Companies) are providing a briefing paper on this and this issue has been

discussed at every TaF meeting since September with the practical issues being highlighted. Clive confirmed in the TaF sessions on the 17th January that he would contact the Area Sludge Leads about the technical challenges and difficulties in meeting IC deadlines.

3. IC14a – Improvement condition for establishing an inventory of liquid waste water discharged from the Head of works waste operation/installation activity (AR11)

The Improvement Condition IC14a is as follows, with a deadline of the 24th January 2024:

Ref	Requirement	Date
IC14a	<p>The operator shall submit a sampling programme in relation to waste water streams and shall obtain the EA’s written approval to it. The sampling programme shall be designed to fully characterise the waste waters discharged to Reading wastewater treatment works (WwTW) from emission point T5 in (table S3.2 of the permit).</p> <p>The programme should include but not be limited to a methodology for a minimum of one 24-hour flow proportional sample a month, for the emission point, for a period of 12 months. The programme shall detail the sampling methods/standards used. Sampling methods shall be in line with Non-hazardous and inert waste: appropriate measures for permitted facilities https://www.gov.uk/guidance/non-hazardous-and-inert-waste-appropriate-measures-for-permitted-facilities).</p> <p>The programme shall include the National Grid Reference (NGR) of the sampling point(s) location(s).</p> <p>The programme shall establish the characteristics of the liquid waste water streams and shall include as a minimum for each emission point:</p> <ul style="list-style-type: none"> • Average values and variability of flow, pH, temperature and conductivity. • Average concentration and load values of all relevant substances and their variability. • Data on bioeliminability. <p>The operator shall submit the collected monitoring data in writing to the EA according to agreed reporting periods.</p> <p>The sampling programme shall be produced in accordance with EA guidance:</p> <ul style="list-style-type: none"> • Specific substances and priority hazardous substances – <i>Surface water pollution risk for your environmental permit</i> Surface water pollution risk assessment for your environmental permit – GOV.UK (www.gov.uk). • Monitoring discharges to water: <i>guidance on selecting a monitoring approach</i> Monitoring discharges to water: guidance on selecting a monitoring approach – GOV.UK (www.gov.uk). <p>The monitoring programme shall be carried out and the monitoring data submitted in accordance with the Environment Agency’s written approval.</p>	Within 6 months of issue of this permit

As discussed in our meeting with you on the 3rd January and again as per the reasoning for IC11a, we would like to request this IC is put 'on hold' pending the outcome of the Water UK/EA Task & Finish (TaF) Group discussions. Those discussions will impact how the sampling programme is designed. Alternatively, a delayed delivery date could be included (e.g. the delivery date extended by 4 months). However, there is a risk that if there is not a resolution as part of the wider discussions this may need to be delayed further. The key reasons for this request are:

- UKAS labs are not able to assess a waste sample to the accredited method for all the parameters (~156 parameters including specific substances and priority hazardous substances) detailed in the EA's guidance on Surface water pollution risk assessment for your environmental permit.
- Discussions are ongoing with the Water UK/EA Task & Finish Group as to UK lab capacity and its capability to sample and analyse to the required standards and the industry's proposal is that a site-specific sample list be determined.
- Pending the outcome of these discussions with the Water UK/EA Task & Finish (TaF) Group the effluent sampling requirements may change and the practicalities of the forthcoming IC deadlines has been recognised by National EA (Clive Humphreys). The WaSCs are providing a briefing paper on this and this issue has been discussed at every TaF meeting since September with the practical issues being highlighted. Clive confirmed in the TaF sessions on the 17th January that he would contact the Area Sludge Leads about the technical challenges and difficulties in meeting IC deadlines.

4. IC13 – Improvement condition for review of effectiveness of abatement plant

The Improvement Condition IC13 is as follows, with a deadline of the 24th January 2024:

Ref	Requirement	Date
IC13	<p>The operator shall carry out a review of the abatement plant at emission points A15 on the site plan in schedule 7, to determine whether the measures have been effective and adequate to prevent and where not possible minimise emissions released to air including but not limited to odour and ammonia. The operator shall submit a written report to the EA following this review for assessment and approval. The report shall include but not be limited to the following aspects:</p> <ul style="list-style-type: none"> • Full investigation and characterisation of the waste gas streams. • Evidence that the pollutants of the waste gas stream will be controlled and/or abated either by the abatement plant or by the proposed abatement systems. • Abatement stack monitoring results (including but not limited to odour and ammonia). • Abatement process monitoring results (including but not limited to odour and ammonia). • Details of air quality quantitative impact assessment including modelling and a proposal for site-specific “action levels” (including but not limited to odour concentration, hydrogen sulphide and ammonia). • Odour monitoring results at the site boundary. • Records of odour complaints and odour related incidents. • Recommendations for improvement including the replacement or upgrading of the abatement plant. • Timescales for implementation of improvements to the abatement plant. <p>The operator shall implement the improvements in line with the timescales as approved by the EA.</p>	6 months of permit issue or such other date as agreed in writing with the Environment Agency

As discussed in our meeting with you on the 3rd January we would like to request that TWUL is granted an extended deadline to submit the written report of the review of the abatement plant to the EA, until the 30th April 2024 for the following reasons:

- Parts required for rehabilitation works to fix the OCU came with long lead times to procure. There was then limited availability of framework suppliers to fit the parts.
- We had some outstanding queries following advice from our specialist contractors on the process monitoring requirements of the Odour Control Units (OCUs) (Table S3.4) and on the monitoring requirement of the standby carbon OCU at Reading, which is only in use less than once in every 10-years of operation. These were discussed with yourselves on the 3rd January.
- As such we need to redo the odour monitoring of the OCU and this will delay the impact assessment and finalising the full report as required by IC13. We will, of course, endeavour to submit the report ahead of this extended deadline, if possible.

We would also like to request the following considerations:

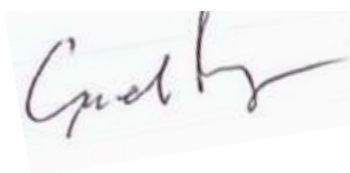

Thames Water Utilities Limited, a company registered in England and Wales with company number 02366661.
Registered office address: Clearwater Court, Vastern Road, Reading RG1 8DB. VAT registration number: GB 537-4569-15.

- This is our first IED permit and IC on IED odour measurements.
- The IED programme team were focused on ensuring all 18 IED permit applications were submitted by the deadline of 20th December.

We thank you for your time on the 3rd January and for your consideration of these IC extensions. Given the impending deadline for these IC's we would really appreciate a prompt response at the earliest opportunity as to whether these requests are acceptable to the EA.

Whilst our discussions specifically relate to the Reading STC, this also has implications as to how we deal with comparable ICs which are likely to be included in our other IED permits and/or how we address BAT risk assessments for all 25 STC sites and the secondary containment solutions proposed.

Yours sincerely,

A handwritten signature in black ink, appearing to read 'Gareth Parry', is written on a light-colored rectangular background.

Gareth Parry
Director of Scientific and Environmental Assurance

Subject: RE: Thames Water IED Permit - Improvement Conditions for Reading IED Permit EPR/MP338LU/V004

Dear Nicola

I have reviewed your request for an extension of 4 of the improvement conditions in Readings permit with colleagues from our National team.

A CAR form will be produced and sent in the next few weeks. However, as the deadline is tomorrow I wanted to provide a quick response on our decision. We agree to an extension for IC11 and IC14. A new deadline will be set and detailed in the CAR form. We do not agree to extending the deadline for IC9 or IC13. Again, further details on this will be included in the CAR form.

Kind regards

Holly

Subject: Thames Water IED Permit - Improvement Conditions for Reading IED Permit EPR/MP338LU/V004
Importance: High

You don't often get email from nicola.telcik@thameswater.co.uk. [Learn why this is important](#)

Good afternoon Holly,

Thanks again for the meeting with yourself and Colin Chiverton on the 3rd January.

Please find attached a letter and appendix formally requesting acceptance of the risk-assessment approach for secondary containment we would like to follow for all 25 Sites requiring IED Permits and specifically for Reading.

We would also like to formally request the extension of the Improvement Conditions which are due on the 24th January 2024.

Kind Regards,

Nicola

Nicola Telcik - BEng (Hons) MEngSc FIEAust CPEng NER

Officer's name	Holly Linham		Date issued	08/02/2024		

Section 1 - Compliance Assessment Summary

This is based on the requirements of the permit under the Environmental Permitting Regulations (EPR). A detailed explanation and any action you may need to take are given in the "Detailed Assessment of Compliance" (section 3). This summary details where we believe any non-compliance with the permit has occurred, the relevant condition and how the non-compliance has been categorised using our [Compliance Classification Scheme](#) (CCS). CCS scores can be consolidated or suspended, where appropriate, to reflect the impact of some non-compliances more accurately. For more details of our CCS scheme, contact your [local office](#).

Permit Conditions and Compliance Summary			Condition(s) breached
a) Permitted activities	1. Specified by permit	N	
b) Infrastructure	1. Engineering for prevention & control of pollution	N	
	2. Closure & decommissioning	N	
	3. Site drainage engineering (clean & foul)	N	
	4. Containment of stored materials	N	
	5. Plant and equipment	N	
c) General management	1. Staff competency/ training	N	
	2. Management system & operating procedures	C2	2.4.1
	3. Materials acceptance	N	
	4. Storage handling, labelling, segregation	N	
d) Incident management	1. Site security	N	
	2. Accident, emergency & incident planning	N	
e) Emissions	1. Air	N	
	2. Land & Groundwater	N	
	3. Surface water	N	
	4. Sewer	N	
	5. Waste	N	
f) Amenity	1. Odour	N	
	2. Noise	N	
	3. Dust/fibres/particulates & litter	N	
	4. Pests, birds & scavengers	N	
	5. Deposits on road	N	
g) Monitoring and records, maintenance and reporting	1. Monitoring of emissions & environment	N	
	2. Records of activity, site diary, journal & events	N	
	3. Maintenance records	N	
	4. Reporting & notification	N	
h) Resource efficiency	1. Efficient use of raw materials	N	
	2. Energy	N	

KEY: C1, C2, C3, C4 = CCS breach category (* suspended scores are marked with an asterisk),
A = Assessed (no evidence of non-compliance), N = Not assessed, NA = Not Applicable, O = Ongoing non-compliance – not scored
MSA, MSB, TCM = Management System condition A, Management System Condition B and Technically Competent Manager condition which are environmental permit conditions from Part 3 of schedule9 EPR (see notes in Section 5/6).

Number of breaches recorded	1	Total compliance score (see section 5 for scoring scheme)	31
------------------------------------	---	---	----

If the Total No Breaches is greater than zero, then please see Section 3 for details of our proposed enforcement response

Section 2 – Compliance Assessment Report Detail

This section contains a report of our findings and will usually include information on:

- the part(s) of the permit that were assessed (e.g. maintenance, training, combustion plant, etc)
- where the type of assessment was 'Data Review' details of the report/results triggering the assessment
- any non-compliances identified
- any non-compliances with directly applicable legislation
- details of any multiple non-compliances
- information on the compliance score accrued inc. details of suspended or consolidated scores.
- details of advice given
- any other areas of concern
- all actions requested
- any examples of good practice.
- a reference to photos taken

This report should be clear, comprehensive, unambiguous and normally completed within 14 days of an assessment.

Introduction

This CAR form covers improvement conditions 9, 11, 13 and 14. On the 17 January 2024 TWUL requested an extension to these improvement conditions. The request was submitted via email and included a letter titled "TWUL letter to EA regarding Reading IED permit ICs" and "Appendix A – TW IED Permit Reading secondary containment review".

A meeting had been held between the EA and TWUL on the 3 January 2024 to discuss the improvement conditions.

The deadline for submission of IC9, IC11, IC13 and IC14 was within 6 months of permit issue, and the permit was issued on the 25 July 2023.

On the 23 January 2024 I replied to the email request for an IC extension and confirmed that a follow up CAR form would be produced. An extension was granted for IC11 and IC14, but no extension was given for IC9 or IC13.

Non-compliance

C2: Management systems and operating procedures – I have scored you a CCS2 (31 points) for non-compliance with permit condition 2.4.1 which states "The operator shall complete improvements specified in schedule 1 table S3.1 by the date specified in that table unless otherwise agreed in writing by the Environment Agency".

IC9 requires the operator to submit a written "secondary containment implementation plan" and obtain the EA's written approval to it. The written containment plan was not submitted and an extension of 5 months was requested to allow TWUL to complete a detailed design and obtain quotation and instruction.

A deadline was not agreed, as detailed in the email to TWUL on the 23 January 2024. The reasons for this are below.

In the letter TWUL state that they are considering alternative solutions based on a different risk assessment approach. The details of this were included as Appendix A which concludes that a risk based approach would still need secondary containment but smaller than the current permit requirements. It also concludes that the most credible failure scenario is not catastrophic tank failure, but a slower escape of material over time due to leakage or failure at pipe penetration. The report states that this could allow spills to be managed by temporary bunding directed towards tertiary containment or controlled return to the WwTWs.

Secondary containment is covered by BAT 19 which requires the operator to prevent or where that is not practicable, reduce emissions to soil and water. BAT 19d lists a number of techniques which can be used in combination to reduce the likelihood and impact of overflows and failures from tanks and vessels. This includes suitable secondary containment. We use CIRIA C736 as the standard for best available techniques for secondary containment. CIRIA uses the 110% of the capacity of the largest tank within the bund or 25% of the total capacity of all the tanks within the same bund

rule.

As part of the permitting process TWUL provided a document titled “Reading STC – Containment Options Report”, dated May 2023. Spill modelling in this report shows that the potential sludge spill from one of the digestors would not be contained on site, highlighting the need for additional containment. The report concludes that the preferred options was wide containment approach with the volume for containment driven by the 25% rule. This would include installation of bund walls and impermeable surfacing at modelled locations.

Secondary containment is a fundamental principle of pollution prevention. TWUL’s facilities store and treat significant volumes of waste sludge and liquids that have the potential to cause significant pollution to land, air and water.

TWUL are now looking at “credible scenario” approach and not the previously submitted 25% secondary containment. This is a significant change and not what was submitted at the time of permit application.

We provided advice to the industry regarding secondary containment including at a workshop held by Water UK in February 2020, written advice in March 2021 and a presentation in July 2021 delivered to Water UK. TWUL has had years to plan and prepare for the requirements of this improvement condition. As such an extension is not agreed.

As set out in the information supplied to TWUL by Clive Humphries on the 17 January 2024, we do not accept that the concept of credible scenarios offers an opportunity to reduce secondary containment capacity. However, we are open to proposals that may deviate without compromising the level of environmental protection.

With regards to temporary bunding, we do not accept this as a suitable method for containment. It relies on TWUL staff to correctly erect the barriers in time to prevent escape of liquids. We do not consider this an appropriate alternative.

A CCS2 score is given as the reasonably foreseeable impact of not having secondary containment is that tank or pipe failure could lead to a significant environmental impact. The spill modelling shows that the sludge from one of the digestors would escape the site boundary within 15 minutes following failure. The spill modelling shows that it would flow onto the adjacent grassland, the haul road and then Island Road. There is also a small stream running adjacent to the site and the civic amenity facility opposite. The spill modelling shows the digestate flows into this channel which in turn flows directly into the River Kennet around 250m downstream. A digestate spill into the stream would have significant impact on the local water courses. The digestate would also enter drains on site which could impact the sewage works. Without containment the digestate would also spill onto Island Road which could potentially prevent access to nearby businesses.

A spill of digestate from one of the digestors is likely to have a significant impact on the local land, water course and businesses. It could also impact the sewage works itself resulting in the potential for further pollution from the sewage discharge.

ACTION – Submit the requirements under IC9 for our approval. We can consider alternatives to BAT so long as they maintain the same or higher environmental protection. We cannot consider any alternatives which offer a lower level of environmental protection.

IC13 requires the operator to carry out a review of the abatement plant at emission point A15. TWUL requested an extension until the 30 April 2024 for the following reasons.

Parts required for the rehabilitation works to fix the OCU came with long lead times. TWUL had outstanding queries linked to some of the process monitoring requirements and the monitoring of the carbon OCU which is a back up unit. As such the odour monitoring needed to be re-done.

An extension to this IC was not granted. The OCU should have critical spares on site to account for any delays with acquiring parts. The query on process monitoring was the requirement to continuously monitor pH scrubber solution pre-abatement. This should not impact or delay the submission of IC13 as only forms a very small part of process monitoring. Please provide further information on why you cannot complete this monitoring. I can then raise the query with our national odour team.

The monitoring requirements of the standby carbon OCU are set out in Table S3.4 under “Carbon Filters – A15 on site plan. Although the carbon filter is a standby, TWUL have not provided evidence to demonstrate that the wet scrubber is sufficient. BAT 34 and 53 state that wet scrubbing should be used in conjunction with a biofilter, thermal oxidation or adsorption on activated carbon. As such, wet scrubbing alone does not demonstrate BAT. IC13 would provide information to check the effectiveness of the abatement system to ensure compliance with BAT. Until IC13 is agreed, we cannot accept any changes to the monitoring frequencies listed in the process monitoring tables.

ACTION – In the letter you state that the report of the abatement plant would be submitted by the 30 April 2024. We look forward to receiving it by this date.

Agreement to extend deadline for IC11a and 14a

As detailed in the email sent on the 23 January 2024, we agree to extending the deadline for submission of information under IC11a and IC14a. A new deadline of 31 March 2024 to submit the sampling programme is given. This will then allow the required minimum of 12 months sampling to be completed by the 31 March 2025.

Total non-compliance score for this inspection is 31. This puts you in compliance band D and will impact your subsistence. We are now considering our enforcement response in line with our Enforcement and Sanctions Policy.

Section 3- Enforcement Response	Only one of the boxes below should be ticked
<p>You must take immediate action to rectify any non-compliance and prevent repetition. Non-compliance with your permit conditions constitutes an offence* and can result in criminal prosecutions and/or suspension or revocation of a permit. Please read the detailed assessment in Section 2 and the steps you need to take in Section 4 below.</p> <p><i>*Non-compliance with MSA, MSB & TCM do not constitute an offence but can result in the service of a compliance, suspension and/or revocation notice.</i></p>	
Other than the provision of advice and guidance, at present we do not intend to take further enforcement action in respect of the non-compliance identified above. This does not preclude us from taking enforcement action if further relevant information comes to light or advice isn't followed.	<input type="checkbox"/>
In respect of the above non-compliance you have been issued with a warning. At present we do not intend to take further enforcement action. This does not preclude us from taking additional enforcement action if further relevant information comes to light or offences continue.	<input type="checkbox"/>
We will now consider what enforcement action is appropriate and notify you, referencing this form.	<input checked="" type="checkbox"/>

Section 4- Action(s)			
Where non-compliance has been detected and an enforcement response has been selected above, this section summarises the steps you need to take to return to compliance and also provides timescales for this to be done.			
Criteria Ref.	CCS Category	Action Required / Advised	Due Date
See Section 1 above			
C2	C2	Submit requirements for IC9 and IC13	N/A

Section 5 - Compliance notes for the Operator

To ensure you correct actual or potential non-compliance we may

- advise on corrective actions verbally or in writing
- require you to take specific actions in writing
- issue a notice
- require you to review your procedures or management system
- change some of the conditions of your permit
- decide to undertake a full review of your permit

Any breach of a permit condition is an offence* and we may take legal action against you.

- We will normally provide advice and guidance to assist you to come back into compliance either after an offence is committed or where we consider that an offence is likely to be committed. This is without prejudice to any other enforcement response that we consider may be required.
- Enforcement action can include the issue of a formal caution, prosecution, the service of a notice and or suspension or revocation of the permit.
- A civil sanction Enforcement Undertaking (EU) offer may also be available to you as an alternative enforcement response for this/these offence(s).

See our Enforcement and Civil Sanctions guidance for further information

**A breach of permit condition MSA, MSB & TCM is not an offence but may result in the service of a notice requiring compliance and/or suspension or revocation of the permit.*

This report does not relieve the site operator of the responsibility to

- ensure you comply with the conditions of the permit at all times and prevent pollution of the environment
- ensure you comply with other legislative provisions which may apply.

Non-compliance scores and categories

CCS category	Description	Score
C1	A non-compliance which could have a major environmental effect	60
C2	A non-compliance which could have a significant environmental effect	31
C3	A non-compliance which could have a minor environmental effect	4
C4	A non-compliance which has no potential environmental effect	0.1

Operational Risk Appraisal (Opra) - Compliance assessment findings may affect your Opra score and/or your charges. This score influences the resource we use to assess permit compliance.

MSA, MSB & TCM are conditions inserted into certain permits by Schedule 9 Part 3 EPR

MSA requires operators to manage and operate in accordance with a written management system that identifies and minimises risks of pollution.

MSB requires that the management system must be reviewed, kept up-to-date and a written record kept of this.

TCM requires the submission of technical competence information.

Section 6 – General Information

Data protection notice

The information on this form will be processed by the Environment Agency to fulfill its regulatory and monitoring functions and to maintain the relevant public register(s). The Environment Agency may also use and/or disclose it in connection with:

- offering/providing you with its literature/services relating to environmental matters
- consulting with the public, public bodies and other organisations (e.g. Health and Safety Executive, local authorities) on environmental issues
- carrying out statistical analysis, research and development on environmental issues
- providing public register information to enquirers
- investigating possible breaches of environmental law and taking any resulting action
- preventing breaches of environmental law
- assessing customer service satisfaction and improving its service
- Freedom of Information Act/Environmental Information Regulations request.

The Environment Agency may pass it on to its agents/representatives to do these things on its behalf. You should ensure that any persons named on this form are informed of the contents of this data protection notice.

Disclosure of information

The Environment Agency will provide a copy of this report to the public register(s). However, if you consider that any information contained in this report should not be released to the public register(s) on the grounds of commercial confidentiality, you must write to your local area office within 28 days of receipt of this form indicating which information it concerns and why it should not be released, giving your reasons in full.

Customer charter

What can I do if I disagree with this compliance assessment report?

A permit holder can challenge any part of the CAR form by writing to the Environment Agency office local to the site within 28 days of receipt. If the issue cannot be resolved by the local office, a permit holder may request an appeal of the regulatory decision by emailing enquiries@environment-agency.gov.uk within 14 days of receipt of the outcome.

If you are still dissatisfied, you can make a complaint to the Ombudsman. For advice on how to complain to the Parliamentary and Health Service Ombudsman phone their helpline on 0345 015 4033.

6th March 2024

Dear Holly,

RE: CAR received 07/02/24 - Reading IED Permit – Report ID (MP3338LU/0492048)

Thank you for your EPR Compliance Assessment Report (CAR) for Reading Sludge Treatment Centre (STC) dated 7th February (sent by email on 8th February 2024). This was the formal response to our request of 17th January 2024 to extend the Improvement Condition (IC) deadline for IC 9, 11, 13 and 14.

After our productive meeting with the Environment Agency on the 3rd January 2024, we were disappointed, that although an extension was granted for IC11a and IC14a, that no extension was given for IC9 or IC13. As such, we have been scored a Compliance Classification Scheme (CCS) C2 breach category (31 points) for non-compliance with permit condition 2.4.1 which states "*The operator shall complete improvements specified in schedule 1 table S3.1 by the date specified in that table unless otherwise agreed in writing by the Environment Agency*".

While we understand the need to issue a CAR form, we would like the EA to reconsider the scoring applied on this occasion. In addition, we would also like the EA to consider suspension of the scoring until the matters of issue within the CAR form are resolved. As you are aware, the issues raised are of a complex nature and until a decision is made on the appeal of the Permit itself (from which these alleged compliances stem), we ask that the scoring is temporarily suspended. This matter is unlikely to be fully resolved quickly and, as you are aware, we are very much taking steps to comply. We have had open and ongoing engagement in relation to these issues for some time now and we would therefore hope that all scores can be suspended pending the permit appeal and reviewed by the EA in due course. In relation to the level of scoring, we challenge the following points in the CAR:

1. IC9 – Improvement condition for secondary containment design

IC9 requires a written “secondary containment implementation plan’ which consists of six listed components. The first component is an updated Best Available Technique (BAT) assessment with specific regard to BAT 19 of the Waste Treatment BREF.

We requested an extension to IC9 because we revised our BAT 19 assessment to follow the site-specific risk-based approach as recommended in CIRIA C736 and we need for it to be accepted by the Environment Agency (EA) before we can satisfy the subsequent components of IC9, which includes the finalised designs and specifications.

Our updated BAT 19 assessment was presented to the EA at the meeting on the 3rd January 2024. We subsequently submitted this formally with our IC extension request letter on the 17th January 2024 and identified a credible failure scenario approach and why this is in accordance with the CIRIA C736 guidance.

The following reasons are cited by the EA, in the CAR issued to us on the 8th February, for not accepting our updated BAT 19 assessment for containment:

- a. *Spill modelling in the “Reading STC – Containment Options Report”, dated May 2023 shows that the potential sludge spill from one of the digestors would not be contained on site, **highlighting the need for additional containment**.With regards to **temporary bunding, we do not accept this as a suitable method for containment**. It relies on TWUL staff to correctly erect the barriers in time to prevent escape of liquids. We do not consider this an appropriate alternative.*
- b. *The updated “credible scenario” approach and not the previously submitted 25% secondary containment ...is a **significant change and not what was submitted at the time of permit application**....TWUL has had years to plan and prepare for the requirements of this improvement condition. As such an extension is not agreed.*

In addition, there is reference to the email from Clive Humphreys on the 17th January. This communication includes a statement that *the requirement for secondary containment is not dependent on a risk assessment*.

- c. *As set out in the information supplied to TWUL by Clive Humphreys on the 17 January 2024, **we do not accept that the concept of credible scenarios offers an opportunity to reduce secondary containment capacity**. However, we are open to proposals that may deviate **without compromising the level of environmental protection**.*

Further – in the communication from Clive Humphreys on the 17th January, he states: *For the 25% rule the assumption is that not all the tanks within the secondary containment are expected to fail at the same time. However, **there could be credible scenarios where this assumption might not hold, such as an explosion damaging multiple tanks, implying that for some***

credible scenarios you may conclude that containment needs to be increased above the standard 25% of total tank volume.

- d. *A spill of digestate from one of the digesters is likely to have a significant impact on the local land, water course and businesses. It could also impact the sewage works itself resulting in the potential for further pollution from the sewage discharge.*

We will address each point in turn and respectfully request the updated BAT 19 assessment for Reading is reviewed for acceptance.

- a. **Addressing the need for additional containment and not accepting temporary bunding:**

Our updated BAT 19 assessment concludes:

The review demonstrates that a risk-based approach at Reading would still need secondary containment but smaller than the current permit requirements and further consideration of local containment and/or with operational intervention.

We understand that the EA will not accept 'operational intervention' and since the submission of our updated BAT 19 site-specific risk assessment, we have a revised concept for Reading's secondary containment – please refer to Appendix A.

Our revised concept is in accordance with CIRIA C736 and consists of built containment. It includes installing of High Gain Vehicle (HGV) kerbs, Legarto Precast Concrete Blocks (PCB) and impermeable surfaces to contain any possible spill from leaving the site and therefore **does not compromise the level of environmental protection** offered in the option provided in May 2023 but at a lower cost and risk to the operational wastewater facility, which balances the potential harm against the resources required i.e. measures that are proportionate to the risk. The C736 guidance notes in Section 1.1.3 that the “costs of upgrading existing facilities might outweigh the environmental benefits, and therefore not be viable, or that other equally effective risk reduction measures to those suggested in this guidance may be implemented”.

- b. **Addressing significant change / not what was submitted at the time of permit application....TWUL has had years to plan:**

We have been submitting containment risk assessments to the EA since December 2021 – please refer to Appendix B. In 2021 and 2022, only the Camberley and Slough IED permit applications were reviewed and commented on by the EA National Permitting Officers. Through responses from the EA to multiple iterations of the Camberley containment risk assessment, we were guided by the EA to move away from the recommended CIRIA C736 site-specific risk assessment towards the EA's interpretation of the CIRIA C736 guidance of the 110% and 25% rule. All subsequent IED permit applications, including Reading, have been driven by the EA to follow this approach if the permit applications were to achieve duly made status.

However, we do not believe the approach we have been guided towards by the EA follows the recommend CIRIA C736 guidance and believe that subsequent containment will be **oversized without offering any more environmental protection**.

Our updated BAT 19 assessment for Reading **has returned** to following the recommended CIRIA C736 site-specific risk approach. This was our original approach since December 2021 - albeit it was missing the 10% rainfall contribution, which is now included in our updated BAT 19 assessment.

Whilst undertaking further assessment of the design submitted in May 2023, we undertook a wider operational assessment for the whole of Reading STW. This identified that should the bunded area around the digesters fill, it would inhibit access to the rest of the site and would potentially lead to issues with the activated sludge process that could impact on final effluent compliance. We assessed that this was not an acceptable situation which gave further reasoning behind looking at an alternative containment solution.

c. Addressing we do not accept that the concept of credible scenarios offers an opportunity to reduce secondary containment capacity:

We would like to reiterate the sections 3.3.1 and 3.3.2 from our updated BAT 19 assessment for Reading:

3.3.1 The '110%' and '25%' rules

*Within CIRIA there is reference to a simplified sizing method has been used as an industry 'rule of thumb' historically, however this **does not follow the CIRIA recommended risk-based approach** (see CIRIA C736 section 4.2.1 paragraph 1).*

This method employs:

- *Where a single bulk liquid tank is bunded, the recommended minimum bund capacity is 110% of the capacity of the tank.*
- *Where two or more tanks are installed within the same bund, the recommended capacity of the bund is the greater of:*
 - *110% of the capacity of the largest tank within the bund.*
 - *25% of the total capacity of all of the tanks within the bund, except where tanks are hydraulically linked in which case they should be treated as if they were a single tank.*

3.3.2 CIRIA C736 Recommended Approach

The CIRIA C736 recommendations on estimating capacity for local systems (designated areas surrounding primary storage vessel to contain spills) can be summarised as follows:

- Allowance based on risk assessment of a credible spill scenario while accounting for tertiary containment (measures for additional level of spill protection such as diversion tanks and lagoons) and where applicable fire-fighting waters.
 - For single-tank installations minimum capacity of 100% of the primary containment volume.
 - For multi-tank installation capacity **based on risk assessment around credible scenario**
- Allowance for total volume of accumulated rainfall with annual exceedance probability (AEP) of 10% (if uncovered) with a minimum retention period of eight days.
- Minimum freeboard (increased height to account for uncertainty factors) of 100 mm for firefighting agents (e.g., foams).
- Freeboard allowance for dynamic effects which varies depending on the type of containment structure e.g., 250 mm for secondary containment tanks.

Additional allowances, such as the provision of sufficient capacity to manage firefighting and cooling water, are also included in containment capacity estimates for remote systems (designated areas located away from spilling or leaking equipment) and combined systems, which contain elements of both local and remote systems along with the means of collecting and transferring spills.

The CIRIA C736 further states:

“The designer of the containment system should take into account the probability of a number of events occurring simultaneously. The worst-case scenario for containment is represented by the design return period rainfall (e.g., the rainfall that is likely to occur, e.g., once in 10 years) coinciding with the sudden and total loss of primary containment and a fire involving applied firefighting water. At low-risk sites or sites where it can be demonstrated that the probability of a simultaneous occurrence of events is sufficiently low, it may be possible to apply less stringent capacity requirements. Such relaxations should be subject to the designer’s and site operator’s discretion and the agreement of the various regulatory bodies in the light of the particular circumstances.”

Which implies that if the designer can demonstrate that the risk of worse-case scenario is low then a lower level of containment could be proposed.

Site-specific containment failure risk at Reading

As presented in the updated BAT 19 assessment, the **most credible failure mode is not a catastrophic tank failure**, but rather a slower escape of material over time, due to leakage or a failure of pipe penetration **on only one tank**. The only scenario

identified that could lead to a catastrophic failure of multiple tanks would be due to explosion in one tank leading to damage to other tanks.

In addressing the statement from Clive Humphreys that “..credible scenarios where this assumption might not hold, such as an explosion damaging multiple tanks”:

CIRIA C736 was written following the Buncefield incident and was written for tanks storing flammable materials. **Tank contents at sludge treatment works are not flammable** - risk of gas gives explosion, but materials do not burn.

An analysis of the risk of explosion leading to a catastrophic failure of a concrete tank **was assessed as negligible**. Whilst there have been instances of chemical tanks exploding (Buncefield and Avonmouth as examples) **there is no evidence that a concrete digester containing biogas and sewage sludge have ever failed in this manner**.

The only ‘medium likelihood’ risks for spills at Reading and the subsequent spill volume to be contained are provided on the next page.

Provision of capacity for firefighting water is not required in our secondary containment volumes as the **contained material is not flammable** and therefore only **consideration** of the **stored capacity and management of rainwater needs to be considered**.

In addition - CIRIA specifically states that “**sewage and sewage effluents**, farm waste and related materials” are **excluded** as “**Stored inventory**” in section 1.2.

Credible Failure Modes with a Medium Likelihood:

Failure at a penetration (pipe or mixer)	Reading site specific impact	There are low level penetrations into the tanks for the feed pipe and the mixing system. These were cast during the construction of the insitu reinforced concrete tank with correctly designed thrust and water stops. On the glass fused to steel tanks, these were all installed during manufacture/construction and have the correct level of strengthening around the opening. The stub pipes have bolted flanges attached to isolation valves. The orientation of the pipes is away from the bank of tanks, thus reducing risk of jetting adversely impacting/damaging other tanks. The tanks have been in service for 20-years and have not shown any sign of failure of these penetrations. Visual inspection is carried out during site walk arounds to look for sign of damage, missing bolts, leakage and none have been identified.
	Loss of liquid	Potential for release of 90%+ of tank contents is real from lower penetrations. - Rate of discharge depends upon depth of liquid in the tank. Rate could be in range 500-700 l/s for the likely orifice size. - Risk is low due to rate of flow, time for tank to empty and directional nature of flow. - Risk to adjacent structures depend on pressure behind the flow and the direction of impact on adjacent structures - unlikely to have any impact on concrete structures only glass coated tanks
	Failure to more than one tank	Tanks are not hydraulically linked so very unlikely, so largest loss would be 1 tank volume. The orientation of the pipes is away from the bank of tanks, thus reducing risk of jetting adversely impacting/damaging other tanks.
Leaks	Reading site specific impact	Potential risk around joint failures, especially of construction mastic. Periodic replacement and resealing and monitoring for visual indication
	Loss of liquid	Low rates of escape flow and low volumes escaping
	Failure to more than one tank	Tanks are not hydraulically linked, so largest loss would be 1 tank volume.
Operator / human error	Reading site specific impact	Potential for operator error, but online instrument and monitoring should identify process parameters before failure occurs.
	Loss of liquid	Low rates of escape flow and low volumes escaping
	Failure to more than one tank	Tanks are not hydraulically linked, so largest loss would be 1 tank volume.

d. Addressing “A spill of digestate from one of the digestors is likely to have a significant impact on the local land, water course and businesses”:

We presented the Reading spill modelling at the meeting on the 3rd January and it is also provided in Appendix A.

We note that the EA acknowledges potential failure of **only one digester**. The key point being that it is **very unlikely** that we will get failure from more than one tank from any of the failure modes (listed above and in our updated BAT 19 assessment). Which is why the secondary containment volume we are addressing is 110% (following the recommended CIRIA C736 site-related risk approach) and not the greater of the 110% of largest tank or 25% of total tank volume.

2. [IC13 – Improvement Condition for review of effectiveness of abatement plan](#)

Our request for the IC13 extension to 30th April 2024 (i.e., only a 3-month extension) on the grounds of outstanding queries on process monitoring requirements and the associated lead-in times for the parts required for the rehabilitation works to fix the Odour Control Unit (OCU) and associated lead-in times was rejected.

We would like to highlight the following in relation to this IC:

- The CAR form states that the OCU should have critical spares on site to account for delays - this is specialist equipment that would not ordinarily be held on site, in particular, some parts needed to be manufactured specifically (e.g. gas inlet isolation dampers). In addition, the issues with the OCU were not simple (e.g., fan replacements) and there were issues with the Programmable Logic Controller (PLC) where the Information, Controls and Automation (ICA) team were needed to attend and fix – this has since been completed.
- In addition to this, two teams are required for the rehabilitation works: 1 x team for the installation and 1 x team for the commissioning (both works underway w/c 12th February), therefore inclusive of lead times for getting contractors out to site. Once commissioned the OCU needs to then run for about 2 weeks before samples can be taken, which then have a 20-day turn around for results, before subsequent modelling and interpretation of results and generation of the response to EA.

In a subsequent CAR received from yourself on 29/02/2024 for Reading following submission of our emissions monitoring and annual report for 2023, **we note the following:**

“The odour control unit has not yet been monitored. The permit requires 6 monthly monitoring of hydrogen sulphide, ammonia, odour concentration and TVOC (NH3 and H2S can be an alternative to odour concentration). TWUL provide an update on the 16 January 2024 explaining that there was a delay in sampling the OCU due to shortages in MCerts qualified personnel and ongoing remedial works. OCU sampling was due on the 18 January and the report should be submitted by the end of February.

ACTION – No CCS score will be given for this delay. Once we have received the OCU emission monitoring a separate CAR form will be generated and a breach given if the results are above the permitted limits. Please ensure that in future this work is scheduled in and completed as per permit requirements.”

We responded to you on the 29th February 2024 again committing to provide a response on the abatement plant for IC13 as per our original timetable.

As such we still require this extension to IC13 until the 30th April 2024 to redo the odour monitoring of the OCU which will delay the impact assessment and finalising full report against IC13.

3. Agreement to extend deadline for IC11a and 14a

Whilst we welcome agreement to extend the deadlines for IC11a and 14a, we would query the delivery date of the following:

- **IC11 - Improvement conditions for establishing an inventory of liquid waste water discharged from anaerobic digestion and associated activities (AR1 – AR10) – (a) Sampling programme**
- **IC14 - Improvement condition for establishing an inventory of liquid waste water discharged from the Head of works waste operation/installation activity - (AR11) – (a) Sampling programme**

We requested that these two ICs were put ‘on hold’ pending the outcome of industry discussions or that the delivery date was extended by a period of time of e.g. 4 months. However, the CAR form only agrees to extend this deadline to 31st March 2024 to submit the sampling programme and then allow the required minimum of 12 months sampling to be completed by the 31 March 2025.

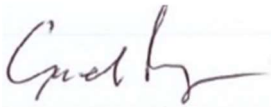

Given that industry discussions are still pending this seems short-sighted. We refer to the email dated 16th February 2024 from Clive Humphreys to Lucinda Gilfoyle (Anglian Water) in response to the Water UK IED Task & Finish Group queries whereby it is noted that *“the return liquors which will take a little longer to resolve”* and *“We are arranging a second visit to discuss technical limitations with ALS and will feed back as soon as we have clarity and can issue advice. I can’t say exactly when this will be.”*. We further reference the WaSC Task & Finish Group on the 21st February 2024 attended by Clive Humphreys. The follow-up ALS meeting will be towards the end of March 2024 and we note that Clive Humphreys is yet to comment

on the draft 'Analysis of Liquors' paper submitted by Rebecca Lamb from Wessex Water on behalf of the WaSCs on the 17th January 2024.

This is applicable to both return liquors and, the analysis of incoming tankered wastes. Thames Water and other WaSCs cannot allocate correct budgets for monthly sampling until we know what we are sampling and analysing for. We therefore kindly request that the EA re-consider the IC extension deadline accordingly.

Finally, we would still like to agree with you our updated BAT 19 risk assessment, the approval to extend IC 9 and 13 (which are the subject of our appeal submission dated 30th January 2024) and an extension to the IC 11a and IC14a deadline as per our original 17th January letter. In light of the above, we would again like you to reconsider your current non-compliance score. To reiterate, we are committed to working with the EA to achieve BAT for waste treatment at Reading STC and we welcome the opportunity to meet with you to discuss further.

Yours sincerely,

Gareth Parry

Director of Scientific and Environmental Assurance

4. Appendices

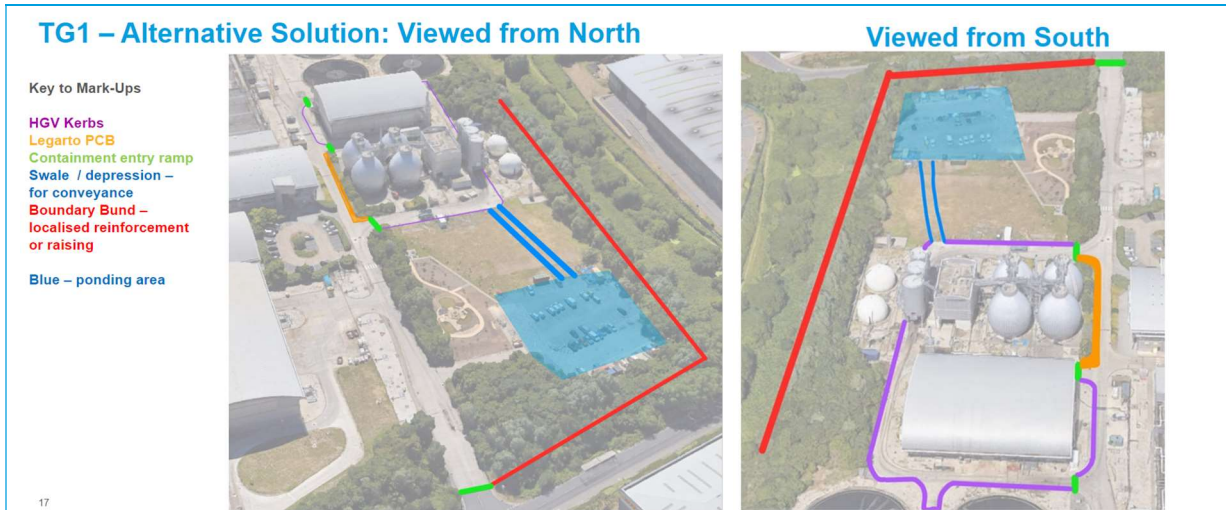

Appendix A – Reading spill modelling and revised containment concept design in accordance with recommended CIRIA C736

The following spill modelling was presented to the EA on the 3rd January and has been accepted at TWUL Technical Governance Board (TG1). It shows spill modelling over a 4 hour period.

13

The following is the concept design proposal for Reading, which will contain any possible spills within the site compound using a number of measures all in accordance with CIRIA C736.

Appendix B – History of EA guidance on CIRIA C736 and TWUL Spill modelling and containment risk assessments for Camberley IED permit application

February 2020

EA presented slides to the Water Industry in February 2020, which stated: “above ground structures” “that have a capacity greater than 110 percent of the largest tank or 25 percent of the total tankage, whichever is the larger” but also stated that **containment “Requires a risk assessment approach”....and to “Calculate the realistic likelihood of loss of containment occurring – CIRIA Paragraph 2.5”**

July 2021

In the EA’s Appropriate Measures consultation response document, the EA stated:

“...the requirement to ensure secondary containment to CIRIA 736 standards applies to new sites. Existing facilities... are unlikely to be designed and built to a CIRIA 736 specification. In such cases we expect operators to evaluate primary and secondary containment to ensure it is fit for purpose and use alternative means to achieve an equivalent standard. All sites must be assessed by a chartered engineer.”

1st Dec 2021

Camberley IED Permit application (EPR/MP3903MU/A001) submitted to EA – included Camberley STE IED Containment Assessment Report (dated 27/09/21) submitted to EA:

*The objectives of the containment measures proposed in this report are to safely contain spillages **from credible failure scenarios...***

3.0 Design Containment Volume / 3.1 Loss of stock from most credible failure scenario

*CIRIA C736 states that in determining containment requirements, **the volume of substance should be based on the loss from Credible Failure Scenario, and this need not necessarily involve the entire site inventory. As the sludge holding tanks and the digesters are not hydraulically connected, the Credible Failure Scenario of this site would be failure of the largest tank.***

This conclusion did not include for rainfall contribution in spill modelling, which should be added to the containment volume -i.e. 110% of the largest tank.

15th March 2022

We resent our Camberley STE IED Containment Assessment Report (following meetings between Tommy Wager (EA) and Charlotte Morris (TW). This was still following the recommended CIRIA C736 site-specific risk approach. This document stated:

*Chapter 2 determines the **design containment volume based on a credible failure scenario** and describes the uncontained spill map and flow paths.*

2.2 Loss of stock from most credible failure scenario

CIRIA C736 states that when considering a loss of containment of sludge, the volume of substance should be based on the loss from a credible scenario, this need not necessarily involve the entire site inventory.

*None of the tanks are hydraulically linked, so rupture would affect only one digester or tank. **Therefore, the volume from a credible failure scenario is the maximum capacity of the largest tank, which at Camberley is the largest secondary digester...***

This conclusion did not include for rainfall contribution in spill modelling, which should be added to the containment volume -i.e. 110% of the largest tank.

19th May 2022

A Reading STW Risk Identification and Containment Assessment Report was prepared but was not issued to the EA. In that report, following the recommended CIRIA C736 site-specific risk approach. This document stated:

*Chapter 2 determines the **design containment volume based on a credible failure scenario** and describes the uncontained spill map and flow paths.*

2.2 Loss of stock from most credible failure scenario

CIRIA C736 states that when considering a loss of containment of sludge, the volume of substance should be based on the loss from a credible scenario, this need not necessarily involve the entire site inventory.

*None of the tanks are hydraulically linked, so rupture would affect only one digester or tank. **Therefore, the volume from a credible failure scenario is the maximum capacity of the largest tank, which at Reading is the largest Primary Digester...***

This conclusion did not include for rainfall contribution in spill modelling, which should be added to the containment volume -i.e. 110% of the largest tank.

24th June 2022

We received a Schedule 5 from Tommy Wager on Camberley IED Permit application – In Section 13/question 17:

Secondary Containment Assessment Reports should be completed in line with CIRIA 736 guidance: Containment Systems for the Prevention of Pollution, ADBA Secondary Containment at AD Plants: An Industry Guide and Best Available Techniques (BAT) Reference Document for Waste Treatment. Revise the secondary containment report and any relevant supporting documents addressing the questions below:

*17. Submit a revised spill model in the Camberley IED assessment report to assess the impact from a catastrophic tank failure. Your revised model **must assess the impact of spill volumes using 110% of the largest tank or 25% of all tanks** within a bunded area (whichever is greater) **as opposed to a ‘credible’ spill volume.***

Reason for Question

***BAT conclusion 19d** states “tanks for liquids that are located in a suitable secondary containment; the **volume is normally sized to accommodate the loss of containment of the largest tank within the secondary containment**”. Upon assessment of your application, we can see you have detailed in the report ‘credible spill volume’ of the largest secondary digester 2000m³ that falls short of the 110% and 25% rule outlined in the CIRIA 736 guidance, section 4.2.1. The additional 10% spill is considered to account for potential rainfall during a catastrophic tank failure incident and should be included in a revised spill model.*

The subsequent secondary containment assessments were guided by the EA to move to a “worst case scenario” and away from the recommended CIRIA C736 guidance to be able to achieve duly making on our permit applications. However, we do not agree with this non-site-specific approach or the subsequent oversized containment volume which arises. Hence our questioning of this interpretation and application of the CIRIA C736 guidance.

July 2022

Our initial Reading IED Permit application was submitted to the EA. It did have a containment assessment at that time.

The July 2022 Reading containment report altered the conclusion from the May 2022 Reading STW Risk Identification and Containment Assessment Report as directed by the EA following discussions on Camberley. In the executive summary “The containment volume of 2883m³ is driven by the 25% rule (25% of total tank volumes which includes allowance for rainfall) rather than 110% (of the largest single tank) of the total tanks volume.”

The second containment assessment for Reading was issued to the EA in December 2023. This also followed the worst-case scenario of a containment volume based on the greater of the 25% of all tanks or 110% of the largest tank.

This document is meant purely as a documentation tool and the institutions do not assume any liability for its contents

THE EUROPEAN PARLIAMENT AND THE COUNCIL OF THE EUROPEAN UNION,

Having regard to the Treaty on the Functioning of the European Union, and in particular Article 192(1) thereof,

Having regard to the proposal from the European Commission,

Having regard to the opinion of the European Economic and Social Committee ⁽¹⁾,

Having regard to the opinion of the Committee of the Regions ⁽²⁾,

Acting in accordance with the ordinary legislative procedure ⁽³⁾,

Whereas:

- (1) A number of substantial changes are to be made to Council Directive 78/176/EEC of 20 February 1978 on waste from the titanium dioxide industry ⁽⁴⁾, Council Directive 82/883/EEC of 3 December 1982 on procedures for the surveillance and monitoring of environments concerned by waste from the titanium dioxide industry ⁽⁵⁾, Council Directive 92/112/EEC of 15 December 1992 on procedures for harmonising the programmes for the reduction and eventual elimination of pollution caused by waste from the titanium dioxide industry ⁽⁶⁾, Council Directive 1999/13/EC of 11 March 1999 on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain activities and installations ⁽⁷⁾, Directive 2000/76/EC of the European Parliament and of the Council of 4 December 2000 on the incineration of waste ⁽⁸⁾, Directive 2001/80/EC of the European Parliament and of the Council of 23 October 2001 on the limitation of emissions of certain pollutants into the air from large combustion plants ⁽⁹⁾ and Directive 2008/1/EC of the European Parliament and of the Council of 15 January 2008 concerning integrated pollution prevention and control ⁽¹⁰⁾. In the interests of clarity, those Directives should be recast.
- (2) In order to prevent, reduce and as far as possible eliminate pollution arising from industrial activities in compliance with

⁽¹⁾ OJ C 182, 4.8.2009, p. 46.

⁽²⁾ OJ C 325, 19.12.2008, p. 60.

⁽³⁾ Position of the European Parliament of 10 March 2009 (OJ C 87 E, 1.4.2010, p. 191) and position of the Council at first reading of 15 February 2010 (OJ C 107 E, 27.4.2010, p. 1). Position of the European Parliament of 7 July 2010 (not yet published in the Official Journal) and decision of the Council of 8 November 2010.

⁽¹⁰⁾ OJ L 24, 29.1.2008, p. 8.

▼B

the 'polluter pays' principle and the principle of pollution prevention, it is necessary to establish a general framework for the control of the main industrial activities, giving priority to intervention at source, ensuring prudent management of natural resources and taking into account, when necessary, the economic situation and specific local characteristics of the place in which the industrial activity is taking place.

- (3) Different approaches to controlling emissions into air, water or soil separately may encourage the shifting of pollution from one environmental medium to another rather than protecting the environment as a whole. It is, therefore, appropriate to provide for an integrated approach to prevention and control of emissions into air, water and soil, to waste management, to energy efficiency and to accident prevention. Such an approach will also contribute to the achievement of a level playing field in the Union by aligning environmental performance requirements for industrial installations.
- (4) It is appropriate to revise the legislation relating to industrial installations in order to simplify and clarify the existing provisions, reduce unnecessary administrative burden and implement the conclusions of the Commission Communications of 21 September 2005 on the Thematic Strategy on Air Pollution (hereinafter the Thematic Strategy on Air Pollution), of 22 September 2006 on the Thematic Strategy for Soil Protection and of 21 December 2005 on the Thematic Strategy on the Prevention and Recycling of Waste adopted as a follow-up to Decision No 1600/2002/EC of the European Parliament and of the Council of 22 July 2002 laying down the Sixth Community Environment Action Programme⁽¹⁾. Those Communications set objectives to protect human health and the environment which cannot be met without further reductions in emissions arising from industrial activities.
- (5) In order to ensure the prevention and control of pollution, each installation should operate only if it holds a permit or, in the case of certain installations and activities using organic solvents, only if it holds a permit or is registered.
- (6) It is for Member States to determine the approach for assigning responsibilities to operators of installations provided that compliance with this Directive is ensured. Member States may choose to grant a permit to one responsible operator for each installation or to specify the responsibility amongst several operators of different parts of an installation. Where its current legal system provides for only one responsible operator for each installation, a Member State may decide to retain this system.
- (7) In order to facilitate the granting of permits, Member States should be able to set requirements for certain categories of installations in general binding rules.
- (8) It is important to prevent accidents and incidents and limit their consequences. Liability regarding the environmental consequences of accidents and incidents is a matter for relevant national law and, where applicable, other relevant Union law.

⁽¹⁾ OJ L 242, 10.9.2002, p. 1.

▼B

- (9) In order to avoid duplication of regulation, the permit for an installation covered by Directive 2003/87/EC of the European Parliament and of the Council of 13 October 2003 establishing a scheme for greenhouse gas emission allowance trading within the Community ⁽¹⁾ should not include an emission limit value for direct emissions of the greenhouse gases specified in Annex I to that Directive except where it is necessary to ensure that no significant local pollution is caused or where an installation is excluded from that scheme.
- (10) In accordance with Article 193 of the Treaty on the Functioning of the European Union (TFEU), this Directive does not prevent Member States from maintaining or introducing more stringent protective measures, for example greenhouse gas emission requirements, provided that such measures are compatible with the Treaties and the Commission has been notified.
- (11) Operators should submit permit applications containing the information necessary for the competent authority to set permit conditions. Operators should be able to use information resulting from the application of Council Directive 85/337/EEC of 27 June 1985 on the assessment of the effects of certain public and private projects on the environment ⁽²⁾ and of Council Directive 96/82/EC of 9 December 1996 on the control of major-accident hazards involving dangerous substances ⁽³⁾ when submitting permit applications.
- (12) The permit should include all the measures necessary to achieve a high level of protection of the environment as a whole and to ensure that the installation is operated in accordance with the general principles governing the basic obligations of the operator. The permit should also include emission limit values for polluting substances, or equivalent parameters or technical measures, appropriate requirements to protect the soil and groundwater and monitoring requirements. Permit conditions should be set on the basis of best available techniques.
- (13) In order to determine best available techniques and to limit imbalances in the Union as regards the level of emissions from industrial activities, reference documents for best available techniques (hereinafter BAT reference documents³) should be drawn up, reviewed and, where necessary, updated through an exchange of information with stakeholders and the key elements of BAT reference documents (hereinafter BAT conclusions³) adopted through committee procedure. In this respect, the Commission should, through committee procedure, establish guidance on the collection of data, on the elaboration of BAT reference documents and on their quality assurance. BAT conclusions should be the reference for setting permit conditions. They can be supplemented by other sources. The Commission should aim to update BAT reference documents not later than 8 years after the publication of the previous version.

⁽¹⁾ OJ L 275, 25.10.2003, p. 32.

⁽²⁾ OJ L 175, 5.7.1985, p. 40.

⁽³⁾ OJ L 10, 14.1.1997, p. 13.

▼B

- (14) In order to ensure an effective and active exchange of information resulting in high-quality BAT reference documents, the Commission should establish a forum that functions in a transparent manner. Practical arrangements for the exchange of information and the accessibility of BAT reference documents should be laid down, in particular to ensure that Member States and stakeholders provide data of sufficient quality and quantity based on established guidance to enable the determination of best available techniques and emerging techniques.
- (15) It is important to provide sufficient flexibility to competent authorities to set emission limit values that ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques. To this end, the competent authority may set emission limits that differ from the emission levels associated with the best available techniques in terms of the values, periods of time and reference conditions applied, so long as it can be demonstrated, through the results of emission monitoring, that emissions have not exceeded the emission levels associated with the best available techniques. Compliance with the emission limit values that are set in permits results in emissions below those emission limit values.
- (16) In order to take into account certain specific circumstances where the application of emission levels associated with the best available techniques would lead to disproportionately high costs compared to the environmental benefits, competent authorities should be able to set emission limit values deviating from those levels. Such deviations should be based on an assessment taking into account well-defined criteria. The emission limit values set out in this Directive should not be exceeded. In any event, no significant pollution should be caused and a high level of protection of the environment taken as a whole should be achieved.
- (17) In order to enable operators to test emerging techniques which could provide for a higher general level of environmental protection, or at least the same level of environmental protection and higher cost savings than existing best available techniques, the competent authority should be able to grant temporary derogations from emission levels associated with the best available techniques.
- (18) Changes to an installation may give rise to higher levels of pollution. Operators should notify the competent authority of any planned change which might affect the environment. Substantial changes to installations which may have significant negative effects on human health or the environment should not be made without a permit granted in accordance with this Directive.
- (19) The spreading of manure contributes significantly to emissions of pollutants into air and water. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution and Union law on water protection, it is necessary for the Commission to review the need to establish the most suitable controls of these emissions through the application of best available techniques.

▼B

- (20) The intensive rearing of poultry and cattle contributes significantly to emissions of pollutants into air and water. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution and in Union law on water protection, it is necessary for the Commission to review the need to establish differentiated capacity thresholds for different poultry species in order to define the scope of this Directive and to review the need to establish the most suitable controls on emissions from cattle rearing installations.
- (21) In order to take account of developments in best available techniques or other changes to an installation, permit conditions should be reconsidered regularly and, where necessary, updated, in particular where new or updated BAT conclusions are adopted.
- (22) In specific cases where permit reconsideration and updating identifies that a longer period than 4 years after the publication of a decision on BAT conclusions might be needed to introduce new best available techniques, competent authorities may set a longer time period in permit conditions where this is justified on the basis of the criteria laid down in this Directive.
- (23) It is necessary to ensure that the operation of an installation does not lead to a deterioration of the quality of soil and groundwater. Permit conditions should, therefore, include appropriate measures to prevent emissions to soil and groundwater and regular surveillance of those measures to avoid leaks, spills, incidents or accidents occurring during the use of equipment and during storage. In order to detect possible soil and groundwater pollution at an early stage and, therefore, to take appropriate corrective measures before the pollution spreads, the monitoring of soil and groundwater for relevant hazardous substances is also necessary. When determining the frequency of monitoring, the type of prevention measures and the extent and occurrence of their surveillance may be considered.
- (24) In order to ensure that the operation of an installation does not deteriorate the quality of soil and groundwater, it is necessary to establish, through a baseline report, the state of soil and groundwater contamination. The baseline report should be a practical tool that permits, as far as possible, a quantified comparison between the state of the site described in that report and the state of the site upon definitive cessation of activities, in order to ascertain whether a significant increase in pollution of soil or groundwater has taken place. The baseline report should, therefore, contain information making use of existing data on soil and groundwater measurements and historical data related to past uses of the site.
- (25) In accordance with the polluter pays principle, when assessing the level of significance of the pollution of soil and groundwater caused by the operator which would trigger the obligation to return the site to the state described in the baseline report,

▼B

Member States should take into account the permit conditions that have applied over the lifetime of the activity concerned, the pollution prevention measures adopted for the installation, and the relative increase in pollution compared to the contamination load identified in the baseline report. Liability regarding pollution not caused by the operator is a matter for relevant national law and, where applicable, other relevant Union law.

- (26) In order to ensure the effective implementation and enforcement of this Directive, operators should regularly report to the competent authority on compliance with permit conditions. Member States should ensure that the operator and the competent authority each take necessary measures in the event of non-compliance with this Directive and provide for a system of environmental inspections. Member States should ensure that sufficient staff are available with the skills and qualifications needed to carry out those inspections effectively.
- (27) In accordance with the Århus Convention on access to information, public participation in decision-making and access to justice in environmental matters⁽¹⁾, effective public participation in decision-making is necessary to enable the public to express, and the decision-maker to take account of, opinions and concerns which may be relevant to those decisions, thereby increasing the accountability and transparency of the decision-making process and contributing to public awareness of environmental issues and support for the decisions taken. Members of the public concerned should have access to justice in order to contribute to the protection of the right to live in an environment which is adequate for personal health and well-being.
- (28) The combustion of fuel in installations with a total rated thermal input below 50 MW contributes significantly to emissions of pollutants into the air. With a view to meeting the objectives set out in the Thematic Strategy on Air Pollution, it is necessary for the Commission to review the need to establish the most suitable controls on emissions from such installations. That review should take into account the specificities of combustion plants used in healthcare facilities, in particular with regard to their exceptional use in the case of emergencies.
- (29) Large combustion plants contribute greatly to emissions of polluting substances into the air resulting in a significant impact on human health and the environment. In order to reduce that impact and to work towards meeting the requirements of Directive 2001/81/EC of the European Parliament and of the Council of 23 October 2001 on national emission ceilings for certain atmospheric pollutants⁽²⁾ and the objectives set out in the Thematic Strategy on Air Pollution, it is necessary to set more stringent emission limit values at Union level for certain categories of combustion plants and pollutants.

⁽¹⁾ OJ L 124, 17.5.2005, p. 4.

⁽²⁾ OJ L 309, 27.11.2001, p. 22.

▼B

- (30) The Commission should review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V for certain large combustion plants, taking into account the review and update of the relevant BAT reference documents. In this context, the Commission should consider the specificity of the energy systems of refineries.
- (31) Due to the characteristics of certain indigenous solid fuels, it is appropriate to apply minimum desulphurisation rates rather than emission limit values for sulphur dioxide for combustion plants firing such fuels. Moreover, as the specific characteristics of oil shale may not allow the application of the same sulphur abatement techniques or the achievement of the same desulphurisation efficiency as for other fuels, a slightly lower minimum desulphurisation rate for plants using this fuel is appropriate.
- (32) In the case of a sudden interruption in the supply of low-sulphur fuel or gas resulting from a serious shortage, the competent authority should be able to grant temporary derogations to allow emissions of the combustion plants concerned to exceed the emission limit values set out in this Directive.
- (33) The operator concerned should not operate a combustion plant for more than 24 hours after malfunctioning or breakdown of abatement equipment and unabated operation should not exceed 120 hours in a 12-month period in order to limit the negative effects of pollution on the environment. However, where there is an overriding need for energy supplies or it is necessary to avoid an overall increase of emissions resulting from the operation of another combustion plant, competent authorities should be able to grant a derogation from those time limits.
- (34) In order to ensure a high level of environmental and human health protection and to avoid transboundary movements of waste to plants operating at lower environmental standards, it is necessary to set and maintain stringent operating conditions, technical requirements and emission limit values for plants incinerating or co-incinerating waste within the Union.
- (35) The use of organic solvents in certain activities and installations gives rise to emissions of organic compounds into the air which contribute to the local and transboundary formation of photochemical oxidants which causes damage to natural resources and has harmful effects on human health. It is, therefore, necessary to take preventive action against the use of organic solvents and to establish a requirement to comply with emission limit values for organic compounds and appropriate operating conditions. Operators should be allowed to comply with the requirements of a reduction scheme instead of complying with the emission limit values set out in this Directive where other measures, such as the use of low-solvent or solvent-free products or techniques, provide alternative means of achieving equivalent emission reduction.

▼B

- (36) Installations producing titanium dioxide can give rise to significant pollution into air and water. In order to reduce these impacts, it is necessary to set at Union level more stringent emission limit values for certain polluting substances.
- (37) With regard to the inclusion in the scope of national laws, regulations and administrative provisions brought into force in order to comply with this Directive of installations for the manufacturing of ceramic products by firings, on the basis of the characteristics of the national industrial sector, and in order to grant clear interpretation of the scope, Member States should decide whether to apply both the criteria, production capacity and kiln capacity, or just one of the two criteria.
- (38) In order to simplify reporting and reduce unnecessary administrative burden, the Commission should identify methods to streamline the way in which data are made available pursuant to this Directive with the other requirements of Union law, and in particular Regulation (EC) No 166/2006 of the European Parliament and of the Council of 18 January 2006 concerning the establishment of a European Pollutant Release and Transfer Register ⁽¹⁾.
- (39) In order to ensure uniform conditions for implementation, implementing powers should be conferred on the Commission to adopt guidance on the collection of data, on the drawing up of BAT reference documents and on their quality assurance, including the suitability of their content and format, to adopt decisions on BAT conclusions, to establish detailed rules on the determination of start-up and shut-down periods and for transitional national plans for large combustion plants, and to establish the type, format and frequency of information that Member States are to make available to the Commission. In accordance with Article 291 TFEU, rules and general principles concerning mechanisms for the control by Member States of the Commission's exercise of implementing powers are to be laid down in advance by a regulation adopted in accordance with the ordinary legislative procedure. Pending the adoption of that new regulation, Council Decision 1999/468/EC of 28 June 1999 laying down the procedures for the exercise of implementing powers conferred on the Commission ⁽²⁾ continues to apply, with the exception of the regulatory procedure with scrutiny, which is not applicable.
- (40) The Commission should be empowered to adopt delegated acts in accordance with Article 290 TFEU in respect of the setting of the date from which continuous measurements of emissions into the air of heavy metals and dioxins and furans are to be carried out, and the adaptation of certain parts of Annexes V, VI and VII to scientific and technical progress. In the case of waste incineration plants and waste co-incineration plants, this may include, inter alia, the establishment of criteria to allow derogations from continuous monitoring of total dust emissions. It is of particular importance that the Commission carry out appropriate consultations during its preparatory work, including at expert level.

⁽¹⁾ OJ L 33, 4.2.2006, p. 1.

⁽²⁾ OJ L 184, 17.7.1999, p. 23.

▼B

- (41) In order to address significant environmental pollution, for example from heavy metals and dioxins and furans, the Commission should, based on an assessment of the implementation of the best available techniques by certain activities or of the impact of those activities on the environment as a whole, present proposals for Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance.
- (42) Member States should lay down rules on penalties applicable to infringements of the national provisions adopted pursuant to this Directive and ensure that they are implemented. Those penalties should be effective, proportionate and dissuasive.
- (43) In order to provide existing installations with sufficient time to adapt technically to the new requirements of this Directive, some of the new requirements should apply to those installations after a fixed period from the date of application of this Directive. Combustion plants need sufficient time to install the necessary abatement measures to meet the emission limit values set out in Annex V.
- (44) Since the objectives of this Directive, namely to ensure a high level of environmental protection and the improvement of environmental quality, cannot be sufficiently achieved by Member States and can, therefore, by reason of the transboundary nature of pollution from industrial activities, be better achieved at Union level, the Union may adopt measures in accordance with the principle of subsidiarity as set out in Article 5 of the Treaty on European Union. In accordance with the principle of proportionality, as set out in that Article, this Directive does not go beyond what is necessary in order to achieve those objectives.
- (45) This Directive respects the fundamental rights and observes the principles recognised in particular by the Charter of Fundamental Rights of the European Union. In particular, this Directive seeks to promote the application of Article 37 of that Charter.
- (46) The obligation to transpose this Directive into national law should be confined to those provisions which represent a substantive change as compared with the earlier Directives. The obligation to transpose the provisions which are unchanged arises under the earlier Directives.
- (47) In accordance with paragraph 34 of the Interinstitutional agreement on better law-making⁽¹⁾, Member States are encouraged to draw up, for themselves and in the interests of the Union, their own tables, which will as far as possible, illustrate the correlation between this Directive and the transposition measures, and to make those tables public.
- (48) This Directive should be without prejudice to the obligations of the Member States relating to the time-limits for transposition into national law and application of the Directives set out in Annex IX, Part B,

⁽¹⁾ OJ C 321, 31.12.2003, p. 1.

▼B

HAVE ADOPTED THIS DIRECTIVE:

CHAPTER I
COMMON PROVISIONS

Article 1

Subject matter

This Directive lays down rules on integrated prevention and control of pollution arising from industrial activities.

It also lays down rules designed to prevent or, where that is not practicable, to reduce emissions into air, water and land and to prevent the generation of waste, in order to achieve a high level of protection of the environment taken as a whole.

Article 2

Scope

1. This Directive shall apply to the industrial activities giving rise to pollution referred to in Chapters II to VI.
2. This Directive shall not apply to research activities, development activities or the testing of new products and processes.

Article 3

Definitions

For the purposes of this Directive the following definitions shall apply:

- (1) ‘substance’ means any chemical element and its compounds, with the exception of the following substances:
 - (a) radioactive substances as defined in Article 1 of Council Directive 96/29/Euratom of 13 May 1996 laying down basic safety standards for the protection of the health of workers and the general public against the dangers arising from ionising radiation ⁽¹⁾;
 - (b) genetically modified micro-organisms as defined in Article 2(b) of Directive 2009/41/EC of the European Parliament and the Council of 6 May 2009 on the contained use of genetically modified micro-organisms ⁽²⁾;
 - (c) genetically modified organisms as defined in point 2 of Article 2 of Directive 2001/18/EC of the European Parliament and of the Council of 12 March 2001 on the deliberate release into the environment of genetically modified organisms ⁽³⁾;

⁽¹⁾ OJ L 159, 29.6.1996, p. 1.

⁽²⁾ OJ L 125, 21.5.2009, p. 75.

⁽³⁾ OJ L 106, 17.4.2001, p. 1.

▼B

- (2) ‘pollution’ means the direct or indirect introduction, as a result of human activity, of substances, vibrations, heat or noise into air, water or land which may be harmful to human health or the quality of the environment, result in damage to material property, or impair or interfere with amenities and other legitimate uses of the environment;
- (3) ‘installation’ means a stationary technical unit within which one or more activities listed in Annex I or in Part 1 of Annex VII are carried out, and any other directly associated activities on the same site which have a technical connection with the activities listed in those Annexes and which could have an effect on emissions and pollution;
- (4) ‘emission’ means the direct or indirect release of substances, vibrations, heat or noise from individual or diffuse sources in the installation into air, water or land;
- (5) ‘emission limit value’ means the mass, expressed in terms of certain specific parameters, concentration and/or level of an emission, which may not be exceeded during one or more periods of time;
- (6) ‘environmental quality standard’ means the set of requirements which must be fulfilled at a given time by a given environment or particular part thereof, as set out in Union law;
- (7) ‘permit’ means a written authorisation to operate all or part of an installation or combustion plant, waste incineration plant or waste co-incineration plant;
- (8) ‘general binding rules’ means emission limit values or other conditions, at least at sector level, that are adopted with the intention of being used directly to set permit conditions;
- (9) ‘substantial change’ means a change in the nature or functioning, or an extension, of an installation or combustion plant, waste incineration plant or waste co-incineration plant which may have significant negative effects on human health or the environment;
- (10) ‘best available techniques’ means the most effective and advanced stage in the development of activities and their methods of operation which indicates the practical suitability of particular techniques for providing the basis for emission limit values and other permit conditions designed to prevent and, where that is not practicable, to reduce emissions and the impact on the environment as a whole:
 - (a) ‘techniques’ includes both the technology used and the way in which the installation is designed, built, maintained, operated and decommissioned;
 - (b) ‘available techniques’ means those developed on a scale which allows implementation in the relevant industrial sector, under economically and technically viable conditions, taking into consideration the costs and advantages, whether or not the techniques are used or produced inside the Member State in question, as long as they are reasonably accessible to the operator;

▼B

- (c) ‘best’ means most effective in achieving a high general level of protection of the environment as a whole;
- (11) ‘BAT reference document’ means a document, resulting from the exchange of information organised pursuant to Article 13, drawn up for defined activities and describing, in particular, applied techniques, present emissions and consumption levels, techniques considered for the determination of best available techniques as well as BAT conclusions and any emerging techniques, giving special consideration to the criteria listed in Annex III;
- (12) ‘BAT conclusions’ means a document containing the parts of a BAT reference document laying down the conclusions on best available techniques, their description, information to assess their applicability, the emission levels associated with the best available techniques, associated monitoring, associated consumption levels and, where appropriate, relevant site remediation measures;
- (13) ‘emission levels associated with the best available techniques’ means the range of emission levels obtained under normal operating conditions using a best available technique or a combination of best available techniques, as described in BAT conclusions, expressed as an average over a given period of time, under specified reference conditions;
- (14) ‘emerging technique’ means a novel technique for an industrial activity that, if commercially developed, could provide either a higher general level of protection of the environment or at least the same level of protection of the environment and higher cost savings than existing best available techniques;
- (15) ‘operator’ means any natural or legal person who operates or controls in whole or in part the installation or combustion plant, waste incineration plant or waste co-incineration plant or, where this is provided for in national law, to whom decisive economic power over the technical functioning of the installation or plant has been delegated;
- (16) ‘the public’ means one or more natural or legal persons and, in accordance with national law or practice, their associations, organisations or groups;
- (17) ‘the public concerned’ means the public affected or likely to be affected by, or having an interest in, the taking of a decision on the granting or the updating of a permit or of permit conditions; for the purposes of this definition, non-governmental organisations promoting environmental protection and meeting any requirements under national law shall be deemed to have an interest;
- (18) ‘hazardous substances’ means substances or mixtures as defined in Article 3 of Regulation (EC) No 1272/2008 of the European Parliament and of the Council of 16 December 2008 on classification, labelling and packaging of substances and mixtures ⁽¹⁾;

⁽¹⁾ OJ L 353, 31.12.2008, p. 1.

▼B

- (19) ‘baseline report’ means information on the state of soil and groundwater contamination by relevant hazardous substances;
- (20) ‘groundwater’ means groundwater as defined in point 2 of Article 2 of Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000 establishing a framework for Community action in the field of water policy ⁽¹⁾;
- (21) ‘soil’ means the top layer of the Earth’s crust situated between the bedrock and the surface. The soil is composed of mineral particles, organic matter, water, air and living organisms;
- (22) ‘environmental inspection’ means all actions, including site visits, monitoring of emissions and checks of internal reports and follow-up documents, verification of self-monitoring, checking of the techniques used and adequacy of the environment management of the installation, undertaken by or on behalf of the competent authority to check and promote compliance of installations with their permit conditions and, where necessary, to monitor their environmental impact;
- (23) ‘poultry’ means poultry as defined in point 1 of Article 2 of Council Directive 90/539/EEC of 15 October 1990 on animal health conditions governing intra-Community trade in, and imports from third countries of, poultry and hatching eggs ⁽²⁾;
- (24) ‘fuel’ means any solid, liquid or gaseous combustible material;
- (25) ‘combustion plant’ means any technical apparatus in which fuels are oxidised in order to use the heat thus generated;
- (26) ‘stack’ means a structure containing one or more flues providing a passage for waste gases in order to discharge them into the air;
- (27) ‘operating hours’ means the time, expressed in hours, during which a combustion plant, in whole or in part, is operating and discharging emissions into the air, excluding start-up and shut-down periods;
- (28) ‘rate of desulphurisation’ means the ratio over a given period of time of the quantity of sulphur which is not emitted into air by a combustion plant to the quantity of sulphur contained in the solid fuel which is introduced into the combustion plant facilities and which is used in the plant over the same period of time;
- (29) ‘indigenous solid fuel’ means a naturally occurring solid fuel fired in a combustion plant specifically designed for that fuel and extracted locally;
- (30) ‘determinative fuel’ means the fuel which, amongst all fuels used in a multi-fuel firing combustion plant using the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, has the highest emission

⁽¹⁾ OJ L 327, 22.12.2000, p. 1.

⁽²⁾ OJ L 303, 31.10.1990, p. 6.

▼B

limit value as set out in Part 1 of Annex V, or, in the case of several fuels having the same emission limit value, the fuel having the highest thermal input amongst those fuels;

- (31) ‘biomass’ means any of the following:
- (a) products consisting of any vegetable matter from agriculture or forestry which can be used as a fuel for the purpose of recovering its energy content;
 - (b) the following waste:
 - (i) vegetable waste from agriculture and forestry;
 - (ii) vegetable waste from the food processing industry, if the heat generated is recovered;
 - (iii) fibrous vegetable waste from virgin pulp production and from production of paper from pulp, if it is co-incinerated at the place of production and the heat generated is recovered;
 - (iv) cork waste;
 - (v) wood waste with the exception of wood waste which may contain halogenated organic compounds or heavy metals as a result of treatment with wood preservatives or coating and which includes, in particular, such wood waste originating from construction and demolition waste;
- (32) ‘multi-fuel firing combustion plant’ means any combustion plant which may be fired simultaneously or alternately by two or more types of fuel;
- (33) ‘gas turbine’ means any rotating machine which converts thermal energy into mechanical work, consisting mainly of a compressor, a thermal device in which fuel is oxidised in order to heat the working fluid, and a turbine;
- (34) ‘gas engine’ means an internal combustion engine which operates according to the Otto cycle and uses spark ignition or, in case of dual fuel engines, compression ignition to burn fuel;
- (35) ‘diesel engine’ means an internal combustion engine which operates according to the diesel cycle and uses compression ignition to burn fuel;
- (36) ‘small isolated system’ means a small isolated system as defined in point 26 of Article 2 of Directive 2003/54/EC of the European Parliament and of the Council of 26 June 2003 concerning common rules for the internal market in electricity ⁽¹⁾;
- (37) ‘waste’ means waste as defined in point 1 of Article 3 of Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste ⁽²⁾;

⁽¹⁾ OJ L 176, 15.7.2003, p. 37.

⁽²⁾ OJ L 312, 22.11.2008, p. 3.

▼B

- (38) ‘hazardous waste’ means hazardous waste as defined in point 2 of Article 3 of Directive 2008/98/EC;
- (39) ‘mixed municipal waste’ means waste from households as well as commercial, industrial and institutional waste which, because of its nature and composition, is similar to waste from households, but excluding fractions indicated under heading 20 01 of the Annex to Decision 2000/532/EC ⁽¹⁾ that are collected separately at source and excluding the other waste indicated under heading 20 02 of that Annex;
- (40) ‘waste incineration plant’ means any stationary or mobile technical unit and equipment dedicated to the thermal treatment of waste, with or without recovery of the combustion heat generated, through the incineration by oxidation of waste as well as other thermal treatment processes, such as pyrolysis, gasification or plasma process, if the substances resulting from the treatment are subsequently incinerated;
- (41) ‘waste co-incineration plant’ means any stationary or mobile technical unit whose main purpose is the generation of energy or production of material products and which uses waste as a regular or additional fuel or in which waste is thermally treated for the purpose of disposal through the incineration by oxidation of waste as well as other thermal treatment processes, such as pyrolysis, gasification or plasma process, if the substances resulting from the treatment are subsequently incinerated;
- (42) ‘nominal capacity’ means the sum of the incineration capacities of the furnaces of which a waste incineration plant or a waste co-incineration plant is composed, as specified by the constructor and confirmed by the operator, with due account being taken of the calorific value of the waste, expressed as the quantity of waste incinerated per hour;
- (43) ‘dioxins and furans’ means all polychlorinated dibenzo-p-dioxins and dibenzofurans listed in Part 2 of Annex VI;
- (44) ‘organic compound’ means any compound containing at least the element carbon and one or more of hydrogen, halogens, oxygen, sulphur, phosphorus, silicon or nitrogen, with the exception of carbon oxides and inorganic carbonates and bicarbonates;
- (45) ‘volatile organic compound’ means any organic compound as well as the fraction of creosote, having at 293,15 K a vapour pressure of 0,01 kPa or more, or having a corresponding volatility under the particular conditions of use;
- (46) ‘organic solvent’ means any volatile organic compound which is used for any of the following:
- (a) alone or in combination with other agents, and without undergoing a chemical change, to dissolve raw materials, products or waste materials;

⁽¹⁾ Commission Decision 2000/532/EC of 3 May 2000 replacing Decision 94/3/EC establishing a list of wastes pursuant to Article 1(a) of Council Directive 75/442/EEC on waste and Council Decision 94/904/EC establishing a list of hazardous waste pursuant to Article 1(4) of Council Directive 91/689/EEC on hazardous waste (OJ L 226, 6.9.2000, p. 3).

▼B

- (b) as a cleaning agent to dissolve contaminants;
 - (c) as a dissolver;
 - (d) as a dispersion medium;
 - (e) as a viscosity adjuster;
 - (f) as a surface tension adjuster;
 - (g) as a plasticiser;
 - (h) as a preservative;
- (47) ‘coating’ means coating as defined in point 8 of Article 2 of Directive 2004/42/EC of the European Parliament and of the Council of 21 April 2004 on the limitation of emissions of volatile organic compounds due to the use of organic solvents in certain paints and varnishes and vehicle refinishing products ⁽¹⁾.

*Article 4***Obligation to hold a permit**

1. Member States shall take the necessary measures to ensure that no installation or combustion plant, waste incineration plant or waste co-incineration plant is operated without a permit.

By way of derogation from the first subparagraph, Member States may set a procedure for the registration of installations covered only by Chapter V.

The procedure for registration shall be specified in a binding act and include at least a notification to the competent authority by the operator of the intention to operate an installation.

2. Member States may opt to provide that a permit cover two or more installations or parts of installations operated by the same operator on the same site.

Where a permit covers two or more installations, it shall contain conditions to ensure that each installation complies with the requirements of this Directive.

3. Member States may opt to provide that a permit cover several parts of an installation operated by different operators. In such cases, the permit shall specify the responsibilities of each operator.

*Article 5***Granting of a permit**

1. Without prejudice to other requirements laid down in national or Union law, the competent authority shall grant a permit if the installation complies with the requirements of this Directive.

⁽¹⁾ OJ L 143, 30.4.2004, p. 87.

▼B

2. Member States shall take the measures necessary to ensure that the conditions of, and the procedures for the granting of, the permit are fully coordinated where more than one competent authority or more than one operator is involved or more than one permit is granted, in order to guarantee an effective integrated approach by all authorities competent for this procedure.

3. In the case of a new installation or a substantial change where Article 4 of Directive 85/337/EEC applies, any relevant information obtained or conclusion arrived at pursuant to Articles 5, 6, 7 and 9 of that Directive shall be examined and used for the purposes of granting the permit.

*Article 6***General binding rules**

Without prejudice to the obligation to hold a permit, Member States may include requirements for certain categories of installations, combustion plants, waste incineration plants or waste co-incineration plants in general binding rules.

Where general binding rules are adopted, the permit may simply include a reference to such rules.

*Article 7***Incidents and accidents**

Without prejudice to Directive 2004/35/EC of the European Parliament and of the Council of 21 April 2004 on environmental liability with regard to the prevention and remedying of environmental damage ⁽¹⁾, in the event of any incident or accident significantly affecting the environment, Member States shall take the necessary measures to ensure that:

- (a) the operator informs the competent authority immediately;
- (b) the operator immediately takes the measures to limit the environmental consequences and to prevent further possible incidents or accidents;
- (c) the competent authority requires the operator to take any appropriate complementary measures that the competent authority considers necessary to limit the environmental consequences and to prevent further possible incidents or accidents.

*Article 8***Non-compliance**

1. Member States shall take the necessary measures to ensure that the permit conditions are complied with.

2. In the event of a breach of the permit conditions, Member States shall ensure that:

- (a) the operator immediately informs the competent authority;

⁽¹⁾ OJ L 143, 30.4.2004, p. 56.

▼B

- (b) the operator immediately takes the measures necessary to ensure that compliance is restored within the shortest possible time;
- (c) the competent authority requires the operator to take any appropriate complementary measures that the competent authority considers necessary to restore compliance.

Where the breach of the permit conditions poses an immediate danger to human health or threatens to cause an immediate significant adverse effect upon the environment, and until compliance is restored in accordance with points (b) and (c) of the first subparagraph, the operation of the installation, combustion plant, waste incineration plant, waste co-incineration plant or relevant part thereof shall be suspended.

*Article 9***Emission of greenhouse gases**

1. Where emissions of a greenhouse gas from an installation are specified in Annex I to Directive 2003/87/EC in relation to an activity carried out in that installation, the permit shall not include an emission limit value for direct emissions of that gas, unless necessary to ensure that no significant local pollution is caused.
2. For activities listed in Annex I to Directive 2003/87/EC, Member States may choose not to impose requirements relating to energy efficiency in respect of combustion units or other units emitting carbon dioxide on the site.
3. Where necessary, the competent authorities shall amend the permit as appropriate.
4. Paragraphs 1 to 3 shall not apply to installations which are temporarily excluded from the scheme for greenhouse gas emission allowance trading within the Union in accordance with Article 27 of Directive 2003/87/EC.

CHAPTER II

PROVISIONS FOR ACTIVITIES LISTED IN ANNEX I*Article 10***Scope**

This Chapter shall apply to the activities set out in Annex I and, where applicable, reaching the capacity thresholds set out in that Annex.

*Article 11***General principles governing the basic obligations of the operator**

Member States shall take the necessary measures to provide that installations are operated in accordance with the following principles:

- (a) all the appropriate preventive measures are taken against pollution;

▼B

- (b) the best available techniques are applied;
- (c) no significant pollution is caused;
- (d) the generation of waste is prevented in accordance with Directive 2008/98/EC;
- (e) where waste is generated, it is, in order of priority and in accordance with Directive 2008/98/EC, prepared for re-use, recycled, recovered or, where that is technically and economically impossible, it is disposed of while avoiding or reducing any impact on the environment;
- (f) energy is used efficiently;
- (g) the necessary measures are taken to prevent accidents and limit their consequences;
- (h) the necessary measures are taken upon definitive cessation of activities to avoid any risk of pollution and return the site of operation to the satisfactory state defined in accordance with Article 22.

*Article 12***Applications for permits**

1. Member States shall take the necessary measures to ensure that an application for a permit includes a description of the following:
 - (a) the installation and its activities;
 - (b) the raw and auxiliary materials, other substances and the energy used in or generated by the installation;
 - (c) the sources of emissions from the installation;
 - (d) the conditions of the site of the installation;
 - (e) where applicable, a baseline report in accordance with Article 22(2);
 - (f) the nature and quantities of foreseeable emissions from the installation into each medium as well as identification of significant effects of the emissions on the environment;
 - (g) the proposed technology and other techniques for preventing or, where this is not possible, reducing emissions from the installation;
 - (h) measures for the prevention, preparation for re-use, recycling and recovery of waste generated by the installation;
 - (i) further measures planned to comply with the general principles of the basic obligations of the operator as provided for in Article 11;

▼B

- (j) measures planned to monitor emissions into the environment;
- (k) the main alternatives to the proposed technology, techniques and measures studied by the applicant in outline.

An application for a permit shall also include a non-technical summary of the details referred to in the first subparagraph.

2. Where information supplied in accordance with the requirements provided for in Directive 85/337/EEC or a safety report prepared in accordance with Directive 96/82/EC or other information produced in response to other legislation fulfils any of the requirements of paragraph 1, that information may be included in, or attached to, the application.

*Article 13***BAT reference documents and exchange of information**

1. In order to draw up, review and, where necessary, update BAT reference documents, the Commission shall organise an exchange of information between Member States, the industries concerned, non-governmental organisations promoting environmental protection and the Commission.

2. The exchange of information shall, in particular, address the following:

- (a) the performance of installations and techniques in terms of emissions, expressed as short- and long-term averages, where appropriate, and the associated reference conditions, consumption and nature of raw materials, water consumption, use of energy and generation of waste;
- (b) the techniques used, associated monitoring, cross-media effects, economic and technical viability and developments therein;
- (c) best available techniques and emerging techniques identified after considering the issues mentioned in points (a) and (b).

3. The Commission shall establish and regularly convene a forum composed of representatives of Member States, the industries concerned and non-governmental organisations promoting environmental protection.

The Commission shall obtain the opinion of the forum on the practical arrangements for the exchange of information and, in particular, on the following:

- (a) the rules of procedure of the forum;
- (b) the work programme for the exchange of information;
- (c) guidance on the collection of data;
- (d) guidance on the drawing up of BAT reference documents and on their quality assurance including the suitability of their content and format.

▼B

The guidance referred to in points (c) and (d) of the second subparagraph shall take account of the opinion of the forum and shall be adopted in accordance with the regulatory procedure referred to in Article 75(2).

4. The Commission shall obtain and make publicly available the opinion of the forum on the proposed content of the BAT reference documents and shall take into account this opinion for the procedures laid down in paragraph 5.

5. Decisions on the BAT conclusions shall be adopted in accordance with the regulatory procedure referred to in Article 75(2).

6. After the adoption of a decision in accordance with paragraph 5, the Commission shall without delay make the BAT reference document publicly available and ensure that BAT conclusions are made available in all the official languages of the Union.

7. Pending the adoption of a relevant decision in accordance with paragraph 5, the conclusions on best available techniques from BAT reference documents adopted by the Commission prior to the date referred to in Article 83 shall apply as BAT conclusions for the purposes of this Chapter except for Article 15(3) and (4).

*Article 14***Permit conditions**

1. Member States shall ensure that the permit includes all measures necessary for compliance with the requirements of Articles 11 and 18.

Those measures shall include at least the following:

- (a) emission limit values for polluting substances listed in Annex II, and for other polluting substances, which are likely to be emitted from the installation concerned in significant quantities, having regard to their nature and their potential to transfer pollution from one medium to another;
- (b) appropriate requirements ensuring protection of the soil and groundwater and measures concerning the monitoring and management of waste generated by the installation;
- (c) suitable emission monitoring requirements specifying:
 - (i) measurement methodology, frequency and evaluation procedure; and
 - (ii) where Article 15(3)(b) is applied, that results of emission monitoring are available for the same periods of time and reference conditions as for the emission levels associated with the best available techniques;
- (d) an obligation to supply the competent authority regularly, and at least annually, with:
 - (i) information on the basis of results of emission monitoring referred to in point (c) and other required data that enables the competent authority to verify compliance with the permit conditions; and

▼B

- (ii) where Article 15(3)(b) is applied, a summary of the results of emission monitoring which allows a comparison with the emission levels associated with the best available techniques;
- (e) appropriate requirements for the regular maintenance and surveillance of measures taken to prevent emissions to soil and groundwater pursuant to point (b) and appropriate requirements concerning the periodic monitoring of soil and groundwater in relation to relevant hazardous substances likely to be found on site and having regard to the possibility of soil and groundwater contamination at the site of the installation;
- (f) measures relating to conditions other than normal operating conditions such as start-up and shut-down operations, leaks, malfunctions, momentary stoppages and definitive cessation of operations;
- (g) provisions on the minimisation of long-distance or transboundary pollution;
- (h) conditions for assessing compliance with the emission limit values or a reference to the applicable requirements specified elsewhere.

2. For the purpose of paragraph 1(a), emission limit values may be supplemented or replaced by equivalent parameters or technical measures ensuring an equivalent level of environmental protection.

3. BAT conclusions shall be the reference for setting the permit conditions.

4. Without prejudice to Article 18, the competent authority may set stricter permit conditions than those achievable by the use of the best available techniques as described in the BAT conclusions. Member States may establish rules under which the competent authority may set such stricter conditions.

5. Where the competent authority sets permit conditions on the basis of a best available technique not described in any of the relevant BAT conclusions, it shall ensure that:

- (a) that technique is determined by giving special consideration to the criteria listed in Annex III; and
- (b) the requirements of Article 15 are complied with.

Where the BAT conclusions referred to in the first subparagraph do not contain emission levels associated with the best available techniques, the competent authority shall ensure that the technique referred to in the first subparagraph ensures a level of environmental protection equivalent to the best available techniques described in the BAT conclusions.

6. Where an activity or a type of production process carried out within an installation is not covered by any of the BAT conclusions or where those conclusions do not address all the potential environmental effects of the activity or process, the competent authority shall, after prior consultations with the operator, set the permit

▼B

conditions on the basis of the best available techniques that it has determined for the activities or processes concerned, by giving special consideration to the criteria listed in Annex III.

7. For installations referred to in point 6.6 of Annex I, paragraphs 1 to 6 of this Article shall apply without prejudice to the legislation relating to animal welfare.

*Article 15***Emission limit values, equivalent parameters and technical measures**

1. The emission limit values for polluting substances shall apply at the point where the emissions leave the installation, and any dilution prior to that point shall be disregarded when determining those values.

With regard to indirect releases of polluting substances into water, the effect of a water treatment plant may be taken into account when determining the emission limit values of the installation concerned, provided that an equivalent level of protection of the environment as a whole is guaranteed and provided this does not lead to higher levels of pollution in the environment.

2. Without prejudice to Article 18, the emission limit values and the equivalent parameters and technical measures referred to in Article 14(1) and (2) shall be based on the best available techniques, without prescribing the use of any technique or specific technology.

3. The competent authority shall set emission limit values that ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques as laid down in the decisions on BAT conclusions referred to in Article 13(5) through either of the following:

- (a) setting emission limit values that do not exceed the emission levels associated with the best available techniques. Those emission limit values shall be expressed for the same or shorter periods of time and under the same reference conditions as those emission levels associated with the best available techniques; or
- (b) setting different emission limit values than those referred to under point (a) in terms of values, periods of time and reference conditions.

Where point (b) is applied, the competent authority shall, at least annually, assess the results of emission monitoring in order to ensure that emissions under normal operating conditions have not exceeded the emission levels associated with the best available techniques.

4. By way of derogation from paragraph 3, and without prejudice to Article 18, the competent authority may, in specific cases, set less strict emission limit values. Such a derogation may apply only where an assessment shows that the achievement of emission levels associated with the best available techniques as described in BAT conclusions would lead to disproportionately higher costs compared to the environmental benefits due to:

▼B

- (a) the geographical location or the local environmental conditions of the installation concerned; or
- (b) the technical characteristics of the installation concerned.

The competent authority shall document in an annex to the permit conditions the reasons for the application of the first subparagraph including the result of the assessment and the justification for the conditions imposed.

The emission limit values set in accordance with the first subparagraph shall, however, not exceed the emission limit values set out in the Annexes to this Directive, where applicable.

The competent authority shall in any case ensure that no significant pollution is caused and that a high level of protection of the environment as a whole is achieved.

On the basis of information provided by Member States in accordance with Article 72(1), in particular concerning the application of this paragraph, the Commission may, where necessary, assess and further clarify, through guidance, the criteria to be taken into account for the application of this paragraph.

The competent authority shall re-assess the application of the first subparagraph as part of each reconsideration of the permit conditions pursuant to Article 21.

5. The competent authority may grant temporary derogations from the requirements of paragraphs 2 and 3 of this Article and from Article 11(a) and (b) for the testing and use of emerging techniques for a total period of time not exceeding 9 months, provided that after the period specified, either the technique is stopped or the activity achieves at least the emission levels associated with the best available techniques.

*Article 16***Monitoring requirements**

1. The monitoring requirements referred to in Article 14(1)(c) shall, where applicable, be based on the conclusions on monitoring as described in the BAT conclusions.
2. The frequency of the periodic monitoring referred to in Article 14(1)(e) shall be determined by the competent authority in a permit for each individual installation or in general binding rules.

Without prejudice to the first subparagraph, periodic monitoring shall be carried out at least once every 5 years for groundwater and 10 years for soil, unless such monitoring is based on a systematic appraisal of the risk of contamination.

*Article 17***General binding rules for activities listed in Annex I**

1. When adopting general binding rules, Member States shall ensure an integrated approach and a high level of environmental protection equivalent to that achievable with individual permit conditions.

▼B

2. General binding rules shall be based on the best available techniques, without prescribing the use of any technique or specific technology in order to ensure compliance with Articles 14 and 15.
3. Member States shall ensure that general binding rules are updated to take into account developments in best available techniques and in order to ensure compliance with Article 21.
4. General binding rules adopted in accordance with paragraphs 1 to 3 shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication.

*Article 18***Environmental quality standards**

Where an environmental quality standard requires stricter conditions than those achievable by the use of the best available techniques, additional measures shall be included in the permit, without prejudice to other measures which may be taken to comply with environmental quality standards.

*Article 19***Developments in best available techniques**

Member States shall ensure that the competent authority follows or is informed of developments in best available techniques and of the publication of any new or updated BAT conclusions and shall make that information available to the public concerned.

*Article 20***Changes by operators to installations**

1. Member States shall take the necessary measures to ensure that the operator informs the competent authority of any planned change in the nature or functioning, or an extension of the installation which may have consequences for the environment. Where appropriate, the competent authority shall update the permit.
2. Member States shall take the necessary measures to ensure that no substantial change planned by the operator is made without a permit granted in accordance with this Directive.

The application for a permit and the decision by the competent authority shall cover those parts of the installation and those details listed in Article 12 which may be affected by the substantial change.

3. Any change in the nature or functioning or an extension of an installation shall be deemed to be substantial if the change or extension in itself reaches the capacity thresholds set out in Annex I.

*Article 21***Reconsideration and updating of permit conditions by the competent authority**

1. Member States shall take the necessary measures to ensure that the competent authority periodically reconsiders in accordance with paragraphs 2 to 5 all permit conditions and, where necessary to ensure compliance with this Directive, updates those conditions.

2. At the request of the competent authority, the operator shall submit all the information necessary for the purpose of reconsidering the permit conditions, including, in particular, results of emission monitoring and other data, that enables a comparison of the operation of the installation with the best available techniques described in the applicable BAT conclusions and with the emission levels associated with the best available techniques.

When reconsidering permit conditions, the competent authority shall use any information resulting from monitoring or inspections.

3. Within 4 years of publication of decisions on BAT conclusions in accordance with Article 13(5) relating to the main activity of an installation, the competent authority shall ensure that:

- (a) all the permit conditions for the installation concerned are reconsidered and, if necessary, updated to ensure compliance with this Directive, in particular, with Article 15(3) and (4), where applicable;
- (b) the installation complies with those permit conditions.

The reconsideration shall take into account all the new or updated BAT conclusions applicable to the installation and adopted in accordance with Article 13(5) since the permit was granted or last reconsidered.

4. Where an installation is not covered by any of the BAT conclusions, the permit conditions shall be reconsidered and, if necessary, updated where developments in the best available techniques allow for the significant reduction of emissions.

5. The permit conditions shall be reconsidered and, where necessary, updated at least in the following cases:

- (a) the pollution caused by the installation is of such significance that the existing emission limit values of the permit need to be revised or new such values need to be included in the permit;
- (b) the operational safety requires other techniques to be used;
- (c) where it is necessary to comply with a new or revised environmental quality standard in accordance with Article 18.

*Article 22***Site closure**

1. Without prejudice to Directive 2000/60/EC, Directive 2004/35/EC, Directive 2006/118/EC of the European Parliament and of the Council of 12 December 2006 on the protection of groundwater against pollution and deterioration⁽¹⁾ and to relevant Union law on soil protection, the competent authority shall set permit conditions to ensure compliance with paragraphs 3 and 4 of this Article upon definitive cessation of activities.

2. Where the activity involves the use, production or release of relevant hazardous substances and having regard to the possibility of soil and groundwater contamination at the site of the installation, the operator shall prepare and submit to the competent authority a baseline report before starting operation of an installation or before a permit for an installation is updated for the first time after 7 January 2013.

The baseline report shall contain the information necessary to determine the state of soil and groundwater contamination so as to make a quantified comparison with the state upon definitive cessation of activities provided for under paragraph 3.

The baseline report shall contain at least the following information:

- (a) information on the present use and, where available, on past uses of the site;
- (b) where available, existing information on soil and groundwater measurements that reflect the state at the time the report is drawn up or, alternatively, new soil and groundwater measurements having regard to the possibility of soil and groundwater contamination by those hazardous substances to be used, produced or released by the installation concerned.

Where information produced pursuant to other national or Union law fulfils the requirements of this paragraph that information may be included in, or attached to, the submitted baseline report.

The Commission shall establish guidance on the content of the baseline report.

3. Upon definitive cessation of the activities, the operator shall assess the state of soil and groundwater contamination by relevant hazardous substances used, produced or released by the installation. Where the installation has caused significant pollution of soil or groundwater by relevant hazardous substances compared to the state established in the baseline report referred to in paragraph 2, the operator shall take the necessary measures to address that pollution so as to return the site to that state. For that purpose, the technical feasibility of such measures may be taken into account.

Without prejudice to the first subparagraph, upon definitive cessation of the activities, and where the contamination of soil and groundwater at the site poses a significant risk to human health or the environment as a result of the permitted activities carried out by the operator before the

⁽¹⁾ OJ L 372, 27.12.2006, p. 19.

▼B

permit for the installation is updated for the first time after 7 January 2013 and taking into account the conditions of the site of the installation established in accordance with Article 12(1)(d), the operator shall take the necessary actions aimed at the removal, control, containment or reduction of relevant hazardous substances, so that the site, taking into account its current or approved future use, ceases to pose such a risk.

4. Where the operator is not required to prepare a baseline report referred to in paragraph 2, the operator shall, upon definitive cessation of the activities, take the necessary actions aimed at the removal, control, containment or reduction of relevant hazardous substances, so that the site, taking into account its current or approved future use, ceases to pose any significant risk to human health or the environment due to the contamination of soil and groundwater as a result of the permitted activities and taking into account the conditions of the site of the installation established in accordance with Article 12(1)(d).

*Article 23***Environmental inspections**

1. Member States shall set up a system of environmental inspections of installations addressing the examination of the full range of relevant environmental effects from the installations concerned.

Member States shall ensure that operators afford the competent authorities all necessary assistance to enable those authorities to carry out any site visits, to take samples and to gather any information necessary for the performance of their duties for the purposes of this Directive.

2. Member States shall ensure that all installations are covered by an environmental inspection plan at national, regional or local level and shall ensure that this plan is regularly reviewed and, where appropriate, updated.

3. Each environmental inspection plan shall include the following:

- (a) a general assessment of relevant significant environmental issues;
- (b) the geographical area covered by the inspection plan;
- (c) a register of the installations covered by the plan;
- (d) procedures for drawing up programmes for routine environmental inspections pursuant to paragraph 4;
- (e) procedures for non-routine environmental inspections pursuant to paragraph 5;
- (f) where necessary, provisions on the cooperation between different inspection authorities.

4. Based on the inspection plans, the competent authority shall regularly draw up programmes for routine environmental inspections, including the frequency of site visits for different types of installations.

▼B

The period between two site visits shall be based on a systematic appraisal of the environmental risks of the installations concerned and shall not exceed 1 year for installations posing the highest risks and 3 years for installations posing the lowest risks.

If an inspection has identified an important case of non-compliance with the permit conditions, an additional site visit shall be carried out within 6 months of that inspection.

The systematic appraisal of the environmental risks shall be based on at least the following criteria:

- (a) the potential and actual impacts of the installations concerned on human health and the environment taking into account the levels and types of emissions, the sensitivity of the local environment and the risk of accidents;
- (b) the record of compliance with permit conditions;
- (c) the participation of the operator in the Union eco-management and audit scheme (EMAS), pursuant to Regulation (EC) No 1221/2009 ⁽¹⁾.

The Commission may adopt guidance on the criteria for the appraisal of environmental risks.

5. Non-routine environmental inspections shall be carried out to investigate serious environmental complaints, serious environmental accidents, incidents and occurrences of non-compliance as soon as possible and, where appropriate, before the granting, reconsideration or update of a permit.

6. Following each site visit, the competent authority shall prepare a report describing the relevant findings regarding compliance of the installation with the permit conditions and conclusions on whether any further action is necessary.

The report shall be notified to the operator concerned within 2 months of the site visit taking place. The report shall be made publicly available by the competent authority in accordance with Directive 2003/4/EC of the European Parliament and of the Council of 28 January 2003 on public access to environmental information ⁽²⁾ within 4 months of the site visit taking place.

Without prejudice to Article 8(2), the competent authority shall ensure that the operator takes all the necessary actions identified in the report within a reasonable period.

Article 24

Access to information and public participation in the permit procedure

1. Member States shall ensure that the public concerned are given early and effective opportunities to participate in the following procedures:

- (a) the granting of a permit for new installations;

⁽¹⁾ Regulation (EC) No 1221/2009 of the European Parliament and of the Council of 25 November 2009 on the voluntary participation by organisations in a Community eco-management and audit scheme (EMAS) (OJ L 342, 22.12.2009, p. 1).

⁽²⁾ OJ L 41, 14.2.2003, p. 26.

▼B

- (b) the granting of a permit for any substantial change;
- (c) the granting or updating of a permit for an installation where the application of Article 15(4) is proposed;
- (d) the updating of a permit or permit conditions for an installation in accordance with Article 21(5)(a).

The procedure set out in Annex IV shall apply to such participation.

2. When a decision on granting, reconsideration or updating of a permit has been taken, the competent authority shall make available to the public, including via the Internet in relation to points (a), (b) and (f), the following information:

- (a) the content of the decision, including a copy of the permit and any subsequent updates;
- (b) the reasons on which the decision is based;
- (c) the results of the consultations held before the decision was taken and an explanation of how they were taken into account in that decision;
- (d) the title of the BAT reference documents relevant to the installation or activity concerned;
- (e) how the permit conditions referred to in Article 14, including the emission limit values, have been determined in relation to the best available techniques and emission levels associated with the best available techniques;
- (f) where a derogation is granted in accordance with Article 15(4), the specific reasons for that derogation based on the criteria laid down in that paragraph and the conditions imposed.

3. The competent authority shall also make available to the public, including via the Internet at least in relation to point (a):

- (a) relevant information on the measures taken by the operator upon definitive cessation of activities in accordance with Article 22;
- (b) the results of emission monitoring as required under the permit conditions and held by the competent authority.

4. Paragraphs 1, 2 and 3 of this Article shall apply subject to the restrictions laid down in Article 4(1) and (2) of Directive 2003/4/EC.

Article 25

Access to justice

1. Member States shall ensure that, in accordance with the relevant national legal system, members of the public concerned have access to a review procedure before a court of law or another independent and

▼B

impartial body established by law to challenge the substantive or procedural legality of decisions, acts or omissions subject to Article 24 when one of the following conditions is met:

- (a) they have a sufficient interest;
- (b) they maintain the impairment of a right, where administrative procedural law of a Member State requires this as a precondition.

2. Member States shall determine at what stage the decisions, acts or omissions may be challenged.

3. What constitutes a sufficient interest and impairment of a right shall be determined by Member States, consistently with the objective of giving the public concerned wide access to justice.

To this end, the interest of any non-governmental organisation promoting environmental protection and meeting any requirements under national law shall be deemed sufficient for the purpose of paragraph 1(a).

Such organisations shall also be deemed to have rights capable of being impaired for the purpose of paragraph 1(b).

4. Paragraphs 1, 2 and 3 shall not exclude the possibility of a preliminary review procedure before an administrative authority and shall not affect the requirement of exhaustion of administrative review procedures prior to recourse to judicial review procedures, where such a requirement exists under national law.

Any such procedure shall be fair, equitable, timely and not prohibitively expensive.

5. Member States shall ensure that practical information is made available to the public on access to administrative and judicial review procedures.

Article 26

Transboundary effects

1. Where a Member State is aware that the operation of an installation is likely to have significant negative effects on the environment of another Member State, or where a Member State which is likely to be significantly affected so requests, the Member State in whose territory the application for a permit pursuant to Article 4 or Article 20(2) was submitted shall forward to the other Member State any information required to be given or made available pursuant to Annex IV at the same time as it makes it available to the public.

Such information shall serve as a basis for any consultations necessary in the framework of the bilateral relations between the two Member States on a reciprocal and equivalent basis.

2. Within the framework of their bilateral relations, Member States shall ensure that in the cases referred to in paragraph 1, the applications are also made available for an appropriate period of time to the public of the Member State likely to be affected so that it will have the right to comment on them before the competent authority reaches its decision.

▼B

3. The results of any consultations pursuant to paragraphs 1 and 2 shall be taken into consideration when the competent authority reaches a decision on the application.

4. The competent authority shall inform any Member State which has been consulted pursuant to paragraph 1 of the decision reached on the application and shall forward to it the information referred to in Article 24(2). That Member State shall take the measures necessary to ensure that that information is made available in an appropriate manner to the public concerned in its own territory.

*Article 27***Emerging techniques**

1. Member States shall, where appropriate, encourage the development and application of emerging techniques, in particular for those emerging techniques identified in BAT reference documents.

2. The Commission shall establish guidance to assist Member States in encouraging the development and application of emerging techniques as referred to in paragraph 1.

CHAPTER III

SPECIAL PROVISIONS FOR COMBUSTION PLANTS*Article 28***Scope**

This Chapter shall apply to combustion plants, the total rated thermal input of which is equal to or greater than 50 MW, irrespective of the type of fuel used.

This Chapter shall not apply to the following combustion plants:

- (a) plants in which the products of combustion are used for the direct heating, drying, or any other treatment of objects or materials;
- (b) post-combustion plants designed to purify the waste gases by combustion which are not operated as independent combustion plants;
- (c) facilities for the regeneration of catalytic cracking catalysts;
- (d) facilities for the conversion of hydrogen sulphide into sulphur;
- (e) reactors used in the chemical industry;
- (f) coke battery furnaces;
- (g) cowpers;
- (h) any technical apparatus used in the propulsion of a vehicle, ship or aircraft;

▼B

- (i) gas turbines and gas engines used on offshore platforms;
- (j) plants which use any solid or liquid waste as a fuel other than waste referred to in point (b) of point 31 of Article 3.

*Article 29***Aggregation rules**

1. Where the waste gases of two or more separate combustion plants are discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.
2. Where two or more separate combustion plants which have been granted a permit for the first time on or after 1 July 1987, or the operators of which have submitted a complete application for a permit on or after that date, are installed in such a way that, taking technical and economic factors into account, their waste gases could in the judgement of the competent authority, be discharged through a common stack, the combination formed by such plants shall be considered as a single combustion plant and their capacities added for the purpose of calculating the total rated thermal input.
3. For the purpose of calculating the total rated thermal input of a combination of combustion plants referred to in paragraphs 1 and 2, individual combustion plants with a rated thermal input below 15 MW shall not be considered.

*Article 30***Emission limit values**

1. Waste gases from combustion plants shall be discharged in a controlled way by means of a stack, containing one or more flues, the height of which is calculated in such a way as to safeguard human health and the environment.
2. All permits for installations containing combustion plants which have been granted a permit before 7 January 2013, or the operators of which have submitted a complete application for a permit before that date, provided that such plants are put into operation no later than 7 January 2014, shall include conditions ensuring that emissions into air from these plants do not exceed the emission limit values set out in Part 1 of Annex V.

All permits for installations containing combustion plants which had been granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC and which are in operation after 1 January 2016, shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.
3. All permits for installations containing combustion plants not covered by paragraph 2 shall include conditions ensuring that emissions into the air from these plants do not exceed the emission limit values set out in Part 2 of Annex V.

▼B

4. The emission limit values set out in Parts 1 and 2 of Annex V as well as the minimum rates of desulphurisation set out in Part 5 of that Annex shall apply to the emissions of each common stack in relation to the total rated thermal input of the entire combustion plant. Where Annex V provides that emission limit values may be applied for a part of a combustion plant with a limited number of operating hours, those limit values shall apply to the emissions of that part of the plant, but shall be set in relation to the total rated thermal input of the entire combustion plant.

5. The competent authority may grant a derogation for a maximum of 6 months from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 for sulphur dioxide in respect of a combustion plant which to this end normally uses low-sulphur fuel, in cases where the operator is unable to comply with those limit values because of an interruption in the supply of low-sulphur fuel resulting from a serious shortage.

Member States shall immediately inform the Commission of any derogation granted under the first subparagraph.

6. The competent authority may grant a derogation from the obligation to comply with the emission limit values provided for in paragraphs 2 and 3 in cases where a combustion plant using only gaseous fuel has to resort exceptionally to the use of other fuels because of a sudden interruption in the supply of gas and for this reason would need to be equipped with a waste gas purification facility. The period for which such a derogation is granted shall not exceed 10 days except where there is an overriding need to maintain energy supplies.

The operator shall immediately inform the competent authority of each specific case referred to in the first subparagraph.

Member States shall inform the Commission immediately of any derogation granted under the first subparagraph.

7. Where a combustion plant is extended, the emission limit values set out in Part 2 of Annex V shall apply to the extended part of the plant affected by the change and shall be set in relation to the total rated thermal input of the entire combustion plant. In the case of a change to a combustion plant, which may have consequences for the environment and which affects a part of the plant with a rated thermal input of 50 MW or more, the emission limit values as set out in Part 2 of Annex V shall apply to the part of the plant which has changed in relation to the total rated thermal input of the entire combustion plant.

8. The emission limit values set out in Parts 1 and 2 of Annex V shall not apply to the following combustion plants:

- (a) diesel engines;
- (b) recovery boilers within installations for the production of pulp.

9. For the following combustion plants, on the basis of the best available techniques, the Commission shall review the need to establish Union-wide emission limit values and to amend the emission limit values set out in Annex V:

▼B

- (a) the combustion plants referred to in paragraph 8;
- (b) combustion plants within refineries firing the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, taking into account the specificity of the energy systems of refineries;
- (c) combustion plants firing gases other than natural gas;
- (d) combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption.

The Commission shall, by 31 December 2013, report the results of this review to the European Parliament and to the Council accompanied, if appropriate, by a legislative proposal.

*Article 31***Desulphurisation rate**

1. For combustion plants firing indigenous solid fuel, which cannot comply with the emission limit values for sulphur dioxide referred to in Article 30(2) and (3) due to the characteristics of this fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex and with prior validation by the competent authority of the technical report referred to in Article 72(4)(a).
2. For combustion plants firing indigenous solid fuel, which co-incinerate waste, and which cannot comply with the C_{proc} values for sulphur dioxide set out in points 3.1 or 3.2 of Part 4 of Annex VI due to the characteristics of the indigenous solid fuel, Member States may apply instead the minimum rates of desulphurisation set out in Part 5 of Annex V, in accordance with the compliance rules set out in Part 6 of that Annex. If Member States choose to apply this paragraph, C_{waste} as referred to in point 1 of Part 4 of Annex VI shall be equal to 0 mg/Nm³.
3. The Commission shall, by 31 December 2019, review the possibility of applying minimum rates of desulphurisation set out in Part 5 of Annex V, taking into account, in particular, the best available techniques and benefits obtained from reduced sulphur dioxide emissions.

*Article 32***Transitional National Plan**

1. During the period from 1 January 2016 to 30 June 2020, Member States may draw up and implement a transitional national plan covering combustion plants which were granted the first permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003. For each of the combustion plants covered by the plan, the plan shall cover emissions of one or more of the following pollutants: nitrogen oxides, sulphur dioxide and dust. For gas turbines, only nitrogen oxides emissions shall be covered by the plan.

▼B

The transitional national plan shall not include any of the following combustion plants:

- (a) those to which Article 33(1) applies;
- (b) those within refineries firing low calorific gases from the gasification of refinery residues or the distillation and conversion residues from the refining of crude oil for own consumption, alone or with other fuels;
- (c) those to which Article 35 applies;
- (d) those which are granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC.

2. Combustion plants covered by the plan may be exempted from compliance with the emission limit values referred to in Article 30(2) for the pollutants which are subject to the plan or, where applicable, with the rates of desulphurisation referred to in Article 31.

The emission limit values for sulphur dioxide, nitrogen oxides and dust set out in the permit for the combustion plant applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained.

Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V.

3. For each of the pollutants it covers, the transitional national plan shall set a ceiling defining the maximum total annual emissions for all of the plants covered by the plan on the basis of each plant's total rated thermal input on 31 December 2010, its actual annual operating hours and its fuel use, averaged over the last 10 years of operation up to and including 2010.

The ceiling for the year 2016 shall be calculated on the basis of the relevant emission limit values set out in Annexes III to VII to Directive 2001/80/EC or, where applicable, on the basis of the rates of desulphurisation set out in Annex III to Directive 2001/80/EC. In the case of gas turbines, the emission limit values for nitrogen oxides set out for such plants in Part B of Annex VI to Directive 2001/80/EC shall be used. The ceilings for the years 2019 and 2020 shall be calculated on the basis of the relevant emission limit values set out in Part 1 of Annex V to this Directive or, where applicable, the relevant rates of desulphurisation set out in Part 5 of Annex V to this Directive. The ceilings for the years 2017 and 2018 shall be set providing a linear decrease of the ceilings between 2016 and 2019.

Where a plant included in the transitional national plan is closed or no longer falls within the scope of Chapter III, this shall not result in an increase in total annual emissions from the remaining plants covered by the plan.

▼B

4. The transitional national plan shall also contain provisions on monitoring and reporting that comply with the implementing rules established in accordance with Article 41(b), as well as the measures foreseen for each of the plants in order to ensure timely compliance with the emission limit values that will apply from 1 July 2020.

5. Not later than 1 January 2013, Member States shall communicate their transitional national plans to the Commission.

The Commission shall evaluate the plans and, where the Commission has raised no objections within 12 months of receipt of a plan, the Member State concerned shall consider its plan to be accepted.

When the Commission considers a plan not to be in accordance with the implementing rules established in accordance with Article 41(b), it shall inform the Member State concerned that its plan cannot be accepted. In relation to the evaluation of a new version of a plan which a Member State communicates to the Commission, the time period referred to in the second subparagraph shall be 6 months.

6. Member States shall inform the Commission of any subsequent changes to the plan.

*Article 33***Limited life time derogation**

1. During the period from 1 January 2016 to 31 December 2023, combustion plants may be exempted from compliance with the emission limit values referred to in Article 30(2) and with the rates of desulphurisation referred to in Article 31, where applicable, and from their inclusion in the transitional national plan referred to in Article 32 provided that the following conditions are fulfilled:

- (a) the operator of the combustion plant undertakes, in a written declaration submitted by 1 January 2014 at the latest to the competent authority, not to operate the plant for more than 17 500 operating hours, starting from 1 January 2016 and ending no later than 31 December 2023;
- (b) the operator is required to submit each year to the competent authority a record of the number of operating hours since 1 January 2016;
- (c) the emission limit values for sulphur dioxides, nitrogen oxides and dust set out in the permit for the combustion plant applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained during the remaining operational life of the combustion plant. Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V; and
- (d) the combustion plant has not been granted an exemption as referred to in Article 4(4) of Directive 2001/80/EC.

▼B

2. At the latest on 1 January 2016, each Member State shall communicate to the Commission a list of any combustion plants to which paragraph 1 applies, including their total rated thermal input, the fuel types used and the applicable emission limit values for sulphur dioxide, nitrogen oxides and dust. For plants subject to paragraph 1, Member States shall communicate annually to the Commission a record of the number of operating hours since 1 January 2016.

3. In case of a combustion plant being, on 6 January 2011, part of a small isolated system and accounting at that date for at least 35 % of the electricity supply within that system, which is unable, due to its technical characteristics, to comply with the emission limit values referred to in Article 30(2), the number of operating hours referred to in paragraph 1(a) of this Article shall be 18 000, starting from 1 January 2020 and ending no later than 31 December 2023, and the date referred to in paragraph 1(b) and paragraph 2 of this Article shall be 1 January 2020.

4. In case of a combustion plant with a total rated thermal input of more than 1 500 MW which started operating before 31 December 1986 and fires indigenous solid fuel with a net calorific value of less than 5 800 kJ/kg, a moisture content greater than 45 % by weight, a combined moisture and ash content greater than 60 % by weight and a calcium oxide content in ash greater than 10 %, the number of operating hours referred to in paragraph 1(a) shall be 32 000.

*Article 34***Small isolated systems**

1. Until 31 December 2019, combustion plants being, on 6 January 2011, part of a small isolated system may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31, where applicable. Until 31 December 2019, the emission limit values set out in the permits of these combustion plants, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, shall at least be maintained.

2. Combustion plants with a total rated thermal input of more than 500 MW firing solid fuels, which were granted the first permit after 1 July 1987, shall comply with the emission limit values for nitrogen oxides set out in Part 1 of Annex V.

3. Where there are, on the territory of a Member State combustion plants covered by this Chapter that are part of a small isolated system, that Member State shall report to the Commission before 7 January 2013 a list of those combustion plants, the total annual energy consumption of the small isolated system and the amount of energy obtained through interconnection with other systems.

*Article 35***District heating plants**

1. Until 31 December 2022, a combustion plant may be exempted from compliance with the emission limit values referred to in Article 30(2) and the rates of desulphurisation referred to in Article 31 provided that the following conditions are fulfilled:

▼B

- (a) the total rated thermal input of the combustion plant does not exceed 200 MW;
- (b) the plant was granted a first permit before 27 November 2002 or the operator of that plant had submitted a complete application for a permit before that date, provided that it was put into operation no later than 27 November 2003;
- (c) at least 50 % of the useful heat production of the plant, as a rolling average over a period of 5 years, is delivered in the form of steam or hot water to a public network for district heating; and
- (d) the emission limit values for sulphur dioxide, nitrogen oxides and dust set out in its permit applicable on 31 December 2015, pursuant in particular to the requirements of Directives 2001/80/EC and 2008/1/EC, are at least maintained until 31 December 2022.

2. At the latest on 1 January 2016, each Member State shall communicate to the Commission a list of any combustion plants to which paragraph 1 applies, including their total rated thermal input, the fuel types used and the applicable emission limit values for sulphur dioxide, nitrogen oxides and dust. In addition, Member States shall, for any combustion plants to which paragraph 1 applies and during the period mentioned in that paragraph, inform the Commission annually of the proportion of useful heat production of each plant which was delivered in the form of steam or hot water to a public network for district heating, expressed as a rolling average over the preceding 5 years.

*Article 36***Geological storage of carbon dioxide**

1. Member States shall ensure that operators of all combustion plants with a rated electrical output of 300 megawatts or more for which the original construction licence or, in the absence of such a procedure, the original operating licence is granted after the entry into force of Directive 2009/31/EC of the European Parliament and of the Council of 23 April 2009 on the geological storage of carbon dioxide ⁽¹⁾, have assessed whether the following conditions are met:

- (a) suitable storage sites are available,
- (b) transport facilities are technically and economically feasible,
- (c) it is technically and economically feasible to retrofit for carbon dioxide capture.

2. If the conditions laid down in paragraph 1 are met, the competent authority shall ensure that suitable space on the installation site for the equipment necessary to capture and compress carbon dioxide is set aside. The competent authority shall determine whether the conditions are met on the basis of the assessment referred to in paragraph 1 and other available information, particularly concerning the protection of the environment and human health.

⁽¹⁾ OJ L 140, 5.6.2009, p. 114.

▼B*Article 37***Malfunction or breakdown of the abatement equipment**

1. Member States shall ensure that provision is made in the permits for procedures relating to malfunction or breakdown of the abatement equipment.
2. In the case of a breakdown, the competent authority shall require the operator to reduce or close down operations if a return to normal operation is not achieved within 24 hours, or to operate the plant using low polluting fuels.

The operator shall notify the competent authority within 48 hours after the malfunction or breakdown of the abatement equipment.

The cumulative duration of unabated operation shall not exceed 120 hours in any 12-month period.

The competent authority may grant a derogation from the time limits set out in the first and third subparagraphs in one of the following cases:

- (a) there is an overriding need to maintain energy supplies;
- (b) the combustion plant with the breakdown would be replaced for a limited period by another plant which would cause an overall increase in emissions.

*Article 38***Monitoring of emissions into air**

1. Member States shall ensure that the monitoring of air polluting substances is carried out in accordance with Part 3 of Annex V.
2. The installation and functioning of the automated monitoring equipment shall be subject to control and to annual surveillance tests as set out in Part 3 of Annex V.
3. The competent authority shall determine the location of the sampling or measurement points to be used for the monitoring of emissions.
4. All monitoring results shall be recorded, processed and presented in such a way as to enable the competent authority to verify compliance with the operating conditions and emission limit values which are included in the permit.

*Article 39***Compliance with emission limit values**

The emission limit values for air shall be regarded as being complied with if the conditions set out in Part 4 of Annex V are fulfilled.

*Article 40***Multi-fuel firing combustion plants**

1. In the case of a multi-fuel firing combustion plant involving the simultaneous use of two or more fuels, the competent authority shall set the emission limit values in accordance with the following steps:

- (a) taking the emission limit value relevant for each individual fuel and pollutant corresponding to the total rated thermal input of the entire combustion plant as set out in Parts 1 and 2 of Annex V;
- (b) determining fuel-weighted emission limit values, which are obtained by multiplying the individual emission limit value referred to in point (a) by the thermal input delivered by each fuel, and dividing the product of multiplication by the sum of the thermal inputs delivered by all fuels,
- (c) aggregating the fuel-weighted emission limit values.

2. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the following emission limit values may be applied instead of the emission limit values set according to paragraph 1:

- (a) where, during the operation of the combustion plant, the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is 50 % or more, the emission limit value set in Part 1 of Annex V for the determinative fuel;
- (b) where the proportion contributed by the determinative fuel to the sum of the thermal inputs delivered by all fuels is less than 50 %, the emission limit value determined in accordance with the following steps:
 - (i) taking the emission limit values set out in Part 1 of Annex V for each of the fuels used, corresponding to the total rated thermal input of the combustion plant;
 - (ii) calculating the emission limit value of the determinative fuel by multiplying the emission limit value, determined for that fuel according to point (i), by a factor of two, and subtracting from this product the emission limit value of the fuel used with the lowest emission limit value as set out in Part 1 of Annex V, corresponding to the total rated thermal input of the combustion plant;
 - (iii) determining the fuel-weighted emission limit value for each fuel used by multiplying the emission limit value determined under points (i) and (ii) by the thermal input of the fuel concerned and by dividing the product of this multiplication by the sum of the thermal inputs delivered by all fuels;

▼B

- (iv) aggregating the fuel-weighted emission limit values determined under point (iii).

3. In the case of multi-fuel firing combustion plants covered by Article 30(2), which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels, the average emission limit values for sulphur dioxide set out in Part 7 of Annex V may be applied instead of the emission limit values set according to paragraphs 1 or 2 of this Article.

*Article 41***Implementing rules**

Implementing rules shall be established concerning:

- (a) the determination of the start-up and shut-down periods referred to in point 27 of Article 3 and in point 1 of Part 4 of Annex V; and
- (b) the transitional national plans referred to in Article 32 and, in particular, the setting of emission ceilings and related monitoring and reporting.

Those implementing rules shall be adopted in accordance with the regulatory procedure referred to in Article 75(2). The Commission shall make appropriate proposals not later than 7 July 2011.

CHAPTER IV

SPECIAL PROVISIONS FOR WASTE INCINERATION PLANTS AND WASTE CO-INCINERATION PLANTS*Article 42***Scope**

1. This Chapter shall apply to waste incineration plants and waste co-incineration plants which incinerate or co-incinerate solid or liquid waste.

This Chapter shall not apply to gasification or pyrolysis plants, if the gases resulting from this thermal treatment of waste are purified to such an extent that they are no longer a waste prior to their incineration and they can cause emissions no higher than those resulting from the burning of natural gas.

For the purposes of this Chapter, waste incineration plants and waste co-incineration plants shall include all incineration lines or co-incineration lines, waste reception, storage, on site pretreatment facilities, waste-, fuel- and air-supply systems, boilers, facilities for the treatment of waste gases, on-site facilities for treatment or storage of residues and waste water, stacks, devices and systems for controlling incineration or co-incineration operations, recording and monitoring incineration or co-incineration conditions.

If processes other than oxidation, such as pyrolysis, gasification or plasma process, are applied for the thermal treatment of waste, the waste incineration plant or waste co-incineration plant shall include both the thermal treatment process and the subsequent incineration process.

▼B

If waste co-incineration takes place in such a way that the main purpose of the plant is not the generation of energy or production of material products but rather the thermal treatment of waste, the plant shall be regarded as a waste incineration plant.

2. This Chapter shall not apply to the following plants:

- (a) plants treating only the following wastes:
 - (i) waste listed in point (b) of point 31 of Article 3;
 - (ii) radioactive waste;
 - (iii) animal carcasses as regulated by Regulation (EC) No 1774/2002 of the European Parliament and of the Council of 3 October 2002 laying down health rules concerning animal by-products not intended for human consumption ⁽¹⁾;
 - (iv) waste resulting from the exploration for, and the exploitation of, oil and gas resources from off-shore installations and incinerated on board the installations;
- (b) experimental plants used for research, development and testing in order to improve the incineration process and which treat less than 50 tonnes of waste per year.

*Article 43***Definition of residue**

For the purposes of this Chapter, 'residue' shall mean any liquid or solid waste which is generated by a waste incineration plant or waste co-incineration plant.

*Article 44***Applications for permits**

An application for a permit for a waste incineration plant or waste co-incineration plant shall include a description of the measures which are envisaged to guarantee that the following requirements are met:

- (a) the plant is designed, equipped and will be maintained and operated in such a manner that the requirements of this Chapter are met taking into account the categories of waste to be incinerated or co-incinerated;
- (b) the heat generated during the incineration and co-incineration process is recovered as far as practicable through the generation of heat, steam or power;
- (c) the residues will be minimised in their amount and harmfulness and recycled where appropriate;
- (d) the disposal of the residues which cannot be prevented, reduced or recycled will be carried out in conformity with national and Union law.

⁽¹⁾ OJ L 273, 10.10.2002, p. 1.

▼B*Article 45***Permit conditions**

1. The permit shall include the following:
 - (a) a list of all types of waste which may be treated using at least the types of waste set out in the European Waste List established by Decision 2000/532/EC, if possible, and containing information on the quantity of each type of waste, where appropriate;
 - (b) the total waste incinerating or co-incinerating capacity of the plant;
 - (c) the limit values for emissions into air and water;
 - (d) the requirements for the pH, temperature and flow of waste water discharges;
 - (e) the sampling and measurement procedures and frequencies to be used to comply with the conditions set for emission monitoring;
 - (f) the maximum permissible period of any technically unavoidable stoppages, disturbances, or failures of the purification devices or the measurement devices, during which the emissions into the air and the discharges of waste water may exceed the prescribed emission limit values.
2. In addition to the requirements set out in paragraph 1, the permit granted to a waste incineration plant or waste co-incineration plant using hazardous waste shall include the following:
 - (a) a list of the quantities of the different categories of hazardous waste which may be treated;
 - (b) the minimum and maximum mass flows of those hazardous wastes, their lowest and maximum calorific values and their maximum contents of polychlorinated biphenyls, pentachlorophenol, chlorine, fluorine, sulphur, heavy metals and other polluting substances.
3. Member States may list the categories of waste to be included in the permit which can be co-incinerated in certain categories of waste co-incineration plants.
4. The competent authority shall periodically reconsider and, where necessary, update permit conditions.

*Article 46***Control of emissions**

1. Waste gases from waste incineration plants and waste co-incineration plants shall be discharged in a controlled way by means of a stack the height of which is calculated in such a way as to safeguard human health and the environment.
2. Emissions into air from waste incineration plants and waste co-incineration plants shall not exceed the emission limit values set out in parts 3 and 4 of Annex VI or determined in accordance with Part 4 of that Annex.

▼B

If in a waste co-incineration plant more than 40 % of the resulting heat release comes from hazardous waste, or the plant co-incinerates untreated mixed municipal waste, the emission limit values set out in Part 3 of Annex VI shall apply.

3. Discharges to the aquatic environment of waste water resulting from the cleaning of waste gases shall be limited as far as practicable and the concentrations of polluting substances shall not exceed the emission limit values set out in Part 5 of Annex VI.

4. The emission limit values shall apply at the point where waste waters from the cleaning of waste gases are discharged from the waste incineration plant or waste co-incineration plant.

When waste waters from the cleaning of waste gases are treated outside the waste incineration plant or waste co-incineration plant at a treatment plant intended only for the treatment of this sort of waste water, the emission limit values set out in Part 5 of Annex VI shall be applied at the point where the waste waters leave the treatment plant. Where the waste water from the cleaning of waste gases is treated collectively with other sources of waste water, either on site or off site, the operator shall make the appropriate mass balance calculations, ►C1 using the results of the measurements set out in point 3 of Part 6 of Annex VI in order to determine the emission levels in the final waste water discharge ◀ that can be attributed to the waste water arising from the cleaning of waste gases.

Under no circumstances shall dilution of waste water take place for the purpose of complying with the emission limit values set out in Part 5 of Annex VI.

5. Waste incineration plant sites and waste co-incineration plant sites, including associated storage areas for waste, shall be designed and operated in such a way as to prevent the unauthorised and accidental release of any polluting substances into soil, surface water and groundwater.

Storage capacity shall be provided for contaminated rainwater run-off from the waste incineration plant site or waste co-incineration plant site or for contaminated water arising from spillage or fire-fighting operations. The storage capacity shall be adequate to ensure that such waters can be tested and treated before discharge where necessary.

6. Without prejudice to Article 50(4)(c), the waste incineration plant or waste co-incineration plant or individual furnaces being part of a waste incineration plant or waste co-incineration plant shall under no circumstances continue to incinerate waste for a period of more than 4 hours uninterrupted where emission limit values are exceeded.

The cumulative duration of operation in such conditions over 1 year shall not exceed 60 hours.

The time limit set out in the second subparagraph shall apply to those furnaces which are linked to one single waste gas cleaning device.

▼B*Article 47***Breakdown**

In the case of a breakdown, the operator shall reduce or close down operations as soon as practicable until normal operations can be restored.

*Article 48***Monitoring of emissions**

1. Member States shall ensure that the monitoring of emissions is carried out in accordance with Parts 6 and 7 of Annex VI.
2. The installation and functioning of the automated measuring systems shall be subject to control and to annual surveillance tests as set out in point 1 of Part 6 of Annex VI.
3. The competent authority shall determine the location of the sampling or measurement points to be used for monitoring of emissions.
4. All monitoring results shall be recorded, processed and presented in such a way as to enable the competent authority to verify compliance with the operating conditions and emission limit values which are included in the permit.
5. As soon as appropriate measurement techniques are available within the Union, the Commission shall, by means of delegated acts in accordance with Article 76 and subject to the conditions laid down in Articles 77 and 78, set the date from which continuous measurements of emissions into the air of heavy metals and dioxins and furans are to be carried out.

*Article 49***Compliance with emission limit values**

The emission limit values for air and water shall be regarded as being complied with if the conditions described in Part 8 of Annex VI are fulfilled.

*Article 50***Operating conditions**

1. Waste incineration plants shall be operated in such a way as to achieve a level of incineration such that the total organic carbon content of slag and bottom ashes is less than 3 % or their loss on ignition is less than 5 % of the dry weight of the material. If necessary, waste pre-treatment techniques shall be used.
2. Waste incineration plants shall be designed, equipped, built and operated in such a way that the gas resulting from the incineration of waste is raised, after the last injection of combustion air, in a controlled and homogeneous fashion and even under the most unfavourable conditions, to a temperature of at least 850 °C for at least two seconds.

▼B

Waste co-incineration plants shall be designed, equipped, built and operated in such a way that the gas resulting from the co-incineration of waste is raised in a controlled and homogeneous fashion and even under the most unfavourable conditions, to a temperature of at least 850 °C for at least two seconds.

If hazardous waste with a content of more than 1 % of halogenated organic substances, expressed as chlorine, is incinerated or co-incinerated, the temperature required to comply with the first and second subparagraphs shall be at least 1 100 °C.

In waste incineration plants, the temperatures set out in the first and third subparagraphs shall be measured near the inner wall of the combustion chamber. The competent authority may authorise the measurements at another representative point of the combustion chamber.

3. Each combustion chamber of a waste incineration plant shall be equipped with at least one auxiliary burner. This burner shall be switched on automatically when the temperature of the combustion gases after the last injection of combustion air falls below the temperatures set out in paragraph 2. It shall also be used during plant start-up and shut-down operations in order to ensure that those temperatures are maintained at all times during these operations and as long as unburned waste is in the combustion chamber.

The auxiliary burner shall not be fed with fuels which can cause higher emissions than those resulting from the burning of gas oil as defined in Article 2(2) of Council Directive 1999/32/EC of 26 April 1999 relating to a reduction in the sulphur content of certain liquid fuels ⁽¹⁾, liquefied gas or natural gas.

4. Waste incineration plants and waste co-incineration plants shall operate an automatic system to prevent waste feed in the following situations:

- (a) at start-up, until the temperature set out in paragraph 2 of this Article or the temperature specified in accordance with Article 51(1) has been reached;
- (b) whenever the temperature set out in paragraph 2 of this Article or the temperature specified in accordance with Article 51(1) is not maintained;
- (c) whenever the continuous measurements show that any emission limit value is exceeded due to disturbances or failures of the waste gas cleaning devices.

5. Any heat generated by waste incineration plants or waste co-incineration plants shall be recovered as far as practicable.

6. Infectious clinical waste shall be placed straight in the furnace, without first being mixed with other categories of waste and without direct handling.

7. Member States shall ensure that the waste incineration plant or waste co-incineration plant is operated and controlled by a natural person who is competent to manage the plant.

⁽¹⁾ OJ L 121, 11.5.1999, p. 13.

▼B*Article 51***Authorisation to change operating conditions**

1. Conditions different from those laid down in Article 50(1), (2) and (3) and, as regards the temperature, paragraph 4 of that Article and specified in the permit for certain categories of waste or for certain thermal processes, may be authorised by the competent authority provided the other requirements of this Chapter are met. Member States may lay down rules governing these authorisations.
2. For waste incineration plants, the change of the operating conditions shall not cause more residues or residues with a higher content of organic polluting substances compared to those residues which could be expected under the conditions laid down in Article 50(1), (2) and (3).
3. Emissions of total organic carbon and carbon monoxide from waste co-incineration plants, authorised to change operating conditions according to paragraph 1 shall also comply with the emission limit values set out in Part 3 of Annex VI.

Emissions of total organic carbon from bark boilers within the pulp and paper industry co-incinerating waste at the place of its production which were in operation and had a permit before 28 December 2002 and which are authorised to change operating conditions according to paragraph 1 shall also comply with the emission limit values set out in Part 3 of Annex VI.

4. Member States shall communicate to the Commission all operating conditions authorised under paragraphs 1, 2 and 3 and the results of verifications made as part of the information provided in accordance with the reporting requirements under Article 72.

*Article 52***Delivery and reception of waste**

1. The operator of the waste incineration plant or waste co-incineration plant shall take all necessary precautions concerning the delivery and reception of waste in order to prevent or to limit as far as practicable the pollution of air, soil, surface water and groundwater as well as other negative effects on the environment, odours and noise, and direct risks to human health.
2. The operator shall determine the mass of each type of waste, if possible according to the European Waste List established by Decision 2000/532/EC, prior to accepting the waste at the waste incineration plant or waste co-incineration plant.
3. Prior to accepting hazardous waste at the waste incineration plant or waste co-incineration plant, the operator shall collect available information about the waste for the purpose of verifying compliance with the permit requirements specified in Article 45(2).

▼B

That information shall cover the following:

- (a) all the administrative information on the generating process contained in the documents mentioned in paragraph 4(a);
- (b) the physical, and as far as practicable, chemical composition of the waste and all other information necessary to evaluate its suitability for the intended incineration process;
- (c) the hazardous characteristics of the waste, the substances with which it cannot be mixed, and the precautions to be taken in handling the waste.

4. Prior to accepting hazardous waste at the waste incineration plant or waste co-incineration plant, at least the following procedures shall be carried out by the operator:

- (a) the checking of the documents required by Directive 2008/98/EC and, where applicable, those required by Regulation (EC) No 1013/2006 of the European Parliament and of the Council of 14 June 2006 on shipments of waste ⁽¹⁾ and by legislation on transport of dangerous goods;
- (b) the taking of representative samples, unless inappropriate as far as possible before unloading, to verify conformity with the information provided for in paragraph 3 by carrying out controls and to enable the competent authorities to identify the nature of the wastes treated.

The samples referred to in point (b) shall be kept for at least 1 month after the incineration or co-incineration of the waste concerned.

5. The competent authority may grant exemptions from paragraphs 2, 3 and 4 to waste incineration plants or waste co-incineration plants which are a part of an installation covered by Chapter II and only incinerate or co-incinerate waste generated within that installation.

Article 53

Residues

1. Residues shall be minimised in their amount and harmfulness. Residues shall be recycled, where appropriate, directly in the plant or outside.
2. Transport and intermediate storage of dry residues in the form of dust shall take place in such a way as to prevent dispersal of those residues in the environment.
3. Prior to determining the routes for the disposal or recycling of the residues, appropriate tests shall be carried out to establish the physical and chemical characteristics and the polluting potential of the residues. Those tests shall concern the total soluble fraction and heavy metals soluble fraction.

⁽¹⁾ OJ L 190, 12.7.2006, p. 1.

▼B*Article 54***Substantial change**

A change of operation of a waste incineration plant or a waste co-incineration plant treating only non-hazardous waste in an installation covered by Chapter II which involves the incineration or co-incineration of hazardous waste shall be regarded as a substantial change.

*Article 55***Reporting and public information on waste incineration plants and waste co-incineration plants**

1. Applications for new permits for waste incineration plants and waste co-incineration plants shall be made available to the public at one or more locations for an appropriate period to enable the public to comment on the applications before the competent authority reaches a decision. That decision, including at least a copy of the permit, and any subsequent updates, shall also be made available to the public.

2. For waste incineration plants or waste co-incineration plants with a nominal capacity of 2 tonnes or more per hour, the report referred to in Article 72 shall include information on the functioning and monitoring of the plant and give account of the running of the incineration or co-incineration process and the level of emissions into air and water in comparison with the emission limit values. That information shall be made available to the public.

3. A list of waste incineration plants or waste co-incineration plants with a nominal capacity of less than 2 tonnes per hour shall be drawn up by the competent authority and shall be made available to the public.

CHAPTER V

SPECIAL PROVISIONS FOR INSTALLATIONS AND ACTIVITIES USING ORGANIC SOLVENTS*Article 56***Scope**

This chapter shall apply to activities listed in Part 1 of Annex VII and, where applicable, reaching the consumption thresholds set out in Part 2 of that Annex.

*Article 57***Definitions**

For the purposes of this Chapter, the following definitions shall apply:

- (1) 'existing installation' means an installation in operation on 29 March 1999 or which was granted a permit or registered before 1 April 2001 or the operator of which submitted a complete application for a permit before 1 April 2001, provided that that installation was put in operation no later than 1 April 2002;

▼B

- (2) 'waste gases' means the final gaseous discharge containing volatile organic compounds or other pollutants from a stack or abatement equipment into air;
- (3) 'fugitive emissions' means any emissions not in waste gases of volatile organic compounds into air, soil and water as well as solvents contained in any products, unless otherwise stated in Part 2 of Annex VII;
- (4) 'total emissions' means the sum of fugitive emissions and emissions in waste gases;
- (5) 'mixture' means mixture as defined in Article 3(2) of Regulation (EC) No 1907/2006 of the European Parliament and of the Council of 18 December 2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) and establishing a European Chemicals Agency ⁽¹⁾,
- (6) 'adhesive' means any mixture, including all the organic solvents or mixtures containing organic solvents necessary for its proper application, which is used to adhere separate parts of a product;
- (7) 'ink' means a mixture, including all the organic solvents or mixtures containing organic solvents necessary for its proper application, which is used in a printing activity to impress text or images on to a surface;
- (8) 'varnish' means a transparent coating;
- (9) 'consumption' means the total input of organic solvents into an installation per calendar year, or any other 12-month period, less any volatile organic compounds that are recovered for re-use;
- (10) 'input' means the quantity of organic solvents and their quantity in mixtures used when carrying out an activity, including the solvents recycled inside and outside the installation, and which are counted every time they are used to carry out the activity;
- (11) 're-use' means the use of organic solvents recovered from an installation for any technical or commercial purpose and including use as a fuel but excluding the final disposal of such recovered organic solvent as waste;
- (12) 'contained conditions' means conditions under which an installation is operated so that the volatile organic compounds released from the activity are collected and discharged in a controlled way either via a stack or abatement equipment and are, therefore, not entirely fugitive;
- (13) 'start-up and shut-down operations' means operations excluding regularly oscillating activity phases whilst bringing an activity, an equipment item or a tank into or out of service or into or out of an idling state.

⁽¹⁾ OJ L 396, 30.12.2006, p. 1.

*Article 58***Substitution of hazardous substances**

Substances or mixtures which, because of their content of volatile organic compounds classified as carcinogens, mutagens, or toxic to reproduction under Regulation (EC) No 1272/2008, are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F, shall be replaced, as far as possible by less harmful substances or mixtures within the shortest possible time.

*Article 59***Control of emissions**

1. Member States shall take the necessary measures to ensure that each installation complies with either of the following:

- (a) the emission of volatile organic compounds from installations shall not exceed the emission limit values in waste gases and the fugitive emission limit values, or the total emission limit values, and other requirements laid down in Parts 2 and 3 of Annex VII are complied with;
- (b) the requirements of the reduction scheme set out in Part 5 of Annex VII provided that an equivalent emission reduction is achieved compared to that achieved through the application of the emission limit values referred to in point (a).

Member States shall report to the Commission in accordance with Article 72(1) on the progress in achieving the equivalent emission reduction referred to in point (b).

2. By way of derogation from paragraph 1(a), where the operator demonstrates to the competent authority that for an individual installation the emission limit value for fugitive emissions is not technically and economically feasible, the competent authority may allow emissions to exceed that emission limit value provided that significant risks to human health or the environment are not to be expected and that the operator demonstrates to the competent authority that the best available techniques are being used.

3. By way of derogation from paragraph 1, for coating activities covered by item 8 of the table in Part 2 of Annex VII which cannot be carried out under contained conditions, the competent authority may allow the emissions of the installation not to comply with the requirements set out in that paragraph if the operator demonstrates to the competent authority that such compliance is not technically and economically feasible and that the best available techniques are being used.

4. Member States shall report to the Commission on the derogations referred to in paragraphs 2 and 3 of this Article in accordance with Article 72(2).

▼B

5. The emissions of either volatile organic compounds which are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351, shall be controlled under contained conditions as far as technically and economically feasible to safeguard public health and the environment and shall not exceed the relevant emission limit values set out in Part 4 of Annex VII.

6. Installations where two or more activities are carried out, each of which exceeds the thresholds in Part 2 of Annex VII shall:

- (a) as regards the substances specified in paragraph 5, meet the requirements of that paragraph for each activity individually;
- (b) as regards all other substances, either:
 - (i) meet the requirements of paragraph 1 for each activity individually; or
 - (ii) have total emissions of volatile organic compounds not exceeding those which would have resulted had point (i) been applied.

7. All appropriate precautions shall be taken to minimise emissions of volatile organic compounds during start-up and shut-down operations.

*Article 60***Monitoring of emissions**

Member States shall, either by specification in the permit conditions or by general binding rules, ensure that measurements of emissions are carried out in accordance with Part 6 of Annex VII.

*Article 61***Compliance with emission limit values**

The emission limit values in waste gases shall be regarded as being complied with if the conditions set out in Part 8 of Annex VII are fulfilled.

*Article 62***Reporting on compliance**

The operator shall supply the competent authority, on request, with data enabling the competent authority to verify compliance with either of the following:

- (a) emission limit values in waste gases, fugitive emission limit values and total emission limit values;
- (b) the requirements of the reduction scheme under Part 5 of Annex VII;

▼B

- (c) the derogations granted in accordance with Article 59(2) and (3).

This may include a solvent management plan prepared in accordance with Part 7 of Annex VII.

*Article 63***Substantial change to existing installations**

1. A change of the maximum mass input of organic solvents by an existing installation averaged over 1 day, where the installation is operated at its design output under conditions other than start-up and shut-down operations and maintenance of equipment, shall be considered as substantial if it leads to an increase of emissions of volatile organic compounds of more than:

- (a) 25 % for an installation carrying out either activities which fall within the lower threshold band of items 1, 3, 4, 5, 8, 10, 13, 16 or 17 of the table in Part 2 of Annex VII or, activities which fall under one of the other items of Part 2 of Annex VII, and with a solvent consumption of less than 10 tonnes per year;
- (b) 10 % for all other installations.

2. Where an existing installation undergoes a substantial change, or falls within the scope of this Directive for the first time following a substantial change, that part of the installation which undergoes the substantial change shall be treated either as a new installation or as an existing installation, provided that the total emissions of the whole installation do not exceed those that would have resulted had the substantially changed part been treated as a new installation.

3. In case of a substantial change, the competent authority shall check compliance of the installation with the requirements of this Directive.

*Article 64***Exchange of information on substitution of organic solvents**

The Commission shall organise an exchange of information with the Member States, the industry concerned and non-governmental organisations promoting environmental protection on the use of organic solvents and their potential substitutes and techniques which have the least potential effects on air, water, soil, ecosystems and human health.

The exchange of information shall be organised on all of the following:

- (a) fitness for use;
- (b) potential effects on human health and occupational exposure in particular;
- (c) potential effects on the environment;
- (d) the economic consequences, in particular the costs and benefits of the options available.

▼B*Article 65***Access to information**

1. The decision of the competent authority, including at least a copy of the permit, and any subsequent updates, shall be made available to the public.

The general binding rules applicable for installations and the list of installations subject to permitting and registration shall be made available to the public.

2. The results of the monitoring of emissions as required under Article 60 and held by the competent authority shall be made available to the public.

3. Paragraphs 1 and 2 of this Article shall apply, subject to the restrictions laid down in Article 4(1) and (2) of Directive 2003/4/EC.

CHAPTER VI

SPECIAL PROVISIONS FOR INSTALLATIONS PRODUCING TITANIUM DIOXIDE*Article 66***Scope**

This Chapter shall apply to installations producing titanium dioxide.

*Article 67***Prohibition of the disposal of waste**

Member States shall prohibit the disposal of the following waste into any water body, sea or ocean:

- (a) solid waste;
- (b) the mother liquors arising from the filtration phase following hydrolysis of the titanyl sulphate solution from installations applying the sulphate process; including the acid waste associated with such liquors, containing overall more than 0,5 % free sulphuric acid and various heavy metals and including such mother liquors which have been diluted until they contain 0,5 % or less free sulphuric acid;
- (c) waste from installations applying the chloride process containing more than 0,5 % free hydrochloric acid and various heavy metals, including such waste which has been diluted until it contains 0,5 % or less free hydrochloric acid;
- (d) filtration salts, sludges and liquid waste arising from the treatment (concentration or neutralisation) of the waste mentioned under points (b) and (c) and containing various heavy metals, but not including neutralised and filtered or decanted waste containing only traces of heavy metals and which, before any dilution, has a pH value above 5,5.

▼B*Article 68***Control of emissions into water**

Emissions from installations into water shall not exceed the emission limit values set out in Part 1 of Annex VIII.

*Article 69***Prevention and control of emissions into air**

1. The emission of acid droplets from installations shall be prevented.
2. Emissions into air from installations shall not exceed the emission limit values set out in Part 2 of Annex VIII.

*Article 70***Monitoring of emissions**

1. Member States shall ensure the monitoring of emissions into water in order to enable the competent authority to verify compliance with the permit conditions and Article 68.
2. Member States shall ensure the monitoring of emissions into air in order to enable the competent authority to verify compliance with the permit conditions and Article 69. Such monitoring shall include at least monitoring of emissions as set out in Part 3 of Annex VIII.
3. Monitoring shall be carried out in accordance with CEN standards or, if CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality.

CHAPTER VII

COMMITTEE, TRANSITIONAL AND FINAL PROVISIONS*Article 71***Competent authorities**

Member States shall designate the competent authorities responsible for carrying out the obligations arising from this Directive.

*Article 72***Reporting by Member States**

1. Member States shall ensure that information is made available to the Commission on the implementation of this Directive, on representative data on emissions and other forms of pollution, on emission limit values, on the application of best available techniques in accordance with Articles 14 and 15, in particular on the granting of exemptions in accordance with Article 15(4), and on progress made concerning the development and application of emerging techniques in accordance with Article 27. Member States shall make the information available in an electronic format.

▼B

2. The type, format and frequency of information to be made available pursuant to paragraph 1 shall be established in accordance with the regulatory procedure referred to in Article 75(2). This shall include the determination of the specific activities and pollutants for which data referred to in paragraph 1 shall be made available.

3. For all combustion plants covered by Chapter III of this Directive, Member States shall, from 1 January 2016, establish an annual inventory of the sulphur dioxide, nitrogen oxides and dust emissions and energy input.

Taking into account the aggregation rules set out in Article 29, the competent authority shall obtain the following data for each combustion plant:

- (a) the total rated thermal input (MW) of the combustion plant;
- (b) the type of combustion plant: boiler, gas turbine, gas engine, diesel engine, other (specifying the type);
- (c) the date of the start of operation of the combustion plant;
- (d) the total annual emissions (tonnes per year) of sulphur dioxide, nitrogen oxides and dust (as total suspended particles);
- (e) the number of operating hours of the combustion plant;
- (f) the total annual amount of energy input, related to the net calorific value (TJ per year), broken down in terms of the following categories of fuel: coal, lignite, biomass, peat, other solid fuels (specifying the type), liquid fuels, natural gas, other gases (specifying the type).

The annual plant-by-plant data contained in these inventories shall be made available to the Commission upon request.

A summary of the inventories shall be made available to the Commission every 3 years within 12 months from the end of the three-year period considered. This summary shall show separately the data for combustion plants within refineries.

The Commission shall make available to the Member States and to the public a summary of the comparison and evaluation of those inventories in accordance with Directive 2003/4/EC within 24 months from the end of the three-year period considered.

4. Member States shall, from 1 January 2016, report the following data annually to the Commission:

- (a) for combustion plants to which Article 31 applies, the sulphur content of the indigenous solid fuel used and the rate of desulphurisation achieved, averaged over each month. For the first year where Article 31 is applied, the technical justification of the non-feasibility of complying with the emission limit values referred to in Article 30(2) and (3) shall also be reported; and
- (b) for combustion plants which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the number of operating hours per year.

Article 73

Review

1. By 7 January 2016, and every 3 years thereafter, the Commission shall submit to the European Parliament and to the Council a report reviewing the implementation of this Directive on the basis of the information referred to in Article 72.

That report shall include an assessment of the need for Union action through the establishment or updating of Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance for activities within the scope of the BAT conclusions adopted during the previous three-year period, on the basis of the following criteria:

- (a) the impact of the activities concerned on the environment as a whole; and
- (b) the state of implementation of best available techniques for the activities concerned.

That assessment shall consider the opinion of the forum referred to in Article 13(4).

Chapter III and Annex V of this Directive shall be considered to represent the Union-wide minimum requirements in the case of large combustion plants.

The report shall be accompanied by a legislative proposal where appropriate. Where the assessment referred to in the second subparagraph identifies such a need, the legislative proposal shall include provisions establishing or updating Union-wide minimum requirements for emission limit values and for rules on monitoring and compliance assessment for the activities concerned.

2. The Commission shall, by 31 December 2012, review the need to control emissions from:

- (a) the combustion of fuels in installations with a total rated thermal input below 50 MW;
- (b) the intensive rearing of cattle; and
- (c) the spreading of manure.

The Commission shall report the results of that review to the European Parliament and to the Council accompanied by a legislative proposal where appropriate.

3. The Commission shall report to the European Parliament and the Council, by 31 December 2011, on the establishment in Annex I of:

- (a) differentiated capacity thresholds for the rearing of different poultry species, including the specific case of quail;
- (b) capacity thresholds for the simultaneous rearing of different types of animals within the same installation.

The Commission shall report the results of that review to the European Parliament and to the Council accompanied by a legislative proposal where appropriate.

▼B*Article 74***Amendments of Annexes**

In order to allow the provisions of this Directive to be adapted to scientific and technical progress on the basis of best available techniques, the Commission shall adopt delegated acts in accordance with Article 76 and subject to the conditions laid down in Articles 77 and 78 as regards the adaptation of Parts 3 and 4 of Annex V, Parts 2, 6, 7 and 8 of Annex VI and Parts 5, 6, 7 and 8 of Annex VII to such scientific and technical progress.

*Article 75***Committee procedure**

1. The Commission shall be assisted by a committee.
2. Where reference is made to this paragraph, Articles 5 and 7 of Decision 1999/468/EC shall apply, having regard to the provisions of Article 8 thereof.

The period laid down in Article 5(6) of Decision 1999/468/EC shall be set at 3 months.

*Article 76***Exercise of the delegation**

1. The power to adopt the delegated acts referred to in Article 48(5) and Article 74 shall be conferred on the Commission for a period of 5 years from 6 January 2011. The Commission shall draw up a report in respect of the delegated power at the latest 6 months before the end of the five-year period. The delegation of power shall be automatically extended for periods of an identical duration, unless the European Parliament or the Council revokes it in accordance with Article 77.
2. As soon as it adopts a delegated act, the Commission shall notify it simultaneously to the European Parliament and to the Council.
3. The power to adopt delegated acts is conferred on the Commission subject to the conditions laid down in Articles 77 and 78.

*Article 77***Revocation of the delegation**

1. The delegation of power referred to in Article 48(5) and Article 74 may be revoked at any time by the European Parliament or by the Council.
2. The institution which has commenced an internal procedure for deciding whether to revoke a delegation of power shall endeavour to inform the other institution and the Commission within a reasonable time before the final decision is taken, indicating the delegated power which could be subject to revocation and possible reasons for a revocation.
3. The decision of revocation shall put an end to the delegation of the power specified in that decision. It shall take effect immediately or on a later date specified therein. It shall not affect the validity of the delegated acts already in force. It shall be published in the *Official Journal of the European Union*.

Article 78

Objections to delegated acts

1. The European Parliament or the Council may object to a delegated act within a period of 2 months from the date of notification.

At the initiative of the European Parliament or the Council that period shall be extended by 2 months.

2. If, on expiry of the period referred to in paragraph 1, neither the European Parliament nor the Council has objected to the delegated act, it shall be published in the *Official Journal of the European Union* and shall enter into force on the date stated therein.

The delegated act may be published in the *Official Journal of the European Union* and enter into force before the expiry of that period if the European Parliament and the Council have both informed the Commission of their intention not to raise objections.

3. If either the European Parliament or the Council objects to the delegated act within the period referred to in paragraph 1, it shall not enter into force. The institution which objects shall state the reasons for objecting to the delegated act.

Article 79

Penalties

Member States shall determine penalties applicable to infringements of the national provisions adopted pursuant to this Directive. The penalties thus provided for shall be effective, proportionate and dissuasive. Member States shall notify those provisions to the Commission by 7 January 2013 and shall notify it without delay of any subsequent amendment affecting them.

Article 80

Transposition

1. Member States shall bring into force the laws, regulations and administrative provisions necessary to comply with Article 2, points (8), (11) to (15), (18) to (23), (26) to (30), (34) to (38) and (41) of Article 3, Article 4(2) and (3), Article 7, Articles 8 and 10, Article 11(e) and (h), Article 12(1)(e) and (h), Article 13(7), point (ii) of Article 14(1)(c), points (d), (e), (f) and (h) of Article 14(1), Article 14(2) to (7), Article 15(2) to (5), Articles 16, 17 and 19, Article 21(2) to (5), Articles 22, 23, 24, 27, 28 and 29, Article 30(1), (2), (3), (4), (7) and (8), Articles 31, 32, 33, 34, 35, 36, 38 and 39, Article 40(2) and (3), Articles 42 and 43, Article 45(1), Article 58, Article 59(5), Article 63, Article 65(3), Articles 69, 70, 71, 72 and 79, and with the first subparagraph and points 1.1, 1.4, 2.5(b), 3.1, 4, 5, 6.1(c), 6.4(b), 6.10 and 6.11 of Annex I, Annex II, point 12 of Annex III, Annex V, point (b) of Part 1, points 2.2, 2.4, 3.1 and 3.2 of Part 4, points 2.5 and 2.6 of Part 6 and point 1.1(d) of Part 8 of Annex VI, point 2 of Part 4, point 1 of Part 5, point 3 of Part 7 of Annex VII, points 1 and 2(c) of Part 1, points 2 and 3 of Part 2 and Part 3 of Annex VIII by 7 January 2013.

▼B

They shall apply those measures from that same date.

When Member States adopt those measures, they shall contain a reference to this Directive or be accompanied by such a reference on the occasion of their official publication. The methods of making such reference shall be laid down by Member States.

2. Member States shall communicate to the Commission the text of the main provisions of national law which they adopt in the field covered by this Directive.

*Article 81***Repeal**

1. Directives 78/176/EEC, 82/883/EEC, 92/112/EEC, 1999/13/EC, 2000/76/EC and 2008/1/EC, as amended by the acts listed in Annex IX, Part A are repealed with effect from 7 January 2014, without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directives set out in Annex IX, Part B.

2. Directive 2001/80/EC as amended by the acts listed in Annex IX, Part A is repealed with effect from 1 January 2016, without prejudice to the obligations of the Member States relating to the time limits for transposition into national law and application of the Directives set out in Annex IX, Part B.

3. References to the repealed Directives shall be construed as references to this Directive and shall be read in accordance with the correlation table set out in Annex X.

*Article 82***Transitional provisions**

1. In relation to installations carrying out activities referred to in Annex I, point 1.1 for activities with a total rated thermal input exceeding 50 MW, points 1.2 and 1.3, point 1.4(a), points 2.1 to 2.6, points 3.1 to 3.5, points 4.1 to 4.6 for activities concerning production by chemical processing, points 5.1 and 5.2 for activities covered by Directive 2008/1/EC, point 5.3 (a)(i) and (ii), point 5.4, point 6.1(a) and (b), points 6.2 and 6.3, point 6.4(a), point 6.4(b) for activities covered by Directive 2008/1/EC, point 6.4(c) and points 6.5 to 6.9 which are in operation and hold a permit before 7 January 2013 or the operators of which have submitted a complete application for a permit before that date, provided that those installations are put into operation no later than 7 January 2014, Member States shall apply the laws, regulations and administrative provisions adopted in accordance with Article 80(1) from 7 January 2014 with the exception of Chapter III and Annex V.

2. In relation to installations carrying out activities referred to in Annex I, point 1.1 for activities with a total rated thermal input of 50 MW, point 1.4(b), points 4.1 to 4.6 for activities concerning production by biological processing, points 5.1 and 5.2 for activities not covered by Directive 2008/1/EC, point 5.3(a)(iii) to (v), point 5.3(b), points 5.5 and 5.6, point 6.1(c), point 6.4(b) for activities not covered by Directive 2008/1/EC and points 6.10 and 6.11 which are in operation before 7 January 2013, Member States shall apply the laws, regulations and administrative provisions adopted in accordance with this Directive from 7 July 2015 with the exception of Chapters III and IV and Annexes V and VI.

▼B

3. In relation to combustion plants referred to in Article 30(2), Member States shall, from 1 January 2016, apply the laws, regulations and administrative provisions adopted in accordance with Article 80(1) to comply with Chapter III and Annex V.

4. In relation to combustion plants referred to in Article 30(3), Member States shall no longer apply Directive 2001/80/EC from 7 January 2013.

5. In relation to combustion plants which co-incinerate waste, point 3.1 of Part 4 of Annex VI shall apply until:

(a) 31 December 2015, for combustion plants referred to in Article 30(2);

▼C1

(b) 6 January 2013, for combustion plants referred to in Article 30(3).

▼B

6. Point 3.2 of Part 4 of Annex VI shall apply in relation to combustion plants which co-incinerate waste, as from:

(a) 1 January 2016, for combustion plants referred to in Article 30(2)

(b) 7 January 2013, for combustion plants referred to in Article 30(3).

7. Article 58 shall apply from 1 June 2015. Until that date, substances or mixtures which, because of their content of volatile organic compounds classified as carcinogens, mutagens, or toxic to reproduction under Regulation (EC) No 1272/2008, are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or the risk phrases R45, R46, R49, R60 or R61, shall be replaced, as far as possible, by less harmful substances or mixtures within the shortest possible time.

8. Article 59(5) shall apply from 1 June 2015. Until that date, the emissions of either volatile organic compounds which are assigned or need to carry the hazard statements H340, H350, H350i, H360D or H360F or the risk phrases R45, R46, R49, R60 or R61 or halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351 or the risk phrases R40 or R68, shall be controlled under contained conditions, as far as technically and economically feasible, to safeguard public health and the environment and shall not exceed the relevant emission limit values set out in Part 4 of Annex VII.

9. Point 2 of Part 4 of Annex VII shall apply from 1 June 2015. Until that date, for emissions of halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351 or the risk phrases R40 or R68, where the mass flow of the sum of the compounds causing the hazard statements H341 or H351 or the labelling R40 or R68 is greater than, or equal to, 100 g/h, an emission limit value of 20 mg/Nm³ shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

▼B

Article 83

Entry into force

This Directive shall enter into force on the 20th day following its publication in the *Official Journal of the European Union*.

Article 84

Addressees

This Directive is addressed to the Member States.

▼B*ANNEX I***Categories of activities referred to in Article 10**

The threshold values given below generally refer to production capacities or outputs. Where several activities falling under the same activity description containing a threshold are operated in the same installation, the capacities of such activities are added together. For waste management activities, this calculation shall apply at the level of activities 5.1, 5.3(a) and 5.3(b).

The Commission shall establish guidance on:

- (a) the relationship between waste management activities described in this Annex and those described in Annexes I and II to Directive 2008/98/EC; and
- (b) the interpretation of the term ‘industrial scale’ regarding the description of chemical industry activities described in this Annex.
 - 1. Energy industries
 - 1.1. Combustion of fuels in installations with a total rated thermal input of 50 MW or more
 - 1.2. Refining of mineral oil and gas
 - 1.3. Production of coke
 - 1.4. Gasification or liquefaction of:
 - (a) coal;
 - (b) other fuels in installations with a total rated thermal input of 20 MW or more.
 - 2. Production and processing of metals
 - 2.1. Metal ore (including sulphide ore) roasting or sintering
 - 2.2. Production of pig iron or steel (primary or secondary fusion) including continuous casting, with a capacity exceeding 2,5 tonnes per hour
 - 2.3. Processing of ferrous metals:
 - (a) operation of hot-rolling mills with a capacity exceeding 20 tonnes of crude steel per hour;
 - (b) operation of smitheries with hammers the energy of which exceeds 50 kilojoule per hammer, where the calorific power used exceeds 20 MW;
 - (c) application of protective fused metal coats with an input exceeding 2 tonnes of crude steel per hour.
 - 2.4. Operation of ferrous metal foundries with a production capacity exceeding 20 tonnes per day
 - 2.5. Processing of non-ferrous metals:
 - (a) production of non-ferrous crude metals from ore, concentrates or secondary raw materials by metallurgical, chemical or electrolytic processes;
 - (b) melting, including the alloyage, of non-ferrous metals, including recovered products and operation of non-ferrous metal foundries, with a melting capacity exceeding 4 tonnes per day for lead and cadmium or 20 tonnes per day for all other metals.

▼B

- 2.6. Surface treatment of metals or plastic materials using an electrolytic or chemical process where the volume of the treatment vats exceeds 30 m³
3. Mineral industry
 - 3.1. Production of cement, lime and magnesium oxide:
 - (a) production of cement clinker in rotary kilns with a production capacity exceeding 500 tonnes per day or in other kilns with a production capacity exceeding 50 tonnes per day;
 - (b) production of lime in kilns with a production capacity exceeding 50 tonnes per day;
 - (c) production of magnesium oxide in kilns with a production capacity exceeding 50 tonnes per day.
 - 3.2. Production of asbestos or the manufacture of asbestos-based products
 - 3.3. Manufacture of glass including glass fibre with a melting capacity exceeding 20 tonnes per day
 - 3.4. Melting mineral substances including the production of mineral fibres with a melting capacity exceeding 20 tonnes per day
 - 3.5. Manufacture of ceramic products by firing, in particular roofing tiles, bricks, refractory bricks, tiles, stoneware or porcelain with a production capacity exceeding 75 tonnes per day and/or with a kiln capacity exceeding 4 m³ and with a setting density per kiln exceeding 300 kg/m³
4. Chemical industry

For the purpose of this section, production within the meaning of the categories of activities contained in this section means the production on an industrial scale by chemical or biological processing of substances or groups of substances listed in points 4.1 to 4.6

 - 4.1. Production of organic chemicals, such as:
 - (a) simple hydrocarbons (linear or cyclic, saturated or unsaturated, aliphatic or aromatic);
 - (b) oxygen-containing hydrocarbons such as alcohols, aldehydes, ketones, carboxylic acids, esters and mixtures of esters, acetates, ethers, peroxides and epoxy resins;
 - (c) sulphurous hydrocarbons;
 - (d) nitrogenous hydrocarbons such as amines, amides, nitrous compounds, nitro compounds or nitrate compounds, nitriles, cyanates, isocyanates;
 - (e) phosphorus-containing hydrocarbons;
 - (f) halogenic hydrocarbons;
 - (g) organometallic compounds;
 - (h) plastic materials (polymers, synthetic fibres and cellulose-based fibres);
 - (i) synthetic rubbers;

▼B

- (j) dyes and pigments;
 - (k) surface-active agents and surfactants.
- 4.2. Production of inorganic chemicals, such as:
- (a) gases, such as ammonia, chlorine or hydrogen chloride, fluorine or hydrogen fluoride, carbon oxides, sulphur compounds, nitrogen oxides, hydrogen, sulphur dioxide, carbonyl chloride;
 - (b) acids, such as chromic acid, hydrofluoric acid, phosphoric acid, nitric acid, hydrochloric acid, sulphuric acid, oleum, sulphurous acids;
 - (c) bases, such as ammonium hydroxide, potassium hydroxide, sodium hydroxide;
 - (d) salts, such as ammonium chloride, potassium chlorate, potassium carbonate, sodium carbonate, perborate, silver nitrate;
 - (e) non-metals, metal oxides or other inorganic compounds such as calcium carbide, silicon, silicon carbide.
- 4.3. Production of phosphorous-, nitrogen- or potassium-based fertilisers (simple or compound fertilisers)
- 4.4. Production of plant protection products or of biocides
- 4.5. Production of pharmaceutical products including intermediates
- 4.6. Production of explosives
5. Waste management
- 5.1. Disposal or recovery of hazardous waste with a capacity exceeding 10 tonnes per day involving one or more of the following activities:
- (a) biological treatment;
 - (b) physico-chemical treatment;
 - (c) blending or mixing prior to submission to any of the other activities listed in points 5.1 and 5.2;
 - (d) repackaging prior to submission to any of the other activities listed in points 5.1 and 5.2;
 - (e) solvent reclamation/regeneration;
 - (f) recycling/reclamation of inorganic materials other than metals or metal compounds;
 - (g) regeneration of acids or bases;
 - (h) recovery of components used for pollution abatement;
 - (i) recovery of components from catalysts;
 - (j) oil re-refining or other reuses of oil;

▼B

- (k) surface impoundment.
- 5.2. Disposal or recovery of waste in waste incineration plants or in waste co-incineration plants:
- (a) for non-hazardous waste with a capacity exceeding 3 tonnes per hour;
 - (b) for hazardous waste with a capacity exceeding 10 tonnes per day.
- 5.3. (a) Disposal of non-hazardous waste with a capacity exceeding 50 tonnes per day involving one or more of the following activities, and excluding activities covered by Council Directive 91/271/EEC of 21 May 1991 concerning urban waste-water treatment ⁽¹⁾:
- (i) biological treatment;
 - (ii) physico-chemical treatment;
 - (iii) pre-treatment of waste for incineration or co-incineration;
 - (iv) treatment of slags and ashes;
 - (v) treatment in shredders of metal waste, including waste electrical and electronic equipment and end-of-life vehicles and their components.
- (b) Recovery, or a mix of recovery and disposal, of non-hazardous waste with a capacity exceeding 75 tonnes per day involving one or more of the following activities, and excluding activities covered by Directive 91/271/EEC:
- (i) biological treatment;
 - (ii) pre-treatment of waste for incineration or co-incineration;
 - (iii) treatment of slags and ashes;
 - (iv) treatment in shredders of metal waste, including waste electrical and electronic equipment and end-of-life vehicles and their components.
- When the only waste treatment activity carried out is anaerobic digestion, the capacity threshold for this activity shall be 100 tonnes per day.
- 5.4. Landfills, as defined in Article 2(g) of Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste ⁽²⁾, receiving more than 10 tonnes of waste per day or with a total capacity exceeding 25 000 tonnes, excluding landfills of inert waste
- 5.5. Temporary storage of hazardous waste not covered under point 5.4 pending any of the activities listed in points 5.1, 5.2, 5.4 and 5.6 with a total capacity exceeding 50 tonnes, excluding temporary storage, pending collection, on the site where the waste is generated

⁽¹⁾ OJ L 135, 30.5.1991, p. 40.

⁽²⁾ OJ L 182, 16.7.1999, p. 1.

▼B

- 5.6. Underground storage of hazardous waste with a total capacity exceeding 50 tonnes
6. Other activities
- 6.1. Production in industrial installations of:
- (a) pulp from timber or other fibrous materials;
- (b) paper or card board with a production capacity exceeding 20 tonnes per day;
- (c) one or more of the following wood-based panels: oriented strand board, particleboard or fibreboard with a production capacity exceeding 600 m³ per day.
- 6.2. Pre-treatment (operations such as washing, bleaching, mercerisation) or dyeing of textile fibres or textiles where the treatment capacity exceeds 10 tonnes per day
- 6.3. Tanning of hides and skins where the treatment capacity exceeds 12 tonnes of finished products per day
- 6.4. (a) Operating slaughterhouses with a carcass production capacity greater than 50 tonnes per day
- (b) Treatment and processing, other than exclusively packaging, of the following raw materials, whether previously processed or unprocessed, intended for the production of food or feed from:
- (i) only animal raw materials (other than exclusively milk) with a finished product production capacity greater than 75 tonnes per day;
- (ii) only vegetable raw materials with a finished product production capacity greater than 300 tonnes per day or 600 tonnes per day where the installation operates for a period of no more than 90 consecutive days in any year;
- (iii) animal and vegetable raw materials, both in combined and separate products, with a finished product production capacity in tonnes per day greater than:
- 75 if A is equal to 10 or more; or,
- $[300 - (22,5 \times A)]$ in any other case,
- where 'A' is the portion of animal material (in percent of weight) of the finished product production capacity.

Packaging shall not be included in the final weight of the product.

▼B

This subsection shall not apply where the raw material is milk only.

- (c) Treatment and processing of milk only, the quantity of milk received being greater than 200 tonnes per day (average value on an annual basis).
- 6.5. Disposal or recycling of animal carcasses or animal waste with a treatment capacity exceeding 10 tonnes per day
- 6.6. Intensive rearing of poultry or pigs:
 - (a) with more than 40 000 places for poultry;
 - (b) with more than 2 000 places for production pigs (over 30 kg), or
 - (c) with more than 750 places for sows.
- 6.7. Surface treatment of substances, objects or products using organic solvents, in particular for dressing, printing, coating, degreasing, waterproofing, sizing, painting, cleaning or impregnating, with an organic solvent consumption capacity of more than 150 kg per hour or more than 200 tonnes per year
- 6.8. Production of carbon (hard-burnt coal) or electrographite by means of incineration or graphitisation
- 6.9. Capture of CO₂ streams from installations covered by this Directive for the purposes of geological storage pursuant to Directive 2009/31/EC
- 6.10. Preservation of wood and wood products with chemicals with a production capacity exceeding 75 m³ per day other than exclusively treating against sapstain
- 6.11. Independently operated treatment of waste water not covered by Directive 91/271/EEC and discharged by an installation covered by Chapter II

▼B*ANNEX II***List of polluting substances**

AIR

1. Sulphur dioxide and other sulphur compounds
2. Oxides of nitrogen and other nitrogen compounds
3. Carbon monoxide
4. Volatile organic compounds
5. Metals and their compounds
6. Dust including fine particulate matter
7. Asbestos (suspended particulates, fibres)
8. Chlorine and its compounds
9. Fluorine and its compounds
10. Arsenic and its compounds
11. Cyanides
12. Substances and mixtures which have been proved to possess carcinogenic or mutagenic properties or properties which may affect reproduction via the air
13. Polychlorinated dibenzodioxins and polychlorinated dibenzofurans

WATER

1. Organohalogen compounds and substances which may form such compounds in the aquatic environment
2. Organophosphorus compounds
3. Organotin compounds
4. Substances and mixtures which have been proved to possess carcinogenic or mutagenic properties or properties which may affect reproduction in or via the aquatic environment
5. Persistent hydrocarbons and persistent and bioaccumulable organic toxic substances
6. Cyanides
7. Metals and their compounds
8. Arsenic and its compounds
9. Biocides and plant protection products
10. Materials in suspension
11. Substances which contribute to eutrophication (in particular, nitrates and phosphates)

▼B

12. Substances which have an unfavourable influence on the oxygen balance (and can be measured using parameters such as BOD, COD, etc.)
13. Substances listed in Annex X to Directive 2000/60/EC

▼B*ANNEX III***Criteria for determining best available techniques**

1. the use of low-waste technology;
2. the use of less hazardous substances;
3. the furthering of recovery and recycling of substances generated and used in the process and of waste, where appropriate;
4. comparable processes, facilities or methods of operation which have been tried with success on an industrial scale;
5. technological advances and changes in scientific knowledge and understanding;
6. the nature, effects and volume of the emissions concerned;
7. the commissioning dates for new or existing installations;
8. the length of time needed to introduce the best available technique;
9. the consumption and nature of raw materials (including water) used in the process and energy efficiency;
10. the need to prevent or reduce to a minimum the overall impact of the emissions on the environment and the risks to it;
11. the need to prevent accidents and to minimise the consequences for the environment;
12. information published by public international organisations.

ANNEX IV

Public participation in decision-making

1. The public shall be informed (by public notices or other appropriate means such as electronic media where available) of the following matters early in the procedure for the taking of a decision or, at the latest, as soon as the information can reasonably be provided:
 - (a) the application for a permit or, as the case may be, the proposal for the updating of a permit or of permit conditions in accordance with Article 21, including the description of the elements listed in Article 12(1);
 - (b) where applicable, the fact that a decision is subject to a national or transboundary environmental impact assessment or to consultations between Member States in accordance with Article 26;
 - (c) details of the competent authorities responsible for taking the decision, those from which relevant information can be obtained, those to which comments or questions can be submitted, and details of the time schedule for transmitting comments or questions;
 - (d) the nature of possible decisions or, where there is one, the draft decision;
 - (e) where applicable, the details relating to a proposal for the updating of a permit or of permit conditions;
 - (f) an indication of the times and places where, or means by which, the relevant information will be made available;
 - (g) details of the arrangements for public participation and consultation made pursuant to point 5.
2. Member States shall ensure that, within appropriate time-frames, the following is made available to the public concerned:
 - (a) in accordance with national law, the main reports and advice issued to the competent authority or authorities at the time when the public concerned were informed in accordance with point 1;
 - (b) in accordance with Directive 2003/4/EC, information other than that referred to in point 1 which is relevant for the decision in accordance with Article 5 of this Directive and which only becomes available after the time the public concerned was informed in accordance with point 1.
3. The public concerned shall be entitled to express comments and opinions to the competent authority before a decision is taken.
4. The results of the consultations held pursuant to this Annex must be taken into due account in the taking of a decision.
5. The detailed arrangements for informing the public (for example by bill posting within a certain radius or publication in local newspapers) and consulting the public concerned (for example by written submissions or by way of a public inquiry) shall be determined by the Member States. Reasonable time-frames for the different phases shall be provided, allowing sufficient time to inform the public and for the public concerned to prepare and participate effectively in environmental decision-making subject to this Annex.

▼B

ANNEX V

Technical provisions relating to combustion plants

PART 1

Emission limit values for combustion plants referred to in Article 30(2)

- All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O₂ content of 6 % for solid fuels, 3 % for combustion plants, other than gas turbines and gas engines using liquid and gaseous fuels and 15 % for gas turbines and gas engines.
- Emission limit values (mg/Nm³) for SO₂ for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass	Peat	Liquid fuels
50-100	400	200	300	350
100-300	250	200	300	250
> 300	200	200	200	200

Combustion plants, using solid fuels which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO₂ of 800 mg/Nm³.

Combustion plants using liquid fuels, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for SO₂ of 850 mg/Nm³ in case of plants with a total rated thermal input not exceeding 300 MW and of 400 mg/Nm³ in case of plants with a total rated thermal input greater than 300 MW.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding two paragraphs in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

- Emission limit values (mg/Nm³) for SO₂ for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low calorific gases from blast furnace	200

▼B

Combustion plants, firing low calorific gases from gasification of refinery residues, which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for SO₂ of 800 mg/Nm³.

4. Emission limit values (mg/Nm³) for NO_x for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels
50-100	300 450 in case of pulverised lignite combustion	300	450
100-300	200	250	200 ⁽¹⁾
> 300	200	200	150 ⁽¹⁾

Note:

- ⁽¹⁾ The emission limit value is 450 mg/Nm³ for the firing of distillation and conversion residues from the refining of crude-oil for own consumption in combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

Combustion plants in chemical installations using liquid production residues as non-commercial fuel for own consumption with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, shall be subject to an emission limit value for NO_x of 450 mg/Nm³.

Combustion plants using solid or liquid fuels with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO_x of 450 mg/Nm³.

Combustion plants using solid fuels with a total rated thermal input greater than 500 MW, which were granted a permit before 1 July 1987 and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO_x of 450 mg/Nm³.

Combustion plants using liquid fuels, with a total rated thermal input greater than 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, shall be subject to an emission limit value for NO_x of 400 mg/Nm³.

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding three paragraphs in relation to the total rated thermal

▼B

input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

5. Gas turbines (including combined cycle gas turbines (CCGT)) using light and middle distillates as liquid fuels shall be subject to an emission limit value for NO_x of 90 mg/Nm^3 and for CO of 100 mg/Nm^3 .

Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values (mg/Nm^3) for NO_x and CO for gas fired combustion plants

	NO_x	CO
Combustion plants firing natural gas with the exception of gas turbines and gas engines	100	100
Combustion plants firing blast furnace gas, coke oven gas or low calorific gases from gasification of refinery residues, with the exception of gas turbines and gas engines	200 ⁽⁴⁾	—
Combustion plants firing other gases, with the exception of gas turbines and gas engines	200 ⁽⁴⁾	—
Gas turbines (including CCGT), using natural gas ⁽¹⁾ as fuel	50 ⁽²⁾ ⁽³⁾	100
Gas turbines (including CCGT), using other gases as fuel	120	—
Gas engines	100	100

Notes:

- ⁽¹⁾ Natural gas is naturally occurring methane with not more than 20 % (by volume) of inerts and other constituents.
- ⁽²⁾ 75 mg/Nm^3 in the following cases, where the efficiency of the gas turbine is determined at ISO base load conditions:
- (i) gas turbines, used in combined heat and power systems having an overall efficiency greater than 75 %;
 - (ii) gas turbines used in combined cycle plants having an annual average overall electrical efficiency greater than 55 %;
 - (iii) gas turbines for mechanical drives.
- ⁽³⁾ For single cycle gas turbines not falling into any of the categories mentioned under note (2), but having an efficiency greater than 35 % – determined at ISO base load conditions – the emission limit value for NO_x shall be $50\eta/35$ where η is the gas turbine efficiency at ISO base load conditions expressed as a percentage.
- ⁽⁴⁾ 300 mg/Nm^3 for such combustion plants with a total rated thermal input not exceeding 500 MW which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

For gas turbines (including CCGT), the NO_x and CO emission limit values set out in the table contained in this point apply only above 70 % load.

For gas turbines (including CCGT) which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003, and which do not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, the emission limit value for NO_x is 150 mg/Nm^3 when firing natural gas and 200 mg/Nm^3 when firing other gases or liquid fuels.

▼B

A part of a combustion plant discharging its waste gases through one or more separate flues within a common stack, and which does not operate more than 1 500 operating hours per year as a rolling average over a period of 5 years, may be subject to the emission limit values set out in the preceding paragraph in relation to the total rated thermal input of the entire combustion plant. In such cases the emissions through each of those flues shall be monitored separately.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

7. Emission limit values (mg/Nm³) for dust for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels ⁽¹⁾
50-100	30	30	30
100-300	25	20	25
> 300	20	20	20

Note:

⁽¹⁾ The emission limit value is 50 mg/Nm³ for the firing of distillation and conversion residues from the refining of crude oil for own consumption in combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003.

8. Emission limit values (mg/Nm³) for dust for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	5
Blast furnace gas	10
Gases produced by the steel industry which can be used elsewhere	30

PART 2

Emission limit values for combustion plants referred to in Article 30(3)

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O₂ content of 6 % for solid fuels, 3 % for combustion plants other than gas turbines and gas engines using liquid and gaseous fuels and 15 % for gas turbines and gas engines.

In case of combined cycle gas turbines with supplementary firing, the standardised O₂ content may be defined by the competent authority, taking into account the specific characteristics of the installation concerned.

2. Emission limit values (mg/Nm³) for SO₂ for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

▼B

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass	Peat	Liquid fuels
50-100	400	200	300	350
100-300	200	200	300 250 in case of fluidised bed combustion	200
> 300	150 200 in case of circulating or pressurised fluidised bed combustion	150	150 200 in case of fluidised bed combustion	150

3. Emission limit values (mg/Nm³) for SO₂ for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	35
Liquefied gas	5
Low calorific gases from coke oven	400
Low calorific gases from blast furnace	200

4. Emission limit values (mg/Nm³) for NO_x for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	Coal and lignite and other solid fuels	Biomass and peat	Liquid fuels
50-100	300 400 in case of pulverised lignite combustion	250	300
100-300	200	200	150
> 300	150 200 in case of pulverised lignite combustion	150	100

5. Gas turbines (including CCGT) using light and middle distillates as liquid fuels shall be subject to an emission limit value for NO_x of 50 mg/Nm³ and for CO of 100 mg/Nm³

Gas turbines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

6. Emission limit values (mg/Nm³) for NO_x and CO for gas fired combustion plants

	NO _x	CO
Combustion plants other than gas turbines and gas engines	100	100
Gas turbines (including CCGT)	50 ⁽¹⁾	100
Gas engines	75	100

Note:

- ⁽¹⁾ For single cycle gas turbines having an efficiency greater than 35 % – determined at ISO base load conditions – the emission limit value for NO_x shall be 50xη/35 where η is the gas turbine efficiency at ISO base load conditions expressed as a percentage.

▼B

For gas turbines (including CCGT), the NO_x and CO emission limit values set out in this point apply only above 70 % load.

Gas turbines and gas engines for emergency use that operate less than 500 operating hours per year are not covered by the emission limit values set out in this point. The operator of such plants shall record the used operating hours.

7. Emission limit values (mg/Nm³) for dust for combustion plants using solid or liquid fuels with the exception of gas turbines and gas engines

Total rated thermal input (MW)	
50-300	20
> 300	10 20 for biomass and peat

8. Emission limit values (mg/Nm³) for dust for combustion plants using gaseous fuels with the exception of gas turbines and gas engines

In general	5
Blast furnace gas	10
Gases produced by the steel industry which can be used elsewhere	30

PART 3

Emission monitoring

1. The concentrations of SO₂, NO_x and dust in waste gases from each combustion plant with a total rated thermal input of 100 MW or more shall be measured continuously.

The concentration of CO in waste gases from each combustion plant firing gaseous fuels with a total rated thermal input of 100 MW or more shall be measured continuously.

2. The competent authority may decide not to require the continuous measurements referred to in point 1 in the following cases:
- for combustion plants with a life span of less than 10 000 operational hours;
 - for SO₂ and dust from combustion plants firing natural gas;
 - for SO₂ from combustion plants firing oil with known sulphur content in cases where there is no waste gas desulphurisation equipment;
 - for SO₂ from combustion plants firing biomass if the operator can prove that the SO₂ emissions can under no circumstances be higher than the prescribed emission limit values.
3. Where continuous measurements are not required, measurements of SO₂, NO_x, dust and, for gas fired plants, also of CO shall be required at least once every 6 months.

▼B

4. For combustion plants firing coal or lignite, the emissions of total mercury shall be measured at least once per year.
5. As an alternative to the measurements of SO₂ and NO_x referred to in point 3, other procedures, verified and approved by the competent authority, may be used to determine the SO₂ and NO_x emissions. Such procedures shall use relevant CEN standards or, if CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality.
6. The competent authority shall be informed of significant changes in the type of fuel used or in the mode of operation of the plant. The competent authority shall decide whether the monitoring requirements laid down in points 1 to 4 are still adequate or require adaptation.
7. The continuous measurements carried out in accordance with point 1 shall include the measurement of the oxygen content, temperature, pressure and water vapour content of the waste gases. The continuous measurement of the water vapour content of the waste gases shall not be necessary, provided that the sampled waste gas is dried before the emissions are analysed.
8. Sampling and analysis of relevant polluting substances and measurements of process parameters as well as the quality assurance of automated measuring systems and the reference measurement methods to calibrate those systems shall be carried out in accordance with CEN standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall apply.

The automated measuring systems shall be subject to control by means of parallel measurements with the reference methods at least once per year.

The operator shall inform the competent authority about the results of the checking of the automated measuring systems.

9. At the emission limit value level, the values of the 95 % confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Carbon monoxide	10 %
Sulphur dioxide	20 %
Nitrogen oxides	20 %
Dust	30 %

10. The validated hourly and daily average values shall be determined from the measured valid hourly average values after having subtracted the value of the confidence interval specified in point 9.

Any day in which more than three hourly average values are invalid due to malfunction or maintenance of the automated measuring system shall be invalidated. If more than 10 days over a year are invalidated for such situations the competent authority shall require the operator to take adequate measures to improve the reliability of the automated measuring system.

11. In the case of plants which must comply with the rates of desulphurisation referred to in Article 31, the sulphur content of the fuel which is fired in the combustion plant shall also be regularly monitored. The competent authorities shall be informed of substantial changes in the type of fuel used.

▼B

PART 4

Assessment of compliance with emission limit values

1. In the case of continuous measurements, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the evaluation of the measurement results indicates, for operating hours within a calendar year, that all of the following conditions have been met:
 - (a) no validated monthly average value exceeds the relevant emission limit values set out in Parts 1 and 2;
 - (b) no validated daily average value exceeds 110 % of the relevant emission limit values set out in Parts 1 and 2;
 - (c) in cases of combustion plants composed only of boilers using coal with a total rated thermal input below 50 MW, no validated daily average value exceeds 150 % of the relevant emission limit values set out in Parts 1 and 2,
 - (d) 95 % of all the validated hourly average values over the year do not exceed 200 % of the relevant emission limit values set out in Parts 1 and 2.

The validated average values are determined as set out in point 10 of Part 3.

For the purpose of the calculation of the average emission values, the values measured during the periods referred to in Article 30(5) and (6) and Article 37 as well as during the start-up and shut-down periods shall be disregarded.

2. Where continuous measurements are not required, the emission limit values set out in Parts 1 and 2 shall be regarded as having been complied with if the results of each of the series of measurements or of the other procedures defined and determined according to the rules laid down by the competent authorities do not exceed the emission limit values.

PART 5

Minimum rate of desulphurisation

1. Minimum rate of desulphurisation for combustion plants referred to in Article 30(2)

Total rated thermal input (MW)	Minimum rate of desulphurisation	
	Plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003	Other plants
50-100	80 %	92 %
100-300	90 %	92 %
> 300	96 % ⁽¹⁾	96 %

Note:

⁽¹⁾ For combustion plants firing oil shale, the minimum rate of desulphurisation is 95 %.

▼B

2. Minimum rate of desulphurisation for combustion plants referred to in Article 30(3)

Total rated thermal input (MW)	Minimum rate of desulphurisation
50-100	93 %
100-300	93 %
> 300	97 %

PART 6

Compliance with rate of desulphurisation

The minimum rates of desulphurisation set out in Part 5 of this Annex shall apply as a monthly average limit value.

PART 7

Average emission limit values for multi-fuel firing combustion plants within a refinery

Average emission limit values (mg/Nm³) for SO₂ for multi-fuel firing combustion plants within a refinery, with the exception of gas turbines and gas engines, which use the distillation and conversion residues from the refining of crude-oil for own consumption, alone or with other fuels:

- (a) for combustion plants which were granted a permit before 27 November 2002 or the operators of which had submitted a complete application for a permit before that date, provided that the plant was put into operation no later than 27 November 2003: 1 000 mg/Nm³;
- (b) for other combustion plants: 600 mg/Nm³.

These emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correction for the water vapour content of the waste gases and at a standardised O₂ content of 6 % for solid fuels and 3 % for liquid and gaseous fuels.

▼B*ANNEX VI***Technical provisions relating to waste incineration plants and waste co-incineration plants**

PART 1

Definitions

For the purpose of this Annex the following definitions shall apply:

- (a) ‘existing waste incineration plant’ means one of the following waste incineration plants:
- (i) which was in operation and had a permit in accordance with applicable Union law before 28 December 2002,
 - (ii) which was authorised or registered for waste incineration and had a permit granted before 28 December 2002 in accordance with applicable Union law, provided that the plant was put into operation no later than 28 December 2003,
 - (iii) which, in the view of the competent authority, was the subject of a full request for authorisation before 28 December 2002, provided that the plant was put into operation not later than 28 December 2004;
- (b) ‘new waste incineration plant’ means any waste incineration plant not covered by point (a).

PART 2

Equivalence factors for dibenzo-p-dioxins and dibenzofurans

For the determination of the total concentration of dioxins and furans, the mass concentrations of the following dibenzo-p-dioxins and dibenzofurans shall be multiplied by the following equivalence factors before summing:

	Toxic equivalence factor
2,3,7,8 — Tetrachlorodibenzodioxin (TCDD)	1
1,2,3,7,8 — Pentachlorodibenzodioxin (PeCDD)	0,5
1,2,3,4,7,8 — Hexachlorodibenzodioxin (HxCDD)	0,1
1,2,3,6,7,8 — Hexachlorodibenzodioxin (HxCDD)	0,1
1,2,3,7,8,9 — Hexachlorodibenzodioxin (HxCDD)	0,1
1,2,3,4,6,7,8 — Heptachlorodibenzodioxin (HpCDD)	0,01
Octachlorodibenzodioxin (OCDD)	0,001
2,3,7,8 — Tetrachlorodibenzofuran (TCDF)	0,1
2,3,4,7,8 — Pentachlorodibenzofuran (PeCDF)	0,5
1,2,3,7,8 — Pentachlorodibenzofuran (PeCDF)	0,05
1,2,3,4,7,8 — Hexachlorodibenzofuran (HxCDF)	0,1
1,2,3,6,7,8 — Hexachlorodibenzofuran (HxCDF)	0,1
1,2,3,7,8,9 — Hexachlorodibenzofuran (HxCDF)	0,1
2,3,4,6,7,8 — Hexachlorodibenzofuran (HxCDF)	0,1
1,2,3,4,6,7,8 — Heptachlorodibenzofuran (HpCDF)	0,01
1,2,3,4,7,8,9 — Heptachlorodibenzofuran (HpCDF)	0,01
Octachlorodibenzofuran (OCDF)	0,001

▼B

PART 3

Air emission limit values for waste incineration plants

1. All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correcting for the water vapour content of the waste gases.

They are standardised at 11 % oxygen in waste gas except in case of incineration of mineral waste oil as defined in point 3 of Article 3 of Directive 2008/98/EC, when they are standardised at 3 % oxygen, and in the cases referred to in Point 2.7 of Part 6.

- 1.1. Daily average emission limit values for the following polluting substances (mg/Nm³)

Total dust	10
Gaseous and vaporous organic substances, expressed as total organic carbon (TOC)	10
Hydrogen chloride (HCl)	10
Hydrogen fluoride (HF)	1
Sulphur dioxide (SO ₂)	50
Nitrogen monoxide (NO) and nitrogen dioxide (NO ₂), expressed as NO ₂ for existing waste incineration plants with a nominal capacity exceeding 6 tonnes per hour or new waste incineration plants	200
Nitrogen monoxide (NO) and nitrogen dioxide (NO ₂), expressed as NO ₂ for existing waste incineration plants with a nominal capacity of 6 tonnes per hour or less	400

- 1.2. Half-hourly average emission limit values for the following polluting substances (mg/Nm³)

	(100 %) A	(97 %) B
Total dust	30	10
Gaseous and vaporous organic substances, expressed as total organic carbon (TOC)	20	10
Hydrogen chloride (HCl)	60	10
Hydrogen fluoride (HF)	4	2
Sulphur dioxide (SO ₂)	200	50
Nitrogen monoxide (NO) and nitrogen dioxide (NO ₂), expressed as NO ₂ for existing waste incineration plants with a nominal capacity exceeding 6 tonnes per hour or new waste incineration plants	400	200

- 1.3. Average emission limit values (mg/Nm³) for the following heavy metals over a sampling period of a minimum of 30 minutes and a maximum of 8 hours

Cadmium and its compounds, expressed as cadmium (Cd)	Total: 0,05
Thallium and its compounds, expressed as thallium (Tl)	
Mercury and its compounds, expressed as mercury (Hg)	0,05

▼B

Antimony and its compounds, expressed as antimony (Sb)	Total: 0,5
Arsenic and its compounds, expressed as arsenic (As)	
Lead and its compounds, expressed as lead (Pb)	
Chromium and its compounds, expressed as chromium (Cr)	
Cobalt and its compounds, expressed as cobalt (Co)	
Copper and its compounds, expressed as copper (Cu)	
Manganese and its compounds, expressed as manganese (Mn)	
Nickel and its compounds, expressed as nickel (Ni)	
Vanadium and its compounds, expressed as vanadium (V)	

These average values cover also the gaseous and the vapour forms of the relevant heavy metal emissions as well as their compounds.

- 1.4. Average emission limit value (ng/Nm³) for dioxins and furans over a sampling period of a minimum of 6 hours and a maximum of 8 hours. The emission limit value refers to the total concentration of dioxins and furans calculated in accordance with Part 2.

Dioxins and furans	0,1
--------------------	-----

- 1.5. Emission limit values (mg/Nm³) for carbon monoxide (CO) in the waste gases:

- (a) 50 as daily average value;
- (b) 100 as half-hourly average value;
- (c) 150 as 10-minute average value.

The competent authority may authorise exemptions from the emission limit values set out in this point for waste incineration plants using fluidised bed technology, provided that the permit sets an emission limit value for carbon monoxide (CO) of not more than 100 mg/Nm³ as an hourly average value.

2. Emission limit values applicable in the circumstances described in Article 46(6) and Article 47.

The total dust concentration in the emissions into the air of a waste incineration plant shall under no circumstances exceed 150 mg/Nm³ expressed as a half-hourly average. The air emission limit values for TOC and CO set out in points 1.2 and 1.5(b) shall not be exceeded.

3. Member States may lay down rules governing the exemptions provided for in this Part.

▼B

PART 4

Determination of air emission limit values for the co-incineration of waste

1. The following formula (mixing rule) shall be applied whenever a specific total emission limit value 'C' has not been set out in a table in this Part.

The emission limit value for each relevant polluting substance and CO in the waste gas resulting from the co-incineration of waste shall be calculated as follows:

▼C1

$$\frac{V_{\text{waste}} \times C_{\text{waste}} + V_{\text{proc}} \times C_{\text{proc}}}{V_{\text{waste}} + V_{\text{proc}}} = C$$

▼B

V_{waste} : waste gas volume resulting from the incineration of waste only determined from the waste with the lowest calorific value specified in the permit and standardised at the conditions given by this Directive.

If the resulting heat release from the incineration of hazardous waste amounts to less than 10 % of the total heat released in the plant, V_{waste} must be calculated from a (notional) quantity of waste that, being incinerated, would equal 10 % heat release, the total heat release being fixed.

C_{waste} : emission limit values for waste incineration plants set out in Part 3

V_{proc} : waste gas volume resulting from the plant process including the combustion of the authorised fuels normally used in the plant (wastes excluded) determined on the basis of oxygen contents at which the emissions must be standardised as set out in Union or national law. In the absence of legislation for this kind of plant, the real oxygen content in the waste gas without being thinned by addition of air unnecessary for the process must be used.

C_{proc} : emission limit values as set out in this Part for certain industrial activities or in case of the absence of such values, emission limit values of plants which comply with the national laws, regulations and administrative provisions for such plants while burning the normally authorised fuels (wastes excluded). In the absence of these measures the emission limit values set out in the permit are used. In the absence of such permit values the real mass concentrations are used.

C: total emission limit values at an oxygen content as set out in this Part for certain industrial activities and certain polluting substances or, in case of the absence of such values, total emission limit values replacing the emission limit values as set out in specific Annexes of this Directive. The total oxygen content to replace the oxygen content for the standardisation is calculated on the basis of the content above respecting the partial volumes.

▼B

All emission limit values shall be calculated at a temperature of 273,15 K, a pressure of 101,3 kPa and after correcting for the water vapour content of the waste gases.

Member States may lay down rules governing the exemptions provided for in this Part.

2. Special provisions for cement kilns co-incinerating waste
- 2.1. The emission limit values set out in points 2.2 and 2.3 apply as daily average values for total dust, HCl, HF, NO_x, SO₂ and TOC (for continuous measurements), as average values over the sampling period of a minimum of 30 minutes and a maximum of 8 hours for heavy metals and as average values over the sampling period of a minimum of 6 hours and a maximum of 8 hours for dioxins and furans.

All values are standardised at 10 % oxygen.

Half-hourly average values shall only be needed in view of calculating the daily average values.

- 2.2. C – total emission limit values (mg/Nm³ except for dioxins and furans) for the following –polluting substances

Polluting substance	C
Total dust	30
HCl	10
HF	1
NO _x	500 ⁽¹⁾
Cd + Tl	0,05
Hg	0,05
Sb + As + Pb + Cr + Co + Cu + Mn + Ni + V	0,5
Dioxins and furans (ng/Nm ³)	0,1

⁽¹⁾ Until 1 January 2016, the competent authority may authorise exemptions from the limit value for NO_x for Lepol kilns and long rotary kilns provided that the permit sets a total emission limit value for NO_x of not more than 800 mg/Nm³.

- 2.3. C – total emission limit values (mg/Nm³) for SO₂ and TOC

Pollutant	C
SO ₂	50
TOC	10

The competent authority may grant derogations for emission limit values set out in this point in cases where TOC and SO₂ do not result from the co-incineration of waste.

- 2.4. C- total emission limit values for CO

The competent authority may set emission limit values for CO.

▼B

3. Special provisions for combustion plants co-incinerating waste
- 3.1. C_{proc} expressed as daily average values (mg/Nm^3) valid until the date set out in Article 82(5)

For determining the total rated thermal input of the combustion plants, the aggregation rules as defined in Article 29 shall apply. Half-hourly average values shall only be needed in view of calculating the daily average values.

C_{proc} for solid fuels with the exception of biomass (O_2 content 6 %):

Polluting substances	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	850	200	200
NO_x	—	400	200	200
Dust	50	50	30	30

C_{proc} for biomass (O_2 content 6 %):

Polluting substances	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	200	200	200
NO_x	—	350	300	200
Dust	50	50	30	30

C_{proc} for liquid fuels (O_2 content 3 %):

Polluting substances	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	850	400 to 200 (linear decrease from 100 to 300 MWth)	200
NO_x	—	400	200	200
Dust	50	50	30	30

- 3.2. C_{proc} expressed as daily average values (mg/Nm^3) valid from the date set out in Article 82(6)

For determining the total rated thermal input of the combustion plants, the aggregation rules as defined in Article 29 shall apply. Half-hourly average values shall only be needed in view of calculating the daily average values.

- 3.2.1. C_{proc} for combustion plants referred to in Article 30(2), with the exception of gas turbines and gas engines

C_{proc} for solid fuels with the exception of biomass (O_2 content 6 %):

Polluting substance	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO_2	—	400 for peat: 300	200	200

▼B

Polluting substance	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
NO _x	—	300 for pulverised lignite: 400	200	200
Dust	50	30	25 for peat: 20	20

C_{proc} for biomass (O₂ content 6 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO ₂	—	200	200	200
NO _x	—	300	250	200
Dust	50	30	20	20

C_{proc} for liquid fuels (O₂ content 3 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO ₂	—	350	250	200
NO _x	—	400	200	150
Dust	50	30	25	20

3.2.2. C_{proc} for combustion plants referred to in Article 30(3), with the exception of gas turbines and gas engines

C_{proc} for solid fuels with the exception of biomass (O₂ content 6 %):

Polluting substance	< 50 MWth	50-100 MWth	100 to 300 MWth	> 300 MWth
SO ₂	—	400 for peat: 300	200 for peat: 300, except in the case of fluidised bed combustion: 250	150 for circulating or pressurised fluidised bed combustion or, in case of peat firing, for all fluidised bed combustion: 200
NO _x	—	300 for peat: 250	200	150 for pulverised lignite combustion: 200
Dust	50	20	20	10 for peat: 20

C_{proc} for biomass (O₂ content 6 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO ₂	—	200	200	150
NO _x	—	250	200	150
Dust	50	20	20	20

▼B

C_{proc} for liquid fuels (O_2 content 3 %):

Polluting substance	< 50 MWth	50 to 100 MWth	100 to 300 MWth	> 300 MWth
SO ₂	—	350	200	150
NO _x	—	300	150	100
Dust	50	20	20	10

- 3.3. C — total emission limit values for heavy metals (mg/Nm³) expressed as average values over the sampling period of a minimum of 30 minutes and a maximum of 8 hours (O_2 content 6 % for solid fuels and 3 % for liquid fuels)

Polluting substances	C
Cd + Tl	0,05
Hg	0,05
Sb + As + Pb + Cr + Co + Cu + Mn + Ni + V	0,5

- 3.4. C — total emission limit value (ng/Nm³) for dioxins and furans expressed as average value measured over the sampling period of a minimum of 6 hours and a maximum of 8 hours (O_2 content 6 % for solid fuels and 3 % for liquid fuels)

Polluting substance	C
Dioxins and furans	0,1

4. Special provisions for waste co-incineration plants in industrial sectors not covered under Points 2 and 3 of this Part

- 4.1. C — total emission limit value (ng/Nm³) for dioxins and furans expressed as average value measured over the sampling period of a minimum of 6 hours and a maximum of 8 hours:

Polluting substance	C
Dioxins and furans	0,1

- 4.2. C — total emission limit values (mg/Nm³) for heavy metals expressed as average values over the sampling period of a minimum of 30 minutes and a maximum of 8 hours:

Polluting substances	C
Cd + Tl	0,05
Hg	0,05

PART 5

Emission limit values for discharges of waste water from the cleaning of waste gases

Polluting substances	Emission limit values for unfiltered samples (mg/l except for dioxins and furans)	
	(95 %)	(100 %)
1. Total suspended solids as defined in Annex I of Directive 91/271/EEC	30	45
2. Mercury and its compounds, expressed as mercury (Hg)	0,03	
3. Cadmium and its compounds, expressed as cadmium (Cd)	0,05	
4. Thallium and its compounds, expressed as thallium (Tl)	0,05	
5. Arsenic and its compounds, expressed as arsenic (As)	0,15	
6. Lead and its compounds, expressed as lead (Pb)	0,2	
7. Chromium and its compounds, expressed as chromium (Cr)	0,5	
8. Copper and its compounds, expressed as copper (Cu)	0,5	
9. Nickel and its compounds, expressed as nickel (Ni)	0,5	
10. Zinc and its compounds, expressed as zinc (Zn)	1,5	
11. Dioxins and furans	0,3 ng/l	

PART 6

Monitoring of emissions

1. Measurement techniques
 - 1.1. Measurements for the determination of concentrations of air and water polluting substances shall be carried out representatively.
 - 1.2. Sampling and analysis of all polluting substances including dioxins and furans as well as the quality assurance of automated measuring systems and the reference measurement methods to calibrate them shall be carried out according to CEN-standards. If CEN standards are not available, ISO, national or other international standards which ensure the provision of data of an equivalent scientific quality shall apply. Automated measuring systems shall be subject to control by means of parallel measurements with the reference methods at least once per year.
 - 1.3. At the daily emission limit value level, the values of the 95 % confidence intervals of a single measured result shall not exceed the following percentages of the emission limit values:

Carbon monoxide:	10 %
Sulphur dioxide:	20 %
Nitrogen dioxide:	20 %
Total dust:	30 %
Total organic carbon:	30 %

▼B

Hydrogen chloride:	40 %
Hydrogen fluoride:	40 %.

Periodic measurements of the emissions into air and water shall be carried out in accordance with points 1.1 and 1.2.

2. Measurements relating to air polluting substances
 - 2.1. The following measurements relating to air polluting substances shall be carried out:
 - (a) continuous measurements of the following substances: NO_x, provided that emission limit values are set, CO, total dust, TOC, HCl, HF, SO₂;
 - (b) continuous measurements of the following process operation parameters: temperature near the inner wall or at another representative point of the combustion chamber as authorised by the competent authority, concentration of oxygen, pressure, temperature and water vapour content of the waste gas;
 - (c) at least two measurements per year of heavy metals and dioxins and furans; one measurement at least every 3 months shall, however, be carried out for the first 12 months of operation.
 - 2.2. The residence time as well as the minimum temperature and the oxygen content of the waste gases shall be subject to appropriate verification, at least once when the waste incineration plant or waste co-incineration plant is brought into service and under the most unfavourable operating conditions anticipated.
 - 2.3. The continuous measurement of HF may be omitted if treatment stages for HCl are used which ensure that the emission limit value for HCl is not being exceeded. In that case the emissions of HF shall be subject to periodic measurements as laid down in point 2.1(c).
 - 2.4. The continuous measurement of the water vapour content shall not be required if the sampled waste gas is dried before the emissions are analysed.
 - 2.5. The competent authority may decide not to require continuous measurements for HCl, HF and SO₂ in waste incineration plants or waste co-incineration plants and require periodic measurements as set out in point 2.1(c) or no measurements if the operator can prove that the emissions of those pollutants can under no circumstances be higher than the prescribed emission limit values.

The competent authority may decide not to require continuous measurements for NO_x and require periodic measurements as set out in point 2.1(c) in existing waste incineration plants with a nominal capacity of less than 6 tonnes per hour or in existing waste co-incineration plants with a nominal capacity of less than 6 tonnes per hour if the operator can prove on the basis of information on the quality of the waste concerned, the technologies used and the results of the monitoring of emissions, that the emissions of NO_x can under no circumstances be higher than the prescribed emission limit value.

- 2.6. The competent authority may decide to require one measurement every 2 years for heavy metals and one measurement per year for dioxins and furans in the following cases:
 - (a) the emissions resulting from co-incineration or incineration of waste are under all circumstances below 50 % of the emission limit values;

▼B

- (b) the waste to be co-incinerated or incinerated consists only of certain sorted combustible fractions of non-hazardous waste not suitable for recycling and presenting certain characteristics, and which is further specified on the basis of the assessment referred to in point (c);
 - (c) the operator can prove on the basis of information on the quality of the waste concerned and the monitoring of the emissions that the emissions are under all circumstances significantly below the emission limit values for heavy metals and dioxins and furans.
- 2.7. The results of the measurements shall be standardised using the standard oxygen concentrations mentioned in Part 3 or calculated according to Part 4 and by applying the formula given in Part 7.

When waste is incinerated or co-incinerated in an oxygen-enriched atmosphere, the results of the measurements can be standardised at an oxygen content laid down by the competent authority reflecting the special circumstances of the individual case.

When the emissions of polluting substances are reduced by waste gas treatment in a waste incineration plant or waste co-incineration plant treating hazardous waste, the standardisation with respect to the oxygen contents provided for in the first subparagraph shall be done only if the oxygen content measured over the same period as for the polluting substance concerned exceeds the relevant standard oxygen content.

3. Measurements relating to water polluting substances
- 3.1. The following measurements shall be carried out at the point of waste water discharge:
- (a) continuous measurements of pH, temperature and flow;
 - (b) spot sample daily measurements of total suspended solids or measurements of a flow proportional representative sample over a period of 24 hours;
 - (c) at least monthly measurements of a flow proportional representative sample of the discharge over a period of 24 hours of Hg, Cd, Tl, As, Pb, Cr, Cu, Ni and Zn;
 - (d) at least every 6 months measurements of dioxins and furans; however, one measurement at least every 3 months shall be carried out for the first 12 months of operation.
- 3.2. Where the waste water from the cleaning of waste gases is treated on site collectively with other on-site sources of waste water, the operator shall take the measurements:
- (a) on the waste water stream from the waste gas cleaning processes prior to its input into the collective waste water treatment plant;
 - (b) on the other waste water stream or streams prior to its or their input into the collective waste water treatment plant;
 - (c) at the point of final waste water discharge, after the treatment, from the waste incineration plant or waste co-incineration plant.

▼B

PART 7

Formula to calculate the emission concentration at the standard percentage oxygen concentration

$$E_S = \frac{21 - O_S}{21 - O_M} \times E_M$$

E_S = calculated emission concentration at the standard percentage oxygen concentration

E_M = measured emission concentration

O_S = standard oxygen concentration

O_M = measured oxygen concentration

PART 8

Assessment of compliance with emission limit values

1. Air emission limit values

1.1. The emission limit values for air shall be regarded as being complied with if:

- (a) none of the daily average values exceeds any of the emission limit values set out in point 1.1 of Part 3 or in Part 4 or calculated in accordance with Part 4;
- (b) either none of the half-hourly average values exceeds any of the emission limit values set out in column A of the table under point 1.2 of Part 3 or, where relevant, 97 % of the half-hourly average values over the year do not exceed any of the emission limit values set out in column B of the table under point 1.2 of Part 3;
- (c) none of the average values over the sampling period set out for heavy metals and dioxins and furans exceeds the emission limit values set out in points 1.3 and 1.4 of Part 3 or in Part 4 or calculated in accordance with Part 4;
- (d) for carbon monoxide (CO):
 - (i) in case of waste incineration plants:
 - at least 97 % of the daily average values over the year do not exceed the emission limit value set out in point 1.5(a) of Part 3; and,
 - at least 95 % of all 10-minute average values taken in any 24-hour period or all of the half-hourly average values taken in the same period do not exceed the emission limit values set out in points 1.5(b) and (c) of Part 3; in case of waste incineration plants in which the gas resulting from the incineration process is raised to a temperature of at least 1 100 °C for at least two seconds, Member States may apply an evaluation period of 7 days for the 10-minute average values;
 - (ii) in case of waste co-incineration plants: the provisions of Part 4 are met.

1.2. The half-hourly average values and the 10-minute averages shall be determined within the effective operating time (excluding the start-up and shut-down periods if no waste is being incinerated) from the measured values after having subtracted the value of the confidence interval specified in point 1.3 of Part 6. The daily average values shall be determined from those validated average values.

▼B

To obtain a valid daily average value no more than five half-hourly average values in any day shall be discarded due to malfunction or maintenance of the continuous measurement system. No more than ten daily average values per year shall be discarded due to malfunction or maintenance of the continuous measurement system.

- 1.3. The average values over the sampling period and the average values in the case of periodical measurements of HF, HCl and SO₂ shall be determined in accordance with the requirements of Articles 45(1)(e), 48(3) and point 1 of Part 6.
2. Water emission limit values

The emission limit values for water shall be regarded as being complied with if:

- (a) for total suspended solids 95 % and 100 % of the measured values do not exceed the respective emission limit values as set out in Part 5;
- (b) for heavy metals (Hg, Cd, Tl, As, Pb, Cr, Cu, Ni and Zn) no more than one measurement per year exceeds the emission limit values set out in Part 5; or, if the Member State provides for more than 20 samples per year, no more than 5 % of these samples exceed the emission limit values set out in Part 5;
- (c) for dioxins and furans, the measurement results do not exceed the emission limit value set out in Part 5.

ANNEX VII

Technical provisions relating to installations and activities using organic solvents

PART 1

Activities

1. In each of the following points, the activity includes the cleaning of the equipment but not the cleaning of products unless specified otherwise.
2. Adhesive coating
3. Coating activity

Any activity in which a single or multiple application of a continuous film of a coating is applied to:

- (a) either of the following vehicles:
 - (i) new cars, defined as vehicles of category M1 in Directive 2007/46/EC of the European Parliament and of the Council of 5 September 2007 establishing a framework for the approval of motor vehicles and their trailers, and of systems, components and separate technical units intended for such vehicles⁽¹⁾ and of category N1 in so far as they are coated at the same installation as M1 vehicles;
 - (ii) truck cabins, defined as the housing for the driver, and all integrated housing for the technical equipment, of vehicles of categories N2 and N3 in Directive 2007/46/EC;
 - (iii) vans and trucks, defined as vehicles of categories N1, N2 and N3 in Directive 2007/46/EC, but not including truck cabins;
 - (iv) buses, defined as vehicles of categories M2 and M3 in Directive 2007/46/EC;
 - (v) trailers, defined in categories O1, O2, O3 and O4 in Directive 2007/46/EC;
- (b) metallic and plastic surfaces including surfaces of airplanes, ships, trains, etc.;
- (c) wooden surfaces;
- (d) textile, fabric, film and paper surfaces;
- (e) leather.

Coating activities do not include the coating of substrate with metals by electrophoretic and chemical spraying techniques. If the coating activity includes a step in which the same article is printed by whatever technique used, that printing step is considered part of the coating activity. However, printing activities operated as a separate activity are not included, but may be covered by Chapter V of this Directive if the printing activity falls within the scope thereof.

⁽¹⁾ OJ L 263, 9.10.2007, p. 1.

▼B

4. Coil coating

Any activity where coiled steel, stainless steel, coated steel, copper alloys or aluminium strip is coated with either a film forming or laminate coating in a continuous process.
5. Dry cleaning

Any industrial or commercial activity using volatile organic compounds in an installation to clean garments, furnishing and similar consumer goods with the exception of the manual removal of stains and spots in the textile and clothing industry.
6. Footwear manufacture

Any activity of producing complete footwear or parts thereof.
7. Manufacturing of coating mixtures, varnishes, inks and adhesives

The manufacture of the above final products, and of intermediates where carried out at the same site, by mixing of pigments, resins and adhesive materials with organic solvent or other carrier, including dispersion and predispersion activities, viscosity and tint adjustments and operations for filling the final product into its container.
8. Manufacturing of pharmaceutical products

The chemical synthesis, fermentation, extraction, formulation and finishing of pharmaceutical products and, where carried out at the same site, the manufacture of intermediate products.
9. Printing

Any reproduction activity of text and/or images in which, with the use of an image carrier, ink is transferred onto whatever type of surface. It includes associated varnishing, coating and laminating techniques. However, only the following sub-processes are subject to Chapter V:

 - (a) flexography – a printing activity using an image carrier of rubber or elastic photopolymers on which the printing areas are above the non-printing areas, using liquid inks which dry through evaporation;
 - (b) heatset web offset – a web-fed printing activity using an image carrier in which the printing and non-printing area are in the same plane, where web-fed means that the material to be printed is fed to the machine from a reel as distinct from separate sheets. The non-printing area is treated to attract water and thus reject ink. The printing area is treated to receive and transmit ink to the surface to be printed. Evaporation takes place in an oven where hot air is used to heat the printed material;
 - (c) laminating associated to a printing activity – the adhering together of two or more flexible materials to produce laminates;
 - (d) publication rotogravure – a rotogravure printing activity used for printing paper for magazines, brochures, catalogues or similar products, using toluene-based inks;
 - (e) rotogravure – a printing activity using a cylindrical image carrier in which the printing area is below the non-printing area, using liquid inks which dry through evaporation. The recesses are filled with ink and the surplus is cleaned off the non-printing area before the surface to be printed contacts the cylinder and lifts the ink from the recesses;

▼B

- (f) rotary screen printing – a web-fed printing activity in which the ink is passed onto the surface to be printed by forcing it through a porous image carrier, in which the printing area is open and the non-printing area is sealed off, using liquid inks which dry only through evaporation. Web-fed means that the material to be printed is fed into the machine from a reel as distinct from separate sheets;
 - (g) varnishing – an activity by which a varnish or an adhesive coating for the purpose of later sealing the packaging material is applied to a flexible material.
10. Rubber conversion

Any activity of mixing, milling, blending, calendaring, extrusion and vulcanisation of natural or synthetic rubber and any ancillary operations for converting natural or synthetic rubber into a finished product.
 11. Surface cleaning

Any activity except dry cleaning using organic solvents to remove contamination from the surface of material including degreasing. A cleaning activity consisting of more than one step before or after any other activity shall be considered as one surface cleaning activity. This activity does not refer to the cleaning of the equipment but to the cleaning of the surface of products.
 12. Vegetable oil and animal fat extraction and vegetable oil refining activities

Any activity to extract vegetable oil from seeds and other vegetable matter, the processing of dry residues to produce animal feed, the purification of fats and vegetable oils derived from seeds, vegetable matter and/or animal matter.
 13. Vehicle refinishing

Any industrial or commercial coating activity and associated degreasing activities performing either of the following:

 - (a) the original coating of road vehicles as defined in Directive 2007/46/EC or part of them with refinishing-type materials, where this is carried out away from the original manufacturing line;
 - (b) the coating of trailers (including semi-trailers) (category O in Directive 2007/46/EC).
 14. Winding wire coating

Any coating activity of metallic conductors used for winding the coils in transformers and motors, etc.
 15. Wood impregnation

Any activity giving a loading of preservative in timber.
 16. Wood and plastic lamination

Any activity to adhere together wood and/or plastic to produce laminated products.

PART 2

Thresholds and emission limit values

The emission limit values in waste gases shall be calculated at a temperature of 273,15 K, and a pressure of 101,3 kPa.

	Activity (solvent consumption threshold in tonnes/ year)	Threshold (solvent consumption threshold in tonnes/ year)	Emission limit values in waste gases (mg C/Nm ³)	Fugitive emission limit values (per- centage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installa- tions	New installations	Existing installa- tions	
1	Heatset web offset printing (> 15)	15—25 > 25	100 20	30 ⁽¹⁾ 30 ⁽¹⁾				⁽¹⁾ Solvent residue in finished product is not to be considered as part of fugitive emissions.
2	Publication rotogravure (> 25)		75	10	15			
3	Other rotogravure, flexography, rotary screen printing, laminating or varnishing units (> 15) rotary screen printing on textile/cardboard (> 30)	15—25 > 25 > 30 ⁽¹⁾	100 100 100	25 20 20				⁽¹⁾ Threshold for rotary screen printing on textile and on cardboard.
4	Surface cleaning using compounds specified in Article 59(5). (> 1)	1—5 > 5	20 ⁽¹⁾ 20 ⁽¹⁾	15 10				⁽¹⁾ Limit value refers to mass of compounds in mg/Nm ³ , and not to total carbon.
5	Other surface cleaning (> 2)	2—10 > 10	75 ⁽¹⁾ 75 ⁽¹⁾	20 ⁽¹⁾ 15 ⁽¹⁾				⁽¹⁾ Installations which demonstrate to the competent authority that the average organic solvent content of all cleaning material used does not exceed 30 % by weight are exempt from application of these values.

▼B

	Activity (solvent consumption threshold in tonnes/ year)	Threshold (solvent consumption threshold in tonnes/ year)	Emission limit values in waste gases (mg C/Nm ³)	Fugitive emission limit values (per- centage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installa- tions	New installations	Existing installa- tions	
6	Vehicle coating (< 15) and vehicle refinishing	> 0,5	50 ⁽¹⁾	25				⁽¹⁾ Compliance in accordance with point 2 of Part 8 shall be demon- strated based on 15 minute average measurements.
7	Coil coating (> 25)		50 ⁽¹⁾	5	10			⁽¹⁾ For installations which use tech- niques which allow reuse of recovered solvents, the emission limit value shall be 150.
8	Other coating, including metal, plastic, textile ⁽⁵⁾ , fabric, film and paper coating (> 5)	5—15 > 15	100 ⁽¹⁾ ⁽⁴⁾ 50/75 ⁽²⁾ ⁽³⁾ ⁽⁴⁾	25 ⁽⁴⁾ 20 ⁽⁴⁾				⁽¹⁾ Emission limit value applies to coating application and drying processes operated under contained conditions. ⁽²⁾ The first emission limit value applies to drying processes, the second to coating application processes. ⁽³⁾ For textile coating installations which use techniques which allow reuse of recovered solvents, the emission limit value applied to coating application and drying processes taken together shall be 150. ⁽⁴⁾ Coating activities which cannot be carried out under contained conditions (such as shipbuilding, aircraft painting) may be exempted from these values, in accordance with Article 59(3). ⁽⁵⁾ Rotary screen printing on textile is covered by activity No 3.

▼B

	Activity (solvent consumption threshold in tonnes/ year)	Threshold (solvent consumption threshold in tonnes/ year)	Emission limit values in waste gases (mg C/Nm ³)	Fugitive emission limit values (per- centage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installa- tions	New installations	Existing installa- tions	
9	Winding wire coating (> 5)					10 g/kg ⁽¹⁾ 5 g/kg ⁽²⁾		⁽¹⁾ Applies for installations where average diameter of wire ≤ 0,1 mm. ⁽²⁾ Applies for all other instal- lations.
10	Coating of wooden surfaces (> 15)	15—25 > 25	100 ⁽¹⁾ 50/75 ⁽²⁾		25 20			⁽¹⁾ Emission limit value applies to coating application and drying processes operated under contained conditions. ⁽²⁾ The first value applies to drying processes, the second to coating application processes.
11	Dry cleaning					20 g/kg ⁽¹⁾ ⁽²⁾		⁽¹⁾ Expressed in mass of solvent emitted per kilogram of product cleaned and dried. ⁽²⁾ The emission limit value in point 2 of Part 4 does not apply for this activity.
12	Wood impregnation (> 25)		100 ⁽¹⁾		45	11 kg/m ³		⁽¹⁾ Emission limit value does not apply for impregnation with creo- sote.
13	Coating of leather (> 10)	10—25 > 25 > 10 ⁽¹⁾				85 g/m ² 75 g/m ² 150 g/m ²		Emission limit values are expressed in grams of solvent emitted per m ² of product produced. ⁽¹⁾ For leather coating activities in furnishing and particular leather goods used as small consumer goods like bags, belts, wallets, etc.

▼B

	Activity (solvent consumption threshold in tonnes/ year)	Threshold (solvent consumption threshold in tonnes/ year)	Emission limit values in waste gases (mg C/Nm ³)	Fugitive emission limit values (per- centage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installa- tions	New installations	Existing installa- tions	
14	Footwear manufacture (> 5)						25 g per pair	Total emission limit value is expressed in grams of solvent emitted per pair of complete footwear produced.
15	Wood and plastic lamination (> 5)						30 g/m ²	
16	Adhesive coating (> 5)	5—15 > 15	50 ⁽¹⁾ 50 ⁽¹⁾		25 20			⁽¹⁾ If techniques are used which allow reuse of recovered solvent, the emission limit value in waste gases shall be 150.
17	Manufacture of coating mixture, varnishes, inks and adhesives (> 100)	100—1 000 > 1 000	150 150		5 3	5 % of solvent input 3 % of solvent input		The fugitive emission limit value does not include solvent sold as part of a coatings mixture in a sealed container.
18	Rubber conversion (> 15)		20 ⁽¹⁾		25 ⁽²⁾	25 % of solvent input		⁽¹⁾ If techniques are used which allow reuse of recovered solvent, the emission limit value in waste gases shall be 150. ⁽²⁾ The fugitive emission limit value does not include solvent sold as part of products or mixtures in a sealed container.

▼B

	Activity (solvent consumption threshold in tonnes/ year)	Threshold (solvent consumption threshold in tonnes/ year)	Emission limit values in waste gases (mg C/Nm ³)	Fugitive emission limit values (per- centage of solvent input)		Total emission limit values		Special provisions
				New installations	Existing installa- tions	New installations	Existing installa- tions	
19	Vegetable oil and animal fat extraction and vegetable oil refining activities (> 10)					Animal fat: 1,5 kg/tonne Castor: 3 kg/tonne Rape seed: 1 kg/tonne Sunflower seed: 1 kg/tonne Soya beans (normal crush): 0,8 kg/tonne Soya beans (white flakes): 1,2 kg/tonne Other seeds and other vegetable matter: 3 kg/tonne ⁽¹⁾ 1,5 kg/ tonne ⁽²⁾ 4 kg/tonne ⁽³⁾	⁽¹⁾ Total emission limit values for installations processing individual batches of seeds and other vegetable matter should be set by the competent authority on a case- by-case basis, applying the best available techniques. ⁽²⁾ Applies to all fractionation processes excluding de-gumming (the removal of gums from the oil). ⁽³⁾ Applies to de-gumming.	
20	Manufacturing of pharmaceutical products (> 50)		20 ⁽¹⁾	5 ⁽²⁾	15 ⁽²⁾	5 % of solvent input	15 % of solvent input	⁽¹⁾ If techniques are used which allow reuse of recovered solvent, the emission limit value in waste gases shall be 150. ⁽²⁾ The fugitive emission limit value does not include solvent sold as part of products or mixtures in a sealed container.

▼B

PART 3

Emission limit values for installations of the vehicle coating industry

1. The total emission limit values are expressed in terms of grams of organic solvent emitted in relation to the surface area of product in square metres and in kilograms of organic solvent emitted in relation to the car body.
2. The surface area of any product dealt with in the table under point 3 is defined as the surface area calculated from the total electrophoretic coating area, and the surface area of any parts that might be added in successive phases of the coating process which are coated with the same coatings as those used for the product in question, or the total surface area of the product coated in the installation.

The surface of the electrophoretic coating area is calculated using the following formula:

$$\frac{2 \times \text{total weight of product shell}}{\text{average thickness of metal sheet} \times \text{density of metal sheet}}$$

This method shall also be applied for other coated parts made out of sheets.

Computer aided design or other equivalent methods shall be used to calculate the surface area of the other parts added, or the total surface area coated in the installation.

3. The total emission limit values in the table below refer to all process stages carried out at the same installation from electrophoretic coating, or any other kind of coating process, through to the final wax and polish of topcoating inclusive, as well as solvent used in cleaning of process equipment, including spray booths and other fixed equipment, both during and outside of production time.

Activity (solvent consumption threshold in tonnes/year)	Production threshold (refers to annual production of coated item)	Total emission limit value	
		New installations	Existing installations
Coating of new cars (> 15)	> 5 000	45 g/m ² or 1,3 kg/body + 33 g/m ²	60 g/m ² or 1,9 kg/body + 41 g/m ²
	≤ 5 000 monocoque or > 3 500 chassis-built	90 g/m ² or 1,5 kg/body + 70 g/m ²	90 g/m ² or 1,5 kg/body + 70 g/m ²
		Total emission limit value (g/m ²)	
Coating of new truck cabins (> 15)	≤ 5 000	65	85
	> 5 000	55	75
Coating of new vans and trucks (> 15)	≤ 2 500	90	120
	> 2 500	70	90
Coating of new buses (> 15)	≤ 2 000	210	290
	> 2 000	150	225

▼B

4. Vehicle coating installations below the solvent consumption thresholds mentioned in the table under point 3 shall meet the requirements for the vehicle refinishing sector set out in Part 2.

PART 4

Emission limit values relating to volatile organic compounds with specific risk phrases

1. For emissions of the volatile organic compounds referred to in Article 58 where the mass flow of the sum of the compounds causing the labelling referred to in that Article is greater than, or equal to, 10 g/h, an emission limit value of 2 mg/Nm³ shall be complied with. The emission limit value refers to the mass sum of the individual compounds.
2. For emissions of halogenated volatile organic compounds which are assigned or need to carry the hazard statements H341 or H351, where the mass flow of the sum of the compounds causing the hazard statements H341 or H351 is greater than, or equal to, 100 g/h, an emission limit value of 20 mg/Nm³ shall be complied with. The emission limit value refers to the mass sum of the individual compounds.

PART 5

Reduction scheme

1. The operator may use any reduction scheme, specially designed for his installation.
2. In the case of applying coatings, varnishes, adhesives or inks, the following scheme can be used. Where the following method is inappropriate, the competent authority may allow an operator to apply any alternative scheme achieving equivalent emission reductions to those achieved if the emission limit values of Parts 2 and 3 were to be applied. The design of the scheme shall take into account the following facts:
 - (a) where substitutes containing little or no solvent are still under development, a time extension shall be given to the operator to implement his emission reduction plans;
 - (b) the reference point for emission reductions should correspond as closely as possible to the emissions which would have resulted had no reduction action been taken.
3. The following scheme shall operate for installations for which a constant solid content of product can be assumed:
 - (a) The annual reference emission is calculated as follows:
 - (i) The total mass of solids in the quantity of coating and/or ink, varnish or adhesive consumed in a year is determined. Solids are all materials in coatings, inks, varnishes and adhesives that become solid once the water or the volatile organic compounds are evaporated.
 - (ii) The annual reference emissions are calculated by multiplying the mass determined in (i) by the appropriate factor listed in the table below. Competent authorities may adjust these factors for individual installations to reflect documented increased efficiency in the use of solids.

▼B

Activity	Multiplication factor for use in item (a)(ii)
Rotogravure printing; flexography printing; laminating as part of a printing activity; varnishing as part of a printing activity; wood coating; coating of textiles, fabric film or paper; adhesive coating	4
Coil coating, vehicle refinishing	3
Food contact coating, aerospace coatings	2,33
Other coatings and rotary screen printing	1,5

- (b) The target emission is equal to the annual reference emission multiplied by a percentage equal to:
- (i) (the fugitive emission limit value + 15), for installations falling within item 6 and the lower threshold band of items 8 and 10 of Part 2,
 - (ii) (the fugitive emission limit value + 5) for all other installations.
- (c) Compliance is achieved if the actual solvent emission determined from the solvent management plan is less than or equal to the target emission.

PART 6

Emission monitoring

1. Channels to which abatement equipment is connected, and which at the final point of discharge emit more than an average of 10 kg/h of total organic carbon, shall be monitored continuously for compliance.
2. In the other cases, Member States shall ensure that either continuous or periodic measurements are carried out. For periodic measurements at least three measurement values shall be obtained during each measurement exercise.
3. Measurements are not required in the case where end-of-pipe abatement equipment is not needed to comply with this Directive.

PART 7

Solvent management plan

1. Principles

The solvent management plan shall be used to:

 - (a) verify compliance as specified in Article 62;
 - (b) identify future reduction options;
 - (c) enable provision of information on solvent consumption, solvent emissions and compliance with the requirements of Chapter V to the public.
2. Definitions

The following definitions provide a framework for the mass balance exercise.

▼B

Inputs of organic solvents (I):

- I1 The quantity of organic solvents or their quantity in mixtures purchased which are used as input into the process in the time frame over which the mass balance is being calculated.
- I2 The quantity of organic solvents or their quantity in mixtures recovered and reused as solvent input into the process. The recycled solvent is counted every time it is used to carry out the activity.

Outputs of organic solvents (O):

- O1 Emissions in waste gases.
 - O2 Organic solvents lost in water, taking into account waste water treatment when calculating O5.
 - O3 The quantity of organic solvents which remains as contamination or residue in products output from the process.
 - O4 Uncaptured emissions of organic solvents into air. This includes the general ventilation of rooms, where air is released to the outside environment via windows, doors, vents and similar openings.
 - O5 Organic solvents and/or organic compounds lost due to chemical or physical reactions (including those which are destroyed, by incineration or other waste gas or waste water treatments, or captured, as long as they are not counted under O6, O7 or O8).
 - O6 Organic solvents contained in collected waste.
 - O7 Organic solvents, or organic solvents contained in mixtures, which are sold or are intended to be sold as a commercially valuable product.
 - O8 Organic solvents contained in mixtures recovered for reuse but not as input into the process, as long as not counted under O7.
 - O9 Organic solvents released in other ways.
3. Use of the solvent management plan for verification of compliance.

The use made of the solvent management plan shall be determined by the particular requirement which is to be verified, as follows:

- (a) verification of compliance with the reduction scheme as set out in Part 5, with a total emission limit value expressed in solvent emissions per unit product, or otherwise stated in Parts 2 and 3.
 - (i) for all activities using the reduction scheme as set out in Part 5, the solvent management plan shall be drawn up annually to determine the consumption (C). The consumption shall be calculated according to the following equation:

$$C = I1 - O8$$

A parallel exercise shall also be undertaken to determine solids used in coating in order to derive the annual reference emission and the target emission each year.

▼B

- (ii) for assessing compliance with a total emission limit value expressed in solvent emissions per unit product or otherwise stated in Parts 2 and 3, the solvent management plan shall be drawn up annually to determine the emissions (E). The emissions shall be calculated according to the following equation:

$$E = F + O1$$

Where F is the fugitive emission as defined in point (b)(i). The emission figure shall then be divided by the relevant product parameter.

- (iii) for assessing compliance with the requirements of point (b)(ii) of Article 59(6), the solvent management plan shall be drawn up annually to determine total emissions from all activities concerned, and that figure shall then be compared with the total emissions that would have resulted had the requirements of Parts 2, 3 and 5 been met for each activity separately.

- (b) Determination of fugitive emissions for comparison with the fugitive emission limit values in Part 2:

- (i) The fugitive emission shall be calculated according to one of the following equations;

$$F = I1 - O1 - O5 - O6 - O7 - O8$$

or

$$F = O2 + O3 + O4 + O9$$

F shall be determined either by direct measurement of the quantities or by an equivalent method or calculation, for instance by using the capture efficiency of the process.

The fugitive emission limit value is expressed as a proportion of the input, which shall be calculated according to the following equation:

$$I = I1 + I2$$

- (ii) Determination of fugitive emissions shall be done by a short but comprehensive set of measurements and needs not be done again until the equipment is modified.

PART 8

Assessment of compliance with emission limit values in waste gases

1. In the case of continuous measurements the emission limit values shall be considered to be complied with if:
 - (a) none of the arithmetic averages of all valid readings taken during any 24-hour period of operation of an installation or activity except start-up and shut-down operations and maintenance of equipment exceeds the emission limit values,
 - (b) none of the hourly averages exceeds the emission limit values by more than a factor of 1,5.
2. In the case of periodic measurements the emission limit values shall be considered to be complied with if, in one monitoring exercise:
 - (a) the average of all the measurement values does not exceed the emission limit values,

▼B

- (b) none of the hourly averages exceeds the emission limit value by more than a factor of 1,5.
- 3. Compliance with Part 4 shall be verified on the basis of the sum of the mass concentrations of the individual volatile organic compounds concerned. For all other cases, compliance shall be verified on the basis of the total mass of organic carbon emitted unless otherwise specified in Part 2.
- 4. Gas volumes may be added to the waste gas for cooling or dilution purposes where technically justified but shall not be considered when determining the mass concentration of the pollutant in the waste gas.

ANNEX VIII

Technical provisions relating to installations producing titanium dioxide

PART 1

Emission limit values for emissions into water

1. In case of installations using the sulphate process (as an annual average):

550 kg of sulphate per tonne of titanium dioxide produced.
2. In case of installations using the chloride process (as an annual average):
 - (a) 130 kg chloride per tonne of titanium dioxide produced using neutral rutile,
 - (b) 228 kg chloride per tonne of titanium dioxide produced using synthetic rutile,
 - (c) 330 kg chloride per tonne of titanium dioxide produced using slag. Installations discharging into salt water (estuarine, coastal, open sea) may be subject to an emission limit value of 450 kg chloride per tonne of titanium dioxide produced using slag.
3. For installations using the chloride process and using more than one type of ore, the emission limit values in point 2 shall apply in proportion to the quantity of the ores used.

PART 2

Emission limit values into air

1. The emission limit values which are expressed as concentrations in mass per cubic meter (Nm³) shall be calculated at a temperature of 273,15 K, and a pressure of 101,3 kPa.
2. For dust: 50 mg/Nm³ as an hourly average from major sources and 150 mg/Nm³ as an hourly average from any other source.
3. For gaseous sulphur dioxide and trioxide discharged from digestion and calcination, including acid droplets calculated as SO₂ equivalent:
 - (a) 6 kg per tonne of titanium dioxide produced as an annual average;
 - (b) 500 mg/Nm³ as an hourly average for plants for the concentration of waste acid.
4. For chlorine in the case of installations using the chloride process:
 - (a) 5 mg/Nm³ as a daily average;
 - (b) 40 mg/Nm³ at any time.

▼B

PART 3

Emission monitoring

The monitoring of emissions into air shall include at least the continuous monitoring of:

- (a) gaseous sulphur dioxide and trioxide discharged from digestion and calcination from plants for the concentration of waste acid in installations using the sulphate process;
- (b) chlorine from major sources within installations using the chloride process;
- (c) dust from major sources.

ANNEX IX

PART A

Repealed Directives with their successive amendments

(referred to in Article 81)

Council Directive 78/176/EEC (OJ L 54, 25.2.1978, p. 19).	
Council Directive 83/29/EEC (OJ L 32, 3.2.1983, p. 28).	
Council Directive 91/692/EEC (OJ L 377, 31.12.1991, p. 48).	only Annex I, point (b)
Council Directive 82/883/EEC (OJ L 378, 31.12.1982, p. 1).	
Act of Accession of 1985	only Annex I, point X.1(o)
Act of Accession of 1994	only Annex I, point VIII.A.6
Council Regulation (EC) No 807/2003 (OJ L 122, 16.5.2003, p. 36).	only Annex III, point 34
Regulation (EC) No 219/2009 of the European Parliament and of the Council (OJ L 87, 31.3.2009, p. 109).	only Annex, point 3.1
Council Directive 92/112/EEC (OJ L 409, 31.12.1992, p. 11).	
Council Directive 1999/13/EC (OJ L 85, 29.3.1999, p. 1).	
Regulation (EC) No 1882/2003 of the European Parliament and of the Council (OJ L 284, 31.10.2003, p. 1).	only Annex I, point 17
Directive 2004/42/EC of the European Parliament and of the Council (OJ L 143, 30.4.2004, p. 87).	only Article 13(1)
Directive 2008/112/EC of the European Parliament and of the Council (OJ L 345, 23.12.2008, p. 68).	only Article 3
Directive 2000/76/EC of the European Parliament and of the Council (OJ L 332, 28.12.2000, p. 91).	
Regulation (EC) No 1137/2008 of the European Parliament and of the Council (OJ L 311, 21.11.2008, p. 1).	only Annex, point 4.8
Directive 2001/80/EC of the European Parliament and of the Council (OJ L 309, 27.11.2001, p. 1).	
Council Directive 2006/105/EC (OJ L 363, 20.12.2006, p. 368).	only Annex, part B, point 2
Directive 2009/31/EC of the European Parliament and of the Council (OJ L 140, 5.6.2009, p. 114).	only Article 33
Directive 2008/1/EC of the European Parliament and of the Council (OJ L 24, 29.1.2008, p. 8).	
Directive 2009/31/EC of the European Parliament and of the Council (OJ L 140, 5.6.2009, p. 114).	only Article 37

PART B

List of time-limits for transposition into national law and application

(referred to in Article 81)

Directive	Time-limit for transposition	Time-limit for application
78/176/EEC	25 February 1979	
82/883/EEC	31 December 1984	
92/112/EEC	15 June 1993	
1999/13/EC	1 April 2001	
2000/76/EC	28 December 2000	28 December 2002 28 December 2005
2001/80/EC	27 November 2002	27 November 2004
2003/35/EC	25 June 2005	
2003/87/EC	31 December 2003	
2008/1/EC	30 October 1999 ⁽¹⁾	30 October 1999 30 October 2007

⁽¹⁾ Directive 2008/1/EC is a codified version of Council Directive 96/61/EC of 24 September 1996 concerning integrated pollution prevention and control (OJ L 257, 10.10.1996, p. 26) and the time-limits for transposition and application remain in force.

Water Resources Act 1991

1991 CHAPTER 57

An Act to consolidate enactments relating to the National Rivers Authority and the matters in relation to which it exercises functions, with amendments to give effect to recommendations of the Law Commission. [25th July 1991]

Be it enacted by the Queen's most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:—

Modifications etc. (not altering text)

- C1 Act: definition applied (1.12.1991) by [Water Industry Act 1991 \(c. 56, SIF 130\)](#), [s. 219\(1\)](#)

CHAPTER III

GENERAL DUTIES

15 General duties with respect to the water industry.

- (1) It shall be the duty of the Agency [^{F15}and the NRBW], in exercising any of [^{F16}their] powers under any enactment, to have particular regard to the duties imposed, by virtue of the provisions of Parts II to IV of the ^{M1}Water Industry Act 1991, on any water undertaker or sewerage undertaker which appears to the Agency [^{F17}or the NRBW, as the case may be,] to be or to be likely to be affected by the exercise of the power in question.
- (2) It shall be the duty of each of the Ministers, in exercising—
- (a) any power conferred by virtue of [^{F18}the 1995 Act,]this Act, the ^{M2}Land Drainage Act 1991, the Water Industry Act 1991[^{F19}, the Water Act 1989 or the Natural Resources Body for Wales (Establishment) Order 2012 (S.I.2012/1903)] in relation to, or to decisions of, the Agency [^{F20}or the NRBW]; or
 - (b) any power which, but for any direction given by one of the Ministers, would fall to be exercised by the Agency [^{F20}or the NRBW],
- to take into account the duty imposed on the Agency [^{F21}and the NRBW] by subsection (1) above.

CHAPTER I

GENERAL MANAGEMENT FUNCTIONS

19 **General management of resources by the [^{F25}Agency.]**

- (1) It shall be the duty of the [^{F26}Agency] to take all such action as it may from time to time consider, in accordance (if any have been given for the purposes of this section) with the directions of the Secretary of State, to be necessary or expedient for the purpose—
 - (a) of conserving, redistributing or otherwise augmenting water resources in England and Wales; and
 - (b) of securing the proper use of water resources in England and Wales.
- (2) Nothing in this section shall be construed as relieving any water undertaker of the obligation to develop water resources for the purpose of performing any duty imposed on it by virtue of section 37 of the ^{M3}Water Industry Act 1991 (general duty to maintain water supply system).

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. 20 Water resources management schemes.

- (1) It shall be the duty of the [^{F27}appropriate agency] so far as reasonably practicable to enter into and maintain such arrangements with water undertakers for securing the proper management or operation of—
- (a) the waters which are available to be used by water undertakers for the purposes of, or in connection with, the carrying out of their functions; and
 - (b) any reservoirs, apparatus or other works which belong to, are operated by or are otherwise under the control of water undertakers for the purposes of, or in connection with, the carrying out of their functions,
- as the [^{F27}appropriate agency] from time to time considers appropriate for the purpose of carrying out its functions under section 6(2) [^{F28}or, as the case may be, section 6(2A)] of the 1995 Act.
- (2) Without prejudice to the power of the [^{F27}appropriate agency] and any water undertaker to include any such provision as may be agreed between them in arrangements under this section, such arrangements may—
- (a) make provision by virtue of subsection (1)(a) above with respect to the construction or installation of any reservoirs, apparatus or other works which will be used by the undertaker in the carrying out of its functions;
 - (b) contain provision requiring payments to be made by the [^{F27}appropriate agency] to the undertaker; and
 - (c) require the reference to and determination by the Secretary of State or the [^{F29}Water Services Regulation Authority] of questions arising under the arrangements.
- (3) The [^{F27}appropriate agency] shall send a copy of any arrangements entered into by it under this section to the Secretary of State; and the obligations of a water undertaker by virtue of any such arrangements shall be enforceable under section 18 of the ^{M4}Water Industry Act 1991 (enforcement orders) by the Secretary of State.

Textual Amendments

[^{F30}20A Water resources management schemes: other abstractors

- (1) The [^{F31}appropriate agency] may enter into and maintain such arrangements with holders of abstraction licences other than water undertakers for securing the proper management or operation of—
- (a) the waters from which they have the right by virtue of their licences to abstract water; and
 - (b) any reservoirs, apparatus or other works which are used for the purposes of or in connection with their abstractions and which belong to them, are operated by them or are otherwise under their control,
- as the [^{F31}appropriate agency] from time to time considers appropriate for the purpose of carrying out its functions under section 6(2) [^{F32}or, as the case may be, section 6(2A)] of the 1995 Act.
- (2) Without prejudice to the power of the [^{F31}appropriate agency] and any holder of an abstraction licence to include any such provision as may be agreed between them in arrangements under this section, such arrangements may—
- (a) make provision by virtue of subsection (1)(a) above with respect to the construction or installation of any reservoirs, apparatus or other works which the holder of the licence will use for the purposes of or in connection with his abstraction;
 - (b) contain provision requiring payments to be made by the [^{F31}appropriate agency] to the holder of the licence; and
 - (c) require the reference to and determination by the Secretary of State or the Water Services Regulation Authority of questions arising under the arrangements.
- (3) The [^{F31}appropriate agency] shall send a copy of any arrangements entered into by it under this section to the Secretary of State.
- (4) In this section, references to abstraction licences are to licences under Chapter 2 of this Part to abstract water.]

21 Minimum acceptable flows.

- (1) The [^{F38}appropriate agency] may, if it thinks it appropriate to do so, submit a draft statement to the Secretary of State containing, in relation to any inland waters that are not discrete waters—
- (a) provision for determining the minimum acceptable flow for those waters; or
 - (b) where any provision for determining such a flow is for the time being in force in relation to those waters, provision for amending that provision or for replacing it with different provision for determining the minimum acceptable flow for those waters.
- (2) The provision contained in any statement for determining the minimum acceptable flow for any inland waters shall, in relation to the inland waters to which it relates, set out—
- (a) the control points at which the flow in the waters is to be measured;
 - (b) the method of measurement which is to be used at each control point; and
 - (c) the flow which is to be the minimum acceptable flow at each control point or, where appropriate, the flows which are to be the minimum acceptable flows at each such point for the different times or periods specified in the statement.
- (3) Before preparing so much of any draft statement under this section as relates to any particular inland waters, the [^{F38}appropriate agency] shall consult—
- [^{F39}(za) if those waters are in Wales and there are related inland waters in England, the Agency;
 - (zb) if those waters are in England and there are related inland waters in Wales, the NRBW;]
 - (a) any water undertaker having the right to abstract water from those waters;
 - (b) any other water undertaker having the right to abstract water from any related underground strata;
 - (c) the drainage board for any internal drainage district from which water is discharged into those waters or in which any part of those waters is situated;
 - (d) any navigation authority, harbour authority or conservancy authority having functions in relation to those waters or any related inland waters;
 - (e) if those waters are ^{F40}... situated in Wales (or in an area of the sea adjoining either the coast of Wales or an area of sea forming part of Wales) and they or any related inland waters are tidal waters in relation to which there is no such navigation authority, harbour authority or conservancy authority, [^{F41}the Secretary of State for Transport]; and
 - (f) any person authorised by a licence under Part I of the ^{M5}Electricity Act 1989 to generate electricity [^{F42}who has a right to abstract water from those waters].

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (4) In determining the flow to be specified in relation to any inland waters under subsection (2)(c) above, the [^{F38}appropriate agency] shall have regard—
- (a) to the flow of water in the inland waters from time to time;
 - (b) in the light of its duties under [^{F43}sections 6(1), 7 and 8 of the 1995 Act], to the character of the inland waters and their surroundings; and
 - (c) to any water quality objectives established under Chapter I of Part III of this Act in relation to the inland waters or any other inland waters which may be affected by the flow in the inland waters in question.
- (5) The flow specified in relation to any inland waters under subsection (2)(c) above shall be not less than the minimum which, in the opinion of the [^{F38}appropriate agency], is needed for safeguarding the public health and for meeting (in respect of both quantity and quality of water)—
- (a) the requirements of existing lawful uses of the inland waters, whether for agriculture, industry, water supply or other purposes; and
 - (b) the requirements, in relation to both those waters and other inland waters whose flow may be affected by changes in the flow of those waters, of navigation, fisheries or land drainage.
- (6) The provisions of Schedule 5 to this Act shall have effect with respect to draft statements under this section and with respect to the approval of statements submitted as draft statements.
- (7) The approval under Schedule 5 to this Act of a draft statement under this section shall bring into force, on the date specified in that approval, so much of that statement, as approved, as contains provision for determining, amending or replacing the minimum acceptable flow for any inland waters.
- (8) For the purposes of subsection (3) above—
- (a) underground strata are related underground strata in relation to any inland waters if—
 - (i) a water undertaker has a right to abstract water from the strata; and
 - (ii) it appears to the [^{F38}appropriate agency], having regard to the extent to which the level of water in the strata depends on the flow of those waters, that the exercise of that right may be substantially affected by so much of the draft statement in question as relates to those waters;
 - (b) inland waters are related inland waters in relation to any other inland waters, where it appears to the [^{F38}appropriate agency] that changes in the flow of the other waters may affect the flow of the first-mentioned inland waters.
- (9) For the purposes of subsection (5) above the [^{F38}appropriate agency] shall be entitled (but shall not be bound) to treat as lawful any existing use of any inland waters unless—
- (a) by a decision given in any legal proceedings, it has been held to be unlawful; and
 - (b) that decision has not been quashed or reversed;
- ^{F44}
- [^{F45}(10) In subsection (5) above, the reference to land drainage includes—
- (a) defence against water (including sea water), irrigation (other than spray irrigation), warping and the carrying on, for any purpose, of any other practice which involves management of the level of water in a watercourse; and

22 Directions to the [^{F46}appropriate agency] to consider minimum acceptable flow.

- (1) If the [^{F46}appropriate agency] is directed by the Secretary of State to consider whether the minimum acceptable flow for any particular inland waters ought to be determined or reviewed, the [^{F46}appropriate agency] shall consider that matter as soon as reasonably practicable after being directed to do so.
- (2) After considering any matter under subsection (1) above the [^{F46}appropriate agency] shall submit to the Secretary of State with respect to the inland waters in question either—
 - (a) such a draft statement as is mentioned in subsection (1) of section 21 above; or
 - (b) a draft statement that no minimum acceptable flow ought to be determined for those waters or, as the case may require, that the minimum acceptable flow for those waters does not need to be changed.

and subsections (6) and (7) of that section shall apply in relation to a draft statement under this subsection as they apply in relation to a draft statement under that section.
- (3) Without prejudice to the generality of paragraph 4 of Schedule 5 to this Act, the power of the Secretary of State under that paragraph to alter a draft statement before approving it shall include power to substitute a statement containing or amending any such provision as is mentioned in subsection (2) of section 21 above for such a draft statement as is mentioned in subsection (2)(b) of this section.

23 Minimum acceptable level or volume of inland waters.

- (1) Where it appears to the [^{F47}appropriate agency], in the case of any particular inland waters, that it would be appropriate to measure the level or the volume (either instead of or in addition to the flow) the [^{F47}appropriate agency] may determine that sections 21 and 22 above shall apply in relation to those inland waters as if any reference to the flow were or, as the case may be, included a reference to the level or to the volume.
- (2) Where the [^{F47}appropriate agency] makes a determination under subsection (1) above with respect to any inland waters, any draft statement prepared for the purposes of section 21 or 22 above, in so far as it relates to those waters, shall state—
 - (a) whether the level or the volume is to be measured; and
 - (b) whether it is to be measured instead of, or in addition to, the flow.
- (3) Chapter II of this Part shall apply in relation to any inland waters with respect to which a determination has been made under subsection (1) above as if any reference in that Chapter to the flow were, or (as the case may be) included, a reference to the level or, as the case may be, the volume.

Restrictions on abstraction and impounding

24 Restrictions on abstraction.

- (1) Subject to the following provisions of this Chapter and to any drought order [^{F48}or drought permit] under Chapter III of this Part, no person shall—
 - (a) abstract water from any source of supply; or
 - (b) cause or permit any other person so to abstract any water,
 except in pursuance of a licence under this Chapter granted by the [^{F47}appropriate agency] and in accordance with the provisions of that licence.
- (2) Where by virtue of subsection (1) above the abstraction of water contained in any underground strata is prohibited except in pursuance of a licence under this Chapter, no person shall begin, or cause or permit any other person to begin—
 - (a) to construct any well, borehole or other work by which water may be abstracted from those strata;
 - (b) to extend any such well, borehole or other work; or
 - (c) to instal or modify any machinery or apparatus by which additional quantities of water may be abstracted from those strata by means of a well, borehole or other work,
 unless the conditions specified in subsection (3) below are satisfied.
- (3) The conditions mentioned in subsection (2) above are—
 - (a) that the abstraction of the water or, as the case may be, of the additional quantities of water is authorised by a licence under this Chapter; and
 - (b) that—
 - (i) the well, borehole or work, as constructed or extended; or
 - (ii) the machinery or apparatus, as installed or modified,
 fulfils the requirements of that licence as to the means by which water is authorised to be abstracted.
- (4) A person shall be guilty of an offence if—
 - (a) he contravenes subsection (1) or (2) above; or
 - (b) he is for the purposes of this section the holder of a licence under this Chapter and, in circumstances not constituting such a contravention, does not comply with a condition or requirement imposed by the provisions, as for the time being in force, of that licence.
- (5) A person who is guilty of an offence under this section shall be liable [^{F49}on summary conviction, or on conviction on indictment, to a fine].
- (6) The restrictions imposed by this section shall have effect notwithstanding anything in any enactment contained in any Act passed before the passing of the ^{M6}Water Resources Act 1963 on 31st July 1963 or in any statutory provision made or issued, whether before or after the passing of that Act, by virtue of such an enactment.

F50 S. 24A inserted (1.4.2006) by [Water Act 2003 \(c. 37\)](#), ss. **1(1)**, 105(3); S.I. 2006/984, art. 2(a) (with [Sch. paras. 1, 2](#))

25 Restrictions on impounding.

[^{F51}(1) Subject to the following provisions of this Chapter and to any drought order or drought permit under Chapter 3 of this Part, no person shall—

- (a) begin, or cause or permit any other person to begin, to construct or alter any impounding works at any point in any inland waters which are not discrete waters; or
- (b) cause or permit the flow of any inland waters which are not discrete waters to be obstructed or impeded at any point by means of impounding works,

unless (in either case) the conditions mentioned in subsection (1A) below are satisfied.

(1A) The conditions are—

- (a) a licence under this Chapter granted by the [^{F52}appropriate agency] to obstruct or impede the flow of those inland waters at that point by means of impounding works is in force;
- (b) the impounding works will not (or, as the case may be, do not) obstruct or impede the flow of the inland waters except to the extent, and in the manner, authorised by the licence; and
- (c) any other conditions or requirements imposed by the provisions, as for the time being in force, of the licence (whether as to the provision of compensation water or otherwise) are complied with.]

(2) A person shall be guilty of an offence if—

- (a) he contravenes subsection (1) above; or
- (b) he is for the purposes of this section the holder of a licence under this Chapter and ^{F53}... does not comply with a condition or requirement imposed by the provisions, as for the time being in force, of that licence.

(3) A person who is guilty of an offence under this section shall be liable [^{F54}on summary conviction, or on conviction on indictment, to a fine].

(4) Subject to subsection (5) below, the restrictions imposed by this section shall have effect notwithstanding anything in any enactment contained in any Act passed before the passing of the ^{M7}Water Resources Act 1963 on 31st July 1963 or in any statutory provision made or issued, whether before or after the passing of that Act, by virtue of such an enactment.

(5) Subject to subsection (6) below, the restriction on impounding works [^{F55}shall not apply in respect of any impounding works], if—

- (a) the construction or alteration of those works; or

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (b) the obstruction or impeding of the flow of the inland waters resulting from the construction or alteration of the works,
is authorised (in whatsoever terms, and whether expressly or by implication) by virtue of any such statutory provision as at the coming into force of this Act was an alternative statutory provision for the purposes of section 36(2) of the Water Resources Act 1963.
- (6) The provisions of this Chapter shall have effect in accordance with subsection (7) below where by virtue of any such provision as is mentioned in subsection (5) above and is for the time being in force—
- (a) any water undertaker or sewerage undertaker to which rights under that provision have been transferred in accordance with a scheme under Schedule 2 to the ^{M8}Water Act 1989 or Schedule 2 to the ^{M9}Water Industry Act 1991; or
- (b) any other person,
is authorised (in whatsoever terms, and whether expressly or by implication) to obstruct or impede the flow of any inland waters by means of impounding works (whether those works have already been constructed or not).
- (7) Where subsection (6) above applies, the provisions of this Chapter shall have effect (with the necessary modifications), where the reference is to the revocation or variation of a licence under this Chapter, as if—
- (a) any reference in those provisions to a licence under this Chapter included a reference to the authorisation mentioned in that subsection; and
- (b) any reference to the holder of such a licence included a reference to the undertaker or other person so mentioned.
- (8) In this Chapter “impounding works” means either of the following, that is to say—
- (a) any dam, weir or other works in any inland waters by which water may be impounded;
- (b) any works for diverting the flow of any inland waters in connection with the construction or alteration of any dam, weir or other works falling within paragraph (a) above.

[^{F56}(9) In relation to impounding works, references to alteration include the removal or partial removal of those works, and cognate expressions shall be construed accordingly.]

[^{F57}25A Enforcement notices

- (1) Subject to the following provisions of this section, where it appears to the [^{F58}appropriate agency] that a person is—
 - (a) in breach of section 24(1) or (2) or section 25(1) above; or
 - (b) for the purposes of section 24 or 25 above a holder of a licence under this Chapter and has not complied with a condition or requirement imposed by the provisions, as for the time being in force, of that licence,
 the [^{F58}appropriate agency] shall be entitled to serve an enforcement notice on him if the condition in subsection (2) below is satisfied.
- (2) The condition is that it appears to the [^{F58}appropriate agency] that the breach or failure to comply is causing or is likely to cause significant damage to the environment.
- (3) An enforcement notice is a notice requiring the person on whom it is served—
 - (a) to cease his breach of section 24(1) or (2) or section 25(1) above, or to comply with the condition or requirement in question; and
 - (b) to carry out any works or operations specified in the notice.
- (4) The works or operations which may be specified are works or operations which it appears to the [^{F58}appropriate agency] are appropriate for the purpose of remedying or mitigating the effects of the breach or failure to comply, and may include—
 - (a) works or operations for the purpose, so far as it is reasonably practicable to do so, of restoring any affected waters, including any flora and fauna dependent on them, to their state immediately before the breach or failure to comply; and
 - (b) in the case of a breach of section 25(1) above, the removal of any unauthorised impounding works or the reversal of any unauthorised alteration to impounding works.
- (5) An enforcement notice must specify the periods within which the person on whom it is served must do each of the things specified in the notice.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (6) Before serving an enforcement notice on any person, the [^{F58}appropriate agency] shall take reasonable steps to consult that person about the works or operations which are to be specified in the notice.
- (7) The Secretary of State may by regulations make provision for or in connection with—
- (a) the form or content of enforcement notices;
 - (b) requirements for consultation, before the service of an enforcement notice, with persons other than the person upon whom the notice is to be served;
 - (c) steps to be taken for the purposes of any consultation required under subsection (6) above or regulations made by virtue of paragraph (b) above;
 - (d) any other steps of a procedural nature which are to be taken in connection with, or in consequence of, the service of an enforcement notice.
- (8) An enforcement notice is not invalid, or invalidly served, merely because of a failure to comply with subsection (6) above or with regulations made by virtue of subsection (7) (b) above.
- (9) The Secretary of State may, if he thinks fit in relation to any person, give directions to the [^{F58}appropriate agency] as to whether or how it should exercise its powers under this section.
- (10) In proceedings for any offence under section 24 or 25 above against a person upon whom an enforcement notice has been served, the following are not to be taken as evidence that he has committed the offence—
- (a) the fact that an enforcement notice has been served on him;
 - (b) the fact that he does not appeal against it;
 - (c) the fact that on an appeal against it the notice is confirmed (whether with or without modifications).

Rights to abstract or impound

[^{F61}26 Rights of navigation, harbour and conservancy authorities.

- (1) Subject to subsection (2) below, the restriction on abstraction shall not apply to any transfer, without intervening use, of water from inland waters described in the first column of the Table below to inland waters described in the corresponding entry in the second column, if the transfer is in the course of, or results from, any operations carried out by a navigation authority, harbour authority or conservancy authority in the carrying out of their functions as such an authority.

Transfer from

A water system of the authority's.

Transfer to

The same water system.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

A water system of the authority's.	Inland waters not forming part of that water system.
A supply reservoir of the authority's.	A water system of the authority's with which that reservoir is connected.

- (2) Subsection (1) above shall not apply to a transfer of water from a water system to any inland waters outside that water system in order to—
- (a) empty a dry dock; or
 - (b) introduce into those inland waters all or part of a quantity of water to be abstracted from any connected inland waters in pursuance of a licence to do so granted under this Chapter.
- (3) The restriction on impounding works shall not apply to—
- (a) the construction or alteration of impounding works; or
 - (b) the obstruction or impeding of inland waters by means of impounding works, in the course of the performance by a navigation authority, harbour authority or conservancy authority of their functions as such an authority, unless the construction, alteration, obstruction or impeding affects any inland waters in relation to which the authority does not have functions.
- (4) In this section, references to—
- (a) an authority's water system are to a water system in relation to which the authority has functions;
 - (b) an authority's supply reservoir are to a reservoir—
 - (i) belonging to a navigation authority;
 - (ii) used for the purposes of supplying that navigation authority's water system; and
 - (iii) which does not discharge to any inland waters other than that water system.
- (5) For the purposes of this section, “water system” means the canals, the harbours, or the canals and harbours constituting the system in question—
- (a) together with the locks, docks, balancing reservoirs, weirs and other works associated with the system (other than any supply reservoir as described in subsection (4)(b) above); but
 - (b) excluding any part of the system which consists of a navigable river or part of one.]

Textual Amendments

F61 S. 26 substituted (1.1.2018) by [Water Act 2003 \(c. 37\)](#), ss. 5, 105(3); S.I. 2017/1043, art. 2(a)

[^{F62}27 Rights to abstract small quantities.

- (1) The restriction on abstraction shall not apply to any abstraction of a quantity of water not exceeding twenty cubic metres in any period of twenty-four hours, if the abstraction does not form part of a continuous operation, or of a series of operations, by which a quantity of water which, in aggregate, is more than twenty cubic metres is abstracted during the period.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (2) In the case of any abstraction of water from underground strata which falls within subsection (1) above, the restriction imposed by section 24(2) above shall not apply—
 - (a) to the construction or extension of any well, borehole or other work; or
 - (b) to the installation or modification of machinery or other apparatus,
 if the well, borehole or other work is constructed or extended, or the machinery or apparatus is installed or modified, for the purpose of abstracting the water.
- (3) Where a person is authorised by a licence under this Chapter to carry on a particular abstraction operation (or series of operations), this section does not permit him to carry it on beyond the authorisation conferred by the licence.

Textual Amendments

F62 Ss 27, 27A substituted (1.4.2004 for the insertion of s. 27A, 1.4.2005 in so far as not already in force) for s. 27 by [Water Act 2003 \(c. 37\)](#), [ss. 6\(1\), 105\(3\)](#); [S.I. 2004/641, art. 3\(a\)](#) (with [Sch. 3 paras. 17](#)); [S.I. 2005/968, art. 2\(a\)](#)

27A Variation of small quantity threshold

- (1) The Secretary of State may by order made by statutory instrument provide that section 27(1) above is to have effect in relation to—
 - (a) a geographical area; or
 - (b) a class of inland waters; or
 - (c) a class of underground strata; or
 - (d) a class of inland waters or of underground strata within a geographical area,
 (in each case as specified in the order) as if for “twenty cubic metres” there were substituted another quantity specified in the order.
- (2) The Secretary of State shall not make such an order except upon the application of the [^{F63}appropriate agency]; but he may direct the [^{F63}appropriate agency] to make such an application.
- (3) Such an order may—
 - (a) make different provision in relation to the different paragraphs in subsection (1) above; and
 - (b) make different provision for different areas, waters or underground strata.
- (4) Schedule 6 to this Act shall have effect with respect to applications for orders under subsection (1) above and with respect to the making of such orders.
- (5) An order under subsection (1) above which specifies a greater quantity than the one which previously had effect in relation to the area, waters or strata in question may make provision for a licence to abstract water granted under this Chapter—
 - (a) which is for the time being in force; but
 - (b) which by virtue of the order has become wholly or partly unnecessary,
 to cease to have effect, or to cease to have effect to the extent specified in the order.
- (6) An order under subsection (1) above may include provision for or in relation to the payment by the [^{F63}appropriate agency] of compensation, in cases specified in the order, to a person who—

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) immediately before the making of an order under subsection (1) above, had been in a position to carry out an abstraction to which, by virtue of section 27(1) above, the restriction on abstraction did not apply;
 - (b) following the making of that order, requires a licence under this Chapter in order to carry out that abstraction; and
 - (c) has suffered loss or damage as a result of his having been—
 - (i) refused such a licence in respect of that abstraction; or
 - (ii) granted such a licence, but in respect of an abstraction of more limited extent than the one he had been in a position to carry out.
- (7) Paragraphs (e) and (f) of section 219(2) below apply in relation to orders under subsection (1) above as they apply to regulations made under this Act.
- (8) A statutory instrument containing an order under subsection (1) above shall be subject to annulment in pursuance of a resolution of either House of Parliament.]

Textual Amendments

- F62** Ss 27, 27A substituted (1.4.2004 for the insertion of s. 27A, 1.4.2005 in so far as not already in force) for s. 27 by [Water Act 2003 \(c. 37\)](#), [ss. 6\(1\), 105\(3\)](#); [S.I. 2004/641](#), [art. 3\(a\)](#) (with [Sch. 3 paras. 17](#)); [S.I. 2005/968](#), [art. 2\(a\)](#)
- F63** Words in [s. 27A](#) substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), [art. 1\(2\)](#), [Sch. 2 para. 270\(e\)](#) (with [Sch. 7](#))

28 Curtailment of rights under section 27.

- [^{F64}(1) The provisions of this section shall have effect where a person (“the occupier”) is entitled, by virtue of subsection (6) of section 27 above, to a protected right for the purposes of this Chapter by reason of his being the occupier of such a holding as is mentioned in subsection (4) of that section in relation to an abstraction falling within that subsection (“the holding”).
- (2) If it appears to the [^{F65}Agency] that the occupier is entitled, as against other occupiers of land contiguous to the inland waters in question, to abstract water from those waters for use on part of the holding (“the relevant part”), but is not so entitled to abstract water for use on other parts of the holding—
- (a) the [^{F65}Agency] may serve on him a notice specifying the relevant part of the holding; and
 - (b) subject to the following provisions of this section, the notice shall have effect so as to require subsections (3) and (4) of section 27 above to be construed in relation to the holding as if the references in subsection (4) to use on the holding were references to use on the part of the holding specified in the notice.
- (3) Where a notice is served under subsection (2) above and the occupier objects to the notice on the grounds—
- (a) that he is entitled, as against other occupiers of land contiguous to the inland waters in question, to abstract water from those waters for use on every part of the holding; or
 - (b) that he is so entitled to abstract water for use on a larger part of the holding than that specified in the notice,

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

he may, within such period (not being less than twenty-eight days from the date of service of the notice) and in such manner as may be prescribed, appeal to the court against the notice.

(4) On any appeal under subsection (3) above, the court shall determine the matter in dispute and, in accordance with its decision, confirm, quash or vary the [^{F65}Agency’s] notice and—

- (a) where the court quashes a notice served under subsection (2) above, paragraph (b) of that subsection shall not have effect; and
- (b) where the court varies such a notice, that paragraph shall have effect, but with the substitution, for the reference to the part of the holding specified in the notice, of a reference to the part specified in the notice as varied by the court.

(5) In this section—

“the court” means the county court for the district in which the holding, or the part of the holding which is contiguous to the inland waters in question, is situated; and

“entitled” (except in subsection (1) above) means entitled apart from this Chapter or any other statutory provision.]

Textual Amendments

F64 S. 28 repealed (1.4.2005) by [Water Act 2003 \(c. 37\)](#), ss. 6(2), 105(3), [Sch. 9 Pt. 1](#); S.I. 2005/968, art. 2(a)(n)

F65 Words in s. 28 substituted (subject to other provisions of the amending Act) (1.4.1996) by [1995 c. 25](#), s. 120, [Sch. 22 para. 128](#) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3

29 Rights to abstract for drainage purposes etc.

(1) The restriction on abstraction shall not apply to any abstraction of water from a source of supply in the course of, or resulting from, any operations for purposes of land drainage.

[^{F66}(1A) The restriction on abstraction shall not apply to any abstraction of water from inland waters within the district of an internal drainage board if—

- (a) the abstraction is carried out by or on behalf of that board in connection with its functions;
- (b) the water abstracted is transferred to another area of inland waters within the board’s district without intervening use; and
- (c) the sole or main purpose of the transfer is to augment that other area of inland waters.]

[^{F67}(2) The restriction on abstraction shall not apply to any abstraction of water from a source of supply in so far as the abstraction (where it does not fall within subsection (1) or (1A) above) is an emergency abstraction and the person abstracting the water complies with subsection (2B) below.

(2A) An abstraction of water is an emergency abstraction if, in the opinion of the abstractor, an emergency has arisen which makes the abstraction necessary to prevent immediate danger of interference with any mining, quarrying, engineering, building or other operations (whether underground or on the surface) or, in relation to such operations, to prevent an immediate risk—

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (a) to a human being of death, personal injury or harm to health;
 - (b) of serious damage to works resulting from any such operations; or
 - (c) of serious damage to the environment.
- (2B) In the case of any emergency abstraction, the person abstracting the water shall before the end of the period of five days beginning with the date on which the abstraction started give notice to the appropriate agency of—
- (a) the abstraction and of the source of supply in question; and
 - (b) the reasons for the abstractor’s opinion that an emergency had arisen and that the abstraction was necessary.
- (2C) The appropriate agency may give notice to the person referred to in subsection (2B) above that in the appropriate agency's opinion an emergency had not arisen, or that the abstraction is not, or is no longer, necessary for any of the reasons set out in subsection (2A) above; and, if the appropriate agency does so, the restriction on abstraction shall apply to the abstraction from the time when the notice is served (and, if applicable, the restriction imposed by section 24(2) above shall apply accordingly).]
- ^{F68}(3)
- (4) In the case of any abstraction of water from underground strata which falls within subsection (1) or (2) above, the restriction imposed by section 24(2) above shall not apply—
- (a) to the construction or extension of any well, borehole or other work; or
 - (b) to the installation or modification of machinery or other apparatus,
- if the well, borehole or other work is constructed or extended, or the machinery or apparatus is installed or modified, for the purpose of abstracting the water.
- [^{F69}(5) In this section, “land drainage”—
- (a) includes the protection of land against erosion or encroachment by water, whether from inland waters or from the sea; but
 - (b) does not include warping, irrigation (including spray irrigation), or transferring water from one source of supply to another (whether with or without intervening use) solely or mainly in order to augment the latter.]

F70 S. 30 repealed (1.4.2006) by [Water Act 2003 \(c. 37\)](#), ss. 8(3), 105(3), [Sch. 9 Pt. 1](#); S.I. 2006/984, art. 2(e)(s)(ii) (with savings in [Sch. paras. 4, 5](#))

F71 31 Appeals against conservation notices under section 30.

.....

Textual Amendments

F71 S. 31 repealed (1.4.2006) by [Water Act 2003 \(c. 37\)](#), ss. 8(3), 105(3), [Sch. 9 Pt. 1](#); S.I. 2006/984, art. 2(e)(s)(ii) (with savings in [Sch. paras. 4, 5](#))

32 Miscellaneous rights to abstract.

- (1) The restriction on abstraction shall not apply to any abstraction by machinery or apparatus installed on a vessel, where the water is abstracted for use on that, or any other, vessel.
- (2) The restriction on abstraction and the other restrictions imposed by section 24 above shall not apply to the doing of anything—
 - (a) for [^{F72}extinguishing fires or protecting life and property in the event of fire]; or
 - (b) for the purpose of testing apparatus used for [^{F73}either of] those purposes or of training or practice in the use of such apparatus.
- (3) The restriction on abstraction and the other restrictions imposed by section 24 above shall not apply—
 - (a) to any abstraction of water;
 - (b) to the construction or extension of any well, borehole or other work; or
 - (c) to the installation or modification of machinery or other apparatus,
 if the abstraction, construction, extension, installation or modification is for any of the purposes specified in subsection (4) below and takes place with the consent of the [^{F74}appropriate agency] and in compliance with any conditions imposed by the [^{F74}appropriate agency].
- (4) The purposes mentioned in subsection (3) above are—
 - (a) the purpose of ascertaining the presence of water in any underground strata or the quality or quantity of any such water; and
 - (b) the purpose of ascertaining the effect of abstracting water from the well, borehole or other work in question on the abstraction of water from, or the level of water in, any other well, borehole or other work or any inland waters.

Textual Amendments

F72 Words in s. 32(2)(a) substituted (1.10.2004 except in relation to W., 10.11.2004 for W.) by [Fire and Rescue Services Act 2004 \(c. 21\)](#), s. 61, [Sch. 1 para. 79\(a\)](#); S.I. 2004/2304, art. 2; S.I. 2004/2917, art. 2

^{F75}33 Power to provide for further rights to abstract.

.....

Textual Amendments

- F75** S. 33 repealed with a saving (1.4.2004) by [Water Act 2003 \(c. 37\)](#), ss. 10(11), 105(3), [Sch. 9 Pt. 1](#); S.I. 2004/641, art. 3(c)(z)

[^{F76}33A Power to provide for further exemptions

- (1) The Secretary of State may make regulations providing for further cases in which—
 - (a) the restriction on abstraction (and, in the case of abstractions from underground strata, the other restrictions imposed by section 24 above); or
 - (b) the restriction on impounding works,shall not apply; and in this section such a case is referred to as an “exemption”.
- (2) The regulations may, in particular, make provision, in relation to an exemption—
 - (a) for the exemption to apply only for a prescribed period;
 - (b) for the exemption not to apply unless prescribed conditions are satisfied, or continue to be satisfied;
 - (c) for the [^{F77}appropriate agency] to be notified, or its consent obtained—
 - (i) before any particular abstraction operation or series of such operations begins; or
 - (ii) in connection with such an operation or series of operations relating to the abstraction of water in underground strata, before any other thing which is mentioned in section 24(2) above is done; or
 - (iii) before any impounding works are constructed or altered,in reliance on the exemption.
- (3) The regulations may provide for an exemption to apply generally or to relate to—
 - (a) a prescribed geographical area;
 - (b) a prescribed source of supply (in the case of an exemption from the restriction on abstraction or the other restrictions imposed by section 24 above); or
 - (c) prescribed inland waters (in the case of an exemption from the restriction on impounding works).
- (4) Subject to subsection (5) below, if regulations under this section provide for an exemption falling within subsection (1)(a) above, the regulations shall—
 - (a) if appropriate, make provision for the exemption not to permit a person who is authorised by a licence under this Chapter to carry on an abstraction operation (or series of operations) to carry it on beyond the authorisation conferred by the licence; and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - F76** S. 33A inserted (1.4.2004) by [Water Act 2003 \(c. 37\)](#), **ss. 9**, 105(3); S.I. 2004/641, art. 3(b) (with Sch. 3 paras. 17)
- F77** Words in ss. 33A-45 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 270(g)** (with Sch. 7)

Applications for a licence

34 Regulations with respect to applications.

- (1) Any application for a licence under this Chapter shall be made in such manner as may be prescribed, and shall include such particulars, [^{F78}be accompanied by such reports,] and be verified by such evidence, as may be prescribed.
- (2) The Secretary of State may by regulations make provision as to the manner in which applications for the grant of licences under this Chapter are to be dealt with, including provision requiring the giving of notices of, and information relating to, the making of such applications or decisions on such applications [^{F79}, and provision for making such applications available for public inspection.]
- (3) Without prejudice to the generality of subsection (2) above, provision shall be made by regulations under this section for securing that, in such circumstances as may be prescribed (being circumstances in which it appears to the Secretary of State that applications for licences under this Chapter would be of special concern to National Park ^{F80} . . . authorities)—
- (a) notice of any such application will be given to such one or more National Park ^{F80} . . . authorities as may be determined in accordance with the regulations; and
 - (b) the matters to which the [^{F77}appropriate agency] or, as the case may be, the Secretary of State is to have regard in dealing with the application will include any representations made by any such National Park ^{F80} . . . authority within such period and in such manner as may be prescribed.
- (4) The preceding provisions of this section shall have effect subject to any express provision contained in, or having effect by virtue of, any other enactment contained in this Chapter; and any regulations made under this section shall have effect subject to any such express provision.

35 Restrictions on persons who may make applications for abstraction licences.

- (1) No application for a licence under this Chapter to abstract water shall be entertained unless it is made by a person entitled to make the application in accordance with the following provisions of this section.
- ^{F82}(2) In relation to abstractions from any inland waters, a person shall be entitled to make the application if, as respects the place (or, if more than one, as respects each of the places) at which the proposed abstractions are to be effected, he satisfies the [^{F77}appropriate agency] that—
- (a) he has, or at the time when the proposed licence is to take effect will have, a right of access to land contiguous to the inland waters at that place (or those places); and
- (b) he will continue to have such a right for the period of at least one year beginning with the date on which the proposed licence is to take effect, or until it is to expire (if sooner).
- (3) In relation to abstractions from underground strata, a person shall be entitled to make the application if he satisfies the [^{F77}appropriate agency] that—
- (a) he has, or at the time when the proposed licence is to take effect will have, a right of access to land consisting of or comprising those underground strata; and
- (b) he will continue to have such a right for the period of at least one year beginning with the date on which the proposed licence is to take effect, or until it is to expire (if sooner).
- (3A) The [^{F77}appropriate agency] may, in particular, take evidence of a person's occupation of land to be evidence of his right of access to it.]
- (4) Any reference in this section to a person who [^{F83}will have a right of access to] land of any description—
- (a) includes a reference to a person who satisfies the [^{F77}appropriate agency] that he has entered into negotiations for the acquisition of an interest in land of that description such that, if the interest is acquired by him, he will be entitled to [^{F84}a right of access to] that land; and
- (b) without prejudice to the application of paragraph (a) above to a person who is or can be authorised to acquire land compulsorily, also includes any person who satisfies the [^{F77}appropriate agency] that by virtue of any enactment, the

compulsory acquisition by that person of land of that description either has been authorised or can be authorised and has been initiated.

- (5) In subsection (4) above the reference to initiating the compulsory acquisition of land by a person is a reference to—
- (a) the submission to the relevant Minister of a draft of an order which, if made by that Minister in the form of the draft, will authorise that person to acquire that land compulsorily, with or without other land; or
 - (b) the submission to the relevant Minister of an order which, if confirmed by that Minister as submitted will authorise that person to acquire that land compulsorily, with or without other land.
- (6) In subsection (5) above “the relevant Minister”, in relation to the compulsory acquisition of land by any person, means the Minister who, in accordance with the enactment mentioned in subsection (4)(b) above, is empowered to authorise that person to acquire land compulsorily.

- F85** S. 36 repealed (1.4.2006) by [Water Act 2003 \(c. 37\)](#), ss. 12, 105(3), **Sch. 9 Pt. 1**; S.I. 2006/984, art. 2(g)(s)(ii) (with Sch. paras. 1, 2)

[^{F86}36A Applications: types of abstraction licence

- (1) The [^{F77}appropriate agency] may decide that—
- (a) an application for a full licence, a transfer licence or a temporary licence ought to be for one of the other types of licence;
 - (b) a number of applications for licences (of any type or types) to abstract water from a particular source of supply ought to be treated as an application for a single such licence (of any type);

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (c) an application for a single licence (of any type) to abstract water from a particular source of supply ought to be treated as a number of applications for such licences (of any type or types); or
 - (d) any such application as is referred to above ought to be accompanied by an application for revocation of an existing licence to abstract water.
- (2) The [^{F77}appropriate agency] may arrive at the decision referred to in paragraph (a), (b), (c) or (d) of subsection (1) above on the basis of its assessment of any one or more of the following—
 - (a) the likely effect of the abstraction (or abstractions) for which the applicant has applied for a licence (or licences);
 - (b) the likely effect of that abstraction (or those abstractions) taken together with abstractions under any other licence held by the applicant, or abstractions which would be authorised under any other licence for which the applicant has applied;
 - (c) any other prescribed matter.
- (3) If the [^{F77}appropriate agency] does so decide, it shall serve a notice of its decision on the applicant; and, subject to subsections (4) to (8) below, shall deal with the application (or applications) accordingly (which, if the [^{F77}appropriate agency] made the decision referred to in paragraph (d) of subsection (1) above in relation to any application (or applications), means not publishing any notice under section 37 below, or taking any further step in connection with the application (or applications), until the application for revocation has been received).
- (4) The applicant may by notice appeal to the Secretary of State against the decision, and shall serve a copy of any such notice on the [^{F77}appropriate agency].
- (5) That notice, and the copy of it, shall be served in such manner and within such period as may be prescribed.
- (6) If the [^{F77}appropriate agency] serves a notice under subsection (3) above, it shall not publish any notice under section 37 below, or take any further step in connection with the application (or applications), before—
 - (a) the end of the period within which notice of an appeal may be served on the Secretary of State; or
 - (b) if notice of an appeal is so served, the appeal has been determined.
- (7) The Secretary of State—
 - (a) may allow or dismiss the appeal, or vary any part of the decision of the [^{F77}appropriate agency], whether the appeal relates to that part of the decision or not; and
 - (b) shall direct the [^{F77}appropriate agency] to deal with the application, or applications, accordingly (which, if the [^{F77}appropriate agency's] decision was made under paragraph (d) of subsection (1) above in relation to any such application, and that decision is upheld, may mean not publishing any notice under section 37 below, or taking any further step in connection with the application, until the application for revocation has been received).
- (8) Subsections (2) and (7) of section 44 below apply in relation to an appeal under this section as they apply in relation to an appeal under section 43 below.
- (9) This section is subject to section 114 of the 1995 Act (delegation or reference of appeals).]

[^{F87}37 Publication of application for licence.

- (1) The [^{F77}appropriate agency] shall publish a notice of an application for—
 - (a) a full licence or a transfer licence; or
 - (b) a licence under this Chapter to obstruct or impede the flow of any inland waters by means of impounding works,
 in the prescribed way or (if no way is prescribed) in a way calculated to bring the application to the attention of persons who in the [^{F77}appropriate agency's] view are likely to be affected by the licence.
- (2) Not later than the date on which that notice is first published, the [^{F77}appropriate agency] shall also serve a copy of it on the persons referred to in subsection (3) below (except the applicant, if the applicant is one of those persons).
- (3) Those persons are—
 - (a) any water undertaker within whose area any proposed point of abstraction or impounding is situated;
 - (b) any navigation authority, harbour authority or conservancy authority having functions in relation to any inland waters at any such proposed point; and
 - (c) the drainage board for any internal drainage district within which any such proposed point is situated,
 but paragraphs (b) and (c) above do not apply if the licence applied for is exclusively for the abstraction of water from a source of supply that does not form part of any inland waters.
- (4) A notice for the purposes of the preceding provisions of this section shall—
 - (a) be in the prescribed form and shall include any prescribed matters; and
 - (b) state that any person may make representations in writing to the [^{F77}appropriate agency] with respect to the application at any time before the end of a period specified in the notice.
- (5) The period referred to in subsection (4)(b) above—
 - (a) begins on the date the notice referred to in subsection (1) above is first published as mentioned there; and
 - (b) shall not end before the end of the period of twenty-eight days beginning with that date.
- (6) The Secretary of State may make regulations providing for—
 - (a) the requirements of subsection (2) above, or of both subsections (1) and (2) above, not to apply in prescribed cases;

Consideration of licence applications

38 General consideration of applications.

- (1) The [F77 appropriate agency] shall not determine any application for a licence under this Chapter before the end of the period specified [F89 in the notice referred to in section 37(4)(b)] above.
- [F90(1A) An application shall be determined in two stages in accordance with subsections (1B) and (1C) below if it is an application for a full licence or a transfer licence which, if granted—
- (a) would take effect immediately after the expiry of an existing licence of the same type (the “existing licence”) and be held by the same person as the holder of that licence; but
 - (b) would in any other respect be different from the existing licence in a way which, if the existing licence were to continue without expiring, would require an application to be made under section 51(2) below for a variation of the licence.
- (1B) So far as the application relates to any such difference as is mentioned in subsection (1A)(b) above, it shall first be treated for determination purposes as if it were an application for a variation under section 51(2) below (but as if the existing licence were to continue without expiring).
- (1C) If the result of that would have been the grant of the application for variation of the licence, the application referred to in subsection (1) above shall be treated as one for a licence with that variation, and its determination concluded accordingly; and otherwise its determination shall be concluded as if it were an application for a licence with no such variation.]
- (2) Subject to the following provisions of this Chapter, on any application to the [F77 appropriate agency] for a licence under this Chapter, the [F77 appropriate agency]—
- (a) may grant a licence containing such provisions as the [F77 appropriate agency] considers appropriate; or
 - (b) if, having regard to the provisions of this Chapter, the [F77 appropriate agency] considers it necessary or expedient to do so, may refuse to grant a licence.
- (3) Without prejudice to section 39(1) below, the [F77 appropriate agency], in dealing with any application for a licence under this Chapter, shall have regard to [F91 all the relevant circumstances, including any duty imposed by or under any enactment on bodies having functions in relation to inland waters (for example, navigation authorities and internal drainage boards), and shall have regard in particular to]—
- (a) any representations in writing relating to the application which are received by the [F77 appropriate agency] before the end of the period mentioned in subsection (1) above; and
 - (b) the requirements of the applicant, in so far as they appear to the [F77 appropriate agency] to be reasonable requirements.
- [F92 and may have regard to any failure on the part of the applicant to make an application under section 40 of the Water Industry Act 1991 pursuant to a proposal made by the [F77 appropriate agency] under section 20C above.]
- [F93(4) Subsection (1) above, and paragraph (a) of subsection (3) above, do not apply if in relation to the application in question the requirements of section 37(1) above do not

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Modifications etc. (not altering text)

- C55** S. 38 applied (with modifications) (1.4.2006) by [Water Resources \(Abstraction and Impounding\) Regulations 2006 \(S.I. 2006/641\)](#), [reg. 1\(2\)](#), [Sch. 2 para. 8\(3\)](#)

39 Obligation to have regard to existing rights and privileges.

- (1) [^{F94}Subject to subsection (1A) below,] the [^{F77}appropriate agency] shall not, except with the consent of the person entitled to the rights, grant a licence so authorising—
- the abstraction of water; or
 - the flow of any inland waters to be obstructed or impeded by means of impounding works,
- as to derogate from any rights which, at the time when the application is determined by the [^{F77}appropriate agency], are protected rights for the purposes of this Chapter.

[^{F95}(1A) Subsection (1) above does not apply when—

- the application to be determined is one which does not fall within subsection (1A) of section 38 above only because paragraph (b) of that subsection is not satisfied; or
- the determination of an application is being concluded in accordance with subsection (1C) of that section.]

- (2) In a case where an application for a licence under this Chapter relates to abstraction from underground strata, the [^{F77}appropriate agency], in dealing with the application, shall have regard to the requirements of existing lawful uses of water abstracted from those strata, whether for agriculture, industry, water supply or other purposes.

^{F96}(3)

- (4) Any reference in this Chapter, in relation to the abstraction of water or obstructing or impeding the flow of any inland waters by means of impounding works, to derogating from a right which is a protected right for the purposes of this Chapter is a reference to, as the case may be—
- abstracting water; or
 - so obstructing or impeding the flow of any such waters,

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

in such a way, or to such an extent, as to prevent the person entitled to that right from abstracting water to the extent mentioned in [^{F97}(as the case may be) section 39A(2) or (7), 48(1) or 59C(10) below or section 102(3) of the Water Act 2003, or in a provision made in an order by virtue of section 10(5)(b) of that Act, in each case subject to any limitations mentioned there].

- (5) For the purposes of subsection (2) above the [^{F77}appropriate agency] shall be entitled (but shall not be bound) to treat as lawful any existing use of water from underground strata unless—
- (a) by a decision given in any legal proceedings, it has been held to be unlawful; and
 - (b) that decision has not been quashed or reversed.

[^{F98}39A Protected rights for the purposes of this Chapter

- (1) For the purposes of this Chapter, a right is a protected right if—
- (a) it is such a right as a person who is the holder of a full licence is taken to have by virtue of section 48(1) below;
 - (b) it is such a right as a person is taken to have by virtue of subsection (2) below;
 - (c) it is such a right as a person continues to be taken to have by virtue of subsection (7) below;
 - (d) it is such a right as a person is taken to have by virtue of subsection (10) of section 59C below;
 - (e) it is such a right as a person continues to be taken to have by virtue of a provision made under subsection (5)(b) of section 10 of the Water Act 2003 in an order made under that section; or
 - (f) it is such a right as a person continues to be taken to have by virtue of section 102(3) of that Act.
- (2) A person who is in a position to carry out an abstraction of a quantity of water which—
- (a) by virtue of section 27(1) above is not subject to the restriction on abstraction; and
 - (b) also falls within subsection (4) or (5) below,

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

shall be taken, for the purposes of this Chapter, to have a right to do so in respect of the maximum quantity mentioned in subsection (3) below.

- (3) The maximum quantity is the lower of the following—
 - (a) twenty cubic metres;
 - (b) if, by virtue of an order under section 27A(1) above, section 27(1) above has, or has ever had, effect in relation to the source of supply and point of abstraction in question as if it referred to a quantity lower than twenty cubic metres, that lower quantity (or, if more than one, the lowest of them).
- (4) An abstraction falls within this subsection if it is an abstraction from inland waters carried out by or on behalf of an occupier of land contiguous to those waters at the place where the abstraction is effected (“contiguous land”), and—
 - (a) the water is abstracted for use on a holding consisting of the contiguous land with or without other land held with that land; and
 - (b) it is abstracted for use on that holding for either or both of the following purposes—
 - (i) the domestic purposes of the occupier’s household;
 - (ii) agricultural purposes other than spray irrigation.
- (5) An abstraction falls within this subsection if it is an abstraction from underground strata and the water is abstracted by or on behalf of an individual as a supply of water for the domestic purposes of his household.
- (6) Subsection (2) above shall not apply to a person in respect of an abstraction which that person is, or was at any time, taken to have a right to carry out by virtue of any provision mentioned in paragraph (a), (c), (d), (e) or (f) of subsection (1) above.
- (7) Subject to subsection (8) below, a person who was the holder of a full licence which has ceased to have effect (or has ceased in part to have effect) by virtue of—
 - (a) any provision made by virtue of section 27A(5) above in an order made under section 27A(1) above; or
 - (b) any provision made by virtue of section 33A(5) above in regulations made under section 33A above,and who was taken in consequence of that licence (or that part of the licence) to have a right to abstract water by virtue of section 48(1) below shall continue to be taken to have that right for the purposes of this Chapter.
- (8) For the purposes of this Chapter, the person who was the holder of the licence in question (“the old licence”) shall cease to continue to be taken to have a right, by virtue of subsection (7) above, to abstract water if—
 - (a) during a period mentioned in subsection (9) below he does not carry out any such abstraction as would have been authorised by the old licence if it had still been in force; or
 - (b) following a further order under section 27A(1) above or further regulations under section 33A above, he is granted another full licence in respect of abstraction from the same point as that authorised by the old licence.
- (9) The period referred to in subsection (8)(a) above is—
 - (a) four years; or
 - (b) if the abstractions authorised under the old licence were abstractions planned to be carried out at intervals of more than four years, or abstractions for

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. [F99] 39B Register of certain protected rights

- (1) The Secretary of State may by regulations make provision for and in connection with the establishment, and for the keeping and maintenance by the [F77appropriate agency], of one or more registers of protected rights which arise otherwise than by virtue of a licence under this Chapter to abstract water.
- (2) The regulations may, in particular, provide for—
 - (a) a register to relate to a prescribed geographical area, or for different sections of a register to relate to different geographical areas (whether prescribed or not);
 - (b) the inclusion of protected rights which arise other than by virtue of any provision of this Act;
 - (c) the form and contents of the register, and its inspection by members of the public;
 - (d) the procedure for applying for a protected right to be included in the register, including any information which is to accompany the application;
 - (e) cases in which it is the duty of the [F77appropriate agency] to include a protected right in the register without an application for inclusion having been made.
- (3) The Secretary of State may by order designate any geographical area in respect of which a register, or a section of a register, relates as an area of compulsory registration.
- (4) If he does so, a protected right in that area which is not registered shall not have effect as a protected right for any purpose of this Act (other than that of registering it) for so long as it is not registered.
- (5) Subsection (4) above does not apply in relation to any protected right until after the expiry of the period of two years beginning with the date on which the order under subsection (3) above was made, or such longer period as may be specified in the order.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. 42 Consideration of called-in applications.

- (1) Subject to the following provisions of this section and to section 46 below, the Secretary of State, on considering a called-in application—
 - (a) may determine that a licence shall be granted containing such provisions as he considers appropriate; or
 - (b) if, having regard to the provisions of this Act, he considers it necessary or expedient to do so, may determine that no licence shall be granted.
 - (2) Before determining a called-in application, the Secretary of State may, if he thinks fit—
 - (a) cause a local inquiry to be held; or
 - (b) afford to the applicant and the [^{F77}appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose;and the Secretary of State shall act as mentioned in paragraph (a) or (b) above if a request is made by the applicant or the [^{F77}appropriate agency] to be heard with respect to the application.
 - (3) The provisions of sections 37, 38(1) and (3), 39(2) and 40 above shall apply in relation to any called-in application as if—
 - (a) any reference in those provisions to the [^{F77}appropriate agency], except the references in sections [^{F102}37] and 38(3)(a), were a reference to the Secretary of State; and
 - (b) any reference to section 39(1) above were a reference to subsection (4) below.
 - (4) [^{F103}Subject to subsection (4A) below,] in determining any called-in application and, in particular, in determining what (if any) direction to give under subsection (5) below, the Secretary of State shall consider whether any such direction would require the grant of a licence which would so authorise—
 - (a) the abstraction of water; or
 - (b) the flow of any inland waters to be obstructed or impeded by means of impounding works,as to derogate from rights which, at the time when the direction in question is given, are protected rights for the purposes of this Chapter.
- [^{F104}(4A) Subsection (1A) of section 39 above applies in relation to subsection (4) above as it applies in relation to section 39(1) above.]
- (5) Where the decision of the Secretary of State on a called-in application is that a licence is to be granted, the decision shall include a direction to the [^{F77}appropriate agency] to grant a licence containing such provisions as may be specified in the direction.
 - (6) The decision of the Secretary of State on any called-in application shall be final.
 - (7) In this section “called-in application” means an application referred to the Secretary of State in accordance with directions under section 41 above.

Appeals with respect to decisions on licence applications

43 Appeals to the Secretary of State.

- (1) Where an application has been made to the [^{F77}appropriate agency] for a licence under this Chapter, the applicant may by notice appeal to the Secretary of State if—
- (a) the applicant is dissatisfied with the decision of the [^{F77}appropriate agency] on the application; or
 - (b) the [^{F77}appropriate agency] fails within the period specified in subsection (2) below to give to the applicant either—
 - (i) notice of the [^{F77}appropriate agency's] decision on the application; or
 - (ii) notice that the application has been referred to the Secretary of State in accordance with any direction under section 41 above.
- [^{F105}(1A) This section is subject to section 114 of the 1995 Act (delegation or reference of appeals etc).]
- (2) The period mentioned in subsection (1)(b) above is—
- (a) except in a case falling within paragraph (b) below, such period as may be prescribed; and
 - (b) where an extended period is at any time agreed in writing between the applicant and the [^{F77}appropriate agency], the extended period.
- (3) A notice of appeal under this section shall be served—
- (a) in such manner as may be prescribed; and
 - (b) within such period as may be prescribed, being a period of not less than twenty-eight days from, as the case may be—
 - (i) the date on which the decision to which it relates was notified to the applicant; or
 - (ii) the end of the period which, by virtue of subsection (2) above, is applicable for the purposes of subsection (1)(b) above.
- (4) Where a notice is served under this section in respect of any application, the applicant shall, within the period prescribed for the purposes of subsection (3)(b) above, serve a copy of the notice on the [^{F77}appropriate agency].
- (5) Where any representations in writing with respect to an application were made within the period specified [^{F106}in any such notice as is referred to in section 37(4)(b)] above, the Secretary of State shall, before determining an appeal under this section in respect of the application, require the [^{F77}appropriate agency] to serve a copy of the notice of appeal on each of the persons who made those representations.

44 Determination of appeals.

- (1) Subject to the following provisions of this Chapter, where an appeal is brought under section 43 above, the Secretary of State—
- may allow or dismiss the appeal or reverse or vary any part of the decision of the [^{F77}appropriate agency], whether the appeal relates to that part of the decision or not; and
 - may deal with the application as if it had been made to him in the first instance; and for the purposes of this section an appeal by virtue of section 43(1)(b) above shall be taken to be an appeal against a refusal of the application.
- (2) Before determining an appeal under section 43 above, the Secretary of State may, if he thinks fit—
- cause a local inquiry to be held; or
 - afford to the applicant and the [^{F77}appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose;
- and the Secretary of State shall act as mentioned in paragraph (a) or (b) above if a request is made by the applicant or the [^{F77}appropriate agency] to be heard with respect to the appeal.
- (3) The Secretary of State, in determining an appeal under section 43 above, shall take into account—
- any further representations in writing received by him, within the prescribed period, from the persons mentioned in section 43(5) above; and
 - the requirements of the applicant, in so far as they appear to the Secretary of State to be reasonable requirements.
- (4) [^{F107}Subject to subsection (4A) below,] in determining any appeal under section 43 above and, in particular, in determining what (if any) direction to give under subsection (6) below, the Secretary of State shall consider whether any such direction would require such a grant or variation of a licence as would so authorise—
- the abstraction of water; or

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. (b) the flow of any inland waters to be obstructed or impeded by means of impounding works,
as to derogate from rights which, at the time when the direction in question is given, are protected rights for the purposes of this Chapter.

[^{F108}(4A) Subsection (1A) of section 39 above applies in relation to subsection (4) above as it applies in relation to section 39(1) above.]

(5) The provisions of sections 39(2) and 40 above shall apply in relation to any appeal under section 43 above as if—

- (a) any reference in those provisions to the [^{F77}appropriate agency], were a reference to the Secretary of State; and
- (b) the references to sections 38(3) and 39(1) above were references to subsections (3) and (4) above.

(6) Where the decision on an appeal under section 43 above is that a licence is to be granted or to be varied or revoked, the decision shall include a direction to the [^{F77}appropriate agency], as the case may be—

- (a) to grant a licence containing such provisions as may be specified in the direction;
- (b) to vary the licence so as to contain such provisions as may be so specified; or
- (c) to revoke the licence.

(7) The decision of the Secretary of State on any appeal under section 43 above shall be final.

Textual Amendments

F77 Words in ss. 33A-45 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 270(g)** (with Sch. 7)

F107 Words in s. 44(4) inserted (1.4.2004) by [Water Act 2003 \(c. 37\)](#), **ss. 16(7)(a)**, 105(3); S.I. 2004/641, art. 3(e) (with Sch. 3 para. 7)

F108 S. 44(4A) inserted (1.4.2004) by [Water Act 2003 \(c. 37\)](#), **ss. 16(7)(b)**, 105(3); S.I. 2004/641, art. 3(e) (with Sch. 3 para. 7)

45 Regulations with respect to appeals.

(1) The Secretary of State may by regulations make provision as to the manner in which appeals against decisions [^{F109}of the [^{F77}appropriate agency] under section 36A above or] on applications for the grant, revocation or variation of licences under this Chapter are to be dealt with, including provision requiring the giving of notices of, and information relating to, the making of such appeals or decisions on any such appeals.

(2) Without prejudice to the generality of subsection (1) above, provision shall be made by regulations under this section for securing that, in prescribed circumstances (being circumstances in which it appears to the Secretary of State that applications for licences under this Chapter would be of special concern to National Park ^{F110} . . . authorities)—

- (a) notice of any appeal against the decision on such an application, will be served on any National Park ^{F110} . . . authority who made representations falling within paragraph (b) of section 34(3) above; and

Form, contents and effect of licences

46 Form and contents of licences.

- (1) The Secretary of State may by regulations make provision as to the form of licences under this Chapter or of any class of such licences; but any regulations under this subsection shall have effect subject to the following provisions of this section and to any other express provision contained in, or having effect by virtue of, any other enactment contained in this Chapter.
- (2) [^{F112}Every full licence under this Chapter shall, and any other licence under this Chapter to abstract water may, make—]
- (a) provision as to the quantity of water authorised to be abstracted in pursuance of the licence from the source of supply to which the licence relates during a period or periods specified in the licence, including provision as to the way in which that quantity is to be measured or assessed for the purposes of this Chapter; and
- (b) provision for determining, by measurement or assessment, what quantity of water is to be taken to have been abstracted during any such period by the holder of the licence from the source of supply to which the licence relates.

[^{F113}(2A) For the purposes of section 61(4A) below—

- (a) every full licence under this Chapter which is for a term exceeding twelve years shall; and
- (b) any transfer licence under this Chapter which is for a term exceeding twelve years may,

specify a minimum value for the quantity referred to in subsection (2)(a) above.]

- (3) Every licence under this Chapter to abstract water shall indicate the means by which water is authorised to be abstracted in pursuance of the licence, by reference either to

specified works, machinery or apparatus or to works, machinery or apparatus fulfilling specified requirements.

- [^{F114}(4) Every licence under this Chapter to abstract water shall also specify the purposes for which water abstracted in pursuance of the licence is to be used.
- (5) Every licence under this Chapter to abstract water shall state—
- (a) the date on which it takes effect; and
 - (b) the date on which it expires.
- (5A) Every licence under this Chapter to obstruct or impede any inland waters shall remain in force until revoked.]
- (6) Different provision may be made by the same licence with respect to any one or more of the following matters, that is to say—
- (a) the abstraction of water during different periods;
 - (b) the abstraction of water from the same source of supply but at different points or by different means;
 - (c) the abstraction of water for use for different purposes;
- and any such provision as is mentioned in subsection (2) above may be made separately in relation to each of the matters for which (in accordance with this subsection) different provision is made in the licence.
- (7) Nothing in subsection (6) above shall be construed as preventing two or more licences from being granted to the same person to be held concurrently in respect of the same source of supply, if the licences authorise the abstraction of water at different points [^{F115}, by different means or for different purposes] .

Textual Amendments

48 General effect of licence.

- (1) For the purposes of this Chapter a person who is for the time being the holder of a licence under this Chapter to abstract water shall be taken to have a right to abstract water to the extent authorised by the licence and in accordance with the provisions contained in it.
- (2) In any action brought against a person in respect of the abstraction of water from a source of supply [^{F121}(other than an abstraction in respect of which a claim could be brought under section 48A below, in which case that section shall apply)], it shall be a defence, subject to paragraph 2 of Schedule 7 to this Act, for him to prove—
 - (a) that the water was abstracted in pursuance of a licence under this Chapter; and
 - (b) that the provisions of the licence were complied with.
- (3) In any action brought against a person in respect of any obstruction or impeding of the flow of any inland waters at any point by means of impounding works, it shall be a defence for him to prove—
 - (a) that the flow was so obstructed or impeded in pursuance of a licence under this Chapter;
 - (b) that the obstructing or impeding was in the manner specified in that licence and to an extent not exceeding the extent so specified; and
 - (c) that the other requirements of the licence (if any) were complied with.
- (4) Nothing in subsection (2) or (3) above shall exonerate a person from any action for negligence or breach of contract.

Textual Amendments

^{F122}48A Civil remedies for loss or damage due to water abstraction

- (1) Subject to subsection (7) below and to section 79 (including that section as applied by section 79A(9)) below, a person who abstracts water from any inland waters or underground strata (an “abstractor”) shall not by that abstraction cause loss or damage to another person.
- (2) A person who suffers such loss or damage (a “relevant person”) may bring a claim against the abstractor.
- (3) Such a claim shall be treated as one in tort for breach of statutory duty.
- (4) In proceedings in respect of a claim under this section, the court may not grant an injunction against the abstractor if that would risk interrupting the supply of water to the public, or would put public health or safety at risk.
- (5) Except as provided in this section, no claim may be made in civil proceedings by a person (whether or not a relevant person) against an abstractor in respect of loss or damage caused by his abstraction of water.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - F124** S. 50 repealed (1.4.2006) by [Water Act 2003 \(c. 37\), s. 23\(4\)\(5\), 105\(3\), Sch. 9 Pt. 1; S.I. 2006/984, art. 2\(m\)\(s\)\(ii\) \(with Sch. para. 3\)](#)

Modification of licences

51 Modification on application of licence holder.

- (1) The holder of a licence under this Chapter [^{F125}to abstract water] may apply to the [^{F126}appropriate agency] to revoke the licence and, on any such application, the [^{F126}appropriate agency] shall revoke the licence accordingly.
- ^{F127}(1A) The holder of a licence under this Chapter to obstruct or impede the flow of inland waters (an “impounding licence”) may apply to the [^{F126}appropriate agency] to revoke the licence and, on any such application, the [^{F126}appropriate agency] may revoke the licence accordingly.
- (1B) The [^{F126}appropriate agency] may require conditions to be met to its satisfaction before revocation of the impounding licence takes effect, and those conditions may in particular include conditions—
- (a) requiring the removal of all or part of the impounding works;
 - (b) as to the restoration of the site of the impounding works to a state which is satisfactory to the [^{F126}appropriate agency];
 - (c) relating to the inland waters the flow of which is obstructed or impeded by means of the impounding works.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (1C) The person making an application under subsection (1A) above (“the applicant”) may by notice appeal to the Secretary of State if—
- (a) he is dissatisfied with the decision of the [^{F126}appropriate agency] as to—
 - (i) whether his licence may be revoked; or
 - (ii) any conditions imposed by virtue of subsection (1B) above; or
 - (b) the [^{F126}appropriate agency] fails to give notice of its decision to the applicant within the prescribed period or within such extended period as may be agreed in writing between the [^{F126}appropriate agency] and the applicant.
- (1D) The Secretary of State may by regulations make provision with respect to—
- (a) the manner in which notices of appeal under subsection (1C) above shall be served;
 - (b) the period within which such notices shall be served;
 - (c) the procedure on any such appeal.
- (1E) Where an appeal is brought under subsection (1C) above, the Secretary of State may—
- (a) allow or dismiss the appeal or reverse or vary any part of the decision of the [^{F126}appropriate agency], whether the appeal relates to that part of the decision or not; and
 - (b) may deal with the application as if it had been made to him in the first place.
- (1F) The decision of the Secretary of State on any appeal under subsection (1C) above shall be final.
- (1G) Subsections (1C) to (1F) above are subject to section 114 of the 1995 Act (delegation or reference of appeals).]
- (2) The holder of a licence under this Chapter may apply to the [^{F126}appropriate agency] to vary the licence.
- [^{F128}(2A) An application may not be made under subsection (2) above to convert an abstraction licence of one type into an abstraction licence of a different type.]
- (3) Subject to subsection (4) below, the provisions of sections 37 to 44 above shall apply (with the necessary modifications) to applications under subsection (2) above, and to the variation of licences in pursuance of such applications, as they apply to applications for, and the grant of, licences under this Chapter.
- (4) Where the variation proposed in an application under subsection (2) above is limited to reducing the quantity of water authorised to be abstracted in pursuance of the licence during one or more periods—
- (a) sections 37 and 38(1) above shall not apply by virtue of subsection (3) above; and
 - (b) sections 43 and 44 above, as applied by that subsection, shall have effect as if subsection (5) of section 43 and paragraph (a) of section 44(3) were omitted.

52 Proposals for modification at instance of the [F129 appropriate agency] or Secretary of State.

- (1) Where it appears to the [F129 appropriate agency] that a licence under this Chapter should be revoked or varied, the [F129 appropriate agency] may formulate proposals for revoking or varying the licence.

[F130(1A) In the case of a licence to obstruct or impede any inland waters, a variation may take the form of a requirement that the impounding works be modified in ways specified in the proposed new provision of the licence.]

- (2) Where—

- (a) it appears to the Secretary of State (either in consequence of representations made to the Secretary of State or otherwise) that a licence under this Chapter ought to be reviewed; but
- (b) no proposals for revoking or varying the licence have been formulated by the [F129 appropriate agency] under subsection (1) above,
- the Secretary of State may, as he may consider appropriate in the circumstances, give the [F129 appropriate agency] a direction under subsection (3) below.

- (3) A direction under this subsection may—

- (a) direct the [F129 appropriate agency] to formulate proposals for revoking the licence in question; or
- (b) direct the [F129 appropriate agency] to formulate proposals for varying that licence in such manner as may be specified in the direction.

- (4) Notice in the prescribed form of any proposals formulated under this section with respect to any licence shall—

- (a) be served on the holder of the licence; and
- [F131(b) be published in the prescribed way or (if no way is prescribed) in a way calculated to bring it to the attention of persons likely to be affected if the licence were revoked or varied as proposed.]

- (5) If—

- (a) a licence with respect to which any proposals are formulated under this section relates to any inland waters; and
- (b) the proposals provide for variation of that licence,

a copy of the notice for the purposes of subsection (4) above shall, not later than the date on which it is first published [F132 as mentioned in subsection (4)(b) above], be served on any navigation authority, harbour authority or conservancy authority having functions in relation to those waters at a place where the licence, if varied in accordance with the proposals, would authorise water to be abstracted or impounded.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - [^{F133}(6) A notice for the purposes of subsection (4) above shall—
- (a) include any prescribed matters; and
 - (b) state that, before the end of a period specified in the notice—
 - (i) the holder of the licence may give notice in writing to the [^{F129}appropriate agency] objecting to the proposals; and
 - (ii) any other person may make representations in writing to the [^{F129}appropriate agency] with respect to the proposals.]
- [^{F134}(7) The period referred to in subsection (6)(b) above—
- (a) begins on the date the notice referred to in subsection (4) above is first published as mentioned there; and
 - (b) shall not end before the end of the period of twenty-eight days beginning with that date.]
- [^{F135}(8)

53 Modification in pursuance of proposals under section 52.

- (1) Subject to the following provisions of this section, where the [^{F136}appropriate agency] has formulated any proposals under section 52 above with respect to any licence under this Chapter, it may—
- (a) if the proposals are for the revocation of the licence, revoke the licence; and
 - (b) if the proposals are proposals for varying the licence, vary the licence in accordance with those proposals or, with the consent of the holder of the licence, in any other way.
- (2) The [^{F136}appropriate agency] shall not proceed with any proposals formulated under section 52 above before the end of the period specified, in accordance with subsection (7) of that section, for the purposes in relation to those proposals of subsection (6) of that section.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (3) If no notice under subsection (4) below is given to the [F136 appropriate agency] before the end of the period mentioned in subsection (2) above, the [F136 appropriate agency] may proceed with the proposals.
- (4) If the holder of the licence gives notice to the [F136 appropriate agency] objecting to the proposals before the end of the period mentioned in subsection (2) above, the [F136 appropriate agency] shall refer the proposals to the Secretary of State, with a copy of the notice of objection.
- (5) Where the [F136 appropriate agency] proceeds with any proposals under subsection (3) above and the proposals are proposals for varying the licence, the provisions of sections 38(3), 39(1) and (2) and 40 above shall apply (with the necessary modifications) to any action of the [F136 appropriate agency] in proceeding with the proposals as they apply to the action of the [F136 appropriate agency] in dealing with an application for a licence.

Textual Amendments

F136 Words in ss. 53-57 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 270(i)** (with Sch. 7)

Modifications etc. (not altering text)

C87 S. 53 applied (with modifications) (1.4.2006) by [Water Resources \(Abstraction and Impounding\) Regulations 2006 \(S.I. 2006/641\)](#), regs. 1(2), **19(2)**

54 Reference of modification proposals to the Secretary of State.

- (1) Where any proposals of the [F136 appropriate agency] with respect to a licence are referred to the Secretary of State in accordance with subsection (4) of section 53 above, the Secretary of State shall consider—
 - (a) the proposals;
 - (b) the objection of the holder of the licence; and
 - (c) any representations in writing relating to the proposals which were received by the [F136 appropriate agency] before the end of the period mentioned in subsection (2) of that section,
 and, subject to subsection (2) below, shall determine (according to whether the proposals are for the revocation or variation of the licence) the question whether the licence should be revoked or the question whether it should be varied as mentioned in subsection (1)(b) of that section.
- (2) Before determining under this section whether a licence should be revoked or varied in a case in which proposals have been formulated under section 52 above, the Secretary of State may, if he thinks fit—
 - (a) cause a local inquiry to be held; or
 - (b) afford to the holder of the licence and the [F136 appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose;
 and the Secretary of State shall act as mentioned in paragraph (a) or (b) above if a request is made by the holder of the licence or the [F136 appropriate agency] to be heard with respect to the proposals.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (3) In determining under this section whether a licence should be varied and, if so, what directions should be given under subsection (5) below, the Secretary of State shall consider whether any such direction would require such a variation of the licence as would so authorise—
- (a) the abstraction of water; or
 - (b) the flow of any inland waters to be obstructed or impeded by means of impounding works,
- as to derogate from rights which, at the time when the direction is given, are protected rights for the purposes of this Chapter.
- (4) The provisions of sections 39(2) and 40 above shall apply in relation to any proposals referred to the Secretary of State in accordance with section 53(4) above as if in those provisions—
- (a) any reference to the [^{F136}appropriate agency] were a reference to the Secretary of State;
 - (b) any reference to the application were a reference to the proposals; and
 - (c) the references to sections 38(3) and 39(1) were references to subsections (1) and (3) above.
- (5) Where the decision of the Secretary of State on a reference in accordance with section 53(4) above is that the licence in question should be revoked or varied, the decision shall include a direction to the [^{F136}appropriate agency] to revoke the licence or, as the case may be, to vary it so as to contain such provisions as may be specified in the direction.
- (6) A decision of the Secretary of State under this section with respect to any proposals shall be final.

55 Application for modification of licence by owner of fishing rights.

- (1) Subject to the following provisions of this section and to Schedule 7 to this Act, where a licence under this Chapter authorises abstraction from any inland waters in respect of which no minimum acceptable flow has been determined under Chapter I of this Part, any person who is the owner of fishing rights in respect of those inland waters may apply to the Secretary of State for the revocation or variation of the licence.
- (2) No application shall be made under this section in respect of any licence except at a time after the end of the period of one year beginning with the date on which the licence was granted but before a minimum acceptable flow has been determined in relation to the waters in question.
- (3) Any application under this section made by a person as owner of fishing rights in respect of any inland waters shall be made on the grounds that, in his capacity as owner

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. of those rights, he has sustained loss or damage which is directly attributable to the abstraction of water in pursuance of the licence in question and either—

- (a) he is not entitled to a protected right for the purposes of this Chapter in respect of those inland waters; or
 - (b) the loss or damage which he has sustained in his capacity as owner of those rights is not attributable to any such breach of statutory duty as is mentioned in subsection (2) or (3) of section 60 below or is in addition to any loss or damage attributable to any such breach.
- (4) Where an application is made under this section in respect of any licence, the applicant shall serve notice in the prescribed form on the [^{F136}appropriate agency] and on the holder of the licence, stating that each of them is entitled, at any time before the end of the period of twenty-eight days beginning with the date of service of the notice, to make representations in writing to the Secretary of State with respect to the application.
- (5) In this section and section 56 below “fishing rights”, in relation to any inland waters, means any right (whether it is an exclusive right or a right in common with one or more other persons) to fish in those waters, where the right in question—
- (a) constitutes or is included in an interest in land; or
 - (b) is exercisable by virtue of an exclusive licence granted for valuable consideration;
- and any reference to an owner of fishing rights is a reference to the person for the time being entitled to those rights.
- (6) In this section any reference to a right included in an interest in land is a reference to a right which is exercisable only by virtue of, and as a right incidental to, the ownership of that interest.

- and the Secretary of State shall act as mentioned in paragraph (a) or (b) above if a request is made by the applicant, the holder of the licence or the [^{F136}appropriate agency] to be heard with respect to the proposals.
- (3) Subject to subsections (4) and (5) below, on an application under section 55 above in respect of any licence, the Secretary of State shall not determine that the licence shall be revoked or varied unless—
- (a) the grounds of the application, as mentioned in subsection (3) of that section, are established to his satisfaction; and
 - (b) he is satisfied that the extent of the loss or damage which the applicant has sustained, as mentioned in that subsection, is such as to justify the revocation or variation of the licence.
- (4) On an application under section 55 above in respect of any licence, the Secretary of State shall not determine that the licence shall be revoked or varied if he is satisfied that the fact that the abstraction of water in pursuance of the licence caused the loss or damage which the applicant has sustained, as mentioned in subsection (3) of that section, was wholly or mainly attributable to exceptional shortage of rain or to an accident or other unforeseen act or event not caused by, and outside the control of, the [^{F136}appropriate agency].
- (5) Where the Secretary of State determines, on an application under section 55 above, that a licence shall be varied, the variation shall be limited to that which, in the opinion of the Secretary of State, is requisite having regard to the loss or damage which the applicant has sustained as mentioned in subsection (3) of that section.
- (6) Where the decision of the Secretary of State on an application under section 55 above in respect of any licence is that the licence should be revoked or varied, the decision shall include a direction to the [^{F136}appropriate agency] to revoke the licence or, as the case may be, to vary it so as to contain such provisions as may be specified in the direction.
- (7) A decision of the Secretary of State on an application under section 55 above shall be final.

57 Emergency variation of licences for spray irrigation purposes.

- (1) This section applies where at any time—
- (a) one or more licences under this Chapter are in force in relation to a source of supply authorising water abstracted in pursuance of the licences to be used for the purpose of spray irrigation, or for that purpose together with other purposes; and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (b) by reason of exceptional shortage of rain or other emergency, it appears to the [F136 appropriate agency] that it is necessary to impose a temporary restriction on the abstraction of water for use for that purpose.
- (2) Subject to subsections (3) and (4) below, where this section applies the [F136 appropriate agency] may serve a notice on the holder of any of the licences reducing, during such period as may be specified in the notice, the quantity of water authorised to be abstracted in pursuance of the licence from the source of supply for use for the purpose of spray irrigation; and, in relation to that period, the licence shall have effect accordingly subject to that reduction.
- (3) The [F136 appropriate agency] shall not serve a notice under this section in respect of abstraction of water from underground strata unless it appears to the [F136 appropriate agency] that such abstraction is likely to affect the flow, level or volume of any inland waters which are [F137 not discrete waters].
- (4) In the exercise of the power conferred by this section in a case where there are two or more licences under this Chapter in force authorising abstraction from the same source of supply either at the same point or at points which, in the opinion of the [F136 appropriate agency], are not far distant from each other—
- (a) the [F136 appropriate agency] shall not serve a notice under this section on the holder of one of the licences unless a like notice is served on the holders of the other licences in respect of the same period; and
- (b) the reductions imposed by the notices on the holders of the licences shall be so calculated as to represent, as nearly as appears to the [F136 appropriate agency] to be practicable, the same proportion of the quantity of water authorised by the licences (apart from the notices) to be abstracted for use for the purpose of spray irrigation.
- (5) The provisions of this section shall have effect without prejudice to the exercise of any power conferred by sections 51 to 54 above.

Textual Amendments

F139 Ss. 59A-59D and cross-heading inserted (1.4.2006) by [Water Act 2003 \(c. 37\)](#), **ss. 23(1)**, 105(3); [S.I. 2006/984](#), art. 2(m) (with [Sch. para. 3](#))

59A Transfer of licence

- (1) The following licences—
 - (a) a full licence;
 - (b) a transfer licence; or
 - (c) a licence to obstruct or impede the flow of inland waters by means of impounding works,may be transferred by the holder of the licence to another person (“the transferee”) in accordance with the following provisions of this section.
- (2) The holder and the proposed transferee shall give notice (a “transfer notice”) to the [^{F140}appropriate agency] of their agreement that the licence should be transferred.
- (3) The transfer notice shall include—
 - (a) such information as the [^{F140}appropriate agency] reasonably requires; and
 - (b) (in the case of the transfer of a full licence or of a transfer licence) a declaration by the proposed transferee that—
 - (i) he has, or at the time when the proposed transfer is to take effect will have, a right of access in relation to each point of abstraction; and
 - (ii) he will continue to have such a right for the period of at least one year beginning with the date on which the proposed transfer is to take effect, or until the licence is to expire (if sooner),and may specify the date on which the holder and the transferee wish the transfer to take effect.
- (4) If the holder is a person in whom the licence has vested under section 59B below, a transfer notice shall be of no effect unless the notice required by section 59B(4) has been given.
- (5) Subject to subsection (4) above, if the [^{F140}appropriate agency] receives a transfer notice which complies with the requirements of subsections (2) and (3) above, the [^{F140}appropriate agency] shall amend the licence by substituting the name of the transferee as holder of the licence.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (6) The transfer shall take effect—
- (a) from the date on which the [^{F140}appropriate agency] amends the licence; or
 - (b) from the date specified in the transfer notice, if later.
- (7) Nothing in this section shall affect the liability of the holder of the licence for any failure by him, before the transfer took effect, to comply with any condition or requirement of that licence.
- (8) In this section—
- “point of abstraction” means a place where the licence authorises water to be abstracted from inland waters or (as the case may be) a place consisting of or comprising underground strata from which the licence authorises water to be abstracted; and
- “right of access” means, in relation to a point of abstraction, a right of access to land of the kind referred to in subsection (2)(a) or, as the case may be, (3)(a) of section 35 above; and references to a person who will have such a right of access shall be construed in accordance with that section (including subsections (4) to (6)).

59B Vesting of licence on death or bankruptcy of holder

- (1) On the death of the holder of a licence under this Chapter, the licence shall be regarded as property forming part of the deceased’s personal estate, whether or not it would be so regarded apart from this subsection, and shall accordingly vest in his personal representatives.
- (2) If a bankruptcy order is made against the holder of a licence under this Chapter, the licence shall be regarded for the purposes of any of the Second Group of Parts of the Insolvency Act 1986 (insolvency of individuals; bankruptcy) as property forming part of the bankrupt’s estate, whether or not it would be so regarded apart from this subsection, and shall accordingly vest as such in the trustee in bankruptcy.
- (3) A person in whom a licence vests under this section shall become the holder of the licence, in place of the prior holder, from the date of the vesting.
- (4) Where a licence other than a temporary licence vests in any person under this section, that person shall give notice of that fact to the [^{F140}appropriate agency] not later than the end of the period of fifteen months beginning with the date of the vesting.
- (5) If—
 - (a) a licence vests in any person under this section; but
 - (b) that person fails to give the notice required by subsection (4) above within the period mentioned there,

the licence shall cease to have effect.

Textual Amendments

F140 Words in ss. 59A-59C substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), [Sch. 2 para. 270\(j\)](#) (with Sch. 7)

59C Apportionment of licence to abstract

- (1) The holder of a full licence or of a transfer licence (the “old licence”) may apply to the [^{F140}appropriate agency] for the division of the holder’s right to abstract water in accordance with the old licence and for the transfer—
 - (a) to another person of part, or to a number of other persons of parts not amounting to the whole; or
 - (b) to a number of other persons of parts amounting in all to the whole, of that right.
- (2) The holder of the old licence and any person proposing to carry on a part of the abstraction authorised by the old licence in place of the holder (a “successor”) shall give notice to the [^{F140}appropriate agency] of their agreement to the division and transfer (an “apportionment notice”).
- (3) The apportionment notice shall, in relation to the abstraction authorised by the old licence—
 - (a) specify, for each proposed successor, what quantity of water he proposes to abstract, and (if the holder of the old licence is to continue the abstraction in part) what quantity of water he proposes to abstract;
 - (b) specify the purpose or purposes for which those persons referred to in paragraph (a) above who would require a new licence granted under subsection (5) below would abstract water (being one or more of the purposes for which abstraction is authorised under the old licence);
 - (c) specify the point (or points) of abstraction from which it is proposed that the persons referred to in paragraph (a) above would abstract water (being one or more of the points from which abstraction is authorised under the old licence);
 - (d) include a declaration by each of those persons who requires a licence under this Chapter in order to carry on the abstraction that—
 - (i) he has, or at the time when the proposed grant to him of a new licence under subsection (5) below is to take effect will have, a right of access in relation to each such point of abstraction; and
 - (ii) he will continue to have such a right for the period of at least one year beginning with the date on which the new licence is to take effect, or until it is to expire (if sooner); and
 - (e) include such other information as the [^{F140}appropriate agency] reasonably requires, and may specify the date on which the holder and the successor (or successors) wish the division and transfer (or transfers) to take effect.
- (4) The apportionment notice shall be accompanied by an application on the part of the holder of the old licence for its revocation.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (5) Subject to subsection (9) below, if the [F140 appropriate agency] receives an apportionment notice and the application for revocation referred to in subsection (4) above, the [F140 appropriate agency] shall—
- (a) revoke the old licence;
 - (b) if the holder is to continue the abstraction in part and a licence is required under this Chapter for that purpose, grant to the holder of the old licence a licence relating to that part of the abstraction; and
 - (c) grant to each successor who requires a licence under this Chapter in order to carry on his part of the abstraction a licence relating to that part of the abstraction.
- (6) Sections 34 to 45 above shall not apply to the grant of a new licence under subsection (5) above.
- (7) Subject to section 46 above and to any provision of regulations made under section 59D(1) below, each new licence to be granted under subsection (5) above shall be granted subject to provisions which correspond as nearly as practicable to those of the old licence in relation to the part of the abstraction to be authorised by the new licence.
- (8) The revocation of the old licence and the grant of the new licences shall take effect—
- (a) from the date on which the [F140 appropriate agency] revokes the old licence and grants the new ones; or
 - (b) from the date specified in the apportionment notice, if later.
- (9) The [F140 appropriate agency] shall not grant a new licence to the holder of the old licence or to a successor if, by virtue of an exemption, the restriction on abstraction would not apply to that part of the abstraction proposed in relation to him in the apportionment notice.
- (10) For the purposes of this Chapter, a person (whether the holder of the old licence or a successor) who proposes to carry on a part of the abstraction in the circumstances mentioned in subsection (9) above shall, if the old licence was a full licence, be taken to have the right to do so in relation to that part, subject to subsection (11) below.
- (11) For the purposes of this Chapter, a person shall cease to be taken to have a right, by virtue of subsection (10) above, to carry on an abstraction if—
- (a) during a period mentioned in subsection (12) below that person does not carry out any such abstraction; or
 - (b) following an order under section 27A(1) above or regulations under section 33A above, that person is granted a full licence in respect of abstraction from the same point.
- (12) The period referred to in subsection (11)(a) above is—
- (a) four years; or
 - (b) if the abstractions authorised under the old licence were abstractions planned to be carried out at intervals of more than four years, or abstractions for emergency purposes only, such longer period as the [F140 appropriate agency] may determine on the application of the person in question.
- (13) For the purposes of section 39A above, a new licence granted under subsection (5) above shall be treated—
- (a) as if it had been granted at the time the old licence was granted; and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

(b) as if it and any other new licence granted by virtue of the relevant apportionment notice had been granted in place of the old licence.

(14) In this section—

“exemption” means the disapplication of the restriction on abstraction under or by virtue of section 27 or 33A above; and

“point of abstraction” and “right of access” have the same meanings as in section 59A above.

Textual Amendments

F140 Words in ss. 59A-59C substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 270(j)** (with Sch. 7)

Modifications etc. (not altering text)

C94 S. 59C applied (with modifications) (1.4.2006) by [Water Resources \(Abstraction and Impounding\) Regulations 2006 \(S.I. 2006/641\)](#), regs. 1(2), **22**

59D Apportionment of licence to abstract: supplementary

- (1) The Secretary of State may make regulations about the provisions to be contained in licences granted under section 59C above.
- (2) Nothing in section 59C above shall affect the liability of the holder of the old licence for any failure by him, before the revocation of that licence took effect, to comply with any condition or requirement of that licence.
- (3) If the holder of the old licence is a person in whom the old licence has vested under section 59B above, an apportionment notice shall be of no effect unless the notice required by section 59B(4) has been given.
- (4) In this section, “apportionment notice” and “old licence” have the same meanings as in section 59C above.]

Remedies and compensation in respect of infringement of protected rights etc.

60 Liability of the [F141 appropriate agency] for derogation from protected right.

- (1) A breach of the duty imposed by subsection (1) of section 39 above (including that duty as applied by section 51(3) or 53(5) above) shall neither invalidate the grant or variation of a licence nor be enforceable by any criminal proceedings, by prohibition or injunction or by action against any person other than the [F141 appropriate agency].
- (2) Instead, the duty referred to in subsection (1) above shall be enforceable, at the suit of any person entitled to a protected right for the purposes of this Chapter, by an action against the [F141 appropriate agency] for damages for breach of statutory duty.
- (3) Where under any provision of this Chapter, the [F141 appropriate agency] is directed by the Secretary of State to grant or vary a licence, and the licence, as granted or varied in compliance with the direction, authorises derogation from protected rights, then—
 - (a) the grant or variation of the licence shall, as between the [F141 appropriate agency] and the person entitled to those rights, have effect as a breach on

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

the part of the [F141appropriate agency] of a statutory duty not to authorise derogation from those rights; and

- (b) subsection (2) above shall apply in relation to that statutory duty as it applies in relation to the duty imposed by section 39(1) above.

- (4) Subsection (3) above shall be without prejudice to the duty of the [F141appropriate agency], to comply with the direction in question, but that duty shall not afford any defence in an action brought by virtue of paragraph (b) of that subsection.

- (5) In any action brought against the [F141appropriate agency] in pursuance of this section it shall be a defence for the [F141appropriate agency] to show that the fact, as the case may be—

- (a) that the abstraction of water authorised by the licence, as granted or varied by the [F141appropriate agency], derogated from the plaintiff's protected right; or
- (b) that the obstruction or impeding of the flow of the inland waters authorised by the licence, as so granted or varied, derogated from the plaintiff's protected right,

was wholly or mainly attributable to exceptional shortage of rain or to an accident or other unforeseen act or event not caused by, and outside the control of, the [F141appropriate agency].

- (6) This section has effect subject to the provision made by Schedule 7 to this Act.

- (7) In this section any reference to authorising a derogation from protected rights is a reference to so authorising—

- (a) the abstraction of water; or
- (b) the flow of any inland waters to be obstructed or impeded by means of impounding works,

as to derogate from rights which, at the time of the authorisation, are protected rights for the purposes of this Chapter.

C95 S. 60 applied (with modifications) (1.4.2006) by [Water Resources \(Abstraction and Impounding\) Regulations 2006 \(S.I. 2006/641\)](#), regs. 1(2), **23**

61 Compensation where licence modified on direction of the Secretary of State.

- (1) Where a licence [F142held by a person other than a water undertaker or sewerage undertaker] is revoked or varied in pursuance of a direction under section 54 or [F14356] above and it is shown that the holder of the licence—

- (a) has incurred expenditure in carrying out work which is rendered abortive by the revocation or variation; or
- (b) has otherwise sustained loss or damage which is directly attributable to the revocation or variation,

the [F144appropriate agency] shall pay him compensation in respect of that expenditure, loss or damage.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (2) For the purposes of this section, any expenditure incurred in the preparation of plans for the purposes of any work, or upon other similar matters preparatory to any work, shall be taken to be included in the expenditure incurred in carrying out that work.
- (3) Subject to subsection (2) above and to Schedule 7 to this Act, no compensation shall be paid under this section—
 - (a) in respect of any work carried out before the grant of the licence which is revoked or varied; or
 - (b) in respect of any other loss or damage arising out of anything done or omitted to be done before the grant of that licence.
- (4) No compensation shall be payable under this section in respect of a licence to abstract water, if it is shown that no water was abstracted in pursuance of the licence during the period of [^{F145}four] years ending with the date on which notice of the proposals for revoking or varying the licence was served on the holder of the licence.
- [^{F146}(4A) No compensation shall be payable under this section in respect of the variation of a full licence, or of a transfer licence which specifies a minimum value under section 46(2A) above, so as to reduce the quantity of water which the holder of the licence is authorised by the licence to abstract from the source of supply to which the licence relates if—
 - (a) the ground for varying the licence is that the Secretary of State is satisfied that the variation is necessary in order to protect the availability of water in the source of supply to which the licence relates;
 - (b) the variation does not reduce the quantity of water which the holder of the licence is authorised by the licence to abstract to less than the minimum value specified in the licence under section 46(2A) above for the purposes of this subsection; and
 - (c) the conditions set out in subsection (4B) below are satisfied.
- (4B) Those conditions are that—
 - (a) the licence was granted after the coming into force of section 19 of the Water Act 2003;
 - (b) the variation is made no sooner than the end of the period of six years beginning with the date on which the licence took effect; and
 - (c) the variation takes effect no sooner than the end of the period of six years beginning with the date of the variation.]
 - (5) Any question of disputed compensation under this section shall be referred to and determined by the [^{F147}Upper Tribunal]; and in relation to the determination of any such compensation the provisions of [^{F148}section] 4 of the ^{M10}Land Compensation Act 1961 shall apply, subject to any necessary modifications.
 - (6) For the purpose of assessing any compensation under this section, in so far as that compensation is in respect of loss or damage consisting of depreciation of the value of an interest in land, the rules set out in section 5 of the Land Compensation Act 1961 shall, so far as applicable and subject to any necessary modifications, have effect as they have effect for the purpose of assessing compensation for the compulsory acquisition of an interest in land.
 - (7) Where the interest in land, in respect of which any compensation falls to be assessed in accordance with subsection (6) above, is subject to a mortgage—
 - (a) the compensation shall be assessed as if the interest were not subject to the mortgage;

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) a claim for the compensation may be made by any mortgagee of the interest, but without prejudice to the making of a claim by the person entitled to the interest;
- (c) no such compensation shall be payable in respect of the interest of the mortgagee (as distinct from the interest which is subject to the mortgage);
- (d) any such compensation which is payable in respect of the interest which is subject to the mortgage shall be paid to the mortgagee or, if there is more than one mortgagee, to the first mortgagee, and shall in either case be applied by him as if it were proceeds of sale.

[^{F149}61ZA] **No compensation where modification to protect environment: England**

- (1) This section applies where—
 - (a) a relevant licence is revoked or varied on or after 1 January 2028 in pursuance of a direction under section 54 or 56, and
 - (b) the ground for revoking or varying the licence is that the Secretary of State is satisfied the revocation or variation is necessary—
 - (i) having regard to a relevant environmental objective, or
 - (ii) to otherwise protect the water environment from damage.
- (2) A “relevant licence” is a licence to abstract water that—
 - (a) is to abstract water in England only, and
 - (b) is to remain in force until revoked.
- (3) Where this section applies, no compensation is payable under section 61 in respect of the revocation or variation of the licence.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F150 S. 61A repealed (14.7.2014) by [Water Act 2014 \(c. 21\)](#), ss. **58(3)**, 94(2)(l)

62 Compensation for owner of fishing rights applying under section 55.

- (1) Where a licence is revoked or varied on an application under section 55 above, the applicant shall be entitled to compensation from the [^{F151}appropriate agency] in respect of the loss or damage which he has sustained as mentioned in subsection (3) of that section.
- (2) Where, on an application under section 55 above for the revocation or variation of a licence, the Secretary of State determines—
 - (a) that the grounds of the application (as mentioned in subsection (3) of that section) have been established to his satisfaction; but
 - (b) that the licence shall not be revoked or varied in pursuance of that application, he shall certify accordingly for the purposes of the following provisions of this section.
- (3) Unless within the period of six months from the date on which a certificate under subsection (2) above is granted either—
 - (a) notice to treat for the acquisition of the fishing rights of the applicant, or of an interest in land which includes those rights, has been served by the [^{F151}appropriate agency]; or
 - (b) an offer has been made by the [^{F151}appropriate agency] to the owner of those rights to acquire them on compulsory purchase terms or, where the rights subsist only as rights included in an interest in land, to acquire that interest on such terms,
 the owner of the fishing rights shall be entitled to compensation from the [^{F151}appropriate agency].
- (4) The amount of the compensation payable under subsection (3) above in respect of any fishing rights shall be the amount by which—
 - (a) the value of those rights; or
 - (b) where they subsist only as rights included in an interest in land, the value of that interest,
 is depreciated by the operation of section 48(2) above in relation to the licence to which the application related.
- (5) Any question of disputed compensation under this section shall be referred to and determined by the [^{F152}Upper Tribunal] ; and in relation to the determination of any such compensation the provisions of [^{F153}section] 4 of the ^{M11}Land Compensation Act 1961 shall apply, subject to any necessary modifications.
- (6) For the purposes of this section a right or interest is acquired on compulsory purchase terms if it is acquired on terms that the price payable shall be equal to and shall, in default of agreement, be determined in like manner as the compensation which would be payable in respect thereof if the right or interest were acquired compulsorily by the [^{F151}appropriate agency].
- (7) Where—

- (a) the Secretary of State, on an application under section 55 above, determines that the licence to which the application relates shall not be revoked or varied and grants a certificate under subsection (2) above; and
- (b) notice to treat for the acquisition of the fishing rights to which the application related, or of an interest in land in which those rights are included, has been served by the [F151 appropriate agency] within the period of six months from the date on which that certificate is granted,

then, for the purpose of assessing compensation in respect of any compulsory acquisition in pursuance of that notice to treat, no account shall be taken of any depreciation of the value of the fishing rights, or of the interest in question, which is applicable to the operation, in relation to that licence, of section 48(2) above.

- (8) Subsections (5) and (6) of section 55 above shall apply for construing references in this section to fishing rights or to rights included in an interest in land as they have effect for construing such references in that section.

63 Secretary of State to indemnify [F154 appropriate agency] in certain cases.

(1) Where—

- (a) the [F154 appropriate agency] is liable under section 60 above to pay damages to any person in consequence of the grant or variation of a licence in compliance with a direction given by the Secretary of State; and
- (b) the [F154 appropriate agency] pay to that person any sum in satisfaction of that liability,

then, whether an action for recovery of those damages has been brought or not, the Secretary of State may, if he thinks fit, pay to the [F154 appropriate agency] the whole or such part as he considers appropriate of the relevant amount.

(2) If—

- (a) proposals for revoking or varying the licence, in a case falling within subsection (1) above, are formulated by the [F154 appropriate agency], or an application with respect to any licence is made under section 55 above;
- (b) in consequence of those proposals or that application, the licence is revoked or varied; and
- (c) compensation in respect of the revocation or variation is payable by the [F154 appropriate agency] under section 61 above,

the Secretary of State may, if he thinks fit, pay to the [F154 appropriate agency] the whole or such part as he considers appropriate of the relevant amount.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. (3) Where—

- (a) the Secretary of State determines under section 55 above—
- (i) that a licence granted in compliance with a direction given by the Secretary of State shall be revoked or varied; or
 - (ii) that a licence shall not be revoked or varied;

and

- (b) in consequence of that determination, compensation is payable by the [F154 appropriate agency] under section 62 above,

the Secretary of State may, if he thinks fit, pay to the [F154 appropriate agency] the whole or such part as he considers appropriate of the relevant amount.

(4) In this section “the relevant amount” means—

- (a) for the purposes of subsection (1) above, the amount of the sum paid by the [F154 appropriate agency] and, if an action has been brought against the [F154 appropriate agency] in respect of the liability mentioned in that subsection, the amount of any costs reasonably incurred by the [F154 appropriate agency] in connection with the action (including any costs of the plaintiff which the [F154 appropriate agency] was required to pay); and
- (b) for the purposes of subsections (2) and (3) above, the amount of the compensation and, if any question relating to that compensation is referred to the [F155 Upper Tribunal], the amount of any costs reasonably incurred by the [F154 appropriate agency] in connection with that reference (including any costs of the claimant which the [F154 appropriate agency] is required to pay).

71 Modification of local enactments.

- (1) If it appears to the Secretary of State by whom an order is made under a provision of this Chapter to which this section applies that any local enactment passed or made before the relevant date—
 - (a) is inconsistent with any of the provisions of that order; or
 - (b) requires to be amended or adapted, having regard to any of the provisions of that order,

the Secretary of State may by order repeal, amend or adapt that enactment to such extent, or in such manner, as he may consider appropriate.
- (2) Any order under this section may include such transitional, incidental, supplementary and consequential provisions as the Secretary of State may consider necessary or expedient.
- (3) The power to make an order under this section shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.
- (4) This section applies to the following provisions of this Chapter, that is to say, sections ^{F183}... 66, 68 and 72(5).
- (5) In this section—

“local enactment” means—

 - (a) a local or private Act;
 - (b) a public general Act relating to London;
 - (c) an order or scheme made under an Act, confirmed by Parliament or brought into operation in accordance with special parliamentary procedure; or
 - (d) an enactment in a public general Act amending a local or private Act or any such order or scheme;

“relevant date” means the date which was the second appointed day for the purposes of section 133 of the ^{M15}Water Resources Act 1963.
- (6) The provisions of this section shall have effect without prejudice to the exercise of any other power to repeal, amend or adapt local enactments which is conferred by any other enactment.

72 Interpretation of Chapter II.

(1) In this Chapter—

“derogate”, in relation to a protected right, shall be construed in accordance with section 39(4) above;

“flow” shall be construed subject to section 23(3) above;

[^{F184}“full licence” has the meaning given in section 24A above;]

“impounding works” has the meaning given by section 25(8) above;

“licence”, in relation to the variation or revocation of a licence, shall be construed subject to section 25(6) and (7) above;

“protected right” shall be construed in accordance with [^{F185}section 39A] above;

“the restriction on abstraction” means the restriction imposed by section 24(1) above;

“the restriction on impounding works” means the restriction imposed by section [^{F186}25(1)(a) and (b)] above;

“spray irrigation” means (subject to subsection (5) below) the irrigation of land or plants (including seeds) by means of water or other liquid emerging (in whatever form) from apparatus designed or adapted to eject liquid into the air in the form of jets or spray; and

“statutory provision” means a provision (whether of a general or special nature) which is contained in, or in any document made or issued under, any Act (whether of a general or special nature).

[^{F184}“temporary licence” and “transfer licence” have the meanings given in section 24A above.]

(2) References in this Chapter to a watercourse shall not include references—

(a) to any sewer or part of a sewer vested in—

(i) a sewerage undertaker;

(ii) a local authority or joint planning board;

(iii) the [^{F187}new towns residuary body] or a development corporation for a new town;

(iv) a harbour board within the meaning of the ^{M16}Railway and Canal Traffic Act 1888;

or

(b) to any adit or passage constructed in connection with a well, borehole or other similar work for facilitating the collection of water in the well, borehole or work.

[^{F188}(2A) In subsection (2)(a)(iii) “new towns residuary body” means—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (a) in relation to England, the Homes and Communities Agency so far as exercising functions in relation to anything transferred (or to be transferred) to it as mentioned in section 52(1)(a) to (d) of the Housing and Regeneration Act 2008 [^{F189}or the Greater London Authority so far as exercising its new towns and urban development functions]; and
 - (b) in relation to Wales, the Welsh Ministers so far as exercising functions in relation to anything transferred (or to be transferred) to them as mentioned in section 36(1)(a)(i) to (iii) of the New Towns Act 1981.]
- (3) Any reference in this Chapter to the doing of anything in pursuance of a licence under this Chapter is a reference to its being done—
- (a) by the holder of such a licence; or
 - (b) by a person acting as a servant or agent of, or otherwise under the authority of, the holder of such a licence,
- at a time when the licence is in force and in circumstances such that, if no such licence were in force, the doing of that thing would contravene a restriction imposed by this Chapter.
- (4) For the purposes of this Chapter land shall be taken to be contiguous to any inland waters notwithstanding that it is separated from those waters by a towpath or by any other land used, or acquired for use, in connection with the navigation of the inland waters, unless that other land comprises any building or works other than a lock, pier, wharf, landing-stage or similar works.
- (5) The Ministers may by order direct that references to spray irrigation in this Chapter, and in any other enactments in which “spray irrigation” is given the same meaning as in this Chapter, or such of those references as may be specified in the order—
- (a) shall be construed as not including spray irrigation if carried out by such methods or in such circumstances or for such purposes as may be specified in the order; and
 - (b) without prejudice to the exercise of the power conferred by virtue of paragraph (a) above, shall be construed as including references to the carrying out, by such methods or in such circumstances or for such purposes as may be specified in the order, of irrigation of any such description, other than spray irrigation, as may be so specified.
- (6) The power of the Ministers to make an order under subsection (5) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.

CHAPTER III

DROUGHT

73 Power to make ordinary and emergency drought orders.

[^{F190}(1) If the Secretary of State is satisfied that, by reason of an exceptional shortage of rain, there exists or is threatened—

- (a) a serious deficiency of supplies of water in any area, or
- (b) such a deficiency in the flow or level of water in any inland waters as to pose a serious threat to any of the flora or fauna which are dependent on those waters,

then,], subject to the following provisions of this Chapter, he may by order (in this Chapter referred to as an “ordinary drought order”) make such provision authorised by this Chapter as appears to him to be expedient with a view to meeting the deficiency.

(2) If the Secretary of State—

- (a) is satisfied that, by reason of an exceptional shortage of rain, a serious deficiency of supplies of water in any area exists or is threatened; and
- (b) is further satisfied that the deficiency is such as to be likely to impair the economic or social well-being of persons in the area,

then, subject to the following provisions of this Chapter, he may by order (in this Chapter referred to as an “emergency drought order”) make such provision authorised by this Chapter as appears to him to be expedient with a view to meeting the deficiency.

(3) Subject to section 76(3) below, the power to make a drought order in relation to any area shall not be exercisable [^{F191}unless] an application is made to the Secretary of State—

- (a) by the [^{F192}appropriate agency]; or
- (b) [^{F193}except in the case of an ordinary drought order by virtue of subsection (1) (b) above,] by a water undertaker which supplies water to premises in that area.

(4) The power to make a drought order shall be exercisable by statutory instrument; and Schedule 8 to this Act shall have effect with respect to the procedure on an application for such an order.

74 Provisions and duration of ordinary drought order.

- (1) An ordinary drought order made on the application of the [F192appropriate agency] may contain any of the following provisions, that is to say—
- (a) provision authorising the [F192appropriate agency] (or persons authorised to do so by the [F192appropriate agency]) to take water from any source specified in the order subject to any conditions or restrictions so specified;
 - (b) provision authorising the [F192appropriate agency] (or persons authorised to do so by the [F192appropriate agency]) to discharge water to any place specified in the order subject to any conditions or restrictions so specified;
 - (c) provision authorising the [F192appropriate agency] to prohibit or limit the taking by any person (including a water undertaker) of water from a source specified in the order if the [F192appropriate agency] is satisfied that the taking of water from that source seriously affects the supplies available to the [F192appropriate agency], any water undertaker or any other person;
 - (d) provision suspending or modifying, subject to any conditions specified in the order, any restriction or obligation to which the [F192appropriate agency], any water undertaker or sewerage undertaker or any other person is subject as respects—
 - (i) the taking of water from any source;
 - (ii) the discharge of water;
 - (iii) the supply of water (whether in point of quantity, pressure, quality, means of supply or otherwise); or
 - (iv) the filtration or other treatment of water;
 - (e) provision authorising the [F192appropriate agency] to suspend or vary, or attach conditions to, any [F194environmental permit] specified in the order for the discharge of any effluent by any person, including any sewerage undertaker or water undertaker.
- (2) An ordinary drought order made on the application of a water undertaker may contain any of the following provisions, that is to say—
- (a) provision authorising the water undertaker to take water from any source specified in the order subject to any conditions or restrictions so specified;
 - (b) provision authorising the water undertaker to prohibit or limit the use of water for any purpose specified in the order, being a purpose for the time being set out in a direction given by the Secretary of State to water undertakers generally as a purpose which may be specified by virtue of this paragraph in any ordinary drought order;
 - (c) provision authorising the water undertaker to discharge water to any place specified in the order subject to any conditions or restrictions so specified;
 - (d) provision authorising the [F192appropriate agency] to prohibit or limit the taking by any person of water from a source specified in the order if the

- [^{F192}appropriate agency] is satisfied that the taking of water from that source seriously affects the supplies available to the water undertaker;
- (e) provision prohibiting or limiting the taking by the [^{F192}appropriate agency] of water from a source specified in the order if the taking of water from that source is determined, in accordance with provision made by the order, seriously to affect the supplies available to the water undertaker;
- (f) provision suspending or modifying, subject to any conditions specified in the order, any restriction or obligation to which the water undertaker or any sewerage undertaker or other person is subject as respects—
- (i) the taking of water from any source;
 - (ii) the discharge of water;
 - (iii) the supply of water (whether in point of quantity, pressure, quality, means of supply or otherwise); or
 - (iv) the filtration or other treatment of water;
- (g) provision authorising the [^{F192}appropriate agency] to suspend or vary, or attach conditions to, any [^{F195}environmental permit] specified in the order for the discharge of any effluent by any person, including the company which applied for the order (whether in the capacity in which it made the application, in its capacity as a sewerage undertaker or in any other capacity).
- (3) The period for which—
- (a) an authorisation given by or under an ordinary drought order;
 - (b) a prohibition or limitation imposed by or under any such order; or
 - (c) a suspension or modification effected by or under any such order,
- has effect shall expire before the end of the period of six months beginning with the day on which the order comes into force, unless that period of six months is extended, in relation to that order, by virtue of the exercise by the Secretary of State of his power (subject to subsection (4) below) to amend the order.
- (4) The power of the Secretary of State to amend an ordinary drought order shall not be exercised so as to extend the period of six months mentioned in subsection (3) above beyond the end of the period of one year beginning with the day on which that order came into force.
- (5) Without prejudice to the following provisions of this Chapter, an ordinary drought order may—
- (a) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
 - (b) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate.

75 Provisions and duration of emergency drought order.

- (1) An emergency drought order made on the application of the [^{F192}appropriate agency] may contain any of the provisions which could be included, by virtue of section 74(1) above, in an ordinary drought order made on the application of the [^{F192}appropriate agency].
- (2) An emergency drought order made on the application of a water undertaker may contain any of the following provisions, that is to say—
 - (a) any provision which could be included, by virtue of subsection (2) of section 74 above, in an ordinary drought order made on the application of a water undertaker, except provision authorised by paragraph (b) of that subsection;
 - (b) provision authorising the water undertaker to prohibit or limit the use of water for such purposes as the water undertaker thinks fit;
 - (c) provision authorising the water undertaker—
 - (i) to supply water in its area, or in any place within its area, by means of stand-pipes or water tanks; and
 - (ii) to erect or set up and maintain stand-pipes or water tanks in any street in that area.
- (3) The period for which—
 - (a) an authorisation given by or under an emergency drought order;
 - (b) a prohibition or limitation imposed by or under any such order; or
 - (c) a suspension or modification effected by or under any such order,
 has effect shall expire before the end of the period of three months beginning with the day on which the order comes into force unless that period of three months is extended, in relation to that order, by virtue of the exercise by the Secretary of State of his power (subject to subsection (4) below) to amend the order.
- (4) The power of the Secretary of State to amend an emergency drought order shall not be exercised so as to extend the period of three months mentioned in subsection (3) above beyond the end of the period of five months beginning with the day on which that order came into force.
- (5) Where powers have been conferred by an emergency drought order on any person—
 - (a) the Secretary of State may give to that person such directions as he considers necessary or expedient as to the manner in which, or the circumstances in which, any of those powers is or is not to be exercised;
 - (b) it shall be the duty of that person to comply with any such direction; and
 - (c) where that person is a water undertaker or sewerage undertaker, the duty to comply with any such direction shall be enforceable under section 18 of the ^{M17}Water Industry Act 1991 by the Secretary of State.
- (6) The giving of a direction under subsection (5) above in relation to any power shall not affect—
 - (a) the validity of anything done in the exercise of that power before the giving of the direction; or
 - (b) any obligation or liability incurred before the giving of the direction.
- (7) Without prejudice to the following provisions of this Chapter, an emergency drought order may—

76 Provisions of drought order restricting use of water.

- (1) The following provisions apply where a drought order contains a provision authorising a water undertaker to prohibit or limit the use of water, that is to say—
 - (a) the power may be exercised in relation to consumers generally, a class of consumer or a particular consumer;
 - (b) the water undertaker shall take such steps as it thinks appropriate for bringing the prohibition or limitation to the attention of the persons to whom the prohibition or limitation will apply and, in particular, shall (as the undertaker thinks appropriate)—
 - (i) cause notice of the prohibition or limitation to be published in one or more local newspapers circulating within that part of the water undertaker's area which would be affected by the provision of the order; or
 - (ii) send notice of the prohibition or limitation to the persons to whom the prohibition or limitation will apply;
 - (c) the prohibition or limitation shall not come into operation until the end of the period of seventy-two hours beginning with the day on which the notice is published or, as the case may be, sent to the person in question.
- (2) The Secretary of State may revoke or vary any direction given by him for the purposes of section 74(2)(b) above by a further direction for those purposes.
- (3) Where any purpose set out in a direction given for the purposes of section 74(2)(b) above will cease, by virtue of the variation or revocation of the direction, to be one which may be specified in an ordinary drought order, the Secretary of State shall (without an application having been made to him) exercise his power to vary or revoke ordinary drought orders, in so far as any orders in force will be affected by the variation or revocation of the direction, so as to make those orders conform to the variation or reflect the revocation.
- (4) The revocation or variation of a direction under subsection (3) above shall not affect either—
 - (a) the validity of anything done in pursuance of an order before the giving of the further direction; or
 - (b) any obligation or liability accrued or incurred before the giving of the further direction.

77 Provisions of drought order with respect to abstractions and discharges.

(1) Any drought order which-

- (a) authorises the taking of water from a source from which water is supplied to an inland navigation; or
- (b) suspends or modifies—
 - (i) a restriction as respects the taking of water from a source from which water is supplied to an inland navigation; or
 - (ii) an obligation to discharge compensation water into a canal or into any river or stream which forms part of, or from which water is supplied to, an inland navigation,

may include provision for prohibiting or imposing limitations on the taking of water from the inland navigation or for the suspension or modification of any obligation to which a navigation authority are subject as respects the discharge of water from the inland navigation.

(2) A prohibition or limitation by or under a drought order on the taking of water from any source may be imposed so as to have effect in relation to a source from which a person to whom the prohibition or limitation applies has a right to take water whether by virtue of an enactment or instrument, an agreement or the ownership of land.

(3) Where a drought order made on the application of a water undertaker confers power on the [F196appropriate agency]—

- (a) to prohibit or limit the taking of water from any source; or
- (b) to suspend or vary, or attach conditions to, any [F197environmental permit] for the discharge of any effluent,

the [F196appropriate agency] shall exercise that power in such manner as will ensure, so far as reasonably practicable, that the supplies of water available to the water undertaker are not seriously affected.

^{F198}(4)

(5) Where—

- (a) any drought order confers power on the [F196appropriate agency] to suspend or vary, or attach conditions to, any [F199environmental permit] for the discharge of any effluent; and
- (b) the [F196appropriate agency] exercises that power so as to restrict the discharge of effluent by a sewerage undertaker,

the sewerage undertaker may so modify any consents or agreements relating to the discharge by other persons of trade effluent as to enable it to comply with any requirements or conditions imposed on it by or under the order with respect to discharges from sewers or works of the undertaker.

(6) In this section—

“compensation water” means water which a water undertaker or the [F196appropriate agency] is under an obligation to discharge—

- (a) in accordance with the provisions of a licence under Chapter II of this Part into a source of supply; or
- (b) under any local statutory provision, into any river, stream, brook or other running water or into a canal;

and

78 Works under drought orders.

- (1) A drought order may authorise the [^{F196}appropriate agency] or a water undertaker, subject to any conditions and restrictions specified in the order, to carry out any works required for the performance of any duty or the exercise of any power which is imposed or conferred by or under the order.
- (2) A drought order authorising the [^{F196}appropriate agency] or a water undertaker to carry out any works—
 - (a) may authorise the [^{F196}appropriate agency] or that undertaker for that purpose to enter upon any land specified in the order and to occupy and use the land to such extent and in such manner as may be requisite for the carrying out and maintenance of the works; and
 - (b) may apply in relation to the carrying out of the works such of the provisions of Part VII of this Act or Part VI of the ^{M18}Water Industry Act 1991 as appear to the Secretary of State to be appropriate, subject to such modifications as may be specified in the order.
- (3) The Secretary of State shall include in any drought order authorising the [^{F196}appropriate agency] or a water undertaker to enter any land provisions requiring the [^{F196}appropriate agency] or that undertaker to give to the occupier of the land and to such other persons concerned with the land as may be specified in the order not less than twenty-four hours' notice of any intended entry.
- (4) Subject to subsection (3) above, a drought order may make any such provision in relation to provisions of the order authorising any person to enter any land as corresponds to provision having effect by virtue of section 173 below or to provision contained in Part II of Schedule 6 to the Water Industry Act 1991.
- (5) Any works to be carried out under the authority of an emergency drought order shall be included in the definition of emergency works in section 52 of the New Roads and Street Works Act 1991.
- (6) Until the coming into force of section 52 of the ^{M19}New Roads and Street Works Act 1991, subsection (5) above shall have effect as if the reference to that section were a reference to section 39(1) of the ^{M20}Public Utilities Street Works Act 1950; but nothing in this section shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing that section 52 into force on different days for different purposes (including the purposes of this section).

79 Compensation and charges where drought order made.

- (1) Schedule 9 to this Act shall have effect with respect to the payment of compensation where a drought order has been made.
- (2) Except as provided by Schedule 9 to this Act, neither the [^{F196}appropriate agency] nor any water undertaker or sewerage undertaker shall incur any liability to any person for loss or damage sustained by reason of anything done in pursuance of any drought order or of any omission in pursuance of such an order.
- (3) Nothing in any drought order shall affect the right of the [^{F196}appropriate agency], a water undertaker or a sewerage undertaker, in the event of an interruption or diminution of the supply of water, to recover any fixed or minimum charge which might have been recovered from any person by the [^{F196}appropriate agency] or that undertaker if there had been no such interruption or diminution.
- [^{F200}(4) Where a water undertaker makes an application for a drought order, the [^{F196}appropriate agency] may recover from the water undertaker any expenses it incurs (whether of a revenue or capital nature)—
 - (a) in connection with any local inquiry held in respect of the application;
 - (b) in the exercise of the [^{F196}appropriate agency's] functions so far as their exercise is attributable to the application and (if the order is made) to the order, in so far as those expenses have not been recovered (whether from the water undertaker or not) under or by virtue of any other enactment.
- (5) Sections 125 to 129 below shall not apply in respect of any charges which may be made under subsection (4) above.]

- a drought permit making such provision authorised by this section as appears to the [F202 appropriate agency] to be expedient with a view to meeting the deficiency.
- (2) A drought permit may contain any of the following provisions, that is to say—
- (a) provision authorising the water undertaker to which it is issued to take water from any source specified in the permit subject to any conditions or restrictions so specified;
 - (b) provision suspending or modifying, subject to any conditions specified in the permit, any restriction or obligation to which that undertaker is subject as respects the taking of water from any source.
- (3) A drought permit shall specify—
- (a) the day on which it comes into force; and
 - (b) the period for which, subject to subsections (4) and (5) below, any authorisation given, or suspension or modification effected, by the permit is to have effect.
- (4) Subject to subsection (5) below, the period for which—
- (a) an authorisation given by a drought permit, or
 - (b) a suspension or modification effected by such a permit,
- has effect shall expire before the end of the period of six months beginning with the day on which the permit comes into force.
- (5) At any time before the expiration of the period for which such an authorisation, suspension or modification has effect, the [F202 appropriate agency] may, by giving notice to the water undertaker to which the permit in question was issued, extend that period, but not so as to extend it beyond the end of the period of one year beginning with the day on which the permit came into force.
- (6) A drought permit which—
- (a) authorises the taking of water from a source from which water is supplied to an inland navigation; or
 - (b) suspends or modifies—
 - (i) a restriction as respects the taking of water from a source from which water is supplied to an inland navigation; or
 - (ii) an obligation to discharge compensation water into a canal or into any river or stream which forms part of, or from which water is supplied to, an inland navigation,
- shall not be issued without the consent of every navigation authority exercising functions over any or all of the parts of the canal or inland navigation in question which are affected by the permit.
- (7) Schedule 8 to this Act shall have effect with respect to the procedure on an application for a drought permit as it has effect with respect to the procedure on an application for a drought order, but with the following modifications, that is to say—
- (a) with the substitution for any reference to a drought order of a reference to a drought permit;
 - (b) with the substitution for any reference to the Secretary of State of a reference to the [F202 appropriate agency];
 - F203 (c)

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (d) with the insertion, in paragraph 1(3)(c), of a requirement that the notice in question shall specify the address at which any objections are to be made to the [^{F202}appropriate agency]; and
- (e) with the omission—
 - (i) of paragraph 2(1)(a) and the word “either” immediately preceding it, and
 - (ii) of paragraph 2(6).

^{F204}(8)

^{F205}(8A) [^{F202}appropriate agency] may recover from the water undertaker any expenses it incurs (whether of a revenue or capital nature) in the exercise of its functions so far as their exercise is attributable to—

- (a) the application;
- (b) (if the permit is issued) the permit,

in so far as those expenses have not been recovered (whether from the water undertaker or not) under or by virtue of any other enactment.

(8B) Sections 125 to 129 below shall not apply in respect of any charges which may be made under subsection (8A) above.]

(9) Section 79 above and Schedule 9 to this Act shall apply in relation to drought permits and their issue as they apply in relation to ordinary drought orders and their making.

(10) A drought permit may—

- (a) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
- (b) contain such supplemental, consequential and transitional provisions as the [^{F202}appropriate agency] considers appropriate.

(11) In this section—

- “compensation water” has the same meaning as in section 77 above;
- “drought permit” means a drought permit under this section;
- “inland navigation” has the same meaning as in section 77 above.]

PART III

CONTROL OF POLLUTION OF WATER RESOURCES

Modifications etc. (not altering text)

- C99** Pt. III (ss. 82-104) modified (subject to other provisions of the amending Act) (1.2.1996) by 1995 c. 25, s. 5(5)(g) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 2
- C100** Pt. III (ss. 82-104): functions transferred to the Environment Agency (subject to other provisions of the amending Act) (1.4.1996) by 1995 c. 25, s. 2(1)(a)(ii) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3
- C101** Pt. III: definition of “controlled waters” applied (1.12.1991) by water Consolidation (Consequential Provisions) Act 1991 (c. 60, SIF 130), ss. 2(1), 4(2), Sch. 1 para. 1

CHAPTER I

QUALITY OBJECTIVES

82 Classification of quality of waters.

- (1) The Secretary of State may, in relation to any description of controlled waters (being a description applying to some or all of the waters of a particular class or of two or more different classes), by regulations prescribe a system of classifying the quality of those waters according to criteria specified in the regulations.
- (2) The criteria specified in regulations under this section in relation to any classification shall consist of one or more of the following, that is to say—
 - (a) general requirements as to the purposes for which the waters to which the classification is applied are to be suitable;
 - (b) specific requirements as to the substances that are to be present in or absent from the water and as to the concentrations of substances which are or are required to be present in the water;
 - (c) specific requirements as to other characteristics of those waters;
 and for the purposes of any such classification regulations under this section may provide that the question whether prescribed requirements are satisfied may be determined by reference to such samples as may be prescribed.

Modifications etc. (not altering text)

- C102** S. 82 modified (1.7.1999) by S.I. 1999/672, art. 5, Sch. 2
- C103** S. 82 amended (27.8.1993) by 1993 c. 12, ss. 40, 51(2), Sch. 3 Pt. I para.9 (with s. 46).
- C104** S. 82 modified by S.I. 2010/675, Sch. 23 Pt. 8 para. 3 Table 9 (as substituted (1.10.2011) by The Environmental Permitting (England and Wales) (Amendment) Regulations 2011 (S.I. 2011/2043), reg. 1(b), Sch. 1)
- C105** S. 82 modified (1.1.2017) by The Environmental Permitting (England and Wales) Regulations 2016 (S.I. 2016/1154), reg. 1(1), Sch. 23 Pt. 7 paras. 1(3), 2 (with regs. 1(3), 77-79, Sch. 4)

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

83 Water quality objectives.

- (1) For the purpose of maintaining and improving the quality of controlled waters the Secretary of State may, by serving a notice on the [^{F209}appropriate agency] specifying—
 - (a) one or more of the classifications for the time being prescribed under section 82 above; and
 - (b) in relation to each specified classification, a date, establish the water quality objectives for any waters which are, or are included in, waters of a description prescribed for the purposes of that section.
- (2) The water quality objectives for any waters to which a notice under this section relates shall be the satisfaction by those waters, on and at all times after each date specified in the notice, of the requirements which at the time of the notice were the requirements for the classification in relation to which that date is so specified.
- (3) Where the Secretary of State has established water quality objectives under this section for any waters he may review objectives for those waters if—
 - (a) five years or more have elapsed since the service of the last notice under subsection (1) or (6) of this section to be served in respect of those waters; or
 - (b) the [^{F209}appropriate agency], after consultation with such water undertakers and other persons as it considers appropriate, requests a review;and the Secretary of State shall not exercise his power to establish objectives for any waters by varying the existing objectives for those waters except in consequence of such a review.
- (4) Where the Secretary of State proposes to exercise his power under this section to establish or vary the objectives for any waters he shall—
 - (a) give notice setting out his proposal and specifying the period (not being less than three months from the date of publication of the notice) within which representations or objections with respect to the proposal may be made; and
 - (b) consider any representations or objections which are duly made and not withdrawn;and, if he decides, after considering any such representations or objections, to exercise his power to establish or vary those objectives, he may do so either in accordance with the proposal contained in the notice or in accordance with that proposal as modified in such manner as he considers appropriate.
- (5) A notice under subsection (4) above shall be given—
 - (a) by publishing the notice in such manner as the Secretary of State considers appropriate for bringing it to the attention of persons likely to be affected by it; and
 - (b) by serving a copy of the notice on the [^{F209}appropriate agency].
- (6) If, on a review under this section or in consequence of any representations or objections made following such a review for the purposes of subsection (4) above, the Secretary of State decides that the water quality objectives for any waters should remain unchanged, he shall serve notice of that decision on the [^{F209}appropriate agency].

[F228] CHAPTER IIA

ABANDONED MINES

Textual Amendments

F228 Chapter IIA (ss. 91A-91B) inserted (subject to other provisions of the amending Act) (21.9.1995 for certain purposes and 1.7.1998 otherwise) by [1995 c. 25, s. 58](#) (with ss. 7(6), 115, 117); [S.I. 1995/1983, art. 3](#) (with art. 4); [S.I. 1998/604, art. 3](#)

F229 **91A Introductory.**

- (1) For the purposes of this Chapter, “abandonment”, in relation to a mine,—
- (a) subject to paragraph (b) below, includes—
 - (i) the discontinuance of any or all of the operations for the removal of water from the mine;
 - (ii) the cessation of working of any relevant seam, vein or vein-system;
 - (iii) the cessation of use of any shaft or outlet of the mine;
 - (iv) in the case of a mine in which activities other than mining activities are carried on (whether or not mining activities are also carried on in the mine)—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (A) the discontinuance of some or all of those other activities in the mine; and
 - (B) any substantial change in the operations for the removal of water from the mine; but
- (b) does not include—
- (i) any disclaimer under section 178 or 315 of the ^{M22}Insolvency Act 1986 (power of liquidator, or trustee of a bankrupt’s estate, to disclaim onerous property) by the official receiver acting in a compulsory capacity; or
 - (ii) the abandonment of any rights, interests or liabilities by the Accountant in Bankruptcy acting as [^{F230}trustee] or interim trustee in a sequestration (within the meaning of the ^{M23}Bankruptcy (Scotland) Act [^{F231}2016]);

and cognate expressions shall be construed accordingly.

- (2) In this Chapter, except where the context otherwise requires—
- “the 1954 Act” means the ^{M24}Mines and Quarries Act 1954;
 - “acting in a compulsory capacity”, in the case of the official receiver, means acting as—
 - (a) liquidator of a company;
 - (b) receiver or manager of a bankrupt’s estate, pursuant to section 287 of the ^{M25}Insolvency Act 1986;
 - (c) trustee of a bankrupt’s estate;
 - (d) liquidator of an insolvent partnership;
 - (e) trustee of an insolvent partnership;
 - (f) trustee, or receiver or manager, of the insolvent estate of a deceased person;
 - “mine” has the same meaning as in the 1954 Act;
 - “the official receiver” has the same meaning as it has in the ^{M26}Insolvency Act 1986 by virtue of section 399(1) of that Act;
 - “prescribed” means prescribed in regulations;
 - “regulations” means regulations made by the Secretary of State;
 - “relevant seam, vein or vein-system”, in the case of any mine, means any seam, vein or vein-system for the purpose of, or in connection with, whose working any excavation constituting or comprised in the mine was made.

Textual Amendments

- F229** Chapter IIA (ss. 91A-91B) inserted (subject to other provisions of the amending Act) (21.9.1995 for certain purposes and 1.7.1998 otherwise) by 1995 c. 25, s. 58 (with ss. 7(6), 115, 117); S.I. 1995/1983, art. 3 (with art. 4); S.I. 1998/604, art. 3
- F230** Word in s. 91A(1)(b)(ii) substituted (30.11.2016) by The Bankruptcy (Scotland) Act 2016 (Consequential Provisions and Modifications) Order 2016 (S.I. 2016/1034), art. 1, Sch. 1 para. 8(2)(a)

91B Mine operators to give the [^{F232}appropriate agency] six months' notice of any proposed abandonment.

- (1) If, in the case of any mine, there is to be an abandonment at any time after the expiration of the initial period, it shall be the duty of the operator of the mine to give notice of the proposed abandonment to the [^{F232}appropriate agency] at least six months before the abandonment takes effect.
- (2) A notice under subsection (1) above shall contain such information (if any) as is prescribed for the purpose, which may include information about the operator's opinion as to any consequences of the abandonment.
- (3) A person who fails to give the notice required by subsection (1) above shall be guilty of an offence and liable—
 - (a) on summary conviction, to a fine not exceeding the statutory maximum;
 - (b) on conviction on indictment, to a fine.
- (4) A person shall not be guilty of an offence under subsection (3) above if—
 - (a) the abandonment happens in an emergency in order to avoid danger to life or health; and
 - (b) notice of the abandonment, containing such information as may be prescribed, is given as soon as reasonably practicable after the abandonment has happened.
- (5) Where the operator of a mine is—
 - (a) the official receiver acting in a compulsory capacity, or
 - (b) the Accountant in Bankruptcy acting as [^{F233}trustee] or interim trustee in a sequestration (within the meaning of the ^{M27}Bankruptcy (Scotland) Act [^{F234}2016]),he shall not be guilty of an offence under subsection (3) above by reason of any failure to give the notice required by subsection (1) above if, as soon as reasonably practicable (whether before or after the abandonment), he gives to the [^{F232}appropriate agency] notice of the abandonment or proposed abandonment, containing such information as may be prescribed.
- (6) Where a person gives notice under subsection (1), (4)(b) or (5) above, he shall publish prescribed particulars of, or relating to, the notice in one or more local newspapers circulating in the locality where the mine is situated.
- (7) Where the [^{F232}appropriate agency]—
 - (a) receives notice under this section or otherwise learns of an abandonment or proposed abandonment in the case of any mine, and
 - (b) considers that, in consequence of the abandonment or proposed abandonment taking effect, any land has or is likely to become contaminated land, within the meaning of Part IIA of the ^{M28}Environmental Protection Act 1990,it shall be the duty of the [^{F232}appropriate agency] to inform the local authority in whose area that land is situated of the abandonment or proposed abandonment.
- (8) In this section—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

“the initial period” means the period of six months beginning with the day on which subsection (1) above comes into force;

“local authority” means—

- (a) any unitary authority;
- (b) any district council, so far as it is not a unitary authority;
- (c) the Common Council of the City of London and, as respects the Temples, the Sub-Treasurer of the Inner Temple and the Under-Treasurer of the Middle Temple respectively;

“unitary authority” means—

- (a) the council of a county, so far as it is the council of an area for which there are no district councils;
- (b) the council of any district comprised in an area for which there is no county council;
- (c) the council of a London borough;
- (d) the council of a county borough in Wales.]

CHAPTER III

POWERS TO PREVENT AND CONTROL POLLUTION

92 Requirements to take precautions against pollution.

- (1) The Secretary of State may by regulations make provision—
- (a) for prohibiting a person from having custody or control of any poisonous, noxious or polluting matter unless prescribed works and prescribed precautions and other steps have been carried out or taken for the purpose of preventing or controlling the entry of the matter into any controlled waters;
 - (b) for requiring a person who already has custody or control of, or makes use of, any such matter to carry out such works for that purpose and to take such precautions and other steps for that purpose as may be prescribed.
- (2) Without prejudice to the generality of the power conferred by subsection (1) above, regulations under that subsection may—
- (a) confer power on the [^{F235}appropriate agency]—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (i) to determine for the purposes of the regulations the circumstances in which a person is required to carry out works or to take any precautions or other steps; and
- (ii) by notice to that person, to impose the requirement and to specify or describe the works, precautions or other steps which that person is required to carry out or take;
- (b) provide for appeals to the Secretary of State against notices served by the [^{F235}appropriate agency] in pursuance of provision made by virtue of paragraph (a) above; and
- (c) provide that a contravention of the regulations shall be an offence the maximum penalties for which shall not exceed the penalties specified in [^{F236}regulation 39(1) of the Environmental Permitting Regulations].

[^{F237}(3) This section is subject to section 114 of the 1995 Act (delegation or reference of appeals etc).]

93 Water protection zones.

[^{F238}(1) Where the appropriate national authority considers that either or both of subsections (2) and (2A) is satisfied in relation to any area, it may by order make provision—

- (a) designating that area as a water protection zone; and
- (b) regulating the carrying on in that zone of such activities as may be specified or described in the order.]

[^{F239}(1A) An order under this section may regulate activities carried on in a water protection zone by—

- (a) prohibiting or restricting the carrying on of those activities in the zone; or
- (b) imposing requirements on persons who carry on those activities in the zone to take such steps as may be specified or described in the order.

(1B) The power under subsection (1A)(b) is exercisable only for the purpose of [^{F240}achievement of] any applicable environmental objectives.]

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) For the purposes of subsection (1) above this subsection is satisfied in relation to any area if ^{F241}... it is appropriate, with a view to preventing or controlling the entry of any poisonous, noxious or polluting matter into controlled waters, to prohibit or restrict the carrying on in that area of activities which the [^{F242}appropriate national authority] considers are likely to result in the pollution of any such waters.
- ^{F243}(2A) For the purposes of subsection (1) this subsection is satisfied in relation to any area if it is appropriate, with a view to preventing or limiting any harm that is being or is likely to be caused to controlled waters, to regulate the carrying on in that area of activities which the appropriate national authority considers are likely to result in such harm.
- (2B) In subsection (2A) “harm” means any adverse impact on the condition of any hydromorphological quality element affecting the controlled waters that would be likely to prevent the achievement of any environmental objectives applicable to those waters (whether by itself or in combination with other factors), other than an adverse impact caused by the entry into controlled waters of any poisonous, noxious or polluting matter.
- ^{F244}(2C)
- ^{F245}(3)
- (4) Without prejudice to the generality of the power conferred by virtue of subsection (1) above, an order under this section may—
 - ^{F246}(a) confer power on the [^{F235}appropriate agency] to determine for the purposes of the order—
 - (i) the circumstances in which the carrying on of any activities is prohibited or restricted;
 - (ii) the circumstances in which any requirement to take steps is imposed on persons who carry on activities;
 - (iii) the activities to which any such prohibition or restriction or any such requirement (as the case may be) applies.]
 - (b) apply a prohibition or restriction in respect of any activities to cases where the activities are carried on without the consent of the [^{F235}appropriate agency] or in contravention of any conditions subject to which any such consent is given;
 - ^{F247}(c) provide that a contravention of a prohibition or restriction contained in the order or of a condition of a consent given for the purposes of any such prohibition or restriction or a failure to comply with a requirement to take steps contained in the order shall be an offence;]
 - (d) provide (subject to any regulations under section 96 below) for anything falling to be determined under the order by the [^{F235}appropriate agency] to be determined in accordance with such procedure and by reference to such matters and to the opinion of such persons as may be specified in the order;
 - (e) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
 - (f) contain such supplemental, consequential and transitional provision as the [^{F248}appropriate national authority] considers appropriate.
- ^{F249}(4A) The maximum penalties for an offence created by subsection 4(c) shall not exceed—
 - (a) on summary conviction, a term of imprisonment for a term not exceeding three months or a fine not exceeding the statutory maximum (or both); and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (b) on conviction on indictment, imprisonment for a term not exceeding two years or a fine (or both).]

[^{F250}(5) In this section, “appropriate national authority” means—

- (a) in relation to England, the Secretary of State; and
(b) in relation to Wales, the Welsh Ministers.

(6) The power to make an order under this section shall be exercisable by statutory instrument subject—

- (a) in the case of an order made by the Secretary of State, to annulment in pursuance of a resolution of either House of Parliament; and
(b) in the case of an order made by the Welsh Ministers, to annulment in pursuance of a resolution of the National Assembly for Wales,

but neither the Secretary of State nor the Welsh Ministers shall make such an order except on an application made by the [^{F235}appropriate agency] in accordance with Schedule 11 to this Act and otherwise in accordance with that Schedule.

(7) In this section—

“England” includes the territorial sea adjacent to England not forming any part of Wales and “Wales” has the meaning given by section 158(1) of the Government of Wales Act 2006;

[^{F251}“environmental objectives”—

- (a) in relation to the Solway Tweed River Basin District, means the objectives as defined in regulation 2 of the Water Environment (Water Framework Directive) (Solway Tweed River Basin District) Regulations 2004 (S.I. 2004/99);
(b) in relation to the Northumbria River Basin District, means the objectives referred to in the WFD Regulations as applied and modified by regulation 5 of the Water Environment (Water Framework Directive) (Northumbria River Basin District) Regulations 2003 (S.I. 2003/3245);
(c) in relation to any other river basin district, within the meaning of the WFD Regulations, has the same meaning as in those regulations;

“hydromorphological quality element” has the same meaning as in the Water Framework Directive;

“the WFD Regulations” means the Water Environment (Water Framework Directive) (England and Wales) Regulations 2017 (S.I. 2017/407).]

“the Water Framework Directive” means Directive [2000/60/EC](#) of the European Parliament and of the Council establishing a framework for Community action in the field of water policy [^{F252}, as last amended by Commission [Directive 2014/101/EU](#)].]

F254 S. 95 repealed (22.12.2009) by [Water Resources Act 1991 \(Amendment\) \(England and Wales\) Regulations 2009 \(S.I. 2009/3104\)](#), regs. 1(c), 4 (with reg. 7)

96 Regulations with respect to consents required by virtue of section 93 or 94.

- (1) The Secretary of State may, for the purposes of any orders under section 93 above which require the consent of the [^{F235}appropriate agency] to the carrying on of any activities, by regulations make provision with respect to—
- (a) applications for any such consent;
 - (b) the conditions of any such consent;
 - (c) the revocation or variation of any such consent;
 - (d) appeals against determinations on any such application;
 - (e) the exercise by the Secretary of State of any power conferred on the [^{F235}appropriate agency] by the orders;
 - (f) the imposition of charges where such an application has been made, such a consent has been given or anything has been done in pursuance of any such consent; and
 - (g) the registration of any such application or consent.

^{F255}(2)

^{F256}(3)

CHAPTER IV

SUPPLEMENTAL PROVISIONS WITH RESPECT TO WATER POLLUTIONS

98 Radioactive substances.

- (1) Except as provided by regulations made by the Secretary of State under this section, nothing in this Part shall apply in relation to radioactive waste within the meaning of [^{F259}the Environmental Permitting Regulations].
- (2) The Secretary of State may by regulations—
- (a) provide for prescribed provisions of this Part to have effect with such modifications as he considers appropriate for dealing with such waste;
- (b) make such modifications of [^{F260}the Environmental Permitting Regulations] or, in relation to such waste, of any other enactment as he considers appropriate in consequence of the provisions of this Part and of any regulations made by virtue of paragraph (a) above.

104 Meaning of “controlled waters” etc. in Part III.

- (1) References in this Part to controlled waters are references to waters of any of the following classes—
- (a) relevant territorial waters, that is to say, subject to subsection (4) below, the waters which extend seaward for three miles from the baselines from which the breadth of the territorial sea adjacent to England and Wales is measured;
 - (b) coastal waters, that is to say, any waters which are within the area which extends landward from those baselines as far as—
 - (a) the limit of the highest tide; or
 - (b) in the case of the waters of any relevant river or watercourse, the fresh-water limit of the river or watercourse,
 together with the waters of any enclosed dock which adjoins waters within that area;
 - (c) inland freshwaters, that is to say, the waters of any relevant lake or pond or of so much of any relevant river or watercourse as is above the fresh-water limit;
 - (d) ground waters, that is to say, any waters contained in underground strata;
- and, accordingly, in this Part “coastal waters”, “controlled waters”, “ground waters”, “inland freshwaters” and “relevant territorial waters” have the meanings given by this subsection.
- (2) In this Part any reference to the waters of any lake or pond or of any river or watercourse includes a reference to the bottom, channel or bed of any lake, pond, river or, as the case may be, watercourse which is for the time being dry.
- (3) In this section—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. “fresh-water limit”, in relation to any river or watercourse, means the place for the time being shown as the fresh-water limit of that river or watercourse in the latest map deposited for that river or watercourse under section 192 below;

“miles” means international nautical miles of 1,852 metres;

“lake or pond” includes a reservoir of any description;

“relevant lake or pond” means (subject to subsection (4) below) any lake or pond which (whether it is natural or artificial or above or below ground) discharges into a relevant river or watercourse or into another lake or pond which is itself a relevant lake or pond;

“relevant river or watercourse” means (subject to subsection (4) below) any river or watercourse (including an underground river or watercourse and an artificial river or watercourse) which is neither a public sewer nor a sewer or drain which drains into a public sewer.

- (4) The Secretary of State may by order provide—
- (a) that any area of the territorial sea adjacent to England and Wales is to be treated as if it were an area of relevant territorial waters for the purposes of this Part and of any other enactment in which any expression is defined by reference to the meanings given by this section;
 - (b) that any lake or pond which does not discharge into a relevant river or watercourse or into a relevant lake or pond is to be treated for those purposes as a relevant lake or pond;
 - (c) that a lake or pond which does so discharge and is of a description specified in the order is to be treated for those purposes as if it were not a relevant lake or pond;
 - (d) that a watercourse of a description so specified is to be treated for those purposes as if it were not a relevant river or watercourse.
- (5) An order under this section may—
- (a) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate; and
 - (b) make different provision for different cases, including different provision in relation to different persons, circumstances or localities.
- (6) The power of the Secretary of State to make an order under this section shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.

PART IV

FLOOD DEFENCE

Modifications etc. (not altering text)

C126 Pt. IV (ss. 105-113): functions transferred to the Environment Agency (subject to other provisions of the amending Act) (1.4.1996) by 1995 c. 25, s. 2(1)(a)(iii) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3 (with art. 4)

General

105 General functions with respect to flood defence.

^{F268}(1)

- (2) For the purpose of carrying out its flood defence functions the [^{F269}appropriate agency] shall from time to time carry out surveys of the areas in relation to which it carries out those functions.
- (3) In the exercise of the powers conferred by the following provisions of this Part and the other flood defence provisions of this Act due regard shall be had to the interests of fisheries, including sea fisheries.
- (4) Nothing in the following provisions of this Part or the other flood defence provisions of this Act shall prejudice or affect the provisions of Part V of this Act or the ^{M31}Salmon and Freshwater Fisheries Act 1975 or any right, power or duty conferred or imposed by that Part or that Act.

Main river functions

107 Main river functions under the Land Drainage Act 1991.

- (1) This section has effect for conferring functions in relation to main rivers on the [F269 appropriate agency] which are functions of drainage boards in relation to other watercourses.
- (2) Notwithstanding subsection (3) of section 21 of the Land Drainage Act 1991 (power to secure compliance with drainage obligations), the powers of the [F269 appropriate agency] in relation to a main river shall, by virtue of this section, include the powers which under that section are exercisable otherwise than in relation to a main river by the drainage board concerned; and the provisions of that section shall have effect accordingly.
- (3) The powers of the [F269 appropriate agency] in relation to a main river shall, by virtue of this section, include the powers which under section 25 of the Land Drainage Act 1991 (powers for securing the maintenance of flow of watercourses) are exercisable in relation to an ordinary watercourse by the drainage board concerned; and the provisions of that section and section 27 of that Act shall have effect accordingly.
- (4) Sections 33 and 34 of the Land Drainage Act 1991 (commutation of obligations) shall have effect where—
 - (a) any person is under an obligation imposed on him by reason of tenure, custom, prescription or otherwise to do any work in connection with the drainage of land (whether by way of repairing banks or walls, maintaining watercourses or otherwise); and
 - (b) that work is in connection with a main river,
 as they have effect in relation to an obligation to do work otherwise than in connection with a main river but as if the [F269 appropriate agency] were under a duty to take steps to commute the obligation and the references in those sections to the drainage board for the internal drainage district where the works fall to be done were omitted.
- (5) In this section—
 - (a) references to the exercise of a power in relation to a main river shall include a reference to its exercise in connection with a main river or in relation to the banks of such a river or any drainage works in connection with such a river; and
 - (b) expressions used both in this section and in a provision applied by this section have the same meanings in this section as in that provision.
- (6) The functions of the [F269 appropriate agency] by virtue of this section are in addition to the functions of the [F269 appropriate agency] which by virtue of the provisions of the ^{M32}Land Drainage Act 1991 are exercisable by the [F269 appropriate agency] concurrently with an internal drainage board.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. 108 Schemes for transfer to the ^{F271}appropriate agency] of functions in relation to main river.

- (1) The ^{F271}appropriate agency] may at any time prepare and submit to either of the Ministers for confirmation a scheme making provision for the transfer to the ^{F271}appropriate agency] from any drainage body of—
 - (a) all rights, powers, duties, obligations and liabilities (including liabilities incurred in connection with works) over or in connection with a main river; and
 - (b) any property held by the drainage body for the purpose of, or in connection with, any functions so transferred;
 and the ^{F271}appropriate agency] shall prepare such a scheme and submit it to one of the Ministers if it is directed to do so by that Minister.
- (2) A scheme prepared and submitted under subsection (1) above may make provisions for any matter supplemental to or consequential on the transfers for which the scheme provides.
- (3) The Minister to whom a scheme is submitted under this section may by order made by statutory instrument confirm that scheme; and Schedule 14 to this Act shall have effect with respect to the procedure to be followed in connection with the making of such an order and with respect to challenges to such orders.
- (4) An order under this section may contain provisions with respect to the persons by whom all or any of the expenses incurred by the Ministers or other persons in connection with the making or confirmation of the order, or with the making of the scheme confirmed by the order, are to be borne.
- (5) Where, under a scheme made by the ^{F271}appropriate agency] under this section, liabilities incurred in connection with drainage works are transferred to the ^{F271}appropriate agency] from a local authority, the ^{F271}appropriate agency] may require the local authority to make contributions to the ^{F271}appropriate agency] towards the discharge of the liabilities.
- (6) If the amount to be paid by a local authority by way of contributions required under subsection (5) above is not agreed between the ^{F271}appropriate agency] and the local authority, it shall be referred to the arbitration of a single arbitrator appointed—
 - (a) by agreement between them; or
 - (b) in default of agreement, by the Ministers.
- (7) The relevant Minister shall by regulations provide for the payment, subject to such exceptions or conditions as may be specified in the regulations, of compensation by the ^{F271}appropriate agency] to any officer or other employee of a drainage body who

suffers loss of employment or loss or diminution of emoluments which is attributable to a scheme under this section or anything done in pursuance of such a scheme.

- (8) Regulations under subsection (7) above may include provision—
- (a) as to the manner in which and the persons to whom any claim for compensation by virtue of the regulations is to be made; and
 - (b) for the determination of all questions arising under the regulations.
- (9) In this section—
- “drainage body” means an internal drainage board or any other body having power to make or maintain works for the drainage of land;
 - “the relevant Minister”—
- (a) in relation to employees of a drainage body wholly in Wales, means the Secretary of State;
 - (b) in relation to employees of a drainage body partly in Wales, means the Ministers; and
 - (c) in any other case, means the Minister.

111 Arrangements with navigation and conservancy authorities.

- (1) Subject to subsection (2) below, the [^{F274}appropriate agency], with a view to improving the drainage of any land, may enter into an arrangement with a navigation authority or conservancy authority for any of the following purposes, that is to say—
- (a) the transfer to the [^{F274}appropriate agency] of—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (i) the whole or any part of the undertaking of the navigation authority or conservancy authority or of any of the rights, powers, duties, liabilities and obligations of that authority; or
 - (ii) any property vested in that authority as such;
 - (b) the alteration or improvement by the [^{F274}appropriate agency] of any of the works of the navigation authority or conservancy authority;
 - (c) the making of payments by the [^{F274}appropriate agency] to the navigation authority or conservancy authority or by that authority to the [^{F274}appropriate agency] in respect of any matter for which provision is made by the arrangement.
- (2) The exercise by the [^{F274}appropriate agency] of its power to enter into an arrangement under this section shall require the approval of the Ministers.
- (3) Where the [^{F274}appropriate agency] is intending to enter into an arrangement under this section it shall publish a notice of its intention in such manner as may be directed by either of the Ministers.
- (4) Where an arrangement has been made under this section, the [^{F274}appropriate agency] shall cause a notice under subsection (5) below to be published in the London Gazette in such form as may be prescribed by regulations made by one of the Ministers.
- (5) A notice under this subsection is a notice—
- (a) stating that the arrangement has been made; and
 - (b) specifying the place at which a copy of the arrangement may be inspected by persons interested.

Textual Amendments

F274 Words in ss. 109-111 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 274(b)** (with Sch. 7)

Supplemental

112 Flood defence regulations.

The Ministers shall each have power by regulations to make provision generally for the purpose of carrying into effect the provisions of this Part and the other flood defence provisions of this Act.

113 Interpretation of Part IV.

(1) In this Part—

“banks” means banks, walls or embankments adjoining or confining, or constructed for the purposes of or in connection with, any channel or sea front, and includes all land and water between the bank and low-watermark;

“drainage” includes—

- (a) defence against water, including sea water;
- (b) irrigation other than spray irrigation; ^{F275} . . .
- (c) warping; [^{F276}and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (d) the carrying on, for any purpose, of any other practice which involves management of the level of water in a watercourse;]

“flood defence” means the drainage of land and the provision of flood warning systems;

“main river” (subject to section 137(4) below) means a watercourse shown as such on ^{F277}the main river map for England or the main river map for Wales] and includes any structure or appliance for controlling or regulating the flow of water into, in or out of the channel which—

- (a) is a structure or appliance situated in the channel or in any part of the banks of the channel; and
- (b) is not a structure or appliance vested in or controlled by an internal drainage board;

“watercourse” shall be construed as if for the words from “except” onwards in the definition in section 221(1) below there were substituted the words “except a public sewer”.

- (2) If any question arises under this Part—
- (a) whether any work is a drainage work in connection with a main river; or
- (b) whether any proposed work will, if constructed, be such a drainage work,
- the question shall be referred to one of the Ministers for decision or, if either of the parties so requires, to arbitration.
- (3) Where any question is required under subsection (2) above to be referred to arbitration it shall be referred to the arbitration of a single arbitrator appointed—
- (a) by agreement between the parties; or
- (b) in default of agreement, by the President of the Institution of Civil Engineers, on the application of either party.
- (4) Nothing in this Part shall affect the powers exercisable by the ^{F278}appropriate agency] under any local Act, as they existed immediately before the coming into force of this Act.

Textual Amendments

PART V

GENERAL CONTROL OF FISHERIES

Modifications etc. (not altering text)

C130 Pt. V (ss. 114-116): certain functions transferred to the Environment Agency (subject to other provisions of the amending Act) (1.4.1996) by 1995 c. 25, s. 2(1)(a)(v) (with ss. 115, 117); S.I. 1996/186, art. 3 (with art. 4)

^{F279} 114

Textual Amendments

F279 S. 114 repealed (subject to other provisions of the amending Act) (1.4.1996) by 1995 c. 25, s. 120(1) (3), Sch. 22 para. 148, Sch. 24 (with ss. 7(6), 115, 117); S.I. 1996/186, art. 3 (with art. 4)

115 Fisheries orders.

- (1) Subject to the following provisions of this section, each of the Ministers shall have power, on an application made to him by the [^{F280}appropriate agency], by order made by statutory instrument to make provision in relation to an area defined by the order for the modification, in relation to the fisheries in that area—
 - (a) of any provisions of the ^{M33}Salmon and Freshwater Fisheries Act 1975 [^{F281}(as amended by the Marine and Coastal Access Act 2009)] relating to the regulation of fisheries;
 - [^{F282}(b) of section 142 or 156 below or paragraph 6 or 7 of Schedule 25 to this Act [^{F283}(as so amended)]; or]
 - (c) of any provisions of a local Act relating to any fishery in that area.
- (2) An order under this section—
 - (a) may contain such supplemental, consequential and transitional provision, including provision for the payment of compensation to persons injuriously affected by the order, as may appear to be necessary or expedient in connection with the other provisions of the order; but
 - (b) shall not apply to any waters in respect of which either of the Ministers has granted a licence under section 29 of the Salmon and Freshwater Fisheries Act 1975 (fish rearing licences).
- (3) Before either of the Ministers makes an order under this section he shall—
 - (a) send to the [^{F280}appropriate agency] a copy of the draft order; and
 - (b) notify the [^{F280}appropriate agency] of the time within which, and the manner in which, objections to the draft order may be made to him.
- (4) Neither of the Ministers shall make an order under this section unless the [^{F280}appropriate agency] has caused notice of—
 - (a) that Minister’s intention to make the order;
 - (b) the place where copies of the draft order may be inspected and obtained; and
 - (c) the matters notified under subsection (3)(b) above,

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

to be published in the London Gazette and, if it is directed to do so by one of the Ministers, in such other manner as that Minister thinks best adapted for informing persons affected.

- (5) Before either of the Ministers makes an order under this section he—
- (a) shall consider any objection which may be duly made to the draft order; and
 - (b) may cause a public local inquiry to be held with respect to any such objections.
- (6) A statutory instrument containing an order under this section shall be subject to annulment in pursuance of a resolution of either House of Parliament; and, where a statutory instrument is laid before Parliament for the purposes of this paragraph, a copy of the report of any local inquiry held with respect to objections considered in connection with the making of the order contained in that instrument shall be so laid at the same time.
- (7) Where—
- (a) any fishery, land or foreshore proposed to be comprised in an order under this section [^{F284}making provision, by virtue of subsection (1)(b) above, for the modification of section 156 below in relation to fisheries in an area]; or
 - (b) any fishery proposed to be affected by any such order; or
 - (c) any land over which it is proposed to acquire an easement under any such order,
- belongs to Her Majesty in right of the Crown or forms part of the possessions of the Duchy of Lancaster or the Duchy of Cornwall or belongs to, or is under the management of, any government department, the order may be made by one of the Ministers only if he has previously obtained the consent of the appropriate authority.
- (8) In subsection (7) above “the appropriate authority”—
- (a) in the case of any foreshore under the management of the Crown Estate Commissioners or of any fishery or land belonging to Her Majesty in right of the Crown, means those Commissioners;
 - (b) in the case of any foreshore, fishery or land forming part of the possessions of the Duchy of Lancaster, means the Chancellor of the Duchy;
 - (c) in the case of any foreshore, fishery or land forming part of the possessions of the Duchy of Cornwall, means the Duke of Cornwall or the persons for the time being empowered to dispose for any purpose of the land of the Duchy;
 - (d) in the case of any foreshore, fishery or land which belongs to or is under the management of a government department, means that government department.
- (9) In this section “foreshore” includes the shore and bed of the sea and of every channel, creek, bay, estuary and navigable river as far as the tide flows.

GENERAL FINANCIAL PROVISIONS

F293 117

Textual Amendments

F293 S. 117 repealed (1.4.1996) by [1995 c. 25, s. 120\(1\)\(3\)](#), [Sch. 22 para. 149](#), [Sch. 24](#) (with [ss. 7\(6\)](#), [115](#), [117](#)); [S.I. 1996/186](#), [art. 3](#)

118 Special duties with respect to flood defence revenue.

- (1) Revenue raised by the [F294 appropriate agency] as mentioned in subsection (2) below—
 - (a) shall, except for any amount falling within subsection (3) below, be spent only in the carrying out of the [F295 appropriate agency's] [F296 flood and coastal erosion risk management functions, within the meaning of Part 1 of the Flood and Water Management Act 2010,] in or for the benefit of the [F297 flood risk management region] in which it is raised; F298 ...
 - (b) [F299 where the appropriate agency is the Agency,] shall be disregarded in determining the amount of any surplus for the purposes of section 44(4) of the 1995 Act [F300, and]
 - [F301(c) where the appropriate agency is the NRBW, shall be disregarded in determining the amount of any surplus for the purposes of article 13 of the Natural Resources Body for Wales (Establishment) Order 2012 (S.I.2012/1903).]
- (2) The revenue referred to in subsection (1) above is revenue raised by the [F302 appropriate agency] in a [F303 flood risk management region]—
 - (a) by virtue of any regulations under section 74 of the M34 Local Government Finance Act 1988 (power to issue levies);
 - (b) by general drainage charges under sections 134 [F304 and 135] below;
 - (c) by special drainage charges under sections 137 and 138 below; or
 - (d) by contributions required under section 139(1) below.
- (3) An amount falls within this subsection if it is an amount which the [F305 appropriate agency] considers it appropriate—
 - (a) to set aside towards research or related activities or towards meeting the [F305 appropriate agency's] administrative expenses; F306 ...

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. ^{F306}(b)

(4) Any amount specified in a resolution under section 58(1)(b) of the ^{M35}Land Drainage Act 1991 in relation to any [^{F307}flood risk management region] (allocation of revenue in lieu of contributions) shall be treated for the purposes of this section as if it were revenue actually raised by contributions required under section 139(1) below.

(5) For the purposes of this section, the following sums, that is to say—

(a) any sums held by the [^{F308}appropriate agency] by virtue of any transfer of property, rights or liabilities from a water agency in accordance with a scheme under Schedule 2 to the ^{M36}Water Act 1989, in so far as those sums represent amounts which the water agency was required by virtue of paragraph 31 of Schedule 3 to the ^{M37}Water Act 1973 to spend only in the discharge of their land drainage functions in or for the benefit of a particular local land drainage district; and

(b) any sums raised by the [^{F308}appropriate agency] in a [^{F309}flood risk management region] by virtue of a precept issued under section 46 of the ^{M38}Land Drainage Act 1976,

shall be treated as revenue raised by the [^{F308}appropriate agency] as mentioned in subsection (2) above in the corresponding [^{F310}flood risk management region] or, as the case may be, in that local flood defence district.

^{F311}(6)

[^{F312}(7) In this section “flood risk management region”][^{F313}—

(a) in relation to the Agency,] means the region of a Regional Flood and Coastal Committee, within the meaning of section 22 of the Flood and Water Management Act 2010 [^{F314}, and

(b) in relation to the NRBW, means Wales, within the meaning of section 158 of the Government of Wales Act 2006].

120 Contributions between the [F317 appropriate agency] and certain other authorities.

- (1) Where, on the application of a navigation authority, harbour authority or conservancy authority, it appears to the [F317 appropriate agency] that any works constructed or maintained by the applicants have made, or will make, a beneficial contribution towards the fulfilment of the purposes of the [F317 appropriate agency's] water resources functions, the [F317 appropriate agency] shall contribute towards the expenditure incurred or to be incurred by the applicants in constructing or maintaining those works.
- (2) Where, on the application of the [F317 appropriate agency], it appears to a navigation authority, harbour authority or conservancy authority that any works constructed or maintained by the [F317 appropriate agency] in the carrying out of its water resources functions have made, or will make, a beneficial contribution towards the carrying out of the functions of the authority to whom the application is made, that authority shall contribute to the [F317 appropriate agency] towards the expenditure incurred or to be incurred by the [F317 appropriate agency] in constructing or maintaining those works.
- (3) Subject to the following provisions of this section, the sums to be paid by way of contribution and the terms and conditions on which they are to be paid shall be such as the [F317 appropriate agency] and the other authority concerned may agree to be appropriate.
- (4) If on any application under this section—
 - (a) the [F317 appropriate agency] or, as the case may be, the other authority to whom the application is made refuses to make a contribution; or
 - (b) the [F317 appropriate agency] and the other authority concerned are unable to agree as to the sums to be contributed or the terms and conditions on which they are to be contributed,
 the [F317 appropriate agency] or the other authority concerned may refer the matter in dispute to the Secretary of State.
- (5) On a reference under subsection (4) above the Secretary of State may either—
 - (a) determine that matter himself; or
 - (b) refer it for determination to an arbitrator appointed by him for the purpose;
 and where any decision has been made by the Secretary of State or an arbitrator under this subsection, the decision shall be final and a contribution shall be made in accordance with the decision as if the sums, terms or conditions determined under this subsection had been agreed to be appropriate as mentioned in subsection (3) above.
- (6) Any expenditure incurred by a navigation authority, harbour authority or conservancy authority in paying any contribution under this section shall be defrayed in the like manner as any corresponding expenditure of that authority; and that authority shall have the same powers for the purpose of raising money required for paying any such contribution as they would have for the purpose of raising money required for defraying any corresponding expenditure of that authority.
- (7) In subsection (6) above the references to corresponding expenditure of a navigation authority, harbour authority or conservancy authority, in relation to the payment of a contribution in respect of any works, are references to expenditure incurred by

126 Agreements containing exemptions from charges.

- (1) The [^{F317}appropriate agency] may, on the application of any person who is liable to pay charges to the [^{F317}appropriate agency] for the abstraction of water under a licence under Chapter II of Part II of this Act, make an agreement with him either exempting him from the payment of charges or providing for charges to be levied on him at reduced rates specified in the agreement.
- (2) In the exercise of its powers under subsection (1) above in relation to any person, the [^{F317}appropriate agency] shall have regard to—
 - (a) the extent to which any works constructed at any time by that person or any works to be constructed by him have made, or will make, a beneficial contribution towards the fulfilment of the purposes of the functions of the [^{F317}appropriate agency] under any enactment;
 - (b) any financial assistance which that person has rendered, or has agreed to render, towards the carrying out of works by the [^{F317}appropriate agency] in the performance of those functions; and
 - (c) any other material considerations.
- (3) The Secretary of State may give directions as to the exercise by the [^{F317}appropriate agency] of its powers under subsection (1) above.
- (4) Without prejudice to the exercise of the power conferred by subsection (3) above, if on any application under this section—
 - (a) the [^{F317}appropriate agency] refuses to make an agreement with the applicant as mentioned in subsection (1) above; or

127 Special charges in respect of spray irrigation.

- (1) Where a person (“the applicant”) is for the time being the holder of a licence under Chapter II of Part II of this Act to abstract water (“the applicant’s licence”), and in accordance with the provisions of that licence—
 - (a) the water is to be used on land of which the applicant is the occupier; and
 - (b) the purposes for which water abstracted in pursuance of the licence is to be used consist of or include spray irrigation,the applicant may apply to the [^{F317}appropriate agency] to make an agreement with him under this section and, subject to the following provisions of this section and sections 128 and 129 below, the [^{F317}appropriate agency] may make such an agreement accordingly.
- (2) During any period for which an agreement under this section is in force, the following charges shall be payable by the applicant to the [^{F317}appropriate agency] in respect of the applicant’s licence, in so far as it relates to water authorised to be abstracted and used on the relevant land, that is to say—
 - (a) basic charges calculated, in accordance with the agreement, by reference to the quantity of water authorised to be so abstracted and used from time to time in pursuance of the licence; and
 - (b) supplementary charges calculated, in accordance with the agreement, by reference to the quantity of water which is measured or assessed as being

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. abstracted from time to time by or on behalf of the applicant from the source of supply to which the applicant's licence relates for use on the relevant land.

- (3) In determining—
- (a) whether to make an agreement with the applicant under this section; and
 - (b) the charges to be leviable under such an agreement,
- the [F317 appropriate agency] shall have regard to the extent to which, in any year within the period proposed to be specified in the agreement as the period for which it is made, the quantity of water referred to in paragraph (a) of subsection (2) above is likely to exceed the quantity referred to in paragraph (b) of that subsection.
- (4) Where the applicant's licence authorises water abstracted in pursuance of the licence to be used on the relevant land for purposes which include spray irrigation and other purposes—
- (a) any agreement made under this section shall provide for apportioning, as between those purposes respectively, the quantity referred to in paragraph (a) of subsection (2) above and the quantity referred to in paragraph (b) of that subsection;
 - (b) subsection (2) above shall have effect as if in each of those paragraphs the reference to the quantity of water mentioned in that paragraph were a reference to so much of that quantity as in accordance with the agreement is apportioned to the purpose of spray irrigation; and
 - (c) in subsection (3) above any reference to either of those paragraphs shall be construed as a reference to that paragraph as modified by paragraph (b) of this subsection.
- (5) An application under subsection (1) above may be made by a person who has applied for, but is not yet the holder of, a licence under Chapter II of Part II of this Act to abstract water; and, in relation to an application so made or to an agreement made on such an application—
- (a) the reference in that subsection to the provisions of the applicant's licence shall be construed as a reference to the proposals contained in the application for a licence; and
 - (b) any other reference in this section or in section 128 or 129 below to the applicant's licence shall be construed as a reference to any licence granted to the applicant in pursuance of the application mentioned in paragraph (a) above or in pursuance of an appeal consequential upon the application so mentioned.
- (6) In this section and sections 128 and 129 below—
- “the applicant” and “the applicant's licence” shall be construed, subject to subsection (5) above, in accordance with subsection (1) above;
- “the relevant land” means the land on which the applicant's licence, as for the time being in force, authorises water abstracted in pursuance of the licence to be used for purposes which consist of or include spray irrigation; and
- “year” means a period of twelve months beginning—
- (a) with the date on which an agreement under this section comes into force or is proposed to come into force; or
 - (b) with an anniversary of that date.

C135 S. 127(1)(4) modified (18.5.1992) by [S.I. 1992/1096](#), arts. 3, 4, **Sch.**

128 Duration of agreement under section 127.

- (1) The period specified in an agreement under section 127 above as the period for which it is made shall not be less than five years.
- (2) An agreement under section 127 above shall remain in force until the occurrence of whichever of the following events first occurs, that is to say—
 - (a) the period specified in the agreement, as mentioned in subsection (1) above, comes to an end;
 - (b) the applicant's licence expires or is revoked;
 - (c) the applicant ceases to be the occupier of the relevant land or, if he has previously ceased to be the occupier of a part or parts of that land, ceases to be the occupier of the remainder of it;
 - (d) the agreement is terminated under subsection (4) below.
- (3) At any time while an agreement under section 127 above is in force, the applicant may apply to the [^{F317}appropriate agency] to terminate the agreement.
- (4) If, on an application for the termination of an agreement under section 127 above, the [^{F317}appropriate agency] is satisfied that, by reason of any change of circumstances since the agreement was made, it ought to be terminated, it may terminate the agreement, either unconditionally or subject to such conditions (whether as to any payment to be made by the applicant or otherwise) as the [^{F317}appropriate agency] and the applicant may agree.

General drainage charges

134 Raising of general drainage charges.

- (1) Subject to subsection (2) below, the [^{F317}appropriate agency] may raise at an amount per hectare of chargeable land in [^{F333}a flood risk management region] a charge to be known as a general drainage charge and to be levied in accordance with sections 135 and 136 below.
- (2) The [^{F334}Agency] shall not levy a general drainage charge in respect of [^{F335}any flood risk management region] unless [^{F336}the Regional Flood and Coastal Committee for that region] have recommended that such a charge should be raised.

^{F337}(3)

Modifications etc. (not altering text)

- C136** S. 134 restricted (1.12.1991) by [Water Consolidation \(Consequential Provisions\) Act 1991 \(c. 60\)](#), SIF 130, ss. 2(2), 4(2), **Sch. 2 Pt. I para. 2(2)**

135 Amount, assessment etc. of general drainage charge.

- (1) A general drainage charge raised by the [^{F317}appropriate agency] for [^{F338}a flood risk management region] for any year shall be at a uniform amount per hectare of chargeable land in [^{F339}that region].
- (2) The uniform amount referred to in subsection (1) above shall be ascertained, subject to subsection (3) below, by multiplying the relevant quotient ^{F340}. . . by one penny and by such number as may be specified by either of the Ministers by order made for the purposes of this subsection.
- (3) The number specified in an order under this section for the purposes of subsection (2) above shall (apart from any adjustment made to it to take account of rough grazing land) be such as the Minister making the order considers will secure, so far as reasonably practicable, that the amount specified in paragraph (a) below will be equal to the amount specified in paragraph (b) below, that is to say—
 - (a) the aggregate amount produced by any charge levied by reference to a relevant quotient ^{F341}. . . ; and
 - (b) the aggregate amount which, if the chargeable land in [^{F342}the flood risk management region] had been liable to be rated for the financial year beginning in 1989, would have been produced by a rate levied on the land at

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F347 S. 136 repealed (1.8.1992 subject to savings in S.I. 1992/1755, **art. 2(2)**) by **Local Government Finance Act 1992 (c. 14)**, s. 117(1)(2), Sch. 13 para. 97, **Sch.14** (with s. 118(1)(2)(4)); S.I. 1992/1755, **art. 2(1)**

Special drainage charges

137 Special drainage charges in interests of agriculture.

- (1) Where it appears to the [^{F317}appropriate agency] that the interests of agriculture require the carrying out, improvement or maintenance of drainage works in connection with any watercourses in [^{F348}any flood risk management region], the [^{F317}appropriate agency] may submit to either of the Ministers for confirmation a scheme under this section with respect to those watercourses.
- (2) A scheme under this section with respect to any watercourses is a scheme—
 - (a) designating those watercourses, and any watercourses connected with them, for the purposes of this section; and
 - (b) making provision for the raising, in accordance with section 138 below, of a charge (known as a “special drainage charge”) for the purpose of meeting the expenses of drainage works in connection with the designated watercourses and any expenses arising from such works.
- (3) A scheme under this section shall designate for the purposes of the special drainage charge so much of [^{F349}the flood risk management region] as consists of land which, in the opinion of the [^{F317}appropriate agency], is agricultural land that would benefit from drainage works in connection with the designated watercourses.
- (4) The watercourses designated in any scheme under this section shall, if the scheme is confirmed, be treated for the purposes of this Act and the ^{M39}Land Drainage Act 1991 as part of a main river.
- (5) A scheme under this section-
 - (a) may make provision for any of the matters referred to in subsections (1) and (2) of section 108 above; and
 - (b) may provide for the revocation or amendment of, and for the retransfer of property, rights, powers, duties, obligations and liabilities transferred by, any previous scheme under this section.
- (6) Schedule 16 to this Act shall have effect with respect to the making and confirmation of schemes under this section.
- (7) For the purposes of this section—
 - (a) the reference to expenses of drainage works is a reference to expenses incurred in the construction, improvement or maintenance of drainage works;
 - (b) the expenses of any drainage works which may be necessary in consequence of other drainage works, and so much of any contribution made under section 57 of the ^{M40}Land Drainage Act 1991 as is fairly attributable to such expenses, shall be deemed to be expenses arising from those other drainage works; and

- (c) the expenses of any drainage works shall be taken (without prejudice to section 221(5) below) to include a proper proportion of the cost of the officers and buildings and establishment of the authority carrying them out.
- (8) In this section and Schedule 16 to this Act “watercourse” has the same meaning as in Part IV of this Act.

138 Levying and amount of special drainage charge.

- (1) A special drainage charge shall be levied by the [^{F317}appropriate agency] in respect of chargeable land included in the area designated for the purposes of the charge by the scheme authorising it (“the relevant chargeable land”).
- (2) The special drainage charge raised for any year shall be at a uniform amount per hectare of the relevant chargeable land.
- (3) The uniform amount referred to in subsection (2) above shall be determined by [^{F350}the Regional Flood and Coastal Committee for the flood risk management region within which is the area] which includes the relevant chargeable land [^{F351}(where that land is in England) or by the NRBW (where the relevant chargeable land is in Wales)] but shall exceed neither—
- an amount to be specified in the scheme as the maximum amount of the charge or such greater amount as may be authorised for the purposes of the scheme by an order made by one of the Ministers on the application of the [^{F317}appropriate agency]; nor
 - twenty-five pence or such other amount as may be substituted for twenty-five pence by an order made by one of the Ministers and approved by a resolution of the House of Commons.
- (4) Before either of the Ministers makes an order under subsection (3)(a) above he shall—
- consult with such of the associations and persons concerned as he considers appropriate;
 - cause a notice of his intention to make the order, and of the time (which shall not be less than thirty days) within which objections to the proposed order may be made to him, to be published in such manner as he thinks best adapted for informing persons affected;
 - if he considers it necessary, afford such persons an opportunity of appearing before and being heard by a person appointed by him for the purpose; and
 - consider the report of the person so appointed and any objections duly made.
- (5) An order under subsection (3)(b) above may be made so as to apply—

agency] except in respect of such part, if any, of that district as is not situated within any minor internal drainage district.

- (3) Notwithstanding subsection (2) above, the [F317appropriate agency], after determining what contribution should be made by the drainage board for each of the minor internal drainage districts, may, if it thinks fit, require the drainage board for the main internal drainage district to pay direct to the [F317appropriate agency] an amount equal to the aggregate of those contributions.
- (4) If the [F317appropriate agency] make a requisition under subsection (3) above, the drainage board of the main internal drainage district shall raise the amount paid by them under that subsection to the [F317appropriate agency] by means of drainage rates levied by them within, or special levies issued in respect of, the main internal drainage district or, as the case may be, such part of that district as is situated within a minor internal drainage district.
- (5) Without prejudice to subsection (3) of section 140 below, a resolution under this section may be acted upon by the [F317appropriate agency] forthwith, notwithstanding that the time for bringing an appeal under that section has not expired or that an appeal so brought is pending.

Textual Amendments

F317 Words in ss. 120-143 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), [Sch. 2 para. 276](#) (with Sch. 7)

140 Appeals in respect of resolutions under section 139.

- (1) If—
 - (a) an internal drainage board is aggrieved by a resolution of the [F317appropriate agency] under section 139 above determining the amount of any contribution; or
 - (b) the council of any county [F355, county borough] or London borough is aggrieved by any such resolution on the ground that the amount of the contribution required to be made by an internal drainage board is inadequate, the board or council may, within six weeks after the date on which notice of the resolution is given by the [F317appropriate agency] to the internal drainage board in question, appeal to the relevant Minister against the resolution.
- (2) On an appeal under this section the relevant Minister may, after—
 - (a) considering any objections made to him; and
 - (b) if he thinks fit, holding a local public inquiry,
 make such an order in the matter as he thinks just.
- (3) Where the [F317appropriate agency] has acted on a resolution by virtue of section 139(5) above and an appeal is brought in respect of the resolution, the relevant Minister shall by his order direct such adjustment to be made in respect of any sums recovered or paid in pursuance of the resolution as may be necessary for giving effect to his decision.
- (4) Where the relevant Minister makes an order under this section, he shall lay before Parliament particulars of the matter in respect of which the appeal was made and of the reasons for his order.

Incidental power of the Authority to impose charges

Interpretation of Chapter II

145 Interpretation of Chapter II.

In this Chapter—

“agricultural buildings” has the meaning provided by section 26(4) of the ^{M43}General Rate Act 1967 as amended by the ^{M44}Rating Act 1971;

“agricultural land” means—

- (a) land used as arable, meadow or pasture ground only;
- (b) land used for a plantation or a wood or for the growth of saleable underwood; and
- (c) land exceeding one tenth of a hectare used for the purpose of poultry farming, market gardens, nursery grounds, orchards or allotments, including allotment gardens within the meaning of the ^{M45}Allotments Act 1922,

but does not include land occupied together with a house as a park, gardens (other than as aforesaid) or pleasure grounds, land kept or preserved mainly or exclusively for purposes of sport or recreation or land used as a racecourse;

“chargeable land” means the agricultural land and agricultural buildings in so much of [^{F358}a flood risk management region] as does not fall within an internal drainage district, excluding rough grazing land and woodlands other than commercial woodlands;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

“commercial woodlands” means woodlands managed on a commercial basis with a view to the realisation of profits;

“drainage” has the same meaning as in Part IV above;

“drainage charge” means general drainage charge or special drainage charge;

[^{F359}“flood risk management region” [^{F360}—

(a) in relation to the Agency,] means the region of a Regional Flood and Coastal Committee, within the meaning of section 22 of the Flood and Water Management Act 2010 [^{F361}, and

(b) in relation to the NRBW, means Wales, within the meaning of section 158 of the Government of Wales Act 2006].

“rough grazing land” means land of either of the following descriptions, that is to say—

(a) land used as pasture ground on which the vegetation consists solely or mainly of one or more of the following, that is to say, bracken, gorse, heather, rushes and sedge; and

(b) land so used which is unsuitable for mowing by machine and on which the vegetation consists solely or mainly of grass of poor feeding value; and

“spray irrigation” has the same meaning as in Chapter II of Part II of this Act.]

- the Agency [^{F370}or the NRBW] for the purposes of, or in connection with, the carrying out of its functions.
- (2) The power of [^{F372}the relevant Minister] under subsection (1) above shall include power—
- (a) to authorise the acquisition of interests in, and rights over, land by the creation of new interests and rights; and
 - (b) by authorising the acquisition by the Agency [^{F373}or, as the case may be, by the NRBW,] of any rights over land which is to be or has been acquired by the Agency [^{F374}or the NRBW], to provide for the extinguishment of those rights.
- (3) Without prejudice to the generality of subsection (1) above, the land which the Agency [^{F375}or the NRBW] may be authorised under that subsection to purchase compulsorily shall include land which is or will be required for the purpose of being given in exchange for, or for any right over, any other land which for the purposes of the ^{M46}Acquisition of Land Act 1981 is or forms part of a common, open space or a fuel or field garden allotment.
- (4) Subject to section 182 below, the Acquisition of Land Act 1981 shall apply to any compulsory purchase under subsection (1) above of any land by the Agency [^{F376}or the NRBW]; and Schedule 3 to the said Act of 1981 shall apply to the compulsory acquisition under that subsection of rights by the creation of new rights.
- (5) Schedule 18 to this Act shall have effect for the purpose of modifying enactments relating to compensation and the provisions of the ^{M47}Compulsory Purchase Act 1965 in their application in relation to the compulsory acquisition under subsection (1) above of a right over land by the creation of a new right.
- (6) The provisions of Part I of the ^{M48}Compulsory Purchase Act 1965 (so far as applicable), other than sections 4 to 8, 10, 21, 27(1) and 31 and Schedule 4, shall apply in relation to any power to acquire land by agreement which is conferred, by virtue of any provision of this Act or otherwise (including section 37 of the 1995 Act (incidental general powers of the Agency) [^{F377}or article 9 of the Natural Resources Body for Wales (Establishment) Order 2012 (general incidental function of the Body) (S.I.2012/1903)]), on the Agency [^{F378}or the NRBW] as if—
- (a) any reference in those provisions to the acquiring authority were a reference to the Agency [^{F379}or, as the case may be, the NRBW]; and
 - (b) any reference to land subject to compulsory purchase were a reference to land which may be purchased by agreement under that power.
- ^{F380}(7) In this section, in relation to the NRBW, references to functions have effect as references to relevant transferred functions.
- (8) In subsections (1) and (2), “the relevant Minister” means—
- (a) in relation to land in England, the Secretary of State; and
 - (b) in relation to land in Wales, the Welsh Ministers.]

155 Accretions of land resulting from drainage works.

- (1) If the relevant Minister certifies that, as the result of—
- any drainage works carried out or improved, or proposed to be carried out or improved, by the Agency [^{F381}or the NRBW] in connection with the tidal waters of a main river; or
 - any drainage works transferred from a drainage body to the Agency [^{F381}or the NRBW] in pursuance of this Act or the ^{M49}Land Drainage Act 1991,
- there has been or is likely to be any accretion of land, the powers of the Agency [^{F382}and the NRBW] by virtue of this Act, for the purpose of carrying out its functions [^{F383}or, as the case may be, its relevant transferred functions], to acquire land or any interest in or right over land by agreement or compulsorily shall include power so to acquire the land mentioned in subsection (2) below.
- (2) The land mentioned in subsection (1) above is—
- the accretion of land or the land to which the accretion will, if it takes place, be added, together with any right to reclaim or embank the accretion; and

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) such other land as is reasonably required for the purpose of reclamation of the accretion or for the enjoyment of it when reclaimed.
- (3) An agreement or order with respect to the acquisition of any land or rights by virtue of this section may provide for the transfer to the Agency [^{F384}or, as the case may be, the NRBW] of any liability for the upkeep, maintenance and repair of any bank or drainage work or of any other like liability.
- (4) Where the value of any land or right is increased by the carrying out or proposed carrying out of drainage works by the Agency [^{F385}or, as the case may be, the NRBW] the amount of the increase shall not be taken into account in assessing the compensation in respect of the compulsory acquisition of it.
- (5) Where, by reason of a certificate having been given by the relevant Minister under this section in relation to any drainage works, the Agency [^{F386}or, as the case may be, the NRBW] has acquired any land or right and a grant has been made out of public moneys for defraying the cost or part of the cost of the carrying out of the works, the Agency [^{F386}or, as the case may be, the NRBW] shall—
- (a) on being so required by the Crown Estate Commissioners; and
 - (b) on payment by the Commissioners to the Agency [^{F387}or the NRBW] of the sum paid by the Agency [^{F387}or the NRBW] in respect of the acquisition of the land or right, together with the amount of any costs incurred by the [^{F388}Agency][^{F387}or the NRBW] in connection with the acquisition,
- transfer the land or right to the Commissioners or to any person nominated by them.
- (6) If the Agency [^{F389}or, as the case may be, the NRBW], on being so required by the Crown Estate Commissioners in pursuance of subsection (5) above, fail to transfer to the Commissioners any land or right, the relevant Minister may by a vesting order transfer the land or right to the Commissioners or to a person nominated by them; and, for the purposes of this subsection, the relevant Minister shall be deemed to be a competent authority within the meaning of section 9 of the ^{M50}Law of Property Act 1925.
- (7) In this section—
- “banks” has the same meaning as in Part IV of this Act;
 - “drainage body” has the same meaning as in section 108 above;
 - “the relevant Minister”—
- (a) in relation to England, means the Minister; and
 - (b) in relation to Wales, means the Secretary of State.

157 Restriction on disposals of compulsorily acquired land.

- (1) The Agency [^{F396}and the NRBW] shall not dispose of any of its compulsorily acquired land, or of any interest or right in or over any of that land, except with the consent of, or in accordance with a general authorisation given by, one of the Ministers.
- (2) A consent or authorisation for the purposes of this section—
 - (a) shall be set out in a notice served on the Agency [^{F397}or, as the case may be, the NRBW] by the Minister who is giving the consent or authorisation; and
 - (b) in the case of an authorisation, may be combined with an authorisation for the purposes of section 156 of the ^{M52}Water Industry Act 1991 (restrictions on disposals of land by a water or sewerage undertaker).
- (3) A consent or authorisation for the purposes of this section may be given on such conditions as the Minister who is giving it considers appropriate.
- (4) Without prejudice to the generality of subsection (3) above, the conditions of a consent or authorisation for the purposes of this section may include a requirement that, before there is any disposal, an opportunity of acquiring the land in question, or an interest or right in or over that land, is to be made available to such person as may be specified in or determined under provision contained in the notice setting out the consent or authorisation in question.
- (5) A requirement under subsection (4) above may require the opportunity to be made available in such manner and on such terms as may be specified in or determined under provision contained in the notice setting out the consent or authorisation in question.
- ^{F398}(6) In this section “compulsorily acquired land”, in relation to the Agency, means any land of the Agency which—
 - (a) was acquired by the Agency compulsorily under the provisions of section 154 above or of an order under section 168 below;
 - (b) was acquired by the Agency at a time when it was authorised under those provisions to acquire the land compulsorily;
 - (c) being land which has been transferred to the Agency from the Authority by section 3 of the 1995 Act, was acquired by the Authority—
 - (i) compulsorily, under the provisions of section 154 above or of an order under section 168 below or under the provisions of section 151 of the ^{M53}Water Act 1989 or of an order under section 155 of that Act; or
 - (ii) at a time when it was authorised under those provisions to acquire the land compulsorily;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (d) being land—
 - (i) which has been so transferred, and
 - (ii) which was transferred to the Authority in accordance with a scheme under Schedule 2 to the ^{M54}Water Act 1989, was acquired by a predecessor of the Authority compulsorily under so much of any enactment in force at any time before 1st September 1989 as conferred powers of compulsory acquisition; or
- (e) being land transferred as mentioned in sub-paragraphs (i) and (ii) of paragraph (d) above, was acquired by such a predecessor at a time when it was authorised to acquire the land by virtue of any such powers as are mentioned in that paragraph.]

[^{F399}(7) In this section “compulsorily acquired land”, in relation to the NRBW, means any land of the NRBW which—

- (a) was acquired by the NRBW compulsorily under the provisions of section 154 above or of an order under section 168 below;
- (b) was acquired by the NRBW at a time when it was authorised under those provisions to acquire the land compulsorily; or
- (c) being land which has been transferred to the NRBW from the Agency in accordance with a scheme made under section 23 of the Public Bodies Act 2011, was compulsorily acquired land of the Agency within the meaning of subsection (6).]

Works agreements for water resources purposes

158 Works agreements for water resources purposes.

- (1) Without prejudice to the generality of the powers of the [^{F400}Agency] by virtue of section 37 of the 1995 Act (incidental general powers of the Agency)[^{F401}, or (as the case may be) of the NRW by virtue of article 9 of the Natural Resources Body for Wales (Establishment) Order 2012 (general incidental function of the Body) (S.I.2012/1903),] but subject to subsection (2) below, those powers shall include power to enter into an agreement with any water undertaker, with any sewerage undertaker, with any local authority or joint planning board, or with the owner or occupier of any land, with respect to any one or more of the following matters, that is to say—
 - (a) the carrying out by any party to the agreement of works which the [^{F402}appropriate agency] considers necessary or expedient in connection with the carrying out of any of the [^{F402}appropriate agency's] functions by virtue of Part II of this Act;
 - (b) the maintenance by any party to the agreement of works carried out in pursuance of the agreement;
 - (c) provision for the [^{F403}appropriate agency] to use, or have access to, any land for any purpose connected with the carrying out of any of those functions;
 - (d) the manner in which any reservoir is to be operated.
- (2) The Secretary of State may by a direction to the [^{F404}appropriate agency] direct that, in such cases or classes of cases as are specified in the direction, the [^{F404}appropriate agency] shall not enter into any such agreement as is mentioned in subsection (1) above except with his consent.
- (3) An agreement such as is mentioned in subsection (1) above may contain such incidental and consequential provisions (including provisions of a financial character) as appear to the [^{F405}appropriate agency] necessary or expedient for the purposes of the agreement.
- (4) Where an agreement such as is mentioned in subsection (1) above is made with an owner of land, other than registered land, and the agreement provides that the provisions of this subsection shall have effect in relation to the agreement—
 - (a) the agreement may be registered as a land charge under the ^{M55}Land Charges Act 1972 as if it were a charge affecting land falling within paragraph (iii) of Class D;
 - (b) the provisions of section 4 of that Act (which relates to the effect of non-registration) shall apply as if the agreement were such a land charge; and
 - (c) subject to the provisions of section 4 of that Act, the agreement shall be binding upon any successor of that owner to the same extent as it is binding upon that owner, notwithstanding that it would not have been binding upon that successor apart from the provisions of this paragraph.
- (5) Where an agreement such as is mentioned in subsection (1) above is made with an owner of land which is registered land, and the agreement provides that the provisions of this subsection shall have effect in relation to the agreement—
 - ^{F406}(a) the agreement may be the subject of a notice in the register of title under the Land Registration Act 2002 as if it were an interest affecting the registered land;

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the provisions of sections 28 to 30 of that Act (effect of dispositions of registered land on priority of adverse interests) shall apply as if the agreement were such an interest;]
- (c) [^{F407}subject to the provisions of those sections,] the agreement shall be binding upon any successor of that owner to the same extent as it is binding upon that owner, notwithstanding that it would not have been binding upon that successor apart from the provisions of this paragraph.
- (6) In this section—
- “registered land” has the same meaning as in the [^{F408}Land Registration Act 2002]; and
- “successor”, in relation to an agreement with the owner of any land, means a person deriving title or otherwise claiming under that owner, otherwise than in right of an interest or charge to which the interest of the owner was subject immediately before the following time, that is to say—
- (a) where the land is not registered land, the time when the agreement was made; and
- (b) where the land is registered land, the time when the notice of the agreement was registered.

General pipe-laying powers

159 Powers to lay pipes in streets.

- (1) Subject to the following provisions of this Part, the [F409 appropriate agency] shall, for the purpose of carrying out its functions, have power—
- (a) to lay a relevant pipe in, under or over any street and to keep that pipe there;
 - (b) to inspect, maintain, adjust, repair or alter any relevant pipe which is in, under or over any street; and
 - (c) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) or (b) above, including for those purposes the following kinds of works, that is to say—
 - (i) breaking up or opening a street;
 - (ii) tunnelling or boring under a street;
 - (iii) breaking up or opening a sewer, drain or tunnel;
 - (iv) moving or removing earth and other materials.
- [F410(1A) The [F409 appropriate agency] may carry out work within subsection (1)(a) to (c) if—
- (a) it thinks the work desirable having regard to the national flood and coastal erosion risk management strategies under sections 7 and 8 of the Flood and Water Management Act 2010, and
 - (b) the purpose of the work is to manage a flood risk (within the meaning of that Act) from (i) the sea, or (ii) a main river.]
- (2) Without prejudice to the generality of subsection (1)(c) above, the [F409 appropriate agency] shall have power to erect and keep in any street notices indicating the position of such underground accessories for its relevant pipes as may be used for controlling the flow of water in those pipes.
- (3) The power conferred by subsection (2) above shall include power to attach any such notice as is mentioned in that subsection to any building, fence or other structure which is comprised in premises abutting on the street in question.
- (4) Until the coming into force of its repeal by the M56 New Roads and Street Works Act 1991 section 20 of the M57 Highways Act 1980 (works in special roads) shall have effect as if the reference in that section to a power under any enactment to lay down or erect apparatus included a reference to any power to lay any pipe which is conferred by this section.
- (5) In this section references to a relevant pipe are references to a resource main or discharge pipe and references to laying such a pipe shall include references—
- (a) to the laying of any drain or sewer for any of the purposes specified in subsection (6) below; and
 - (b) to the construction of a watercourse for any of those purposes.
- (6) The purposes mentioned in subsection (5) above are—
- (a) intercepting, treating or disposing of any foul water arising or flowing upon any land; or
 - (b) otherwise preventing the pollution—
 - (i) of any waters, whether on the surface or underground, which belong to the [F409 appropriate agency] or any water undertaker or from which

- the [F409 appropriate agency] or any water undertaker is authorised to take water;
- (ii) without prejudice to sub-paragraph (i) above, of any reservoir which belongs to or is operated by the [F409 appropriate agency] or any water undertaker or which the [F409 appropriate agency] or any water undertaker is proposing to acquire or construct for the purpose of being so operated; or
- (iii) of any underground strata from which the [F409 appropriate agency] or any water undertaker is for the time being authorised to abstract water in pursuance of a licence under Chapter II of Part II of this Act.
- (7) References in this section to maintaining a pipe include references to cleansing it and references to altering a pipe include references to altering its size or course, to moving or removing it and to replacing it with a pipe which is of the same description of relevant pipe as the pipe replaced.

C155 Ss. 161-161D modified (1.1.2017) by [The Environmental Permitting \(England and Wales\) Regulations 2016 \(S.I. 2016/1154\)](#), reg. 1(1), Sch. 23 Pt. 7 paras. 1(3), 2 (with regs. 1(3), 77-79, Sch. 4)

161ZA. Other works and operations in respect of harm to controlled waters

- (1) This section applies where it appears to the [F409 appropriate agency] that any controlled waters are being or have been harmed, or are likely to be harmed, by any event, process or other source of potential harm (and it is immaterial whether the source of potential harm has been identified).
- (2) In this section “harm” means any adverse impact on the condition of any hydromorphological quality element affecting the controlled waters that would be likely to prevent the achievement of the environmental objectives applicable to the controlled waters (whether by itself or in combination with other factors), other than an adverse impact caused by the entry into or presence in those waters of any poisonous, noxious or polluting matter or waste matter.

^{F413}(3)

- (4) The [F409 appropriate agency] shall be entitled to carry out works and operations for any of the following purposes (so far as it is reasonably practicable to achieve them)—
 - (a) removing the source of potential harm;
 - (b) preventing any harm or further harm being caused to the controlled waters;
 - (c) in a case where the controlled waters are being or have been harmed—
 - (i) remedying or mitigating the effects of the harm;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (ii) restoring the waters, including any flora and fauna dependent on the aquatic environment of the waters, to their state immediately before any harm was caused.
- (5) The [^{F409}appropriate agency] shall be entitled to carry out investigations for the purpose of establishing any of the following—
 - (a) the source of any harm or potential harm to the controlled waters;
 - (b) the nature and effects of any harm caused or likely to be caused to those waters; and
 - (c) the identity of any responsible persons.
- (6) Without prejudice to the power of the [^{F409}appropriate agency] to carry out those investigations, the powers conferred by subsection (4) shall only be exercisable in a case where—
 - (a) the [^{F409}appropriate agency] considers it necessary to carry out forthwith any works or operations falling within that subsection; or
 - (b) it appears to the [^{F409}appropriate agency] , after reasonable enquiry, that no responsible person can be found on whom to serve a works notice.
- (7) In this section “responsible person” means a person who has caused or knowingly permitted—
 - (a) any harm to be caused to the controlled waters; or
 - (b) a source of potential harm to exist that is likely, in the opinion of the [^{F409}appropriate agency], to cause harm to the controlled waters.

161ZB. Works and operations for improving controlled waters

- (1) This section applies where it appears to the [^{F409}appropriate agency] that—
 - (a) the condition of any hydromorphological quality element affecting any controlled waters is unsatisfactory; and
 - (b) it is possible to improve the hydromorphological quality element by carrying out works or operations.
- (2) For the purposes of this section the condition of a hydromorphological quality element affecting the controlled waters is unsatisfactory if (whether by itself or in combination with other factors) if it is likely to prevent the waters from achieving the applicable environmental objectives.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

^{F414}(3)

- (4) The [^{F409}appropriate agency] shall be entitled to carry out works and operations for the purpose of improving the condition of the hydromorphological quality element in question with a view to achieving (or contributing to the achievement of) the applicable environmental objectives.
- (5) The [^{F409}appropriate agency] shall be entitled to carry out investigations for the purpose of establishing why the condition of the hydromorphological quality element in question is unsatisfactory.
- (6) Without prejudice to the power of the [^{F409}appropriate agency] to carry out those investigations, the powers conferred by subsection (4) shall only be exercisable if it appears to the [^{F409}appropriate agency] that it is unable to secure that the necessary works or operations are carried out by exercising its powers under section 161 or 161ZA or by serving a works notice on any responsible person.

161ZC. Sections 161 to 161ZB: supplementary

- (1) Nothing in sections 161 to 161ZB shall entitle the [^{F409}appropriate agency] to impede or prevent the making of any discharge in pursuance of [^{F415}an environmental permit].
- (2) Where the [^{F409}appropriate agency] carries out any works, operations or investigations under any of the powers conferred by section 161 or 161ZA it shall, subject to subsection (3), be entitled to recover the expenses reasonably incurred in doing so from any responsible person (within the meaning of the section conferring the powers in question).
- (3) No expenses are recoverable from a person for any works, operations or investigations in respect of water from an abandoned mine or an abandoned part of a mine which that person permitted to enter any controlled waters or to reach a place from which it was likely, in the opinion of the [^{F409}appropriate agency], to enter any controlled waters.
- (4) Subsection (3) does not apply to the owner or former operator of any mine or part of a mine if the mine or part in question became abandoned after 31st December 1999.

^{F416}(5)

- (6) Nothing in sections 161, 161ZA and 161ZB—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. 161A. Notices requiring persons to carry out works and operations

- (1) Where it appears to the [^{F409}appropriate agency] that—
- (a) any poisonous, noxious or polluting matter or any waste matter is or has been present in, or is likely to enter, any controlled waters (so that section 161 applies), or
 - (b) any controlled waters are being or have been harmed, or are likely to be harmed, by any event, process or other source of potential harm (so that section 161ZA applies),
- the [^{F409}appropriate agency] shall be entitled to serve a works notice on any responsible person.
- (2) In this section “responsible person” has the same meaning as in section 161 or 161ZA) (as the case may be).

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (3) For the purposes of this section a works notice is a notice requiring the person on whom it is served to carry out such works or operations as may be specified in the notice.
- (4) The works or operations that may be so specified are works or operations which may be carried out under section 161(2) or (3) or section 161ZA(4) (as the case may be).
- (5) Where the [^{F409}appropriate agency] has carried out any such investigations as are mentioned in sections 161(4) or 161ZA(5) and serves a works notice on a responsible person in connection with the matters to which the investigations relate it shall (unless the notice is quashed or withdrawn) be entitled to recover from that person the costs or expenses reasonably incurred in carrying out those investigations.
- (6) The appropriate national authority may, if it thinks fit in relation to any person, give directions to the [^{F409}appropriate agency] as to whether or how it should exercise its powers under this section or section 161AA.
- (7) In this section and sections 161AA and 161AB “controlled waters” has the same meaning as in Part 3 of this Act.

Textual Amendments

F409 Words in ss. 159-161B substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 283** (with Sch. 7)

Modifications etc. (not altering text)

C154 Ss. 161-161D modified by S.I. 2010/675, Sch. 23 Pt. 8 para. 3 Table 9 (as substituted (1.10.2011) by [The Environmental Permitting \(England and Wales\) \(Amendment\) Regulations 2011 \(S.I. 2011/2043\)](#), reg. 1(b), **Sch. 1**)

161AA. Works notices: form etc

- (1) A works notice—
 - (a) must specify the periods within which the person on whom it is served is required to do each of the things specified in the notice; and
 - (b) is without prejudice to the powers of the [^{F409}appropriate agency] to carry out any works or operations under section 161(5)(a) or 161ZA(6)(a).
- (2) Before serving a works notice on any person, the [^{F409}appropriate agency] shall reasonably endeavour to consult that person concerning the works or operations which are to be specified in the notice.
- (3) The appropriate national authority may by regulations make provision for or in connection with—
 - (a) the form or content of works notices;
 - (b) requirements for consultation, before the service of a works notice, with persons other than the person on whom that notice is to be served;
 - (c) steps to be taken for the purposes of any consultation required under subsection (2) or regulations made by virtue of paragraph (b); or
 - (d) any other steps of a procedural nature which are to be taken in connection with or in consequence of the service of a works notice.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (4) A works notice shall not be regarded as invalid or as invalidly served by reason only of a failure to comply with the requirements of subsection (2) or of regulations made by virtue of paragraph (b) of subsection (3).
- (5) In this section and section 161A, “appropriate national authority” means—
 - (a) in relation to England, the Secretary of State; and
 - (b) in relation to Wales, the Welsh Ministers.
- (6) The power to make regulations under this section shall be exercisable by statutory instrument subject—
 - (a) in the case of regulations made by the Secretary of State, to annulment in pursuance of a resolution of either House of Parliament; and
 - (b) in the case of regulations made by the Welsh Ministers, to annulment in pursuance of a resolution of the National Assembly for Wales.
- (7) In this section,—
 - (a) paragraph (1) of section 219 does not apply; and
 - (b) in paragraph (2) of that section, references to “the Ministers” or the “the Secretary of State” shall be taken to be references to the appropriate national authority.

^{F421}161B Grant of, and compensation for, rights of entry etc.

- (1) A works notice may require a person to carry out works or operations in relation to any land or waters notwithstanding that he is not entitled to carry out those works or operations.
 - (2) Any person whose consent is required before any works or operations required by a works notice may be carried out shall grant, or join in granting, such rights in relation to any land or waters as will enable the person on whom the works notice is served to comply with any requirements imposed by the works notice.
 - (3) Before serving a works notice, the [^{F409}appropriate agency] shall reasonably endeavour to consult every person who appears to it—
 - (a) to be the owner or occupier of any relevant land, and
 - (b) to be a person who might be required by subsection (2) above to grant, or join in granting, any rights,concerning the rights which that person may be so required to grant.
 - (4) A works notice shall not be regarded as invalid, or as invalidly served, by reason only of any failure to comply with the requirements of subsection (3) above.
 - (5) A person who grants, or joins in granting, any rights pursuant to subsection (2) above shall be entitled, on making an application within such period as may be prescribed and in such manner as may be prescribed to such person as may be prescribed, to be paid by the person on whom the works notice in question is served compensation of such amount as may be determined in such manner as may be prescribed.
- [^{F422}(6) Without prejudice to the generality of the regulations that may be made by virtue of subsection (5), regulations by virtue of that subsection may—
- (a) provide for the basis on which any amount to be paid by way of compensation under this section is to be assessed;
 - (b) without prejudice to the generality of paragraph (a) above, provide for compensation under this section to be payable in respect of—
 - (i) any effect of any rights being granted, or
 - (ii) any consequence of the exercise of any rights which have been granted;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (c) provide for the times at which any entitlement to compensation under this section is to arise or at which any such compensation is to become payable;
- (d) provide for the persons or bodies by whom, and the manner in which, any dispute—
 - (i) as to whether any, and (if so) how much and when, compensation under this section is payable, or
 - (ii) as to the person to or by whom it shall be paid,
 is to be determined;
- (e) provide for when or how applications may be made for compensation under this section;
- (f) without prejudice to the generality of paragraph (d) above, provide for when or how applications may be made for the determination of any such disputes as are mentioned in that paragraph;
- (g) without prejudice to the generality of paragraphs (e) and (f) above, prescribe the form in which any such applications as are mentioned in those paragraphs are to be made;
- (h) make provision similar to any provision made by paragraph 8 of Schedule 19;
- (i) make different provision for different cases, including different provision in relation to different persons or circumstances;
- (j) include such incidental, supplemental, consequential or transitional provision as the Secretary of State considers appropriate.]

(7) In this section—

“prescribed” means prescribed in regulations made by the Secretary of State;

“relevant land” means—

- (a) any land or waters in relation to which the works notice in question requires, or may require, works or operations to be carried out; or
- (b) any land adjoining or adjacent to that land or those waters;

“works notice” means a works notice under section 161A above.

^{F423}**161A Appeals against works notices.**

- (1) A person on whom a works notice is served may, within the period of twenty-one days beginning with the day on which the notice is served, appeal against the notice to the Secretary of State.
- (2) On any appeal under this section the Secretary of State—
 - (a) shall quash the notice, if he is satisfied that there is a material defect in the notice; but
 - (b) subject to that, may confirm the notice, with or without modification, or quash it.
- (3) The Secretary of State may by regulations make provision with respect to—
 - (a) the grounds on which appeals under this section may be made; or
 - (b) the procedure on any such appeal.
- (4) Regulations under subsection (3) above may (among other things)—
 - (a) include provisions comparable to those in section 290 of the ^{M58}Public Health Act 1936 (appeals against notices requiring the execution of works);
 - (b) prescribe the cases in which a works notice is, or is not, to be suspended until the appeal is decided, or until some other stage in the proceedings;
 - (c) prescribe the cases in which the decision on an appeal may in some respects be less favourable to the appellant than the works notice against which he is appealing;
 - (d) prescribe the cases in which the appellant may claim that a works notice should have been served on some other person and prescribe the procedure to be followed in those cases;
 - (e) make provision as respects—
 - (i) the particulars to be included in the notice of appeal;
 - (ii) the persons on whom notice of appeal is to be served and the particulars, if any, which are to accompany the notice; or
 - (iii) the abandonment of an appeal.
- (5) In this section “works notice” means a works notice under section 161A above.
- (6) This section is subject to section 114 of the 1995 Act (delegation or reference of appeals).

^{F424}161D Consequences of not complying with a works notice.

- (1) If a person on whom the [^{F425}appropriate agency] serves a works notice fails to comply with any of the requirements of the notice, he shall be guilty of an offence.
- (2) A person who commits an offence under subsection (1) above shall be liable—
 - (a) on summary conviction, to imprisonment for a term not exceeding three months or to [^{F426}a fine] or to both;
 - (b) on conviction on indictment to imprisonment for a term not exceeding two years or to a fine or to both.
- (3) If a person on whom a works notice has been served fails to comply with any of the requirements of the notice, the [^{F425}appropriate agency] may do what that person was required to do and may recover from him any costs or expenses reasonably incurred by the [^{F425}appropriate agency] in doing it.
- (4) If the [^{F425}appropriate agency] is of the opinion that proceedings for an offence under subsection (1) above would afford an ineffectual remedy against a person who has failed to comply with the requirements of a works notice, the [^{F425}appropriate agency] may take proceedings in the High Court for the purpose of securing compliance with the notice.
- (5) In this section “works notice” means a works notice under section 161A above.

162 Other powers to deal with foul water and pollution.

- (1) Without prejudice to the powers conferred by [F427 sections 161 to 161D] above and subsections (2) and (3) below, the [F425 appropriate agency] shall have power, on any land—
 - (a) which belongs to the [F425 appropriate agency]; or
 - (b) over or in which the [F425 appropriate agency] has acquired the necessary easements or rights,
to construct and maintain drains, sewers, watercourses, catchpits and other works for the purpose of intercepting, treating or disposing of any foul water arising or flowing on that land or of otherwise preventing any such pollution as is mentioned in section 159(6)(b) above.
- (2) Subject to the following provisions of this Part, the [F425 appropriate agency] shall, for the purpose of carrying out its functions, have power—
 - (a) to carry out in a street all such works as are requisite for securing that the water in any relevant waterworks is not polluted or otherwise contaminated; and
 - (b) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) above, including for those purposes the following kinds of works, that is to say—
 - (i) breaking up or opening a street;
 - (ii) tunnelling or boring under a street;
 - (iii) breaking up or opening a sewer, drain or tunnel;
 - (iv) moving or removing earth and other materials;and the provisions of section 159 above shall, so far as applicable, have effect in relation to the powers conferred by this subsection as they have effect in relation to the powers conferred by subsection (1) of that section.
- (3) Subject to the following provisions of this Part, the [F425 appropriate agency] shall, for the purpose of carrying out its functions, have power—
 - (a) to carry out on any land which is not in, under or over a street all such works as are requisite for securing that the water in any relevant waterworks is not polluted or otherwise contaminated; and
 - (b) to carry out any works requisite for, or incidental to, the purposes of any works falling within paragraph (a) above;
and the provisions of section 160 above shall, so far as applicable, have effect in relation to the powers conferred by this subsection as they have effect in relation to the powers conferred by subsection (1) of that section.
- (4) Without prejudice to the provisions of sections 178 to 184 below, nothing in subsection (1) above shall authorise the [F425 appropriate agency], without the consent of the navigation authority in question, to intercept or take any water which a navigation authority are authorised to take or use for the purposes of their undertaking.
- (5) Any dispute as to whether any consent for the purposes of subsection (4) above is being unreasonably withheld shall be referred to the arbitration of a single arbitrator to be appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (6) In this section—

Powers to discharge water

163 Discharges for works purposes.

- (1) Subject to the following provisions of this section and to section 164 below, where the [^{F425}appropriate agency]—
 - (a) is carrying out, or is about to carry out, the construction, alteration, repair, cleaning, or examination of any reservoir, well, borehole or other work belonging to or used by the [^{F425}appropriate agency] for the purposes of, or in connection with, the carrying out of any of its functions; or
 - (b) is exercising or about to exercise any power conferred by section 159, 160 or 162(2) or (3) above,
 the [^{F425}appropriate agency] may cause the water in any relevant pipe or in any such reservoir, well, borehole or other work to be discharged into any available watercourse.
- (2) Nothing in this section shall authorise any discharge which—
 - (a) damages or injuriously affects the works or property of any railway company or navigation authority; or
 - (b) floods or damages any highway.
- (3) If the [^{F425}appropriate agency] fails to take all necessary steps to secure that any water discharged by it under this section is as free as may be reasonably practicable from—
 - (a) mud and silt;
 - (b) solid, polluting, offensive or injurious substances; and
 - (c) any substances prejudicial to fish or spawn, or to spawning beds or food of fish,
 it shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.

- (4) In this section—

“railway company” means the British Railways Board, [^{F428}Transport for London or any subsidiary (within the meaning of the Greater London

164 Consents for certain discharges under section 163.

- (1) Except in an emergency, no discharge through any pipe the diameter of which exceeds two hundred and twenty-nine millimetres shall be made under section 163 above except with such consent as may be prescribed.
- (2) Where the [^{F425}appropriate agency] makes an application to any person for a consent for the purposes of this section—
 - (a) that application shall be accompanied or supplemented by all such information as that person may reasonably require; and
 - (b) the [^{F425}appropriate agency] shall serve a copy of the application, and of any consent given on that application, on every person who—
 - (i) is registered with the [^{F425}appropriate agency] in respect of any premises which are within three miles of the place where the discharge to which the application relates is proposed to be made and are not upstream from that place; and
 - (ii) has not agreed in writing that he need not be served with such a copy;but, subject to subsection (4) below and without prejudice to the effect (if any) of any other contravention of the requirements of this section in relation to such an application, a failure to provide information in pursuance of the obligation to supplement such an application shall not invalidate the application.
- (3) Subject to subsection (4) below, an application for a consent for the purposes of this section shall be determined—
 - (a) in the case of an application with respect to a particular discharge, before the end of the period of seven days beginning with the day after the application is made; and
 - (b) in any other case, before the end of the period of three months beginning with that day;

and, subject to that subsection, where an application for any consent is required to be determined within the period specified in paragraph (a) above and is not so determined, the consent applied for shall be deemed to have been given unconditionally.

- (4) Where—
 - (a) the [^{F425}appropriate agency], having made an application to any person for a consent for the purposes of this section, has failed to comply with its obligation under subsection (2)(a) above to supplement that application with information required by that person; and

- (b) that requirement was made by that person at such a time before the end of the period within which he is required to determine the application as gave the [F425 appropriate agency] a reasonable opportunity to provide the required information within that period,
 that person may delay his determination of the application until a reasonable time after the required information is provided.
- (5) A consent for the purposes of this section may relate to a particular discharge or to discharges of a particular description and may be made subject to such reasonable conditions as may be specified by the person giving it; but a consent for those purposes shall not be unreasonably withheld.
- (6) Any dispute as to whether a consent for the purposes of this section should be given or withheld, or as to whether the conditions to which any such consent is made subject are reasonable, shall be referred to the arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (7) Where any discharge under section 163 above is made in an emergency without the consent which, if there were no emergency, would be required by virtue of this section, the [F425 appropriate agency] shall, as soon as practicable after making the discharge, serve a notice which—
- (a) states that the discharge has been made; and
 - (b) gives such particulars of the discharge and of the emergency as the persons served with the notice might reasonably require,
- on every person on whom the [F425 appropriate agency] would have been required to serve the application for that consent or any copy of that application.
- (8) If the [F425 appropriate agency] contravenes, without reasonable excuse, any of the requirements of this section or any condition of a consent given for the purposes of this section, it shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (9) Nothing in this section shall require any consent to be obtained, or any notice to be served, in respect of any discharge if the requirements of section 34 of the M60 Water Act 1945 (temporary discharges into watercourses) in relation to that discharge had been satisfied before 1st September 1989.

Flood defence and drainage works

165 [F⁴²⁹General powers to carry out works]

- [F⁴³⁰(1) The [F⁴³¹appropriate agency] may—
- (a) carry out flood risk management work within subsection (1D)(a) to (f) if Conditions 1 and 2 are satisfied;
 - (b) carry out flood risk management work within subsection (1D)(g) or (h) if Condition 1 is satisfied.
- (1A) Condition 1 is that the [F⁴³²appropriate agency] considers the work desirable having regard to the national flood and coastal erosion risk management strategies under sections 7 and 8 of the Flood and Water Management Act 2010.
- (1B) Condition 2 is that the purpose of the work is to manage a flood risk (within the meaning of that Act) from—
- (a) the sea, or
 - (b) a main river.
- (1C) In subsection (1B)(b) the reference to a main river includes a reference to a lake, pond or other area of water which flows into a main river.
- (1D) In this section “flood risk management work” means anything done—
- (a) to maintain existing works (including buildings or structures) including cleansing, repairing or otherwise maintaining the efficiency of an existing watercourse or drainage work;
 - (b) to operate existing works (such as sluiceways or pumps);
 - (c) to improve existing works (including buildings or structures) including anything done to deepen, widen, straighten or otherwise improve an existing watercourse, to remove or alter mill dams, weirs or other obstructions to watercourses, or to raise, widen or otherwise improve a drainage work;
 - (d) to construct or repair new works (including buildings, structures, watercourses, drainage works and machinery);
 - (e) for the purpose of maintaining or restoring natural processes;
 - (f) to monitor, investigate or survey a location or a natural process;
 - (g) to reduce or increase the level of water in a place;
 - (h) to alter or remove works.]
- (2) The [F⁴³³appropriate agency] shall also have power^{F⁴³⁴}... to maintain, improve or construct drainage works for the purpose of defence against sea water or tidal water; and that power shall be exercisable both above and below the low-water mark.
- (3) The [F⁴³⁵appropriate agency] may construct all such works and do all such things in the sea or in any estuary as may, in its opinion, be necessary to secure an adequate outfall for a main river.
- [F⁴³⁶(4) The Agency [F⁴³⁷or the NRBW] may by agreement with any person carry out, improve or maintain, at that person’s expense, any drainage works which that person is entitled to carry out, improve or maintain; but for the purposes of this subsection the expense to be borne by that person shall not include such part (if any) of the amount of any grant made under section 47 of the Environment Act 1995 (grants to the new Agencies) [F⁴³⁸or article 12 of the Natural Resources Body for Wales (Establishment) Order 2012

166 Power to carry out works for purpose of providing flood warning system.

- (1) Without prejudice to its other powers by virtue of section 37 of the 1995 Act (incidental general powers of the Agency), [F443 or (as the case may be) article 9 of the Natural Resources Body for Wales (Establishment) Order 2012 (general incidental function of the Body) (S.I.2012/1903),] Part IV of this Act and this Part, the [F444 appropriate agency] shall have power—
- (a) to provide and operate flood warning systems;
 - (b) to provide, install and maintain apparatus required for the purposes of such systems;
 - (c) to carry out any other engineering or building operations so required.
- (2) Subsection (1) above shall not be construed as authorising, on the part of the [F445 appropriate agency], any act or omission which, apart from that subsection, would be actionable at the suit of any person on any grounds other than a limitation imposed by law on the capacity of the [F445 appropriate agency] by virtue of its constitution.
- (3) The [F446 Agency] may exercise the powers conferred by subsection (1)(b) or (c) above in an area in Scotland as if—
- (a) its functions in relation to [F447 the flood risk management regions adjacent to Scotland] were functions in relation to that area in Scotland; and
 - (b) that area in Scotland were included in [F448 those flood risk management regions];

but the powers conferred by this subsection are subject (except in the case of a power to maintain apparatus) to prior consultation with the local authority (within the meaning of section 1 of the M61 Flood Prevention (Scotland) Act 1961) for the area in Scotland in question.

[F449 (4) In this section—

[F450 “flood risk management region” means the region of a Regional Flood and Coastal Committee, within the meaning of section 22 of the Flood and Water Management Act 2010;]

“flood warning system” means any system whereby, for the purpose of providing warning of any danger of flooding, information with respect to—

- (a) rainfall, as measured at a particular place within a particular period; or
- (b) the level or flow of any inland water, or part of an inland water, at a particular time; or
- (c) other matters appearing to the [F451 appropriate agency] to be relevant for that purpose,

is obtained and transmitted, whether automatically or otherwise, with or without provision for carrying out calculations based on such information and for transmitting the results of those calculations;

“inland water” means any of the following in any part of Great Britain, that is to say—

- (a) any river, stream or other watercourse, whether natural or artificial and whether tidal or not;
- (b) any lake or pond, whether natural or artificial, and any reservoir or dock; and
- (c) any channel, creek, bay, estuary or arm of the sea;

“rainfall” includes any fall of snow, hail or sleet.]

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

[^{F449}(4) In this section—

“flood warning system” means any system whereby, for the purpose of providing warning of any danger of flooding, information with respect to—

Compulsory works orders

168 Compulsory works orders.

- (1) Where the [^{F457}appropriate agency] is proposing, for the purposes of, or in connection with, the carrying out of any of its functions—
 - (a) to carry out any engineering or building operations; or
 - (b) to discharge water into any inland waters or underground strata,
 the [^{F457}appropriate agency] may apply to either of the Ministers for an order under this section (“a compulsory works order”).
- (2) Subject to the following provisions of this section, the Ministers shall each have power, on an application under subsection (1) above, by order made by statutory instrument—
 - (a) to confer such compulsory powers; and
 - (b) to grant such authority,
 as he considers necessary or expedient for the purpose of enabling any engineering or building operations or discharges of water to be carried out or made for the purposes of, or in connection with, the carrying out of the functions with respect to which the application was made.
- (3) Schedule 19 to this Act shall have effect with respect to applications for compulsory works orders and with respect to such orders.
- (4) Subject to the provisions of Schedule 19 to this Act, a compulsory works order may—
 - (a) without prejudice to section 154 above, confer power to acquire compulsorily any land, including—
 - (i) power to acquire interests in and rights over land by the creation of new rights and interests; and
 - (ii) power, by the compulsory acquisition by the [^{F457}appropriate agency] of any rights over land which is to be or has been acquired by the [^{F457}appropriate agency], to extinguish any such rights;
 - (b) apply for the purposes of the order, either with or without modifications, any of the relevant provisions of this Part which do not apply for those purposes apart from by virtue of this paragraph;
 - (c) make any authority granted by the order subject to such conditions as may be specified in the order;
 - (d) amend or repeal any local statutory provision;
 - (e) contain such supplemental, consequential and transitional provision as the Minister making the order considers appropriate;
 and section 156(1) above shall apply in relation to the powers conferred by virtue of this section as it applies in relation to the power conferred by section 154 above.
- (5) Without prejudice to any duty imposed by virtue of section 184 below, where—
 - (a) either of the Ministers makes a compulsory works order authorising the [^{F457}appropriate agency] to carry out works for or in connection with the construction or operation of a reservoir or conferring compulsory powers for that purpose on the [^{F457}appropriate agency]; and
 - (b) it appears to him that the works to be carried out may permanently affect the area in which they are situated and are not primarily intended to benefit the inhabitants of that area,

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. he may include in the order provision with respect to facilities for recreation or other leisure-time occupation for the benefit of those inhabitants.

- (6) Nothing in any compulsory works order shall exempt the [^{F457}appropriate agency] from any restriction imposed by Chapter II of Part II of this Act.
- (7) It is hereby declared that a compulsory works order may grant authority for discharges of water by the [^{F457}appropriate agency] where the [^{F457}appropriate agency] has no power to take water, or to require discharges to be made, from the inland waters or other source from which the discharges authorised by the order are intended to be made; but nothing in so much of any such order as grants authority for any discharges of water shall have the effect of conferring any such power.
- (8) In this section the reference to the relevant provisions of this Part is a reference to the provisions of this Part except sections 155 to 158 and 165 to 167 above.
- [^{F458}(9) In this section, in relation to the NRBW, references to functions have effect as references to relevant transferred functions.]

CHAPTER II

POWERS OF ENTRY

169 Powers of entry for enforcement purposes.

- (1) Any person designated in writing for the purpose by either of the Ministers [^{F459}, by the Agency, or by the NRBW,] may—
- (a) enter any premises or vessel for the purpose of ascertaining whether any provision of an enactment to which this section applies, of any subordinate legislation or other instrument made by virtue of any such enactment or of any byelaws made by the Agency [^{F460} or of any relevant byelaws made by the NRBW] is being or has been contravened; and
 - (b) carry out such inspections, measurements and tests on any premises or vessel entered by that person or of any articles found on any such premises or vessel, and take away such samples of water or effluent or of any land or articles, as that Minister [^{F461}, the Agency, or the NRBW]—
 - (i) considers appropriate for the purpose mentioned in paragraph (a) above; and
 - (ii) has authorised that person to carry out or take away.
- [^{F462}(2) The powers conferred by subsection (1) above in relation to any premises shall include power, in order to obtain information for the purpose mentioned in subsection (1)(a) above—
- (a) to carry out experimental borings or other works on those premises; and

- (2) The purposes mentioned in subsection (1) above are the carrying out of any survey or tests for the purpose of determining—
- ^{F475}(a)
- (b) whether it would be appropriate for the Agency [^{F476}or the NRBW] to apply for an order under section 168 above and what compulsory powers it would be appropriate to apply for under that section.
- (3) The power by virtue of subsection (1) above of a person designated under this section to enter any premises for the purpose of carrying out any survey or tests shall include power—
- (a) to carry out experimental borings or other works for the purpose of ascertaining the nature of the sub-soil, the presence of underground water in the sub-soil or the quantity or quality of any such water;
- (b) to install and keep monitoring or other apparatus on the premises for the purpose of obtaining the information on which any such determination as is mentioned in subsection (2) above may be made; and
- (c) to take away and analyse such samples of water or of any land or articles as the Agency [^{F477}or the NRBW] considers necessary for any of the purposes so mentioned and has authorised that person to take away and analyse.
- (4) [^{F478}The powers conferred by this section or section 172 of the Housing and Planning Act 2016 shall not be exercised on behalf of the Agency or the NRBW in any case for purposes connected with the determination of—]
- (a) whether, where or how a reservoir should be constructed; or
- (b) whether, where or how a borehole should be sunk for the purpose of abstracting water from or discharging water into any underground strata,
- unless the Secretary of State has, in accordance with subsection (5) below, given his written authorisation in relation to that case for the exercise of those powers for those purposes.
- (5) The Secretary of State shall not give his authorisation for the purposes of subsection (4) above unless—
- (a) he is satisfied that notice of the proposal to apply for the authorisation has been given to the owner and to the occupier of the premises in question; and
- (b) he has considered any representation or objections with respect to the proposed exercise of the powers under this section which—
- (i) have been duly made to him by the owner or occupier of those premises, within the period of fourteen days beginning with the day after the giving of the notice; and
- (ii) have not been withdrawn.
- [^{F479}(6) In relation to the NRBW, the reference to functions in subsection (2)(a) has effect as a reference to relevant transferred functions.]

CHAPTER III

PROVISIONS SUPPLEMENTAL TO LAND AND WORK POWERS

Vesting of pipes in the [^{F492}appropriate agency]

Textual Amendments

- F492** Words in s. 175 cross-heading substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 294** (with Sch. 7)

175 Vesting of pipes in the [^{F493}appropriate agency].

- (1) Subject to any provision to the contrary contained in an agreement between the [^{F493}appropriate agency] and the person in whom an interest in the pipe is or is to be vested, every pipe which—
- (a) is a relevant pipe for the purposes of section 159 or 160 above; and
 - (b) has been laid, in exercise of any power conferred by Chapter I of this Part or otherwise, by the [^{F493}appropriate agency],
- shall vest in the [^{F493}appropriate agency].
- (2) Subsection (1) above is without prejudice to the vesting of anything in the [^{F493}appropriate agency] by virtue of the exercise by the [^{F493}appropriate agency] of any power to acquire property by agreement or compulsorily.

Textual Amendments

Offence of interference with works etc.

176 Offence of interference with works etc.

- (1) Subject to subsection (2) below, if any person without the consent of the [^{F494}appropriate agency]—
- (a) intentionally or recklessly interferes with any resource main or other pipe vested in the [^{F494}appropriate agency] or with any structure, installation or apparatus belonging to the [^{F494}appropriate agency]; or
 - (b) by any act or omission negligently interferes with any such main or other pipe or with any such structure, installation or apparatus so as to damage it or so as to have an effect on its use or operation,
- that person shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (2) A person shall not be guilty of an offence under subsection (1) above—
- (a) by reason of anything done in an emergency to prevent loss or damage to persons or property; or
 - (b) by reason of his opening or closing the stopcock fitted to a service pipe by means of which water is supplied to any premises by a water undertaker if—
 - (i) he has obtained the consent of every consumer whose supply is affected by the opening or closing of that stopcock or, as the case may be, of every other consumer whose supply is so affected; and
 - (ii) in the case of opening a stopcock, the stopcock was closed otherwise than by the undertaker.
- (3) Any person who without the consent of the [^{F494}appropriate agency]—
- (a) attaches any pipe or apparatus to any resource main or other pipe vested in the [^{F494}appropriate agency]; or
 - (b) subject to subsection (4) below, uses any pipe or apparatus which has been attached or altered in contravention of this section,
- shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (4) In proceedings against any person for an offence by virtue of paragraph (b) of subsection (3) above it shall be a defence for that person to show that he did not know, and had no grounds for suspecting, that the pipe or apparatus in question had been attached or altered as mentioned in that subsection.
- (5) An offence under subsection (1) or (3) above shall constitute a breach of a duty owed to the [^{F494}appropriate agency]; and any such breach of duty which causes the [^{F494}appropriate agency] to sustain loss or damage shall be actionable at the suit of the [^{F494}appropriate agency].
- (6) The amount recoverable by virtue of subsection (5) above from a person who has committed an offence under subsection (3) above shall include such amount as may be reasonable in respect of any water wasted, misused or improperly consumed in consequence of the commission of the offence.
- (7) In this section “service pipe” and “stopcock” have the same meanings as in the ^{M63}Water Industry Act 1991, and “consumer” has the same meaning as in Part III of that Act.

- (b) to construct or alter any works on or in any such inland waters, the [^{F494}appropriate agency] shall consult the internal drainage board for that district before doing so.
- (3) A consent for the purposes of subsection (1) above may be given subject to reasonable conditions but shall not be unreasonably withheld.
- (4) Any dispute—
- (a) as to whether anything done or proposed to be done interferes or will interfere as mentioned in subsection (1) above;
 - (b) as to whether any consent for the purposes of this section is being unreasonably withheld; or
 - (c) as to whether any condition subject to which any such consent has been given was reasonable,
- shall be referred to the arbitration of a single arbitrator to be appointed by agreement between the parties or, in default of agreement, by the President of the Institution of Civil Engineers.
- (5) The provisions of this section shall be without prejudice to the provisions of Schedule 22 to this Act.

F499 Words in s. 184 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 295** (with Sch. 7)

F500 Words in s. 184(2)(b) substituted (1.4.1996) by 1994 c. 19, s. 22(5), **Sch. 11**, para. 3(5) (with ss. 54(4) (7), 55(5), **Sch. 17** paras. 22(1), 23(2)); S.I. 1996/396, art. 3, **Sch. 1**

Savings in respect of existing drainage obligations

185 Savings in respect of existing drainage obligations.

- (1) Nothing in the flood defence provisions of this Act shall operate to release any person from an obligation to which section 21 of the ^{M70}Land Drainage Act 1991 applies.
- (2) The functions of the [^{F501}appropriate agency] as respects the doing of any work under the flood defence provisions of this Act are not to be treated as in any way limited by the fact that some other person is under an obligation, by reason of tenure, custom, prescription or otherwise, to do that work.

Interpretation of Part VII

186 Interpretation of Part VII.

- (1) In this Part—
 - “discharge pipe” means a pipe from which discharges are or are to be made under section 163 above;
 - [^{F502}“relevant transferred functions” means any functions which—
 - (a) were exercisable by the Agency before 1 April 2013, and
 - (b) are functions of the NRBW by virtue of the Natural Resources Body for Wales (Functions) Order 2013,but this is subject to subsection (1A).]
 - “resource main” means any pipe, not being a trunk main within the meaning of the ^{M71}Water Industry Act 1991, which is or is to be used for the purpose of—
 - (a) conveying water from one source of supply to another, from a source of supply to a regulating reservoir or from a regulating reservoir to a source of supply; or
 - (b) giving or taking a supply of water in bulk.

[^{F503}(1A) For the purposes of the definition of “relevant transferred functions”—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) a function of the Agency was exercisable before 1 April 2013 whether or not the enactment conferring it had come into force before that date, but
 - (b) a function is only a relevant transferred function when the enactment conferring the Agency function transferred to or conferred on the NRBW has come into force.]
- (2) In subsection (1) above—
 “source of supply” shall be construed without reference to the definition of that expression in section 221 below; and
 “supply of water in bulk” has the same meaning as in section 3 above.
- (3) The powers conferred by Chapter I of this Part shall be without prejudice to the powers conferred on the Agency [^{F504}or on the NRBW] by any other enactment or by any agreement.

^{F528}(b)

(c) complying with a notice under section 202 below,

then, if the person furnishing it applies to the [^{F508}appropriate agency] to have the information excluded from any register kept or maintained by the [^{F508}appropriate agency] under any provision of this Act, on the ground that it is commercially confidential (as regards himself or another person), the [^{F508}appropriate agency] shall determine whether the information is or is not commercially confidential.

(3) A determination under subsection (2) above must be made within the period of fourteen days beginning with the date of the application and if the [^{F508}appropriate agency] fails to make a determination within that period it shall be treated as having determined that the information is commercially confidential.

(4) Where it appears to the [^{F508}appropriate agency] that any information (other than information furnished in circumstances within subsection (2) above) which has been obtained by the [^{F508}appropriate agency] under or by virtue of any provision of any enactment might be commercially confidential, the [^{F508}appropriate agency] shall—

(a) give to the person to whom or whose business it relates notice that that information is required to be included in a register kept or maintained by the [^{F508}appropriate agency] under any provision of this Act, unless excluded under this section; and

(b) give him a reasonable opportunity—

(i) of objecting to the inclusion of the information on the ground that it is commercially confidential; and

(ii) of making representations to the [^{F508}appropriate agency] for the purpose of justifying any such objection;

and, if any representations are made, the [^{F508}appropriate agency] shall, having taken the representations into account, determine whether the information is or is not commercially confidential.

(5) Where, under subsection (2) or (4) above, the [^{F508}appropriate agency] determines that information is not commercially confidential—

(a) the information shall not be entered on the register until the end of the period of twenty-one days beginning with the date on which the determination is notified to the person concerned; and

(b) that person may appeal to the Secretary of State against the decision;

and, where an appeal is brought in respect of any information, the information shall not be entered on the register until the end of the period of seven days following the day on which the appeal is finally determined or withdrawn.

^{F529}(6) Section 114 of the 1995 Act (delegation or reference to appeals etc) applies to any appeal brought under subsection (5).

(6A) If either party to the appeal so requests, or the Secretary of State or Welsh Ministers so decide, an appeal shall be or continue in the form of a hearing (which must be held in private).

(6B) The Secretary of State may by regulations make provision as to appeals under subsection (5) to the Secretary of State, and the Welsh Ministers may by regulations make provision as to appeals under that subsection to them; and the regulations may, in particular, may make provision as to—

(a) the period within which and the manner in which appeals are to be brought; and

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (b) the manner in which appeals are to be considered.]
- (7) The Secretary of State may give to the [^{F508}appropriate agency] directions as to specified information, or descriptions of information, which the public interest requires to be included in registers kept or maintained by the [^{F508}appropriate agency] under any provision of this Act notwithstanding that the information may be commercially confidential.
- (8) Information excluded from a register shall be treated as ceasing to be commercially confidential for the purposes of this section at the expiry of the period of four years beginning with the date of the determination by virtue of which it was excluded; but the person who furnished it may apply to the [^{F508}appropriate agency] for the information to remain excluded from the register on the ground that it is still commercially confidential and the [^{F508}appropriate agency] shall determine whether or not that is the case.
- (9) Subsections (5) and (6) above shall apply in relation to a determination under subsection (8) above as they apply in relation to a determination under subsection (2) or (4) above.
- (10) The Secretary of State may by regulations substitute (whether in all cases or in such classes or descriptions of case as may be specified in the regulations) for the period for the time being specified in subsection (3) above such other period as he considers appropriate.
- (11) Information is, for the purposes of any determination under this section, commercially confidential, in relation to any individual or person, if its being contained in the register would prejudice to an unreasonable degree the commercial interests of that individual or person.
- ^{F530}(12)]

192 Maps of fresh-water limits.

- (1) The Secretary of State—
 - (a) shall deposit maps with the [^{F508}appropriate agency] showing what appear to him to be the fresh-water limits of every relevant river or watercourse; and
 - (b) may from time to time, if he considers it appropriate to do so by reason of any change of what appears to him to be the fresh-water limit of any river or watercourse, deposit a map showing a revised limit for that river or watercourse.
- (2) It shall be the duty of the [^{F508}appropriate agency] to keep any maps deposited with it under subsection (1) above available, at all reasonable times, for inspection by the public free of charge.
- (3) In this section “relevant river or watercourse” has the same meaning as in section 104 above.

Textual Amendments

F508 Words in ss. 189-197 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 299** (with Sch. 7)

[^{F531}Main river map for England

Textual Amendments

F531 Ss. 193-194E substituted for ss. 193, 194 (1.10.2014) by [Water Act 2014 \(c. 21\)](#), **ss. 59(2), 94**; S.I. 2014/1823, art. 3

193 The main river map for England

- (1) The Agency must keep the main river map for England.
- (2) For the purposes of this Act the main river map for England is a record of areas in England which—
 - (a) shows the extent to which any watercourse or part of a watercourse is to be treated as a main river or as part of a main river for the purposes of this Act, and
 - (b) indicates which (if any) of those watercourses are watercourses designated in a scheme made under section 137.
- (3) The map is conclusive as to the extent to which a watercourse in England is to be treated as a main river or as part of a main river for the purposes of this Act.
- (4) The map must specify the date on which it takes effect.
- (5) The Agency must keep the map in electronic form.
- (6) In this section and sections 193A to 193E “watercourse” has the same meaning as in Part 4 of this Act.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

193A Inspection and copies

- (1) The Agency must provide reasonable facilities for inspecting the main river map for England in electronic form.
- (2) The Agency must on request provide any person with—
 - (a) a hard copy of all or part of the map, or
 - (b) data comprising all or part of the map in electronic form.
- (3) The Agency may charge a fee for providing a copy or data under subsection (2), but the fee—
 - (a) must, in the case of a person appearing to the Agency to have requested a copy or data for commercial purposes, represent a reasonable usage fee, and
 - (b) in any other case, may not exceed the reasonable costs of providing the copy or data.
- (4) The Agency must on request provide a body mentioned in the first column of the following table with a hard copy of, or data comprising, such part of the main river map for England as is described in the second column of the entry for that body.

A local authority in England	The part that relates to the local authority's area
An internal drainage board for an internal drainage district that is wholly or partly in England	The part that relates to its district, so far as that district is in England
A water company that exercises functions in relation to an area in England	The part that relates to that area
A highway authority that exercises functions in relation to highways in England	The part that relates to the area in England in relation to which it exercises functions
A navigation authority that exercises functions in relation to an area in England	The part that relates to that area

- (5) The Documentary Evidence Act 1868 has effect as if—
 - (a) the Agency were mentioned in the first column of the Schedule to that Act;
 - (b) any member of the staff of the Agency authorised to act on behalf of the Agency were specified in the second column of the Schedule to that Act in connection with the Agency;
 - (c) the regulation referred to in that Act included the main river map for England kept by the Agency;
 - (d) references to a copy included references to a print-out of information kept in electronic form.

193B Replacing the main river map for England

- (1) The Agency may at any time replace the existing main river map for England for the purpose of including—
 - (a) a change which, pursuant to section 193(2)(b), is required by the making, amendment or revocation of a scheme under section 137,
 - (b) a change to give effect to a determination under section 193C, or

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) a change directed by the Secretary of State under section 193D(5) (following an appeal against a determination).
- (2) A replacement map may not include other changes.
- (3) A replacement map must specify the date on which it takes effect.

193C Determinations as to main rivers

- (1) Subject to the following provisions of this section, the Agency may determine that—
 - (a) such watercourse or part of a watercourse in England as is specified in the determination is to be treated for the purposes of this Act as a main river or part of a main river;
 - (b) such watercourse or part of a watercourse in England as is specified in the determination (not being a watercourse designated in a scheme made under section 137) is no longer to be treated for the purposes of this Act as a main river or part of a main river.
- (2) Before making a determination under subsection (1) as regards a watercourse, the Agency must—
 - (a) publish (in such manner as it considers appropriate) the determination it proposes to make, and
 - (b) consider representations made within the time and in the manner specified by the Agency when publishing the determination.
- (3) The Agency must consult the NRBW before making a determination under subsection (1)—
 - (a) which affects a watercourse part of which is in England and part of which is in Wales, and
 - (b) in which it seems to the Agency that the NRBW has an interest.
- (4) Having taken such steps as are required by subsections (2) and (3), the Agency may—
 - (a) decide not to make a determination, or
 - (b) decide to make a determination in accordance with what was proposed under subsection (2)(a) or otherwise.
- (5) The Agency must publish (in such manner as it considers appropriate)—
 - (a) that decision;
 - (b) the terms of any determination made;
 - (c) if a determination is made, the date on which a replacement map will give effect to the determination.
- (6) The date specified under subsection (5)(c) may not be before the end of a period of six weeks beginning with the day on which the matters specified in subsection (5) are published.
- (7) The Agency must also inform those persons affected by the proposal who made representations in accordance with subsection (2)(b) containing an objection to the proposal as to the matters referred to in subsection (5).

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

193D Appeals

- (1) A person aggrieved by a determination under section 193C may appeal to the Secretary of State.
- (2) An appeal must be made before the end of a period of six weeks beginning with the day on which the matters referred to in section 193C(5) are published.
- (3) Where an appeal is made against a determination, a replacement map under section 193B may not include a change to give effect to the determination except as specified in this section.
- (4) The Secretary of State may appoint a person to make a report to assist the Secretary of State in determining the appeal.
- (5) If the Secretary of State allows the appeal in whole or in part, the Secretary of State may by direction to the Agency—
 - (a) specify a change to be included in a replacement map under section 193B, and
 - (b) specify the date on which that change is to take effect.
- (6) If the Secretary of State dismisses the appeal, the Agency may include a change to give effect to its determination in a replacement map, the replacement map to have effect on such date as the Secretary of State may direct.
- (7) The Secretary of State may direct the Agency to publish the Secretary of State's decision in such manner as the direction may specify.

193E Guidance

- (1) The Secretary of State may from time to time issue guidance to the Agency about the exercise of its functions under sections 193 to 193D.
- (2) The guidance may in particular include guidance as to—
 - (a) determining whether or not a watercourse or part of a watercourse is suitable to become or to remain a main river or a part of a main river;
 - (b) what kind of publication is appropriate under section 193C(2) and (5).
- (3) The Agency must have regard to the guidance in carrying out its functions under sections 193 to 193D.

Main river map for Wales

194 The main river map for Wales

- (1) The NRBW must keep the main river map for Wales.
- (2) For the purposes of this Act the main river map for Wales is a record of areas in Wales which—
 - (a) shows the extent to which any watercourse or part of a watercourse is to be treated as a main river or as part of a main river for the purposes of this Act, and
 - (b) indicates which (if any) of those watercourses are watercourses designated in a scheme made under section 137.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (3) The map is conclusive as to the extent to which a watercourse in Wales is to be treated as a main river or as part of a main river for the purposes of this Act.
- (4) The map must specify the date on which it takes effect.
- (5) The NRBW must keep the map in electronic form.
- (6) In this section and sections 194A to 194E “watercourse” has the same meaning as in Part 4 of this Act.

194A Inspection and copies

- (1) The NRBW must provide reasonable facilities for inspecting the main river map for Wales in electronic form.
- (2) The NRBW must on request provide any person with—
 - (a) a hard copy of all or part of the map, or
 - (b) data comprising all or part of the map in electronic form.
- (3) The NRBW may charge a fee for providing a copy or data under subsection (2), but the fee—
 - (a) must, in the case of a person appearing to the NRBW to have requested a copy or data for commercial purposes, represent a reasonable usage fee, and
 - (b) in any other case, may not exceed the reasonable costs of providing the copy or data.
- (4) The NRBW must on request provide a body mentioned in the first column of the following table with a hard copy of, or data comprising, such part of the main river map for Wales as is described in the second column of the entry for that body.

A local authority in Wales	The part that relates to the local authority's area
An internal drainage board for an internal drainage district that is wholly or partly in Wales	The part that relates to its district, so far as that district is in Wales
A water company that exercises functions in relation to an area in Wales	The part that relates to that area
A highway authority that exercises functions in relation to highways in Wales	The part that relates to the area in Wales in relation to which it exercises functions
A navigation authority that exercises functions in relation to an area in Wales	The part that relates to that area

- (5) The Documentary Evidence Act 1868 has effect as if—
 - (a) the NRBW were mentioned in the first column of the Schedule to that Act;
 - (b) any member of the staff of the NRBW authorised to act on behalf of the NRBW were specified in the second column of the Schedule to that Act in connection with the NRBW;
 - (c) the regulation referred to in that Act included the main river map for Wales kept by the NRBW;

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (d) references to a copy included references to a print-out of information kept in electronic form.

194B Replacing the main river map for Wales

- (1) The NRBW may at any time replace the existing main river map for Wales for the purpose of including—
 - (a) a change which, pursuant to section 194(2)(b), is required by the making, amendment or revocation of a scheme under section 137,
 - (b) a change to give effect to a determination under section 194C, or
 - (c) a change directed by the Welsh Ministers under section 194D(5) (following an appeal against a determination).
- (2) A replacement map may not include other changes.
- (3) A replacement map must specify the date on which it takes effect.

194C Determinations as to main rivers

- (1) Subject to the following provisions of this section, the NRBW may determine that—
 - (a) such watercourse or part of a watercourse in Wales as is specified in the determination is to be treated for the purposes of this Act as a main river or part of a main river;
 - (b) such watercourse or part of a watercourse in Wales as is specified in the determination (not being a watercourse designated in a scheme made under section 137) is no longer to be treated for the purposes of this Act as a main river or part of a main river.
- (2) Before making a determination under subsection (1) as regards a watercourse, the NRBW must—
 - (a) publish (in such manner as it considers appropriate) the determination it proposes to make, and
 - (b) consider representations made within the time and in the manner specified by the NRBW when publishing the determination.
- (3) The NRBW must consult the Agency before making a determination under subsection (1)—
 - (a) which affects a watercourse part of which is in Wales and part of which is in England, and
 - (b) in which it seems to the NRBW that the Agency has an interest.
- (4) Having taken such steps as are required by subsections (2) and (3), the NRBW may—
 - (a) decide not to make a determination, or
 - (b) decide to make a determination in accordance with what was proposed under subsection (2)(a) or otherwise.
- (5) The NRBW must publish (in such manner as it considers appropriate)—
 - (a) that decision;
 - (b) the terms of any determination made;
 - (c) if a determination is made, the date on which a replacement map will give effect to the determination.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (6) The date specified under subsection (5)(c) may not be before the end of a period of six weeks beginning with the day on which the matters specified in subsection (5) are published.
- (7) The NRBW must also inform those persons affected by the proposal who made representations in accordance with subsection (2)(b) containing an objection to the proposal as to the matters referred to in subsection (5).

194D Appeals

- (1) A person aggrieved by a determination under section 194C may appeal to the Welsh Ministers.
- (2) An appeal must be made before the end of a period of six weeks beginning with the day on which the matters referred to in section 194C(5) are published.
- (3) Where an appeal is made against a determination, a replacement map under section 194B may not include a change to give effect to the determination except as specified in this section.
- (4) The Welsh Ministers may appoint a person to make a report to assist them in determining the appeal.
- (5) If the Welsh Ministers allow the appeal in whole or in part, they may by direction to the NRBW—
 - (a) specify a change to be included in a replacement map under section 194B, and
 - (b) specify the date on which that change is to take effect.
- (6) If the Welsh Ministers dismiss the appeal, the NRBW may include a change to give effect to its determination in a replacement map, the replacement map to have effect on such date as the Welsh Ministers may direct.
- (7) The Welsh Ministers may direct the NRBW to publish their decision in such manner as the direction may specify.

194E Guidance

- (1) The Welsh Ministers may from time to time issue guidance to the NRBW about the exercise of its functions under sections 194 to 194D.
- (2) The guidance may in particular include guidance as to—
 - (a) determining whether or not a watercourse or part of a watercourse is suitable to become or to remain a main river or a part of a main river;
 - (b) what kind of publication is appropriate under section 194C(2) and (5).
- (3) The NRBW must have regard to the guidance in carrying out its functions under sections 194 to 194D.]

198 Information about underground water.

- (1) Any person who, for the purpose of searching for or abstracting water, proposes to sink a well or borehole intended to reach a depth of more than fifty feet below the surface shall, before he begins to do so, give notice to [^{F534}United Kingdom Research and Innovation (“UKRI”)] of his intention to do so.
- (2) Any person sinking any such well or borehole as is mentioned in subsection (1) above shall-
 - (a) keep a journal of the progress of the work and, on completion or abandonment of the work, send a complete copy of the journal to [^{F535}UKRI];
 - (b) send to [^{F536}UKRI] particulars of any test made before completion or abandonment of the work of the flow of water;
 - (c) allow any person authorised by [^{F537}UKRI] for the purpose, on production of some duly authenticated document showing his authority, at all reasonable times to exercise any of the rights specified in subsection (5) below.
- (3) The journal required to be kept under this section shall include measurements of—
 - (a) the strata passed through; and
 - (b) the levels at which water is struck and subsequently rests.
- (4) The particulars required to be sent to [^{F538}UKRI] under subsection (2)(b) above shall specify—
 - (a) the rate of flow throughout the test;
 - (b) the duration of the test;
 - (c) where practicable, the water levels during the test and afterwards until the water returns to its natural level; and
 - (d) where the well or borehole is sunk in connection with an existing pumping station, the rate of pumping at the existing works during the test.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (5) The rights mentioned in subsection (2)(c) above are the rights, subject to section 205 below—
- (a) to have free access to the well or borehole;
 - (b) to inspect the well or borehole and the material extracted from it;
 - (c) to take specimens of any such material and of water abstracted from the well or borehole; and
 - (d) to inspect and take copies of or extracts from the journal required to be kept under this section.
- (6) Where the person sinking a well or borehole on any land is not the occupier of the land, the obligation imposed on that person by virtue of subsection (2)(c) above shall be the obligation of the occupier as well.
- (7) Where—
- (a) any person contracts to sink any well or borehole on land belonging to or occupied by another; and
 - (b) the carrying out of the work is under the control of the contractor,
- the contractor and no other person shall be deemed for the purposes of this section to be the person sinking the well or borehole.
- (8) Any person who fails to comply with any obligation imposed on him by this section shall be guilty of an offence and liable, on summary conviction—
- (a) to a fine not exceeding level 3 on the standard scale; and
 - (b) where the offence continues after conviction, to a further fine of £20 for every day during which it so continues.

[^{F542}199A Appeals against conservation notices under section 199

- (1) The person on whom a notice under section 199(2) above (“a conservation notice”) is served may, by notice to the Secretary of State, appeal to him against the conservation notice on either or both of the following grounds, that is to say—
- (a) that the measures required by the conservation notice are not reasonable;
 - (b) that those measures would interfere with the winning of minerals.
- (2) Any notice of appeal against a conservation notice shall be served within such period (not being less than twenty-eight days from the date of service of the conservation notice) and in such manner as may be prescribed.
- (3) Before determining an appeal against a conservation notice, the Secretary of State may, if he thinks fit—
- (a) cause a local inquiry to be held; or
 - (b) afford to the appellant and the [^{F539}appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose;
- and the Secretary of State shall act as mentioned in paragraph (a) or (b) above if a request is made by the appellant or the [^{F539}appropriate agency] to be heard with respect to an appeal.
- (4) On an appeal against a conservation notice the Secretary of State may confirm, quash or vary the notice as he may consider appropriate.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (5) The decision of the Secretary of State on any appeal against a conservation notice shall be final.
- (6) The Secretary of State may by regulations make provision as to the manner in which appeals against conservation notices are to be dealt with, including provision requiring the giving of notices of, and information relating to, the making of such appeals or decisions on any such appeals.
- (7) Section 69 above applies to a decision of the Secretary of State on any appeal to him under this section as it applies to a decision of his on an appeal to him under Chapter 2 of Part 2, taking the reference in subsection (2)(b) of that section to that Chapter as a reference to this section.
- (8) This section is subject to section 114 of the 1995 Act (delegation or reference of appeals).]

Restriction on disclosure of information

204 Restriction on disclosure of information.

- (1) Subject to the following provisions of this section, no information with respect to any particular business which—
- (a) has been obtained by virtue of any of the provisions of this Act; and
 - (b) relates to the affairs of any individual or to any particular business,
- shall, during the lifetime of that individual or so long as that business continues to be carried on, be disclosed without the consent of that individual or the person for the time being carrying on that business.
- (2) Subsection (1) above does not apply to any disclosure of information which is made—

- Act, any of the other consolidation Acts [^{F585}, the Water Act 1989 [^{F586}, the Water Act 2003 or the Water Act 2014]]; or
- (k) in pursuance of [^{F587}[^{F588}an assimilated] obligation].
- (3) Nothing in subsection (1) above shall be construed—
- (a) as limiting the matters which may be included in, or made public as part of, a report of—
- (i) the [^{F589}Agency];
- [^{F590}(ia) the Scottish Environment Protection Agency;]
- [^{F591}(ib) the NRBW;]
- [^{F592}(ii) the Water Services Regulation Authority;]
- [^{F593}(iii) the Consumer Council for Water (or any regional committee of that Council established under section 27A of the Water Industry Act 1991); or]
- (iv) the [^{F594}Competition and Markets Authority],
- under any provision of this Act [^{F595}, Part I or IIA of the Environmental Protection Act 1990, that Act of 1991 [^{F596}, the 1995 Act [^{F597}, regulations under section 2 of the Pollution Prevention and Control Act 1999, or the Water Act 2003]]];
- (b) as limiting the matters which may be published under section 201 of that Act [^{F598}of 1991]; or
- (c) as applying to any information which has been made public as part of such a report or has been so published or to any information exclusively of a statistical nature.
- (4) Subject to subsection (5) below, nothing in subsection (1) above shall preclude the disclosure of information—
- (a) if the disclosure is of information relating to a matter connected with the carrying out of the functions of a water undertaker or sewerage undertaker [^{F599}, or with the carrying on by [^{F600}a person] holding a licence under Chapter 1A of Part 2 of the Water Industry Act 1991 of activities under [^{F601}the person's licence],] and is made by one Minister of the Crown or government department to another; or
- (b) if the disclosure is for the purpose of enabling or assisting any public or other authority for the time being designated for the purposes of this section by an order made by the Secretary of State to discharge any functions which are specified in the order.
- (5) The power to make an order under subsection (4) above shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament; and where such an order designates an authority for the purposes of paragraph (b) of that subsection, the order may—
- (a) impose conditions subject to which the disclosure of information is permitted by virtue of that paragraph; and
- (b) otherwise restrict the circumstances in which disclosure is so permitted.
- (6) Any person who discloses any information in contravention of the preceding provisions of this section shall be guilty of an offence and liable—
- (a) on summary conviction, to a fine not exceeding the statutory maximum;
- (b) on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.

205 Confidentiality of information relating to underground water etc.

- (1) The person sinking any such well or borehole as is mentioned in section 198 above or, if it is a different person, the owner or occupier of the land on which any such well or borehole is sunk may by notice to [F604United Kingdom Research and Innovation (“UKRI”)] require [F605UKRI] to treat as confidential—
 - (a) any copy of or extract from the journal required to be kept under that section; or
 - (b) any specimen taken in exercise of the rights specified in subsection (5) of that section.
- (2) Subject to subsections (3) and (4) below, [F606UKRI] shall not, without the consent of the person giving the notice, allow any matter to which any notice under subsection (1) above relates to be published or shown to any person who is not an officer of [F607UKRI] or of a department of the Secretary of State.
- (3) Subsection (2) above shall not prohibit any matter from being published or shown to any person in so far as it contains or affords information as to water resources and supplies.
- (4) If at any time [F608UKRI] give notice to any person that in their opinion his consent for the purposes of subsection (2) above is being unreasonably withheld—
 - (a) that person may, within three months after the giving of the notice, appeal to the High Court for an order restraining [F609UKRI] from acting as if consent had been given; and
 - (b) [F609UKRI] may proceed as if consent had been given if either no such appeal is brought within that period or the High Court, after hearing the appeal, do not make such an order.
- (5) Any person who fails to comply with any obligation imposed on him by the preceding provisions of this section shall be guilty of an offence and liable, on summary conviction—
 - (a) to a fine not exceeding level 3 on the standard scale; and
 - (b) where the offence continues after conviction, to a further fine of £20 for every day during which it so continues.
- (6) If any person who is admitted to any premises in compliance with section 198(2)(c) above discloses to any person any information obtained by him there with regard to any manufacturing process or trade secret, he shall, unless the disclosure is in performance of his duty, be guilty of an offence and liable—
 - (a) on summary conviction, to imprisonment for a term not exceeding three months or to a fine not exceeding the statutory maximum or to both;
 - (b) on conviction on indictment, to imprisonment for a term not exceeding three months or to a fine or to both.

Making of false statements etc.

206 Making of false statements etc.

[^{F610}(1) If, in furnishing any information or making any application under or for the purposes of any provision of this Act [^{F611}or of section 3, 4 or 10 of the Water Act 2003], any person makes a statement which he knows to be false or misleading in a material particular, or recklessly makes any statement which is false or misleading in a material particular, he shall be guilty of an offence under this section.]

^{F612}(2)

(3) Where—

- (a) the provisions contained in a licence under Chapter II of Part II of this Act in pursuance of paragraph (b) of subsection (2) of section 46 above, or of that paragraph as modified by subsection (6) of that section, require the use of a meter, gauge or other device; and
- (b) such a device is used for the purposes of those provisions,

any person who wilfully alters or interferes with that device so as to prevent it from measuring correctly shall be guilty of an offence under this section.

[^{F613}(3A) If a person intentionally makes a false entry in any record required to be kept by virtue of a licence under Chapter II of Part II of this Act, or a consent under Chapter II of Part III of this Act, he shall be guilty of an offence under this section.]

(4) If, in keeping any record or journal or in furnishing any information which he is required to keep or furnish under section 198 or 205 above, any person knowingly or recklessly makes any statement which is false in a material particular, he shall be guilty of an offence under this section.

[^{F614}(5) A person who is guilty of an offence under this section shall be liable—

- (a) on summary conviction, to a fine not exceeding the statutory maximum;
- (b) on conviction on indictment, to a fine or to imprisonment for a term not exceeding two years, or to both.]

PART IX

MISCELLANEOUS AND SUPPLEMENTAL

Miscellaneous

207 Directions in the interests of national security etc.

- (1) The Secretary of State may, after consultation with the [^{F615}appropriate agency], give to the [^{F615}appropriate agency] such directions of a general character as appear to the Secretary of State to be requisite or expedient in the interests of national security or for the purpose of mitigating the effects of any civil emergency which may occur.
- (2) If it appears to the Secretary of State to be requisite or expedient to do so in the interests of national security or for the purpose of mitigating the effects of any civil emergency which has occurred or may occur, he may, after consultation with the [^{F615}appropriate agency], give to the [^{F615}appropriate agency] a direction requiring it to do, or not to do, a particular thing specified in the direction.
- (3) The duty of the [^{F615}appropriate agency] to comply with a direction under this section is a duty which has effect notwithstanding any other duty imposed on it (whether or not by or under this Act).
- (4) The Secretary of State shall lay before each House of Parliament a copy of every direction given under this section unless he is of the opinion that disclosure of the direction is against the interests of national security.
- (5) A person shall not disclose, or be required by virtue of any enactment or otherwise to disclose, anything done by virtue of this section if the Secretary of State has notified him that the Secretary of State is of the opinion that disclosure of that thing is against the interests of national security.
- (6) Any person who discloses any matter in contravention of subsection (5) above shall be guilty of an offence and liable, on conviction on indictment, to imprisonment for a term not exceeding two years or to a fine or to both.
- (7) Any reference in this section to a civil emergency is a reference to any natural disaster or other emergency which, in the opinion of the Secretary of State, is or may be likely, in relation to any area—
 - (a) so to disrupt water supplies or sewerage services; or
 - (b) to involve such destruction of or damage to life or property in that area,

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

as seriously and adversely to affect all the inhabitants of that area, or a substantial number of them, whether by depriving them of any of the essentials of life or otherwise.

- (8) In this section “sewerage services” has the same meaning as in the ^{M81}Water Industry Act 1991.

Textual Amendments

F615 Words in s. 207 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), [Sch. 2 para. 301](#) (with Sch. 7)

208 [F616 Civil liability of the Agency or NRBW for escapes of water etc]

- (1) Where an escape of water, however caused, from a pipe vested in the Agency [F617 or the NRBW] causes loss or damage, the Agency [F618 or, as the case may be, the NRBW,] shall be liable, except as otherwise provided in this section, for the loss or damage.
- (2) The Agency [F619 or the NRBW] shall not incur any liability under subsection (1) above if the escape was due wholly to the fault of the person who sustained the loss or damage or of any servant, agent or contractor of his.
- (3) The Agency [F620 or the NRBW] shall not incur any liability under subsection (1) above in respect of any loss or damage for which the Agency [F620 or the NRBW] would not be liable apart from that subsection and which is sustained—
 - (a) by any water undertaker or sewerage undertaker or by any statutory undertakers, within the meaning of section 336(1) of the ^{M82}Town and Country Planning Act 1990;
 - (b) by any public gas supplier within the meaning of Part I of the ^{M83}Gas Act 1986 or the holder of a licence under section 6(1) of the ^{M84}Electricity Act 1989;
 - (c) by any highway authority; or
 - (d) by any person on whom a right to compensation is conferred by section 82 of the ^{M85}New Roads and Street Works Act 1991.
- (4) The ^{M86}Law Reform (Contributory Negligence) Act 1945, the ^{M87}Fatal Accidents Act 1976 and the ^{M88}Limitation Act 1980 shall apply in relation to any loss or damage for which the Agency [F621 or the NRBW] is liable under this section, but which is not due to the Agency’s [F622 or the NRBW’s] fault, as if it were due to its fault.
- (5) Nothing in subsection (1) above affects any entitlement which the Agency [F623 or the NRBW] may have to recover contribution under the ^{M89}Civil Liability (Contribution) Act 1978; and for the purposes of that Act, any loss for which the Agency [F623 or the NRBW] is liable under that subsection shall be treated as if it were damage.
- (6) Where the Agency [F624 or the NRBW] is liable under any enactment or agreement passed or made before 1st April 1982 to make any payment in respect of any loss or damage the Agency [F624 or the NRBW] shall not incur liability under subsection (1) above in respect of the same loss or damage.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (7) In this section “fault” has the same meaning as in the ^{M90}Law Reform (Contributory Negligence) Act 1945.
- (8) Until the coming into force of section 82 of the ^{M91}New Roads and Street Works Act 1991, subsection (3) above shall have effect as if for paragraph (d) there were substituted the following paragraphs—
- “(d) by any bridge authority, bridge managers, street authority or street managers within the meaning of the ^{M92}Public Utilities Street Works Act 1950; or
- (e) by any person on whom a right to compensation under section 26 of that Act of 1950 is conferred.”; but nothing in this section shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing section 82 of that Act into force on different days for different purposes (including the purposes of this section).

211 Enforcement of byelaws.

- (1) If any person contravenes any byelaws made by virtue of paragraph 1 of Schedule 25 to this Act, he shall be guilty of an offence and liable, on summary conviction—
 - (a) to a fine not exceeding level 1 on the standard scale; and
 - (b) if the contravention is continued after conviction, to a fine not exceeding £5 for each day on which it is so continued.
- (2) Byelaws made by virtue of paragraph 2 or 3 of that Schedule may contain provision providing for a contravention of the byelaws to constitute a summary offence punishable, on summary conviction, by a fine not exceeding level 5 on the standard scale or such smaller sum as may be specified in the byelaws.
- (3) A person who contravenes any byelaws made by virtue of paragraph 4 or 6 of that Schedule shall be guilty of an offence and liable, on summary conviction,
 - ^{F629}(a) in the case of byelaws made by virtue of paragraph 4, to a fine not exceeding level 4 on the standard scale or such smaller sum as may be specified in the byelaws;
 - (b) in the case of byelaws made by virtue of paragraph 6, to ^{F630}[a fine].]
- (4) If any person acts in contravention of any byelaw made by virtue of paragraph 5 of that Schedule he shall be guilty of an offence and liable, on summary conviction—
 - (a) to a fine not exceeding level 5 on the standard scale; and
 - (b) if the contravention is continued after conviction, to a further fine not exceeding £40 for each day on which it is so continued.
- (5) Without prejudice to any proceedings by virtue of subsection (1) or (4) above, the ^{F627}[appropriate agency] may—
 - (a) take such action as it considers necessary to remedy the effect of any contravention of byelaws made by virtue of paragraph 1 of Schedule 25 to this Act;
 - (b) take such action as may be necessary to remedy the effect of any person's contravention of byelaws made by virtue of paragraph 5 of that Schedule; and
 - (c) recover the expenses reasonably incurred by the ^{F627}[appropriate agency] in taking any action under paragraph (a) or (b) above from the person in default.
- (6) So much of the ^{M93}Salmon and Freshwater Fisheries Act 1975 as makes provision with respect to or by reference to offences under that Act shall have effect as if an offence consisting in a contravention of byelaws made by virtue of paragraph 6 of Schedule 25 to this Act were an offence under that Act.
- (7) Section 70 above shall apply in relation to any restrictions imposed by byelaws made by virtue of paragraph 1 of Schedule 25 to this Act as it applies in relation to restrictions imposed by the provisions of Chapter II of Part II of this Act which are mentioned in that section; and sections 100 and 101 above shall have effect in relation to contraventions of byelaws made by virtue of paragraph 4 of that Schedule as they have effect in relation to contraventions of provisions of Part III of this Act.

212 Compensation in respect of certain fisheries byelaws.

(1) Where—

- (a) the owner or occupier of any fishery by notice to the [^{F627}appropriate agency] claims that the fishery is injuriously affected by a byelaw made for any of the purposes specified in subsection (2) below; and
- (b) that claim is made at any time before the end of twelve months after the confirmation of the byelaw,

[^{F631}the [^{F627}appropriate agency] may pay that person such amount by way of compensation as it considers appropriate.]

(2) The purposes mentioned in subsection (1)(a) above are the following purposes specified in paragraph 6(2) of Schedule 25 to this Act, that is to say—

- (a) prohibiting the use for taking [^{F632}any fish to which paragraph 6 of that Schedule applies] of any instrument [^{F633}... in such waters and at such times as are prescribed by the byelaw;
- (b) specifying the nets and other instruments [^{F634}... which may be used for taking [^{F635} any such fish] and imposing requirements as to the use of such nets and other instruments;
- (c) imposing requirements as to the construction, design, material and dimensions of any such nets or instruments, including in the case of nets the size of mesh.

[^{F636}(3)

(4) Expressions used in this section and in the Salmon and Freshwater Fisheries Act 1975 have the same meanings in this section as in that Act.

Construction of Act

220 Provisions relating to service of documents.

- (1) Any document required or authorised by virtue of this Act to be served on any person may be served—
- (a) by delivering it to him or by leaving it at his proper address or by sending it by post to him at that address; or
 - (b) if the person is a body corporate, by serving it in accordance with paragraph (a) above on the secretary or clerk of that body; or

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (c) if the person is a partnership, by serving it in accordance with paragraph (a) above on a partner or a person having the control or management of the partnership business.
- (2) For the purposes of this section and section 7 of the ^{M95}Interpretation Act 1978 (which relates to the service of documents by post) in its application to this section, the proper address of any person on whom a document is to be served shall be his last known address, except that—
- (a) in the case of service on a body corporate or its secretary or clerk, it shall be the address of the registered or principal office of the body;
- (b) in the case of service on a partnership or a partner or a person having the control or management of a partnership business, it shall be the address of the principal office of the partnership;
- and for the purposes of this subsection the principal office of a company registered outside the United Kingdom, or of a partnership carrying on business outside the United Kingdom, is its principal office within the United Kingdom.
- (3) If a person to be served by virtue of this Act with any document by another has specified to that other an address within the United Kingdom other than his proper address (as determined in pursuance of subsection (2) above) as the one at which he or someone on his behalf will accept documents of the same description as that document, that address shall also be treated as his proper address for the purposes of this section and for the purposes of the said section 7 in its application to this section.
- (4) Where under any provision of this Act any document is required to be served on the owner, on a lessee or on the occupier of any premises then—
- (a) if the name or address of the owner, of the lessee or, as the case may be, of the occupier of the premises cannot after reasonable inquiry be ascertained; or
- (b) in the case of service on the occupier, if the premises appear to be or are unoccupied,
- that document may be served either by leaving it in the hands of a person who is or appears to be resident or employed on the land or by leaving it conspicuously affixed to some building or object on the land.
- (5) This section shall not apply to any document in relation to the service of which provision is made by rules of court.

Modifications etc. (not altering text)

C197 S. 220 applied (21.7.1994) by 1994 c. xiii, s. 29(4)

221 General interpretation.

- (1) In this Act, except in so far as the context otherwise requires—
- [^{F646}“the 1995 Act” means the Environment Act 1995;]
- “abstraction”, in relation to water contained in any source of supply, means the doing of anything whereby any of that water is removed from that source

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

of supply, whether temporarily or permanently, including anything whereby the water is so removed for the purpose of being transferred to another source of supply; and “abstract” shall be construed accordingly;

“accessories”, in relation to a main, sewer or other pipe, includes any manholes, ventilating shafts, inspection chambers, settling tanks, wash-out pipes, pumps, ferrules or stopcocks for the main, sewer or other pipe, or any machinery or other apparatus which is designed or adapted for use in connection with the use or maintenance of the main, sewer or other pipe or of another accessory for it, but does not include any [^{F647}electronic communications apparatus] unless it—

- (a) is or is to be situated inside or in the close vicinity of the main, sewer or other pipe or inside or in the close vicinity of another accessory for it; and
- (b) is intended to be used only in connection with the use or maintenance of the main, sewer or other pipe or of another accessory for it;

and in this definition “stopcock” has the same meaning as in the ^{M96}Water Industry Act 1991;

[^{F648}“the Agency” means the Environment Agency;]

“agriculture” has the same meaning as in the ^{M97}Agriculture Act 1947 and “agricultural” shall be construed accordingly;

“analyse”, in relation to any sample of land, water or effluent, includes subjecting the sample to a test of any description, and cognate expressions shall be construed accordingly;

[^{F649}“the appropriate agency” means—

- (a) for the purposes of the flood risk management work provisions—
 - (i) in relation to flood risks (within the meaning of the Flood and Water Management Act 2010) in Wales, the NRBW;
 - (ii) in any other case, the Agency;
- (b) for any other purpose—
 - (i) in relation to Wales, the NRBW;
 - (ii) in any other case, the Agency;]

^{F650}

“conservancy authority” means any person who has a duty or power under any enactment to conserve, maintain or improve the navigation of a tidal water and is not a navigation authority or harbour authority;

^{F651}

“contravention” includes a failure to comply, and cognate expressions shall be construed accordingly;

“damage”, in relation to individuals, includes death and any personal injury (including any disease or impairment of physical or mental condition);

“discrete waters” means inland waters so far as they comprise—

- (a) a lake, pond or reservoir which does not discharge to any other inland waters; or
- (b) one of a group of two or more lakes, ponds or reservoirs (whether near to or distant from each other) and of watercourses or mains connecting them, where none of the inland waters in the group discharges to any inland waters outside the group;

“disposal”—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) in relation to land or any interest or right in or over land, includes the creation of such an interest or right and a disposal effected by means of the surrender or other termination of any such interest or right; and
- (b) in relation to sewage, includes treatment;

and cognate expressions shall be construed accordingly;

“drain” has, subject to subsection (2) below, the same meaning as in the ^{M98}Water Industry Act 1991;

“drainage” in the expression “drainage works” has the meaning given by section 113 above for the purposes of Part IV of this Act;

“drought order” means an ordinary drought order under subsection (1) of section 73 above or an emergency drought order under subsection (2) of that section;

“effluent” means any liquid, including particles of matter and other substances in suspension in the liquid;

“enactment” includes an enactment contained in this Act or in any Act passed after this Act;

^{F652}

“engineering or building operations”, without prejudice to the generality of that expression, includes—

- (a) the construction, alteration, improvement, maintenance or demolition of any building or structure or of any reservoir, watercourse, dam, weir, well, borehole or other works; and
 - (b) the installation, modification or removal of any machinery or apparatus;
- “financial year” means the twelve months ending with 31st March;

[^{F653}“environmental permit” has the same meaning as in the Environmental Permitting Regulations;

“Environmental Permitting Regulations” means [^{F654}the Environmental Permitting (England and Wales) Regulations 2016 (S.I. 2016/1154)];]

[^{F655}“flood defence functions”, in relation to [^{F656}the appropriate agency], means—

- (a) its functions with respect to flood defence and land drainage by virtue of Part IV of this Act, the ^{M99}Land Drainage Act 1991 and section 6 of the 1995 Act;
- (b) those functions [^{F657}of the appropriate agency which were previously] transferred to the Agency by section 2(1)(a)(iii) of the 1995 Act which were previously transferred to the Authority by virtue of section 136(8) of the ^{M100}Water Act 1989 and paragraph 1(3) of Schedule 15 to that Act (transfer of land drainage functions under local statutory provisions and subordinate legislation); ^{F658} ...
- (c) any other functions of [^{F659}the appropriate agency] under any of the flood defence provisions of this Act;]
- (d) [^{F660}its functions with respect to securing the drainage of land or the management of flood risk contained in regulations made under section 61 of the Water Act 2014; and
- (e) any other function of the appropriate agency under any provision of this Act or the 1995 Act so far as it relates to a function falling within paragraph (d);]

[^{F661}“flood defence provisions”, in relation to this Act, means—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (a) any of the following provisions of this Act, that is to say—
 - (i) Part IV;
 - (ii) sections 133 to 141 (including Schedule 15), 143, ^{F662}... 155, 165 to 167, 180, 193, 194 and paragraph 5 of Schedule 25;
- (b) any of the following provisions of the 1995 Act, that is to say—
 - (i) section 6(4) (general supervision of flood defence); [^{F663}and]
 - (ii) section 53 (inquiries and other hearings); and
 - (iii) ^{F664}...
- (c) any other provision of this Act or the 1995 Act so far as it relates to a provision falling within paragraph (a) or (b) above;]
 - [^{F665}“flood risk management work provisions” means—
 - (a) sections 159(1A), 160(1A), 165 and 166; and
 - (b) any other provision of Part 7 so far as it relates to a provision falling within paragraph (a);]

“harbour” has the same meaning for the purposes of the flood defence provisions of this Act as in [^{F666}section 313 of the Merchant Shipping Act 1995];

“harbour authority” (except in the flood defence provisions of this Act, in which it has the same meaning as in [^{F667}section 313 of the Merchant Shipping Act 1995]) means a person who is a harbour authority [^{F667}as defined in section 151 for the purposes of Chapter II of Part VI of that Act] and is not a navigation authority;

“highway” has the same meaning as in the ^{M101}Highways Act 1980;

“information” includes anything contained in any records, accounts, estimates or returns;

“inland waters” means the whole or any part of—

 - (a) any river, stream or other watercourse (within the meaning of Chapter II of Part II of this Act), whether natural or artificial and whether tidal or not;
 - (b) any lake or pond, whether natural or artificial, or any reservoir or dock, in so far as the lake, pond, reservoir or dock does not fall within paragraph (a) of this definition; and
 - (c) so much of any channel, creek, bay, estuary or arm of the sea as does not fall within paragraph (a) or (b) of this definition;

“joint planning board” has the same meaning as in the ^{M102}Town and Country Planning Act 1990;

“local authority” means the council of any county, [^{F668}county borough,] district or London borough or the Common Council of the City of London;

“local statutory provision” means—

 - (a) a provision of a local Act (including an Act confirming a provisional order);
 - (b) a provision of so much of any public general Act as has effect with respect to a particular area, with respect to particular persons or works or with respect to particular provisions falling within any paragraph of this definition;
 - (c) a provision of an instrument made under any provision falling within paragraph (a) or (b) above; or

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

(d) a provision of any other instrument which is in the nature of a local enactment;

“main river” means a main river within the meaning of Part IV of this Act;

[^{F669}“the main river map for England” has the meaning given by section 193(2);

“the main river map for Wales” has the meaning given by section 194(2);]

“micro-organism” includes any microscopic, biological entity which is capable of replication;

“minimum acceptable flow”, in relation to any inland waters, means (except in sections 21 and 22 above and subject to section 23(3) above) the minimum acceptable flow as for the time being contained in provisions which are in force under section 21(7) above in relation to those waters;

“the Minister” means the Minister of Agriculture, Fisheries and Food;

“the Ministers” means the Secretary of State and the Minister;

“modifications” includes additions, alterations and omissions, and cognate expressions shall be construed accordingly;

“mortgage” includes any charge or lien on any property for securing money or money’s worth, and “mortgagee” shall be construed accordingly;

“navigation authority” means any person who has a duty or power under any enactment to work, maintain, conserve, improve or control any canal or other inland navigation, navigable river, estuary, harbour or dock;

“notice” means notice in writing;

[^{F670}“the NRBW” means the Natural Resources Body for Wales;]

“owner”, in relation to any premises, means the person who—

- (a) is for the time being receiving the rack-rent of the premises, whether on his own account or as agent or trustee for another person; or
- (b) would receive the rack-rent if the premises were let at a rack-rent,

but for the purposes of Schedule 2 to this Act, Chapter II of Part II of this Act and the related water resources provisions does not include a mortgagee not in possession, and cognate expressions shall be construed accordingly;

“prescribed” means prescribed by regulations made by the Secretary of State or, in relation to regulations made by the Minister, by those regulations;

“public authority” means any Minister of the Crown or government department, the Agency, [^{F671}the NRBW,] any local authority or any person certified by the Secretary of State to be a public authority for the purposes of this Act;

“public sewer” means a sewer for the time being vested in a sewerage undertaker in its capacity as such, whether vested in that undertaker by virtue of a scheme under Schedule 2 to the ^{M103}Water Act 1989, section 179 of or Schedule 2 to the ^{M104}Water Industry Act 1991 or otherwise;

“records” includes computer records and any other records kept otherwise than in a document;

[^{F672}“the related water resources provisions”, in relation to Chapter II of Part II of this Act, means—

- (a) the following provisions of this Act, that is to say, the provisions—
 - (i) of sections 21 to 23 (including Schedule 5);
 - (ii) of sections 120, 125 to 130, 158, 189, 199 to 201, 206(3), 209(3), 211(1) and 216; and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (iii) of paragraph 1 of Schedule 25; and
- (b) the following provisions of the 1995 Act, that is to say, the provisions—
 - (i) of sections 41 and 42 (charging schemes) as they have effect by virtue of subsection (1)(a) of section 41 (licences under Chapter II of Part II of this Act); and
 - (ii) of subsections (1) [^{F673}, (1A)] and (2) of section 53 (inquiries and other hearings);]

“sewage effluent” includes any effluent from the sewage disposal or sewerage works of a sewerage undertaker but does not include surface water;

“sewer” has, subject to subsection (2) below, the same meaning as in the Water Industry Act 1991;

“source of supply” means—

 - (a) any inland waters except, without prejudice to subsection (3) below in its application to paragraph (b) of this definition, any which are discrete waters; or
 - (b) any underground strata in which water is or at any time may be contained;

“street” has, subject to subsection (4) below, the same meaning as in Part III of the ^{M105}New Roads and Street Works 1991;

“subordinate legislation” has the same meaning as in the ^{M106}Interpretation Act 1978;

“substance” includes micro-organisms and any natural or artificial substance or other matter, whether it is in solid or liquid form or in the form of a gas or vapour;

“surface water” includes water from roofs;

“trade effluent” includes any effluent which is discharged from premises used for carrying on any trade or industry, other than surface water and domestic sewage, and for the purposes of this definition any premises wholly or mainly used (whether for profit or not) for agricultural purposes or for the purposes of fish farming or for scientific research or experiment shall be deemed to be premises used for carrying on a trade;

“underground strata” means strata subjacent to the surface of any land;

“vessel” includes a hovercraft within the meaning of the ^{M107}Hovercraft Act 1968;

“watercourse” includes (subject to sections 72(2) [^{F674}113(1), 193(6) and 194(6)] above) all rivers, streams, ditches, drains, cuts, culverts, dykes, sluices, sewers and passages through which water flows, except mains and other pipes which—

 - (a) belong to the Agency [^{F675}, the NRBW,] or a water undertaker; or
 - (b) are used by a water undertaker or any other person for the purpose only of providing a supply of water to any premises;

“water pollution provisions”, in relation to this Act, means the following provisions of this Act—

 - (a) the provisions of Part III of this Act;
 - (b) sections 161 [^{F676}to 161D], 190, 202, [^{F677}and 203] above; and
 - (c) paragraph 4 of Schedule 25 to this Act and section 211 above so far as it relates to byelaws made under that paragraph.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

[^{F678}and the following provisions of the 1995 Act, that is to say, the provisions of subsections (1) [^{F679}, (1A)] and (2) of section 53.]

[^{F680}(1A) For the purposes of the definition of “the appropriate agency” in subsection (1), “Wales” has the meaning given by section 158 of the Government of Wales Act 2006.]

- (2) References in this Act to a pipe, including references to a main, a drain or a sewer, shall include references to a tunnel or conduit which serves or is to serve as the pipe in question and to any accessories for the pipe; and, accordingly, references to the laying of a pipe shall include references to the construction of such a tunnel or conduit, to the construction or installation of any such accessories and to the making of a connection between one pipe and another.
- (3) Any reference in this Act to water contained in underground strata is a reference to water so contained otherwise than in a sewer, pipe, reservoir, tank or other underground works constructed in any such strata; but for the purposes of this Act water for the time being contained in—
 - (a) a well, borehole or similar work, including any adit or passage constructed in connection with the well, borehole or work for facilitating the collection of water in the well, borehole or work; or
 - (b) any excavation into underground strata, where the level of water in the excavation depends wholly or mainly on water entering it from those strata, shall be treated as water contained in the underground strata into which the well, borehole or work was sunk or, as the case may be, the excavation was made.
- (4) Until the coming into force of Part III of the ^{M108}New Roads and Street Works Act 1991, the definition of “street” in subsection (1) above shall have effect as if the reference to that Part were a reference to the ^{M109}Public Utilities Street Works Act 1950; but nothing in this section shall be taken—
 - (a) to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing Part III of that Act into force on different days for different purposes (including the purposes of this section); or
 - (b) in the period before the coming into force of that Part, to prevent references in this Act to a street, where the street is a highway which passes over a bridge or through a tunnel, from including that bridge or tunnel.
- (5) For the purposes of any provision of this Act by or under which power is or may be conferred on any person to recover the expenses incurred by that person in doing anything, those expenses shall be assumed to include such sum as may be reasonable in respect of establishment charges or overheads.
- (6) References in this Act to the later or latest of two or more different times or days are, in a case where those times or days coincide, references to the time at which or, as the case may be, the day on which they coincide.
- (7) For the purposes of this Act—
 - (a) references in this Act to more than one Minister of the Crown, in relation to anything falling to be done by those Ministers, are references to those Ministers acting jointly; and
 - (b) any provision of this Act by virtue of which any function of a Minister of the Crown is exercisable concurrently by different Ministers, shall have effect as providing for that function also to be exercisable jointly by any two or more of those Ministers.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (8) Sub-paragraph (1) of paragraph 1 of Schedule 2 to the ^{M110}Water Consolidation (Consequential Provisions) Act 1991 has effect (by virtue of sub-paragraph (2)(b) of that paragraph) so that references in this Act to things done under or for the purposes of provisions of this Act, the ^{M111}Water Industry Act 1991 or the ^{M112}Land Drainage Act 1991 include references to things done, or treated as done, under or for the purposes of the corresponding provisions of the law in force before the commencement of this Act.
- (9) Subject to any provision to the contrary which is contained in Schedule 26 to the ^{M113}Water Act 1989 or in the ^{M114}Water Consolidation (Consequential Provisions) Act 1991, nothing in any local statutory provision passed or made before 1st September 1989 shall be construed as relieving any water undertaker or sewerage undertaker from any liability arising by virtue of this Act in respect of any act or omission occurring on or after that date.

Other supplemental provisions

[^{F681}222 Crown application.

- (1) Subject to the provisions of this section, this Act binds the Crown.
- (2) No contravention by the Crown of any provision made by or under this Act shall make the Crown criminally liable; but the High Court may, on the application of the [^{F682}appropriate body], declare unlawful any act or omission of the Crown which constitutes such a contravention.
- (3) Notwithstanding anything in subsection (2) above, the provisions of this Act shall apply to persons in the public service of the Crown as they apply to other persons.
- (4) If the Secretary of State certifies that it appears to him, as respects any Crown premises and any powers of entry exercisable in relation to them specified in the certificate, that it is requisite or expedient that, in the interests of national security, the powers should not be exercisable in relation to those premises, those powers shall not be exercisable in relation to those premises.
- (5) Subject to subsection (4) above, the powers conferred by sections 154, 156, 160, 162(3) and 168 above shall be exercisable in relation to land in which there is a Crown or Duchy interest only with the consent of the appropriate authority.
- (6) Nothing in this section shall be taken as in any way affecting Her Majesty in her private capacity; and this subsection shall be construed as if section 38(3) of the ^{M115}Crown Proceedings Act 1947 (interpretation of references to Her Majesty in her private capacity) were contained in this Act.
- (7) Nothing in this Act, as read with the other provisions of this section, shall be construed as conferring any power of levying drainage charges in respect of lands below the high-water mark of ordinary spring tides.
- (8) Section 74 of the ^{M116}Land Drainage Act 1991 (Crown application), so far as it relates to land in which there is a Crown or Duchy interest, shall apply in relation to the flood defence provisions of this Act as it applies in relation to that Act; but nothing in this subsection shall affect any power conferred by this Act for the purposes both of the Agency's [^{F683}or the NRBW's] functions under those provisions and of other functions of the Agency [^{F684}or the NRBW].
- (9) In this section—

“the appropriate authority” has the same meaning as it has in Part XIII of the ^{M117}Town and Country Planning Act 1990 by virtue of section 293(2) of that Act;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

[^{F685}“the appropriate body” means—

- (a) in relation to any act or omission of the Crown in England, the Agency;
- (b) in relation to any act or omission of the Crown in Wales, the NRBW;]

“Crown or Duchy interest” means an interest which belongs to Her Majesty in right of the Crown or of the Duchy of Lancaster, or to the Duchy of Cornwall, or belonging to a government department or held in trust for Her Majesty for the purposes of a government department;

“Crown premises” means premises held by or on behalf of the Crown.

- (10) The provisions of subsection (3) of section 293 of the ^{M118}Town and Country Planning Act 1990 (questions relating to Crown application) as to the determination of questions shall apply for the purposes of this section.

[^{F686}(11) This section shall apply in relation to sections 3, 4 and 10 of the Water Act 2003 as it applies in relation to the provisions of this Act.]]

^{F688}**[224 Application to the Isles of Scilly.**

- (1) Subject to the provisions of any order under this section, this Act shall not apply in relation to the Isles of Scilly.
- (2) The Secretary of State may, after consultation with the Council of the Isles of Scilly, by order provide for the application of any provisions of this Act to the Isles of Scilly; and any such order may provide for the application of those provisions to those Isles with such modifications as may be specified in the order.
- (3) An order under this section may—
 - (a) make different provision for different cases, including different provision in relation to different persons, circumstances or localities; and
 - (b) contain such supplemental, consequential and transitional provision as the Secretary of State considers appropriate, including provision saving provision repealed by or under any enactment.
- (4) The power of the Secretary of State to make an order under this section shall be exercisable by statutory instrument subject to annulment in pursuance of a resolution of either House of Parliament.]

Textual Amendments

F688 S. 224 substituted (1.2.1996 in so far as it confers power to make an order or make provision in relation to the exercise of that power and 1.4.2020 in so far as not already in force) by 1995 c. 25, ss. 118(5), 125(2) (with ss. 7(6), 115, 117); S.I. 1996/186, art. 2 (with art. 4); S.I. 2020/216, art. 2

225 Short title, commencement and extent.

- (1) This Act may be cited as the Water Resources Act 1991.
- (2) This Act shall come into force on 1st December 1991.
- (3) Subject to subsections (4) to (6) of section 2 and to section 224 above, to the extension of section 166(3) above to Scotland and to the extension, by virtue of any other enactment, of any provision of this Act to the territorial sea, this Act extends to England and Wales only.
- (4) Nothing in this Act, so far as it extends to Scotland, shall authorise the [^{F689}Agency] to acquire any land in Scotland compulsorily.

ORDERS AND AGREEMENTS FOR TRANSFER OF OF NAVIGATION, HARBOUR AND CONSERVANCY FUNCTIONS

Modifications etc. (not altering text)

C203 Sch. 2: Functions transferred (1.4.1996) to the Agency by 1995 c. 25, s. 2(1)(a)(vii) (with ss. 7(6), 115, 117); S.I. 1996/186, **art. 3**

Powers to transfer functions or property

- 1 (1) The [^{F691}appropriate agency] may at any time apply to the Ministers for an order under this Schedule transferring to the [^{F691}appropriate agency] any of the functions or property of a navigation authority, harbour authority or conservancy authority.
- (2) The power to make an order under this Schedule shall be exercisable by statutory instrument.
- (3) Any transfer of functions or property which could be effected by an order under this Schedule may, with the consent of the Ministers, be effected by agreement between the [^{F691}appropriate agency] and the other body concerned.
- (4) Where, in accordance with this paragraph, the [^{F691}appropriate agency] may apply for an order transferring any functions or property of another body, that body may itself apply for such an order.
- (5) For the purposes of this Schedule the references in sub-paragraph (1) above to a navigation authority, to a harbour authority and to a conservancy authority shall each include a reference to a body which no longer has any members but which, if it had members, would be such an authority

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F691 Words in Sch. 2 paras. 1-3 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 306** (with Sch. 7)

Consultation with affected body

- 2 (1) Before determining whether to make an order on an application under paragraph 1 above, the Ministers shall—
- (a) consult whichever of the following is not the applicant, that is to say, the [F691appropriate agency] and the body from which any functions or property are proposed in the application to be transferred; and
 - (b) consider any representations made with respect to the application by the [F691appropriate agency] or, as the case may be, by any such body.
- (2) Sub-paragraph (1) above shall not require the Ministers to consult, or consider representations from, any body which no longer has any members.

F691 Words in Sch. 2 paras. 1-3 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 306** (with Sch. 7)

Public consultation

- 3 (1) If the Ministers propose to make an order on an application under paragraph 1 above, they shall prepare a draft order, and shall cause notice of their intention to make an order—
- (a) to be published in the London Gazette and in such other manner as they think best adapted for informing persons affected; and
 - (b) to be served on—
 - (i) the [F691appropriate agency];
 - (ii) any body (other than one no longer having any members) from which any functions or property are proposed to be transferred; and
 - (iii) any such navigation authority, harbour authority or conservancy authority not falling within paragraph (ii) above as appears to the Ministers to be affected by the proposals.
- (2) A notice under sub-paragraph (1) above shall specify—
- (a) the place where copies of the draft order, and of any map to which it refers, may be inspected and obtained; and
 - (b) the time (not being less than twenty-eight days) within which, and the manner in which, objections to the draft order may be made.
- (3) Before making any order on an application under paragraph 1 above, the Ministers—
- (a) shall consider any objections which may be duly made to the draft order; and
 - (b) may, if they think fit, cause a local inquiry to be held with respect to any such objections;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. F691 Words in Sch. 2 paras. 1-3 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 306** (with Sch. 7)

Supplemental provisions of order

- 4 (1) An order under this Schedule may contain such incidental, supplementary, consequential and transitional provisions as the Ministers consider necessary or expedient.
- (2) Without prejudice to the generality of sub-paragraph (1) above, the provision that may be included in an order by virtue of that sub-paragraph shall include such provisions as the Ministers consider necessary or expedient with respect to—
- (a) the transfer of assets and liabilities, the payment of compensation and other financial adjustments;
 - (b) the amendment, adaptation or repeal of local enactments; and
 - (c) the application, subject to such modifications as may be specified in the order, of provisions corresponding to those originally made by or under Part IX of the ^{M120}Water Resources Act 1963.

M120 1963 c. 38.

Objection to final order by affected bodies

- 5 (1) After making an order under this Schedule, the Ministers, if an objection—
- (a) has been duly made by the [^{F692}appropriate agency] or any other body on which notice is required to be served under paragraph 3 above; and
 - (b) has not been withdrawn,
- shall serve notice of the making of the order and of the effect of the order on the [^{F692}appropriate agency] or, as the case may be, that body.
- (2) Where a notice is required to be served under sub-paragraph (1) above, the order shall not have effect before the end of a period of twenty-eight days from the date of service of that notice.
- (3) If, within the period of twenty-eight days mentioned in sub-paragraph (2) above, any body (including the [^{F692}appropriate agency]) on which notice has been served under sub-paragraph (1) above gives notice to one of the Ministers objecting to the order, and the objection is not withdrawn, the order shall be subject to special parliamentary procedure.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F692 Words in [Sch. 2 para. 5](#) substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), [Sch. 2 para. 306](#) (with [Sch. 7](#))

Public notice of order

- 6 (1) After making an order under this Schedule, the Ministers shall publish in the London Gazette, and in such other manner as they think best adapted for informing persons affected, a notice—
- (a) stating that the order has been made; and
 - (b) naming a place where a copy of the order may be seen at all reasonable hours.
- (2) In the case of an order to which sub-paragraph (1) of paragraph 5 above applies, a notice under sub-paragraph (1) above—
- (a) shall not be published until the end of the period of twenty-eight days mentioned in sub-paragraph (2) of that paragraph; and
 - (b) shall state whether or not the order is to be subject to special parliamentary procedure.

Challenge of order

- 7 (1) Subject to sub-paragraph (3) below, if any person aggrieved by an order under this Schedule desires to question its validity on the ground—
- (a) that it is not within the powers of this Schedule; or
 - (b) that any requirement of this Schedule has not been complied with in relation to the order,
- he may, within six weeks after the first publication of the notice required by paragraph 6 above, make an application for the purpose to the High Court.
- (2) Where an application under sub-paragraph (1) above is duly made to the High Court, that Court, if satisfied—
- (a) that the order is not within the powers of this Schedule; or
 - (b) that the interests of the applicant have been substantially prejudiced by any requirements of this Schedule not having been complied with,
- may quash the order either generally or in so far as it affects the applicant.
- (3) The preceding provisions of this paragraph—
- (a) shall not apply to any order which is confirmed by Act of Parliament under section 6 of the ^{M121}Statutory Orders (Special Procedure) Act 1945; and
 - (b) shall have effect in relation to any other order which is subject to special parliamentary procedure by virtue of the provisions of this Schedule as if, for the reference to the first publication of the notice required by paragraph 6 above, there were substituted a reference to the date on which the order becomes operative under that Act of 1945.
- (4) Except as provided by this paragraph, the validity of an order under this Schedule shall not, either before or after the order has been made, be questioned in any legal proceedings whatsoever.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

Effect of order or agreement

- 8 (1) Where, by virtue of an order or agreement under this Schedule, property is transferred to the [^{F693}appropriate agency] on the terms that—
- (a) the body from which it is transferred shall continue liable for the repayment of, and payment of interest on, any sum borrowed in connection with the property; and
 - (b) the [^{F693}appropriate agency] shall make payments to that body in respect of amounts paid by that body by reason of its continuing so liable,
- any payment so made by the shall be deemed to be a capital payment or an annual payment, according as the amount in respect of which it is made was paid in or towards repayment of the loan or by way of interest thereon.
- (2) Property vested in the [^{F693}appropriate agency] by virtue of an order or agreement under this Schedule shall not be treated as so vested by way of sale for the purpose of section 12 of the ^{M122}Finance Act 1895 (which provides for charging stamp duty in the case of certain statutory transfers by way of sale).
- [^{F694}(3) A land transaction by which property is vested in the [^{F693}appropriate agency] by virtue of an order or agreement under this Schedule is exempt from charge for the purposes of stamp duty land tax.
- (4) Relief under sub-paragraph (3) must be claimed in a land transaction return or an amendment of such a return.
- (5) In this paragraph—
- “land transaction” has the meaning given by section 43(1) of the Finance Act 2003;
- “land transaction return” has the meaning given by section 76(1) of that Act.]

Ministers' expenses

- 9 (1) The costs incurred by the Ministers in connection with the making and notification of an order under this Schedule shall be paid by the applicant for the order; and, if there is more than one, the Ministers may apportion the costs between the applicants.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (2) The Ministers may require any applicant for an order under this Schedule to give security for the payment of any costs payable by the applicant under this paragraph.
- (3) The reference in sub-paragraph (1) above to any costs incurred in connection with the making and notification of an order under this Schedule includes a reference to any costs incurred in relation to any such order under the Statutory Orders (Special Procedure) Act 1945.

Compensation for officers and staff

- 10 (1) The Ministers shall by regulations make provision requiring the payment by the [^{F695}appropriate agency], subject to such exceptions or conditions as may be prescribed, of compensation to or in respect of persons who—
 - (a) are, or but for any military or other designated service of theirs would be, the holders of any such situation, place or employment as may be prescribed; and
 - (b) suffer loss of employment, or loss or diminution of emoluments, in consequence of any order or agreement under this Schedule.
- (2) Regulations under this paragraph may be so framed as to have effect as from a date earlier than that on which they are made; but so much of any regulations as provides that any provision is to have effect as from a date earlier than that on which they are made shall not place any person other than the [^{F695}appropriate agency] in a worse position than he would have been in if the regulations had been so framed as to have effect only as from the date on which they are made.
- (3) Regulations made under this paragraph may include provision as to the manner in which, and the person to whom, any claim for compensation under this paragraph is to be made, and for the determination of all questions arising under the regulations.
- (4) In this paragraph “military or other designated service” means any such service in any of Her Majesty’s forces or other employment (whether or not in the service of Her Majesty) as may be prescribed by regulations under this paragraph.

Textual Amendments

F695 Words in *Sch. 2 para. 10* substituted (1.4.2013) by *The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755)*, art. 1(2), **Sch. 2 para. 306** (with *Sch. 7*)

Power to amend local enactments

- 11 (1) If it appears to the Ministers by whom an order is made under this Schedule that any local enactment passed or made before the relevant date—
 - (a) is inconsistent with any of the provisions of that order; or
 - (b) requires to be amended or adapted, having regard to any of the provisions of that order,
 those Ministers may by order repeal, amend or adapt that enactment to such extent, or in such manner, as they may consider appropriate.
- (2) Any order under this paragraph may include such transitional, incidental, supplementary and consequential provisions as the Ministers may consider necessary or expedient.

Interpretation

- 12 (1) In this Schedule “local enactment” means—
- (a) a local or private Act;
 - (b) a public general Act relating to London;
 - (c) an order or scheme made under an Act, confirmed by Parliament or brought into operation in accordance with special parliamentary procedure; or
 - (d) an enactment in a public general Act amending a local or private Act or any such order or scheme.
- (2) References in this Schedule to the Ministers, in a case in which all the functions in question are exercisable in Wales and all the property in question is situated there, shall have effect as references to the Secretary of State.

SCHEDULE 5

Section 21.

PROCEDURE RELATING TO STATEMENTS ON MINIMUM ACCEPTABLE FLOW

Application of Schedule

- 1 (1) This Schedule applies in the case of any draft statement prepared under section 21 or 22 of this Act.
- (2) References in this Schedule, in relation to a statement for amending the provision for determining the minimum acceptable flow of any inland waters, to the inland waters to which the statement relates are references to the inland waters to which the proposed amendment relates.

Notice of proposed statement

- 2 (1) Before submitting the draft statement to the Secretary of State, the [F698 appropriate agency] shall publish a notice—
 - (a) stating the general effect of the draft statement;
 - (b) specifying the place where a copy of the draft statement, and of any relevant map or plan, may be inspected by any person free of charge at all reasonable times during the period of twenty-eight days beginning with the date of first publication of the notice; and
 - (c) stating that any person may within that period, by notice in writing to the Secretary of State, object to the approval of the statement.
- (2) A notice under this paragraph shall be published either—
 - (a) at least once in each of two successive weeks, in one or more newspapers circulating in the locality in which the inland waters to which the draft statement relates are situated; or
 - (b) in any other manner which, in any particular case, may be certified by the Secretary of State to be expedient in that case.
- (3) Not later than the date on which the notice is first published in pursuance of subparagraph (2) above, the [F698 appropriate agency] shall serve a copy of the notice on—
 - (a) every local authority or joint planning board whose area comprises any inland waters to which the draft statement relates;
 - (b) any water undertaker having the right to abstract water from any such inland waters;
 - (c) any other water undertaker which was consulted in relation to the draft statement in pursuance of section 21(3)(b) of this Act;
 - (d) the drainage board for any internal drainage district which comprises any such inland waters or from which water is discharged into any such inland waters;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (e) any navigation authority, harbour authority or conservancy authority having functions in relation to any such waters or any related inland waters;
 - (f) if any such waters or any related inland waters are tidal waters in relation to which there is no such navigation authority, harbour authority or conservancy authority, [^{F699}the Secretary of State for Transport];
 - (g) any person authorised by a licence under Part I of the ^{M130}Electricity Act 1989 to generate electricity [^{F700}who has a right to abstract water from any such waters or related inland waters].; and
 - (h) every person who—
 - (i) has given notice to the [^{F698}appropriate agency] requesting it to notify him of action taken in connection with the determination of a minimum acceptable flow for any inland waters to which the draft statement relates; and
 - (ii) if the [^{F698}appropriate agency] have required him to pay a reasonable charge for being so notified, has paid that charge.
- (4) The [^{F698}appropriate agency] shall also publish a notice in the London Gazette—
- (a) stating that the draft statement has been submitted to the Secretary of State;
 - (b) naming the areas in respect of which a copy of a notice is required to be served under sub-paragraph (3)(a) above;
 - (c) specifying a place where a copy of the draft statement and of any relevant map or plan may be inspected; and
 - (d) where the notice required by sub-paragraph (1) above is published in a newspaper, giving the name of the newspaper and the date of an issue containing the notice.
- (5) In this paragraph “related inland waters” has the same meaning as for the purposes of subsection (3) of section 21 of this Act is given by subsection (8) of that section.

Approval of draft statement

- 4 (1) The Secretary of State may approve the statement either in the form of the draft or in that form as altered in such manner as he thinks fit.
- (2) Where the Secretary of State—
- (a) proposes to make any alteration of a statement before approving it; and
 - (b) considers that any persons are likely to be adversely affected by it,
- the [^{F698}appropriate agency] shall give and publish such additional notices, in such manner, as the Secretary of State may require.
- (3) Sub-paragraph (4) below shall apply if, before the end of—
- (a) the period of twenty-eight days referred to in sub-paragraph (1) of paragraph 2 above;
 - (b) the period of twenty-five days from the publication in the London Gazette of the notice under sub-paragraph (4) of that paragraph; or
 - (c) any period specified in notices under sub-paragraph (2) above,
- notice of an objection is received by the Secretary of State from any person on whom a notice is required by this Schedule to be served, or from any other person appearing to the Secretary of State to be affected by the draft statement, either as prepared in draft or as proposed to be altered.
- (4) Where this sub-paragraph applies and the objection in question is not withdrawn, the Secretary of State, before approving the statement, shall either—
- (a) cause a local inquiry to be held; or
 - (b) afford to the objector and to the [^{F698}appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose.
- (5) Where under this paragraph an objection is received by the Secretary of State from—
- (a) the drainage board for any internal drainage district which comprises any inland waters to which the draft statement relates or, as the case may be, from which water is discharged into any such inland waters; or
 - (b) such an association or person claiming to represent a substantial fishery interest affected by the statement as is certified by the Minister to appear to him to represent such an interest,
- sub-paragraphs (1) to (4) above and paragraph 5 below shall have effect as if references to the Secretary of State (except the first reference in sub-paragraph (3) above) were references to the Ministers.

 - (iii) into whose district water is discharged from any relevant source of supply;
 - (d) any navigation authority, harbour authority or conservancy authority having functions in relation to—
 - (i) any relevant source of supply; or
 - (ii) any related inland waters;
 - (e) if a relevant source of supply or related inland waters are tidal waters in relation to which there is no such navigation authority, harbour authority or conservancy authority, the Secretary of State for Transport;
 - (f) any person authorised by a licence under Part 1 of the Electricity Act 1989 to generate electricity who is (in that capacity) the holder of a licence to abstract water under Chapter 2 of Part 2 of this Act from—
 - (i) any relevant source of supply; or
 - (ii) any related inland waters;
 - (g) [^{F706}Natural England], if the area to which the order relates is or includes England, or part of it; [^{F707}and]
 - ^{F708}(h)
 - (i) the Broads Authority (established under the Norfolk and Suffolk Broads Act 1988), if the area to which the order relates is or includes the Broads (as defined in that Act), or part of it.
- (5) Where an application for an order is made, the [^{F709}appropriate agency] shall also publish a notice in the London Gazette—
- (a) stating that the draft order has been submitted to the Secretary of State;
 - (b) naming the areas of each of the authorities or boards in respect of which a copy of the notice is required to be served under sub-paragraph (4)(a) above;
 - (c) specifying a place where a copy of the draft order and of any relevant map or plan may be inspected; and
 - (d) where the notice required by sub-paragraph (2) above is published in a newspaper, giving the name of the newspaper and the date of an issue containing the notice.
- (6) In this paragraph—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) where a draft order makes provision generally (rather than for a specified geographical area), references to the area to which the order relates are to the whole area (whether England, Wales or both of them) in relation to which the order is applied;
- (b) references to a National Park authority are to a National Park authority established under Part 3 of the 1995 Act;
- [^{F710}(ba) references to a corporate joint committee are to a corporate joint committee to which Part 6 of the Planning and Compulsory Purchase Act 2004 applies by virtue of regulations under Part 5 of the Local Government and Elections (Wales) Act 2021;]
- (c) a “relevant source of supply”, in relation to a draft order, means—
 - (i) if the draft order relates only to particular sources of supply (or a class of them) in an area, any of those sources of supply (or any source of supply in that class) in that area;
 - (ii) otherwise, any source of supply in the area to which the draft order relates;
- (d) a “relevant water undertaker”, in relation to a draft order, means a water undertaker which is the holder of a licence to abstract water under Chapter 2 of Part 2 of this Act from—
 - (i) a relevant source of supply; or
 - (ii) a source of supply which is related to a relevant source of supply;
- (e) for the purposes of paragraph (d) above, a source of supply (the “related source”) is related to a relevant source of supply if it appears to the [^{F711}appropriate agency] that, having regard to the extent to which the level or flow of water in the related source depends on the level or flow of the waters in the relevant source of supply, the ability of the water undertaker to abstract water from the related source in accordance with its licence may be substantially affected as a result of the draft order;
- (f) “related inland waters” are inland waters the level or flow of which may, in the [^{F711}appropriate agency's] opinion, be affected by changes in the level or flow of the waters in a relevant source of supply.

Making of order

- 3 (1) Where an application for an order is made, the Secretary of State may make the order either in the form of the draft or in that form as altered in such manner as he thinks fit.
- (2) Where the Secretary of State—
- (a) proposes to make any alteration of an order before making it; and
 - (b) considers that any persons are likely to be adversely affected by it,
- the [^{F712}appropriate agency] shall give and publish such additional notices, in such manner, as the Secretary of State may require.
- (3) Sub-paragraph (4) below shall apply if before the end of—
- (a) the period of twenty-eight days referred to in sub-paragraph (2)(b) of paragraph 1 above;
 - (b) the period of twenty-five days from the publication in the London Gazette of the notice under sub-paragraph (5) of that paragraph; or
 - (c) any period specified in notices under sub-paragraph (2) above,
- notice of an objection is received by the Secretary of State from any person on whom a notice is required by this Schedule to be served, from any other person appearing to the Secretary of State to be affected by the order (either as prepared in draft or as proposed to be altered) or, in a case where the Secretary of State directed the [^{F712}appropriate agency] to apply for the order, from the [^{F712}appropriate agency].
- (4) Where this sub-paragraph applies and the objection in question is not withdrawn, the Secretary of State, before making the order, may take such steps as he sees fit and, in particular, may—
- (a) cause a local inquiry to be held; or
 - (b) afford to the objector and to the [^{F712}appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by the Secretary of State for the purpose.
- (5) Where—

SCHEDULE 7

Sections 48, 55, 60, 61 and 65.

LICENCES OF RIGHT

Applications for licences of right under paragraph 30 or 31 of Schedule 26 to the Water Act 1989

- 1 (1) Paragraphs 30 and 31 of Schedule 26 to the ^{M131}Water Act 1989 shall continue to apply (notwithstanding the repeals made by the ^{M132}Water Consolidation (Consequential Provisions) Act 1991 but subject to the following provisions of this Schedule) in relation—
- (a) to any application made under either of those paragraphs which is outstanding immediately before the coming into force of this Act; and

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (b) to any appeal against a determination made, on an application under either of those paragraphs, either before the coming into force of this Act or, thereafter, by virtue of paragraph (a) above;
- but for the purposes of any such application or appeal any reference in those paragraphs to a provision of the ^{M133}Water Resources Act 1963 which is re-enacted in this Act shall have effect, in relation to a time after the coming into force of this Act, as a reference to the corresponding provision of this Act.
- (2) Where an application for the grant of a licence by virtue of paragraph 30 or 31 of Schedule 26 to the Water Act 1989 has been made before the end of the period within which such an application was required to be made under that paragraph, then—
- (a) sections 24 and 48 of this Act and Part II of the ^{M134}Gas Act 1965 shall have effect, until the application is disposed of, as if the licence had been granted on the date of the application and the provisions of the licence had been in accordance with the proposals contained in the application; and
- (b) for the purposes of those sections and Part II of the said Act of 1965 any licence granted on the application shall be treated as not having effect until the application has been disposed of.
- (3) For the purposes of this paragraph an application for the grant of a licence by virtue of paragraph 30 or 31 of Schedule 26 to the Water Act 1989 above shall be taken to be disposed of on (but not before) the occurrence of whichever of the following events last occurs, that is to say—
- (a) the grant, on the determination of the application by the [^{F713}appropriate agency], of a licence the provisions of which are in accordance with the proposals contained in the application;
- (b) the expiration, without a notice of appeal having been given, of the period (if any) within which the applicant is entitled to give notice of appeal against the decision on the application;
- (c) the determination or withdrawal of an appeal against that decision;
- (d) the grant, variation or revocation, in compliance with a direction given by the Secretary of State in consequence of such an appeal, of any licence;
- and in this sub-paragraph any reference to a decision includes a reference to a decision which is to be treated as having been made by virtue of any failure of the [^{F713}appropriate agency] to make a decision within a specified time.
- (4) Subject to the other provisions of this Schedule, any licence granted by virtue of this paragraph shall have effect as a licence under Chapter II of Part II of this Act; and, so far as necessary for the purposes of this paragraph, anything done under or for the purposes of a provision of the ^{M135}Water Resources Act 1963 applied by paragraph 30 or 31 of Schedule 26 to the 1989 Act, shall have effect as if that paragraph applied the corresponding provision of this Act and that thing had been done under or for the purposes of that corresponding provision.

M133 1963 c. 38.

M134 1965 c. 36.

M135 1963 c. 38.

Section 48 of this Act

- 2 Subsection (2) of section 48 of this Act shall not afford any defence to an action brought before 1st September 1992 if the licence referred to in that subsection is a 1989 Act licence of right; and there shall be no defence afforded to such an action by that subsection as applied by paragraph 1(2) above.

Section 55 of this Act

- 3 No application shall be made under section 55 of this Act (variation of licence on application of owner of fishing rights) in respect of any 1989 Act licence of right.

Section 60 of this Act

- 4 (1) Where the plaintiff in any action brought against the [F714appropriate agency] in pursuance of section 60 of this Act (liability of the [F714appropriate agency] for derogation from protected right) is entitled to a protected right for the purposes of Chapter II of Part II of this Act by reason only that he is the holder of, or has applied for, a licence of right, it shall be a defence for the [F714appropriate agency] to prove—
- (a) that the plaintiff could have carried out permissible alterations in the means whereby he abstracted water from the source of supply in question; and
 - (b) that, if he had carried out such alterations, the abstraction or, as the case may be, the obstruction or impeding of the flow of the inland waters authorised by the licence to which the action relates would not have derogated from his protected right for the purposes of that Chapter;
- and subsection (3) of that section (liability of [F714appropriate agency] for compliance with direction requiring derogation from protected rights) shall not apply to a direction given in consequence of an appeal against the decision of the [F714appropriate agency] on an application for the grant of a 1989 Act licence of right.
- (2) In this paragraph “permissible alterations”—
- (a) in relation to a person who is the holder of a licence of right, means any alteration of works, or modification of machinery or apparatus, which would fulfil the requirements of the licence as to the means whereby water is authorised to be abstracted;
 - (b) in relation to a person who is not the holder of a licence of right, but to whose application for such a licence paragraph 1 above applies, means any alteration of works, or modification of machinery or apparatus, by means of which he abstracted water from the source of supply in question during the period of five years ending with 1st September 1989, being an alteration or modification which would be within the scope of the licence if granted in accordance with the application.

Textual Amendments

F714 Words in [Sch. 7 para. 4](#) substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), [Sch. 2 para. 309](#) (with [Sch. 7](#))

Section 61 of this Act

- 5 (1) No compensation shall be payable under section 61 of this Act (compensation for revocation or variation of a licence) in respect of the revocation or variation of a 1989 Act licence of right if the revocation or variation is for giving effect to the decision of the court in an action in respect of which paragraph 2 above has effect or in any proceedings in consequence of such an action.
- (2) Nothing in section 61(3) of this Act (compensation not payable in respect of works etc. carried out before the grant of a licence) shall apply in relation to any licence of right.

Licences of right

- 6 (1) In this Schedule references to a licence of right are references to—
- (a) any 1989 Act licence of right, that is to say, a licence granted (whether or not by virtue of paragraph 1 above) under paragraph 30 or 31 of Schedule 26 to the ^{M136}Water Act 1989; or
 - (b) any licence which, having been granted in pursuance of an application under section 33 of the ^{M137}Water Resources Act 1963 (or in pursuance of an appeal consequential on such an application), has effect after the coming into force of this Act by virtue of sub-paragraph (2) below.
- (2) The repeal by the ^{M138}Water Consolidation (Consequential Provisions) Act 1991 of paragraph 29(4) of Schedule 26 to the Water Act 1989 shall not prevent any licence granted as mentioned in paragraph (b) of sub-paragraph (1) above from continuing (in accordance with paragraph 1 of Schedule 2 to that Act of 1991 and subject to the preceding provisions of this Schedule) to have effect after the coming into force of this Act as a licence under Chapter II of Part II of this Act.

PROCEEDINGS ON APPLICATIONS FOR DROUGHT ORDERS

- 1 (1) The applicant for a drought order shall—
- (a) cause notice of the application to be served on the persons specified in the Table set out in sub-paragraph (2) below;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (b) cause a notice of the application to be published in one or more local newspapers circulating within the area affected by the order; and
- (c) cause a notice of the application to be published in the London Gazette.

(2) The said Table is as follows—

TABLE

All orders	(a) The [^{F715} Agency] (where it is not the applicant). [^{F716} (aa) The NRBW (where it is not the applicant).] (b) Every local authority (not being [^{F717} an English county] council) and water undertaker (not being the applicant) whose area would be affected by the order.
Orders which suspend or modify any enactment or any order or scheme made or confirmed under any enactment.	Such persons (if any) as are specified by name in the enactment, order or scheme as being persons for whose protection it was enacted or made.
Orders concerning the taking of water from a source or the discharge of water or effluent to a place.	(a) Every local authority (not being [^{F717} an English county] council) in whose area the source, or the place at which water or effluent is to be discharged, is situated.(b) Every drainage board for an internal district in which the source, or the place at which water or effluent is to be discharged, is situated.(c) Every navigation authority exercising functions over any watercourse affected by the order.(d) If the order concerns any [^{F718} environmental permit] relating to the discharge of sewage effluent or trade effluent, the person to whom the [^{F718} environmental permit] was given.
Orders which authorise the carrying out of any works.	(a) Every local authority (not being [^{F717} an English county] council) within whose area the works are situated.(b) If the order authorises the carrying out of works in, under or over a watercourse, every drainage board for an internal drainage district within which the works, or any part of the works, are situated.
Orders which authorise the occupation and use of land.	Every owner, lessee and occupier of the land.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

Orders which prohibit or limit the taking of water.	Every named person to whom the prohibition or limitation applies.
---	---

- (3) A notice for the purposes of this paragraph of an application for a drought order—
- (a) shall state the general effect of the application;
 - (b) shall specify a place within the area affected by the order where a copy of any relevant map or plan may be inspected by any person free of charge at all reasonable times within a period of seven days from the date on which it is served or, as the case may be, published;
 - (c) shall state that objections to the application may be made to the Secretary of State within seven days from the date on which it is served or, as the case may be, published; and
 - (d) in the case of an application for an order authorising the occupation and use of land, shall specify the land to which the application relates.
- (4) A notice sent in a letter in pursuance of section 220 of this Act to an address to which it may be sent in pursuance of that section shall not be treated as having been properly served for the purposes of this paragraph unless the sender takes such steps as are for the time being required to secure that the letter is transmitted in priority to letters of other descriptions.

Objections to and making of orders

- 2 (1) If any objection is duly made with respect to an application for a drought order and is not withdrawn, then, subject to the provisions of this paragraph, the Secretary of State shall, before making the order, either—
- (a) cause a local inquiry to be held; or
 - (b) afford an opportunity—
 - (i) to the objector; and
 - (ii) if the objector avails himself of the opportunity, to the applicant and to any other persons to whom it appears to the Secretary of State expedient to afford the opportunity,
 of appearing before and being heard by a person appointed by the Secretary of State for the purpose.
- (2) Subject to sub-paragraph (3) below, where, on an application for a drought order, it appears to the Secretary of State that a drought order is required to be made urgently if it is to enable the deficiency of supplies of water to be effectively met, he may direct that the requirements of sub-paragraph (1) above shall be dispensed with in relation to the application.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (3) Nothing in sub-paragraph (2) above shall authorise the Secretary of State to fail to consider any objection to a proposed drought order which has been duly made and not withdrawn.
- (4) Notwithstanding anything in sub-paragraph (1) above, the Secretary of State may—
- (a) require any person who has made an objection to a proposed drought order to state in writing the grounds of his objection; and
 - (b) disregard the objection for the purposes of this paragraph if the Secretary of State is satisfied—
 - (i) that the objection relates exclusively to matters which can be dealt with on a reference under Schedule 9 to this Act or by any person by whom compensation is to be assessed; or
 - (ii) in a case where the order is one confined to the extension of a period specified in a previous order, that the objection is one that has in substance been made with respect to the application for that previous order.
- (5) Subject to the requirements of this paragraph, the Secretary of State, upon being satisfied that the proper notices have been published and served, may, if he thinks fit, make the order in respect of which the application is made with or without modifications.
- (6) The Secretary of State may hold a local inquiry on any application for a drought order notwithstanding that he is not required to do so by this paragraph.
- [^{F719}(7) For the purposes of subsection (2) of section 53 of the 1995 Act (which applies subsections (2) to (5) of section 250 of the Local Government Act 1972 to inquiries in connection with functions of or in relation to the Agency [^{F720}or in connection with relevant environmental functions of or in relation to the NRBW]) [^{F721}as modified by subsection (4) of that section], a local inquiry held under this paragraph with respect to an application by a water undertaker for a drought order, if it would not otherwise fall within paragraph (a) or (b) of that subsection, is to be treated as one which falls within paragraph (b).]

SCHEDULE 9

Section 79.

COMPENSATION IN RESPECT OF DROUGHT ORDERS

Compensation to be made in the case of all drought orders

- 1 Where a drought order has been made, compensation in respect of the entry upon or occupation or use of land shall be made by the applicant for the order to—
- (a) the owners and occupiers of the land; and
 - (b) all other persons interested in the land or injuriously affected by the entry upon, occupation or use of the land,
- for loss or damage sustained by reason of the entry upon, occupation or use of the land.

Compensation to be made in the case of ordinary orders only

- 2 (1) This paragraph shall apply for determining the compensation to be made, in addition to any made under paragraph 1 above, where an ordinary drought order has been made.
- (2) Compensation in respect of the taking of water from a source or its taking from a source otherwise than in accordance with a restriction or obligation which has been suspended or modified shall be made by the applicant for the order to—
- (a) the owners of the source of water; and
 - (b) all other persons interested in the source of water or injuriously affected by the taking of the water,
- for loss or damage sustained by reason of the taking of the water.
- (3) Compensation in respect of water's being discharged or not discharged to any place or its being discharged otherwise than in accordance with a restriction or obligation (whether relating to the treatment or discharge of the water) which has been suspended or modified shall be made by the applicant for the order to—
- (a) the owners of the place of discharge; and
 - (b) all other persons interested in the place of discharge or injuriously affected by the discharge or lack of discharge,
- for loss or damage sustained by reason of the water being discharged or not discharged or being discharged otherwise than in accordance with the restriction or obligation.
- (4) Compensation in respect of the imposition of a prohibition or limitation on the taking of water from a source shall be made by the applicant for the order, to any persons to whom the prohibition or limitation applies, for loss or damage sustained by reason of the prohibition or limitation.
- (5) Compensation in respect of a power to make discharges of sewage effluent or trade effluent in pursuance of any [^{F722}environmental permit] shall be made by the applicant for the order, to any person who has been exercising that power, for loss or damage sustained by reason of the suspension or variation of the [^{F722}environmental permit] or the attachment of conditions to the [^{F722}environmental permit].

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

Textual Amendments

F722 Words in Sch. 9 para. 2(5) substituted (6.4.2010) by [The Environmental Permitting \(England and Wales\) Regulations 2010 \(S.I. 2010/675\)](#), reg. 1(1)(b), **Sch. 26 para. 8(3)(d)** (with reg. 1(2), Sch. 4)

Claims for compensation: general

- 3 (1) A claim for compensation under this Schedule shall be made by serving upon the applicant a notice stating the grounds of the claim and the amount claimed.
- (2) Any question as to the right of a claimant to recover compensation, or as to the amount of compensation recoverable, shall, in default of agreement, be referred to, and determined by, the [^{F723}Upper Tribunal] .

Textual Amendments

F723 Words in Sch. 9 para. 3(2) substituted (1.6.2009) by [The Transfer of Tribunal Functions \(Lands Tribunal and Miscellaneous Amendments\) Order 2009 \(S.I. 2009/1307\)](#), art. 1, **Sch. 1 para. 231** (with Sch. 5)

Claims for compensation under paragraph 2

- 4 (1) A claim for compensation under paragraph 2 above may be made at any time not later than six months after the end of the period for which the order authorises, as the case may be—
- (a) the taking or discharge of water;
 - (b) the imposition of a prohibition or limitation on the taking of water;
 - (c) the suspension or modification of any restriction or obligation; or
 - (d) the suspension or variation of, or attachment of conditions to, any [^{F724}environmental permit] relating to the discharge of sewage effluent or trade effluent.
- (2) Where a claim for compensation under paragraph 2 above is made during the continuance of the ordinary drought order, the [^{F725}Upper Tribunal] may, if it thinks fit, award a sum representing the loss or damage which is likely to be sustained by the claimant in respect of each day on which, as the case may be—
- (a) water is taken or discharged;
 - (b) water is not discharged or is discharged otherwise than in accordance with an obligation or restriction; or
 - (c) sewage effluent or trade effluent is discharged otherwise than in accordance with [^{F726}an environmental permit] originally given.
- (3) In assessing the compensation to be made under paragraph 2(2) above the [^{F727}Upper Tribunal] may, if it thinks fit, have regard to the amount of water which, on an equitable apportionment of the water available from the source between the claimant, the applicant and other persons taking water from the source, may fairly be apportioned to the claimant.
- (4) In assessing the compensation to be made under paragraph 2(3) above in respect of the lack of discharge of compensation water, the [^{F728}Upper Tribunal] may, if it thinks fit, have regard to the amount of water which, under the conditions existing by

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

- F729** Sch. 10 repealed (6.4.2010) by [The Environmental Permitting \(England and Wales\) Regulations 2010 \(S.I. 2010/675\)](#), reg. 1(1)(b), Sch. 26 para. 8(2)(q), **Sch. 28** (with regs. 1(2), 109(2), Sch. 4)

SCHEDULE 11

Section 93.

WATER PROTECTION ZONE ORDERS

Application for consent

- 1 (1) Where the [^{F730}appropriate agency] applies to the Secretary of State for an order under section 93 of this Act, it shall—
- (a) submit to the Secretary of State a draft of the order applied for;
 - (b) publish a notice with respect to the application, at least once in each of two successive weeks, in one or more newspapers circulating in the locality proposed to be designated as a water protection zone by the order;
 - (c) not later than the date on which that notice is first published serve a copy of the notice on every local authority and water undertaker whose area includes the whole or any part of that locality; and
 - (d) publish a notice in the London Gazette which-

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (i) states that the draft order has been submitted to the Secretary of State;
 - (ii) names every local authority on whom a notice is required to be served under this paragraph;
 - (iii) specifies a place where a copy of the draft order and of any relevant map or plan may be inspected; and
 - (iv) gives the name of every newspaper in which the notice required by virtue of paragraph (b) above was published and the date of an issue containing the notice.
- (2) The notice required by virtue of sub-paragraph (1)(b) above to be published with respect to an application for an order shall—
 - (a) state the general effect of the order applied for;
 - (b) specify a place where a copy of the draft order and of any relevant map or plan may be inspected by any person free of charge at all reasonable times during the period of twenty-eight days beginning with the date of the first publication of the notice; and
 - (c) state that any person may, within that period, by notice to the Secretary of State object to the making of the order.

Textual Amendments

F730 Words in Sch. 11 paras. 1-3 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(a)** (with Sch. 7)

Supply of copies of draft orders

- 2 Where the [^{F730}appropriate agency] has applied for an order under section 93 of this Act, it shall, at the request of any person and on payment by that person of such charge (if any) as the [^{F730}appropriate agency] may reasonably require, furnish that person with a copy of the draft order submitted to the Secretary of State under paragraph 1 above.

Textual Amendments

F730 Words in Sch. 11 paras. 1-3 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(a)** (with Sch. 7)

Modifications of proposals

- 3 (1) On an application for an order under section 93 of this Act, the Secretary of State may make the order either in the terms of the draft order submitted to him or, subject to sub-paragraph (2) below, in those terms as modified in such manner as he thinks fit, or may refuse to make an order.
- (2) The Secretary of State shall not make such a modification of a draft order submitted to him as he considers is likely adversely to affect any persons unless he is satisfied that the [^{F730}appropriate agency] has given and published such additional notices, in such manner, as the Secretary of State may have required.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. SCHEDULE 14

Section 108.

ORDERS TRANSFERRING MAIN RIVER
FUNCTIONS TO THE [F734 APPROPRIATE AGENCY]

Textual Amendments

F734 Words in Sch. 14 heading substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(b)** (with Sch. 7)

Procedure on application for order

- 1 As soon as any scheme under section 108 of this Act has been submitted to one of the Ministers, the [F735 appropriate agency] shall—
- (a) send copies of the scheme to every internal drainage board, local authority, navigation authority, harbour authority and conservancy authority affected by it; and
 - (b) publish, in one or more newspapers circulating in the area affected by the scheme, a notice stating—
 - (i) that the scheme has been submitted to that Minister;
 - (ii) that a copy of it is open to inspection at a specified place; and
 - (iii) that representations with respect to the scheme may be made to that Minister at any time within one month after the publication of the notice.

Textual Amendments

F735 Words in Sch. 14 para. 1 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(b)** (with Sch. 7)

Order making procedure etc.

- 2 (1) Before either of the Ministers makes an order under section 108 of this Act, he shall cause notice of—
- (a) the intention to make it;
 - (b) the place where copies of the draft order may be inspected and obtained; and
 - (c) the period within which, and the manner in which, objections to the draft order may be made,
- to be published in the London Gazette and in such other manner as he thinks best adapted for informing persons affected and to be sent to the persons specified in sub-paragraph (2) below.
- (2) The persons referred to in sub-paragraph (1) above are—
- (a) every county council [F736, county borough council] or London borough council in whose area any part of the area proposed to be affected by the order is situated and, if any part of that area is situated in the City of London, the Common Council of the City of London;
 - (b) the [F737 appropriate agency] and every drainage body, navigation authority, harbour authority or conservancy authority that is known to the Minister in

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. question to be exercising jurisdiction within the area proposed to be affected by the order.

- (3) In sub-paragraph (2) above “drainage body” has the same meaning as in section 108 of this Act.

Textual Amendments

F736 Words in Sch. 14 para. 2(2)(a) inserted (1.4.1996) by 1994 c. 19, s. 22(5), **Sch. 11 Pt. I para. 3(8)** (with ss. 54(4)(7), 55(5), Sch. 17 paras. 22(1), 23(2)); S.I. 1996/396, art. 3, **Sch. 1**

F737 Words in Sch. 14 para. 2 substituted (1.4.2013) by The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755), art. 1(2), **Sch. 2 para. 311(b)** (with Sch. 7)

Determination of whether to make order

- 3 (1) Before either of the Ministers makes an order under section 108 of this Act he—
- (a) shall consider any objections duly made to the draft order; and
 - (b) may, in any case, cause a public local inquiry to be held with respect to any objections to the draft order.
- (2) Each of the Ministers may, in making an order under section 108 of this Act, make such modifications in the terms of the draft as appear to him to be desirable and may confirm the scheme to which the order relates either with or without modifications.

Notice of orders

- 4 As soon as may be after an order under section 108 of this Act has effect one of the Ministers shall publish in the London Gazette, and in such other manner as he thinks best adapted for informing persons affected, a notice—
- (a) stating that the order has come into force; and
 - (b) naming a place where a copy of it may be seen at all reasonable hours.

Challenge to orders

- 5 (1) If any person aggrieved by an order under section 108 of this Act desires to question its validity on the ground—
- (a) that it is not within the powers of this Act; or
 - (b) that any requirement of this Act has not been complied with,
- he may, within six weeks of the date of the publication of the notice mentioned in paragraph 4 above, make an application for the purpose to the High Court.
- (2) Where an application is duly made to the High Court under this paragraph, the High Court, if satisfied—
- (a) that the order is not within the powers of this Act; or
 - (b) that the interests of the applicant have been substantially prejudiced by any requirements of this Act not having been complied with,
- may quash the order either generally or in so far as it affects the applicant.
- (3) Except by leave of the Court of Appeal, no appeal shall lie to the ^{F738}Supreme Court] from a decision of the Court of Appeal in proceedings under this paragraph.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (4) Subject to the preceding provisions of this paragraph an order under section 108 of this Act shall not at any time be questioned in any legal proceedings whatsoever.

Textual Amendments

F738 Words in Sch. 14 para. 5(3) substituted (1.10.2009) by [Constitutional Reform Act 2005 \(c. 4\), s. 148\(1\), Sch. 9 para. 55](#); [S.I. 2009/1604, art. 2\(d\)](#)

Power to make regulations for purposes of Schedule etc.

- 6 The Ministers may make regulations in relation to—
- (a) the publication of notices under paragraph 2 or 4 above;
 - (b) the holding of public local inquiries under this Schedule and procedure at those inquiries; and
 - (c) any other matters of procedure respecting the making of orders under section 108 of this Act.

SCHEDULE 15

Sections 135 and 138.

SUPPLEMENTAL PROVISIONS WITH RESPECT TO DRAINAGE CHARGES

Raising of drainage charge

- 1 (1) A drainage charge—
- (a) shall be raised by the [^{F739}appropriate agency] in writing under the common seal of the [^{F739}appropriate agency]; and
 - (b) shall be deemed to be raised on the date on which a resolution is passed by the [^{F739}appropriate agency] authorising their seal to be affixed to the charge.
- (2) Every drainage charge shall be raised for a year ending on 31st March and shall be raised before or during the year for which it is raised.
- (3) Without prejudice to their powers by virtue of section 112 of this Act, the Ministers shall each have power by regulations to prescribe the forms of drainage charges and of demands for drainage charges.

Textual Amendments

F739 Words in Sch. 15 paras. 1-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\), art. 1\(2\), Sch. 2 para. 311\(c\)](#) (with Sch. 7)

Publication of drainage charge

- 2 (1) A drainage charge shall not be valid unless notice of the charge is given by the [^{F739}appropriate agency] in accordance with sub-paragraph (2) below within ten days of the date on which it is raised.
- (2) The notice must—

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) state the amount of the charge and the date on which it was raised; and
- (b) be published in one or more newspapers circulating in the area in respect of which the charge was raised.

Textual Amendments

F739 Words in Sch. 15 paras. 1-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(c)** (with Sch. 7)

Occupiers liable for drainage charge

- 3 (1) Subject to paragraphs 4 and 5 below—
- (a) drainage charges shall be levied on the occupiers of chargeable land in [^{F740}the flood risk management region] or, as the case may be, the designated area; and
 - (b) sub-paragraphs (2) to (4) below shall have effect with respect to the assessment of persons to a drainage charge with respect to any land (“the relevant land”) and their liability in regard to the charge.
- (2) A drainage charge shall be assessed on the person who at the date of the raising of the charge is the occupier of the relevant land.
- (3) The full amount of a drainage charge may be recovered by the [^{F739}appropriate agency] from any person who is the occupier of the relevant land at any time during the period for which the charge is raised; but a person who is in occupation of the relevant land for part only of the period for which the charge is raised shall be liable, by virtue of sub-paragraph (4) below, to bear a proportionate part only of the charge.
- (4) If a person who is in occupation of the relevant land for part only of a period for which a drainage charge is raised is required under sub-paragraph (3) above to pay the full amount of the charge, he may (subject to any agreement to the contrary) recover, from any other person who has been in occupation of the land for part of that period, the amount which that other person is liable to bear.

Textual Amendments

F739 Words in Sch. 15 paras. 1-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(c)** (with Sch. 7)

F740 Words in Sch. 15 para. 3(1)(a) substituted (14.7.2014) by [Water Act 2014 \(c. 21\)](#), s. 94(2)(r), **Sch. 10 para. 14**

Cases where identity of occupiers in doubt

- 4 (1) The [^{F739}appropriate agency] may serve on the owner of any land a notice requiring him to state in writing the name and address of any person known to him as being an occupier of that land.
- (2) The owner of any land shall be guilty of an offence if—
- (a) he fails without reasonable excuse to comply with a notice under sub-paragraph (1) above;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (b) he makes any statement in respect of the information required by such a notice which he knows to be false in a material particular; or
 - (c) he recklessly makes any statement in respect of the information required by such a notice which is false in a material particular.
- (3) A person guilty of an offence under sub-paragraph (2) above shall be liable, on summary conviction, to a fine not exceeding level 4 on the standard scale; and a person convicted by virtue of paragraph (a) of that sub-paragraph shall be liable to a further conviction by virtue of that paragraph if, after conviction, he continues without reasonable excuse [^{F741}to fail] to comply with the notice in question.
- (4) Where the name of any person liable to be assessed to any drainage charge is not known to the [^{F739}appropriate agency], it shall be sufficient to assess him to the charge by the description of the “occupier” of the premises (naming them) in respect of which the assessment is made, without further name or description.
- (5) For the purposes of this Schedule the owner of any land shall be deemed to be its occupier during any period during which it is unoccupied.
- (6) Sub-paragraphs (1) to (3) above shall be without prejudice to the provisions of Part VIII of this Act.

Textual Amendments

- F741** Words in Sch. 15 para. 4(3) inserted (21.9.1995) by [1995 c. 25, s. 120\(1\)](#), [Sch. 22 para. 187\(1\)](#) (with ss. 7(6), 115, 117); [S.I. 1995/1983, art. 3](#)

Arrangements for owner of land to pay drainage charge

- 5 (1) Subject to paragraph 6 below, the [^{F739}appropriate agency] may make arrangements with the owner of any chargeable land for any drainage charges which may be raised by the [^{F739}appropriate agency] for any period in respect of the land to be levied on the owner, instead of on the occupier of the land.
- (2) Where arrangements under this paragraph are made—
- (a) the charges in question shall be levied on the owner, instead of on the occupier; and
 - (b) any reference to an occupier in the provisions of this Schedule (except in this paragraph and paragraph 6 below) shall be construed accordingly.
- (3) Subject to sub-paragraph (4) below, where in pursuance of any arrangements under this paragraph the owner of any land pays drainage charges in respect of the land to the [^{F739}appropriate agency] either—
- (a) before the end of the period of two months beginning with the date of the service on him of the demand for the charges; or
 - (b) before the end of one-half of the period for which the charges are raised,
- the [^{F739}appropriate agency] shall make to him an allowance equal to ten per cent. of the full amount of the charges.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (4) No allowance shall be made under sub-paragraph (3) above in respect of charges which, apart from this paragraph, are payable for any period by the owner in pursuance of paragraph 4(5) above.
- (5) Where arrangements are made under this paragraph, it shall be the duty of the [^{F739}appropriate agency] to give notice of the arrangements, forthwith after they are made, to the occupier of the land affected by them.
- (6) The owner of any land who is a party to any arrangements under this paragraph in respect of the land may recover from the occupier of the land a sum equal to the amount of any drainage charges in respect of the land which, apart from the arrangements, would be payable by the occupier.

Textual Amendments

F739 Words in Sch. 15 paras. 1-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(c)** (with Sch. 7)

Power of occupier to prevent arrangements under paragraph 5

- 6 (1) The occupier of any chargeable land may, by notice given to the [^{F739}appropriate agency], determine—
 - (a) that no arrangements under paragraph 5 above shall be made in respect of the land; and
 - (b) that any such arrangements previously made shall cease to have effect so far as they relate to the land and any drainage charge to be raised for a period beginning after the date on which the notice takes effect;
 and may, by a notice so given, revoke any determination under this sub-paragraph so far as it prohibits the making of any such arrangements in respect of the land.
- (2) A notice under sub-paragraph (1) above shall take effect on the day following that on which it is given to the [^{F739}appropriate agency].
- (3) Where notice is given to the [^{F739}appropriate agency] under sub-paragraph (1) above, it shall be the duty of the [^{F739}appropriate agency] to send a copy of the notice to the owner of the land to which it relates.

Textual Amendments

F739 Words in Sch. 15 paras. 1-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(c)** (with Sch. 7)

Assessment of chargeable land to drainage charge

- 7 (1) Where land is chargeable land during part only of the year for which a drainage charge is raised, a proportionate part only of the charge shall be payable in respect of that land; and any amount overpaid shall be repaid.
- (2) Where the area of chargeable land in respect of which, apart from this sub-paragraph, a sum is payable by any person by way of a drainage charge consists of or includes

a fraction of a hectare, then for the purpose of calculating that sum the fraction shall be disregarded if it is less than one-half and treated as one hectare in any other case.

Partial exemption of commercial woodlands

- 8 (1) The sum payable by way of a drainage charge in respect of chargeable land consisting of commercial woodlands shall be calculated as if the area of the land were one-fifth of its actual area.
- (2) In the application of paragraph 7(2) above to chargeable land to which sub-paragraph (1) above applies the area ascertained in pursuance of sub-paragraph (1) above (and not the area of which it is one-fifth) shall be treated as the area in relation to which paragraph 7(2) above has effect.

Returns with respect to land

- 9 (1) The [F742appropriate agency] may serve on any person appearing to it to be the occupier of any land a notice requiring him to furnish a return under sub-paragraph (2) below to the [F742appropriate agency] within twenty-eight days beginning with the date of service of the notice on him.
- (2) The return required of a person by a notice under sub-paragraph (1) above is a return, in writing and in such form as may be specified in the notice, containing such particulars as may reasonably be required for the purpose of enabling the [F742appropriate agency] to determine—
- (a) how much (if any) of the land occupied by that person is chargeable land; and
 - (b) how much (if any) consists of commercial woodlands.
- (3) If any person on whom notice has been served under sub-paragraph (1) above—
- (a) fails without reasonable excuse to comply with the notice;
 - (b) in a return made in pursuance of such a notice, makes any statement which he knows to be false in a material particular; or
 - (c) in any such return recklessly makes any statement which is false in a material particular,
- he shall be guilty of an offence
- (4) A person guilty of an offence under sub-paragraph (3) above shall be liable, on summary conviction, to a fine not exceeding level 4 on the standard scale; and a person convicted by virtue of paragraph (a) of that sub-paragraph shall be liable to a further conviction by virtue of that paragraph if, after conviction, he continues without reasonable excuse [F743to fail] to comply with the notice in question.
- (5) This paragraph shall be without prejudice to the provisions of Part VIII of this Act.

Power to correct erroneous assessments etc.

- 10 (1) The [^{F742}appropriate agency] may, as respects any drainage charge raised by it for the current or the preceding year, make such amendments in any demands or other documents relating to the charge as appear to the [^{F742}appropriate agency] necessary in order to make the raising, levying and collection of the charge conform with this Act.
- (2) In particular, the [^{F742}appropriate agency] may—
- (a) correct any clerical or arithmetical error;
 - (b) correct any erroneous insertions or omissions or any misdescriptions;
 - (c) make such additions or corrections as appear to the [^{F742}appropriate agency] to be necessary by reason of any change in the occupation of any chargeable land or any property ceasing to be chargeable land.
- (3) The [^{F742}appropriate agency] shall serve a notice of any amendment made by the [^{F742}appropriate agency] in pursuance of this paragraph on the occupier of all land affected thereby.
- (4) Where an amendment is made in pursuance of this paragraph—
- (a) any amount overpaid shall be repaid or allowed; and
 - (b) any amount underpaid may be recovered as if it were arrears of the charge.

Textual Amendments

F742 Words in Sch. 15 paras. 9-13 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(c)** (with Sch. 7)

Appeals against demands for drainage charges

- 11 (1) If any person is aggrieved by—
- (a) a demand for a drainage charge made on him as the occupier of chargeable land; or
 - (b) an amendment of such a demand,
- he may appeal to the county court ^{F744}... .
- (2) Notice of appeal under this paragraph, specifying the grounds of appeal, must be given within the required period—
- (a) to the court to which the appeal is made;
 - (b) to the [^{F742}appropriate agency]; and
 - (c) if the appeal relates to land not in the occupation of the appellant, to the occupier of the land.
- (3) For the purposes of sub-paragraph (2) above the required period is twenty-eight days after the date on which the demand is made or, as the case may be, notice of the amendment is served on the appellant.
- (4) On an appeal under this paragraph the court shall, as it thinks just, either confirm the demand or annul or modify it.

Recovery of drainage charges

- 12 (1) Arrears of any drainage charge may be recovered by the [^{F742}appropriate agency] in the same manner in which arrears of a non-domestic rate may be recovered under the ^{M139}Local Government Finance Act 1988 by a [^{F745}billing authority] within the meaning of that Act.
- (2) Without prejudice to its powers by virtue of [^{F746}section 37 of, and paragraph 6 of Schedule 1 to, the 1995 Act], the [^{F742}appropriate agency] may by resolution authorise any member or officer of the [^{F742}appropriate agency], either generally or in respect of particular proceedings—
- (a) to institute or defend on its behalf any proceedings in relation to a drainage charge; or
 - (b) notwithstanding that he is not qualified to act as a solicitor, to appear on the [^{F742}appropriate agency's] behalf in any proceedings before a magistrates' court for the issue of a [^{F747}warrant of control] for failure to pay a drainage charge.
- (3) In proceedings for the recovery of arrears of a drainage charge the defendant shall not be entitled to raise by way of defence any matter which might have been raised on an appeal under paragraph 11 above.
- (4) The [^{F742}appropriate agency] shall not be required to demand or enforce payment of a drainage charge in any case where the amount of the charge is insufficient to justify the expense of collection.

Use of certain authorities as agents for assessment, collection etc. of drainage charges

- 13 (1) The [F742appropriate agency] and any relevant authority may enter into agreements for—
- (a) the doing by the relevant authority, as agents of the [F742appropriate agency], of anything required for the purpose of the assessment to and recovery of a drainage charge in respect of any relevant land; and
 - (b) the making by the [F742appropriate agency] to the relevant authority of payments in respect of anything so done.
- (2) The [F742appropriate agency] may make arrangements with either of the Ministers for the exercise by him on behalf of the [F742appropriate agency], in such cases as may be determined in pursuance of the arrangements, of the powers conferred on the [F742appropriate agency] by paragraph 9 above.
- (3) Any arrangements under sub-paragraph (2) above shall contain provision for the reimbursement by the [F742appropriate agency] of any expenses incurred by the Minister in question in pursuance of the arrangements.
- (4) In this paragraph—
- “relevant authority” means the council of any district or London borough [F748or Welsh county or county borough]or any internal drainage board; and
- “relevant land”, in relation to an agreement with any relevant authority, means—
- (a) where the relevant authority is a district or London borough [F748or Welsh county or county borough]council, the chargeable land within the council’s area; and
 - (b) where the relevant authority is an internal drainage board, such land as may be specified in the agreement.

SCHEDULE 16

Section 137.

SCHEMES IMPOSING SPECIAL DRAINAGE CHARGES

Submission of scheme

- 1 (1) Before submitting a special charges scheme to either of the Ministers, the [F749appropriate agency] shall consult organisations appearing to it to represent the interests of persons engaged in agriculture in the area designated in the scheme.
- (2) As soon as any special charges scheme has been submitted to either of the Ministers, the [F749appropriate agency] shall—

- (a) send copies of the scheme to—
- (i) the council of any county, [^{F750}county borough]district or London borough wholly or partly within the relevant area;
 - (ii) the drainage board for any internal drainage district within the relevant area; and
 - (iii) every organisation appearing to the [^{F749}appropriate agency] to represent the interests of persons engaged in agriculture in the relevant area;
- and
- (b) publish, in one or more newspapers circulating in the area affected by the scheme, a notice stating—
- (i) that the scheme has been submitted to that Minister;
 - (ii) that a copy of it is open to inspection at a specified place; and
 - (iii) that representations with respect to the scheme may be made to that Minister at any time within one month after the publication of the notice.
- (3) Where the [^{F749}appropriate agency] submit a special charges scheme which designates any watercourse wholly or partly within an internal drainage district, then (unless the [^{F749}appropriate agency] is the drainage board for that district) the scheme must be accompanied either—
- (a) by a statement of the drainage board for that district that they have consented to the designation; or
 - (b) by a statement that they have not consented thereto and a further statement setting out the reasons why the watercourse should nevertheless be designated for the purposes of section 137 of this Act.
- (4) For the purposes of sub-paragraph (2) above “the relevant area” is the area designated in the scheme.

- (3) An order confirming a special charges scheme may contain provisions with respect to the persons by whom all or any of the expenses incurred by either of the Ministers or by other persons in connection with the making or confirmation of the order, or the making of the scheme, are to be borne.

Textual Amendments

F749 Words in Sch. 16 paras. 1-3 substituted (1.4.2013) by The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755), art. 1(2), Sch. 2 para. 311(d) (with Sch. 7)

Notice of proposed order

- 3 (1) Before either of the Ministers makes an order confirming a special charges scheme he shall cause notice of—
- (a) the intention to make it;
 - (b) the place where copies of the draft order may be inspected and obtained; and
 - (c) the period within which, and the manner in which, objections to the draft order may be made,
- to be published in the London Gazette and in such other manner as he thinks best adapted for informing persons affected and to be sent to the persons specified in sub-paragraph (2) below.
- (2) The persons referred to in sub-paragraph (1) above are—
- (a) every county council [^{F751}, county borough council] or London borough council in whose area any part of the area proposed to be affected by the order is situated and, if any part of that area is situated in the City of London, the Common Council of the City of London; and
 - (b) the [^{F749}appropriate agency] and every drainage body, navigation authority, harbour authority or conservancy authority that is known to the Minister in question to be exercising jurisdiction within the area proposed to be affected by the order.
- (3) In sub-paragraph (2) above “drainage body” has the same meaning as in section 108 of this Act.

Textual Amendments

F751 Words in Sch. 16 para. 3(2)(a) inserted (1.4.1996) by 1994 c. 19, s. 22(5), Sch. 11 Pt. I para. 3(10)(b) (with ss. 54(4)(7), 55(5), Sch. 17 paras. 22(1), 23(2)); S.I. 1996/396, art. 3, Sch. 1

Determination of whether to make order

- 4 (1) Before either of the Ministers makes an order confirming a special charges scheme, he—
- (a) shall consider any objections duly made to the draft order; and
 - (b) may, in any case, cause a public local inquiry to be held with respect to any objections to the draft order.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (2) Each of the Ministers shall have power, in making an order confirming a special charges scheme, to make such modifications in the terms of the draft as appear to him to be desirable.

Procedure and other matters after the making of an order

- 5 (1) After either of the Ministers has made an order confirming a special charges scheme, the order (together with a notice under sub-paragraph (2) below) shall be published in such manner as he thinks best adapted for informing the persons affected.
- (2) A notice under this sub-paragraph is a notice—
- (a) that the Minister in question has made the order; and
 - (b) that the order will become final and have effect unless, within such period of not less than thirty days as may be specified in the notice, a memorial praying that the order shall be subject to special parliamentary procedure is presented to that Minister, by a person who is affected by the order and has such interest as may be prescribed by regulations made by one of the Ministers as being sufficient for the purpose.

Orders subject to special parliamentary procedure

- 6 (1) If—
- (a) no such memorial as is mentioned in paragraph 5(2) above has been presented within the period so mentioned in respect of any order confirming a special charges scheme; or
 - (b) every such memorial has been withdrawn,
- the Minister who made the order shall confirm the order and it shall thereupon have effect.
- (2) If such a memorial has been presented in respect of such an order and has not been withdrawn, the order shall be subject to special parliamentary procedure.
- (3) An order confirming a special charges scheme shall in any event be subject to special parliamentary procedure if the Minister who makes the order so directs.
- (4) The Minister who makes an order confirming a special charges scheme may, at any time before it has been laid before Parliament, revoke, either wholly or partially, any order that is subject to special parliamentary procedure.

Notice of unconfirmed orders

- 7 As soon as may be after an unconfirmed order has effect, the Minister who made the order shall publish in the London Gazette, and in such other manner as he thinks best adapted for informing persons affected, a notice—
- (a) stating that the order has come into force; and
 - (b) naming a place where a copy of it may be seen at all reasonable hours.

Challenge to unconfirmed orders

- 8 (1) If any person aggrieved by an unconfirmed order desires to question its validity on the ground—
- (a) that it is not within the powers of this Act; or

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (b) that any requirement of this Act has not been complied with, he may, within six weeks of the relevant date, make an application for the purpose to the High Court.
- (2) Where an application is duly made to the High Court under this paragraph, the High Court, if satisfied—
- (a) that the order is not within the powers of this Act; or
- (b) that the interests of the applicant have been substantially prejudiced by any requirements of this Act not having been complied with,
- may quash the order either generally or in so far as it affects the applicant.
- (3) Except by leave of the Court of Appeal, no appeal shall lie to the [^{F752}Supreme Court] from a decision of the Court of Appeal in proceedings under this paragraph.
- (4) Subject to the preceding provisions of this paragraph an unconfirmed order shall not at any time be questioned in any legal proceedings whatsoever.
- (5) In this paragraph “the relevant date”, in relation to an order, means—
- (a) where the order is subject to special parliamentary procedure, the date on which the order becomes operative under the ^{M140}Statutory Orders (Special Procedure) Act 1945;
- (b) where the order is not subject to special parliamentary procedure, the date of the publication of the notice mentioned in paragraph 7 above.

Textual Amendments

F752 Words in Sch. 16 para. 8(3) substituted (1.10.2009) by [Constitutional Reform Act 2005 \(c. 4\), s. 148\(1\), Sch. 9 para. 55](#); [S.I. 2009/1604, art. 2\(d\)](#)

Marginal Citations

M140 1945 c. 18 (9 & 10 Geo 6).

Power to make regulations for purposes of Schedule

- 9 The Ministers may make regulations in relation to—
- (a) the publication of notices under this Schedule;
- (b) the holding of public local inquiries under this Schedule and procedure at those inquiries; and
- (c) any other matters of procedure respecting the making of orders confirming a special charges scheme.

Interpretation

- 10 (1) In this Schedule—
- “special charges scheme” means a scheme under section 137 of this Act; and
- “unconfirmed order” means an order confirming a special charges scheme, other than one which is itself confirmed under section 6 of the Statutory Orders (Special Procedure) Act 1945.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (2) Section 113 of this Act shall apply for the interpretation of this Schedule as it applies for the interpretation of Part IV of this Act.

SCHEDULE 17

Section 143.

ORDERS WITH RESPECT TO NAVIGATION TOLLS

Orders to be made by statutory instrument

- 1 The power to make an order under section 143 of this Act shall be exercisable by statutory instrument.

Inquiries

- 2 (1) The Secretary of State may hold inquiries for the purposes of section 143 of this Act as if those purposes were purposes of the ^{M141}Ministry of Transport Act 1919; and section 20 of that Act (power to hold inquiries) shall have effect accordingly.
- (2) The Secretary of State may make such order as to the payment of costs incurred by him in connection with any such inquiry as he may think just.

M141 1919 c. 50.

Notice of order

- 3 (1) After the Secretary of State has made an order under section 143 of this Act, the order, together with a notice under sub-paragraph (2) below, shall be published in such manner as he thinks best adapted for informing the persons affected.
- (2) A notice under this sub-paragraph is a notice—
- (a) that the Secretary of State has made the order; and
 - (b) that the order will become final and have effect unless, within such period of not less than thirty days as may be specified in the notice, a memorial praying that the order shall be subject to special parliamentary procedure is presented to the Secretary of State, by a person who is affected by the order and has such an interest as may be prescribed as being sufficient for the purpose.

Orders subject to special parliamentary procedure

- 4 (1) If—
- (a) no such memorial as is mentioned in paragraph 3(2) above has been presented within the period so mentioned in respect of any order under section 143 of this Act; or
 - (b) every such memorial has been withdrawn,
- the Secretary of State shall confirm the order and it shall thereupon have effect.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (2) If such a memorial has been presented in respect of such an order and has not been withdrawn, the order shall be subject to special parliamentary procedure.
- (3) An order under section 143 of this Act shall, in any event, be subject to special parliamentary procedure if the Secretary of State so directs.
- (4) The Secretary of State may, at any time before it has been laid before Parliament, revoke, either wholly or partially, any order under section 143 of this Act that is subject to special parliamentary procedure.

SCHEDULE 18

Section 154.

MODIFICATION OF COMPENSATION PROVISION ETC IN RELATION TO THE CREATION OF NEW RIGHTS

Compensation enactments

- 1 Subject to the following provisions of this Schedule, the enactments for the time being in force with respect to compensation for the compulsory purchase of land shall apply with the necessary modifications as respects compensation in the case of a compulsory acquisition under section 154 of this Act of a right by the creation of a new right as they apply as respects compensation on the compulsory purchase of land and interests in land.

Adaptation of the Compulsory Purchase Act 1965

- 2 (1) The Compulsory Purchase Act 1965 (in the following provisions of this Schedule referred to as “the 1965 Act”) shall have effect with the modifications necessary to make it apply to the compulsory acquisition under section 154 of this Act of a right by the creation of a new right as it applies to the compulsory acquisition under that section of land, so that, in appropriate contexts, references in that Act to land are to be read (according to the requirements of the particular context) as referring to, or as including references to—
 - (a) the right acquired or to be acquired; or
 - (b) the land over which the right is or is to be exercisable.
- (2) Without prejudice to the generality of sub-paragraph (1) above, Part I of the 1965 Act shall apply in relation to the compulsory acquisition under section 154 of this Act of a right by the creation of a new right with the modifications specified in the following provisions of this Schedule.

Section 7 of the 1965 Act

- 3 For section 7 of the 1965 Act (measure of compensation) there shall be substituted the following section—
 - “7 In assessing the compensation to be paid by the acquiring authority under this Act regard shall be had not only to the extent (if any) to which the value of the land over which the right is to be acquired is depreciated by the acquisition of the right but also to the damage (if any) to be sustained by the owner of the land by reason of its severance from other land of his, or injuriously

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

affecting that other land by the exercise of the powers conferred by this or the special Act.”

Section 8 of the 1965 Act

[^{F753}4 Section 8(1) of the Compulsory Purchase Act 1965 has effect as if references to acquiring land were to acquiring a right in the land, and Schedule 2A to that Act is to be read as if, for that Schedule, there were substituted—

“SCHEDULE
2A

COUNTER-NOTICE REQUIRING PURCHASE OF LAND

Introduction

- 1 (1) This Schedule applies where an acquiring authority serve a notice to treat in respect of a right over the whole or part of a house, building or factory.
- (2) But see section 2A of the Acquisition of Land Act 1981 (under which a compulsory purchase order can exclude from this Schedule land that is 9 metres or more below the surface).
- 2 In this Schedule “house” includes any park or garden belonging to a house.

Counter-notice requiring purchase of land

- 3 A person who is able to sell the house, building or factory (“the owner”) may serve a counter-notice requiring the authority to purchase the owner’s interest in the house, building or factory.
- 4 A counter-notice under paragraph 3 must be served within the period of 28 days beginning with the day on which the notice to treat was served.

Response to counter-notice

- 5 On receiving a counter-notice the acquiring authority must decide whether to—
 - (a) withdraw the notice to treat,
 - (b) accept the counter-notice, or
 - (c) refer the counter-notice to the Upper Tribunal.
- 6 The authority must serve notice of their decision on the owner within the period of 3 months beginning with the day on which the counter-notice is served (“the decision period”).
- 7 If the authority decide to refer the counter-notice to the Upper Tribunal they must do so within the decision period.
- 8 If the authority do not serve notice of a decision within the decision period they are to be treated as if they had served notice of a decision to withdraw the notice to treat at the end of that period.
- 9 If the authority serve notice of a decision to accept the counter-notice, the compulsory purchase order and the notice to treat are to have effect as if they included the owner’s interest in the house, building or factory.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

Determination by Upper Tribunal

- 10 On a referral under paragraph 7 the Upper Tribunal must determine whether the acquisition of the right would—
- (a) in the case of a house, building or factory, cause material detriment to the house, building or factory, or
 - (b) in the case of a park or garden, seriously affect the amenity or convenience of the house to which the park or garden belongs.
- 11 In making its determination, the Upper Tribunal must take into account—
- (a) the effect of the acquisition of the right,
 - (b) the proposed use of the right, and
 - (c) if the right is proposed to be acquired for works or other purposes extending to other land, the effect of the whole of the works and the use of the other land.
- 12 If the Upper Tribunal determines that the acquisition of the right would have either of the consequences described in paragraph 10 it must determine how much of the house, building or factory the authority ought to be required to take.
- 13 If the Upper Tribunal determines that the authority ought to be required to take some or all of the house, building or factory the compulsory purchase order and the notice to treat are to have effect as if they included the owner's interest in that land.
- 14 (1) If the Upper Tribunal determines that the authority ought to be required to take some or all of the house, building or factory, the authority may at any time within the period of 6 weeks beginning with the day on which the Upper Tribunal makes its determination withdraw the notice to treat in relation to that land.
- (2) If the acquiring authority withdraws the notice to treat under this paragraph they must pay the person on whom the notice was served compensation for any loss or expense caused by the giving and withdrawal of the notice.
- (3) Any dispute as to the compensation is to be determined by the Upper Tribunal.”]

Textual Amendments

F753 Sch. 18 para. 4 substituted (3.2.2017) by [Housing and Planning Act 2016 \(c. 22\)](#), s. 216(3), Sch. 17 paras. 6, 7; S.I. 2017/75, reg. 3(g) (with reg. 5)

Effect of deed poll

- 5 The following provisions of the 1965 Act (being provisions stating the effect of a deed poll executed in various circumstances where there is no conveyance by persons with interests in the land), that is to say—
- (a) section 9(4) (refusal by owners to convey);
 - (b) paragraph 10(3) of Schedule 1 (owners under incapacity);
 - (c) paragraph 2(3) of Schedule 2 (absent and untraced owners); and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

(d) paragraphs 2(3) and 7(2) of Schedule 4 (common land), shall be so modified as to secure that, as against persons with interests in the land which are expressed to be overridden by the deed, the right which is to be compulsorily acquired is vested absolutely in the acquiring authority.

Section 11 of the 1965 Act

- 6 Section 11 of the 1965 Act (powers of entry) shall be so modified as to secure that, as from the date on which the acquiring authority have served notice to treat in respect of any right, they have power, exercisable in the like circumstances and subject to the like conditions, to enter for the purpose of exercising that right (which shall be deemed for this purpose to have been created on the date of service of the notice); and sections 12 (penalty for unauthorised entry) and 13 (entry on warrant in the event of obstruction) shall be modified correspondingly.

Section 20 of the 1965 Act

- 7 Section 20 of the 1965 Act (protection for interests of tenants at will etc.) shall apply with the modifications necessary to secure that persons with such interests as are mentioned in that section are compensated in a manner corresponding to that in which they would be compensated on a compulsory acquisition under section 154 of this Act of that land, but taking into account only the extent (if any) of such interference with such an interest as is actually caused, or likely to be caused, by the exercise of the right in question.

Section 22 of the 1965 Act

- 8 Section 22 of the 1965 Act (protection of acquiring authority's possession where by inadvertence an estate, right or interest has not been got in) shall be so modified as to enable the acquiring authority, in circumstances corresponding to those referred to in that section, to continue entitled to exercise the right acquired, subject to compliance with that section as respects compensation.

Applications for orders

- 1 (1) Where the [^{F754}appropriate agency] applies to either of the Ministers for a compulsory works order, it shall—
- (a) submit to that Minister a draft of the order applied for;
 - (b) publish a notice with respect to the application, at least once in each of two successive weeks, in one or more newspapers circulating in each relevant locality;
 - (c) not later than the date on which that notice is first published—
 - (i) serve a copy of the notice on each of the persons specified in relation to the application in sub-paragraph (3) below; and
 - (ii) in the case of a draft order which would authorise the stopping-up or diversion of a footpath^{F755}, bridleway or restricted byway], cause such a copy, together with a plan showing the general effect of the draft order so far as it relates to the footpath^{F755}, bridleway or restricted byway], to be displayed in a prominent position at the ends of the part of the path or way to be stopped up or diverted;

and

 - (d) publish a notice in the London Gazette which-
 - (i) states that the draft order has been submitted to that Minister;
 - (ii) names every local authority on whom a notice is required to be served under this paragraph;
 - (iii) specifies a place where a copy of the draft order and of any relevant map or plan may be inspected; and
 - (iv) gives the name of every newspaper in which the notice required by virtue of paragraph (b) above was published and the date of an issue containing the notice.
- (2) The notice required by virtue of sub-paragraph (1)(b) above to be published with respect to an application for an order by the [^{F754}appropriate agency] shall—
- (a) state the general effect of the order applied for;
 - (b) in the case of an application made wholly or partly for the purpose of enabling any discharges of water to be made—
 - (i) contain particulars of the proposed discharges, stating the purposes of the discharges and specifying each place of discharge;
 - (ii) specify the places at which the water to be comprised in the proposed discharges is to be taken and the treatment (if any) which the draft order proposes to require the water, or any of it, to receive before being discharged under the order; and
 - (iii) state the effect which, in the opinion of the [^{F754}appropriate agency], the proposed discharges would have on the flow, level and quality of water in any inland waters or underground strata;
 - (c) specify a place where a copy of the draft order and of any relevant map or plan may be inspected by any person free of charge at all reasonable times during the period of twenty-eight days beginning with the date of the first publication of the notice; and
 - (d) state that any person may within that period, by notice to the Minister applied to, object to the making of the order.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (3) The persons mentioned in sub-paragraph (1)(c) above in relation to an application for a compulsory works order a draft of which has been submitted to either of the Ministers are—
- (a) every local authority whose area is or includes the whole or any part of a relevant locality and which is not [^{F756}an English county] council;
 - (b) every water undertaker whose area is or includes the whole or any part of such a locality;
 - (c) every navigation authority, harbour authority and conservancy authority which would be affected by, or has functions in relation to any inland waters which would be affected by, any provision proposed to be made by the order;
 - [^{F757}(d) every person who—
 - (i) is an owner, lessee, tenant (whatever the tenancy period) or occupier of any land in relation to which compulsory powers would become exercisable if the order were made in the terms of the draft order; or
 - (ii) who the water undertaker thinks is likely to be entitled to make a claim for compensation under section 10 of the Compulsory Purchase Act 1965 if the order is confirmed and the compulsory powers become exercisable, so far as he is known to the water undertaker after making diligent inquiry;]
 - (e) every person who has given notice to the [^{F754}appropriate agency] requiring it to notify him of applications for compulsory works orders and has paid such reasonable charge as the [^{F754}appropriate agency] may have required him to pay for being notified by virtue of this paragraph;
 - (f) such other persons as may be prescribed.
- (4) In this paragraph “relevant locality”, in relation to an application for an order, means—
- (a) any locality which would be affected by any provision proposed to be made by the order for the purpose of enabling any engineering or building operations to be carried out; and
 - (b) where provision is proposed to be made by the order for the purpose of enabling discharges of water to be made, each locality in which the place of any of the proposed discharges is situated or in which there appears to the [^{F754}appropriate agency] to be any inland waters or underground strata the flow, level or quality of water in which may be affected by any of the proposed discharges.

Supply of copies of draft orders

- 2 Where the [^{F754}appropriate agency] is applying for a compulsory works order, it shall, at the request of any person and on payment by that person of such charge (if any) as the [^{F754}appropriate agency] may reasonably require, furnish that person with a copy of any draft order submitted to either of the Ministers under paragraph 1 above and of any relevant map or plan.

Textual Amendments

F754 Words in Sch. 19 paras. 1-5 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(e)** (with Sch. 7)

Powers on an application

- 3 (1) On an application for a compulsory works order, the Minister or the Secretary of State may make the order either in the terms of the draft order submitted or, subject to sub-paragraphs (2) and (3) below, in those terms as modified in such manner as he thinks fit, or may refuse to make an order.
- (2) Neither of the Ministers shall make such a modification of a draft order as he considers is likely adversely to affect any persons unless he is satisfied that the [^{F754}appropriate agency] has given and published such additional notices, in such manner, as he may have required.
- (3) Neither of the Ministers shall, unless all interested parties consent, make a compulsory works order so as to confer in relation to any land any powers of compulsory acquisition which would not have been conferred in relation to that land if the order were made in the terms of the draft order submitted under paragraph 1 above.
- (4) Where one of the Ministers refuses, on an application for a compulsory works order, to make an order, the [^{F754}appropriate agency] shall, as soon as practicable after the refusal, notify the refusal to every person on whom it was, by virtue of paragraph 1(1)(c)(i) above, required to serve a copy of the notice with respect to the application.

Textual Amendments

F754 Words in Sch. 19 paras. 1-5 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 311(e)** (with Sch. 7)

Consideration of objections etc.

- 4 (1) If, where an application for a compulsory works order has been made, either of the Ministers receives any notice of an objection to it, before the end of the relevant period, from—
- (a) any person on whom a notice under paragraph 1 or 3 above is required to be served; or
- (b) from any other person appearing to that Minister to be affected by the order as submitted or as proposed to be modified under paragraph 3 above,

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

then, unless the objection is withdrawn, the Minister or the Secretary of State shall, before making the order, either cause a local inquiry to be held or afford to the objector and to the [^{F754}appropriate agency] an opportunity of appearing before, and being heard by, a person appointed by him for the purpose.

- (2) Where any objection received by one of the Ministers as mentioned in subparagraph (1) above relates to any powers of compulsory acquisition, the Minister or the Secretary of State—
- (a) may require the objector to state in writing the grounds of his objection; and
 - (b) if he is satisfied that the objection relates exclusively to matters that can be dealt with in the assessment of compensation, may disregard the objection for the purposes of that subparagraph.
- (3) In this paragraph “the relevant period”, in relation to an application for any order, means the period ending with whichever is the later of—
- (a) the end of the period of twenty-eight days beginning with the date of the first publication of the notice published with respect to the application for the purposes of paragraph 1(1)(b) above; and
 - (b) the end of the period of twenty-five days beginning with the date of the publication in the London Gazette of the notice published for the purposes of the application by virtue of paragraph 1(1)(d) above,

together, in the case of an application for an order modifications to which have been proposed by the Minister considering the application, with any further periods specified with respect to the modifications in notices under paragraph 3(2) above.

shall apply in relation to so much of a compulsory works order as confers powers of compulsory acquisition as they apply in relation to a compulsory purchase order made by virtue of section 154 of this Act and, accordingly, shall so apply, where the case so requires, with the modifications made by Schedule 18 to this Act.

(2) Subject to the provisions of sub-paragraph (6) below, if any person aggrieved by a compulsory works order containing powers of compulsory acquisition, or by a certificate given under the special land provisions in connection with such an order, desires—

- (a) to question the validity of the order, or of any provision of the order, on the grounds that any powers of compulsory acquisition conferred by the order are not authorised by this Act to be so conferred, or that any of the relevant requirements have not been complied with in relation to the order; or
- (b) to question the validity of the certificate on the grounds that any of the relevant requirements have not been complied with in relation to the certificate,

he may make an application for the purpose to the High Court at any time before the end of the period of six weeks beginning with the date on which notice of the making of the order is first published in accordance with paragraph 5 above or, as the case may be, notice of the giving of the certificate is first published in accordance with the special land provisions.

(3) On any application under sub-paragraph (2) above with respect to any order or certificate, the High Court—

- (a) may by interim order suspend the operation of the order, or any provision of the order, or of the certificate (either generally or in so far as it affects any property of the applicant to the High Court) until the final determination of the proceedings; and
- (b) if satisfied—
 - (i) that any powers of compulsory acquisition conferred by the order are not authorised by this Act to be so conferred; or
 - (ii) that the interests of that applicant have been substantially prejudiced by a failure to comply with any of the relevant requirements in relation to the order or the certificate,

may quash the order, or any provision of the order, or the certificate (either generally or in so far as it affects any property of that applicant).

(4) Except as provided by sub-paragraph (2) above, the validity of any such order or certificate as is mentioned in that sub-paragraph shall not, either before or after the order or certificate has been made or given, be questioned in any legal proceedings whatsoever.

(5) Subject to any order of the High Court under sub-paragraph (3) above, any such order or certificate as is mentioned in sub-paragraph (2) above shall become operative (except, in the case of an order, where it is subject by virtue of the special land provisions to special parliamentary procedure) on the date on which notice of the making or giving of the order or certificate is published as mentioned in the said sub-paragraph (2).

(6) Where an order such as is mentioned in sub-paragraph (2) above is subject to special parliamentary procedure, sub-paragraphs (2) to (4) of this paragraph—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (a) shall not apply to the order if it is confirmed by Act of Parliament under section [^{F760}4 or] 6 of the ^{M144}Statutory Orders (Special Procedure) Act 1945; and
- (b) in any other case, shall have effect as if the reference in sub-paragraph (2) of this paragraph to the date on which notice of the making of the order is first published in accordance with paragraph 5 above were a reference to the date on which the order becomes operative under the said Act of 1945.

(7) In this paragraph—

“the special land provisions” means the provisions, as applied by virtue of sub-paragraph (1) above, of Part III of the ^{M145}Acquisition of Land Act 1981 or, as the case may require, of Part II of Schedule 3 to that Act; and

“the relevant requirements”, in relation to an order or certificate, means the requirements of this Schedule and such requirements of the special land provisions or of any other enactment as are applicable to that order or certificate by virtue of this paragraph.

Compensation in certain cases of compulsory acquisition

7 Where—

- (a) in connection with any engineering or building operations to which a compulsory works order relates, a licence under Chapter II of Part II of this Act is granted, or is deemed to be granted, to the [^{F761}appropriate agency]; and
- (b) that licence is a licence to abstract water or to obstruct or impede the flow of any inland waters,

no compensation shall be payable by virtue of sub-paragraph (1) of paragraph 6 above in respect of any land or interest injuriously affected by the carrying out of those operations, in so far as that land or interest is injuriously affected by the abstraction of water, or the obstruction or impeding of the flow, in accordance with the provisions of the licence.

Compensation in respect of powers other than acquisition powers

- 8 (1) If the value of any interest in any relevant land is depreciated by the coming into force of so much of any compulsory works order as—
- (a) confers compulsory powers, other than powers of compulsory acquisition, for the purpose of enabling any engineering or building operations to be carried out; and
 - (b) grants authority for the carrying out of the operations,
- the person entitled to that interest shall be entitled to compensation from the [F762appropriate agency] of an amount equal to the amount of the depreciation.
- (2) Where the person entitled to an interest in any relevant land sustains loss or damage which—
- (a) is attributable to so much of any compulsory works order as—
 - (i) confers compulsory powers, other than powers of compulsory acquisition, for the purpose of enabling any engineering or building operations to be carried out; and
 - (ii) grants authority for the carrying out of the operations;
 - (b) does not consist in depreciation of the value of that interest; and
 - (c) is loss or damage for which he would have been entitled to compensation by way of compensation for disturbance, if his interest in that land had been compulsorily acquired under section 154 of this Act in pursuance of a notice to treat served on the date on which the order comes into force,
- he shall be entitled to compensation from the [F762appropriate agency] in respect of that loss or damage, in addition to compensation under sub-paragraph (1) above.
- (3) Where any damage to, or injurious affection of, any land which is not relevant land is attributable to so much of any compulsory works order as—
- (a) confers compulsory powers, other than powers of compulsory acquisition, for the purpose of enabling any engineering or building operations to be carried out; and
 - (b) grants authority for the carrying out of the operations,
- the [F762appropriate agency] shall pay compensation in respect of that damage or injurious affection to every person entitled to an interest in that land.
- (4) A person who sustains any loss or damage which is attributable to any discharge of water made by the [F762appropriate agency] in pursuance of a compulsory works order shall be entitled to recover compensation from the [F762appropriate agency] in respect of the loss or damage.
- (5) For the purposes of sub-paragraph (4) above any extra expenditure—
- (a) which it becomes reasonably necessary for any water undertaker or public authority (other than the [F762appropriate agency]) to incur for the purpose of properly carrying out any statutory functions; and
 - (b) which is attributable to any such discharge of water as is mentioned in that sub-paragraph,
- shall be deemed to be a loss sustained by the undertaker or public authority and to be so attributable.
- (6) Any question of disputed compensation under this paragraph, shall be referred to and determined by the [F763Upper Tribunal]; and in relation to the determination of any

such compensation the provisions of [^{F764}section] 4 of the ^{M146}Land Compensation Act 1961 shall apply, subject to any necessary modifications.

- (7) For the purpose of assessing any compensation under this paragraph, so far as that compensation is in respect of loss or damage consisting in depreciation of the value of an interest in land, the rules set out in section 5 of the Land Compensation Act 1961 shall, so far as applicable and subject to any necessary modifications, have effect as they have effect for the purpose of assessing compensation for the compulsory acquisition of an interest in land.
- (8) Where the interest in land in respect of which any compensation falls to be assessed in accordance with sub-paragraph (7) above is subject to a mortgage—
- (a) the compensation shall be assessed as if the interest were not subject to the mortgage;
 - (b) a claim for compensation may be made by any mortgagee of the interest, but without prejudice to the making of a claim by the person entitled to the interest;
 - (c) no such compensation shall be payable in respect of the interest of the mortgagee (as distinct from the interest which is subject to the mortgage); and
 - (d) any such compensation which is payable in respect of the interest which is subject to the mortgage shall be paid to the mortgagee, or, if there is more than one mortgagee, to the first mortgagee, and shall in either case be applied by him as if it were proceeds of sale.
- (9) In this paragraph “relevant land”, in relation to a compulsory works order, means any land which is not land in relation to which powers of compulsory acquisition are conferred by the order but is—
- (a) land where any operations for which authority is granted by the order are to be carried out;
 - (b) land in relation to which compulsory powers are conferred by the order; or
 - (c) land held with any land falling within paragraph (a) or (b) above.

Interpretation

10 In this Schedule—

“bridleway” and “footpath” have the same meanings as in the ^{M147}Highways Act 1980;

“compulsory works order” means an order under section 168 of this Act;
“powers of compulsory acquisition” means any such powers as are mentioned in subsection (4)(a) of section 168 of this Act;

[^{F765}“restricted byway” has the same meaning as in Part 2 of the Countryside and Rights of Way Act 2000;]

Warrant to exercise power

- 2 (1) If it is shown to the satisfaction of a justice of the peace on sworn information in writing—
 - (a) that there are reasonable grounds for the exercise in relation to any premises or vessel of a power conferred by sections 169 to 172 of this Act; and
 - (b) that one or more of the conditions specified in sub-paragraph (2) below is fulfilled in relation to those premises or that vessel,
 the justice may by warrant authorise the relevant authority to designate a person who shall be authorised to exercise the power in relation to those premises, or that vessel, in accordance with the warrant and, if need be, by force.
- (2) The conditions mentioned in sub-paragraph (1)(b) above are—
 - (a) that the exercise of the power in relation to the premises or vessel has been refused;
 - (b) that such a refusal is reasonably apprehended;
 - (c) that the premises are unoccupied or the vessel is unoccupied;
 - (d) that the occupier is temporarily absent from the premises or vessel;

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (e) that the case is one of urgency; or
 - (f) that an application for admission to the premises or vessel would defeat the object of the proposed entry.
- (3) A justice of the peace shall not issue a warrant under this Schedule by virtue only of being satisfied that the exercise of a power in relation to any premises or vessel has been refused, or that a refusal is reasonably apprehended, unless he is also satisfied—
- (a) that notice of the intention to apply for the warrant has been given to the occupier of the premises or vessel; or
 - (b) that the giving of such a notice would defeat the object of the proposed entry.
- (4) For the purposes of the application of this Schedule to the powers conferred by section 171 of this Act in a case to which subsection (4) of that section applies, a justice of the peace shall not issue a warrant under this Schedule unless he is satisfied that the Secretary of State has given his authorisation for the purposes of that subsection in relation to that case.
- (5) Every warrant under this Schedule shall continue in force until the purposes for which the warrant was issued have been fulfilled.

Manner of exercise of powers

- 3 A person designated as the person who may exercise any power to which this Schedule applies shall produce evidence of his designation and other authority before he exercises the power.

Supplementary powers of person making entry etc.

- 4 A person authorised to enter any premises or vessel by virtue of any power to which this Schedule applies shall be entitled, subject in the case of a power exercisable under a warrant to the terms of the warrant, to take with him on to the premises or vessel such other persons and such equipment as may be necessary.

Duty to secure premises

- 5 A person who enters any premises or vessel in the exercise of any power to which this Schedule applies shall leave the premises or vessel as effectually secured against trespassers as he found them.

Compensation

- 6 (1) Where any person exercises any power to which this Schedule applies, it shall be the duty of the relevant authority to make full compensation to any person who has sustained loss or damage by reason of—
- (a) the exercise by the designated person of that power or of any power to take any person or equipment with him when entering the premises or vessel in relation to which the power is exercised; or
 - (b) the performance of, or failure of the designated person to perform, the duty imposed by paragraph 5 above.
- (2) Compensation shall not be payable by virtue of sub-paragraph (1) above in respect of any loss or damage if the loss or damage—
- (a) is attributable to the default of the person who sustained it; or

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Section 177.

CCOMPENSATION ETC. IN RESPECT OF CERTAIN WORKS POWER

Compensation in respect of street works powers

- 1 (1) This paragraph applies, in relation to the [^{F771}appropriate agency], to the powers conferred on it in relation to streets by sections 159 and 162 of this Act.
- (2) It shall be the duty of the [^{F771}appropriate agency]—
 - (a) to do as little damage as possible in the exercise of the powers to which this paragraph applies; and
 - (b) to pay compensation for any loss caused or damage done in the exercise of those powers.
- (3) Any dispute as to whether compensation should be paid under sub-paragraph (2) above, or as to the amount of any such compensation, shall be referred to the arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the Secretary of State.
- (4) Until the coming into force of Part III of the ^{M151}New Roads and Street Works Act 1991, a payment of compensation under this paragraph shall be treated for the purposes of section 32 of the ^{M152}Public Utilities Street Works Act 1950 (provisions against duplication of compensation) as made under an enactment passed before that Act of 1950; but nothing in this sub-paragraph shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing Part III of that Act into force on different days for different purposes (including the purposes of this paragraph).

Compensation in respect of pipe-laying works on private land

- 2 (1) If the value of any interest in any relevant land is depreciated by virtue of the exercise by the [F772appropriate agency] of any power to carry out pipe-laying works on private land, the person entitled to that interest shall be entitled to compensation from the [F772appropriate agency] of an amount equal to the amount of the depreciation.
- (2) Where the person entitled to an interest in any relevant land sustains loss or damage which—
- (a) is attributable to the exercise by the [F772appropriate agency] of any power to carry out pipe-laying works on private land;
 - (b) does not consist in depreciation of the value of that interest; and
 - (c) is loss or damage for which he would have been entitled to compensation by way of compensation for disturbance, if his interest in that land had been compulsorily acquired under section 154 of this Act,
- he shall be entitled to compensation from the [F772appropriate agency] in respect of that loss or damage, in addition to compensation under sub-paragraph (1) above.
- (3) Where any damage to, or injurious affection of, any land which is not relevant land is attributable to the exercise by the [F772appropriate agency], of any power to carry out pipe-laying works on private land, the [F772appropriate agency] shall pay compensation in respect of that damage or injurious affection to every person entitled to an interest in that land.
- (4) The Secretary of State may by regulations make provision requiring the [F772appropriate agency], where it is proposing or has begun, in a prescribed case, to exercise any power to carry out pipe-laying works on private land, to make advance payments on account of compensation that will become payable in respect of the exercise of that power.
- (5) In this paragraph “relevant land”, in relation to any exercise of a power to carry out pipe-laying works on private land, means the land where the power is exercised or land held with that land.
- (6) In this paragraph the references to a power to carry out pipe-laying works on private land are references to any of the powers conferred by virtue of section 160 or 162(3) of this Act.

of any such compensation the provisions of [^{F774}section] 4 of the ^{M153}Land Compensation Act 1961 shall apply, subject to any necessary modifications.

- (2) For the purpose of assessing any compensation under paragraph 2 above, so far as that compensation is in respect of loss or damage consisting in depreciation of the value of an interest in land, the rules set out in section 5 of the Land Compensation Act 1961 shall, so far as applicable and subject to any necessary modifications, have effect as they have effect for the purpose of assessing compensation for the compulsory acquisition of an interest in land.
- (3) Where the interest in land in respect of which any compensation falls to be assessed in accordance with sub-paragraph (2) above is subject to a mortgage—
 - (a) the compensation shall be assessed as if the interest were not subject to the mortgage;
 - (b) a claim for compensation may be made by any mortgagee of the interest, but without prejudice to the making of a claim by the person entitled to the interest;
 - (c) no such compensation shall be payable in respect of the interest of the mortgagee (as distinct from the interest which is subject to the mortgage); and
 - (d) any such compensation which is payable in respect of the interest which is subject to the mortgage shall be paid to the mortgagee, or, if there is more than one mortgagee, to the first mortgagee, and shall in either case be applied by him as if it were proceeds of sale.
- (4) Where, apart from this sub-paragraph, any person entitled to an interest in any land would be entitled under paragraph 2 above to an amount of compensation in respect of any works, there shall be deducted from that amount an amount equal to the amount by which the carrying out of the works has enhanced the value of any other land which—
 - (a) is contiguous or adjacent to that land; and
 - (b) is land to an interest in which that person is entitled in the same capacity.

SCHEDULE 22

Section 178.

PROTECTION FOR PARTICULAR UNDERTAKINGS

Modifications etc. (not altering text)

- C219** Sch. 22 applied (1.12.1991) by [Land Drainage Act 1991 \(c. 59, SIF 73:1\)](#), ss. 67(2), 76(2)

General provisions protecting undertakings

- 1 (1) Nothing in any of the provisions of this Act conferring power on the [^{F778}appropriate agency] to carry out any works shall confer power to do anything, except with the consent of the persons carrying on an undertaking protected by this paragraph, which, whether directly or indirectly, so interferes or will so interfere—
- (a) with works or property vested in or under the control of the persons carrying on that undertaking, in their capacity as such; or
 - (b) with the use of any such works or property,
- as to affect injuriously those works or that property or the carrying on of that undertaking.
- (2) A consent for the purposes of sub-paragraph (1) above may be given subject to reasonable conditions but shall not be unreasonably withheld.
- (3) Subject to the following provisions of this Schedule, any dispute—
- (a) as to whether anything done or proposed to be done interferes or will interfere as mentioned in sub-paragraph (1) above;
 - (b) as to whether any consent for the purposes of this paragraph is being unreasonably withheld; or
 - (c) as to whether any condition subject to which any such consent has been given was reasonable,
- shall be referred to the arbitration of a single arbitrator to be appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (4) The following are the undertakings protected by this paragraph, that is to say—
- (a) the undertakings of the Civil Aviation Authority, [^{F779}the Coal Authority] and [^{F780}a universal service provider (so far as it is his undertaking in relation to the provision of a universal postal service)];
 - (b) the undertaking of any water undertaker or sewerage undertaker;
 - [^{F781}(c) any undertaking consisting in the provision of an electronic communications network;]

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (d) any airport to which Part V of the ^{M154}Airports Act 1986 applies;
 - (e) the undertaking of any public gas supplier within the meaning of Part I of the ^{M155}Gas Act 1986;
 - (f) the undertaking of any person authorised by a licence under Part I of the ^{M156}Electricity Act 1989 to generate, [^{F782}supply or participate in the transmission of] electricity;
 - (g) the undertaking of any navigation authority, harbour authority or conservancy authority or of any internal drainage board;
 - (h) the undertaking of any railway company;
 - (i) any public utility undertaking carried on by a local authority under any Act or under any order having the force of an Act.
 - [^{F783}(j) the undertaking of any licensed operator, within the meaning of the Coal Industry Act 1994;]
 - [^{F784}(k) the undertaking of a person who holds a licence under Chapter I of Part I of the Transport Act 2000 (air traffic services) to the extent that it is the person's undertaking as licence holder.]
- (4A) In sub-paragraph (4)(a) above “universal service provider” has the same meaning as in [^{F785}Part 3 of the Postal Services Act 2011]; and the reference to the provision of a universal postal service shall be construed in accordance with [^{F786}that Part].
- (5) For the purposes of this paragraph any reference in this paragraph, in relation to any such airport as is mentioned in sub-paragraph (4)(d) above, to the persons carrying on the undertaking is a reference to the airport operator.
- (6) The reference in sub-paragraph (1) above to the provisions of this Act conferring power to carry out works includes (without prejudice to the extent of that reference apart from this sub-paragraph) a reference to any provisions of any order under section 108 of this Act by virtue of which any such power is conferred.

Protection for statutory powers and jurisdiction

- 2 (1) Subject to sub-paragraph (2) below, nothing in—
- (a) any provision of this Act conferring power on the [^{F787}appropriate agency] to carry out any works; or
 - (b) any of the flood defence provisions of this Act,
- shall confer power to do anything which prejudices the exercise of any statutory power, authority or jurisdiction from time to time vested in or exercisable by any persons carrying on an undertaking protected by paragraph 1 above.
- (2) Nothing in this paragraph shall be taken to exclude the application of section 109 of this Act to any work executed by persons carrying on an undertaking protected by paragraph 1 above.
- (3) Sub-paragraph (6) of paragraph 1 above shall apply for the purposes of sub-paragraph (1) above as it applies for the purposes of sub-paragraph (1) of that paragraph.
- (4) This paragraph shall be without prejudice to any power under this Act to transfer the functions of any authority.

Textual Amendments

F787 Words in Sch. 22 para. 2(1)(a) substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 314(2)** (with Sch. 7)

Special protection for certain undertakings in respect of street works

- 3 (1) Subject to the following provisions of this paragraph and without prejudice to the other provisions of this Schedule, the powers under the street works provisions to break up or open a street shall not be exercisable where the street, not being a highway maintainable at public expense (within the meaning of the ^{M157}Highways Act 1980)—
- (a) is under the control or management of, or is maintainable by, a railway company or a navigation authority; or
 - (b) forms part of a level crossing belonging to such a company or authority or to any other person,
- except with the consent of the company or authority or, as the case may be, of the person to whom the level crossing belongs.
- (2) Sub-paragraph (1) above shall not apply to any exercise of the powers conferred by the street works provisions for the carrying out of emergency works, within the meaning of Part III of the ^{M158}New Roads and Street Works Act 1991.

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (3) A consent given for the purposes of sub-paragraph (1) above may be made subject to such reasonable conditions as may be specified by the person giving it but shall not be unreasonably withheld.
- (4) Any dispute—
- (a) as to whether a consent for the purposes of sub-paragraph (1) above should be given or withheld; or
 - (b) as to whether the conditions to which any such consent is made subject are reasonable,
- shall be referred to the arbitration of a single arbitrator appointed by agreement between the parties to the dispute or, in default of agreement, by the President of the Institution of Civil Engineers.
- (5) If the [^{F788}appropriate agency] contravenes, without reasonable excuse, the requirements of sub-paragraph (1) above, it shall be guilty of an offence and liable, on summary conviction, to a fine not exceeding level 3 on the standard scale.
- (6) The restrictions contained in paragraphs (1) to (5) of section 32 of the ^{M159}Tramways Act 1870 (protection of tramways) shall apply in relation to any exercise of a power conferred by the street works provision s—
- (a) as they apply in relation to the powers mentioned in that section; and
 - (b) as if references in that section to a tramway included references to a trolley vehicle system.
- (7) In this paragraph “the street works provisions” means sections 159 and 162(2) of this Act.
- (8) Until the coming into force of section 52 of the New Roads and Street Works Act 1991, sub-paragraph (2) above shall have effect as if the reference to Part III of that Act were a reference to the ^{M160}Public Utilities Street Works Act 1950; but nothing in this sub-paragraph shall be taken to prejudice the power of the Secretary of State under that Act of 1991 to make an order bringing that section 52 into force on different days for different purposes (including the purposes of this paragraph).

SCHEDULE 23

Section 182.

MINERAL RIGHTS

Acquisition of mineral rights

- 1 (1) This paragraph applies in each of the following cases, that is to say—
- (a) where the [^{F796}appropriate agency] acquires any land (whether compulsorily in exercise of any power conferred by or under this Act or otherwise); and
 - (b) where the [^{F796}appropriate agency] carries out any works in relation to any land for the purposes of, or in connection with, the carrying out of any of its functions.
- (2) Subject to sub-paragraph (3) below, the [^{F796}appropriate agency] shall not, by virtue only of its acquisition of the land or the carrying out of the works, become entitled to any mines or minerals lying under the land; and, accordingly, any such mines or minerals shall be deemed to be excepted from any instrument by virtue of which the land vests in the [^{F796}appropriate agency] unless express provision to the contrary is contained—
- (a) where the land vests in the [^{F796}appropriate agency] by virtue of a conveyance, in the conveyance; or
 - (b) where the land is acquired by the [^{F796}appropriate agency] in pursuance of any power of compulsory acquisition conferred by or under this Act, in the order authorising the acquisition.
- (3) The [^{F796}appropriate agency] shall be entitled to such parts of any mines or minerals that lie under the land as it may be necessary for it to dig, carry away or use in carrying out any works for the purpose of constructing, making, erecting or laying any part of its undertaking.

Notice required for the working of underlying mines

- 2 (1) If the owner of any mines or minerals underlying any part of the [F796 appropriate agency's] undertaking proposes to work them, he shall, not less than thirty days before the commencement of working, serve notice of his intention to do so on the [F796 appropriate agency].
- (2) On receipt of a notice under sub-paragraph (1) above the [F796 appropriate agency] may cause the mines or minerals to be inspected by a person designated by it for the purpose.
- (3) Subject to sub-paragraph (5) and paragraph 3 below, if, where notice has been served under this paragraph, the [F796 appropriate agency]—
- (a) considers that the working of the underlying mines or minerals is likely to damage any part of its undertaking;
 - (b) is willing to compensate the owner of the mines or minerals for the restriction imposed by virtue of this sub-paragraph; and
 - (c) serves notice to that effect on the owner of the mines or minerals before the end of the period of thirty days mentioned in sub-paragraph (1) above,
- the owner shall not work the mines or minerals except to such extent as may be determined by the [F796 appropriate agency], and the [F796 appropriate agency] shall so compensate the owner.
- (4) Any dispute as to the amount of any compensation payable by virtue of sub-paragraph (3) above shall be referred to and determined by the [F797 Upper Tribunal].
- (5) If before the end of the period of thirty days mentioned in sub-paragraph (1) above, no notice has been served under sub-paragraph (3)(c) above by the [F796 appropriate agency], the entitlement of the owner of the mines and minerals to work them shall be an entitlement to work them by proper methods and in the usual manner of working such mines or minerals in the district in question.
- (6) If any damage to the undertaking of the [F796 appropriate agency] is caused by the working otherwise than as authorised by this paragraph of any mines or minerals underlying any part of its undertaking—
- (a) the owner of the mines or minerals shall, at his own expense, forthwith repair the damage; and
 - (b) the [F796 appropriate agency] may, without waiting for the owner to perform his duty, repair the damage and may recover the expenses reasonably incurred by it in doing so from the owner.

Textual Amendments

F796 Words in Sch. 23 paras. 1-7 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(a)** (with Sch. 7)

F797 Words in Sch. 23 para. 2(4) substituted (1.6.2009) by [The Transfer of Tribunal Functions \(Lands Tribunal and Miscellaneous Amendments\) Order 2009 \(S.I. 2009/1307\)](#), art. 1, **Sch. 1 para. 236** (with Sch. 5)

Mining communications

- 3 (1) If the working of any mines or minerals is prevented by reason of any of the preceding provisions of this Schedule, the owner of the mines or minerals may cut and make

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. such communication works through the mines or minerals, or the strata in which they are situated, as are required for the ventilation, drainage and working of mines or minerals which are not underlying any part of the undertaking of the [^{F796}appropriate agency].

- (2) Communication works cut or made under this paragraph—
- (a) shall not, in a case where—
- (i) the part of the undertaking in question was constructed, made, erected or laid in pursuance of an order made under any enactment or is situated on land acquired by the [^{F796}appropriate agency] in pursuance of any powers of compulsory acquisition; and
- (ii) the order authorising the works or acquisition designates dimensions or sections for the communication works, exceed those dimensions or fail to conform to those sections; and
- (b) in any other case, shall not be more than 2.44 metres high or more than 2.44 metres wide.
- (3) Communication works cut or made under this paragraph shall not be cut or made on the land where the part of the undertaking is situated so as to cause damage to that part of the undertaking.
- (4) Where works carried out under this paragraph by the owner of any mines or minerals cause loss or damage to the owner or occupier of land lying over the mines or minerals, the [^{F796}appropriate agency] shall pay full compensation to him for the loss or damage.
- (5) Sub-paragraph (4) above shall not apply where the person sustaining the loss or damage is the owner of the mines.
- (6) In this paragraph “communication works” means airways, headways, gateways or water levels.

Textual Amendments

Powers of entry

- 5 (1) Any person designated in writing for the purpose by the [^{F796}appropriate agency] may, for any purpose specified in sub-paragraph (2) below—
- (a) enter on any land in which the mines or minerals are, or are thought to be, being worked, and which is in or near to the land where any part of the [^{F796}appropriate agency's] undertaking is situated; and
 - (b) enter the mines and any works connected with the mines.
- (2) The purposes mentioned in sub-paragraph (1) above are—
- (a) carrying out any inspection under paragraph 2(2) above;
 - (b) ascertaining whether any mines or minerals have been worked so as to damage the undertaking of the [^{F796}appropriate agency]; and
 - (c) carrying out any works and taking any other steps which the [^{F796}appropriate agency] in question is authorised to carry out or take under paragraph 2(6) above.
- (3) A person authorised to enter any premises under this paragraph may—
- (a) make use of any equipment belonging to the owner of the mines or minerals in question; and
 - (b) use all necessary means for discovering the distance from any part of the undertaking of the [^{F796}appropriate agency] to the parts of the mines or the minerals which are, or are about to be, worked.
- (4) Schedule 20 to this Act shall apply in relation to the powers conferred by this paragraph as it applies to the powers conferred by sections 169 to 172 of this Act.

Textual Amendments

No exemption for injury to mines and minerals

- 6 Nothing in any provision of this Act or of any order made under this Act shall be construed as exempting the [F796 appropriate agency] from any liability to which it would, apart from that provision, have been subject in respect of any damage to any mines or minerals underlying any part of its undertaking or in respect of any loss sustained in relation to any such mines or minerals by a person having an interest therein.

Textual Amendments

F796 Words in Sch. 23 paras. 1-7 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(a)** (with Sch. 7)

Interpretation

- 7 (1) In this Schedule—
- “conveyance” has the same meaning as in the ^{M161}Law of Property Act 1925;
- “designated distance”, in relation to any part of the [F796 appropriate agency's] undertaking, means, subject to sub-paragraph (6) below, thirty-seven metres;
- “mines” means mines of coal, ironstone, slate or other minerals;
- “owner”, in relation to mines and minerals, includes a lessee or occupier;
- and
- “underlying”, in relation to any part of the [F796 appropriate agency's] undertaking, means lying under, or within the designated distance from, that part of that undertaking.
- (2) For the purposes of this Schedule the [F796 appropriate agency's] undertaking shall be taken to consist of so much of any of the following as is for the time being vested in or held by the [F796 appropriate agency] for the purposes of, or in connection with, the carrying out of any of its functions, that is to say—
- (a) any buildings, reservoirs, wells, boreholes or other structures; and
- [F798](b) any resource mains, discharge pipes or other underground works which are for the time being vested in the appropriate agency.]
- (3) References in this Schedule to the working of any mines or minerals include references to the draining of mines and to the winning or getting of minerals.
- (4) For the purposes of this Schedule land shall be treated as acquired by the [F796 appropriate agency] in pursuance of powers of compulsory acquisition if it—
- (a) was so acquired by a water authority or any predecessor of a water authority; and
- (b) is now vested in the [F796 appropriate agency] in accordance with a scheme under Schedule 2 to the ^{M162}Water Act 1989 or otherwise.
- (5) In relation to any land treated by virtue of sub-paragraph (4) above as acquired in pursuance of powers of compulsory acquisition, references in this Schedule to the order authorising the acquisition include references to any local statutory provision

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

which immediately before 1st September 1989 had effect in relation to that land for the purposes of any provisions corresponding to the provisions of this Schedule.

(6) For the purposes of this Schedule where—

- (a) any part of the [^{F796}appropriate agency's] undertaking was constructed, made, erected or laid in pursuance of an order made under any enactment or is situated on land acquired by the [^{F796}appropriate agency] in pursuance of any powers of compulsory acquisition; and
- (b) the order authorising the works or acquisition designates any distance for the purposes of any enactment relating to mines or minerals underlying that part of the undertaking,

then for the purposes of this Schedule that distance (instead of the distance specified in subsection (1) above) shall be the designated distance in relation to that part of the undertaking.

BYELAW - MAKING POWERS OF THE [^{F816}APPROPRIATE AGENCY]

Textual Amendments

F816 Words in [Sch. 25](#) heading substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), [Sch. 2 para. 315\(b\)](#) (with [Sch. 7](#))

Byelaws for regulating use of inland waters

- 1 (1) Subject to the following provisions of this paragraph but without prejudice to the powers conferred by the following provisions of this Schedule, where it appears to the [^{F817}appropriate agency] to be necessary or expedient to do so for the purposes of any of the functions specified in [^{F818}sub-paragraphs (i), (iii) and (v) of section 2(1) (a) of the 1995 Act], the [^{F817}appropriate agency] may make byelaws—
- (a) prohibiting such inland waters as may be specified in the byelaws from being used for boating (whether with mechanically propelled boats or otherwise), swimming or other recreational purposes; or
 - (b) regulating the way in which any inland waters so specified may be used for any of those purposes.
- (2) Byelaws made by the [^{F817}appropriate agency] under this paragraph shall not apply to—
- (a) any tidal waters or any discrete waters;
 - (b) any inland waters in relation to which functions are exercisable by a navigation authority, harbour authority or conservancy authority other than the [^{F817}appropriate agency]; or
 - (c) any reservoir belonging to, and operated by, a water undertaker.
- (3) Byelaws made in respect of any inland waters by virtue of this paragraph may—
- (a) include provision prohibiting the use of the inland waters by boats which are not for the time being registered with the [^{F817}appropriate agency] in such manner as the byelaws may provide; and

- (b) authorise the [^{F817}appropriate agency] to make reasonable charges in respect of the registration of boats in pursuance of the byelaws.

Textual Amendments

F817 Words in Sch. 25 para. 2 substituted (1.4.2013) by The Natural Resources Body for Wales (Functions) Order 2013 (S.I. 2013/755), art. 1(2), **Sch. 2 para. 315(b)** (with Sch. 7)

F818 Words in Sch. 25 para. 1(1) substituted (1.4.1996) by 1995 c. 25, s. 120(1), **Sch. 22 para. 190** (with ss. 7(6), 115, 117); S.I. 1996/186, **art. 3**

Modifications etc. (not altering text)

C222 Sch. 25 para. 1 applied (with modifications) (15.8.2002) by S.I. 2002/1998, **arts. 4, 32** (with art. 33)

Byelaws for regulating the use of navigable waters etc.

- 2 (1) The [^{F817}appropriate agency] shall have power to make such byelaws as are mentioned in sub-paragraph (3) below with respect to any inland waters in relation to which—
- (a) there is a public right of navigation; and
 - (b) the condition specified in sub-paragraph (2) below is satisfied,
- and with respect to any land associated with such waters.
- (2) For the purposes of this paragraph the condition mentioned in sub-paragraph (1) above is satisfied in relation to any waters if navigation in those waters—
- (a) is not for the time being subject to the control of any navigation authority, harbour authority or conservancy authority; or
 - (b) is subject to the control of such a navigation authority, harbour authority or conservancy authority as is prescribed for the purposes of this paragraph by reason of its appearing to the Secretary of State to be unable for the time being to carry out its functions.
- (3) The byelaws referred to in sub-paragraph (1) above in relation to any inland waters or to any land associated with any such waters are byelaws for any of the following purposes, that is to say—
- (a) the preservation of order in or on any such waters or land;
 - (b) the prevention of damage to anything in or on any such waters or land or to any such land;
 - (c) securing that persons resorting to any such waters or land so behave as to avoid undue interference with the enjoyment of the waters or land by others.
- (4) Without prejudice to the generality of any of the paragraphs of sub-paragraph (3) above or to the power conferred on the [^{F817}appropriate agency] by virtue of paragraph 4 below, the byelaws mentioned in that sub-paragraph include byelaws—
- (a) regulating sailing, boating, bathing and fishing and other forms of recreation;
 - (b) prohibiting the use of the inland waters in question by boats which are not for the time being registered, in such manner as may be required by the byelaws, with the [^{F817}appropriate agency];
 - (c) requiring the provision of such sanitary appliances as may be necessary for the purpose of preventing pollution; and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. - (d) authorising the making of reasonable charges in respect of the registration of boats for the purposes of the byelaws.
- (5) In this paragraph “boat” includes a vessel of any description, and “boating” shall be construed accordingly.

Textual Amendments

F817 Words in Sch. 25 para. 2 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(b)** (with Sch. 7)

Byelaws for regulating the use of the ^{F819}appropriate agency's] waterways etc.

Textual Amendments

F819 Words in Sch. 25 para. 3 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(b)** (with Sch. 7)

- 3 (1) The ^{F819}appropriate agency] shall have power to make such byelaws as are mentioned in sub-paragraph (2) below with respect to any waterway owned or managed by the ^{F819}appropriate agency] and with respect to any land held or managed with the waterway.
- (2) The byelaws referred to in sub-paragraph (1) above in relation to any waterway or to any land held or managed with any such waterway are byelaws for any of the following purposes, that is to say—
- (a) the preservation of order on or in any such waterway or land;
 - (b) the prevention of damage to anything on or in any such waterway or land or to any such land;
 - (c) securing that persons resorting to any such waterway or land so behave as to avoid undue interference with the enjoyment of the waterway or land by others.
- (3) Without prejudice to the generality of any of the paragraphs of sub-paragraph (2) above or to the power conferred on the ^{F819}appropriate agency] by virtue of paragraph 4 below, the byelaws mentioned in that sub-paragraph include byelaws—
- (a) regulating sailing, boating, bathing and fishing and other forms of recreation;
 - (b) prohibiting the use of the waterway in question by boats which are not for the time being registered, in such manner as may be required by the byelaws, with the ^{F819}appropriate agency];
 - (c) requiring the provision of such sanitary appliances as may be necessary for the purpose of preventing pollution; and
 - (d) authorising the making of reasonable charges in respect of the registration of boats for the purposes of the byelaws.
- (4) In this paragraph—
- “boat” and “boating” have the same meanings as in paragraph 2 above; and
- “waterway” has the same meaning as in the National Parks and Access to the ^{M173}Countryside Act 1949.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. M173 1949 c. 97.

Byelaws for controlling certain forms of pollution

- 4 (1) The [^{F820}appropriate agency] may by byelaws make such provision as the [^{F820}appropriate agency] considers appropriate—
- (a) for prohibiting or regulating the washing or cleaning in any controlled waters of things of a description specified in the byelaws;
 - (b) for prohibiting or regulating the keeping or use on any controlled waters of vessels of a description specified in the byelaws which are provided with water closets or other sanitary appliances.
- (2) In this paragraph—
- “controlled waters” has the same meaning as in Part III of this Act; and
- “sanitary appliance”, in relation to a vessel, means any appliance which—
- (a) not being a sink, bath or shower bath, is designed to permit polluting matter to pass into the water where the vessel is situated; and
 - (b) is prescribed for the purposes of this paragraph.

Textual Amendments

F820 Words in Sch. 25 paras. 4-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(b)** (with Sch. 7)

Byelaws for flood defence and drainage purposes

- 5 (1) The [^{F820}appropriate agency] may make such byelaws in relation to any particular locality or localities as it considers necessary [^{F821}for any of Purposes 1 to 4.
- (1A) Purpose 1 is to secure the efficient working of a drainage system.
- (1B) Purpose 2 is to regulate the effects on the environment of a drainage system.
- (1C) Purpose 3 is to secure the effectiveness of flood risk management work within the meaning of section 165.
- (1D) Purpose 4 is to secure the effectiveness of works done in reliance on section 38 or 39 of the Flood and Water Management Act 2010 (incidental flooding or coastal erosion).]
- (2) Without prejudice to the generality of sub-paragraph (1) above and subject to sub-paragraph (3) below, the [^{F820}appropriate agency] may, in particular, make byelaws for any of the following purposes, that is to say—
- (a) regulating the use and preventing the improper use of any watercourses, banks or works vested in the [^{F820}appropriate agency] or under its control or for preserving any such watercourses, banks or works from damage or destruction;
 - (b) regulating the opening of sluices and flood gates in connection with any such works as are mentioned in paragraph (a) above;

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (c) preventing the obstruction of any watercourse vested in the [^{F820}appropriate agency] or under its control by the discharge into it of any liquid or solid matter or by reason of any such matter being allowed to flow or fall into it;
- (d) compelling the persons having control of any watercourse vested in the [^{F820}appropriate agency] or under its control, or of any watercourse flowing into any such watercourse, to cut the vegetable growths in or on the bank of the watercourse and, when cut, to remove them.

(3) No byelaw for any purpose specified in sub-paragraph (2)(a) above shall be valid if it would prevent reasonable facilities being afforded for enabling a watercourse to be used by stock for drinking purposes.

[^{F822}(3A) If, in any particular case,—

- (a) a marine licence is needed for the carrying on of any activity,
- (b) before that activity may be carried on, the consent of the [^{F820}appropriate agency] would also be required (apart from this sub-paragraph) by virtue of any byelaw under this paragraph, and
- (c) the [^{F820}appropriate agency] considers that, in view of the terms and conditions that will be included in the marine licence, the requirement for the consent of the [^{F820}appropriate agency] may be dispensed with, and issues a notice to that effect,

the requirement for the consent of the [^{F820}appropriate agency] does not apply in relation to the carrying on of that activity.

(3B) In sub-paragraph (3A) “marine licence” has the same meaning as in Part 4 of the Marine and Coastal Access Act 2009.]

(4) Notwithstanding anything in this Act, no byelaw made by the [^{F820}appropriate agency] under this paragraph shall conflict with or interfere with [^{F823}the operation of—

- (a) any byelaw made by a navigation authority, harbour authority or conservancy authority;
- (b) any byelaw made under section 129 [^{F824}, 129A, 129B or 132(1) or (1A)] of the Marine and Coastal Access Act 2009 (byelaws for [^{F825}marine conservation] in England);
- (c) any order made under section 134 [^{F826}, 134A, 134B or 136(1) or (1A)] of that Act (orders for [^{F827}marine conservation] in Wales).]

(5) In this paragraph “banks” [^{F828}, “drainage”] and “watercourse” have the same meanings as in Part IV of this Act.

Byelaws for purposes of fisheries functions

- 6 (1) The [^{F820}appropriate agency] shall have power, [^{F829}in relation to the whole or any part or parts] of the area in relation to which it carries out its functions relating to fisheries under Part V of this Act, to make byelaws generally for the purposes of—
- (a) the better execution of the ^{M174}Salmon and Freshwater Fisheries Act 1975; and
 - (b) the better protection, preservation and improvement of any [^{F830}fisheries of fish to which this paragraph applies.]
- [^{F831}(1A) This paragraph applies to—
- (a) salmon, trout, eels, lampreys, smelt, shad and freshwater fish; and
 - (b) fish of such other description as may be specified for the purposes of this paragraph by order under section 40A of the Salmon and Freshwater Fisheries Act 1975.]
- (2) ^{F832}..., the [^{F820}appropriate agency] shall have power, [^{F829}in relation to the whole or any part or parts] of the area mentioned in sub-paragraph (1) above, to make byelaws for any of the following purposes, that is to say—
- (a) prohibiting the taking or removal from any water, without lawful authority, of any fish [^{F833}to which this paragraph applies], whether alive or dead;
 - [^{F834}(aa) specifying close seasons or times for the taking of any fish to which this paragraph applies by such means as may be prescribed by the byelaws;]
 - (b) prohibiting or regulating—
 - (i) the taking of [^{F835}any fish to which this paragraph applies] of a size [^{F836}greater or] less than such as may be prescribed by the byelaw; or
 - (ii) the taking of fish [^{F837}to which this paragraph applies] by any means within such distance as is specified in the byelaw above or below any dam or any other obstruction, whether artificial or natural;
 - (c) prohibiting the use for taking [^{F838}fish to which this paragraph applies] of any instrument ^{F839}... in such waters and at such times as may be prescribed by the byelaws;

Changes to legislation: Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes

- (d) specifying the nets and other instruments ^{F840}... which may be used for taking [^{F841}fish to which this paragraph applies], imposing requirements as to the use of such nets and other instruments and regulating the use, in connection with fishing with rod and line, of any lure or bait specified in the byelaw;
- (e) authorising the placing and use of fixed engines at such places, at such times and in such manner as may be prescribed by the byelaws; [^{F842}(including requiring fixed engines during close seasons or times to be removed or made incapable of taking or obstructing the passage of fish)]
- (f) imposing requirements as to the construction, design, material and dimensions of any such nets, instruments or engines as are mentioned in paragraphs (d) and (e) above, including in the case of nets the size of mesh;
- (g) requiring and regulating the attachment to ^{F843}... nets and instruments of marks, labels or numbers, or the painting of marks or numbers or the affixing of labels or numbers to boats, coracles or other vessels used in fishing;
- (h) prohibiting the carrying in any boat or vessel whilst being used in fishing for [^{F844}fish to which this paragraph applies] of any net [^{F845}which may not lawfully be used], or which is without the mark, label or number prescribed by the byelaws; and
- (i) prohibiting or regulating the carrying in a boat or vessel during [^{F846}any close season or time for any description of fish to which this paragraph applies of a net capable of taking fish of that description], other than a net commonly used in the area to which the byelaw applies for sea fishing and carried in a boat or vessel commonly used for that purpose.

^{F847}(3)

^{F848}(4)

- (5) The [^{F820}appropriate agency] shall have power, [^{F829}in relation to the whole or any part or parts] of the area mentioned in sub-paragraph (1) above, to make byelaws for the purpose of requiring persons to send to the [^{F820}appropriate agency] returns, in such form, giving such particulars and at such times as may be specified in the byelaws—
 - (a) of the period or periods during which they have fished for [^{F849}fish to which this paragraph applies],
 - (b) of whether they have taken any; and
 - (c) if they have, of what they have taken.

^{F850}(5A) A byelaw under this paragraph does not apply to a person (including an employee or agent of the [^{F820}appropriate agency]) to the extent that he is acting—

- (a) with the written authority of the [^{F820}appropriate agency]; and
- (b) in accordance with any conditions imposed by the [^{F820}appropriate agency] in relation to that authority.

(5B) For the avoidance of doubt, a byelaw under this paragraph may apply to an historic installation as to any other fixed engine.]

(6) Byelaws made under this paragraph may be made to apply to the whole or any part or parts of the year.

(7) Expressions used in this paragraph and in the ^{M175}Salmon and Freshwater Fisheries Act 1975 have the same meanings in this paragraph as in that Act.

Confirmation of byelaws

- 1 (1) No byelaw made by the [F855 appropriate agency] shall have effect until confirmed by the relevant Minister under this Schedule.
- (2) At least one month before it applies for the confirmation of any byelaw, the [F855 appropriate agency] shall—
 - (a) cause a notice of its intention to make the application to be published in the London Gazette and in such other manner as it considers appropriate for the purpose of bringing the proposed byelaw to the attention of persons likely to be affected by it; and
 - (b) cause copies of the notice to be served on any persons carrying out functions under any enactment who appear to it to be concerned.
- (3) For at least one month before an application is made by the [F855 appropriate agency] for the confirmation of any byelaw, a copy of it shall be deposited at one or more of the offices of the [F855 appropriate agency], including (if there is one) at an office in the area to which the byelaw would apply.
- (4) The [F855 appropriate agency] shall provide reasonable facilities for the inspection free of charge of a byelaw deposited under sub-paragraph (3) above.
- (5) Every person shall be entitled, on application to the [F855 appropriate agency], to be furnished free of charge with a printed copy of a byelaw so deposited.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Textual Amendments

F855 Words in Sch. 26 para. 2 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(c)** (with Sch. 7)

Confirmation with or without modifications

- 2 (1) Subject to sub-paragraph (3) below, the relevant Minister, with or without a local inquiry, may refuse to confirm any byelaw submitted to him by the [^{F855}appropriate agency] for confirmation under this Schedule, or may confirm the byelaw either without or, if the [^{F855}appropriate agency] consents, with modifications.
- (2) The [^{F855}appropriate agency] shall, if so directed by the relevant Minister, cause notice of any proposed modifications to be given in accordance with his directions.
- (3) A byelaw made by the [^{F855}appropriate agency] under paragraph 4 of Schedule 25 to this Act shall be confirmed without a local inquiry only if—
- (a) no written objection to its confirmation has been received by the relevant Minister;
 - (b) every objection to its confirmation which has been so received has been withdrawn; or
 - (c) in the opinion of that Minister the person making the objection has no material interest in the controlled waters to which the byelaw relates;
- and in relation to any such byelaw sub-paragraph (1) above shall have effect with the substitution for the words “if the [^{F855}appropriate agency] consents” of the words “after consultation with the [^{F855}appropriate agency]”.

Textual Amendments

F855 Words in Sch. 26 para. 2 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(c)** (with Sch. 7)

Commencement of byelaw

- 3 (1) The relevant Minister may fix the date on which any byelaw confirmed under this Schedule is to come into force.
- (2) If no date is so fixed in relation to a byelaw, it shall come into force at the end of the period of one month beginning with the date of confirmation.

Availability of confirmed byelaws

- 4 (1) Every byelaw made by the [^{F856}appropriate agency] and confirmed under this Schedule shall be printed and deposited at one or more of the offices of the [^{F856}appropriate agency], including (if there is one) at an office in the area to which the byelaw applies; and copies of the byelaw shall be available at those offices, at all reasonable times, for inspection by the public free of charge.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (2) Every person shall be entitled, on application to the [F856 appropriate agency] and on payment of such reasonable sum as the [F856 appropriate agency] may determine, to be furnished with a copy of any byelaw so deposited by the [F856 appropriate agency].

Textual Amendments

Revocation of byelaws

- 5 If it appears to the relevant Minister that the revocation of a byelaw is necessary or expedient, he may—
- (a) after giving notice to the [F856 appropriate agency] and considering any representations or objections made by the [F856 appropriate agency]; and
 - (b) if required by the [F856 appropriate agency], after holding a local inquiry, revoke that byelaw.

Textual Amendments

F856 Words in Sch. 26 paras. 4-6 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(c)** (with Sch. 7)

Proof of byelaws

- 6 The production of a printed copy of a byelaw purporting to be made by the [F856 appropriate agency] upon which is indorsed a certificate, purporting to be signed on its behalf, stating—
- (a) that the byelaw was made by the [F856 appropriate agency];
 - (b) that the copy is a true copy of the byelaw;
 - (c) that on a specified date the byelaw was confirmed under this Schedule; and
 - (d) the date, if any, fixed under paragraph 3 above for the coming into force of the byelaw,
- shall be prima facie evidence of the facts stated in the certificate, and without proof of the handwriting or official position of any person purporting to sign the certificate.

Textual Amendments

[^{F861}SCHEDULE 27

Section 210(3)

EMERGENCY FISHERIES BYELAWS

Textual Amendments

- F861** Sch. 27 inserted (12.1.2010) by [Marine and Coastal Access Act 2009 \(c. 23\), ss. 225\(2\), 324\(3\)](#); S.I. 2009/3345, art. 2, Sch. para. 14

Emergency fisheries byelaws

- 1 (1) In this Schedule, “emergency fisheries byelaw” means a byelaw made under paragraph 6 of Schedule 25 to this Act (fisheries) in the circumstances in subparagraph (2) below.
- (2) The circumstances are that—

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

- (a) the [^{F862}appropriate agency] considers that, because of any event or likely event, harm is occurring or is likely to occur to—
 - (i) any fish to which paragraph 6 of Schedule 25 to this Act applies or to the spawn, gametes or food of any such fish, or
 - (ii) the marine or coastal, or aquatic or waterside, environment,
 - (b) the [^{F862}appropriate agency] considers that the byelaw would prevent or limit that harm, or would be reasonably likely to do so,
 - (c) the [^{F862}appropriate agency] considers that for that purpose there is a need for the byelaw to come into force as a matter of urgency, and
 - (d) the event or the likelihood of the event could not reasonably have been foreseen.
- (3) Schedule 26 to this Act (procedure relating to byelaws made by the [^{F862}appropriate agency]) does not apply in relation to an emergency fisheries byelaw.
- (4) In sub-paragraph (2)(a), the reference to harm to the marine or coastal, or aquatic or waterside, environment is to—
- (a) harm to the natural beauty or amenity of marine or coastal, or aquatic or waterside, areas (including their geological or physiographical features) or to any features of archaeological or historic interest in such areas, or
 - (b) harm to flora or fauna which are dependent on or associated with the marine or coastal, or aquatic or waterside, environment.

Textual Amendments

F862 Words in Sch. 27 para. 1 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(d)** (with Sch. 7)

Commencement

- 2 An emergency fisheries byelaw comes into force—
- (a) on the date specified in the byelaw, or
 - (b) if no date is so specified, on the day after that on which it is made.

Notification of the appropriate national authority

- 3 The [^{F863}appropriate agency] must, within 24 hours of making an emergency fisheries byelaw—
- (a) send a copy of the byelaw to the appropriate national authority, and
 - (b) explain to the appropriate national authority why the byelaw is being made as an emergency fisheries byelaw.

Textual Amendments

F863 Words in Sch. 27 paras. 3-5 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(d)** (with Sch. 7)

Changes that have been made appear in the content and are referenced with annotations. (See end of Document for details) View outstanding changes*

Publication

- 4 The [^{F863}appropriate agency] must publish notice of the making of an emergency fisheries byelaw (including a copy of the byelaw)—
- (a) in the London Gazette;
 - (b) where the byelaw has effect in Wales, in the Welsh language in such manner as the [^{F863}appropriate agency] thinks appropriate;
 - (c) in such other manner as it thinks appropriate for the purpose of bringing the byelaw to the attention of persons likely to be affected by it.

Textual Amendments

F863 Words in Sch. 27 paras. 3-5 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(d)** (with Sch. 7)

Amendment and revocation

- 5 (1) If at any time the appropriate national authority is satisfied that an emergency fisheries byelaw would better serve to prevent or limit the harm referred to in paragraph 1(2)(a) above if it were amended, the authority must amend it accordingly.
- (2) If at any time the appropriate national authority is satisfied that an emergency fisheries byelaw is no longer needed in order to prevent or limit the harm referred to in paragraph 1(2)(a) above, the authority must revoke it.
- (3) The [^{F863}appropriate agency] must publish notice of an amendment or revocation under this paragraph as specified in paragraph 4(a) to (c) above.

Textual Amendments

F863 Words in Sch. 27 paras. 3-5 substituted (1.4.2013) by [The Natural Resources Body for Wales \(Functions\) Order 2013 \(S.I. 2013/755\)](#), art. 1(2), **Sch. 2 para. 315(d)** (with Sch. 7)

Expiry and extension

- 6 (1) Subject to paragraph 7 below, an emergency fisheries byelaw expires (unless earlier revoked)—
- (a) in accordance with provision made by the byelaw, or
 - (b) if the byelaw does not contain provision for its expiry, at the end of the period of twelve months beginning with the day on which it comes into force.
- (2) A byelaw may not under sub-paragraph (1)(a) above remain in force for longer than the period of twelve months beginning with the day on which it comes into force.
- 7 (1) The [^{F864}appropriate agency] may, at any time before an emergency fisheries byelaw expires, apply to the appropriate national authority for it to be extended.
- (2) On such an application, the appropriate national authority may extend the byelaw at any time before its expiry, provided the authority is satisfied that—
- (a) the byelaw is still needed to prevent or limit the harm referred to in paragraph 1(2)(a) above, and

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. “Appropriate national authority”

- 10 In this Schedule “appropriate national authority” has the same meaning as in the Salmon and Freshwater Fisheries Act 1975.]

TABLE OF DERIVATIONS

- 1 Note: The following abbreviations are used in this Table:—

1945 =	The Water Act 1945 (c. 42)
1963 =	The Water Resources Act 1963 (c. 38)
1965 =	The Science and Technology Act 1965 (c. 4)
1973 =	The Water Act 1973 (c. 37)
1975 =	The Salmon and Freshwater Fisheries Act 1975 (c. 51)
1976 =	The Land Drainage Act 1976 (c. 70)
1977 =	The Criminal Law Act 1977 (c. 45)
1980(LG) =	The Local Government, Planning and Land Act 1980 (c. 65)
1981 =	The Water Act 1981 (c. 12)
1982(CJA) =	The Criminal Justice Act 1982 (c. 43)
1983 =	The Water Act 1983 (c. 23)
1984 =	The Telecommunications Act 1984 (c. 12)
1985(LG) =	The Local Government Act 1985 (c. 51)
1986(GA) =	The Gas Act 1986 (c. 44)
1989 =	The Water Act 1989 (c. 15)
1989(EA) =	The Electricity Act 1989 (c. 29)
1990 =	The Environmental Protection Act 1990 (c. 43)
1991(NR) =	The New Roads and Street Works Act 1991 (c. 22)
R: (followed by a number) =	The recommendation so numbered as set out in the Appendix to the Report of the Law Commission (Cm. 1483).

- 2 Transfer of functions orders (“TFOs”), where applicable in relation to a provision re-enacted in the Bill, are specified at the appropriate place in column 2 of the Table.

Changes to legislation: *Water Resources Act 1991 is up to date with all changes known to be in force on or before 03 April 2024. There are changes that may be brought into force at a future date. DECISIONS

COMMISSION IMPLEMENTING DECISION (EU) 2018/1147

of 10 August 2018

establishing best available techniques (BAT) conclusions for waste treatment, under Directive 2010/75/EU of the European Parliament and of the Council

(notified under document C(2018) 5070)

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Directive 2010/75/EU of the European Parliament and of the Council of 24 November 2010 on industrial emissions (integrated pollution prevention and control) ⁽¹⁾, and in particular Article 13(5) thereof,

Whereas:

- (1) Best available techniques (BAT) conclusions are the reference for setting permit conditions for installations covered by Chapter II of Directive 2010/75/EU and competent authorities should set emission limit values which ensure that, under normal operating conditions, emissions do not exceed the emission levels associated with the best available techniques as laid down in the BAT conclusions.
- (2) The forum composed of representatives of Member States, the industries concerned and non-governmental organisations promoting environmental protection, established by Commission Decision of 16 May 2011 ⁽²⁾, provided the Commission on 19 December 2017 with its opinion on the proposed content of the BAT reference document for waste treatment. That opinion is publicly available.
- (3) The BAT conclusions set out in the Annex to this Decision are the key element of that BAT reference document.
- (4) The measures provided for in this Decision are in accordance with the opinion of the Committee established by Article 75(1) of Directive 2010/75/EU,

HAS ADOPTED THIS DECISION:

Article 1

The best available techniques (BAT) conclusions for waste treatment, as set out in the Annex, are adopted.

Article 2

This Decision is addressed to the Member States.

Done at Brussels, 10 August 2018.

For the Commission

Karmenu VELLA

Member of the Commission

⁽¹⁾ OJ L 334, 17.12.2010, p. 17.

⁽²⁾ Commission Decision of 16 May 2011 establishing a forum for the exchange of information pursuant to Article 13 of Directive 2010/75/EU on industrial emissions (OJ C 146, 17.5.2011, p. 3).

ANNEX

BEST AVAILABLE TECHNIQUES (BAT) CONCLUSIONS FOR WASTE

SCOPE

These BAT conclusions concern the following activities specified in Annex I to Directive 2010/75/EU, namely:

- 5.1. Disposal or recovery of hazardous waste with a capacity exceeding 10 tonnes per day involving one or more of the following activities:
 - (a) biological treatment;
 - (b) physico-chemical treatment;
 - (c) blending or mixing prior to submission to any of the other activities listed in points 5.1 and 5.2 of Annex I to Directive 2010/75/EU;
 - (d) repackaging prior to submission to any of the other activities listed in points 5.1 and 5.2 of Annex I to Directive 2010/75/EU;
 - (e) solvent reclamation/regeneration;
 - (f) recycling/reclamation of inorganic materials other than metals or metal compounds;
 - (g) regeneration of acids or bases;
 - (h) recovery of components used for pollution abatement;
 - (i) recovery of components from catalysts;
 - (j) oil re-refining or other reuses of oil;
- 5.3. (a) Disposal of non-hazardous waste with a capacity exceeding 50 tonnes per day involving one or more of the following activities, and excluding activities covered by Council Directive 91/271/EEC ⁽¹⁾:
 - (i) biological treatment;
 - (ii) physico-chemical treatment;
 - (iii) pre-treatment of waste for incineration or co-incineration;
 - (iv) treatment of ashes;
 - (v) treatment in shredders of metal waste, including waste electrical and electronic equipment and end-of-life vehicles and their components.
- (b) Recovery, or a mix of recovery and disposal, of non-hazardous waste with a capacity exceeding 75 tonnes per day involving one or more of the following activities, and excluding activities covered by Directive 91/271/EEC:
 - (i) biological treatment;
 - (ii) pre-treatment of waste for incineration or co-incineration;
 - (iii) treatment of ashes;
 - (iv) treatment in shredders of metal waste, including waste electrical and electronic equipment and end-of-life vehicles and their components.

When the only waste treatment activity carried out is anaerobic digestion, the capacity threshold for this activity shall be 100 tonnes per day.

- 5.5. Temporary storage of hazardous waste not covered under point 5.4 of Annex I to Directive 2010/75/EU pending any of the activities listed in points 5.1, 5.2, 5.4 and 5.6 of Annex I to Directive 2010/75/EU with a total capacity exceeding 50 tonnes, excluding temporary storage, pending collection, on the site where the waste is generated.
- 6.11. Independently operated treatment of waste water not covered by Directive 91/271/EEC and discharged by an installation undertaking activities covered under points 5.1, 5.3 or 5.5 as listed above.

⁽¹⁾ Council Directive 91/271/EEC of 21 May 1991 concerning urban waste-water treatment (OJ L 135, 30.5.1991, p. 40).

Referring to independently operated treatment of waste water not covered by Directive 91/271/EEC above, these BAT conclusions also cover the combined treatment of waste water from different origins if the main pollutant load originates from the activities covered under points 5.1, 5.3 or 5.5 as listed above.

These BAT conclusions do not address the following:

- Surface impoundment.
- Disposal or recycling of animal carcasses or of animal waste covered by the activity description in point 6.5 of Annex I to Directive 2010/75/EU when this is covered by the BAT conclusions on the slaughterhouses and animal by-products industries (SA).
- On-farm processing of manure when this is covered by the BAT conclusions for the intensive rearing of poultry or pigs (IRPP).
- Direct recovery (i.e. without pretreatment) of waste as a substitute for raw materials in installations carrying out activities covered by other BAT conclusions, e.g.:
 - Direct recovery of lead (e.g. from batteries), zinc or aluminium salts or recovery of the metals from catalysts. This may be covered by the BAT conclusions for the non-ferrous metals industries (NFM).
 - Processing of paper for recycling. This may be covered by the BAT conclusions for the production of pulp, paper and board (PP).
 - Use of waste as fuel/raw material in cement kilns. This may be covered by the BAT conclusions for the production of cement, lime and magnesium oxide (CLM).
- Waste (co-)incineration, pyrolysis and gasification. This may be covered by the BAT conclusions for waste incineration (WI) or the BAT conclusions for large combustion plants (LCP).
- Landfill of waste. This is covered by Council Directive 1999/31/EC⁽¹⁾. In particular, underground permanent and long-term storage (≥ 1 year before disposal, ≥ 3 years before recovery) are covered by Directive 1999/31/EC.
- *In situ* remediation of contaminated soil (i.e. unexcavated soil).
- Treatment of slags and bottom ashes. This may be covered by the BAT conclusions for waste incineration (WI) and/or the BAT conclusions for large combustion plants (LCP).
- Smelting of scrap metals and metal-bearing materials. This may be covered by the BAT conclusions for non-ferrous metals industries (NFM), the BAT conclusions for iron and steel production (IS), and/or the BAT conclusions for the smitheries and foundries industry (SF).
- Regeneration of spent acids and alkalis when this is covered by the BAT conclusions for ferrous metals processing.
- Combustion of fuels when it does not generate hot gases which come into direct contact with the waste. This may be covered by the BAT conclusions for large combustion plants (LCP) or by Directive (EU) 2015/2193 of the European Parliament and of the Council⁽²⁾.

Other BAT conclusions and reference documents which could be relevant for the activities covered by these BAT conclusions are the following:

- Economics and cross-media effects (ECM);
- Emissions from storage (EFS);
- Energy efficiency (ENE);
- Monitoring of emissions to air and water from IED installations (ROM);
- Production of cement, lime and magnesium oxide (CLM);
- Common waste water and waste gas treatment/management systems in the chemical sector (CWW);
- Intensive rearing of poultry or pigs (IRPP).

These BAT conclusions apply without prejudice to the relevant provisions of EU legislation, e.g. the waste hierarchy.

⁽¹⁾ Council Directive 1999/31/EC of 26 April 1999 on the landfill of waste (OJ L 182, 16.7.1999, p. 1).

⁽²⁾ Directive (EU) 2015/2193 of the European Parliament and of the Council of 25 November 2015 on the limitation of emissions of certain pollutants into the air from medium combustion plants (OJ L 313, 28.11.2015, p. 1).

DEFINITIONS

For the purposes of these BAT conclusions, the following **definitions** apply:

Term used	Definition
General terms	
Channelled emissions	Emissions of pollutants into the environment through any kind of duct, pipe, stack, etc. This also includes emissions from open-top biofilters.
Continuous measurement	Measurement using an 'automated measuring system' permanently installed on site.
Declaration of cleanliness	Written document provided by the waste producer/holder certifying that the empty waste packaging concerned (e.g. drums, containers) is clean with respect to the acceptance criteria.
Diffuse emissions	Non-channelled emissions (e.g. of dust, organic compounds, odour) which can result from 'area' sources (e.g. tanks) or 'point' sources (e.g. pipe flanges). This also includes emissions from open-air windrow composting.
Direct discharge	Discharge to a receiving water body without further downstream waste water treatment.
Emissions factors	Numbers that can be multiplied by known data such as plant/process data or throughput data to estimate emissions.
Existing plant	A plant that is not a new plant.
Flaring	High-temperature oxidation to burn combustible compounds of waste gases from industrial operations with an open flame. Flaring is primarily used for burning off flammable gas for safety reasons or during non-routine operating conditions.
Fly ashes	Particles from the combustion chamber or formed within the flue-gas stream, that are transported in the flue-gas.
Fugitive emissions	Diffuse emissions from 'point' sources.
Hazardous waste	Hazardous waste as defined in point 2 of Article 3 of Directive 2008/98/EC.
Indirect discharge	Discharge which is not a direct discharge.
Liquid biodegradable waste	Waste of biological origin with a relatively high water content (e.g. fat separator contents, organic sludges, catering waste).
Major plant upgrade	A major change in the design or technology of a plant with major adjustments or replacements of the process and/or abatement technique(s) and associated equipment.
Mechanical biological treatment (MBT)	Treatment of mixed solid waste combining mechanical treatment with biological treatment such as aerobic or anaerobic treatment.
New plant	A plant first permitted at the site of the installation following the publication of these BAT conclusions or a complete replacement of a plant following the publication of these BAT conclusions.
Output	The treated waste exiting the waste treatment plant.

Term used	Definition
Pasty waste	Sludge which is not free-flowing.
Periodic measurement	Measurement at specified time intervals using manual or automated methods.
Recovery	Recovery as defined in Article 3(15) of Directive 2008/98/EC.
Re-refining	Treatments carried out on waste oil to transform it to base oil.
Regeneration	Treatments and processes mainly designed to make the treated materials (e.g. spent activated carbon or spent solvent) suitable again for a similar use.
Sensitive receptor	Area which needs special protection, such as: <ul style="list-style-type: none"> — residential areas; — areas where human activities are carried out (e.g. neighbouring workplaces, schools, daycare centres, recreational areas, hospitals or nursing homes).
Surface impoundment	Placement of liquid or sludgy discards into pits, ponds, lagoons, etc.
Treatment of waste with calorific value	Treatment of waste wood, waste oil, waste plastics, waste solvents, etc. to obtain a fuel or to allow a better recovery of its calorific value.
VFCs	Volatile (hydro)fluorocarbons: VOCs consisting of fluorinated (hydro)carbons, in particular chlorofluorocarbons (CFCs), hydrochlorofluorocarbons (HCFCs) and hydrofluorocarbons (HFCs).
VHCs	Volatile hydrocarbons: VOCs consisting entirely of hydrogen and carbon (e.g. ethane, propane, iso-butane, cyclopentane).
VOC	Volatile organic compound as defined in Article 3(45) of Directive 2010/75/EU.
Waste holder	Waste holder as defined in Article 3(6) of Directive 2008/98/EC of the European Parliament and of the Council (1).
Waste input	The incoming waste to be treated in the waste treatment plant.
Water-based liquid waste	Waste consisting of aqueous liquids, acids/alkalis or pumpable sludges (e.g. emulsions, waste acids, aqueous marine waste) which is not liquid biodegradable waste.
Pollutants/parameters	
AOX	Adsorbable organically bound halogens, expressed as Cl, include adsorbable organically bound chlorine, bromine and iodine.
Arsenic	Arsenic, expressed as As, includes all inorganic and organic arsenic compounds, dissolved or bound to particles.
BOD	Biochemical oxygen demand. Amount of oxygen needed for the biochemical oxidation of organic and/or inorganic matter in five (BOD ₅) or in seven (BOD ₇) days.
Cadmium	Cadmium, expressed as Cd, includes all inorganic and organic cadmium compounds, dissolved or bound to particles.

Term used	Definition
CFCs	Chlorofluorocarbons: VOCs consisting of carbon, chlorine and fluorine.
Chromium	Chromium, expressed as Cr, includes all inorganic and organic chromium compounds, dissolved or bound to particles.
Hexavalent chromium	Hexavalent chromium, expressed as Cr(VI), includes all chromium compounds where the chromium is in the oxidation state +6.
COD	Chemical oxygen demand. Amount of oxygen needed for the total chemical oxidation of the organic matter to carbon dioxide. COD is an indicator for the mass concentration of organic compounds.
Copper	Copper, expressed as Cu, includes all inorganic and organic copper compounds, dissolved or bound to particles.
Cyanide	Free cyanide, expressed as CN ⁻ .
Dust	Total particulate matter (in air).
HOI	Hydrocarbon oil index. The sum of compounds extractable with a hydrocarbon solvent (including long-chain or branched aliphatic, alicyclic, aromatic or alkyl-substituted aromatic hydrocarbons).
HCl	All inorganic gaseous chlorine compounds, expressed as HCl.
HF	All inorganic gaseous fluorine compounds, expressed as HF.
H ₂ S	Hydrogen sulphide. Carbonyl sulphide and mercaptans are not included.
Lead	Lead, expressed as Pb, includes all inorganic and organic lead compounds, dissolved or bound to particles.
Mercury	Mercury, expressed as Hg, includes elementary mercury and all inorganic and organic mercury compounds, gaseous, dissolved or bound to particles.
NH ₃	Ammonia.
Nickel	Nickel, expressed as Ni, includes all inorganic and organic nickel compounds, dissolved or bound to particles.
Odour concentration	Number of European Odour Units (ou _E) in one cubic metre at standard conditions measured by dynamic olfactometry according to EN 13725.
PCB	Polychlorinated biphenyl.
Dioxin-like PCBs	Polychlorinated biphenyls as listed in Commission Regulation (EC) No 199/2006 ⁽²⁾ .
PCDD/F	Polychlorinated dibenzo- <i>p</i> -dioxin/furan(s).
PFOA	Perfluorooctanoic acid.
PFOS	Perfluorooctanesulphonic acid.
Phenol index	The sum of phenolic compounds, expressed as phenol concentration and measured according to EN ISO 14402.

Term used	Definition
TOC	Total organic carbon, expressed as C (in water), includes all organic compounds.
Total N	Total nitrogen, expressed as N, includes free ammonia and ammonium nitrogen (NH ₄ -N), nitrite nitrogen (NO ₂ -N), nitrate nitrogen (NO ₃ -N) and organically bound nitrogen.
Total P	Total phosphorus, expressed as P, includes all inorganic and organic phosphorus compounds, dissolved or bound to particles
TSS	Total suspended solids. Mass concentration of all suspended solids (in water), measured via filtration through glass fibre filters and gravimetry.
TVOC	Total volatile organic carbon, expressed as C (in air).
Zinc	Zinc, expressed as Zn, includes all inorganic and organic zinc compounds, dissolved or bound to particles.

(¹) Directive 2008/98/EC of the European Parliament and of the Council of 19 November 2008 on waste and repealing certain Directives (OJ L 312, 22.11.2008, p. 3).

(²) Commission Regulation (EC) No 199/2006 of 3 February 2006 amending Regulation (EC) No 466/2001 setting maximum levels for certain contaminants in foodstuffs as regards dioxins and dioxin-like PCBs (OJ L 32, 4.2.2006, p. 34).

For the purposes of these BAT conclusions, the following **acronyms** apply:

Acronym	Definition
EMS	Environmental management system
EoLVs	End-of-life vehicles (as defined in Article 2(2) of Directive 2000/53/EC of the European Parliament and of the Council (¹))
HEPA	High-efficiency particle air (filter)
IBC	Intermediate bulk container
LDAR	Leak detection and repair
LEV	Local exhaust ventilation system
POP	Persistent organic pollutant (as listed in Regulation (EC) No 850/2004 of the European Parliament and of the Council (²))
WEEE	Waste electrical and electronic equipment (as defined in Article 3(1) of Directive 2012/19/EU of the European Parliament and of the Council (³))

(¹) Directive 2000/53/EC of the European Parliament and of the Council of 18 September 2000 on end-of life vehicles (OJ L 269, 21.10.2000, p. 34).

(²) Regulation (EC) No 850/2004 of the European Parliament and of the Council of 29 April 2004 on persistent organic pollutants and amending Directive 79/117/EEC (OJ L 158, 30.4.2004, p. 7).

(³) Directive 2012/19/EU of the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (WEEE) (OJ L 197, 24.7.2012, p. 38).

GENERAL CONSIDERATIONS

Best Available Techniques

The techniques listed and described in these BAT conclusions are neither prescriptive nor exhaustive. Other techniques may be used that ensure at least an equivalent level of environmental protection.

Unless otherwise stated, the BAT conclusions are generally applicable.

Emission levels associated with the best available techniques (BAT-AELs) for emissions to air

Unless stated otherwise, emission levels associated with the best available techniques (BAT-AELs) for emissions to air given in these BAT conclusions refer to concentrations (mass of emitted substances per volume of waste gas) under the following standard conditions: dry gas at a temperature of 273,15 K and a pressure of 101,3 kPa, without correction for oxygen content, and expressed in $\mu\text{g}/\text{Nm}^3$ or mg/Nm^3 .

For averaging periods of BAT-AELs for emissions to air, the following **definitions** apply.

Type of measurement	Averaging period	Definition
Continuous	Daily average	Average over a period of one day based on valid hourly or half-hourly averages.
Periodic	Average over the sampling period	Average value of three consecutive measurements of at least 30 minutes each ⁽¹⁾ .

⁽¹⁾ For any parameter where, due to sampling or analytical limitations, a 30-minute measurement is inappropriate, a more suitable measurement period may be employed (e.g. for the odour concentration). For PCDD/F or dioxin-like PCBs, one sampling period of 6 to 8 hours is used.

Where continuous measurement is used, the BAT-AELs may be expressed as daily averages.

Emission levels associated with the best available techniques (BAT-AELs) for emissions to water

Unless stated otherwise, emission levels associated with the best available techniques (BAT-AELs) for emissions to water given in these BAT conclusions refer to concentrations (mass of emitted substances per volume of water), expressed in $\mu\text{g}/\text{l}$ or mg/l .

Unless stated otherwise, averaging periods associated with the BAT-AELs refer to either of the following two cases:

- in the case of continuous discharge, daily average values, i.e. 24-hour flow-proportional composite samples;
- in the case of batch discharge, average values over the release duration taken as flow-proportional composite samples, or, provided that the effluent is appropriately mixed and homogeneous, a spot sample taken before discharge.

Time-proportional composite samples can be used provided that sufficient flow stability is demonstrated.

All BAT-AELs for emissions to water apply at the point where the emission leaves the installation.

Abatement efficiency

The calculation of the average abatement efficiency referred to in these BAT conclusions (see Table 6.1) does not include, for COD and TOC, initial treatment steps aiming at separating the bulk organic content from the water-based liquid waste, such as evapo-condensation, emulsion breaking or phase separation.

1. GENERAL BAT CONCLUSIONS

1.1. Overall environmental performance

BAT 1. In order to improve the overall environmental performance, BAT is to implement and adhere to an environmental management system (EMS) that incorporates all of the following features:

- I. commitment of the management, including senior management;
- II. definition, by the management, of an environmental policy that includes the continuous improvement of the environmental performance of the installation;

- III. planning and establishing the necessary procedures, objectives and targets, in conjunction with financial planning and investment;
- IV. implementation of procedures paying particular attention to:
 - (a) structure and responsibility,
 - (b) recruitment, training, awareness and competence,
 - (c) communication,
 - (d) employee involvement,
 - (e) documentation,
 - (f) effective process control,
 - (g) maintenance programmes,
 - (h) emergency preparedness and response,
 - (i) safeguarding compliance with environmental legislation;
- V. checking performance and taking corrective action, paying particular attention to:
 - (a) monitoring and measurement (see also the JRC Reference Report on Monitoring of emissions to air and water from IED installations – ROM),
 - (b) corrective and preventive action,
 - (c) maintenance of records,
 - (d) independent (where practicable) internal or external auditing in order to determine whether or not the EMS conforms to planned arrangements and has been properly implemented and maintained;
- VI. review, by senior management, of the EMS and its continuing suitability, adequacy and effectiveness;
- VII. following the development of cleaner technologies;
- VIII. consideration for the environmental impacts from the eventual decommissioning of the plant at the stage of designing a new plant, and throughout its operating life;
- IX. application of sectoral benchmarking on a regular basis;
- X. waste stream management (see BAT 2);
- XI. an inventory of waste water and waste gas streams (see BAT 3);
- XII. residues management plan (see description in Section 6.5);
- XIII. accident management plan (see description in Section 6.5);
- XIV. odour management plan (see BAT 12);
- XV. noise and vibration management plan (see BAT 17).

Applicability

The scope (e.g. level of detail) and nature of the EMS (e.g. standardised or non-standardised) will generally be related to the nature, scale and complexity of the installation, and the range of environmental impacts it may have (determined also by the type and amount of wastes processed).

BAT 2. In order to improve the overall environmental performance of the plant, BAT is to use all of the techniques given below.

	Technique	Description
a.	Set up and implement waste characterisation and pre-acceptance procedures	These procedures aim to ensure the technical (and legal) suitability of waste treatment operations for a particular waste prior to the arrival of the waste at the plant. They include procedures to collect information about the waste input and may include waste sampling and characterisation to achieve sufficient knowledge of the waste composition. Waste pre-acceptance procedures are risk-based considering, for example, the hazardous properties of the waste, the risks posed by the waste in terms of process safety, occupational safety and environmental impact, as well as the information provided by the previous waste holder(s).
b.	Set up and implement waste acceptance procedures	Acceptance procedures aim to confirm the characteristics of the waste, as identified in the pre-acceptance stage. These procedures define the elements to be verified upon the arrival of the waste at the plant as well as the waste acceptance and rejection criteria. They may include waste sampling, inspection and analysis. Waste acceptance procedures are risk-based considering, for example, the hazardous properties of the waste, the risks posed by the waste in terms of process safety, occupational safety and environmental impact, as well as the information provided by the previous waste holder(s).
c.	Set up and implement a waste tracking system and inventory	A waste tracking system and inventory aim to track the location and quantity of waste in the plant. It holds all the information generated during waste pre-acceptance procedures (e.g. date of arrival at the plant and unique reference number of the waste, information on the previous waste holder(s), pre-acceptance and acceptance analysis results, intended treatment route, nature and quantity of the waste held on site including all identified hazards), acceptance, storage, treatment and/or transfer off site. The waste tracking system is risk-based considering, for example, the hazardous properties of the waste, the risks posed by the waste in terms of process safety, occupational safety and environmental impact, as well as the information provided by the previous waste holder(s).
d.	Set up and implement an output quality management system	This technique involves setting up and implementing an output quality management system, so as to ensure that the output of the waste treatment is in line with the expectations, using for example existing EN standards. This management system also allows the performance of the waste treatment to be monitored and optimised, and for this purpose may include a material flow analysis of relevant components throughout the waste treatment. The use of a material flow analysis is risk-based considering, for example, the hazardous properties of the waste, the risks posed by the waste in terms of process safety, occupational safety and environmental impact, as well as the information provided by the previous waste holder(s).
e.	Ensure waste segregation	Waste is kept separated depending on its properties in order to enable easier and environmentally safer storage and treatment. Waste segregation relies on the physical separation of waste and on procedures that identify when and where wastes are stored.

Technique		Description
f.	Ensure waste compatibility prior to mixing or blending of waste	Compatibility is ensured by a set of verification measures and tests in order to detect any unwanted and/or potentially dangerous chemical reactions between wastes (e.g. polymerisation, gas evolution, exothermal reaction, decomposition, crystallisation, precipitation) when mixing, blending or carrying out other treatment operations. The compatibility tests are risk-based considering, for example, the hazardous properties of the waste, the risks posed by the waste in terms of process safety, occupational safety and environmental impact, as well as the information provided by the previous waste holder(s).
g.	Sort incoming solid waste	Sorting of incoming solid waste ⁽¹⁾ aims to prevent unwanted material from entering subsequent waste treatment process(es). It may include: <ul style="list-style-type: none"> — manual separation by means of visual examinations; — ferrous metals, non-ferrous metals or all-metals separation; — optical separation, e.g. by near-infrared spectroscopy or X-ray systems; — density separation, e.g. by air classification, sink-float tanks, vibration tables; — size separation by screening/sieving.

⁽¹⁾ Sorting techniques are described in Section 6.4

BAT 3. In order to facilitate the reduction of emissions to water and air, BAT is to establish and to maintain an inventory of waste water and waste gas streams, as part of the environmental management system (see BAT 1), that incorporates all of the following features:

- (i) information about the characteristics of the waste to be treated and the waste treatment processes, including:
 - (a) simplified process flow sheets that show the origin of the emissions;
 - (b) descriptions of process-integrated techniques and waste water/waste gas treatment at source including their performances;
- (ii) information about the characteristics of the waste water streams, such as:
 - (a) average values and variability of flow, pH, temperature, and conductivity;
 - (b) average concentration and load values of relevant substances and their variability (e.g. COD/TOC, nitrogen species, phosphorus, metals, priority substances/micropollutants);
 - (c) data on bioeliminability (e.g. BOD, BOD to COD ratio, Zahn-Wellens test, biological inhibition potential (e.g. inhibition of activated sludge)) (see BAT 52);
- (iii) information about the characteristics of the waste gas streams, such as:
 - (a) average values and variability of flow and temperature;
 - (b) average concentration and load values of relevant substances and their variability (e.g. organic compounds, POPs such as PCBs);
 - (c) flammability, lower and higher explosive limits, reactivity;
 - (d) presence of other substances that may affect the waste gas treatment system or plant safety (e.g. oxygen, nitrogen, water vapour, dust).

Applicability

The scope (e.g. level of detail) and nature of the inventory will generally be related to the nature, scale and complexity of the installation, and the range of environmental impacts it may have (determined also by the type and amount of wastes processed).

BAT 4. In order to reduce the environmental risk associated with the storage of waste, BAT is to use all of the techniques given below.

Technique		Description	Applicability
a.	Optimised storage location	This includes techniques such as: <ul style="list-style-type: none"> — the storage is located as far as technically and economically possible from sensitive receptors, watercourses, etc.; — the storage is located in such a way so as to eliminate or minimise the unnecessary handling of wastes within the plant (e.g. the same wastes are handled twice or more or the transport distances on site are unnecessarily long). 	Generally applicable to new plants.
b.	Adequate storage capacity	Measures are taken to avoid accumulation of waste, such as: <ul style="list-style-type: none"> — the maximum waste storage capacity is clearly established and not exceeded taking into account the characteristics of the wastes (e.g. regarding the risk of fire) and the treatment capacity; — the quantity of waste stored is regularly monitored against the maximum allowed storage capacity; — the maximum residence time of waste is clearly established. 	Generally applicable.
c.	Safe storage operation	This includes measures such as: <ul style="list-style-type: none"> — equipment used for loading, unloading and storing waste is clearly documented and labelled; — wastes known to be sensitive to heat, light, air, water, etc. are protected from such ambient conditions; — containers and drums are fit for purpose and stored securely. 	
d.	Separate area for storage and handling of packaged hazardous waste	When relevant, a dedicated area is used for storage and handling of packaged hazardous waste.	

BAT 5. In order to reduce the environmental risk associated with the handling and transfer of waste, BAT is to set up and implement handling and transfer procedures.

Description

Handling and transfer procedures aim to ensure that wastes are safely handled and transferred to the respective storage or treatment. They include the following elements:

- handling and transfer of waste are carried out by competent staff;
- handling and transfer of waste are duly documented, validated prior to execution and verified after execution;

- measures are taken to prevent, detect and mitigate spills;
- operation and design precautions are taken when mixing or blending wastes (e.g. vacuuming dusty/powdery wastes).

Handling and transfer procedures are risk-based considering the likelihood of accidents and incidents and their environmental impact.

1.2. Monitoring

BAT 6. For relevant emissions to water as identified by the inventory of waste water streams (see BAT 3), BAT is to monitor key process parameters (e.g. waste water flow, pH, temperature, conductivity, BOD) at key locations (e.g. at the inlet and/or outlet of the pretreatment, at the inlet to the final treatment, at the point where the emission leaves the installation).

BAT 7. BAT is to monitor emissions to water with at least the frequency given below, and in accordance with EN standards. If EN standards are not available, BAT is to use ISO, national or other international standards that ensure the provision of data of an equivalent scientific quality.

Substance/parameter	Standard(s)	Waste treatment process	Minimum monitoring frequency ⁽¹⁾ ⁽²⁾	Monitoring associated with
Adsorbable organically bound halogens (AOX) ⁽³⁾ ⁽⁴⁾	EN ISO 9562	Treatment of water-based liquid waste	Once every day	BAT 20
Benzene, toluene, ethylbenzene, xylene (BTEX) ⁽³⁾ ⁽⁴⁾	EN ISO 15680	Treatment of water-based liquid waste	Once every month	
Chemical oxygen demand (COD) ⁽⁵⁾ ⁽⁶⁾	No EN standard available	All waste treatments except treatment of water-based liquid waste	Once every month	
		Treatment of water-based liquid waste	Once every day	
Free cyanide (CN ⁻) ⁽³⁾ ⁽⁴⁾	Various EN standards available (i.e. EN ISO 14403-1 and -2)	Treatment of water-based liquid waste	Once every day	
Hydrocarbon oil index (HOI) ⁽⁴⁾	EN ISO 9377-2	Mechanical treatment in shredders of metal waste	Once every month	
		Treatment of WEEE containing VFCs and/or VHCs		
		Re-refining of waste oil		
		Physico-chemical treatment of waste with calorific value		
		Water washing of excavated contaminated soil		
		Treatment of water-based liquid waste	Once every day	

Substance/parameter	Standard(s)	Waste treatment process	Minimum monitoring frequency ⁽¹⁾ ⁽²⁾	Monitoring associated with
Arsenic (As), Cadmium (Cd), Chromium (Cr), Copper (Cu), Nickel (Ni), Lead (Pb), Zinc (Zn) ⁽³⁾ ⁽⁴⁾	Various EN standards available (e.g. EN ISO 11885, EN ISO 17294-2, EN ISO 15586)	Mechanical treatment in shredders of metal waste	Once every month	
		Treatment of WEEE containing VFCs and/or VHCs		
		Mechanical biological treatment of waste		
		Re-refining of waste oil		
		Physico-chemical treatment of waste with calorific value		
		Physico-chemical treatment of solid and/or pasty waste		
		Regeneration of spent solvents		
		Water washing of excavated contaminated soil		
		Treatment of water-based liquid waste	Once every day	
Manganese (Mn) ⁽³⁾ ⁽⁴⁾		Treatment of water-based liquid waste	Once every day	
Hexavalent chromium (Cr(VI)) ⁽³⁾ ⁽⁴⁾	Various EN standards available (i.e. EN ISO 10304-3, EN ISO 23913)	Treatment of water-based liquid waste	Once every day	
Mercury (Hg) ⁽³⁾ ⁽⁴⁾	Various EN standards available (i.e. EN ISO 17852, EN ISO 12846)	Mechanical treatment in shredders of metal waste	Once every month	
		Treatment of WEEE containing VFCs and/or VHCs		
		Mechanical biological treatment of waste		
		Re-refining of waste oil		
		Physico-chemical treatment of waste with calorific value		
		Physico-chemical treatment of solid and/or pasty waste		
		Regeneration of spent solvents		
		Water washing of excavated contaminated soil		
		Treatment of water-based liquid waste	Once every day	

Substance/parameter	Standard(s)	Waste treatment process	Minimum monitoring frequency ⁽¹⁾ ⁽²⁾	Monitoring associated with
PFOA ⁽³⁾	No EN standard available	All waste treatments	Once every six months	
PFOS ⁽³⁾				
Phenol index ⁽⁶⁾	EN ISO 14402	Re-refining of waste oil	Once every month	
		Physico-chemical treatment of waste with calorific value		
		Treatment of water-based liquid waste	Once every day	
Total nitrogen (Total N) ⁽⁶⁾	EN 12260, EN ISO 11905-1	Biological treatment of waste	Once every month	
		Re-refining of waste oil		
		Treatment of water-based liquid waste	Once every day	
Total organic carbon (TOC) ⁽⁵⁾ ⁽⁶⁾	EN 1484	All waste treatments except treatment of water-based liquid waste	Once every month	
		Treatment of water-based liquid waste	Once every day	
Total phosphorus (Total P) ⁽⁶⁾	Various EN standards available (i.e. EN ISO 15681-1 and -2, EN ISO 6878, EN ISO 11885)	Biological treatment of waste	Once every month	
		Treatment of water-based liquid waste	Once every day	
Total suspended solids (TSS) ⁽⁶⁾	EN 872	All waste treatments except treatment of water-based liquid waste	Once every month	
		Treatment of water-based liquid waste	Once every day	

⁽¹⁾ Monitoring frequencies may be reduced if the emission levels are proven to be sufficiently stable.

⁽²⁾ In the case of batch discharge less frequent than the minimum monitoring frequency, monitoring is carried out once per batch.

⁽³⁾ The monitoring only applies when the substance concerned is identified as relevant in the waste water inventory mentioned in BAT 3.

⁽⁴⁾ In the case of an indirect discharge to a receiving water body, the monitoring frequency may be reduced if the downstream waste water treatment plant abates the pollutants concerned.

⁽⁵⁾ Either TOC or COD is monitored. TOC is the preferred option, because its monitoring does not rely on the use of very toxic compounds.

⁽⁶⁾ The monitoring applies only in the case of a direct discharge to a receiving water body.

BAT 8. BAT is to monitor channelled emissions to air with at least the frequency given below, and in accordance with EN standards. If EN standards are not available, BAT is to use ISO, national or other international standards that ensure the provision of data of an equivalent scientific quality.

Substance/Parameter	Standard(s)	Waste treatment process	Minimum monitoring frequency ⁽¹⁾	Monitoring associated with
Brominated flame retardants ⁽²⁾	No EN standard available	Mechanical treatment in shredders of metal waste	Once every year	BAT 25

Substance/Parameter	Standard(s)	Waste treatment process	Minimum monitoring frequency ⁽¹⁾	Monitoring associated with
CFCs	No EN standard available	Treatment of WEEE containing VFCs and/or VHCs	Once every six months	BAT 29
Dioxin-like PCBs	EN 1948-1, -2, and -4 ⁽³⁾	Mechanical treatment in shredders of metal waste ⁽²⁾	Once every year	BAT 25
		Decontamination of equipment containing PCBs	Once every three months	BAT 51
Dust	EN 13284-1	Mechanical treatment of waste	Once every six months	BAT 25
		Mechanical biological treatment of waste		BAT 34
		Physico-chemical treatment of solid and/or pasty waste		BAT 41
		Thermal treatment of spent activated carbon, waste catalysts and excavated contaminated soil		BAT 49
		Water washing of excavated contaminated soil		BAT 50
HCl	EN 1911	Thermal treatment of spent activated carbon, waste catalysts and excavated contaminated soil ⁽²⁾	Once every six months	BAT 49
		Treatment of water-based liquid waste ⁽²⁾		BAT 53
HF	No EN standard available	Thermal treatment of spent activated carbon, waste catalysts and excavated contaminated soil ⁽²⁾	Once every six months	BAT 49
Hg	EN 13211	Treatment of WEEE containing mercury	Once every three months	BAT 32
H ₂ S	No EN standard available	Biological treatment of waste ⁽⁴⁾	Once every six months	BAT 34
Metals and metalloids except mercury (e.g. As, Cd, Co, Cr, Cu, Mn, Ni, Pb, Sb, Se, Tl, V) ⁽²⁾	EN 14385	Mechanical treatment in shredders of metal waste	Once every year	BAT 25
NH ₃	No EN standard available	Biological treatment of waste ⁽⁴⁾	Once every six months	BAT 34
		Physico-chemical treatment of solid and/or pasty waste ⁽²⁾	Once every six months	BAT 41
		Treatment of water-based liquid waste ⁽²⁾		BAT 53

Substance/Parameter	Standard(s)	Waste treatment process	Minimum monitoring frequency ⁽¹⁾	Monitoring associated with
Odour concentration	EN 13725	Biological treatment of waste ⁽⁵⁾	Once every six months	BAT 34
PCDD/F ⁽²⁾	EN 1948-1, -2 and -3 ⁽³⁾	Mechanical treatment in shredders of metal waste	Once every year	BAT 25
TVOC	EN 12619	Mechanical treatment in shredders of metal waste	Once every six months	BAT 25
		Treatment of WEEE containing VFCs and/or VHCs	Once every six months	BAT 29
		Mechanical treatment of waste with calorific value ⁽²⁾	Once every six months	BAT 31
		Mechanical biological treatment of waste	Once every six months	BAT 34
		Physico-chemical treatment of solid and/or pasty waste ⁽²⁾	Once every six months	BAT 41
		Re-refining of waste oil		BAT 44
		Physico-chemical treatment of waste with calorific value		BAT 45
		Regeneration of spent solvents		BAT 47
		Thermal treatment of spent activated carbon, waste catalysts and excavated contaminated soil		BAT 49
		Water washing of excavated contaminated soil		BAT 50
		Treatment of water-based liquid waste ⁽²⁾		BAT 53
Decontamination of equipment containing PCBs ⁽⁶⁾	Once every three months	BAT 51		

⁽¹⁾ Monitoring frequencies may be reduced if the emission levels are proven to be sufficiently stable.

⁽²⁾ The monitoring only applies when the substance concerned is identified as relevant in the waste gas stream based on the inventory mentioned in BAT 3.

⁽³⁾ Instead of EN 1948-1, sampling may also be carried out according to CEN/TS 1948-5.

⁽⁴⁾ The odour concentration may be monitored instead.

⁽⁵⁾ The monitoring of NH₃ and H₂S can be used as an alternative to the monitoring of the odour concentration.

⁽⁶⁾ The monitoring only applies when solvent is used for cleaning the contaminated equipment.

BAT 9. BAT is to monitor diffuse emissions of organic compounds to air from the regeneration of spent solvents, the decontamination of equipment containing POPs with solvents, and the physico-chemical treatment of solvents for the recovery of their calorific value, at least once per year using one or a combination of the techniques given below.

Technique		Description
a	Measurement	Sniffing methods, optical gas imaging, solar occultation flux or differential absorption. See descriptions in Section 6.2.
b	Emissions factors	Calculation of emissions based on emissions factors, periodically validated (e.g. once every two years) by measurements.
c	Mass balance	Calculation of diffuse emissions using a mass balance considering the solvent input, channelled emissions to air, emissions to water, the solvent in the process output, and process (e.g. distillation) residues.

BAT 10. BAT is to periodically monitor odour emissions.

Description

Odour emissions can be monitored using:

- EN standards (e.g. dynamic olfactometry according to EN 13725 in order to determine the odour concentration or EN 16841-1 or -2 in order to determine the odour exposure);
- when applying alternative methods for which no EN standards are available (e.g. estimation of odour impact), ISO, national or other international standards that ensure the provision of data of an equivalent scientific quality.

The monitoring frequency is determined in the odour management plan (see BAT 12).

Applicability

The applicability is restricted to cases where an odour nuisance at sensitive receptors is expected and/or has been substantiated.

BAT 11. BAT is to monitor the annual consumption of water, energy and raw materials as well as the annual generation of residues and waste water, with a frequency of at least once per year.

Description

Monitoring includes direct measurements, calculation or recording, e.g. using suitable meters or invoices. The monitoring is broken down at the most appropriate level (e.g. at process or plant/installation level) and considers any significant changes in the plant/installation.

1.3. Emissions to air

BAT 12. In order to prevent or, where that is not practicable, to reduce odour emissions, BAT is to set up, implement and regularly review an odour management plan, as part of the environmental management system (see BAT 1), that includes all of the following elements:

- a protocol containing actions and timelines;
- a protocol for conducting odour monitoring as set out in BAT 10;
- a protocol for response to identified odour incidents, e.g. complaints;
- an odour prevention and reduction programme designed to identify the source(s); to characterise the contributions of the sources; and to implement prevention and/or reduction measures.

Applicability

The applicability is restricted to cases where an odour nuisance at sensitive receptors is expected and/or has been substantiated.

BAT 13. In order to prevent or, where that is not practicable, to reduce odour emissions, BAT is to use one or a combination of the techniques given below.

Technique	Description	Applicability
a. Minimising residence times	Minimising the residence time of (potentially) odorous waste in storage or in handling systems (e.g. pipes, tanks, containers), in particular under anaerobic conditions. When relevant, adequate provisions are made for the acceptance of seasonal peak volumes of waste.	Only applicable to open systems.
b. Using chemical treatment	Using chemicals to destroy or to reduce the formation of odorous compounds (e.g. to oxidise or to precipitate hydrogen sulphide).	Not applicable if it may hamper the desired output quality.
c. Optimising aerobic treatment	In the case of aerobic treatment of water-based liquid waste, it may include: <ul style="list-style-type: none"> — use of pure oxygen; — removal of scum in tanks; — frequent maintenance of the aeration system. In the case of aerobic treatment of waste other than water-based liquid waste, see BAT 36.	Generally applicable.

BAT 14. In order to prevent or, where that is not practicable, to reduce diffuse emissions to air, in particular of dust, organic compounds and odour, BAT is to use an appropriate combination of the techniques given below.

Depending on the risk posed by the waste in terms of diffuse emissions to air, BAT 14d is especially relevant.

Technique	Description	Applicability
a. Minimising the number of potential diffuse emission sources	This includes techniques such as: <ul style="list-style-type: none"> — appropriate design of piping layout (e.g. minimising pipe run length, reducing the number of flanges and valves, using welded fittings and pipes); — favouring the use of gravity transfer rather than using pumps; — limiting the drop height of material; — limiting traffic speed; — using wind barriers. 	Generally applicable.

	Technique	Description	Applicability
b.	Selection and use of high-integrity equipment	<p>This includes techniques such as:</p> <ul style="list-style-type: none"> — valves with double packing seals or equally efficient equipment; — high-integrity gaskets (such as spiral wound, ring joints) for critical applications; — pumps/compressors/agitators fitted with mechanical seals instead of packing; — magnetically driven pumps/compressor/agitators; — appropriate service hose access ports, piercing pliers, drill heads, e.g. when degassing WEEE containing VFCs and/or VHCs. 	Applicability may be restricted in the case of existing plants due to operability requirements.
c.	Corrosion prevention	<p>This includes techniques such as:</p> <ul style="list-style-type: none"> — appropriate selection of construction materials; — lining or coating of equipment and painting of pipes with corrosion inhibitors. 	Generally applicable.
d.	Containment, collection and treatment of diffuse emissions	<p>This includes techniques such as:</p> <ul style="list-style-type: none"> — storing, treating and handling waste and material that may generate diffuse emissions in enclosed buildings and/or enclosed equipment (e.g. conveyor belts); — maintaining the enclosed equipment or buildings under an adequate pressure; — collecting and directing the emissions to an appropriate abatement system (see Section 6.1) via an air extraction system and/or air suction systems close to the emission sources. 	<p>The use of enclosed equipment or buildings may be restricted by safety considerations such as the risk of explosion or oxygen depletion.</p> <p>The use of enclosed equipment or buildings may also be constrained by the volume of waste.</p>
e.	Dampening	Dampening potential sources of diffuse dust emissions (e.g. waste storage, traffic areas, and open handling processes) with water or fog.	Generally applicable.
f.	Maintenance	<p>This includes techniques such as:</p> <ul style="list-style-type: none"> — ensuring access to potentially leaky equipment; — regularly controlling protective equipment such as lamellar curtains, fast-action doors. 	Generally applicable.

Technique		Description	Applicability
g.	Cleaning of waste treatment and storage areas	This includes techniques such as regularly cleaning the whole waste treatment area (halls, traffic areas, storage areas, etc.), conveyor belts, equipment and containers.	Generally applicable.
h.	Leak detection and repair (LDAR) programme	See Section 6.2. When emissions of organic compounds are expected, a LDAR programme is set up and implemented using a risk-based approach, considering in particular the design of the plant and the amount and nature of the organic compounds concerned.	Generally applicable.

BAT 15. BAT is to use flaring only for safety reasons or for non-routine operating conditions (e.g. start-ups, shutdowns) by using both of the techniques given below.

Technique		Description	Applicability
a.	Correct plant design	This includes the provision of a gas recovery system with sufficient capacity and the use of high-integrity relief valves.	Generally applicable to new plants. A gas recovery system may be retrofitted in existing plants.
b.	Plant management	This includes balancing the gas system and using advanced process control.	Generally applicable.

BAT 16. In order to reduce emissions to air from flares when flaring is unavoidable, BAT is to use both of the techniques given below.

Technique		Description	Applicability
a.	Correct design of flaring devices	Optimisation of height and pressure, assistance by steam, air or gas, type of flare tips, etc., to enable smokeless and reliable operation and to ensure the efficient combustion of excess gases.	Generally applicable to new flares. In existing plants, applicability may be restricted, e.g. due to maintenance time availability.
b.	Monitoring and recording as part of flare management	This includes continuous monitoring of the quantity of gas sent to flaring. It may include estimations of other parameters (e.g. composition of gas flow, heat content, ratio of assistance, velocity, purge gas flow rate, pollutant emissions (e.g. NO _x , CO, hydrocarbons), noise). The recording of flaring events usually includes the duration and number of events and allows for the quantification of emissions and the potential prevention of future flaring events.	Generally applicable.

1.4. Noise and vibrations

BAT 17. In order to prevent or, where that is not practicable, to reduce noise and vibration emissions, BAT is to set up, implement and regularly review a noise and vibration management plan, as part of the environmental management system (see BAT 1), that includes all of the following elements:

- I. a protocol containing appropriate actions and timelines;
- II. a protocol for conducting noise and vibration monitoring;
- III. a protocol for response to identified noise and vibration events, e.g. complaints;
- IV. a noise and vibration reduction programme designed to identify the source(s), to measure/estimate noise and vibration exposure, to characterise the contributions of the sources and to implement prevention and/or reduction measures.

Applicability

The applicability is restricted to cases where a noise or vibration nuisance at sensitive receptors is expected and/or has been substantiated.

BAT 18. In order to prevent or, where that is not practicable, to reduce noise and vibration emissions, BAT is to use one or a combination of the techniques given below.

Technique		Description	Applicability
a.	Appropriate location of equipment and buildings	Noise levels can be reduced by increasing the distance between the emitter and the receiver, by using buildings as noise screens and by relocating building exits or entrances.	For existing plants, the relocation of equipment and building exits or entrances may be restricted by a lack of space or excessive costs.
b.	Operational measures	This includes techniques such as: (i) inspection and maintenance of equipment; (ii) closing of doors and windows of enclosed areas, if possible; (iii) equipment operation by experienced staff; (iv) avoidance of noisy activities at night, if possible; (v) provisions for noise control during maintenance, traffic, handling and treatment activities.	Generally applicable.
c.	Low-noise equipment	This may include direct drive motors, compressors, pumps and flares.	
d.	Noise and vibration control equipment	This includes techniques such as: (i) noise reducers; (ii) acoustic and vibrational insulation of equipment; (iii) enclosure of noisy equipment; (iv) soundproofing of buildings.	Applicability may be restricted by a lack of space (for existing plants).

	Technique	Description	Applicability
e.	Noise attenuation	Noise propagation can be reduced by inserting obstacles between emitters and receivers (e.g. protection walls, embankments and buildings).	Applicable only to existing plants, as the design of new plants should make this technique unnecessary. For existing plants, the insertion of obstacles may be restricted by a lack of space. For mechanical treatment in shredders of metal wastes, it is applicable within the constraints associated with the risk of deflagration in shredders.

1.5. Emissions to water

BAT 19. In order to optimise water consumption, to reduce the volume of waste water generated and to prevent or, where that is not practicable, to reduce emissions to soil and water, BAT is to use an appropriate combination of the techniques given below.

	Technique	Description	Applicability
a.	Water management	Water consumption is optimised by using measures which may include: <ul style="list-style-type: none"> — water-saving plans (e.g. establishment of water efficiency objectives, flow diagrams and water mass balances); — optimising the use of washing water (e.g. dry cleaning instead of hosing down, using trigger control on all washing equipment); — reducing the use of water for vacuum generation (e.g. use of liquid ring pumps with high boiling point liquids). 	Generally applicable.
b.	Water recirculation	Water streams are recirculated within the plant, if necessary after treatment. The degree of recirculation is limited by the water balance of the plant, the content of impurities (e.g. odorous compounds) and/or the characteristics of the water streams (e.g. nutrient content).	Generally applicable.
c.	Impermeable surface	Depending on the risks posed by the waste in terms of soil and/or water contamination, the surface of the whole waste treatment area (e.g. waste reception, handling, storage, treatment and dispatch areas) is made impermeable to the liquids concerned.	Generally applicable.

	Technique	Description	Applicability
d.	Techniques to reduce the likelihood and impact of overflows and failures from tanks and vessels	<p>Depending on the risks posed by the liquids contained in tanks and vessels in terms of soil and/or water contamination, this includes techniques such as:</p> <ul style="list-style-type: none"> — overflow detectors; — overflow pipes that are directed to a contained drainage system (i.e. the relevant secondary containment or another vessel); — tanks for liquids that are located in a suitable secondary containment; the volume is normally sized to accommodate the loss of containment of the largest tank within the secondary containment; — isolation of tanks, vessels and secondary containment (e.g. closing of valves). 	Generally applicable.
e.	Roofing of waste storage and treatment areas	Depending on the risks posed by the waste in terms of soil and/or water contamination, waste is stored and treated in covered areas to prevent contact with rainwater and thus minimise the volume of contaminated run-off water.	Applicability may be constrained when high volumes of waste are stored or treated (e.g. mechanical treatment in shredders of metal waste).
f.	Segregation of water streams	Each water stream (e.g. surface run-off water, process water) is collected and treated separately, based on the pollutant content and on the combination of treatment techniques. In particular, uncontaminated waste water streams are segregated from waste water streams that require treatment.	<p>Generally applicable to new plants.</p> <p>Generally applicable to existing plants within the constraints associated with the layout of the water collection system.</p>
g.	Adequate drainage infrastructure	<p>The waste treatment area is connected to drainage infrastructure.</p> <p>Rainwater falling on the treatment and storage areas is collected in the drainage infrastructure along with washing water, occasional spillages, etc. and, depending on the pollutant content, recirculated or sent for further treatment.</p>	<p>Generally applicable to new plants.</p> <p>Generally applicable to existing plants within the constraints associated with the layout of the water drainage system.</p>
h.	Design and maintenance provisions to allow detection and repair of leaks	<p>Regular monitoring for potential leakages is risk-based, and, when necessary, equipment is repaired.</p> <p>The use of underground components is minimised. When underground components are used, and depending on the risks posed by the waste contained in those components in terms of soil and/or water contamination, secondary containment of underground components is put in place.</p>	<p>The use of above-ground components is generally applicable to new plants. It may be limited however by the risk of freezing.</p> <p>The installation of secondary containment may be limited in the case of existing plants.</p>

Technique	Description	Applicability
i. Appropriate buffer storage capacity	<p>Appropriate buffer storage capacity is provided for waste water generated during other than normal operating conditions using a risk-based approach (e.g. taking into account the nature of the pollutants, the effects of downstream waste water treatment, and the receiving environment).</p> <p>The discharge of waste water from this buffer storage is only possible after appropriate measures are taken (e.g. monitor, treat, reuse).</p>	<p>Generally applicable to new plants.</p> <p>For existing plants, applicability may be limited by space availability and by the layout of the water collection system.</p>

BAT 20. In order to reduce emissions to water, BAT is to treat waste water using an appropriate combination of the techniques given below.

Technique (!)	Typical pollutants targeted	Applicability
<i>Preliminary and primary treatment, e.g.</i>		
a. Equalisation	All pollutants	Generally applicable.
b. Neutralisation	Acids, alkalis	
c. Physical separation, e.g. screens, sieves, grit separators, grease separators, oil-water separation or primary settlement tanks	Gross solids, suspended solids, oil/grease	
<i>Physico-chemical treatment, e.g.</i>		
d. Adsorption	Adsorbable dissolved non-biodegradable or inhibitory pollutants, e.g. hydrocarbons, mercury, AOX	Generally applicable.
e. Distillation/rectification	Dissolved non-biodegradable or inhibitory pollutants that can be distilled, e.g. some solvents	
f. Precipitation	Precipitable dissolved non-biodegradable or inhibitory pollutants, e.g. metals, phosphorus	
g. Chemical oxidation	Oxidisable dissolved non-biodegradable or inhibitory pollutants, e.g. nitrite, cyanide	

Technique ⁽¹⁾		Typical pollutants targeted	Applicability
h.	Chemical reduction	Reducible dissolved non-biodegradable or inhibitory pollutants, e.g. hexavalent chromium (Cr(VI))	
i.	Evaporation	Soluble contaminants	
j.	Ion exchange	Ionic dissolved non-biodegradable or inhibitory pollutants, e.g. metals	
k.	Stripping	Purgeable pollutants, e.g. hydrogen sulphide (H ₂ S), ammonia (NH ₃), some adsorbable organically bound halogens (AOX), hydrocarbons	
<i>Biological treatment, e.g.</i>			
l.	Activated sludge process	Biodegradable organic compounds	Generally applicable.
m.	Membrane bioreactor		
<i>Nitrogen removal</i>			
n.	Nitrification/denitrification when the treatment includes a biological treatment	Total nitrogen, ammonia	Nitrification may not be applicable in the case of high chloride concentrations (e.g. above 10 g/l) and when the reduction of the chloride concentration prior to nitrification would not be justified by the environmental benefits. Nitrification is not applicable when the temperature of the waste water is low (e.g. below 12 °C).
<i>Solids removal, e.g.</i>			
o.	Coagulation and flocculation	Suspended solids and particulate-bound metals	Generally applicable.
p.	Sedimentation		
q.	Filtration (e.g. sand filtration, microfiltration, ultrafiltration)		
r.	Flotation		

⁽¹⁾ The descriptions of the techniques are given in Section 6.3.

Table 6.1

BAT-associated emission levels (BAT-AELs) for direct discharges to a receiving water body

Substance/Parameter	BAT-AEL ⁽¹⁾	Waste treatment process to which the BAT-AEL applies
Total organic carbon (TOC) ⁽²⁾	10-60 mg/l	— All waste treatments except treatment of water-based liquid waste
	10-100 mg/l ⁽³⁾ ⁽⁴⁾	— Treatment of water-based liquid waste
Chemical oxygen demand (COD) ⁽²⁾	30-180 mg/l	— All waste treatments except treatment of water-based liquid waste
	30-300 mg/l ⁽³⁾ ⁽⁴⁾	— Treatment of water-based liquid waste
Total suspended solids (TSS)	5-60 mg/l	— All waste treatments
Hydrocarbon oil index (HOI)	0,5-10 mg/l	<ul style="list-style-type: none"> — Mechanical treatment in shredders of metal waste — Treatment of WEEE containing VFCs and/or VHCs — Re-refining of waste oil — Physico-chemical treatment of waste with calorific value — Water washing of excavated contaminated soil — Treatment of water-based liquid waste
Total nitrogen (Total N)	1-25 mg/l ⁽⁵⁾ ⁽⁶⁾	<ul style="list-style-type: none"> — Biological treatment of waste — Re-refining of waste oil
	10-60 mg/l ⁽⁵⁾ ⁽⁶⁾ ⁽⁷⁾	— Treatment of water-based liquid waste
Total phosphorus (Total P)	0,3-2 mg/l	— Biological treatment of waste
	1-3 mg/l ⁽⁴⁾	— Treatment of water-based liquid waste
Phenol index	0,05-0,2 mg/l	<ul style="list-style-type: none"> — Re-refining of waste oil — Physico-chemical treatment of waste with calorific value
	0,05-0,3 mg/l	— Treatment of water-based liquid waste
Free cyanide (CN) ⁽⁸⁾	0,02-0,1 mg/l	— Treatment of water-based liquid waste
Adsorbable organically bound halogens (AOX) ⁽⁸⁾	0,2-1 mg/l	— Treatment of water-based liquid waste

Substance/Parameter	BAT-AEL ⁽¹⁾	Waste treatment process to which the BAT-AEL applies	
Arsenic (expressed as As)	0,01-0,05 mg/l	<ul style="list-style-type: none"> — Mechanical treatment in shredders of metal waste — Treatment of WEEE containing VFCs and/or VHCs — Mechanical biological treatment of waste — Re-refining of waste oil — Physico-chemical treatment of waste with calorific value — Physico-chemical treatment of solid and/or pasty waste — Regeneration of spent solvents — Water washing of excavated contaminated soil 	
Cadmium (expressed as Cd)	0,01-0,05 mg/l		
Chromium (expressed as Cr)	0,01-0,15 mg/l		
Copper (expressed as Cu)	0,05-0,5 mg/l		
Lead (expressed as Pb)	0,05-0,1 mg/l ⁽⁹⁾		
Nickel (expressed as Ni)	0,05-0,5 mg/l		
Mercury (expressed as Hg)	0,5-5 µg/l		
Zinc (expressed as Zn)	0,1-1 mg/l ⁽¹⁰⁾		
Metals and metalloids ⁽⁸⁾	Arsenic (expressed as As)	0,01-0,1 mg/l	— Treatment of water-based liquid waste
	Cadmium (expressed as Cd)	0,01-0,1 mg/l	
	Chromium (expressed as Cr)	0,01-0,3 mg/l	
	Hexavalent chromium (expressed as Cr(VI))	0,01-0,1 mg/l	
	Copper (expressed as Cu)	0,05-0,5 mg/l	
	Lead (expressed as Pb)	0,05-0,3 mg/l	
	Nickel (expressed as Ni)	0,05-1 mg/l	
	Mercury (expressed as Hg)	1-10 µg/l	
	Zinc (expressed as Zn)	0,1-2 mg/l	

⁽¹⁾ The averaging periods are defined in the General considerations.

⁽²⁾ Either the BAT-AEL for COD or the BAT-AEL for TOC applies. TOC monitoring is the preferred option because it does not rely on the use of very toxic compounds.

⁽³⁾ The upper end of the range may not apply:

- when the abatement efficiency is $\geq 95\%$ as a rolling yearly average and the waste input shows the following characteristics: TOC > 2 g/l (or COD > 6 g/l) as a daily average and a high proportion of refractory organic compounds (i.e. which are difficult to biodegrade); or
- in the case of high chloride concentrations (e.g. above 5 g/l in the waste input).

⁽⁴⁾ The BAT-AEL may not apply to plants treating drilling muds/cuttings.

⁽⁵⁾ The BAT-AEL may not apply when the temperature of the waste water is low (e.g. below 12 °C).

⁽⁶⁾ The BAT-AEL may not apply in the case of high chloride concentrations (e.g. above 10 g/l in the waste input).

⁽⁷⁾ The BAT-AEL only applies when biological treatment of waste water is used.

⁽⁸⁾ The BAT-AELs only apply when the substance concerned is identified as relevant in the waste water inventory mentioned in BAT 3.

⁽⁹⁾ The upper end of the range is 0,3 mg/l for mechanical treatment in shredders of metal waste.

⁽¹⁰⁾ The upper end of the range is 2 mg/l for mechanical treatment in shredders of metal waste.

The associated monitoring is given in BAT 7.

Table 6.2

BAT-associated emission levels (BAT-AELs) for indirect discharges to a receiving water body

Substance/Parameter		BAT-AEL ⁽¹⁾ ⁽²⁾	Waste treatment process to which the BAT-AEL applies
Hydrocarbon oil index (HOI)		0,5-10 mg/l	<ul style="list-style-type: none"> — Mechanical treatment in shredders of metal waste — Treatment of WEEE containing VFCs and/or VHCs — Re-refining of waste oil — Physico-chemical treatment of waste with calorific value — Water washing of excavated contaminated soil — Treatment of water-based liquid waste
Free cyanide (CN) ⁽³⁾		0,02-0,1 mg/l	— Treatment of water-based liquid waste
Adsorbable organically bound halogens (AOX) ⁽³⁾		0,2-1 mg/l	— Treatment of water-based liquid waste
Metals and metalloids ⁽³⁾	Arsenic (expressed as As)	0,01-0,05 mg/l	<ul style="list-style-type: none"> — Mechanical treatment in shredders of metal waste — Treatment of WEEE containing VFCs and/or VHCs — Mechanical biological treatment of waste — Re-refining of waste oil — Physico-chemical treatment of waste with calorific value — Physico-chemical treatment of solid and/or pasty waste — Regeneration of spent solvents — Water washing of excavated contaminated soil
	Cadmium (expressed as Cd)	0,01-0,05 mg/l	
	Chromium (expressed as Cr)	0,01-0,15 mg/l	
	Copper (expressed as Cu)	0,05-0,5 mg/l	
	Lead (expressed as Pb)	0,05-0,1 mg/l ⁽⁴⁾	
	Nickel (expressed as Ni)	0,05-0,5 mg/l	
	Mercury (expressed as Hg)	0,5-5 µg/l	
	Zinc (expressed as Zn)	0,1-1 mg/l ⁽⁵⁾	
	Arsenic (expressed as As)	0,01-0,1 mg/l	
Cadmium (expressed as Cd)	0,01-0,1 mg/l		
Chromium (expressed as Cr)	0,01-0,3 mg/l		

Substance/Parameter	BAT-AEL ⁽¹⁾ ⁽²⁾	Waste treatment process to which the BAT-AEL applies
Hexavalent chromium (expressed as Cr(VI))	0,01-0,1 mg/l	
Copper (expressed as Cu)	0,05-0,5 mg/l	
Lead (expressed as Pb)	0,05-0,3 mg/l	
Nickel (expressed as Ni)	0,05-1 mg/l	
Mercury (expressed as Hg)	1-10 µg/l	
Zinc (expressed as Zn)	0,1-2 mg/l	

⁽¹⁾ The averaging periods are defined in the General considerations.

⁽²⁾ The BAT-AELs may not apply if the downstream waste water treatment plant abates the pollutants concerned, provided this does not lead to a higher level of pollution in the environment.

⁽³⁾ The BAT-AELs only apply when the substance concerned is identified as relevant in the waste water inventory mentioned in BAT 3.

⁽⁴⁾ The upper end of the range is 0,3 mg/l for mechanical treatment in shredders of metal waste.

⁽⁵⁾ The upper end of the range is 2 mg/l for mechanical treatment in shredders of metal waste.

The associated monitoring is given in BAT 7.

1.6. Emissions from accidents and incidents

BAT 21. In order to prevent or limit the environmental consequences of accidents and incidents, BAT is to use all of the techniques given below, as part of the accident management plan (see BAT 1).

Technique	Description
a. Protection measures	These include measures such as: <ul style="list-style-type: none"> — protection of the plant against malevolent acts; — fire and explosion protection system, containing equipment for prevention, detection, and extinction; — accessibility and operability of relevant control equipment in emergency situations.
b. Management of incidental/accidental emissions	Procedures are established and technical provisions are in place to manage (in terms of possible containment) emissions from accidents and incidents such as emissions from spillages, firefighting water, or safety valves.
c. Incident/accident registration and assessment system	This includes techniques such as: <ul style="list-style-type: none"> — a log/diary to record all accidents, incidents, changes to procedures and the findings of inspections; — procedures to identify, respond to and learn from such incidents and accidents.

1.7. Material efficiency

BAT 22. In order to use materials efficiently, BAT is to substitute materials with waste.

Description

Waste is used instead of other materials for the treatment of wastes (e.g. waste alkalis or waste acids are used for pH adjustment, fly ashes are used as binders).

Applicability

Some applicability limitations derive from the risk of contamination posed by the presence of impurities (e.g. heavy metals, POPs, salts, pathogens) in the waste that substitutes other materials. Another limitation is the compatibility of the waste substituting other materials with the waste input (see BAT 2).

1.8. Energy efficiency

BAT 23. In order to use energy efficiently, BAT is to use both of the techniques given below.

Technique		Description
a.	Energy efficiency plan	An energy efficiency plan entails defining and calculating the specific energy consumption of the activity (or activities), setting key performance indicators on an annual basis (for example, specific energy consumption expressed in kWh/tonne of waste processed) and planning periodic improvement targets and related actions. The plan is adapted to the specificities of the waste treatment in terms of process(es) carried out, waste stream(s) treated, etc.
b.	Energy balance record	An energy balance record provides a breakdown of the energy consumption and generation (including exportation) by the type of source (i.e. electricity, gas, conventional liquid fuels, conventional solid fuels, and waste). This includes: <ul style="list-style-type: none"> (i) information on energy consumption in terms of delivered energy; (ii) information on energy exported from the installation; (iii) energy flow information (e.g. Sankey diagrams or energy balances) showing how the energy is used throughout the process. The energy balance record is adapted to the specificities of the waste treatment in terms of process(es) carried out, waste stream(s) treated, etc.

1.9. Reuse of packaging

BAT 24. In order to reduce the quantity of waste sent for disposal, BAT is to maximise the reuse of packaging, as part of the residues management plan (see BAT 1).

Description

Packaging (drums, containers, IBCs, pallets, etc.) is reused for containing waste, when it is in good condition and sufficiently clean, depending on a compatibility check between the substances contained (in consecutive uses). If necessary, packaging is sent for appropriate treatment prior to reuse (e.g. reconditioning, cleaning).

Applicability

Some applicability restrictions derive from the risk of contamination of the waste posed by the reused packaging.

2. BAT CONCLUSIONS FOR THE MECHANICAL TREATMENT OF WASTE

Unless otherwise stated, the BAT conclusions presented in Section 2 apply to the mechanical treatment of waste when it is not combined with biological treatment, and in addition to the general BAT conclusions in Section 1.

2.1. General BAT conclusions for the mechanical treatment of waste

2.1.1. Emissions to air

BAT 25. In order to reduce emissions to air of dust, and of particulate-bound metals, PCDD/F and dioxin-like PCBs, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

	Technique	Description	Applicability
a.	Cyclone	See Section 6.1. Cyclones are mainly used as preliminary separators for coarse dust.	Generally applicable.
b.	Fabric filter	See Section 6.1.	May not be applicable to exhaust air ducts directly connected to the shredder when the effects of deflagration on the fabric filter cannot be mitigated (e.g. by using pressure relief valves).
c.	Wet scrubbing	See Section 6.1.	Generally applicable.
d.	Water injection into the shredder	The waste to be shredded is damped by injecting water into the shredder. The amount of water injected is regulated in relation to the amount of waste being shredded (which may be monitored via the energy consumed by the shredder motor). The waste gas that contains residual dust is directed to cyclone(s) and/or a wet scrubber.	Only applicable within the constraints associated with local conditions (e.g. low temperature, drought).

Table 6.3

BAT-associated emission level (BAT-AEL) for channelled dust emissions to air from the mechanical treatment of waste

Parameter	Unit	BAT-AEL (Average over the sampling period)
Dust	mg/Nm ³	2-5 ⁽¹⁾

⁽¹⁾ When a fabric filter is not applicable, the upper end of the range is 10 mg/Nm³.

The associated monitoring is given in BAT 8.

2.2. BAT conclusions for the mechanical treatment in shredders of metal waste

Unless otherwise stated, the BAT conclusions presented in this section apply to the mechanical treatment in shredders of metal waste, in addition to BAT 25.

2.2.1. Overall environmental performance

BAT 26. In order to improve the overall environmental performance, and to prevent emissions due to accidents and incidents, BAT is to use BAT 14g and all of the techniques given below:

- (a) implementation of a detailed inspection procedure for baled waste before shredding;

- (b) removal of dangerous items from the waste input stream and their safe disposal (e.g. gas cylinders, non-depolluted EoLVs, non-depolluted WEEE, items contaminated with PCBs or mercury, radioactive items);
- (c) treatment of containers only when accompanied by a declaration of cleanliness.

2.2.2. Deflagrations

BAT 27. In order to prevent deflagrations and to reduce emissions when deflagrations occur, BAT is to use technique a. and one or both of the techniques b. and c. given below.

Technique	Description	Applicability
a. Deflagration management plan	<p>This includes:</p> <ul style="list-style-type: none"> — a deflagration reduction programme designed to identify the source(s), and to implement measures to prevent deflagration occurrences, e.g. inspection of waste input as described in BAT 26a, removal of dangerous items as described in BAT 26b; — a review of historical deflagration incidents and remedies and the dissemination of deflagration knowledge; — a protocol for response to deflagration incidents. 	Generally applicable.
b. Pressure relief dampers	Pressure relief dampers are installed to relieve pressure waves coming from deflagrations that would otherwise cause major damage and subsequent emissions.	
c. Pre-shredding	Use of a low-speed shredder installed upstream of the main shredder	<p>Generally applicable for new plants, depending on the input material.</p> <p>Applicable for major plant upgrades where a significant number of deflagrations have been substantiated.</p>

2.2.3. Energy efficiency

BAT 28. In order to use energy efficiently, BAT is to keep the shredder feed stable.

Description

The shredder feed is equalised by avoiding disruption or overload of the waste feed which would lead to unwanted shutdowns and start-ups of the shredder.

2.3. BAT conclusions for the treatment of WEEE containing VFCs and/or VHCs

Unless otherwise stated, the BAT conclusions presented in this section apply to the treatment of WEEE containing VFCs and/or VHCs, in addition to BAT 25.

2.3.1. Emissions to air

BAT 29. In order to prevent or, where that is not practicable, to reduce emissions of organic compounds to air, BAT is to apply BAT 14d, BAT 14h and to use technique a. and one or both of the techniques b. and c. given below.

Technique		Description
a.	Optimised removal and capture of refrigerants and oils	All refrigerants and oils are removed from the WEEE containing VFCs and/or VHCs and captured by a vacuum suction system (e.g. achieving refrigerant removal of at least 90 %). Refrigerants are separated from oils and the oils are degassed. The amount of oil remaining in the compressor is reduced to a minimum (so that the compressor does not drip).
b.	Cryogenic condensation	Waste gas containing organic compounds such as VFCs/VHCs is sent to a cryogenic condensation unit where they are liquefied (see description in Section 6.1). The liquefied gas is stored in pressurised vessels for further treatment.
c.	Adsorption	Waste gas containing organic compounds such as VFCs/VHCs is led into adsorption systems (see description in Section 6.1). The spent activated carbon is regenerated by means of heated air pumped into the filter to desorb the organic compounds. Subsequently, the regeneration waste gas is compressed and cooled in order to liquefy the organic compounds (in some cases by cryogenic condensation). The liquefied gas is then stored in pressurised vessels. The remaining waste gas from the compression stage is usually led back into the adsorption system in order to minimise VFC/VHC emissions.

Table 6.4

BAT-associated emission levels (BAT-AELs) for channelled TVOC and CFC emissions to air from the treatment of WEEE containing VFCs and/or VHCs

Parameter	Unit	BAT-AEL (Average over the sampling period)
TVOC	mg/Nm ³	3-15
CFCs	mg/Nm ³	0,5-10

The associated monitoring is given in BAT 8.

2.3.2. Explosions

BAT 30. In order to prevent emissions due to explosions when treating WEEE containing VFCs and/or VHCs, BAT is to use either of the techniques given below.

Technique		Description
a.	Inert atmosphere	By injecting inert gas (e.g. nitrogen), the oxygen concentration in enclosed equipment (e.g. in enclosed shredders, crushers, dust and foam collectors) is reduced (e.g. to 4 vol-%).
b.	Forced ventilation	By using forced ventilation, the hydrocarbon concentration in enclosed equipment (e.g. in enclosed shredders, crushers, dust and foam collectors) is reduced to < 25 % of the lower explosive limit.

2.4. BAT conclusions for the mechanical treatment of waste with calorific value

In addition to BAT 25, the BAT conclusions presented in this section apply to the mechanical treatment of waste with calorific value covered by points 5.3(a)(iii) and 5.3(b)(ii) of Annex I to Directive 2010/75/EU.

2.4.1. Emissions to air

BAT 31. In order to reduce emissions to air of organic compounds, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1.
b.	Biofilter	
c.	Thermal oxidation	
d.	Wet scrubbing	

Table 6.5

BAT-associated emission level (BAT-AEL) for channelled TVOC emissions to air from the mechanical treatment of waste with calorific value

Parameter	Unit	BAT-AEL (Average over the sampling period)
TVOC	mg/Nm ³	10-30 ⁽¹⁾

⁽¹⁾ The BAT-AEL only applies when organic compounds are identified as relevant in the waste gas stream, based on the inventory mentioned in BAT 3.

The associated monitoring is given in BAT 8.

2.5. BAT conclusions for the mechanical treatment of WEEE containing mercury

Unless otherwise stated, the BAT conclusions presented in this section apply to the mechanical treatment of WEEE containing mercury, in addition to BAT 25.

2.5.1. Emissions to air

BAT 32. In order to reduce mercury emissions to air, BAT is to collect mercury emissions at source, to send them to abatement and to carry out adequate monitoring.

Description

This includes all of the following measures:

- equipment used to treat WEEE containing mercury is enclosed, under negative pressure and connected to a local exhaust ventilation (LEV) system;
- waste gas from the processes is treated by dedusting techniques such as cyclones, fabric filters, and HEPA filters, followed by adsorption on activated carbon (see Section 6.1);
- the efficiency of the waste gas treatment is monitored;
- mercury levels in the treatment and storage areas are measured frequently (e.g. once every week) to detect potential mercury leaks.

Table 6.6

BAT-associated emission level (BAT-AEL) for channelled mercury emissions to air from the mechanical treatment of WEEE containing mercury

Parameter	Unit	BAT-AEL (Average over the sampling period)
Mercury (Hg)	µg/Nm ³	2-7

The associated monitoring is given in BAT 8.

3. BAT CONCLUSIONS FOR THE BIOLOGICAL TREATMENT OF WASTE

Unless otherwise stated, the BAT conclusions presented in Section 3 apply to the biological treatment of waste, and in addition to the general BAT conclusions in Section 1. The BAT conclusions in Section 3 do not apply to the treatment of water-based liquid waste.

3.1. General BAT conclusions for the biological treatment of waste

3.1.1. Overall environmental performance

BAT 33. In order to reduce odour emissions and to improve the overall environmental performance, BAT is to select the waste input.

Description

The technique consists of carrying out the pre-acceptance, acceptance and sorting of the waste input (see BAT 2) so as to ensure the suitability of the waste input for the waste treatment, e.g. in terms of nutrient balance, moisture or toxic compounds which may reduce the biological activity.

3.1.2. Emissions to air

BAT 34. In order to reduce channelled emissions to air of dust, organic compounds and odorous compounds, including H₂S and NH₃, BAT is to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1.
b.	Biofilter	See Section 6.1. A pretreatment of the waste gas before the biofilter (e.g. with a water or acid scrubber) may be needed in the case of a high NH ₃ content (e.g. 5-40 mg/Nm ³) in order to control the media pH and to limit the formation of N ₂ O in the biofilter. Some other odorous compounds (e.g. mercaptans, H ₂ S) can cause acidification of the biofilter media and necessitate the use of a water or alkaline scrubber for pretreatment of the waste gas before the biofilter.
c.	Fabric filter	See Section 6.1. The fabric filter is used in the case of mechanical biological treatment of waste.
d.	Thermal oxidation	See Section 6.1.
e.	Wet scrubbing	See Section 6.1. Water, acid or alkaline scrubbers are used in combination with a biofilter, thermal oxidation or adsorption on activated carbon.

Table 6.7

BAT-associated emission levels (BAT-AELs) for channelled NH₃, odour, dust and TVOC emissions to air from the biological treatment of waste

Parameter	Unit	BAT-AEL (Average over the sampling period)	Waste treatment process
NH ₃ ⁽¹⁾ ⁽²⁾	mg/Nm ³	0,3-20	All biological treatments of waste
Odour concentration ⁽¹⁾ ⁽²⁾	ou _E /Nm ³	200-1 000	
Dust	mg/Nm ³	2-5	Mechanical biological treatment of waste
TVOC	mg/Nm ³	5-40 ⁽³⁾	

⁽¹⁾ Either the BAT-AEL for NH₃ or the BAT-AEL for the odour concentration applies.

⁽²⁾ This BAT-AEL does not apply to the treatment of waste mainly composed of manure.

⁽³⁾ The lower end of the range can be achieved by using thermal oxidation.

The associated monitoring is given in BAT 8.

3.1.3. Emissions to water and water usage

BAT 35. In order to reduce the generation of waste water and to reduce water usage, BAT is to use all of the techniques given below.

Technique	Description	Applicability
a. Segregation of water streams	Leachate seeping from compost piles and windrows is segregated from surface run-off water (see BAT 19f).	Generally applicable to new plants. Generally applicable to existing plants within the constraints associated with the layout of the water circuits.
b. Water recirculation	Recirculating process water streams (e.g. from dewatering of liquid digestate in anaerobic processes) or using as much as possible other water streams (e.g. water condensate, rinsing water, surface run-off water). The degree of recirculation is limited by the water balance of the plant, the content of impurities (e.g. heavy metals, salts, pathogens, odorous compounds) and/or the characteristics of the water streams (e.g. nutrient content).	Generally applicable.
c. Minimisation of the generation of leachate	Optimising the moisture content of the waste in order to minimise the generation of leachate.	Generally applicable.

3.2. BAT conclusions for the aerobic treatment of waste

Unless otherwise stated, the BAT conclusions presented in this section apply to the aerobic treatment of waste, and in addition to the general BAT conclusions for the biological treatment of waste in Section 3.1.

3.2.1. Overall environmental performance

BAT 36. In order to reduce emissions to air and to improve the overall environmental performance, BAT is to monitor and/or control the key waste and process parameters.

Description

Monitoring and/or control of key waste and process parameters, including:

- waste input characteristics (e.g. C to N ratio, particle size);
- temperature and moisture content at different points in the windrow;
- aeration of the windrow (e.g. via the windrow turning frequency, O₂ and/or CO₂ concentration in the windrow, temperature of air streams in the case of forced aeration);
- windrow porosity, height and width.

Applicability

Monitoring of the moisture content in the windrow is not applicable to enclosed processes when health and/or safety issues have been identified. In that case, the moisture content can be monitored before loading the waste into the enclosed composting stage and adjusted when it exits the enclosed composting stage.

3.2.2. Odour and diffuse emissions to air

BAT 37. In order to reduce diffuse emissions to air of dust, odour and bioaerosols from open-air treatment steps, BAT is to use one or both of the techniques given below.

	Technique	Description	Applicability
a.	Use of semipermeable membrane covers	Active composting windrows are covered by semipermeable membranes.	Generally applicable.
b.	Adaptation of operations to the meteorological conditions	<p>This includes techniques such as the following:</p> <ul style="list-style-type: none"> — Taking into account weather conditions and forecasts when undertaking major outdoor process activities. For instance, avoiding formation or turning of windrows or piles, screening or shredding in the case of adverse meteorological conditions in terms of emissions dispersion (e.g. the wind speed is too low or too high, or the wind blows in the direction of sensitive receptors). — Orientating windrows, so that the smallest possible area of composting mass is exposed to the prevailing wind, to reduce the dispersion of pollutants from the windrow surface. The windrows and piles are preferably located at the lowest elevation within the overall site layout. 	Generally applicable.

3.3. BAT conclusions for the anaerobic treatment of waste

Unless otherwise stated, the BAT conclusions presented in this section apply to the anaerobic treatment of waste, and in addition to the general BAT conclusions for the biological treatment of waste in Section 3.1.

3.3.1. Emissions to air

BAT 38. In order to reduce emissions to air and to improve the overall environmental performance, BAT is to monitor and/or control the key waste and process parameters.

Description

Implementation of a manual and/or automatic monitoring system to:

- ensure a stable digester operation;
- minimise operational difficulties, such as foaming, which may lead to odour emissions;
- provide sufficient early warning of system failures which may lead to a loss of containment and explosions.

This includes monitoring and/or control of key waste and process parameters, e.g.:

- pH and alkalinity of the digester feed;
- digester operating temperature;
- hydraulic and organic loading rates of the digester feed;
- concentration of volatile fatty acids (VFA) and ammonia within the digester and digestate;
- biogas quantity, composition (e.g. H₂S) and pressure;
- liquid and foam levels in the digester.

3.4. BAT conclusions for the mechanical biological treatment (MBT) of waste

Unless otherwise stated, the BAT conclusions presented in this section apply to MBT, and in addition to the general BAT conclusions for the biological treatment of waste in Section 3.1.

The BAT conclusions for the aerobic treatment (Section 3.2) and anaerobic treatment (Section 3.3) of waste apply, when relevant, to the mechanical biological treatment of waste.

3.4.1. Emissions to air

BAT 39. In order to reduce emissions to air, BAT is to use both of the techniques given below.

Technique		Description	Applicability
a.	Segregation of the waste gas streams	Splitting of the total waste gas stream into waste gas streams with a high pollutant content and waste gas streams with a low pollutant content, as identified in the inventory mentioned in BAT 3.	Generally applicable to new plants. Generally applicable to existing plants within the constraints associated with the layout of the air circuits.
b.	Recirculation of waste gas	Recirculation of waste gas with a low pollutant content in the biological process followed by waste gas treatment adapted to the concentration of pollutants (see BAT 34). The use of waste gas in the biological process may be limited by the waste gas temperature and/or the pollutant content. It may be necessary to condense the water vapour contained in the waste gas before reuse. In this case, cooling is necessary, and the condensed water is recirculated when possible (see BAT 35) or treated before discharge.	

4. BAT CONCLUSIONS FOR THE PHYSICO-CHEMICAL TREATMENT OF WASTE

Unless otherwise stated, the BAT conclusions presented in Section 4 apply to the physico-chemical treatment of waste, and in addition to the general BAT conclusions in Section 1.

4.1. BAT conclusions for the physico-chemical treatment of solid and/or pasty waste

4.1.1. Overall environmental performance

BAT 40. In order to improve the overall environmental performance, BAT is to monitor the waste input as part of the waste pre-acceptance and acceptance procedures (see BAT 2).

Description

Monitoring the waste input, e.g. in terms of:

- content of organics, oxidising agents, metals (e.g. mercury), salts, odorous compounds;
- H₂ formation potential upon mixing of flue-gas treatment residues, e.g. fly ashes, with water.

4.1.2. Emissions to air

BAT 41. In order to reduce emissions of dust, organic compounds and NH₃ to air, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1.
b.	Biofilter	
c.	Fabric filter	
d.	Wet scrubbing	

Table 6.8

BAT-associated emission level (BAT-AEL) for channelled emissions of dust to air from the physico-chemical treatment of solid and/or pasty waste

Parameter	Unit	BAT-AEL (Average over the sampling period)
Dust	mg/Nm ³	2-5

The associated monitoring is given in BAT 8.

4.2. BAT conclusions for the re-refining of waste oil

4.2.1. Overall environmental performance

BAT 42. In order to improve the overall environmental performance, BAT is to monitor the waste input as part of the waste pre-acceptance and acceptance procedures (see BAT 2).

Description

Monitoring of the waste input in terms of content of chlorinated compounds (e.g. chlorinated solvents or PCBs).

BAT 43. In order to reduce the quantity of waste sent for disposal, BAT is to use one or both of the techniques given below.

Technique		Description
a.	Material recovery	Using the organic residues from vacuum distillation, solvent extraction, thin film evaporators, etc. in asphalt products, etc.
b.	Energy recovery	Using the organic residues from vacuum distillation, solvent extraction, thin film evaporators, etc. to recover energy.

4.2.2. Emissions to air

BAT 44. In order to reduce emissions of organic compounds to air, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1.
b.	Thermal oxidation	See Section 6.1. This includes when the waste gas is sent to a process furnace or a boiler.
c.	Wet scrubbing	See Section 6.1.

The BAT-AEL set in Section 4.5 applies.

The associated monitoring is given in BAT 8.

4.3. BAT conclusions for the physico-chemical treatment of waste with calorific value

4.3.1. Emissions to air

BAT 45. In order to reduce emissions of organic compounds to air, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1
b.	Cryogenic condensation	
c.	Thermal oxidation	
d.	Wet scrubbing	

The BAT-AEL set in Section 4.5 applies.

The associated monitoring is given in BAT 8.

4.4. BAT conclusions for the regeneration of spent solvents

4.4.1. Overall environmental performance

BAT 46. In order to improve the overall environmental performance of the regeneration of spent solvents, BAT is to use one or both of the techniques given below.

Technique		Description	Applicability
a.	Material recovery	Solvents are recovered from the distillation residues by evaporation.	Applicability may be restricted when the energy demand is excessive with regards to the quantity of solvent recovered.
b.	Energy recovery	The residues from distillation are used to recover energy.	Generally applicable.

4.4.2. Emissions to air

BAT 47. In order to reduce emissions of organic compounds to air, BAT is to apply BAT 14d and to use a combination of the techniques given below.

Technique		Description	Applicability
a.	Recirculation of process off-gases in a steam boiler	The process off-gases from the condensers are sent to the steam boiler supplying the plant.	May not be applicable to the treatment of halogenated solvent wastes, in order to avoid generating and emitting PCBs and/or PCDD/F.
b.	Adsorption	See Section 6.1.	There may be limitations to the applicability of the technique due to safety reasons (e.g. activated carbon beds tend to self-ignite when loaded with ketones).
c.	Thermal oxidation	See Section 6.1.	May not be applicable to the treatment of halogenated solvent wastes, in order to avoid generating and emitting PCBs and/or PCDD/F.
d.	Condensation or cryogenic condensation	See Section 6.1.	Generally applicable.
e.	Wet scrubbing	See Section 6.1.	Generally applicable.

The BAT-AEL set in Section 4.5 applies.

The associated monitoring is given in BAT 8.

4.5. **BAT-AEL for emissions of organic compounds to air from the re-refining of waste oil, the physico-chemical treatment of waste with calorific value and the regeneration of spent solvents**

Table 6.9

BAT-associated emission level (BAT-AEL) for channelled emissions of TVOC to air from the re-refining of waste oil, the physico-chemical treatment of waste with calorific value and the regeneration of spent solvents

Parameter	Unit	BAT-AEL ⁽¹⁾ (Average over the sampling period)
TVOC	mg/Nm ³	5-30

⁽¹⁾ The BAT-AEL does not apply when the emission load is below 2 kg/h at the emission point provided that no CMR substances are identified as relevant in the waste gas stream, based on the inventory mentioned in BAT 3.

4.6. **BAT conclusions for the thermal treatment of spent activated carbon, waste catalysts and excavated contaminated soil**

4.6.1. Overall environmental performance

BAT 48. In order to improve the overall environmental performance of the thermal treatment of spent activated carbon, waste catalysts and excavated contaminated soil, BAT is to use all of the techniques given below.

Technique	Description	Applicability
a. Heat recovery from the furnace off-gas	Recovered heat may be used, for example, for preheating of combustion air or for the generation of steam, which is also used in the reactivation of the spent activated carbon.	Generally applicable.
b. Indirectly fired furnace	An indirectly fired furnace is used to avoid contact between the contents of the furnace and the flue-gases from the burner(s).	Indirectly fired furnaces are normally constructed with a metal tube and applicability may be restricted due to corrosion problems. There may be also economic restrictions for retrofitting existing plants.
c. Process-integrated techniques to reduce emissions to air	This includes techniques such as: — control of the furnace temperature and of the rotation speed of the rotary furnace; — choice of fuel; — use of a sealed furnace or operation of the furnace at a reduced pressure to avoid diffuse emissions to air.	Generally applicable.

4.6.2. Emissions to air

BAT 49. In order to reduce emissions of HCl, HF, dust and organic compounds to air, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Cyclone	See Section 6.1. The technique is used in combination with further abatement techniques.
b.	Electrostatic precipitator (ESP)	See Section 6.1.
c.	Fabric filter	
d.	Wet scrubbing	
e.	Adsorption	
f.	Condensation	
g.	Thermal oxidation ⁽¹⁾	

⁽¹⁾ Thermal oxidation is carried out with a minimum temperature of 1 100 °C and a two-second residence time for the regeneration of activated carbon used in industrial applications where refractory halogenated or other thermally resistant substances are likely to be present. In the case of activated carbon used for potable water- and food-grade applications, an afterburner with a minimum heating temperature of 850 °C and a two-second residence time is sufficient (see Section 6.1).

The associated monitoring is given in BAT 8.

4.7. **BAT conclusions for the water washing of excavated contaminated soil**

4.7.1. Emissions to air

BAT 50. In order to reduce emissions of dust and organic compounds to air from the storage, handling, and washing steps, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1.
b.	Fabric filter	
c.	Wet scrubbing	

The associated monitoring is given in BAT 8.

4.8. **BAT conclusions for the decontamination of equipment containing PCBs**

4.8.1. Overall environmental performance

BAT 51. In order to improve the overall environmental performance and to reduce channelled emissions of PCBs and organic compounds to air, BAT is to use all of the techniques given below.

Technique		Description
a.	Coating of the storage and treatment areas	This includes techniques such as: — resin coating applied to the concrete floor of the whole storage and treatment area.

Technique		Description
b.	Implementation of staff access rules to prevent dispersion of contamination	This includes techniques such as: <ul style="list-style-type: none"> — access points to storage and treatment areas are locked; — special qualification is required to access the area where the contaminated equipment is stored and handled; — separate ‘clean’ and ‘dirty’ cloakrooms to put on/remove individual protective outfit.
c.	Optimised equipment cleaning and drainage	This includes techniques such as: <ul style="list-style-type: none"> — external surfaces of the contaminated equipment are cleaned with anionic detergent; — emptying of the equipment with a pump or under vacuum instead of gravity emptying; — procedures are defined and used for filling, emptying and (dis)connecting the vacuum vessel; — a long period of drainage (at least 12 hours) is ensured to avoid any dripping of contaminated liquid during further treatment operations, after the separation of the core from the casing of an electrical transformer.
d.	Control and monitoring of emissions to air	This includes techniques such as: <ul style="list-style-type: none"> — the air of the decontamination area is collected and treated with activated carbon filters; — the exhaust of the vacuum pump mentioned in technique c. above is connected to an end-of-pipe abatement system (e.g. a high-temperature incinerator, thermal oxidation or adsorption on activated carbon); — the channelled emissions are monitored (see BAT 8); — the potential atmospheric deposition of PCBs is monitored (e.g. through physico-chemical measurements or biomonitoring).
e.	Disposal of waste treatment residues	This includes techniques such as: <ul style="list-style-type: none"> — porous, contaminated parts of the electrical transformer (wood and paper) are sent to high-temperature incineration; — PCBs in the oils are destroyed (e.g. dechlorination, hydrogenation, solvated electron processes, high-temperature incineration).
f.	Recovery of solvent when solvent washing is used	Organic solvent is collected and distilled to be reused in the process.

The associated monitoring is given in BAT 8.

5. BAT CONCLUSIONS FOR THE TREATMENT OF WATER-BASED LIQUID WASTE

Unless otherwise stated, the BAT conclusions presented in Section 5 apply to the treatment of water-based liquid waste, and in addition to the general BAT conclusions in Section 1.

5.1. Overall environmental performance

BAT 52. In order to improve the overall environmental performance, BAT is to monitor the waste input as part of the waste pre-acceptance and acceptance procedures (see BAT 2).

Description

Monitoring the waste input, e.g. in terms of:

- bioeliminability (e.g. BOD, BOD to COD ratio, Zahn-Wellens test, biological inhibition potential (e.g. inhibition of activated sludge));
- feasibility of emulsion breaking, e.g. by means of laboratory-scale tests.

5.2. Emissions to air

BAT 53. In order to reduce emissions of HCl, NH₃ and organic compounds to air, BAT is to apply BAT 14d and to use one or a combination of the techniques given below.

Technique		Description
a.	Adsorption	See Section 6.1.
b.	Biofilter	
c.	Thermal oxidation	
d.	Wet scrubbing	

Table 6.10

BAT-associated emission levels (BAT-AELs) for channelled emissions of HCl and TVOC to air from the treatment of water-based liquid waste

Parameter	Unit	BAT-AEL ⁽¹⁾ (Average over the sampling period)
Hydrogen chloride (HCl)	mg/Nm ³	1-5
TVOC		3-20 ⁽²⁾

⁽¹⁾ These BAT-AELs only apply when the substance concerned is identified as relevant in the waste gas stream, based on the inventory mentioned in BAT 3.

⁽²⁾ The upper end of the range is 45 mg/Nm³ when the emission load is below 0,5 kg/h at the emission point.

The associated monitoring is given in BAT 8.

6. DESCRIPTION OF TECHNIQUES**6.1. Channelled emissions to air**

Technique	Typical pollutant(s) abated	Description
Adsorption	Mercury, volatile organic compounds, hydrogen sulphide, odorous compounds	Adsorption is a heterogeneous reaction in which gas molecules are retained on a solid or liquid surface that prefers specific compounds to others and thus removes them from effluent streams. When the surface has adsorbed as much as it can, the adsorbent is replaced or the adsorbed content is desorbed as part of the regeneration of the adsorbent. When desorbed, the contaminants are usually at a higher concentration and can either be recovered or disposed of. The most common adsorbent is granular activated carbon.

Technique	Typical pollutant(s) abated	Description
Biofilter	Ammonia, hydrogen sulphide, volatile organic compounds, odorous compounds	<p>The waste gas stream is passed through a bed of organic material (such as peat, heather, compost, root, tree bark, softwood and different combinations) or some inert material (such as clay, activated carbon, and polyurethane), where it is biologically oxidised by naturally occurring microorganisms into carbon dioxide, water, inorganic salts and biomass.</p> <p>A biofilter is designed considering the type(s) of waste input. An appropriate bed material, e.g. in terms of water retention capacity, bulk density, porosity, structural integrity, is selected. Also important are an appropriate height and surface area of the filter bed. The biofilter is connected to a suitable ventilation and air circulation system in order to ensure a uniform air distribution through the bed and a sufficient residence time of the waste gas inside the bed.</p>
Condensation and cryogenic condensation	Volatile organic compounds	<p>Condensation is a technique that eliminates solvent vapours from a waste gas stream by reducing its temperature below its dew point. For cryogenic condensation, the operating temperature can be down to $-120\text{ }^{\circ}\text{C}$, but in practice it is often between $-40\text{ }^{\circ}\text{C}$ and $-80\text{ }^{\circ}\text{C}$ in the condensation device. Cryogenic condensation can cope with all VOCs and volatile inorganic pollutants, irrespective of their individual vapour pressures. The low temperatures applied allow for very high condensation efficiencies which make it well-suited as a final VOC emission control technique.</p>
Cyclone	Dust	<p>Cyclone filters are used to remove heavier particulates, which 'fall out' as the waste gases are forced into a rotating motion before they leave the separator.</p> <p>Cyclones are used to control particulate material, primarily PM_{10}.</p>
Electrostatic precipitator (ESP)	Dust	<p>Electrostatic precipitators operate such that particles are charged and separated under the influence of an electrical field. Electrostatic precipitators are capable of operating under a wide range of conditions. In a dry ESP, the collected material is mechanically removed (e.g. by shaking, vibration, compressed air), while in a wet ESP it is flushed with a suitable liquid, usually water.</p>
Fabric filter	Dust	<p>Fabric filters, often referred to as bag filters, are constructed from porous woven or felted fabric through which gases are passed to remove particles. The use of a fabric filter requires the selection of a fabric suitable for the characteristics of the waste gas and the maximum operating temperature.</p>

Technique	Typical pollutant(s) abated	Description
HEPA filter	Dust	HEPA filters (high-efficiency particle air filters) are absolute filters. The filter medium consists of paper or matted glass fibre with a high packing density. The waste gas stream is passed through the filter medium, where particulate matter is collected.
Thermal oxidation	Volatile organic compounds	The oxidation of combustible gases and odorants in a waste gas stream by heating the mixture of contaminants with air or oxygen to above its auto-ignition point in a combustion chamber and maintaining it at a high temperature long enough to complete its combustion to carbon dioxide and water.
Wet scrubbing	Dust, volatile organic compounds, gaseous acidic compounds (alkaline scrubber), gaseous alkaline compounds (acid scrubber)	The removal of gaseous or particulate pollutants from a gas stream via mass transfer to a liquid solvent, often water or an aqueous solution. It may involve a chemical reaction (e.g. in an acid or alkaline scrubber). In some cases, the compounds may be recovered from the solvent.

6.2. Diffuse emissions of organic compounds to air

Leak detection and repair (LDAR) programme	Volatile organic compounds	<p>A structured approach to reduce fugitive emissions of organic compounds by detection and subsequent repair or replacement of leaking components. Currently, sniffing (described by EN 15446) and optical gas imaging methods are available for the identification of leaks.</p> <p>Sniffing method: The first step is the detection using hand-held organic compound analysers measuring the concentration adjacent to the equipment (e.g. using flame ionisation or photo-ionisation). The second step consists of enclosing the component in an impermeable bag to carry out a direct measurement at the source of the emission. This second step is sometimes replaced by mathematical correlation curves derived from statistical results obtained from a large number of previous measurements made on similar components.</p> <p>Optical gas imaging methods: Optical imaging uses small lightweight hand-held cameras which enable the visualisation of gas leaks in real time, so that they appear as 'smoke' on a video recorder together with the normal image of the component concerned, to easily and rapidly locate significant organic compound leaks. Active systems produce an image with a back-scattered infrared laser light reflected on the component and its surroundings. Passive systems are based on the natural infrared radiation of the equipment and its surroundings.</p>
--	----------------------------	---

Measurement of diffuse VOC emissions	Volatile organic compounds	<p>Sniffing and optical gas imaging methods are described under leak detection and repair programme.</p> <p>Full screening and quantification of emissions from the installation can be undertaken with an appropriate combination of complementary methods, e.g. Solar occultation flux (SOF) or Differential absorption LIDAR (DIAL) campaigns. These results can be used for trend evaluation over time, cross-checking and updating/validation of the ongoing LDAR programme.</p> <p>Solar occultation flux (SOF): The technique is based on the recording and spectrometric Fourier Transform analysis of a broadband infrared or ultraviolet/visible sunlight spectrum along a given geographical itinerary, crossing the wind direction and cutting through VOC plumes.</p> <p>Differential absorption LIDAR (DIAL): This is a laser-based technique using differential absorption LIDAR (light detection and ranging), which is the optical analogue of radio wave-based RADAR. The technique relies on the backscattering of laser beam pulses by atmospheric aerosols, and the analysis of the spectral properties of the returned light collected with a telescope.</p>
--------------------------------------	----------------------------	--

6.3. Emissions to water

Technique	Typical pollutant(s) targeted	Description
Activated sludge process	Biodegradable organic compounds	<p>The biological oxidation of dissolved organic pollutants with oxygen using the metabolism of microorganisms. In the presence of dissolved oxygen (injected as air or pure oxygen), the organic components are transformed into carbon dioxide, water or other metabolites and biomass (i.e. the activated sludge). The microorganisms are maintained in suspension in the waste water and the whole mixture is mechanically aerated. The activated sludge mixture is sent to a separation facility from where the sludge is recycled to the aeration tank.</p>
Adsorption	Adsorbable dissolved non-biodegradable or inhibitory pollutants, e.g. hydrocarbons, mercury, AOX	<p>Separation method in which compounds (i.e. pollutants) in a fluid (i.e. waste water) are retained on a solid surface (typically activated carbon).</p>

Technique	Typical pollutant(s) targeted	Description
Chemical oxidation	Oxidisable dissolved non-biodegradable or inhibitory pollutants, e.g. nitrite, cyanide	Organic compounds are oxidised to less harmful and more easily biodegradable compounds. Techniques include wet oxidation or oxidation with ozone or hydrogen peroxide, optionally supported by catalysts or UV radiation. Chemical oxidation is also used to degrade organic compounds causing odour, taste and colour and for disinfection purposes.
Chemical reduction	Reducible dissolved non-biodegradable or inhibitory pollutants, e.g. hexavalent chromium (Cr(VI))	Chemical reduction is the conversion of pollutants by chemical reducing agents into similar but less harmful or hazardous compounds.
Coagulation and flocculation	Suspended solids and particulate-bound metals	Coagulation and flocculation are used to separate suspended solids from waste water and are often carried out in successive steps. Coagulation is carried out by adding coagulants with charges opposite to those of the suspended solids. Flocculation is carried out by adding polymers, so that collisions of microfloc particles cause them to bond to produce larger flocs. The flocs formed are subsequently separated by sedimentation, air flotation or filtration.
Distillation/rectification	Dissolved non-biodegradable or inhibitory pollutants that can be distilled, e.g. some solvents	Distillation is a technique to separate compounds with different boiling points by partial evaporation and recondensation. Waste water distillation is the removal of low-boiling contaminants from waste water by transferring them into the vapour phase. Distillation is carried out in columns, equipped with plates or packing material, and a downstream condenser.
Equalisation	All pollutants	Balancing of flows and pollutant loads by using tanks or other management techniques.
Evaporation	Soluble pollutants	The use of distillation (see above) to concentrate aqueous solutions of high-boiling substances for further use, processing or disposal (e.g. waste water incineration) by transferring water to the vapour phase. It is typically carried out in multi-stage units with increasing vacuum, to reduce the energy demand. The water vapours are condensed, to be reused or discharged as waste water.

Technique	Typical pollutant(s) targeted	Description
Filtration		The separation of solids from waste water by passing them through a porous medium, e.g. sand filtration, microfiltration and ultrafiltration.
Flotation	Suspended solids and particulate-bound metals	The separation of solid or liquid particles from waste water by attaching them to fine gas bubbles, usually air. The buoyant particles accumulate at the water surface and are collected with skimmers.
Ion exchange	Ionic dissolved non-biodegradable or inhibitory pollutants, e.g. metals	The retention of undesired or hazardous ionic constituents of waste water and their replacement by more acceptable ions using an ion exchange resin. The pollutants are temporarily retained and afterwards released into a regeneration or backwashing liquid.
Membrane bioreactor	Biodegradable organic compounds	A combination of activated sludge treatment and membrane filtration. Two variants are used: a) an external recirculation loop between the activated sludge tank and the membrane module; and b) immersion of the membrane module in the aerated activated sludge tank, where the effluent is filtered through a hollow fibre membrane, the biomass remaining in the tank.
Membrane filtration	Suspended solids and particulate-bound metals	Microfiltration (MF) and ultrafiltration (UF) are membrane filtration processes that retain and concentrate, on one side of the membrane, pollutants such as suspended particles and colloidal particles contained in waste waters.
Neutralisation	Acids, alkalis	The adjustment of the pH of waste water to a neutral level (approximately 7) by the addition of chemicals. Sodium hydroxide (NaOH) or calcium hydroxide (Ca(OH) ₂) may be used to increase the pH, whereas sulphuric acid (H ₂ SO ₄), hydrochloric acid (HCl) or carbon dioxide (CO ₂) may be used to decrease the pH. The precipitation of some pollutants may occur during neutralisation.
Nitrification/denitrification	Total nitrogen, ammonia	A two-step process that is typically incorporated into biological waste water treatment plants. The first step is aerobic nitrification where microorganisms oxidise ammonium (NH ₄ ⁺) to the intermediate nitrite (NO ₂ ⁻), which is then further oxidised to nitrate (NO ₃ ⁻). In the subsequent anoxic denitrification step, microorganisms chemically reduce nitrate to nitrogen gas.

Technique	Typical pollutant(s) targeted	Description
Oil-water separation	Oil/grease	The separation of oil and water and subsequent oil removal by gravity separation of free oil, using separation equipment or emulsion breaking (using emulsion breaking chemicals such as metal salts, mineral acids, adsorbents and organic polymers).
Sedimentation	Suspended solids and particulate-bound metals	The separation of suspended particles by gravitational settling.
Precipitation	Precipitable dissolved non-biodegradable or inhibitory pollutants, e.g. metals, phosphorus	The conversion of dissolved pollutants into insoluble compounds by adding precipitants. The solid precipitates formed are subsequently separated by sedimentation, air flotation or filtration.
Stripping	Purgeable pollutants, e.g. hydrogen sulphide (H ₂ S), ammonia (NH ₃), some adsorbable organically bound halogens (AOX), hydrocarbons	The removal of purgeable pollutants from the aqueous phase by a gaseous phase (e.g. steam, nitrogen or air) that is passed through the liquid. They are subsequently recovered (e.g. by condensation) for further use or disposal. The removal efficiency may be enhanced by increasing the temperature or reducing the pressure.

6.4. Sorting techniques

Technique	Description
Air classification	Air classification (or air separation, or aeraulic separation) is a process of approximate sizing of dry mixtures of different particle sizes into groups or grades at cut points ranging from 10 mesh to sub-mesh sizes. Air classifiers (also called windsifters) complement screens in applications requiring cut points below commercial screen sizes, and supplement sieves and screens for coarser cuts where the special advantages of air classification warrant it.
All-metal separator	Metals (ferrous and non-ferrous) are sorted by means of a detection coil, in which the magnetic field is influenced by metal particles, linked to a processor that controls the air jet for ejecting the materials that have been detected.
Electromagnetic separation of non-ferrous metals	Non-ferrous metals are sorted by means of eddy current separators. An eddy current is induced by a series of rare earth magnetic or ceramic rotors at the head of a conveyor that spins at high speed independently of the conveyor. This process induces temporary magnetic forces in non-magnetic metals of the same polarity as the rotor, causing the metals to be repelled away and then separated from the other feedstock.

Technique	Description
Manual separation	Material is manually separated by means of visual examination by staff on a picking line or on the floor, either to selectively remove a target material from a general waste stream or to remove contamination from an output stream to increase purity. This technique generally targets recyclables (glass, plastic, etc.) and any contaminants, hazardous materials and oversized materials such as WEEE.
Magnetic separation	Ferrous metals are sorted by means of a magnet which attracts ferrous metal materials. This can be carried out, for example, by an overband magnetic separator or a magnetic drum.
Near-infrared spectroscopy (NIRS)	Materials are sorted by means of a near-infrared sensor which scans the whole width of the belt conveyor and transmits the characteristic spectra of the different materials to a data processor which controls an air jet for ejecting the materials that have been detected. Generally NIRS is not suitable for sorting black materials.
Sink-float tanks	Solid materials are separated into two flows by exploiting the different material densities.
Size separation	Materials are sorted according to their particle size. This can be carried out by drum screens, linear and circular oscillating screens, flip-flop screens, flat screens, tumbler screens and moving grates.
Vibration table	Materials are separated according to their density and size, moving (in slurry in the case of wet tables or wet density separators) across an inclined table, which oscillates backwards and forwards.
X-ray systems	Material composites are sorted according to various material densities, halogen components, or organic components, with the aid of X-rays. The characteristics of the different materials are transmitted to a data processor which controls an air jet for ejecting the materials that have been detected.

6.5. Management techniques

Accident management plan	The accident management plan is part of the EMS (see BAT 1) and identifies hazards posed by the plant and the associated risks and defines measures to address these risks. It considers the inventory of pollutants present or likely to be present which could have environmental consequences if they escape.
Residues management plan	A residues management plan is part of the EMS (see BAT 1) and is a set of measures aiming to (1) minimise the generation of residues arising from the treatment of waste; (2) optimise the reuse, regeneration, recycling and/or recovery of energy of the residues, and (3) ensure the proper disposal of residues.

Containment systems for the prevention of pollution

Secondary, tertiary and other measures for industrial and commercial premises

Who we are

Established in 1960, CIRIA is a highly regarded, industry-responsive, not for profit research and information association, which encompasses the construction and built environment industries.

CIRIA operates across a range of market sectors and disciplines, providing a platform for collaborative projects and dissemination by enhancing industry performance, and sharing knowledge and innovation across the built environment.

As an authoritative provider of good practice guidance, solutions and information, CIRIA operates as a knowledge-base for disseminating and delivering a comprehensive range of business improvement services and research products for public and private sector organisations, as well as academia.

How to get involved

CIRIA manage or actively participate in several topic-specific learning and business networks and clubs:

- **Core membership**
Allows your employees to assist with the development of and access to good practice guidance, formal networks, facilitation, conferences, workshops and training.
- **Associate membership**
Allows your employees to access CIRIA's services. Members are able to access exclusive content via the CIRIA website.
- **CIRIA Books Club**
Members can buy most CIRIA publications at half price and can attend a range of CIRIA conferences at reduced rates.
- **The CIRIA Network**
A member-based community where clients and professionals meet, develop and share knowledge about specific topics relevant to construction and the built environment.
- **Project funding**
Project funders influence the direction of the research and gain early access to the results.
- **CEEQUAL**
CIRIA co-manages this environmental award scheme, which promotes environmental quality in civil engineering and infrastructure projects.
- **LACL (Local Authority Contaminated Land Network)**
LACL helps local authorities address responsibilities under Part IIA of the Environmental Protection Act 1990.
- **EMSAGG (European Marine Sand and Gravel Group)**
CIRIA provides secretariat support to EMSAGG, including management of the Group's conferences, workshops and website and producing its newsletter.
- **LANDFoRM (Local Authority Network on Drainage and Flood Risk Management)**
A platform for sharing knowledge and expertise in flood risk management and sustainable drainage.
- **BRMF (Brownfield Risk Management Forum)**
Promoting sustainable and good practice in brownfield projects in the UK.

Summary

This guidance has been developed to assist owners and operators of industrial and commercial facilities storing substances (inventories) that may be hazardous to the environment.

It provides guidance on identifying the hazards, assessing the risks and mitigating the potential consequences of a failure of the primary storage facility and/or the combustion of its contents. A three-tier risk assessment methodology is introduced with recommendations for different 'classes' of construction for each.

It is applicable to the containment of a wide range of inventories and to all sizes of site from small commercial premises with a single storage tank, through to large chemical or petrochemical sites. It also applies to warehouses storing hazardous inventories.

Guidance is provided on the design, and construction of new secondary containment systems and also the inspection, maintenance, repair, extension and upgrading of existing installations.

Foreword

The original CIRIA R164 *Design of containment systems for the prevention of water pollution from industrial incidents* (Mason *et al*, 1997) was written primarily for new construction. However, many of the principles have been applied to good effect on existing sites.

The guide has been revised and updated to reflect changes in legislation, construction design and practice and lessons learned from recent incidents (particularly Buncefield), near misses and inspections. Analysis of this and other incidents identifies several causes, future occurrences of which can be avoided by following the guidance in this document.

In updating the guide, it became clear that the inspection, maintenance, repair, extension or upgrading of containment systems (particularly in cases of change of use) represents a large proportion of the work currently being undertaken. The revision therefore includes a new section covering these issues, such as actions to take on existing facilities, to ensure they continue to perform satisfactorily.

The revised guide also differs from the original by excluding the model design calculations and placing greater emphasis on the need for structures to be professionally designed and constructed.

Acknowledgements

This guide was originally published by CIRIA in 1997 as R164 *Design of containment systems for the prevention of water pollution from industrial incidents*. The authors were Paul Mason, Jim Amies, Phil Edwards, Gordon Rose and Gopal Sangarapillai.

Author

Ian Walton BSc (Hons) MSc DIC CEng MICE

Ian Walton is a technical director at SLR Consulting Limited. He is a chartered civil engineer with over 30 years broad environmental consultancy experience working for both public and private sector clients. He has been responsible for managing and directing a diverse range of commissions including those in the public health, waste management, infrastructure and general development sectors. Ian is also regularly called upon to provide expert evidence in relation to flooding and drainage issues.

Project steering group (PSG)

Following CIRIA's usual practice, the work was guided by a project steering group (PSG) comprising:

Irene Anders	Scottish Environmental Protection Agency
Jackie Coates	Chemical Industries Association
David Cole	Ecovalve
Michael Cooper	Chemical Business Association
Peter Davidson	UK Petroleum Industry Association
Chris Dickinson	Environment Agency
Ray Dickinson	MoD Defence Infrastructure Organisation
Martyn Emberson	Chief Fire Officer's Association
Nicola Fagin	Bureau Veritas
Owen Jenkins	CIRIA
Lee Kelly	CIRIA
Bruce McGlashan	Environment Agency
Mike Nicholas	Environment Agency
Peter Robery (chairman)	CH2M Hill
Barrie Salmon	Tank Storage Association
Mark Scanlon	Energy Institute
Roy Simpson	Basis Registration Ltd
Mike Summersgill	CIWEM
Ian Walton	SLR Consulting

Project funders

The project was funded by the Environment Agency and industry in-kind contributions.

CIRIA Project manager

Owen Jenkins

Corresponding members/technical consultees

Tony Brown	Federation of Petroleum Suppliers
John Davies	Sir Robert McAlpine
Stephen Gibson	Ramboll
Mark Maleham	Environment Agency
Guy Marlair	Ineris France

CIRIA thanks the individuals and organisations who provided photographs, case studies and other relevant information and to Lawrence Dowson, PPG Coatings and Graham Vaughan, Abbey Metal Finishing Ltd for hosting site visits.

Why you should read this guide

Following the good practice in this guide will help you minimise the pollution risks associated with your operations. However, it will also help with the management of risks and opportunities at corporate level that might include:

✓ **Penalties, liabilities and reputational issues**

Ineffective containment of pollutants can result not only in environmental harm but can also have a severe effect on the company concerned. In the past, fines imposed for pollution offences were trivial compared with the cost of installing protective measures. However fines have been increased significantly and in July 2010 five companies were fined a total of £9.5m for their part in the Buncefield catastrophe, a disaster that it is estimated had a total cost exceeding £1 billion.

✓ **Corporate governance**

Corporate governance demands that asset owners understand the value of their portfolio, including future maintenance and risks to operation. This is clearly applicable to the containment systems covered in this guidance.

✓ **Corporate social responsibility (CSR)**

While companies regard legal compliance as a major priority, leading organisations are now striving to improve their reputational image and are becoming more open in the publication of information relating to their environmental performance.

Lessons learned from past incidents and near misses have illustrated that many of the preventative measures are relatively straightforward to implement as illustrated on the following pages.

Lessons learned from incidents

This publication provides guidance on the measures that site operators can take to minimise the risk of pollution from leaking or burning substances stored on site. Many of these measures are relatively straightforward in terms of how sites are designed, operated and maintained. The examples from two key references shown in the following box illustrate some of the consequences that have arisen from not incorporating these measures.

Major accident to the environment (MATTE): UK case studies of incidents and near misses 1999–2010 (HSL, 2012)

- 1 Serious environmental harm is most frequently associated with release of liquids to ground and water, as opposed to aerial dispersion of pollutants.
- 2 There is a need to consider ... the quantities of firewater that are likely to be produced throughout the incident (not just first response), the rate at which runoff will be generated and how this will be successfully managed and retained.
- 3 Loss of liquid material to the environment via hitherto unknown pathways, or because of the availability of pathways due to a lack of impermeable barriers, was common to a number of cases:
 - a failings in oversight were underlying factors ... typically a failure to foresee and plan accordingly
 - b failure to adequately manage ageing plant continues to be highlighted as a significant underlying causal factor.

Buncefield: Why did it happen? The underlying causes of the explosion and fire at the Buncefield oil storage depot, Hemel Hempstead, Hertfordshire on 11 December 2005 (HSE, 2011)

- 1 The bunding at Buncefield had many flaws, which caused large volumes of fuel, foam and firefighting water to leak out of the bunds. Bunds were not impermeable and not fire resistant. The bunding was unable to handle the large volumes of firewater involved in the incident.
- 2 Generally, the concrete performed well in resisting the burning fuels but the bunds failed badly at the joints and walls where pipes penetrated them.
- 3 One of the bunds at Buncefield contained metal waterstops within joints. Even though this bund was exposed to a bund pool fire and tank fires, the joints performed well and did not leak significantly.
- 4 Other bunds had plastic waterstops with metal plates over the inside face of the joint. These joints also maintained their integrity as the plastic waterstop and other joint material was protected from thermal impact by the metal cover plate.
- 5 Three bunds performed particularly badly. The joints (floor and wall joints) did not contain waterstops. During the fire the sealant and other joint materials (which were not fire resistant) were badly damaged. Many of the joints leaked allowing fuel, foam and firewater to flow onto the site roadways.
- 6 One bund was constructed with tie bars penetrating through the bund and although they were plugged and grouted, they were unable to resist the impact of the fire. Holes opened up, which were further pathways for leakage of fuel, foam and firewater from the bund.
- 7 Many of the bunds had pipes penetrating through walls and floors, and failures at these points meant the bunds could no longer retain liquids. Broadly, there were three ways loss of integrity occurred:
 - i catastrophic failure of the walls at pipe penetrations, likely due to thermal expansion of the pipework
 - ii some of the product pipes leading from the tanks ruptured and leaked so that there was an escape of fuel via damaged pipes through the walls and out of pipes in unbunded areas
 - iii loss of seal between pipes and walls.
- 8 There was virtually no tertiary containment in place. Containment systems outside the bunding amounted only to the site's drainage systems, designed for rainwater and minor spills and losses of product, which would flow to interceptors and the site's effluent treatment plant. The drainage was not designed for any large-scale releases from bunds, such as those that occurred. Specific flaws included:
 - there was no kerbing or boundary wall/mound to keep liquids on site and direct them into drainage systems. Once released, liquids could flow anywhere
 - the capacity of the drains and the lagoon was too small
 - some of the drains were 'perforated' so that a 'back-up' of liquids would cause their release through underground perforations
 - the liner of the firewater lagoon was susceptible to fire damage and to damage from debris from the explosion
 - one lagoon was intended as a firewater supply, but was rendered useless as it received fuel draining from the site. It flooded the fire system pump house when it overflowed
 - there was a dependence on pumping liquids, which as a process is vulnerable to, for example:
 - inadequate pumping capacity
 - failure of pumps on loss of power
 - inability to use pumps following release of flammable vapour
 - some areas of unmade ground were not protected from liquids and one such area of the site included a soakaway
 - the effluent treatment plant included soakaways that were not identified in the safety reports or emergency plans.

Collectively these flaws allowed large volumes of fuel, foam and firewater to leave the site.

More information on the Buncefield incident can be found at: www.buncefieldinvestigation.gov.uk

Overview of this guidance

The guidance is divided into 12 chapters and grouped into three parts, summarised here:

Part	Chapter	Contents
1	1	Introduction
	2	Risk assessment and classification* of secondary and tertiary containment systems
	3	Containment options
	4	Containment system capacity
2	5	Existing installations
3	6	Introduction to bunds
	7	<i>In situ</i> reinforced concrete and masonry bunds
	8	Earth banked containment basins (lagoons), earth bunds and earth floors
	9	Containment tanks
	10	Transfer systems
	11	Sacrificial areas and temporary containment
	12	Repair and upgrading of existing containment facilities

* Note that the key recommendations contained in the guidance with respect to the 'class' of containment are indicated in the margin with the key icon: 

The **key plan** and accompanying text provides a summary of the contents of each chapter and gives examples of the scope of each chapter with reference to particular elements of an idealised facility. It is intended to be used as an aid to the reader in navigating the guidance.

Key plan

Key plan notes

Chapter 1: Introduction

The introduction sets out the scope of the guidance, provides an overview of the fundamental principles upon which it is based and includes a high-level summary of related guidance and legislation.

Chapter 2: Risk assessment and classification

At the core of the guidance is a risk assessment and classification methodology that determines the 'class' of containment required, ie class 1, 2 or 3. The class then determines the design and specification requirements for the secondary containment system.

Chapter 3: Containment options

This chapter defines primary, secondary and tertiary containment and a number of system types – local, remote and combined.

Examples:

- tanks, vessels and associated pipework [1] provide the primary containment. The primary containment may also be located within a warehouse [2]
- secondary containment can be provided by bunds constructed from reinforced concrete [3] or earth [4], by lagoons [5] or by tanks [6]. Warehouse walls can also be designed to provide secondary containment [7]
- tertiary containment can be provided by a number of means including lagoons [5], sacrificial areas such as car parks [8] and providing storage on the surface of roadways using containment kerbs [9]
- local containment is provided locally to the primary containment normally using a bund [4] [5]
- remote containment is provided away from the primary containment using, for example, a lagoon [5] or tank [6]. Transferring spilled inventory to the remote containment can be via a gravity drain [10] (as shown by the example of a loading bay [11]) or pumped
- combined containment uses both local containment and remote containment. The example shows a local containment (a bund [3]) with additional remote containment (a tank [6]) connected via a pumping main [12].

Chapter 4: System capacity

This chapter describes the process for determining the secondary and site-wide capacity of containment systems based on a combination of the inventory, an allowance for accumulated rainfall and, where appropriate, firefighting and/or cooling water.

Examples:

- secondary containment capacity requirement differs depending if a single tank in a bund [3] or multiple tanks in a bund [4]
- total site-wide capacity is a combination of all the containment capacity including bunds [3] [4], lagoons [5], tanks [6] and other sacrificial and temporary storage areas [8] [9].

Chapter 5: Assessment of existing installations

This guidance recommends that an operator is able to demonstrate that the 'class' of the installation is appropriate to the use to which it is being put. This part of the document provides advice on the classification, inspection, maintenance and modification of existing installations.

Chapter 6: Introduction to bunds

This chapter defines 'bunds' and for each class of containment provides a performance specification and recommendations and guidance on their design and construction.

Example:

- bunds include those constructed in concrete [3] and as earth embankments [4].

Chapter 7: In situ reinforced concrete and blockwork bunds

In situ built reinforced concrete and blockwork walls [3] are probably the most common form of bund construction. This chapter provides advice on the design and specification of this form of construction appropriate to each class of containment with emphasis is on the formation of joints and detailing of pipe penetrations where these cannot be avoided.

Chapter 8: Earth banked containment basins (lagoons) and earth bunds

Where the site topography and the ground and soil conditions are suitable, earth embankments can provide a cost effective means of providing both local secondary containment (earth bunds [4]) and remote secondary containment basins (lagoons [5]).

This chapter provides advice on assessing the suitability of a site, a performance specification and recommendations and guidance on their design and construction appropriate to the class of containment.

Chapter 9: Secondary containment tanks

Secondary containment tanks [6] usually form part of a remote containment system with, depending on the site topography, either a gravity or pumped [4] connection from a sump local to the primary containment, or from a local secondary containment system. The chapter discusses the factors that should be considered in specifying a secondary containment tank and reviews a number of tank types.

Chapter 10: Transfer systems

Transfer systems are the means for collecting and conveying spillage and contaminated water from the primary containment to a remote secondary and/or tertiary containment facility. The transfer system comprises the catchment area local to the primary containment and the conveyance system (pipes networks, culverts, open channels, pumps and pumping mains and even site roads) discharging to the remote secondary containment.

The chapter provides the performance requirements that components of a transfer system should meet to satisfy the overall system classification.

Examples:

- gravity system [10] draining a loading bay (catchment area) [4] to a remote secondary lagoon
- channel drainage [13] draining inventory overtopping (or due to failure of) failure secondary local containment [3] to a lagoon [5] providing (in this example) tertiary containment
- tertiary containment provided by pumping [12] inventory from secondary containment [3] to a tank [6]
- road [14] with high containment kerbs [9] draining inventory overtopping (or due to failure of) secondary containment [3] [4] [7] to a lagoon [5] or sacrificial storage area [8] providing tertiary containment
- during an incident, runoff from drained areas [14] must be prevented from reaching the outfall to river [15] via the surface water drainage system [16] by closing a pollution control valve [17].

Chapter 11: Sacrificial areas and temporary containment

The sacrificial areas are designed to soak up the contaminants by containing the spill within a depth of permeable soil or porous media. The method relies on interception of spills at the source and conveying the contaminated runoff to a remote area. Sites that may be designated for this purpose include car parks, landscaped areas, sports fields etc.

Temporary containment areas provide preventative measures for dealing with exceptional events that cannot be dealt with by the permanent facility and may form part of a site's emergency response procedures.

This chapter provides advice on the design of sacrificial areas and temporary containment.

Examples:

- spills drained by the roadway [16] to a sacrificial area provided by a car park [16]
- roadway [16] with high containment kerb [16] provides temporary storage. Spills prevent from reaching the river [16] via the surface water drainage system [16] by a pollution control valve [16].

Chapter 12: Repair and upgrading of existing installations

This chapter will provide advice on the repair and upgrading of existing installations with reference to other chapters in Part 3 as appropriate. Upgrading of an existing installation may be required following an assessment described by Chapter 5.

Glossary

Absorption	A process in which one substance, usually a liquid or gas, permeates into, or is dissolved by, a liquid or solid.
Acid	A chemical substance that, in an aqueous solution, undergoes dissociation with the formation of hydrogen ions. An acidic solution has a pH below 7.0.
Alkali	A chemical substance that, in an aqueous solution, undergoes dissociation with the formation of hydroxide ions. An alkali solution has a pH of greater 7.0.
Annual exceedance probability	The probability of a flood event occurring in any year. The probability is expressed as a percentage. For example, a large flood, which may be calculated to have a one per cent chance to occur in any one year, is described as one per cent AEP.
Aquiclude	A saturated geologic unit that is incapable of transmitting significant quantities of water under ordinary hydraulic gradients.
As low as reasonably practicable (ALARP)	In the UK, a process of weighing a health, safety or environmental risk against the trouble, time and money needed to control the risk. It describes the level to which risks should be controlled. Practically, it calls for the same set of tests to be applied as with SFAIRP, however, the terms are not always interchangeable because of how the terms are cited in the relevant legislation (based on HSE ALARP 'at a glance', see <i>Useful websites</i> section).
Baseline survey	A study that looks at the characteristics of the subject at a particular time or under a particular set of conditions to establish a 'baseline'.
Benchmarking	Evaluate (something) by comparison with a standard.
Bioaccumulation	Accumulation of substances, such as pesticides, or other organic chemicals in an organism. Bioaccumulation occurs when an organism absorbs a toxic substance at a rate greater than that at which the substance is lost.
Biodegradation	The chemical dissolution of materials by bacteria or other biological means.
Biomagnification	The increase in concentration of a substance that occurs in a food chain as a consequence of persistence (cannot be broken down by environmental processes), accumulation through the food chain or the low (or non-existent) rate of internal degradation/excretion of the substance.
Biochemical oxygen demand	The amount of dissolved oxygen needed by aerobic biological organisms in a body of water to break down organic material present in a given water sample at certain temperature over a specific time period.
Borehole	The generalised term for any narrow shaft bored in the ground, either vertically or horizontally.
Bund	A facility (including walls and a base) built around an area where potentially polluting materials are handled, processed or stored. This is for the purposes of containing any unintended escape of material from that area until such time as remedial action can be taken. Bunds are usually structurally independent from the primary containment tank.
Characteristic value	Soil properties vary spatially. In the absence of a detailed soils investigation EC7 adopts the concept of a characteristic value, ie "a cautious estimate of the value", which is used for geotechnical design.
Combined sewer	A sewer that accepts both foul and surface water drainage.

Combustible	A substance that ignites and burns readily.
Competent authority	Body or bodies responsible for enforcing health, safety and environmental legislation.
Competent person/ personnel	A person who is appropriately qualified, trained and experienced for the task involved. They should also be authorised to undertake the task, for example, issued with the necessary permit to work.
Construction joints (in concrete)	A joint in concrete construction formed when placement of the concrete is interrupted for some reason. It may be the end of a day's work, or it may be that some other work needs to be completed before resuming the placement. Results in a 'surface' between freshly placed and (partly) cured concrete.
Contraction or shrinkage joints (in concrete)	Allows only for contraction or shrinkage of a slab or wall, as can be anticipated during the curing process.
Cost-benefit analysis	A defined methodology for valuing costs and benefits that enables consistent and transparent comparisons to be made between risk reduction measures to support the decision making process.
Cover-meter survey	A survey to locate reinforcement in a concrete structure and measure the depth to the reinforcement from the concrete surface.
Crack control joints	A partially-formed contraction joint, which aims to ensure that when the concrete does crack, it cracks in a predictable manner at a precise location.
Daywork joints	See <i>Construction joints</i> .
De-bonded dowels	Sleeved dowel bars placed in a movement joint to permit movement with adjacent bay without inducing stress in the structure.
Desiccation	The state of extreme dryness, or the process of extreme drying.
Design life	The time period over which a product or structure is expected to be in service and continue to function effectively.
Differential settlement	The unequal settling of a building or structures foundation (normally due to uneven settlement of the ground).
Dowelled joint	Dowels placed across a joint. A movement to permit loads to be transferred across the joint and prevent differential settlement of adjacent slabs.
Duty holder	Persons with specific duties under a specific set of regulations.
Ecotoxicological	The effects of toxic chemicals on biological organisms.
Effluent	Liquid waste or sewage.
Emulsify	The mixing of two or more liquids that are normally immiscible (non-mixable or un-blendable).
Evaporation	Vaporisation of a liquid that occurs from the surface of a liquid into a gaseous phase.
Evapotranspiration	The sum of evaporation and plant transpiration to the atmosphere.
Event effluent	The combination of inventory and any firefighting water and/or foam and rainwater arising from an event.
Expansion joints (in concrete)	Allow expansion and contraction of a concrete slab or wall without generating potentially damaging forces within the slab itself or the surrounding structures. Expansion joints are usually a complete 'gap' between adjacent bays, ie there is a definite break in the concrete and any reinforcing steel that may be present. Where adjacent bays are 'tied' together by means of dowel bars, these dowels are sleeved in one of the bays to allow expansion to take place without generating stresses within the slab.

Fire resistance	Intrinsic properties or added protection to resist the effects of fire (usually open flames, rather than high temperature alone).
Firefighting water	Water used to cool, extinguish or prevent the spread of fire during an incident. It is likely to become contaminated with product and firefighting foam as a consequence of its use in firefighting activities. Water that is used solely to cool storage tanks water sprays or deluge systems (often described as cooling water) is less likely to become contaminated with product.
Firefighting agents	Includes water-based firefighting agents such as foam. These agents are used to form an aqueous film over the inventory to prevent the escape of flammable vapours with the foam layer excluding oxygen and provides a cooling effect.
Flammable	A combustible substance (solid, liquid, gas or vapour), which is easily ignited in air. The term non-flammable refers to substances that are not easily ignited but does not necessarily indicate that they are non-combustible.
Foul drainage	Drainage system that conveys domestic sewerage.
Freeboard	An allowance in the form of increased height of a containment wall for additional capacity over and above the minimum design requirement.
Gap analysis	Determining and documenting the variance between a particular standard or requirement and the current status (see <i>Benchmarking</i> and <i>Baseline survey</i>).
Geomembrane	Typically a plastic sheet, designed for use in civil engineering/construction to prevent the movement of water or other fluids.
Geotextile	A thin sheet designed for use in civil engineering/construction to add strength or cohesion and/or maintain separation within constructed earthworks.
Good practice	In the context of this guidance the generic term for those standards for controlling risk which have been judged and recognised as satisfying the law.
Groundwater	The water beneath the earth's surface contained in soil pore spaces and in the fractures of rock formations.
Groundwater body	The principal reporting units for distinct volumes of groundwater within an aquifer or aquifers defined by the Water Framework Directive.
Gullies	In the context of this guidance a small chamber used to collecting runoff from a drained surface.
Hardstanding	Ground surfaced with a hard material for parking vehicles or storing materials.
Health and Safety Executive	UK government sponsored body responsible for implementing health and safety legislation at most installations subject to the requirements of this guidance.
Heave	Swelling of the sub-soils due to removal of overburden, increases in the water content of the soil or due to frost action.
Hydromorphology	The physical character of rivers shaped by the movement of water through the catchment.
Hypochlorite	An ion composed of chlorine and oxygen. Their primary applications are as bleaching, disinfection and water treatment agents but are also used for chlorination and oxidation reactions.
Ignition protected	An electrical component that is capable of operating in an explosive environment without igniting that environment.
Immiscible	Not capable of being mixed.
Interceptor	A device installed normally in a surface water drainage system to remove hydrocarbons and fats, and from runoff.

Inventory	In the context of this guide a generic term to describe the contents of the primary containment substances that may be flammable or hazardous to the environment.
ISO tanks	An ISO tank (or tank container) is a pressure vessel held within a 20-foot ISO frame that is used for the transportation and storage of bulk liquids. The 20-foot ISO frame ensures that tank containers can be transported using most modern inter-modal transportation options, including container ships, trucks and rail. A tank container built to the ISO standard making it suitable for different modes of transportation.
Kerb	Edge where a raised pavement meets an un-raised street or other roadway.
Kicker joints	A small upstand cast as part of a concrete base to allow the securing of wall shutters.
Lagoon	An excavated area able to retain liquids as a consequence of the excavated area being below the level of the surrounding area, rather than being retained within a raised area.
Leaching	The removal of soluble or other constituents from a substance by the action of a percolating liquid.
Limpet dam	A dam that affixes to a surface.
Liner	A designed, additional layer or layers that provide separation and liquid impermeability to a bunded area or structure.
Local containment	A form of secondary or tertiary containment designed to contain locally to the source, product or firewater from a loss of containment, eg a bund.
Major accident to the environment	Harm or damage to the environment above defined thresholds.
Maximum capacity	The maximum volume of liquid a storage tank can hold without loss of containment (from overflow or overflow), or damage to the tank structure (due to collision between an internal floating roof and other structures within the tank, or for some fluids, overstressing due to hydrostatic loading). This capacity is greater than the normal capacity and tank-rated capacity.
Multi-straked tanks	Tanks formed with precast or prestressed reinforced concrete wall panels restrained with an external hoop (post-tensioned). This is a common form of construction used to create slurry stores and filter beds at wastewater treatment works.
Non-destructive testing	Testing that does not require the destruction of the material/structure being tested (as opposed to destructive testing that does).
Normal capacity	Level to which a storage tank should be intentionally filled under routine process control. See <i>Maximum capacity</i> and <i>Tank-rated capacity</i> .
Organic compounds	Any member of a large class of gaseous, liquid, or solid chemical compounds whose molecules contain carbon.
Organochlorine solvents	An organic compound containing chlorine. Many derivatives are controversial because of the effects of these compounds on the environment and on human and animal health.
Overflow level	See <i>Maximum capacity</i> .
Overtopping	Flow of liquid over a structure within its path.
Penetration	Pipe or other duct or structure that passes through the wall or floor of a bunded or lined area.
Intumescent	A substance that swells as a result of heat exposure, increasing in volume and decreasing in density. Intumescent are typically used in passive fire protection.

Permeability	Measure of the movement of a fluid (liquid or gas) through a solid material applied to barriers (such as liners or bund walls) or bulk solids (such as soil). Typically measured in metres per second.
Pesticides	Substances used for preventing, destroying or mitigating any pest. They are a class of biocide, a chemical substance or microorganism that can deter, render harmless, or exert a controlling effect on any harmful organism by chemical or biological means.
pH	A measure of the acidity or alkalinity of a solution, numerically equal to 7 for neutral solutions, increasing with increasing alkalinity and decreasing with increasing acidity.
Photolysis	Chemical reaction in which a chemical compound is broken down by photons (light).
Primary containment	The most important means of preventing major incidents involving loss of inventory. It is achieved by the equipment that has direct contact with the inventory stored or transferred such as storage tanks, IBCs, drums, pipework, valves, pumps and associated management and control systems. It also includes equipment that prevents the loss of primary containment under abnormal conditions, such as high-level alarms linked to shut down systems.
Reinforcement	Commonly steel rods incorporated into concrete structures to enable them to withstand tensile and shear forces.
Remote containment	Form of secondary or tertiary containment that is distant from the area of the primary containment.
Risk	Product of likelihood and consequences of environmental impact, adverse human health, business interruption etc from a hazard. Also, may refer to a stated period of time.
Risk assessment	Process to determine the level of risk posed by a hazard.
Runoff	Movement of liquid over the surface of land in accordance with the topography.
Secondary containment	Minimises the consequences of a failure of the primary storage by preventing the uncontrolled spread of the inventory. Secondary containment is achieved by equipment that is external to and structurally independent of the primary storage, for example concrete or earth bunds around storage tanks, or the walls of a warehouse storing drums. Secondary containment may also provide storage capacity for firefighting and cooling water.
Settlement	Consolidation of a soil that results in a decrease in soil volume.
Sewage effluent	Liquid sewerage.
Slumping	A segment of a cliff, slope or embankment moving down-slope along a saturated shear-plane.
So far as is reasonably practicable (SFAIRP)	In the UK, a process of weighing a health, safety or environmental risk against the trouble, time and money needed to control the risk. It describes the level to which risks should be controlled. Practically, it calls for the same set of tests to be applied as with ALARP, however, the terms are not always interchangeable because of how they are cited in the relevant legislation.
Soakaway	A chamber or other below ground structure that aids the infiltration of runoff into the ground.
Source-pathway-receptor assessment	Risk assessment methodology where impacts to the environment are assessed on whether there is a source (eg a released product), a receptor (eg groundwater), and a pathway (eg a drain leading to a river) by which the source material could reach the receptor. See <i>Risk assessment</i> .

palling	The process of surface failure in which spall (flakes of a material that are broken off a larger solid body by a variety of mechanisms including corrosion and weathering) is shed.
Strake/straked tank	A section of a cylindrical tank. In a straked tank, strakes may be joined by welding or sealed to adjacent strakes with or without additional circumferential tension hoops.
Shell	The cylindrical section of the tank or vessel formed by 1 or more 'strakes'
Stormwater drainage	Drainage system that conveys runoff resulting from rainfall.
Subsidence	The motion of a surface as it moves downward relative to a datum.
Tank rated capacity	Theoretical fill level in a storage tank that is far enough below the maximum capacity to allow time to respond to final warning alarms and still prevent loss of containment.
Tertiary containment	Minimises the consequences of a failure in the primary and secondary containment systems. This is done by providing an additional level of protection preventing the uncontrolled spread of the inventory such as site drainage and sumps, diversion tanks and lagoons, containment kerbing to roadways and parking areas and impervious liners and/or flexible booms. Tertiary containment will be used when there is an event that causes the escape of liquids from the secondary containment through failure or overflow (eg bund joint failure, or firewater overflowing from a bund or escaping from building/warehouse during a prolonged fire).
Trade effluent	Any liquid waste, other than surface water and domestic sewage that is discharged from premises being used for a business, trade or industry.
Underdrains	An underground drain or trench with openings through which the water may percolate from the soil or ground above.
Waterbars	Preformed strip of durable impermeable material that is wholly or partially embedded in concrete bund walls and floors during construction or remediation. The strip is located across joints in the structure to provide a permanent liquid-tight seal during the whole range of joint movements.
Waterstops	See <i>Waterbars</i> .

Abbreviations and acronyms

ALARP	As low as reasonably practicable
AMN	All measures necessary
BAT	Best available techniques
BOD	Biochemical oxygen demand
CA	Competent Authority
CBA	Cost-benefit analysis
FMEA	Failure, mode and effect analysis
FTA	Fault tree analysis
FWMA	Flood and Water Management Act 2010
GHS	Globally harmonised system
HAZOP	Hazard and operability studies
HSE	Health and Safety Executive
IBCs	Intermediate bulk containers
MATTE	Major accident to the environment
NGOs	Non-government organisations
PPG(s)	Pollution prevention guidelines
QSRMC	Quality Scheme for Ready Mix Concrete
SDS	Safety data sheet
SFAIRP	So far as is reasonably practicable
TifALARP	Tolerable if as low as reasonably practicable
WFD	Water Framework Directive
WwTW	Wastewater treatment works

1 Introduction

This chapter provides:

- An introduction to this guide, its scope, and the issues excluded from the scope (Sections 1.1 and 1.2)
- The regulatory context for the guidance (Sections 1.3 and 1.4)
- A number of other drivers for producing the guidance (Section 1.5)
- A brief summary of key regulations and existing guidance (Section 1.6)
- Information on risk assessments (Section 1.7)

1.1 OBJECTIVES

This guidance has been developed to assist owners and operators of industrial and commercial facilities to identify and manage the risks associated with storing substances that may be flammable/combustible or hazardous to the environment. Throughout the remainder of this guidance these are referred to as 'inventory' for brevity.

It is applicable to the containment of a wide range of inventories with the potential to pollute land and water and to all sizes of site from small commercial premises, which may contain a single tank, through to large chemical or petrochemical sites. Experience has shown that many incidents occur in warehouses and other storage facilities, which are also covered here.

It advocates a risk-based approach to managing the storage of inventory. However, it is important to ensure that the risk assessment methodology used is appropriate to the regulatory regime within which a site or facility is operating and there will be instances where there are statutory requirements for containment, which must be complied with irrespective of the risk (eg The Control of Pollution (Oil Storage) (England) Regulations (OSR) 2001).

Guidance is also provided on the inspection, maintenance, repair, extension or, in cases of change of use, upgrading of existing containment systems.

The guidance deals principally with managing the potential consequences of a failure of the storage tank or vessel (the primary containment) and/or the combustion of its contents. **Secondary** containment is provided to prevent:

- the inventory,
- firefighting agents, and
- rainfall runoff that has come into contact with the inventory

reaching the wider environment.

As will be discussed in Chapter 4, where flammable inventory is stored, it is often impractical to provide sufficient secondary containment local to the primary containment to cater for the firefighting and cooling water that might be applied during an incident. **Tertiary** containment provides a further level of protection should the secondary containment be overwhelmed by firefighting and cooling water, or fail.

Primary, secondary and tertiary containment are more fully described in Box 1.1.

Primary containment or storage is the most important means of preventing major incidents involving loss of inventory. It is achieved by the equipment used to store or transfer it such as storage tanks, intermediate bulk containers (IBCs), drums, pipework, valves, pumps and associated management and control systems. It also includes equipment that prevents the loss of primary containment under abnormal conditions, such as high-level alarms linked to shut-down systems. While this guide does not cover primary storage, a summary of other documents providing this is given in Chapter 9.

Secondary containment minimises the consequences of a failure of the primary storage by preventing the uncontrolled spread of the inventory. Secondary containment is achieved by equipment that is external to and structurally independent of the primary storage, for example concrete or earth bunds around storage tanks, or the walls of a warehouse storing drums. Secondary containment may also provide storage capacity for firefighting and cooling water. The options for providing secondary containment are discussed in Part 3 of this guidance.

Tertiary containment minimises the consequences of a failure in the primary and secondary containment systems by providing an additional level of protection preventing the uncontrolled spread of the inventory. These include purpose built structures such as diversion tanks and lagoons, but can also use other measures such as containment kerbing to roadways and parking areas and impervious liners and/or flexible booms. Tertiary containment will be used when there is an event that causes the escape of liquids from the secondary containment through failure or overflow (eg bund joint failure, or firewater overflowing from a bund or escaping from building/warehouse during a prolonged fire).

1.2 EXCLUSIONS

The following issues are not covered in this guide:

Issue	Commentary
Primary containment	<ul style="list-style-type: none"> ■ details of the management and maintenance of primary containment systems (although the need for good management practices and the role of protective and warning devices to prevent or detect spillages is included) ■ good practice guidance for the design, manufacture, installation, operation, inspection and maintenance of chemical storage tank systems can be found in Cassie and Seale (2003).
Types of installation	<ul style="list-style-type: none"> ■ underground storage tanks ■ buried/mounded tank/vessels ■ off-shore installations.
Off-site activities	<ul style="list-style-type: none"> ■ the transportation of materials off site by road, rail, sea or air ■ spills from pipelines between industrial premises.
Stored inventory	<ul style="list-style-type: none"> ■ above ground tanks/vessels for the storage of liquid petroleum gas (LPG), and liquefied natural gas(LNG) and other cryogenic substances etc ■ above ground tanks/vessels for the storage of natural gas ■ radioactive substances, hazardous biological organisms or chemicals used in small quantities such as in research laboratories ■ sewage and sewage effluents, farm wastes and related materials.
Source/cause of pollution	<ul style="list-style-type: none"> ■ gradual or continuing pollution, eg leaching from contaminated land ■ abandoned sites ■ pollution as a consequence of atmospheric emissions.
Post-incident clean-up	<ul style="list-style-type: none"> ■ the recovery, recycling or disposal of contaminated chemicals, wash waters, effluents, contaminated fire waters etc (unless this affects the containment system design/selection) ■ monitoring, clean-up or treatment after the occurrence of an incident.

1.3 REGULATORY CONTEXT

1.3.1 Range of sites

This guidance reflects current good practice for the design and maintenance of containment systems for the prevention of pollution. It is intended for use by site managers, design engineers, contractors, regulators and others. Following these guidelines will help businesses manage their environmental responsibilities to prevent pollution and comply with the law.

The guide covers a range of commercial and industry sectors. While most of the principles of this guide can be applied across these sectors, each sector will operate under a specific set of regulatory regimes (see Section 1.5 – some being risk-based and others setting absolute requirements. It is recognised that this guide will be used in a wide variety of applications, which include the hundreds of sites falling under the Control of Major Accident Hazards Regulations (COMAH) 1999, the thousands of sites falling under the Environmental Permitting (England and Wales) Regulations (EPR) 2010 and related regulatory regimes and the tens of thousands of other sites that exist across the UK. The guide does not specify regulatory practice such as the approach to inspection and/or the focus on particular sectors or sites.

Where current policies and guidance are already in place, and are either more or less onerous or differ from the guidance provided here, this publication should be seen as providing supplementary information, rather than additional requirements, on design, inspection and maintenance of containment measures.

1.3.2 Risk

A key feature of this guide is a risk assessment framework and a three-tier classification system, referred to as **classes**, upon which different standards of containment construction or levels of performance are required in accordance with the three levels of risk. This three-tier approach has been applied on many COMAH, EPR and equivalent regulated sites and other unregulated sites. It is acknowledged that other approaches are available and can be used, however the operator should be able to demonstrate an equivalent approach to that set out here.

1.3.3 Existing sites

The guide provides owners and operators of existing sites with ways of identifying and mitigating any pollution risk inherent in their installations and how the adequacy of any newly acquired site may be assessed. Any gaps between the recommendations presented here (or other specific codes etc agreed between regulators and industry) and the situation at a specific site should be dealt with in a manner that satisfies the relevant legal requirements (including risk and cost-benefit factors in deciding whether to upgrade).

The application of this guidance to existing facilities should be based on risk, and any upgrades completed to reduce risk sufficiently to satisfy the law and to be in accordance with guidance under the relevant legislative regime. Upgrades may be subject to as low as reasonably practicable (ALARP) and/or best available techniques (BAT) ‘tests’ and supporting cost-benefit analyses (CBA) depending on the legislative regime (COMAH, EPR etc). It is, however, recognised that the costs of upgrading existing facilities might outweigh the environmental benefits, and therefore not be viable, or that other equally effective risk reduction measures to those suggested in this guidance may be implemented. Guidance on how to make such decisions is available for differing legislative regimes and can also be clarified by discussion with the regulators.

With the exception of sites where changes in use or extensions are proposed, existing requirements in terms of frequency of inspections, risk assessment updates stipulated by current regulations (or agreed in previous industry regulator negotiations) are not expected to change. However, existing sites may need to improve their records and their inspection and risk assessments if they are not currently adopting good practice. It is not anticipated that regulators will significantly alter their inspection strategies as a direct result of this revision, however the guide will be referred to as providing good practice and may influence the content of future inspection campaigns.

1.4 OTHER DRIVERS

The earlier section *Why read this guide* introduced a number of drivers for ensuring good practice and the consequences on the organisation, which include:

- penalties, liabilities and reputational issues

- corporate governance
- corporate social responsibility (CSR).

These are each considered briefly in Sections 1.4.1 to 1.4.3.

1.4.1 Penalties, liabilities and reputation issues

Ineffective containment of pollutants can result not only in environmental harm but can also have a severe effect on the company concerned. In the past, fines imposed for pollution offences were trivial compared with the cost of installing protective measures. However fines have been increased significantly and in July 2010 five companies were fined a total of £9.5m for their part in the Buncefield catastrophe, a disaster that it is estimated had a total cost exceeding £1 billion.

Environmental legislation also empowers courts to imprison directors and managers of companies if pollution is proved to have resulted from their negligence. Several cases of imprisonment have been imposed for waste management offences (see Box 1.2) and this trend may spread into other areas of environmental management.

Box 1.2 *Examples of directors imprisoned for waste management offences*

Prison sentences handed out for leakage and dangerous storage of composting leachate, February 2014

Three directors of a South Wales company prosecuted – one received a 12 month prison sentence, 250 hours of unpaid work, five year ban from being a director; another received 32 week imprisonment, 150 hours unpaid work and three year ban director ban. The third received a 16 week prison sentence and a two year director ban. A financial investigation is under way. Clean up costs estimated at £1.6m so the company are likely to get a very large fine. In the past it had received a £35 000 fine for breaching permit conditions.

For more information go to:
<http://resource.co/business/article/wormtech-directors-sentenced-jail>
http://resource.co/article/Waste_Law/WormTech_closes_following_environment_permit_loss-2350

Custodial sentence and £330 000 penalty for illegal wood waste operations, January 2014

The company owner was sentenced at Sheffield Crown Court (7 January) over four charges relating to the operation of illegal wood waste facilities in Mansfield and Sheffield without an environmental permit.

The 49 year old was given a nine month custodial sentence, ordered to pay £250 000 in confiscation under the Proceeds of Crime Act 2002, ordered to pay £80 000 in investigation and costs, along with a £120 victim surcharge.

For more information go to: www.ciwm-journal.co.uk/archives/5596

Websites accessed 29 May 2014

In addition to prosecution for criminal acts, there is an increasing trend for companies, individuals and the statutory authorities to use civil proceedings for the recovery of costs incurred in cleaning up after pollution incidents. These costs can be extremely high, particularly in cases where the clean-up of contaminated land or groundwater is involved.

It is difficult to assess all the liabilities and resulting financial implications arising from the contamination caused by loss of containment. The widely reported case of Cambridge Water Company versus Eastern Counties Leather (BAILII, 1993) in which spillages of a chlorinated solvent migrated into an aquifer, and then to a borehole used for potable water supply, had a profound effect on the insurance industry.

Given the uncertainties, it may be difficult, or perhaps impossible to obtain insurance cover for all the potential liabilities, in particular for fines and authority investigation costs. Provisional statistics compiled by the HSE indicate that the average fine per conviction resulting from enforcement actions over the 2012/2013 fiscal year was circa £29 000 for the manufacturing sector. Insurance premiums are likely to rise for companies that cause major or highly publicised incidents. One way that companies can protect themselves against future liabilities is by providing high integrity containment systems for materials known to endanger the environment. The rate of increase in premiums may be lower for those with good facilities and management systems.

1.4.2 Corporate governance

Corporate governance demands that asset owners are aware of the value of their portfolio, including future maintenance liabilities and risks to operation. This is clearly applicable to the containment systems covered in this guidance.

Hooper *et al* (2009) provide advice on asset management.

1.4.3 Corporate social responsibility

While companies regard legal compliance as a major priority, leading organisations are acutely aware of their reputational image and are becoming more open to the publication of information relating to their environmental performance.

Corporate responsibility or corporate social responsibility (CSR) has become a part of business risk management. Historically, businesses have had to address some of their key risks such as their health, safety and environmental issues through legislative drivers. Failure to comply results in fines and poor press coverage can have a direct impact on the financial performance and future of the business.

Increasingly, poor performance in these areas has been deemed unacceptable and most organisations now recognise the financial, reputational and business continuity risks of not being in control of their health, safety and environmental activities. This has resulted in businesses taking greater responsibility in identifying, managing and mitigating their health, safety and environmental risks. They now are reporting regularly to risk management committees, audit committees and their company Board and presenting key data in annual financial reports and accounts for shareholder evaluation.

As the business environment has evolved, so have the risk profiles, challenges and pressures faced by business. Stakeholders in particular (including investors, staff, non-government organisations (NGOs), local communities, suppliers, the media and customers) are demanding good corporate conduct that includes but also extends beyond health, safety and environmental compliance to address other business impacts such as social and ethical matters. Corporate responsibility has arisen from the pressure for business to be responsible and to be held accountable for its wider impacts such as:

- pollution prevention
- supply chain
- human rights
- bribery and corruption
- biodiversity
- workplace diversity
- ethics.

1.5 UK AND EU LEGISLATION, INTERNATIONAL GUIDANCE AND PUBLICATIONS RELEVANT TO CONTAINMENT

1.5.1 Introduction

Details of the legislative framework and guidance relevant to containment within the UK are presented in Appendix A1 (see Tables A1.1 and Table A1.2).

In the UK various government agencies enforce UK regulations relevant to containment and pollution prevention, these include:

- Environment Agency (EA) for England
- Natural Resources Wales/Cyfoeth Naturiol Cymru (NRW) for Wales
- Environment and Heritage Service (EHS) for Northern Ireland

- Scottish Environment Protection Agency (SEPA) for Scotland
- Competent Authority (CA) for COMAH sites
- Health and Safety Executive (HSE).

Those UK organisations generally responsible for environmental regulation, ie the EA, NRW, EHS and SEPA, are collectively referred to as the ‘regulator’ throughout this guide.

In the UK business owners are responsible for checking the legal requirements that apply to their business activities. Online business advice and support, which help identify regulations that are applicable to various types of business or activities are provided on regulators'/government websites:

- For England and Wales: www.environment-agency.gov.uk/business/default.aspx
- For Northern Ireland and Scotland: www.netregs.gov.uk

In addition, there is much good advice contained in the series of pollution prevention guidelines (PPGs) published jointly by the EA, NIEA and SEPA at (see *Websites* box at the end of the chapter).

Many sites will be covered by regulations whose focus is considerably wider than water and ground pollution. This may include air pollution and risk to humans. A brief summary of the key regulations are set out below, with reference to Appendix A1 for further details.

1.5.2 Control of Major Accident Hazards Regulations (COMAH)

COMAH implement the Seveso II Directive (Council Directive 96/82/EC), except for land use planning requirements, which are implemented by changes to planning legislation. Their main aim is to prevent and mitigate the effects of those major accidents involving dangerous substances that can cause serious damage/harm to people and/or the environment. COMAH regard risks to the environment as serious as those to people.

COMAH apply mainly to the chemical and petrochemical industries. Other businesses to which they apply include those storing fuels or alcoholic spirits, having large warehouses or distribution facilities, or manufacturing and storing explosives. They apply where threshold quantities of dangerous substances identified in the regulations are kept or used. There are two thresholds known as COMAH lower tier and top tier. To determine whether these Regulations apply, it is necessary to determine if there are sufficient dangerous substances to exceed the lower threshold quantities defined in the regulations.

The regulations are enforced by a COMAH Competent Authority (CA) comprising HSE and the EA in England, HSE and NRW in Wales, and HSE and SEPA in Scotland. Operators will generally receive a single response from the CA on all matters to do with COMAH.

COMAH ensure that businesses and duty holders:

- take all measures necessary (AMN) to prevent major accidents involving dangerous substances
- limit the consequences to people and the environment of any major accidents that do occur.

AMN have to be in place so far as is reasonably practicable (SFAIRP) to prevent environmental harm and in particular a major accident to the environment (MATTE). AMN are interpreted to require use of good practice for pollution prevention and the CA considers these to be in place when the risks are demonstrated to be either ‘broadly acceptable’ or ALARP. As this is an important concept, the HSE’s definition of ALARP is repeated here verbatim:

“ALARP, ‘as low as reasonably practicable’, enables the regulator to set goals for duty-holders, rather than being prescriptive. This flexibility is a great advantage but it has its drawbacks too. Deciding whether a risk is ALARP can be challenging because it requires operators and regulators to exercise judgement. In essence, making sure a risk has been reduced ALARP is about weighing the risk against the sacrifice needed to further reduce it. The decision is weighted in favour of safety because the presumption is that the duty-holder should implement the risk reduction measure. To avoid having to make this sacrifice, the duty-holder must be

able to show that it would be grossly disproportionate to the benefits of risk reduction that would be achieved. Thus, the process is not one of balancing the costs and benefits of measures but, rather, of adopting measures except where they are ruled out because they involve grossly disproportionate sacrifices.”

The HSE provides a suite of ALARP related documents on their website (see *Websites* box).

Further guidance on the CA's position on AMN relating to prevention and mitigation of environmental aspects of major accidents can be found in HSE (2012 and on MATTE in CDOIF (2011).

Note

It is anticipated that the Seveso II Directive (Council Directive 96/82/EC) will be replaced in 2015 by the Seveso III Directive (Directive 2012/18/EU). It is understood that the major change will be the use of the globally harmonised system (GHS) for classification of chemicals to determine whether they are within the scope of the Directive. When the new Directive is implemented, there is the potential for sites to change their COMAH status (top tier, lower tier or non-COMAH), depending on the substances and quantities held.

1.5.3 EPR (England and Wales) 2010, PPC (Northern Ireland) 2003 and PPC (Scotland) 2012

The Environment Permitting Regulations (England and Wales) (EPR) 2010, the Pollution Prevention and Control Regulations (Northern Ireland) (PPC) 2003 and the Pollution Prevention and Control (Scotland) Regulations (PPC) 2012 implement Industrial Emissions Directive (IED) (Council Directive 2010/75/EU). These require installations to be operated in a way that provides a high level of protection to the environment as a whole and, in particular, soil and groundwater.

It is the primary operating environmental permit regime in use in the UK for which core guidance is given in Defra (2013).

It is an offence to discharge without authorisation, or exceed the conditions stated on an environmental permit. In particular, Schedule 38 of the EPR 2010 makes it an offence to cause or knowingly permit a 'water discharge activity' or 'groundwater activity' unless authorised by an environmental permit. Similar regulation applies in Scotland and Northern Ireland.

The definitions of a 'water discharge activity' and 'groundwater activity' are set out in Boxes 1.2 and 1.3. In Scotland the regulations are broader and, in respect of discharges, apply to activities likely to cause pollution of the water environment and any other activity that directly or indirectly has or is likely to have a significant adverse effect on the water environment.

Box 1.2 Definition of a water discharge activity (from EPR, 2010)

Schedule 21 (3)

A "water discharge activity" means any of the following—

- (a) the discharge or entry to inland freshwaters, coastal waters or relevant territorial waters of any
 - (i) poisonous, noxious or polluting matter,
 - (ii) waste matter, or
 - (iii) trade effluent or sewage effluent;
- (b) the discharge from land through a pipe into the sea outside the seaward limits of relevant territorial waters of any trade effluent or sewage effluent;
- (c) the removal from any part of the bottom, channel or bed of any inland freshwaters of a deposit accumulated by reason of any dam, weir or sluice holding back the waters, by causing it to be carried away in suspension in the waters, unless the activity is carried on in the exercise of a power conferred by or under any enactment relating to land drainage, flood prevention or navigation;
- (d) the cutting or uprooting of a substantial amount of vegetation in any inland freshwaters or so near to any such waters that it falls into them and failure to take reasonable steps to remove the vegetation from these waters;
- (e) an activity in respect of which a notice under paragraph 4 or 5 has been served and has taken effect.

Schedule 22 (3)

A “groundwater activity” means any of the following—

- (a) the discharge of a pollutant that results in the direct input of that pollutant to groundwater;
- (b) the discharge of a pollutant in circumstances that might lead to an indirect input of that pollutant to groundwater;
- (c) any other discharge that might lead to the direct or indirect input of a pollutant to groundwater;
- (d) an activity in respect of which a notice under paragraph 10 has been served and has taken effect;
- (e) an activity that might lead to a discharge mentioned in paragraph (a), (b) or (c), where that activity is carried on as part of the operation of a regulated facility of another class

A discharge or an activity that might lead to a discharge is not a “groundwater activity” if the discharge is—

- (a) made, or authorised to be made, by or under any prescribed statutory provision; or
- (b) of trade effluent or sewage effluent from a vessel.

The regulator may determine that a discharge, or an activity that might lead to a discharge, is not a groundwater activity if the input of the pollutant-

- (a) is the consequence of an accident or exceptional circumstances of natural cause that could not reasonably have been foreseen, avoided or mitigated;
- (b) is or would be of a quantity and concentration so small as to obviate any present or future danger of deterioration in the quality of the receiving groundwater; or
- (c) is or would be incapable, for technical reasons, of being prevented or limited without using—
 - (i) measures that would increase risks to human health or to the quality of the environment as a whole, or
 - (ii) disproportionately costly measures to remove quantities of pollutants from, or otherwise control their percolation in, contaminated ground or subsoil.

Note

The EPR require operators of installations to use best available technique (BAT). Where such installations covered in Schedule 1 have bulk storage of hazardous materials, guidance on what represents BAT is given in the BREF document for emission storage (European Commission, 2006).

BAT takes into account the balance between the costs and environmental benefits and in a similar manner to AMN under COMAH, are interpreted to require use of ‘good practice’ for pollution prevention. Further guidance on BAT in relation to particular industry sectors can be found on the EA’s website (see *Websites* box).

1.5.4 The Control of Pollution (Oil Storage) (England) Regulations (OSR) 2001

The Oil Storage Regulations (OSR) apply where more than 200 litres of oil is to be stored. With the exception of those situations set out in paragraph 2.(2) of the Regulations, secure containment facilities must be provided for tanks, drums, IBCs and mobile bowsers to prevent oil escaping into the environment.

It should be noted that there are differing requirements for each UK country and reference should be made to the primary legislation and to Appendix A1.

1.5.5 The European Water Framework Directive (WFD)

The European Water Framework Directive (WFD) (Directive 2000/60/EC) was transposed into UK law in December 2003 and requires that all inland (including groundwater bodies) and coastal waters achieve at least ‘good’ status. The status of a water body is essentially determined from its biological, hydromorphological and physio-chemical properties. The WFD has established river basin districts for which river basin management plans have been developed by the CA that detail the actions (a programme of measures) required to meet these objectives.

Any activities, such as new development that potentially could lead to deterioration in the status of a waterbody, or would render proposed improvement measures ineffective, would be contrary to the Directive. Details of the WFD classification assessment can be found on the EA’s website (see *Websites* box).

1.5.6 Other legislation and guidance

Flood and Water Management Act 2010

The largest of bunds/lagoons might fall in scope of reservoirs safety legislation as part of the Flood and Water Management Act (FWMA) 2010. Where a structure is currently capable of holding more than 25 000 m³ of water above the natural level of any part of the surrounding land it falls within the scope of the Act and must be registered.

The regulator interprets capacity to hold water to include any capacity intended for rainwater or firewater or other site drainage water. A chemicals bund would not therefore be in scope if the foreseeable volumes of water that could be in the bund do not exceed the threshold.

Note

Primarily reservoir safety in England, Wales and Scotland comes under the Reservoirs Act 1975. There is currently no reservoir safety legislation in Northern Ireland. This applies to any raised reservoir storing 25 000 m³ or more of water above natural ground level. The FWMA 2010 modifies sections of the Reservoirs Act in England and Wales and is likely to include measures to bring any reservoirs stored to 10 000 m³ within the scope of the Act. However at the time of writing there is currently no timetable for when this might be enacted through secondary legislation. The Reservoirs (Scotland) Act 2011 applies in Scotland and will repeal the Reservoirs Act 1975 in Scotland, when implemented (possibly 2015). This will include a volume threshold of 10 000 m³.

BASIS Registration Scheme

The BASIS Registration Scheme (see *Websites* box) has been established to develop standards for the safe storage and transport of agricultural, horticultural and forestry pesticides. Registered stores are audited annually to ensure that the store, the people who operate it and the staff who provide advice on professional pesticides meet their legal obligations and are taking all reasonable precautions to protect people and the environment.

Safety data sheets

Specific advice on the management of inventory is also available from its specific safety data sheet (SDS) (see *Websites* box). SDS should be provided by the inventory suppliers, or can be obtained from a number of readily available sources on the internet.

1.6 ASSESSING THE RISK

Fire is the most common cause of serious pollution incidents. A relatively small proportion of incidents stem directly from the catastrophic failure of tanks or vessels. On-site traffic movements and loading movements are also a regular cause of incidents involving rupture of tanks, drums, vessels, bunds or pipework. For smaller sites vandalism is of increasing concern.

A risk assessment provides a transparent and objective means of assessing the likelihood and consequences of a loss of containment based on the source–pathway–receptor model (see Chapter 2). The outcome of the assessment will aid the development of an holistic containment strategy based on the hazard posed by the inventory to be stored or moved within the site, and the sensitivity of potential receptors should a spillage occur. While this strategy may include a combination of prevention (containment) and mitigation measures, the former are considered preferable.

The starting point of any proposal to modify or extend an existing facility, or construct a new facility should be a risk assessment. The risk assessment will assist in informing the design, development of an appropriate inspection and maintenance regime or, where resources are limited, to prioritise risk reduction measures.

Risk assessments are covered in detail in Chapter 2, however, the principal role of the containment systems associated with this guidance is to break the pathway between the source, (the inventory in the primary container), and any potential receptors, eg watercourses, groundwaters, habitats.

2 Risk assessment and classification of secondary and tertiary containment systems

This chapter provides:

- A brief introduction to environmental risk assessments (Section 2.1)
- A framework around which hazards and risks may be assessed in the context of containment design (Sections 2.2 to 2.5)
- An approach to containment design based on these ratings (Sections 2.6)

2.1 INTRODUCTION

This chapter provides a risk assessment methodology to support a three-tier risk-based classification system for secondary and tertiary containment. This classification system recommends different standards of construction, or levels of performance in accordance with each of the three levels of risk. It provides guidance on completing an assessment of the risks posed (principally to the water environment and soils) should there be a release of the inventory stored in the primary containment. The results of the assessment are then used to set standards for specifying mitigation measures appropriate to the risk.

As stated in Chapter 1, the duty holder may take a different approach to determining an appropriate level of performance and standard of construction for their facility than the one described in this chapter. However, regulators may expect the duty holder to reconcile their proposed approach with that set out in this guide.

This guidance will use the following definitions, which are consistent with European law:

- **hazard** is the intrinsic property of a dangerous substance or physical situation, with a potential for creating damage to human health and/or the environment
- **risk** is the likelihood of a specific effect occurring within a specified period or in specified circumstances.

Risk is therefore a combination of **consequence** and the **likelihood** (or probability of occurrence) of that consequence. Consequence can be further defined in terms of the **extent** of harm and the **severity** of harm. In addition to extent and severity, consequence is also a function of duration of harm (both environmental harm index (EHI) and CDOIF (2013a) benchmark this against timescale for natural recovery).

It is a requirement under health and safety and environmental legislation that a duty holder manages potential hazards to comply with the law. Discharging this responsibility generally includes a requirement to apply good practice in the management of risk.

It is unlikely to be economic to provide the primary storage such that it is 100 per cent safe, ie it can be guaranteed not to permit the escape of inventory in every conceivable circumstance. No matter how much care is taken there is always a finite risk that, for example, a particular hazard has not been recognised, structural elements or materials do not behave as predicted or an error in the design or construction was made. Additional risks and uncertainties can be introduced throughout the service life of a primary containment system if it is poorly maintained, it is put to a different use not considered by the original design, or is modified or extended in an inappropriate manner.

Generally following this guidance will assist duty holders to demonstrate that they have managed these risks to comply with the law, specifically through the provision of secondary and potentially tertiary containment.

Defra (2011) provides generic guidelines for the assessment and management of environmental risks. While the guidelines focus on generic principles, the framework presented underpins the specific risk assessment methodology set out in this guide and identifies four main components of risk assessment (see Table 2.1).

Table 2.1 The four components of a risk assessment

Task	Chapter
Formulating the problem	Chapter 2
Carrying out an assessment of the risk	
Identifying and appraising the management options available	Chapters 3 and 4
Addressing the risk with the chosen risk management strategy	Chapters 6 to 11

The guidelines emphasise that environmental risk management is not a single, one-off exercise, but a dynamic process as illustrated by Figure 2.1.

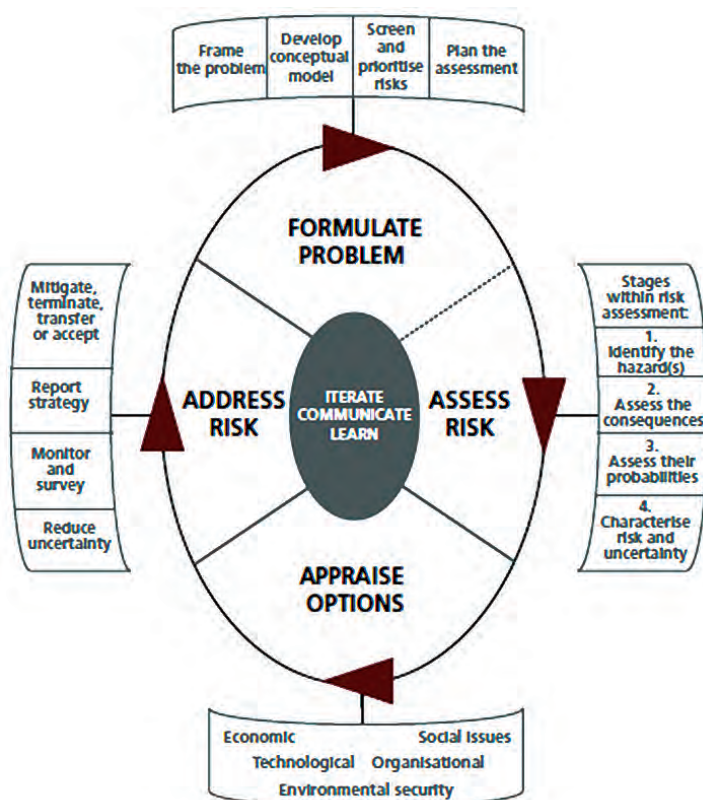

Figure 2.1 A framework for environmental management (from Defra, 2011)

This cyclical approach is particularly relevant to containment systems, and it is good practice to regularly review risk assessments for existing sites (recommendations for existing sites are provided in Section 5.3).

More sector-specific guidance is given in PPG28. The principal focus of PPG28 is on when and how to use a controlled burn as part of a firefighting strategy to prevent or reduce damage to the environment. However, the guidance is underpinned by a risk assessment methodology the principles of which are broadly followed here.

In common with many other environmental risk assessment methodologies, PPG28 uses the source–pathway–receptor model. So, for a risk to exist, all three elements have to be in place. This is illustrated

by Figure 2.2. The aim of a containment system in the context of this guide is to break the pathway between a source such as an oil tank and a receptor such as an adjacent river. The likelihood that a containment system will fail to break the pathway will depend on several factors associated with the way it has been designed, built, operated and maintained.

Figure 2.2 Source–pathway–receptor model

The concept of the source–pathway–receptor model is illustrated in Figure 2.3.

Figure 2.3 Concept of the source–pathway–receptor model

Note that where a site falls within a particular regulatory regime, ie COMAH or EPR/PPC, there are specific risk assessment methodologies that should be followed. However, there is much cross-cutting guidance prepared by the CA for COMAH and the regulator for EPR/PPC that is relevant to the methodology set out in this chapter. This, together with work by industry bodies such as the Energy Institute (EI) and the CDOIF on risk assessment, will be referenced as appropriate.

It is beyond the scope of this guide to provide advice on completing detailed risk assessments, however, the EA provide information on preparing a risk assessment to support an environmental permit (see *Websites* box at the end of this chapter). Guidance is also available in CDOIF (2013a).

CA (2012) provides advice on the selection of an appropriate risk assessment methodology such that it is proportionate to the risks involved.

In addition to extent and severity, consequence is also a function of duration of harm (both EHI and CDOIF (2013a) benchmark this against timescale for natural recovery).

2.2 FRAMEWORK FOR CLASSIFICATION OF SECONDARY AND TERTIARY CONTAINMENT

This section introduces the risk assessment framework that underpins the three-tiered classification system for secondary and tertiary containment facilities set out in this guide. The purpose of a risk assessment is to ensure that the measures put in place to manage or mitigate risk are proportionate.

It has been developed specifically to inform the design and performance of containment systems that are appropriate to the risk associated with inventory and the environmental setting. To this extent, it is

deliberately restricted in context and scope. Class 1 containment systems are provided where the risk of pollution arising from the storage of the inventory is relatively low, whereas class 3 containment systems are provided where this risk is relatively high. Part 3 gives advice on standards of design and detailing appropriate to each class for a number of forms of containment construction.

As noted in Sections 1.3 and 1.4, using a class appropriate to the risk as determined by this guide will not guarantee legal compliance and the final containment solution will ultimately depend on regime specific requirements and risk assessment methodologies. For example, if the output of the risk assessment determines that class 1 (the lowest risk) is appropriate there might still be requirements in law that requires a higher standard of containment.

An operator seeking to develop or extend a site storing inventory where no secondary or tertiary containment is proposed would have to supply clear justification to the regulators as to why it would not be necessary. The information in this chapter is not appropriate to develop any such case.

Figure 2.4 Relationship between risk, environmental impact and frequency

The relationship between risk, environmental impact and likelihood of loss of containment is shown in Figure 2.4 where different levels of risk are indicated by different regions of the chart. The overall purpose of containment is to reduce the likelihood of the escape of inventory and/or the resulting environmental impact.

It should be stressed that this diagram necessarily simplifies what is a complex set of relationships. In particular, the boundaries (represented by the shaded areas) between the regions separating the three risk levels are not in practice clearly defined.

Managing risk to be ‘tolerable if ALARP’ (TifALARP) implies that the measures to be put in place should be proportionate. This guide

therefore provides a risk assessment framework to advise on standards of design and construction for containment systems that are proportionate to the risk.

The general framework for the risk assessment is illustrated by Figure 2.5 and provides a three-step approach:

- **Step 1** applies the source–pathway–receptor model to the site to assess the hazard presented by the inventory to the surrounding environment. Chapter 2 provides guidance on how to undertake this assessment from first principles. The assessment of the source–pathway–receptor is combined in Section 2.4 to provide a **site hazard rating**. However, in many cases the nature and quantity of the inventory and knowledge of nearby sensitive receptors such as water bodies or designated habitats may be sufficient to determine that there is negligible (low site hazard rating) or, conversely, a high (high site hazard rating) risk.
- **Step 2** considers the likelihood of a loss of containment. This will depend on several factors such as the reliability of the operations and inspections undertaken on site, the conditions of the primary storage vessels and the degree they are protected from impact damage etc. Security will also be a consideration (see Section 3.7). The likelihood of a loss of containment is combined with the site hazard rating in Section 2.5 to provide a **site risk rating**.
- **Step 3** the site risk rating leads to a recommendation for an appropriate class of containment as defined in this guide.

The three classes are defined by increasing requirements in terms of design and construction integrity, the recommendations for which are set out in Part 3.

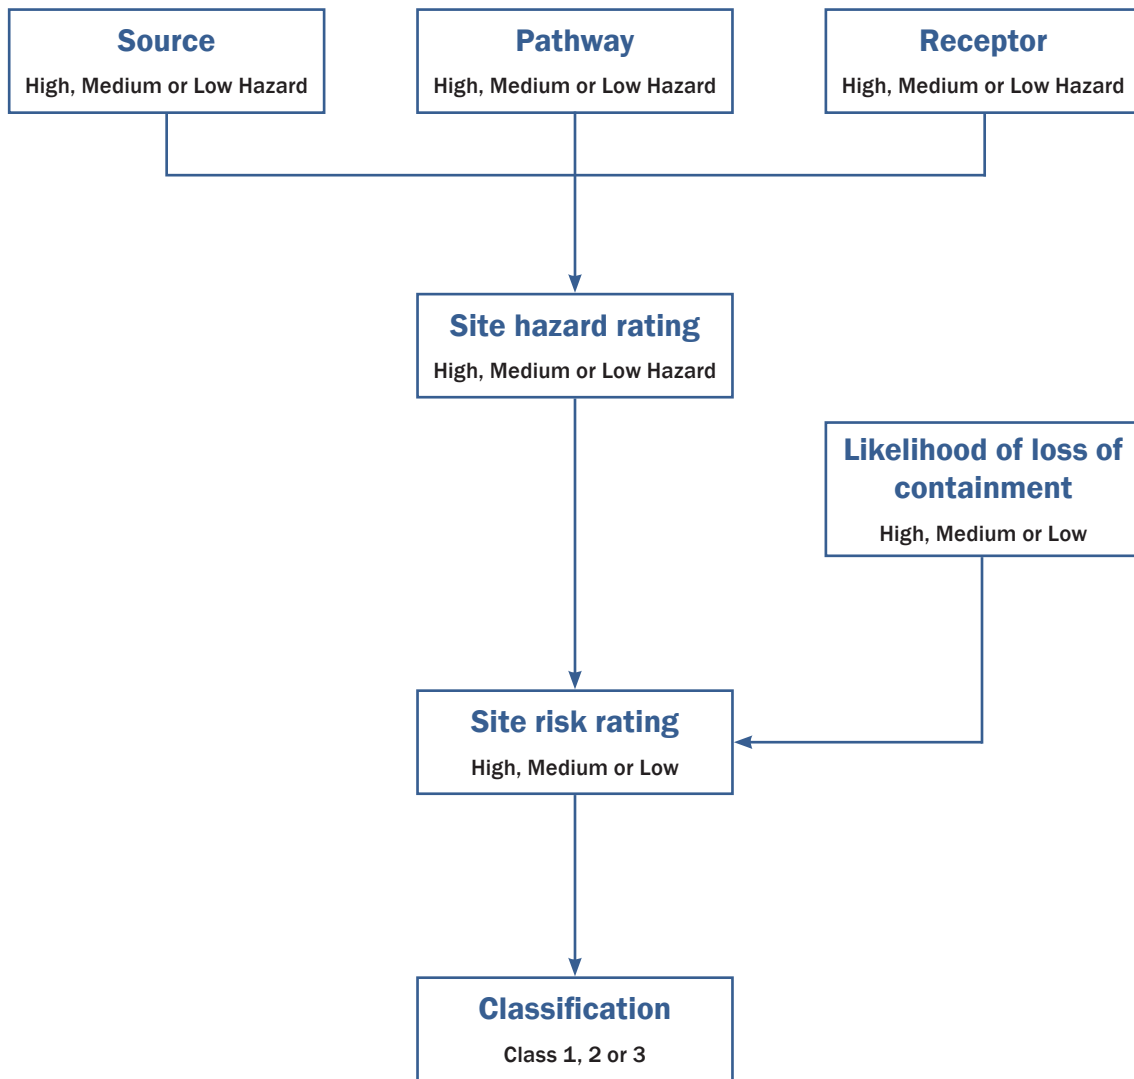

Figure 2.5 Risk assessment framework

2.3 KEY ELEMENTS FOR DETERMINING THE SITE HAZARD RATING

2.3.1 Source

Source	Pathway	Receptor
--------	---------	----------

Introduction

In the context of assessing hazard, the **source** refers to:

- the inventory
- rainwater or surface water runoff contaminated by the inventory
- firefighting agents that are harmful to the environment in their own right and/or are contaminated by the inventory
- firefighting and cooling water contaminated by the inventory.

Nature and quantity of potential pollutants

The potential pollutants present on industrial sites will comprise a range of raw materials, products, fuels and wastes. The quantity and nature of these materials should be assessed in relation to their polluting potential, the extent to which their presence may trigger or exacerbate an incident (eg highly flammable substances) and any physical or chemical properties that may call for special containment measures (eg corrosive materials that may damage concrete). In addition the potential duration of the release should be considered.

In relation to pollution potential, a wide range of characteristics of the inventory and any material used to suppress the fire should be taken into account including:

- physical properties (eg density and viscosity)
- chemical and biochemical properties (eg BOD and pH)
- ecotoxicological properties
- bioaccumulation, biomagnification or persistence potential
- by-products of fire/unwanted reactions
- contaminated firewater.

The first stage is to assess whether the individual chemicals present on site, or any combination of them, will pose a hazard to potential environmental receptors if released. The SDS will provide all relevant environmental data.

Environmental harm index (EHI)

The potential harm caused by a particular substance is a function of the sensitivity of the receptor to that substance. The **severity** of the impact is in turn a function of the potential **extent** over which spillage might occur and **duration** of the harm, ie how persistent the substance is in the particular environment. One method of quantifying the potential harm is the development of an environmental harm index (EHI) as proposed by DETR (1998) There are also a number of other work streams in this area under development that include CDOIF (2013a).

The degree of susceptibility to different substances is likely to vary from receptor to receptor. So, if more than one substance is stored on site and these are not similar, where there is a pathway it will be necessary to repeat the assessment for each substance and against each receptor as necessary.

The quantity of hazardous material present on a site is an important factor to be taken into account when considering containment capacity. There are 'threshold' quantities below which the escape to soils or controlled waters may not have a significant environmental impact. These are provided by 'chemical standards', chemical concentrations in an environmental medium such as water, air or soil that are not expected to cause harm to environmental organisms or human health, provided they are not exceeded. It should be noted that the same chemical may have several standards for different environmental receptors, and for different protection goals. Details of these standards are listed in Appendix A1.

There are a number of statutory and non-statutory standards that are set in legislation and by various organisations respectively. It should be noted that these standards may prohibit any concentrations of a substance in the environment. Information on chemical standards and statutory and non-statutory standards may be found on the EA's website (see *Websites* box).

Toxicity and hazard

An alternative method to the EHI and the work of the CA and CDOIF in classifying the source hazard is based on the toxicity and quantity of the stored substance. The toxicity is based on Regulation (EC) No 1272/2008. This Regulation makes reference to the H-Phrase of a substance defined in the Globally Harmonized System of Classification and Labelling of Chemicals (GHS) (United Nations, 2005). H-Phrases are intended to form a set of standardised phrases about the hazards of chemical substances and mixtures that can be translated into different languages (OChemOnline, 2011).

Some substances classified under the CLP, which are very toxic for the aquatic environment, have a 'multiplying factor' (M-factor) applied to give an increased weight. More information can be obtained from the HSE (see *Websites* box).

Many materials may also have LD50 and LC50 toxicity ratings. These refer to the concentration of the material that kills 50 per cent of an exposed population of test animals and the concentration in water that kills 50 per cent of the aquatic organisms within a given time period respectively. These ratings have been used to relate toxicity, quantity and hazard (see Figure 2.6).

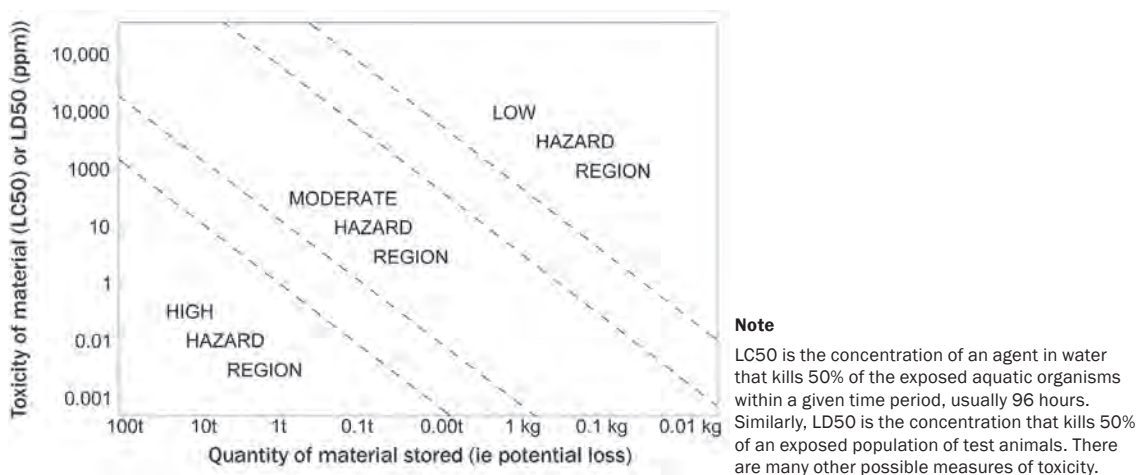

Figure 2.6 Relationship between material quantities, toxicity and hazard

Examples of inventory that, if present on site, would suggest a high source hazard irrespective of the quantity stored are listed in Appendix A2.

It is important that the polluting effects of all the possible cocktails of materials that may arise during an incident are taken into account. This is a particularly important consideration in warehouse situations and across large sites where many different materials may be stored together and there is a risk that they could be released simultaneously into the environment.

Effects of fires and firefighting water

On many industrial sites, one of the most significant hazards is fire. The potential effects of a fire can alter the assessment of source hazard in a number of ways, including physical or chemical modification of the materials on site and damage to other primary containers, which could result in further materials being released.

By far the most important effect of fire, in the context of considering **sources**, is the introduction of potentially very large volumes of water used to extinguish fires and to cool adjacent containment (collectively termed firefighting water in this guide) and, to a lesser extent, foams. Firefighting water will become contaminated on contact with the inventory and so it is just as important to control its release to the environment as it is with the inventory itself. Sites where flammable inventory is present should be considered as a high source hazard rating. Methods for estimating volumes of cooling and firefighting water and foam are presented in Section 4.3.3.

2.3.2 Pathway

Source	Pathway	Receptor
--------	---------	----------

This section provides:

Guidance on how to identify and assess the potential pathways between the source and the receptor and how to assess the hazard rating of the different pathways. It considers:

- proximity of receptors
- firefighting water
- site layout and drainage
- treatment plants
- topography, geology and hydrogeology
- mitigating effects
- climatic conditions
- factors affecting transport potential.

Introduction

Pathways are the means by which a hazardous substance would reach a **receptor**. The area of search for potential receptors is governed by the potential pathways and these might include:

- simple overland flow following the local topography
- existing pipes, sewers, drains or other underground features that could lead to a receptor such as a watercourse
- permeable sub-soils and strata underling a site that could provide a pathway to groundwater or a watercourse.

Multiple combinations of pathways may exist and should be considered.

In considering the hazard rating of potential pathways the following should be considered:

- 1 The distance between the source and the various potential receptors.
- 2 Site layout (including topography), and the position and effectiveness of drains and other internal and external pathways.
- 3 Geographical, geological and hydrogeological features that could either impede or facilitate escape of inventory from the site. In addition building foundations may impede or alter sub-surface drainage paths.
- 4 Climatic conditions and expected variability.
- 5 The direct effects of fire and the introduction of firefighting water, or foam.
- 6 The presence of treatment plants (on or off site).
- 7 Modification of the inventory during passage through the pathway such as the cooling of a liquid.
- 8 Inventory that is not particularly mobile in ambient conditions may be soluble in water.
- 9 The scale of potential incidents (larger incidents and firewater generally have greater potential for mobilisation in the environment than smaller spills).

The time it would take for an inventory to reach a receptor is an important factor. The potential for the substance to harm the environment is higher if it reaches the receptor quickly since:

- there will be less opportunity to contain the inventory (either on site or off site) and prevent escape to the wider environment
- mitigation of the effects of the substance by such factors as evaporation or dilution will be reduced
- there will be less time to warn other organisations and individuals likely to be affected, eg the regulator, downstream landowners and water users, and sewage treatment plant operators.

In cases where the escape of inventory goes undetected, particularly over a long period of time, there will be no opportunity to put mitigation measures in place in a timely manner. The presence of leak detection systems should therefore be taken into account when assessing the hazard rating for pathways.

However, if the time it takes for the inventory to reach a sensitive receptor and cause harm is long, then a planned and tested mitigation strategy may well reduce the impact or prevent damage to the receptor.

By taking into account the factors outlined above it is possible to derive a hazard rating for the pathway. In the same manner as the source hazard, ie this is designated a high, moderate or low according to the particular characteristics of the pathways.

Proximity of receptors

It is important first to identify all of the possible receptors and their locations in relation to the source to be able to assess the relevant pathways. However, judgement will be required in the first instance to make an assessment of credible pathways to set reasonable limits on the area of search for potential receptors.

Potential pathways for overland flow will be determined by the local topography and to an extent the permeability of the near surface soils. Where permeable soils are present, the interaction with groundwater should be considered, which in itself is both a potential pathway and receptor.

Sewers, culverts and drains all have the potential to convey inventory rapidly away from a site and to release them into the environment many kilometres from the site boundary. Even where the sewers, culverts and drains are sealed, the bedding and surround may act as pathway for rapid off site migration.

Permeable substrata can also convey inventory over large distances where they can affect ground and surface water resources. Potential sources of information on groundwater are given in Box 2.2 and the regulator should also be consulted.

Site layout and drainage

The layout of the plant, buildings, roadways, hardstandings and other features, and the surface finish and permeability of the surfaces over which the hazardous substance may flow in the event of an escape, are all relevant factors in deriving hazard rating.

The following issues will tend to increase the hazard rating for pathways:

- 1 Hardstandings around the primary containment sloping towards a surface receptor.
- 2 Primary containment installations surrounded by flat or slightly sloping permeable ground permitting infiltration to groundwaters.
- 3 On-site effluent drainage systems that provide pathways to trade effluent outfalls, to public sewers, or to on- or off-site public treatment works.
- 4 The presence of below-ground features such as services, ducts, pipelines, filled ground, tunnels, tanks or sumps.
- 5 Other man-made pathways such as old mine workings, storm drains and gullies, culverted watercourses and land drains located close to the source or potential pathway.

Rainwater soakaways are a common feature on many sites. The proximity of soakaways to sources of inventory, their location with respect to physical pathways, the possibility of their contamination in the event of an incident, and even their use in principle, need to be carefully reviewed.

Where soakaways are provided as means of rainwater disposal, the potential pathways via infiltration and groundwater as a potential receptor should be fully assessed.

Topography, geology and hydrogeology

The topography of the site and the permeability of the ground will have an effect on the transport of inventory to surface waters and infiltration to groundwaters. On large sites there may be a considerable variation in landform, soil type and geology across the site, which will influence runoff and infiltration.

With the exception of some small sites where the ground conditions are well known, geotechnical and hydrogeological surveys should be carried out on sites where inventory is to be stored.

This will be particularly important where the ground is to be used as part of the containment system, ie earth embankment bunds and lagoons.

Topographic survey data may also be required to confirm potential overland flow paths.

Climatic conditions

Climatic conditions, including precipitation and temperature, can affect ground conditions and permeability, vegetation and evapotranspiration, each of which can affect the pathway. Frozen or saturated ground will increase the tendency for rapid runoff from areas where, at other times, runoff may be very much slower or absent altogether. Surface cracks and fissures in dry conditions will increase infiltration and may provide direct pathways to permeable substrata and groundwater.

The consequences of the failure of a containment system during a period of heavy rain need to be taken into consideration. One possible beneficial effect may be that the rain will dilute the inventory before it reaches the receiving water. However, the higher runoff volume may increase the possibility of it reaching the receptor.

Areas that are susceptible to persistent and/or widespread flooding can also provide a pathway for hazardous substances released from the primary containment. Information on areas potentially at risk of flooding from surface water runoff, rivers and the sea is available from the EA, SEPA and DARDNI (see *Websites* box).

A particular issue is operation of combined sewer overflows (CSO) during periods of heavy rainfall. A combined sewer caters for both foul (including, where consented, trade effluent) and surface flows. CSOs were constructed to reduce the risk of sewer surcharge, flooding or overwhelming the wastewater treatment works (WwTW) during periods of heavy rainfall that discharge to a local watercourse. These CSOs therefore have the potential to provide a direct pathway to a receptor by bypassing the WwTW.

Firefighting water

Firefighting water has the potential to dilute very significantly any hazardous substance released from the primary containment. However, in the same way as heavy rain, it may also affect the pathway. If the flow of firefighting water is greater than the capacity of the site drains, the contaminated firefighting water will find other pathways from the site. Forecasting the pathway of the inventory, taking into account the effects of heavy rain or firefighting water, or even both together, is a key factor in assessing pathways.

Another important consideration is the effect that fire may have on the flow properties of the hazardous substance, particularly in the site drainage system. Fire and heat may cause increases in viscosity or surface crusting so that flow through the system is slowed down or even stopped completely. Conversely, fire may melt or destroy site features that under normal circumstances would divert flows elsewhere. Drains may also become blocked through debris flushed into them by the firefighting water.

Treatment plants

Pathways may lead to, and include, effluent treatment works on the site, or WwTW off site. The unplanned entry of highly polluting effluent into a treatment plant at a level that exceeds the treatment or containment capacity of the works may cause major damage, which effectively puts the plant out of action. The damage may be long-term. The resulting discharge from the damaged works may result in more serious pollution than would have resulted from a direct discharge of the primary pollutant.

WwTW, and particularly those catering for combined sewers, are often provided with storm tanks to balance the load through the works. If the duty holder notifies the works as soon as the incident occurs,

these storm tanks, if provided, may contain any spillage from the primary containment that enters the upstream drainage network potentially interrupting a significant pathway.

Mitigating and exacerbating effects

When inventory escapes from the primary containment, it may be subject to a number of factors that alter its environmental impact potential, either by modifying its properties or its volume.

In assessing possible mitigating effects, the factors that should be taken into account include:

- likelihood of dilution in the drains
- possible dilution and treatment at on-site or off-site treatment plant (note that such plant could be severely affected by the pollutant and to that extent can equally be regarded as a receptor)
- chemical reactions (eg materials may be highly reactive with water)
- application of neutralising agents that might dilute the escaped inventory
- evaporation (eg volatile solvents)
- absorption (some materials may be absorbed by soil or other solids)
- settling (some materials may settle in drains, interceptors or lagoons)
- existing retention capacity on the site.

Note that simply diluting escaped inventory as part of spill management is not considered good practice.

Exacerbating factors might include:

- larger volumes tend to spread further
- greater slopes result in faster runoff and less time to act to intercept
- inventory spread over large areas at shallow depth may be more difficult to recover
- adverse chemical reactions between differing inventories released during an incident.

Factors affecting transport potential

Examples of pathways where the hazard rating is considered to be high might include:

- short runoff time between source and receptor
- direct drainage links between source and receptor (or treatment plant where this could be considered a receptor)
- absence of holding capacity in drains and sewers
- highly permeable strata between source and groundwater receptor
- absence of treatment facilities
- little to mitigate the effects of the released hazardous substance
- flooding.

2.3.3 Receptors

Source	Pathway	Receptor
--------	---------	----------

This section provides:

Guidance on how to identify the various receptors and their susceptibility to harm from the sources and via the pathways identified. It considers:

- environmental sensitivity
- other factors
- uncertainties
- nature and classification of receiving waters
- wastewater treatment works
- dilution and mixing.

Introduction

A receptor includes humans, animals, fish, plants and biota, watercourse or body, groundwater or soils that would be affected (directly or indirectly) by the escape of the inventory. A receptor could also be a downstream process such as a WwTW.

To assess the impact of a hazardous substance release on receptors, it is first necessary to identify any that could be affected. The hazard rating completed for pathways should be used to inform the area of search. Useful information on the presence and nature of environmental receptors in the vicinity of the site may be obtained via site inspection and the study of local maps. Additional information may be held by local authorities, countryside and heritage commissions, and the various regulators. Other potential web-based sources are listed in Table 2.2.

MAGIC <i>Interactive mapping</i>	http://tinyurl.com/nso8tb7	Is a web-based interactive map provided by Defra that brings together information on key environmental schemes and designations in one place, including some of the sources listed above

The presence and nature of the receptor can generally be thought of as a fixed point in any hazard or risk assessment. However, in areas at risk of flooding, there may be circumstances where the location of the receptor may change, ie where the flood waters themselves would be considered a receptor. Although the site operator is able to modify sources and, to some extent perhaps, on-site pathways, altering the location of the receptor is more difficult.

WFD objectives should be noted when assessing the sensitivity of the receptor as it should be taken as its future potential rather than current condition.

As with source and pathway, a receptor is assigned a hazard rating according to its sensitivity to the hazardous substance, ie high, moderate or low.

Environmental sensitivity

Potential receptors should be discussed with the regulator and agreement reached on which of them are sensitive to harm from the hazardous substance(s) stored on the site. As noted in Section 2.4, if there are several different inventories stored at a site then each of these could affect each receptor in a different way.

Other factors

There are other factors that may reduce or increase the severity of the environmental impact. Mitigating factors include:

- biodegradation (eg compounds broken down by microbes)
- evaporation
- photolysis (eg compounds broken down by sunlight)
- hydrolysis (eg compounds broken in water)
- absorption (compounds absorbed by another substance, for example the deployment of chemical spill kit).

Aggravating factors include:

- bioaccumulation (eg in fish)
- biomagnification (eg along a food chain)
- biodegradation (eg discharge of inventory with a high biological oxygen demand).

The rate at which these effects mitigate or aggravate environmental impacts depends on a variety of interacting circumstances, but in some cases it is quantifiable.

Analysis of these mitigating and aggravating factors is a complex task. If these are likely to be significant factors in determining a hazard rating for a receptor, ie high, moderate or low, the advice of a competent person should be sought.

Uncertainties

There are considerable gaps in the knowledge when it comes to quantifying the effects of inventory on receptors. In particular, toxicity effects on man and ecotoxicity effects on ecosystems are only readily available for those substances commonly used in industrial and manufacturing processes.

The hazardous substance may not be a single chemical, but may be, for example, a complex mixture of hydrocarbons as in fuels or oils. In such cases it will be necessary to consider whether to assess all individual chemicals separately, or to treat the mixture as a single substance using available whole product data.

Nature and classification of receiving waters

The EA (2013a) uses aquifer designations that are consistent with the WFD. These designations reflect the importance of aquifers not only in terms of groundwater bodies as a resource (drinking water supply) but also their role in supporting surface water flows and wetland ecosystems. Geological units are broadly divided into principal aquifers, secondary aquifers and non-productive strata. Further information on aquifer designations may be found on the EA's website for England and Wales, and on SEPA's website for sites in Scotland (see *Websites* box).

Wastewater treatment works

On-site effluent treatment plant and off-site WwTW may be considered as receptors. The normal functions of the plant could be impaired for a long period by the entry of materials incompatible with normal treatment processes. For example, all biological treatment plants depend on the activity of bacteria to break down complex organic compounds. The uncontrolled discharge of substances such as pesticides, hypochlorite, metals, organochlorine solvents and acids and alkalis is likely to kill the bacteria

and halt biodegradation processes. Equally, overloading the plant with non-hazardous but high BOD substances can disrupt performance. It could take a treatment plant many weeks to return to its previous level of biological activity. In this period, the plant could not carry out its normal function and sewage and trade effluents would have to be removed off-site for treatment elsewhere.

The effects of pollutants on WwTW need to be considered in the hazard assessment. Tolerable levels and loads of inventory should be established in collaboration with the treatment plant operators particularly in respect of their trade effluent consents. In some situations it is possible that a treatment plant will be the critical receptor.

Dilution and mixing

Receptors may be located many kilometres away from the point at which the inventory is released into the environment. Where the pathway includes surface or groundwaters (receptors in their own right) dilution and dispersion takes place that can mitigate the potential impact. However, in general, regulators would not condone dilution and dispersion in the water environment as a means of mitigation, except as an authorised discharge.

If there is a risk of inventory entering the water environment, regulators would expect to see AMN/BAT applied to reduce that risk. Modelling may, however, be used to demonstrate the effect of residual risk following installation of AMN/BAT, or for assessing impact of a major accident of low frequency. There are a number of dispersion models available ranging from the simple to the extremely complex and the appropriate choice of which will be governed by the potential risk to the receptor. Depending on the complexity of the model to be used, the following information is likely to be required:

- duration and mode of release
- flow of the receiving water and dilution potential. This should also consider periods of low flow where the dilution potential may be limited
- background levels of the inventory
- tidal influences (if any)
- mixing characteristics, stratification, turbulence etc
- density and solubility of the inventory (is it miscible with water, will it float or sink?)
- climatic conditions and the impact of climate change.

Dispersion modelling is a complex process and should be completed by a competent person. The scope of any such model should be agreed in advance with the regulator.

2.4 OVERALL SITE HAZARD RATING

The preceding sections provide an approach to determining a hazard rating for the source, pathway and receptor. The three factors are now combined to obtain an overall site hazard rating designated as **high**, **moderate** or **low**.

There are a number of ways in which the individual factors can be combined, particularly if a different weighting is given to each factor, as may be appropriate in some circumstances. However, assessing the combined effects has to be a judgement based on knowledge, experience and the degree of confidence in the information available. Where there is uncertainty about the correct categorisation of any of the individual source, pathway or receptor hazard ratings, it may be appropriate to move the overall site hazard rating to the next higher rating, ie from medium to high.

It should be stressed that it is likely to be necessary to consider multiple source, pathway and receptor scenarios. For example, there may be one pathway to groundwater and another to surface water, each of which needs to be considered separately. Similarly it may be necessary to consider a number of receptors, since it may not be clear initially which of these is the most environmentally sensitive. The site hazard rating adopted should represent the highest of the individual scenarios considered.

A further issue is a large site where multiple sources of inventory are stored but share secondary containment facilities. As the site hazard rating is used to inform the class of the secondary containment, it is the highest site hazard rating for the combination of source, pathway and receptor estimated for the sources within the particular facility that should be used.

The only exception to this may be where multiple sources are stored in separate secondary containment facilities, ie the site is 'zoned' (see Section 3.7) in which case the site hazard rating should be applied on a zone by zone basis.

If the analysis indicates that the hazard rating of any one element in a combination of source, pathway and receptor is negligible, then the site hazard rating for this particular combination is also considered to be negligible.

Typically, if the three factors are given equal weighting, they may be combined in the way illustrated in Box 2.1 to give an overall site hazard rating.

Box 2.1 Suggested combinations of hazard ratings to give overall site hazard rating

Environmental hazard ratings		
H = High rating		
M = Moderate rating		
L = Low rating		
Source	Pathway	Receptor
(hazard rating)	(transport potential)	(damage potential)
May be H, M or L	May be H, M or L	May be H, M or L
Possible combination of ratings:		Suggested consequent overall site hazard rating:
HHH or HHM or HMM		HIGH
HHL or MMM or HML		MODERATE
MML or HLL or MILL or LLL		LOW

As a general guide it can be anticipated that regulators' initial expectations in terms of the components of the site hazard rating will be as follows:

Source hazard

- Main inventory at COMAH establishments likely to be high.
- EPR establishments likely to be **high/medium**.
- EPR exempt establishments likely to be **medium/low** (though some could be **high**, eg certain large storage facilities otherwise exempt from COMAH/EPR).

Receptor hazard

- Nationally designated sites (SSSIs/SPAs/SACs) and drinking water sources (source protection zones) are likely to be **high**.
- Locally designated sites, surface or groundwater bodies defined as such by the WFD are likely to be **medium**.
- Non-designated sites and other water and groundwaters are likely to be **low**.

When considering the overall site hazard rating regulators would normally refer to the Compliance Classification Scheme (CCS) and the Common Incident Classification Scheme (CICS) (see *Websites* box), which defines a scale of incident impacts and informs their enforcement stance. Therefore, it would be anticipated that overall site hazard rating would be:

- **High** for potential for CICS category 1 (or MATTE) incidents.

- **Medium** for potential for CICS category 2 incidents.
- **Low** for potential for CICS category 3 incidents.

In consultation with the regulators, the assessment may be ended at this stage if it is concluded that decisions regarding containment can be made based on the site hazard rating. It should be noted that the regulators are likely to require containment provisions for sites with a high hazard rating.

Alternatively, the assessment may be developed further to combine the site hazard rating with the likelihood of all events, which could lead to loss of containment and quantifying their impact on the environment.

2.5 SITE RISK RATING

The preceding sections are concerned specifically with hazard assessment. To assess the risk it is necessary to consider the events that may lead to the release of inventory from the primary containment and the likelihood that this would occur, ie:

- 1 Identification of all the events that are capable of causing loss of containment.
- 2 Assessment of the likelihood of occurrence of each event.

The potential failures and the reasons for failure include:

- operational failures, such as failure of plant, or human failure by operators
- shortfalls in design – lack of alarms and fail-safe devices
- structural failure – materials, components, detailing, corrosion or when exposed to heat and flame
- abuse – inappropriate change of use or other misuse
- impact, eg from a vehicle
- vandalism, terrorism, force majeure etc
- flood, fire or explosion
- geological factors -subsidence etc
- ageing or deteriorating assets/sub-components.

Where the need has been identified, a detailed investigation of the reasons for the potential failure of plant and equipment may be carried out with the help of a variety of techniques including hazard and operability (HAZOP) studies, fault tree analysis (FTA) or failure, mode and effect analysis (FMEA). These studies are normally carried out by teams led by engineers specialising in the safety and reliability of processes working with maintenance and operating practitioners.

The effects of changes in the nature, size or frequency of potential releases as a result of actions taken may be modelled using risk assessment techniques. It is also the case that general risk management procedures can assist with avoiding potential releases of inventory and that incident management can include measures other than the provision of containment.

Where company or plant specific failure rate data are not available, reference to the data provided in Appendix 1 of CA (2012) should be made. This provides data on the risk of tank and associated infrastructure failure, tank and bund fires and warehouse fires drawn from a literature review of historic information.

By analysing the events and circumstances that may affect a site it is possible to arrive at an assessment of the probability of a loss of containment and release of inventory expressed a low, medium or high. It is unlikely to be possible to precisely estimate the probability of a failure of the primary containment and/or secondary containment due to the inherent uncertainties involved. It is therefore advised that any such estimates that are made to inform the classification and of the design processes are discussed with the regulator.

However, as a general guide, the following typical probabilities might be considered appropriate for use in establishing the site risk rating.

Table 2.3 Frequency of loss of containment

Risk of loss of containment	Annual probability of loss of containment per site
High	Greater than 1% (1 in 100)
Medium	Between 1% (1 in 100) and 0.001% (1 in 1 million)
Low	Less than 0.001% (1 in 1 million)

Typical examples of incidents that could lead to a loss of containment (listed in order of reducing probability) might include:

- small spills
- pipe failures
- single IBC incident
- localised flooding
- site-wide fires
- whole vessel failures
- major flooding
- vandalism
- subsidence
- terrorism
- plane crash
- earthquake.

It will also be necessary to consider multiple credible potential failure scenarios.

The combination of site hazard rating, with the frequency of loss of containment, provides an assessment of the overall site risk. The ways in which the ratings for hazard and risk can be combined to provide an overall site risk are shown in Box 2.2 where the hazard and the probability are given equal weighting.

Box 2.2 Overall site risk rating as defined by combining ratings of site hazard and probability of containment failure

Site hazard ratings	
May be high (H), moderate (M) or low (L) (see Box 2.1)	
Frequency of loss of containment	
May be high (H), moderate (M) or low (L)	
Possible combination of ratings:	Suggested consequent overall site hazard rating:
HH or HM or MH	HIGH
MM or HL or LH	MODERATE
LL or ML or LM	LOW

Where the risk assessment indicates that an event could result in significant environmental damage at an intolerable frequency, the operator or designer would need to consider one or more of the following risk reduction measures:

- change to less hazardous or reduce inventory
- change or relocate the process or activity to a less environmentally sensitive location
- install new, or improve existing, containment systems (the subject of this guide)
- provide smaller storage units
- modify the on-site pathways to minimise the likelihood of escape of pollutant
- change or relocate the process or activity
- change operational and/or management practices.

As with the classification of hazards, there are many uncertainties and gaps in current information. Combining ratings for hazard and frequency of loss of containment as described previously calls for skill, experience and judgement if sensible and useful conclusions are to be drawn. There are likely to be some distinctly high risk or low risk situations that are relatively easy to define and classify but the majority of

situations will necessarily require some subjective judgements to be made. Key stakeholders including plant operators, regulatory bodies and designers should be consulted throughout the risk assessment and design process.

The hazard and likelihood rating combinations HL and LH in Box 2.5 are perhaps the most difficult to classify in terms of overall site risk, although the recommendation is that they are given a moderate rating. There are likely to be many situations where the hazard rating is high but where the probability of an event causing loss of containment is low. Views on how this situation should be treated may differ and there should be full consultation with the regulator at the start of the process.

Sites scoring a low risk rating are not likely to require further assessment, subject to all site conditions remaining the same. However, when any of the source, pathways or receptors are assessed as a high hazard then a detailed risk assessment should be undertaken by a competent person.

An alternative framework for determining the overall site risk is presented in the CA (2012) based on the EHI. This is combined with likelihood of occurrence (frequency) graphically (see Figure 2.7) and provides three zones, an 'area of concern', 'need to demonstrate risks are ALARP' and 'broadly acceptable'.

Figure 2.7 indicates how the low, medium and high overall site risk relates to the three zones.

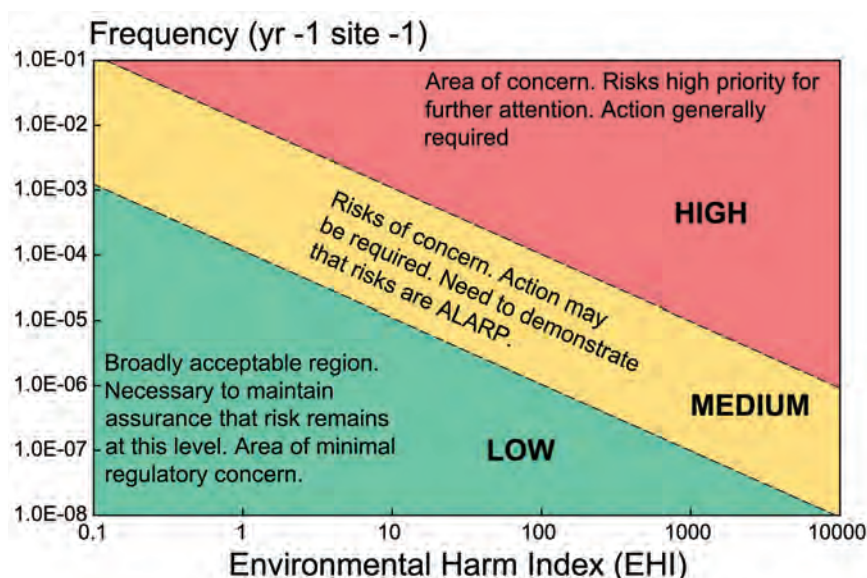

Figure 2.7 Establishment risk threshold frequencies (per receptor) (from DETR, 1998)

2.6 CONTAINMENT CLASSIFICATION SYSTEM

2.6.1 Hazard and risk assessment and design classification

This guidance sets out a classification of containment systems based on three categories (classes 1, 2 and 3) each representing a different level of integrity to match the different requirements of high, moderate and low overall site risks. However, it should be noted that legal requirements for containment systems such as the OSR would have priority above any advice contained in this guidance.

Although there is no direct quantifiable link between the site hazard or site risk and the design of the containment system the following simple relationship is considered appropriate in most circumstances:

- low overall site risk containment type **class 1**, ie base level of integrity
- moderate overall site risk containment type **class 2**, ie intermediate degree of integrity
- high overall site risk containment type **class 3**, ie highest degree of integrity.

The difference in performance between the three classes of containment can be expressed in terms of:

- system safeguards (eg whether or not fail-safe alarms form part of the system)
- system and component redundancies (eg whether there are back-up collection and storage facilities in the event of the failure of containment)
- structural integrity and quality of construction (eg increasing design requirements)
- operation and maintenance (eg enhanced inspection and maintenance regimes).

A suggested approach to the system design for a secondary containment system is outlined by the flowchart in Figure 2.8.

The detailed design guidance presented in Part 3 of this guide is based on these three classifications.

Notes

* The expression 'hazard and/or risk' is abbreviated to 'risk' in the flowchart.

** Beyond these points in the iteration, for 'site' and 'whole site' read 'area' and 'whole area' respectively.

Figure 2.8 Containment system classification

3 Secondary and tertiary containment options

This chapter provides:

- An introduction to containment system selection (Section 3.1)
- Details of containment options (Sections 3.2 to 3.5)
- Recommendations for system selection and site zoning (Section 3.6)
- Advice on considering overall system reliability (Section 3.7)

3.1 INTRODUCTION

System selection is an important first step in the design process and should be informed by the site risk rating, which is the outcome of the risk assessment process described in Chapter 2.

System selection may also be influenced by the required containment volume, which is estimated by following the guidance provided in Chapter 4.

Additional considerations to selecting an appropriate containment occur where the site falls within the scope of the COMAH Regulations, the OSR, the EPR and equivalent regulations, or the reservoir safety legislation included as part of the FWMA. However, in the absence of regime specific requirements, this guidance reflects current good practice for the design and maintenance of containment systems for the prevention of pollution. Following these guidelines will help businesses manage their environmental responsibilities to prevent pollution and comply with the law.

If the system is inappropriate for the site, then no matter how much care is taken over the detailed design and construction of the components, the result is likely to be unsatisfactory either in terms of performance, or cost, or both.

3.2 CONTAINMENT SYSTEM TYPES

Containment systems may be categorised broadly as either local (eg bunds), remote or combined (combined local and remote).

The differences between the three methods of providing containment, the situations in which they may be suitable and the protection that they can afford are described in the following sections. The examples given in this chapter refer to bunds although there are other options for providing containment such as earth embankments and for remote containment, tanks and lagoons.

There is no universally recognised definition of the term ‘bund’, however, in the context of this guidance, a bund is defined as (Mason *et al*, 1997):

“a facility (including walls and a base) built around an area where potentially polluting materials are handled, processed or stored, for the purposes of containing any unintended escape of material from that area until such time as remedial action can be taken. Bunds are usually structurally independent from the primary containment tank”

3.3 LOCAL CONTAINMENT SYSTEMS

Bunds provide a container designed to prevent the spread of any inventory that escapes from the primary containment. They contain the material at source, hence the term local containment.

Storage tanks, IBC/drum stores or other areas used for storing or handling inventory may be banded individually or in groups. However, bands may also be built inside buildings, eg warehouses used for storing chemicals, that may be specially built or modified so that the structure itself provides an effective bund.

Figure 3.1 Typical storage of IBCs in a warehouse (courtesy Feedwater Ltd)

Bunds can also be used in linear form to protect against leaks from pipework. For pipework laid below ground the bund normally takes the form of a covered channel or culvert, although below-ground pipework should be avoided where possible. However, as these linear bunds will usually have only a small capacity and the volume of potential leakage from pipework can be large, it is good practice to arrange them to drain or overflow into larger local or remote secondary and/or tertiary containment areas.

3.4 REMOTE CONTAINMENT SYSTEMS

Remote containment systems retain escaped inventory at a location that is not local to the primary container. These systems would rarely provide any significant containment at the source of failure and so they rely principally on the capacity of the transfer system to convey spillages at a rate no less than the potential flow that would be generated by a sudden (catastrophic) loss of primary containment. Guidance on transfer systems is provided in Chapter 10.

A clear advantage of a remote containment is that a single facility can be designed to serve a number of primary containment areas. However, the design of such a 'shared' facility has to cater for the most hazardous of the substances stored on site as well as considering the potential cocktail of substances that might be retained during a site-wide incident as well as simultaneous or 'domino' events.

It is not always possible to make a clear distinction between a remote secondary containment facility and tertiary containment where the tertiary containment is provided in the form of a permanent facility such as a lagoon. However, following guidance on system capacity provided in Chapter 4:

- **Secondary containment** includes the volume of the inventory stored in the primary containment, plus the allowance made for rainwater, cooling water and firefighting agents (foam) but not necessarily firefighting water.
- **Tertiary containment** would include anything beyond this including an allowance for firefighting water. However, tertiary containment is also a line of defence for failure of secondary containment.

Additional guidance on tertiary containment can be found in EI (2013).

Transfer to tertiary containment may be through a drainage system (above or below ground), or over the surface of appropriately graded areas of hardstanding or formations and, as such, remote systems are best suited to sloping sites where the transfer system can work under gravity.

However, if the transfer system has to rely on pumping, additional measures should be provided for class 2 and 3 sites and these might have a bearing on the design of the secondary containment (see Section 10.3).

The integrity and capacity of the transfer systems clearly influences the level of protection that remote containment systems provide. While a gravity transfer system is preferable as it is 'passive', where this would require below-ground pipework, the integrity of the pipework can be difficult to monitor compared to an above ground pumped system. These are factors that should be considered in the risk assessment when determining an appropriate containment strategy for a site.

Another, less common, method of providing containment is to surround part, or all, of a site with diaphragm or sheet piling cut-off walls, which extend down to an impermeable stratum. The impermeable stratum acts as an impermeable floor and in the event of an incident pollution is restricted to the ground contained by the cut-off walls. A major disadvantage to this approach is that it may result in a large quantity of contaminated soil for which, ultimately, treatment or disposal arrangements would need to be made and paid for. Also, it is not possible to monitor the integrity of the containment. So, cut-off walls should only be used to provide tertiary protection where other types of secondary containment described in this section are already in place. Further guidance on sacrificial areas and temporary containment is given in Chapter 11.

3.5 COMBINED CONTAINMENT SYSTEMS

A combination of both local and remote systems can be provided on a site incorporating a variety of transfer systems as illustrated by the key plan in the overview of this publication.

Combined containment systems have both local and remote elements and are designed to contain some of the escaped inventory close to the source, as in local containment, and to transfer by gravity, or by pumping, to a further secondary containment facility at a remote location.

For combined systems, the distinctions between secondary and tertiary storage can sometimes blur as shown in Box 3.1.

Box 3.1 Combined containment systems

A combined containment system may provide only limited local containment, in which case it becomes, in effect, a remote system as described above. At the other end of the scale, a combined system may include full secondary containment at source, in which case the additional facility to transfer to remote secondary containment can provide an extra degree of environmental protection. Secondary containment in this situation is therefore tertiary containment.

Transfer arrangements

The release of material from the local bund to the remote containment should be controlled manually (for example, by operatives opening a valve when the bund appears to be in danger of overflowing), however, this introduces vulnerability to human failure as it requires competent staff to be available 24/7 to correctly detect, diagnose and act. Alternatively, an overflow weir may be incorporated into the bund design so that no intervention is required to relieve overfilling. Where the capacity of the bund is less than the recommended capacity for a local system, it is essential that the transfer control mechanism operates reliably and preferably incorporates back-up or fail-safe devices. Failure of the control mechanism, or inadequate capacity of the transfer system, could cause a bund with a limited capacity to overflow.

3.6 SYSTEM SELECTION

The assessment of which type of system (or combination of systems) would be most effective and provide best value for money in a particular situation involves consideration of a wide range of factors. These are summarised in Table 3.1.

Table 3.1 System selection

Issue	Factors to consider
Storage of inventory	<ul style="list-style-type: none"> ■ inventory quantity, rainwater, firefighting agents (foam) plus an allowance for firefighting water if required (see Chapter 4) ■ nature of inventory and any 'cocktails' that may result from an incident where remote secondary containment is shared by a number of different inventories (incompatible substances, water-miscible and water-immiscible substances etc) ■ the nature of the primary system, for example whether single tank, tank farm, process plant, warehouse, pipeline, loading point or drum store.
Receptors	<ul style="list-style-type: none"> ■ the proximity and sensitivity of receptors ■ the level of unmitigated risk to the receptors.
Site constraints	<ul style="list-style-type: none"> ■ space available for containment works ■ the potential for using or adapting existing containment facilities, for example interceptors, lagoons and bunds, and on-site or external treatment plant facilities which may have spare storage or treatment capacity ■ the potential for sharing containment facilities across different process areas of a site where a range of different inventories may be present ■ site topography ■ the type of drainage system, including the method of disposal of trade effluents, sewage and stormwater, and how the drains interconnect ■ future development plans for the site, either physical changes in layout, plant or buildings, or in the processes to be carried out.
Financial	<ul style="list-style-type: none"> ■ cost constraints.

Case study 3.1
Example of process resulting in selection of remote secondary containment, West Yorkshire, UK

PPG Architectural Coatings UK Ltd are a manufacturer of paints with a high inventory of chemicals and finished goods stored on their site at Batley, West Yorkshire. With a change to the CHIP regulations, the site became a top tier CoMAH site after many years of being considered a 'normal' manufacturing establishment and therefore required preparation of a CoMAH safety report to evaluate the offsite potential for pollution in the event of a fire and/or spill.

The potential environmental impact from the fire water runoff to an adjacent stream was assessed as a significant MATTE, so the site had to consider how to mitigate impact.

An initial scheme considered effectively containing the entire sloping site within a bund wall. However, this was discounted on cost grounds and a more economically viable option was developed focusing on the control of runoff via the drainage system to the stream.

Surface water (and potentially firewater) runoff from the former Victorian mill complex drains directly to the stream. However, details of the drainage and potential overland flow paths were unknown and had to be established by a detailed site topographic survey. The initial phase of works installed automatic drain closing penstocks on all the outfalls to the stream. These are triggered by the sound of the site fire alarm and by push-button to allow manual closure. They are powered by the mains with a solar battery back-up.

The topographic survey and assessment of firefighting water volumes confirmed that additional containment volume would be required within the site during an incident. This was achieved by lowering an existing car park adjacent to the stream by some two metres to create a lagoon that was designed to fill via backing up of the site drainage once the outfall had closed.

The walls and base of the lagoon, still retained as a car park, were designed following the original CIRIA R164 guidance to be liquid retaining and hold contaminated firefighting water and surface water runoff until it could be remove for offsite disposal. Part of the site's emergency response plan includes a 24/7/365 contract to provide tankers to remove firefighting water from the lagoon should its capacity be fully used during an incident.

3.7 SITE ZONING

As stated in Chapter 2, where a range of inventories are to be stored on a site, the site hazard rating for each inventory should be considered individually. Where such analysis results in differing ratings for each, or groups of, inventory, it may be appropriate to consider 'zoning' the site as differing classes of containment may be required.

Such an approach is likely to be governed by site (space) and economic constraints.

3.8 SYSTEM RELIABILITY

It is not intended that the reliability of the overall containment strategy discussed in this section should influence the class of the containment system. However, overall system reliability is a matter that should be considered as part of the design of the containment facilities.

If properly designed and constructed, a local, remote or combined system is capable of providing effective secondary and/or tertiary containment. However, the degree of environmental protection provided by each system depends upon its reliability to respond to an incident in the way intended. This level of reliability of a system depends, on a number of factors including:

- complexity – the more there is to go wrong, the greater the risk
- whether intervention (manual or automatic) is necessary for the system to work
- ease of maintenance
- ease with which containment condition or integrity may be monitored and any defects or failures dealt with
- site management (arrangements for ongoing assurance, staffing competence, safety culture etc).

It is important to stress that this reliability rating is a relative measure of the likelihood that the containment system will perform as it was designed to, throughout the whole of its life, when called into action.

It is evident that system reliability is dependent not only on the intrinsic characteristics of the system but also on the circumstances in which it is used. It should be stressed that Table 3.2 necessarily simplifies what is a complex design process and there may be site factors or particular characteristics of the operation that would lead to different conclusions regarding relative reliability.

The design of secondary containment systems should therefore balance the advantages and disadvantages of particular features and characteristics of a system. This will require a full and thorough understanding of the site and operations likely to be carried out on it

Table 3.2 Reliability of containment systems

Type of system	Summary of system characteristics				Suggested relative reliability
	Complexity	Intervention	Maintenance	Monitoring	
<i>Local</i>	<ul style="list-style-type: none"> simplest system fully passive does not rely on operation of valves, transfer systems etc. 	<ul style="list-style-type: none"> no intervention required in response to an incident intervention necessary only to ensure bund kept free from accumulated rainwater and to empty following incident. 	<ul style="list-style-type: none"> relatively easy all parts accessible no valves, pumps, transfer systems etc to maintain. 	<ul style="list-style-type: none"> relatively easy major defects obvious leakage from primary containment into bund easy to detect. 	High
<i>Remote</i>	<ul style="list-style-type: none"> system has more components, ie local catchment area, transfer system and remote containment additional components with pumped transfer system. 	<ul style="list-style-type: none"> none required with gravity transfer system non-automatic pumped transfer systems require intervention at start of incident intervention necessary only to ensure bund kept free from accumulated rainwater and to empty following incident, or during incident to reduce level if capacity to be exceeded (eg by transferring our firewater). 	<ul style="list-style-type: none"> relatively difficult systems more 'extensive', likely to include inaccessible transfer system on pumped system, valves, pumps etc require maintenance. 	<ul style="list-style-type: none"> less easy since three potential leakage areas to monitor: catchment area, transfer system and remote containment transfer system particularly difficult. 	Low: except where transfer system gravity operated, or pumped above ground system, in which case medium
<i>Combined</i>	<ul style="list-style-type: none"> same as remote system. 	<ul style="list-style-type: none"> same as remote system but need also to ensure any banded area free from accumulated rainwater. 	<ul style="list-style-type: none"> same as remote. 	<ul style="list-style-type: none"> same as remote. 	Low or medium, with same caveats as remote systems

4 Containment system capacity

This chapter provides:

- An introduction to determining containment capacity (Section 4.1)
- A review of current industry practice (Section 4.2)
- A method for assessing containment capacity (Section 4.3)
- A review of research into the freeboard in bunds to allow for dynamic effects (Section 4.4)
- A summary of retention capacity recommendations (Section 4.5)

4.1 INTRODUCTION

Determining the correct capacity for a containment system is one of the most important parts of the design process. If the capacity of a system is too large, resources that might have been invested in other ways may have been wasted, whereas if a system is too small and is incapable of providing effective protection in the event of an incident, the cost of installation may equally have been wasted.

The assessment of capacity raises a number of issues, such as:

- how much firefighting water would be likely to be used in the event of a major fire
- the impact of any 'burn strategies' that may be in place
- whether firefighting water can be recirculated.

It is important to consult widely with the regulatory authorities and in particular the Fire and Rescue Service, to ensure that the containment system is designed based on credible scenarios.

The method in this guidance is applicable to all types and sizes of containment system from the storage of IBCs in a warehouse to large tank farm sites. However, it is important to note that for the storage of certain materials, there are specific regulations that apply and these must be adhered to. These are referred to in Section 1.7.

As a general point, where containment capacity could potentially be exceeded, operators should have a clear understanding of what would happen to the inventory, ie where it will go, and have contingencies in place to minimise the risks. This will have been established by the assessment of the pathways completed as part of the site risk rating described in Chapter 2.

4.2 CURRENT INDUSTRY PRACTICE

Table 4.1 lists the current approaches, regulations and guidelines for estimating secondary containment volumes and are reviewed in the sections that follow. They are also summarised in Table 4.2.

4.2.1 The '110 per cent' and '25 per cent' rules

The basis for much industry practice in the past has been the 110 per cent and 25 per cent rule. Although not following the risk-based approach recommended in this guide, this practice has been in use for many years.

Where a single bulk liquid tank is banded, the recommended minimum bund capacity is 110 per cent of the capacity of the tank.

Where two or more tanks are installed within the same bund, the recommended capacity of the bund is the greater of:

- 1 110 per cent of the capacity of the largest tank within the bund.
- 2 25 per cent of the total capacity of all of the tanks within the bund, except where tanks are hydraulically linked in which case they should be treated as if they were a single tank

The existing 110 per cent recommendation for single tanks and hydraulically linked multi-tank installations implies a margin of 10 per cent, which is discussed as follows. The recommendation for other multi-tank installations, the 25 per cent rule, is based on the assumption that it is unlikely that more than one tank will fail at any one time. This may be reasonable in circumstances where the contents escape from a primary tank as a result of, for example, tank corrosion or operator error, which is likely to affect only one tank at any one time. However, there may be credible scenarios such as fire or explosion or acts of vandalism that could affect all of the tanks within a banded area.

The 10 per cent margin has been interpreted by industry and regulators to cover a range of factors including:

- prevention of overtopping of the bund in the event of a surge of liquid caused by the catastrophic failure of the primary tank
- prevention of overtopping, which may be caused by wind-induced wave action during the time that the bund is full following failure of a primary tank

- an allowance for firefighting agents, including a foam blanket on the surface or firefighting water
- protection against overfilling
- an allowance for rain that might collect in the bund and reduce its net capacity, or for rain that might fall in coincident with, or immediately following, the failure of the primary containment.

The method set out in this guidance (Section 4.3) provides a quantitative assessment of these assumptions, rather than relying on an arbitrary allowance of 10 per cent of the primary capacity or 25 per cent of the primary capacity for multiple tanks within a common secondary containment. See Sections 4.3 and 4.4 which cover credible scenarios.

It should be noted that the 110 per cent and 25 per cent rules apply as the recommended minimum volume for IBC/drum stores as set out in PPG26, although recent guidance is moving towards the requirement to size IBC/drum stores (and associated combined containment system) based on containment of complete inventory plus rainfall and firefighting water, eg in accordance with HSE (2009b) and EI (2013). The guidance contained in HSE (2009b) and PPG26 is discussed in Sections 4.2.3 and 4.2.4 respectively.

4.2.2 The Control of Pollution (Oil Storage) (England) Regulations (OSR) 2001

The OSR apply to the storage of oil in containers in quantities of greater than 200 litres except where it is stored within a building, is at a private dwelling (where the limit is increased to 3500 litres) or is on a premise use for refining oil or for the onward distribution of oil to other places.

Section 3(2) of the OSR requires that secondary containment is provided with a minimum of 110 per cent of the container's capacity for a single container or where there is more than one container, not less than 110 per cent of the largest container or 25 per cent of their aggregate capacity, whichever is the greater.

Further advice on the interpretation of the OSR is provided by EA *et al* (2011a).

4.2.3 Health and Safety Executive (HSE)

HSG51 The storage of flammable liquids in containers

HSG51 applies to containers with a volume of less than 1000 litres and recommends that secondary containment equivalent to 110 per cent of the largest containers is provided for both indoor and outdoor storage of flammable materials.

HSG71 Chemical warehousing, the storage of packaged dangerous substances

HSG71 recommends that spillage control in outdoor areas should comprise a containment area with a volume that is at least 110 per cent of the capacity of the largest single container except in the case of oil storage where 25 per cent of the total volume should be provided. The guidance also makes reference to CIRIA R164 and PPG18 for further advice on containment capacities.

HSG176 The storage of flammable liquids in tanks

HSG176 applies to above and below-ground bulk fixed bulk storage tanks and to portable, or skid mounted, vessels with a capacity greater than 1000 litres. Smaller containers are covered by HSG51.

The guidance recommends that the secondary containment should have sufficient capacity to contain the largest predictable spillage and that a bund capacity of 110 per cent of the capacity of the largest storage vessel located within the bund will normally be sufficient. It also advises that smaller capacity bunds may be acceptable where liquid can be directed to a remote or tertiary containment area.

It is stated that individual bunding is to be preferred to common bunding, particularly for large tanks,

but where several tanks are contained in one bunded area, intermediate lower bund walls should be provided to divide tanks into groups to contain small spillages and to minimise the surface area of any spillage. The total capacity of tanks in a bund should not exceed 60 000 m³ (120 000 m³ for floating-roof tanks).

Where there is no risk of pollution or of hazard to the public the guidance advised that the containment volume can be reduced to no less than 75 per cent of the largest vessel located within the bund.

COMAH Competent Authority policy on containment of bulk hazardous liquids at COMAH establishments. Control of Major Accident Hazard (COMAH) Regulations 1999

If the quantity of dangerous substances on site exceeds the qualifying inventory for COMAH, operators of such sites are required to take all measures necessary to prevent major accidents based on the principle of reducing risk to ALARP.

CA (2008a) requires that secondary containment shall:

“...have sufficient capacity to allow for tank failure and firewater management. This will normally be a minimum capacity of either 110 per cent of the capacity of the largest tank, or 25 per cent of the total capacity of all the tanks within the bund, whichever is the greater”

and at Part C 11 states that:

“The installation shall have sufficient capacity to hold safely the anticipated or foreseeable volume of hazardous liquids, including firewater, compatible with the intended operational characteristics.”

Safety and environmental standards for fuel storage sites, Process Safety Leadership Group (PSLG), final report

The final report was published to translate the lessons learnt following the catastrophic Buncefield incident into effective and practical guidance for the industry. Part 4 of the report provides guidance on engineering against the loss of containment principally from large gasoline tanks and states that:

“The bund should be sized for 110% of the ‘tank rated capacity’ (TRC) as a minimum. This assumes that the minimum standards for overfill protection systems of control are in place relating to:

- *tank levels and capacities are determined in accordance with Appendix 3 Guidance on defining tank capacity (to the PSLG Final report);*
- *position and type of level gauges and high level detectors;*
- *how are these monitored and the required response;*
- *response times to shutdown inflow*

Unless multiple tanks sharing the same bund are hydraulically linked, simultaneous overfill of independent tanks can be discounted as a realistic hazard. Therefore, the 25% criteria would not apply to the Overfill level. For the bund capacity calculation based on 25% of the total capacity of all the tanks, the normal fill levels of all the tanks within the bund should be used.

The 25% criterion applies to the risk of loss of containment of more than one tank and provision for firewater management. This provides a buffer to deal with the incident and informs risk assessment as to the degree of tertiary containment that may be required to deal with subsequent failure of secondary containment in a severe and prolonged event. The actual sizing for multi-tank bunds will be determined by the hazard and the risk – including the modifying factors stated above.”

4.2.4 Pollution prevention guidelines (PPG)

PPG18 Managing fire water and major spillages

PPG18 (EA, NIEA, SEPA, 2000) provides advice on managing firewater and major spillages. For advice on local secondary containment capacity, PPG2 (EA, NIEA, SEPA, 2011a) is referred to, ie the '110 per cent' and '25 per cent' rules. However, for remote containment the advice mirrors that in this guidance with no distinction made between secondary and tertiary containment.

PPG26 Storage and handling of drums and intermediate bulk containers

PPG26 (EA, NIEA, SEPA, 2004) applies to IBCs of not more than 1000 litres capacity that are not directly connected to a part of a process or other point of use, irrespective of the number of containers stored.

The guidance states that the capacity of secondary containment facilities should take account of the maximum volume of product that could be stored at any one time. If a fixed firefighting system is in place, additional provision will be required for the quantity of firefighting media (eg foam) likely to be used.

For multiple container storage, containment facilities should have sufficient capacity to contain at least 25 per cent of the total volume of the containers being stored, or 110 per cent of the largest container, whichever is the greater.

With large external stores, 25 per cent containment capacity may result in low containment walls, which are quickly overwhelmed by rainfall or firefighting agents. An additional 100 mm height on the walls, known as freeboard, should be provided.

Where containers are stored inside a building, containment facilities should be proportionate to the risk, however, the risk may be substantial. For example, in the case of agricultural stores (see Section 4.2.7) the capacity should be between 110 per cent and 185 per cent of the maximum storage capacity.

4.2.5 Environmental Permitting Regulations (England and Wales) (EPR) 2010

The EPR recognises the potential harm that can be caused by accidental releases from tanks, sumps and containers and a condition of the permit will be the provision of secondary containment or other appropriate measures to prevent or minimise leakage from the primary container.

No specific recommendation are made on containment capacities, however, where there is potential for significant pollution to occur an emissions management plan is required informed by an environmental risk assessment. The outcome of the risk assessment determines the containment or other measures that may be required.

4.2.6 Energy Institute (EI)

EI (2013) and EI (2012b) refer to the CA containment policy for COMAH sites for advice on the provision of secondary containment (CA, 2008b).

4.2.7 BASIS recommendations

Defra (1998) recommends that stores should be capable of containing 110 per cent of the total amount of pesticides to be stored at any one time. However, this should be increased to 185 per cent in "pollution risk or environmentally sensitive areas".

4.2.8 Summary

Table 4.2 Summary of secondary containment requirements in regulations, policies, schemes and publications

Regulations/guidance	Containment requirements	Scope	Typical inventory
OSR 2001 PPG2	110% of the capacity for a single container or, where there is more than one container, not less than 110% of the largest container or 25% of their aggregate capacity, whichever is the greater.	Greater than 200 litres or 3500 litres when stored on residential premises or within a building.	Oil
COMAH	Take all measures necessary to prevent major accidents based on the principle of reducing risk to ALARP.	Qualifying inventory for COMAH.	Dangerous substances
CA containment policy for fuels	Sufficient capacity to allow for tank failure and firewater management. This will normally be a minimum capacity of either 110% of the capacity of the largest tank, or 25% of the total capacity of all the tanks within the bund, whichever is the greater.		
HSE (2009a)	110% of the 'tank rated capacity' (TRC) as a minimum provide that minimum standards for overfill protection systems of control are in place. For the bund capacity calculation based on 25% of the total capacity of all the tanks, the normal fill levels of all the tanks within the bund should be used.		
HSE (1998a)	110% of the largest containers are provided for both indoor and outdoor storage.	Less than 1000 litres.	Flammable liquids in containers
HSE (1998b)	Should contain the largest predictable spillage and that 110% of the capacity of the largest storage vessel located within the bund will normally be sufficient. Advises that smaller capacity bunds may be acceptable where liquid can be directed to a remote or tertiary containment area.	Greater than 1000 litres.	Flammable liquids in tanks
HSE (2009b) PPG26	In outdoor areas at least 110% of the capacity of the largest single. For multiple container storage at least 25% of the total volume of the containers being stored, or 110% of the largest container, whichever is the greater. Allowance for firefighting waters should be made. Containment should be based on risk assessment.		Packaged dangerous substances
EI (2012b)	Refers to CA containment policy for advice on appropriate secondary containment volumes.		Petroleum
BASIS Registration Scheme	110% of the total amount of pesticides to be stored at any one time. However, increased to 185% in "pollution risk or environmentally sensitive areas".		Pesticides for use in agriculture, horticulture and forestry

4.3 METHOD FOR ASSESSING CONTAINMENT CAPACITY

4.3.1 Introduction

This section sets out a method for assessing the required site-wide capacity for containment. This refers to and draws on experience in using a range of the current approaches discussed in Section 4.2.

The method is based on the principle that the containment should be capable of retaining:

- the total volume of inventory that could be released during a credible incident (see Section 4.3.2)
- the maximum rainfall that would be likely to accumulate within the containment before, during and/or after an incident (see Section 4.3.3)
- firefighting agents (water and/or foam), including cooling water (see Sections 4.3.4).

A summary of recommendations from these approaches is provided in Section 4.5 and Table 4.6.

4.3.2 Volume of inventory

The volume of inventory should be taken as the capacity of the primary containment.

For above ground storage tanks, the brimful capacity of the primary containment should normally be adopted as advised in the environmental permit. However, where the tank is fitted with a physical overflow, the capacity at which the tanks would overflow may be taken.

In some cases, and subject to a risk assessment, it may be appropriate to use the nominal capacity, or TRC. This should be discussed and agreed with regulators at an early stage in the design process and would normally only be allowable if a high integrity overfill protection system is in place.

The relationship between capacities is shown in Figure 4.1.

In determining containment requirements, the volume of substance should be based on the loss from a credible scenario and this need not necessarily involve the entire site inventory. This should also be discussed and agreed with regulators at an early stage in the design process.

Figure 4.1 Definition of tank capacities

4.3.3 Rainfall

The following recommendation is based on the assumption that secondary containment is regularly inspected and that any rainwater that has collected is removed regularly. If this is not the case, capacity should be increased to allow for the accumulation of rainwater between inspections and/or the time between its periodic removal.

If the containment is covered, or located within a building, then it is less important to account for accumulated rainfall when determining the containment capacity although collapse of the roof during the incident is a possibility.

The allowance for accumulated rainfall should be based on an event (storm) with an annual exceedance probability (AEP) of 10 per cent (1 in 10). This is commonly referred to as the 1 in 10 year return period event.

The containment capacity should allow for rain falling over the containment area immediately preceding an incident (ie before it could be removed as part of routine operations) and immediately after an incident (ie before a substance, which had escaped from the primary, could be removed from the bund).

The containment volume should include an allowance for the total volume of accumulated rainfall in response to a 10 per cent AEP event for:

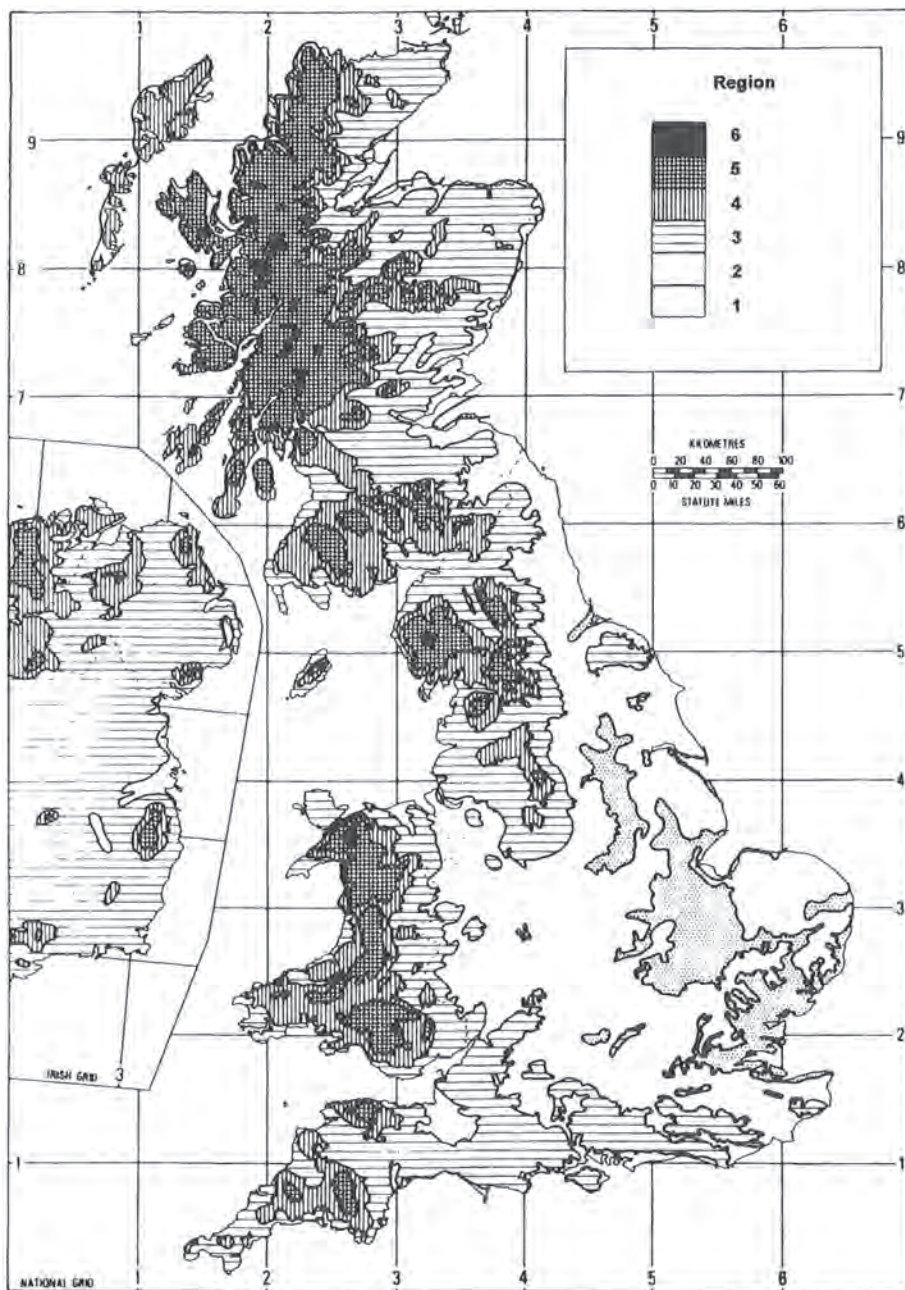

- a 24-hour period preceding an incident
- the duration of the incident (advice on the duration should be sought from the Fire and Rescue Service)
- an eight day period following an incident or other time period as dictated by site specific assessment.

The preferred method of estimating the rainfall depths is to use the depth-duration-frequency rainfall model contained on the *Flood Estimation Handbook* (FEH) CD-ROM (CEH, 2000), which provides location specific rainfall totals for given durations and return periods.

However, as a first estimate, it may be appropriate to refer to Figure 4.2, which provides average annual rainfall depths and those for the 24-hour and eight day 10 per cent AEP events.

Care should be taken to include any additional areas that might drain into the containment system (local, remote or combined) when making an allowance for rainfall depth in the capacity assessment.

Where rainfall, or the management of rainfall, is likely to present a significant problem, providing a roof over the containment should be considered.

Region	Standard annual average rainfall (mm)	Rainfall depth (mm) 10-year return period	
		24-hr duration	8-day duration
1	<600	29	54
2	600–800	32	65
3	800–1200	41	95
4	1200–1600	52	120
5	1600–3200	88	231
6	3200	106	288

Notes

It should be stressed that Figure 4.2 should only be used to derive a first estimate for considering containment volumes. This is for two reasons:

- 1 The figure is based on *Flood studies report* (Institute of Hydrology, 1975) data produced up to 1986.
- 2 Climate change effects since the publication of HR Wallingford (1986) will have resulted in different annual rainfall figures. Detailed design should therefore be based on the output of the FEH rainfall.

Figure 4.2 Average rainfall depths (from HR Wallingford, 1986)

4.3.4 Firefighting water and firefighting agents

This section provides:

- An introduction to firefighting water and firefighting agents (Section 4.3.4.1)
- Advice on the allowance to be made for firefighting water in the design of remote and combined systems (Section 4.3.4.2)
- Advice on delivery rates (Section 4.3.4.3)
- A review of ISO/TR 26368:2012 (Section 4.3.4.4)
- Advice on fixed firefighting systems (sprinklers) (Section 4.3.4.5)
- Reviews guidance by Local Government Association and Water UK (2007) (Section 4.3.4.6)
- Methodology for forecasting the volume of firefighting water (Section 4.3.4.7)

4.3.4.1 Introduction

It is difficult to provide general recommendations for capacity allowance for firefighting water as much depends on the nature of the site and the manner of response to an incident. However, since many incidents are likely to involve fire, and almost all 'worst case' scenarios involve fire, making adequate provision for retention or recycling of firefighting and cooling water is of critical importance.

Firefighting agents, including water-based foams, are accounted for in the estimation of containment capacity by making an adequate allowance in the design of the height of the wall (freeboard). The amount of freeboard required for firefighting foam should be agreed with the Fire and Rescue Service or occupational fire brigades but the amount should be no less than 100 mm.

In making recommendations, a distinction has to be made between local (bund) and remote or combined containment in terms of what is practicable.

It would normally be impracticable to design the local containment with sufficient capacity to contain the quantities of firefighting and cooling water that would be used in a major fire.

In practice, in the event of a major fire, cooling water would be sprayed on to any threatened primary container, either through hoses, monitors, or a fixed sprinkler or deluge system, or both. As a consequence, the bund could be partly or totally filled with cooling water leaving insufficient or no residual capacity to cope with any release of substance if the primary containment subsequently failed. In this situation the Fire and Rescue Service should be consulted and one of the following options agreed:

- procedures for recycling cooling water so that there would be no build-up in the bund. This would require the incorporation in the design of suitable facilities such as the provision of suitable pick-up sumps/transfer systems. (It should be noted that some stored inventories, eg fatty acid methyl esters (FAME) and ethanol, dissolve and emulsify in water and may not be suitable for recirculation as firewater).
- the maximum amount of cooling water that would be likely to be used in the worst case scenario, and increasing the capacity of the bund accordingly. Where cooling water is supplied through fixed installations, the maximum possible application will equal the capacity of the supply reservoir (although it may be replenished during an incident). Such installations are normally designed for a water delivery rate in the range of 2 to 20 l min⁻¹m². Where cooling water is applied by hose, perhaps to supplement the fixed installation, assessment of the volume should necessarily rely on assumptions about application rate and duration. As discussed above, in many situations it may be impracticable to provide the additional capacity.

In many cases this latter option would require the local containment to be several times larger than that required simply by the capacity of the primary containment. On most sites this could translate into very much higher bund walls that could then cause construction, operational and safety problems, and hinder the ability to fight fires.

In many instances, where fire is a credible scenario, local containment of firewater is unlikely to be a feasible option and therefore either tertiary containment, or for larger sites, remote secondary containment will be necessary. For local containment, other than the freeboard to retain a blanket of foam, no separate allowance above the height of the bund wall to contain the volume of substance (see Section 3.3.1) and the accumulated rainwater (see Section 3.3.2) will be required.

4.3.4.2 Allowance for firefighting water in the design of remote and combined systems

Remote and combined systems should have sufficient capacity to manage such firefighting and cooling water as could reasonably be expected to be used in a major fire. It is essential to consult fully with the Fire and Rescue Service to arrive at a reasonable volume estimate, taking into account the following:

- 1 The size and layout of the plant.
- 2 The nature of the materials present and the processes carried out.
- 3 The fire detection and response systems (eg fixed sprinkler installations, on-site firefighting capability) on (or proposed for) the site.
- 4 The Fire and Rescue Service's contingency strategy for dealing with an incident.
- 5 The Fire and Rescue Service's own delivery capability including the number and type of appliances that could respond to an incident.

It should be stressed that a credible scenario should be considered where perhaps the fixed sprinklers fail and the incident is dealt with by mobile deployment. It will therefore be important to discuss with the Fire and Rescue Service what their actual response might be to an incident over and above their planned first response. Regulators are increasingly asking COMAH establishments to produce firefighting plans as part of their emergency response measures. The failure to manage the firefighting water was one of the causes of the environmental harm that resulted from the Buncefield incident.

Based on these factors, and in consultation with the regulators and the plant operators, an appropriate capacity of containment can be determined.

On high or medium hazard rating sites (see Chapter 2) sufficient capacity should be provided to contain and/or manage all of the firefighting and cooling water that could reasonably result from a credible worst case scenario fire.

Where this would not be possible because of physical constraints, or where it would be difficult operationally, it will be necessary to review with the Fire and Rescue Service ways of reducing the anticipated quantities of firefighting and cooling water to a level that could be contained. This may involve, for example, one or a combination of the following measures:

- reduce the volume of the primary containment
- install or provided additional fixed fire sprinklers, monitors and detection systems
- compartmentalising the plant or site to limit the propagation of a fire
- recycling the firewater where this would not be hazardous (ie FAME, ethanol etc)
- using additional temporary pollution prevention measures deployed as part of an incident response plan (IRP) agreed in advance with the regulators. Advice on preparing an IRP and appropriate temporary pollution prevention measures are given in PPG21 (EA, NIEA, SEPA, 2009) and PPG18 (EA, NIEA, SEPA, 2000) respectively
- gaining the agreement of the Fire and Rescue Service, the regulators and the operators to a 'controlled burn' response strategy. Controlled burns are used to prevent or reduce water and air pollution from firefighting activities at industrial and commercial sites. However, these are only appropriate in very specific cases. Advice on controlled burn strategies is provided in PPG28 (EA, NIEA, SEPA, 2007)
- providing a means of removing contaminated firefighting water during an incident such as discharge to the foul sewer (with appropriate consent) or transporting to a suitable reception facility by road tanker.

For sites with a low hazard or risk rating it will be harder to justify the costs of full containment for firefighting and cooling water and in consultation with the Fire and Rescue Service, the regulators and the site operators, a balance should be struck between protection and cost. However, there are some facilities, for example those that fall within the scope of the OSR, for which a prescribed minimum containment volume is mandatory.

The volume of firefighting and cooling water released at a site during an incident may be limited by one or all of:

- the capacity of the fixed water delivery installations on the site (eg sprinklers, deluge systems, ring mains supplied by on-site storage tanks)
- the delivery capability of the fire brigade using tendered or pumped-in water
- the maximum quantity that can be delivered by fixed installations (ie the capacity of the delivery storage tanks or reservoirs, with due allowance for replenishment rate through, for example, water company mains).

By contrast, the delivery capability through fire brigade hoses if connected to the water company mains, or extracting from a watercourse, may be effectively unlimited so that the quantity of firefighting and cooling water delivered would depend solely on the demands of the incident.

4.3.4.3 Delivery rates

Table 4.3 provides an indication of water delivery rates from fire hydrants and fire tenders. To estimate the quantity of firefighting and/or cooling water that might be used during an incident, an inventory of fire hydrants on, or in vicinity of the site, should be completed that includes the potential delivery rates and supply capacity (ie it is connected to a public mains supply (or supplies), or fed from a storage tank with a fixed capacity).

There are a number of high hazard installations located on estuaries and in Port Authority areas. The Port Authorities have a responsibility to have equipment available for timely use in major emergencies and may include one or more fire tugs. Each tug is likely to have a water pumping capacity of the order of 2400 m³h⁻¹ (40 000 l min⁻¹)

Discussions with the Fire and Rescue Service will be required to determine the number and type of appliances that would be mobilised to site in response to an incident. They should also establish what their actual response might be to an incident over and above their planned first response.

Table 4.3 Typical water delivery rates for hydrants, hoses and fire tenders

Delivery appliance	Flow rate (litres/min)	Delivery capacity (litres)	Head (m)
Fire hydrant	>550 (delivery rate at hydrant)	Dependent on supply storage	>3
Hose (25 mm)	24	Dependent on supply storage	>4
Fire tender (average) 24 mm nozzle	Dependent on number of hoses	1200 to 2000	Up to 50
Fire tender (large) 24 mm nozzle	Dependent on number of hoses	Up to 4500	Up to 50

Further useful advice on application rates for firefighting media is provided at Annex D of EI (2012b).

4.3.4.4 ISO/TR 26368:2012 Environmental damage limitation from fire-fighting water runoff

Current guidance on the approach to calculating firefighting and cooling water volumes is given in ISO ISO/TR 26368:2012.

ISO/TR 26368:2012 provides advice on risk reduction strategies that are consistent with this guidance and methods to assess the volume of contaminated firewater that may be generated in response to an incident. The recommendations are only summarised here and reference should be made to the report for detailed guidance on the methods presented.

Volumes are determined for the following as a basis for calculating the maximum required retention volume for firefighting water:

- 1 The total volume of water likely to be used to fight the fire.
- 2 The containment volume provided for each separate contained area of the site (there may only be one).
- 3 The estimated total volume of contaminated firefighting water based on the largest volumes estimated at point 2.
- 4 The expected volume of rainfall.
- 5 The total required retention volume for contaminated fire water (points 3 and 4).

The largest volume calculated at point 2 is then selected as the initial estimate of the volume of contaminated fire water and an estimate is then compared with the fire water likely to be used for the site (point 1). The larger of the two volumes is selected as the required retention volume for contaminated fire water.

This pragmatic methodology requires some clarification:

- the potentially 'partial site' volume estimated at point 2 assumes that the incident can be contained within that part of the site. The risk of a localised incident spreading to other parts of a larger site should be considered as part of the risk assessment and discussed with the Fire and Rescue Service and the regulator
- no explicit mention is made in point 2 allowing for the complete failure of the primary containment during the incident. Estimating the local secondary containment volume available for firefighting water should assume a credible scenario that might include the complete failure of the primary containment.

ISO/TR 26368:2012 provides a number of suggested methods for determining the total volume water used to fight a fire:

- defining retention volumes by 'magic numbers' ('Sandoz' and 'Ciba' methods)
- estimating firefighting volumes by model curves
- a risk-based approach
- the 'VCI' methods
- ICI's guidelines for fires involving whole chemical plants.

These are discussed in Box 4.1.

Defining retention volumes by 'magic numbers' ('Sandoz' and 'Ciba' methods)

This deterministic approach is based on feedback from specific incidents and based on tabulated values. In general, the retention volume required ranges from between 3 m³ to 5 m³ per ton of material stored depending on the:

- stored quantity of flammable materials, to define size of compartment
- hazard categories of stored products
- expected fire duration.

This method has the advantage that it is simple to apply and requires little input data. However, the magic numbers are based on only a few case studies and are therefore difficult to extend to every potential fire scenario.

Estimating firefighting volumes by model curves

Water flow rates required by fire and rescue services to extinguish fires have been statistically analysed against the fire area for both small and large fires. It should be noted that there is a significant variability in the results of the analysis. However, relationships have been developed that, when combined with an estimate of fire duration, can provide an indication of the volume of water required to extinguish fires.

If adopting this method, the Fire and Rescue Service should be consulted to agree credible potential fire duration (see Section 4.3.4.2).

A risk-based approach

Reference is made in ISO/TR 26368:2012 to a risk-based approach (the 'Australian Method') for determining the required retention capacity for firefighting water that is similar in scope to this guidance. However, this approach should not be adopted in preference to that set out in this guidance.

The 'VCI' methods

The VCI guidelines presents a method for calculating the quantities of water required for fixed sprinkler systems for chemical warehouses and the containment of runoff water in the event of a fire. However, the calculation of delivery rates and volumes from sprinklers should be based on the method described in the following sub-section.

To ensure that the analysis reflects actual installed systems, the estimation of potentially contaminated water generated by a sprinkler system should be based on BS EN 12845:2009 (although for older systems it might be appropriate to refer to standards that prevailed at the time of installation such as the now superseded BS 5306-2:1990).

Analysis based on BS EN 12845:2003 is discussed in Section 4.3.4.5.

ICI's guidelines for fires involving whole chemical plants

ICI no longer exist as a corporate entity. However, they produced guidance (ICI, 1986) for internal use, on the demand flow rate and duration for fires at chemical plants, which has been widely used. The forecast of the total amount of firefighting water that might be used in the event of a fire affecting the whole of a chemical plant (as distinct from just a discrete area or fire compartment, assumed in the preceding approaches) is shown in Table 4.4.

Table 4.4 Forecast of firefighting water needed to tackle major chemical plant fires (courtesy ICI)

Plant hazard rating ¹	Firefighting water demand
High severity	Total demand 1620–3240 m ³ /hr for four hours
Medium severity	Total demand 1080–1620 m ³ /hr for four hours
Low severity	Total demand 540–1080 m ³ /hr for four hours

Notes¹

High severity includes plants with:

- over 500 tonnes of flammable liquid above its flashpoint
- over 50 tones LPG above its boiling point and over 50 bars
- over 100 tonnes combustible solid with ready flame propagation
- other factors what increase severity

Medium severity covers plants that fall between high and low severity ratings.

Low severity includes plants with:

- less than 5 tonnes flammable liquids above or below flashpoint
- less than 100 kg flammable gas under 1 bar or a flash liquid
- less than 5 tonnes readily combustible solid
- other factors that decrease severity

A summary of the methods presented in ISO/TR 26368:2012 is provided in Table 4.5.

Criteria		Method				
		Sandoz method	Ciba method	ICI method	VCI method	Australian method
Method definition type		Deterministic	Deterministic	Deterministic	Deterministic	Probabilistic (risk-based approach)
Sizing parameters		0 m ³ to 5 m ³ per ton of material (tabulated)	3 m ³ to 5 m ³ per ton of material	Only estimation of expected water flows according to fire risk severity	Tables (general case) plus specific tables for high-rise storages	Rainwater flow, firewater flow for typical fire scenarios
General size of basins		Maximum 1600 m ³	From 700 m ³ to 5000 m ³ , from standard curves	None defined	Tabulated	Two cases: 1 Sizing of a new facility. 2 Evaluation of existing capacity.
Input parameters	Risk classification			Two categories of fire severity: Weak risk: 240 m ³ /h to 1000 m ³ /h for four hours High risk: 1620 m ³ /h to 3240 m ³ /h for four hours	Specific 'Ki' rating	Input parameters according to two logigrams explaining methodologies pertaining to case (1) design and assessment of new water basins, and case (2) evaluation of pertinence of existing water basin
	Hazard category of substances	15 categories			Specific classification of goods	
	Possible fire size	Limited to compartment size	Limited by the largest compartment (max 3000 m ³)		Limited to compartment size	
	Possible fire duration		1h for 200 m ² to 5h for 1200 m ²			
Additional measures	Use of sprinklers	Influence of basin volume only for pharmaceutical goods	Considered in storage limitation and in sizing			A fire safety study is part of the methodology and may lead to the consideration of additional measures
	Limitation of combustible materials	Limited to compartment size	Limited to 250t or 600 m ² if no sprinkler		Limited according to fire hazard	
	Detection and alarm systems					
	Additional feature		Consider water consumption for cooling		Consider water consumption for cooling	

4.3.4.5 Fixed firefighting systems

BS EN 12845:2004+A2:2009 sets out the minimum requirements for the design, installation and maintenance of fixed fire sprinklers in buildings and industrial plants. Section 6 of the standard defines hazard classes depending on the combustibility of the materials stored and their fire load. Maximum storage heights of material are also specified depending on the method of storage. Hazard classes for a number of common stored materials are provided in Annex A to the standard.

Tables 3, 4 and 5 of the standard specify a 'design density' for each hazard class in terms of an effective discharge rate expressed in mm min⁻¹ (depth of water applied per minute of operation per unit area). The flow rate over the area operation can therefore be estimated.

BS EN 12845:2004+A2:2009 Section 8.1.1 specifies the minimum period over which the system should operate depending on the hazard class from which the total volume of water discharged via the sprinklers can be estimated.

However, where the system is connected to a town supply, there is in effect an exhaustible supply available and therefore the sprinklers could run for a considerable period of time.

The standard does not cover firefighting water that may be used other than in fixed sprinkler installations. So it may be necessary to allow for additional water applied to a fire by the Fire and Rescue Service and/or the occupational fire brigade in circumstances where the sprinkler system has been unable to extinguish the fire.

4.3.4.6 National guidance document on the provision of water for firefighting

Guidance by Local Government Association and Water UK (2007) has been published to promote co-operation between the Fire and Rescue Services and the water industry. Appendix A5 provides general flow requirements for firefighting for differing types of development.

4.3.4.7 Conclusions on forecasting firefighting water

This section provides guidance on a number of methods for estimating the potential volume of firefighting water that should be retained following an incident. It is not possible to offer any definitive guidance on the most appropriate method to a particular site and each will undoubtedly provide a different result. However, they will provide a starting point for discussion with the regulator and the Fire and Rescue Service from which a credible incident response scenario can be developed.

Box 4.2 recommends the issues that should be discussed with the Fire and Rescue Services to aid estimation of the volume of firefighting and cooling water that might have to be contained during an incident.

Box 4.2 *What to ask the Fire and Rescue Services*

What type and number of appliances would attend the site as part of a first response to an incident?
What is the capacity of these appliances?
Based on their experience of incidents at similar facilities, for how long would they anticipate having to apply firefighting and/or cooling water and/or foam?
Are they aware of any restrictions on the supply of firefighting water to the site?
If the incident were to escalate, what is the likely maximum number of appliances that could be called to the site?

Box 4.3 *Fire duration*

Where flammable materials are stored, estimating the potential duration of a fire has important consequences for:

- estimating the volume, of firefighting and cooling water that may have to be applied during an incident (an issue considered in this chapter)
- the fire resistance of the components of the containment systems including the walls, and perhaps more importantly, the materials used to seal any joints. These issues are discussed in Part 3.

The likely duration of an incident is clearly an imponderable, however, credible scenarios should be developed in consultation with the Fire and Rescue Services to inform the design of the containment system in respect of the issues discussed here.

It is noted, however, that commonly available intumescent construction sealants are fire rated for up to four hours. So, in the absence of any other information on the likely incident scenario, a minimum fire duration of four hours should be adopted when considering the application of firefighting and cooling water.

Table 4.6 summarises the site specific factors that might limit the volume and/or application rate of firefighting and cooling water during an incident.

Table 4.6 Factors that might limit delivery rates and volumes of firefighting and cooling water

Volume	Rate of delivery
<ul style="list-style-type: none"> ■ total stored on site in emergency storage ■ rate of replenishment from mains or other supplies ■ hydrant supply capacity – note for large sites, supply may be from different capacity mains or systems ■ number of firefighting tenders attending incident and their capacities ■ local supplies, ie rivers, lakes ■ potential for firewater recycling. 	<ul style="list-style-type: none"> ■ sprinklers ■ monitors ■ hydrants ■ firefighting tenders ■ pumps (from local supplies).

4.4 FREEBOARD IN BUNDS AND DYNAMIC EFFECTS

Freeboard is the increased height allowed in the design of structures to account for uncertainty. Using a sea wall as an example, a freeboard allowance would be made to increase the crest height of the wall to cater for the quantified effects of wind and waves, and other dynamic forces.

In the context of this guidance, it is an increase in the height of a containment wall to provide additional capacity over and above the minimum design volume requirement. As discussed in Section 4.3.4, a minimum freeboard of 100 mm should be allowed for firefighting agents (foam) in addition to the height of wall required to contain the volume of inventory plus rainwater.

In addition, the surge effects of the catastrophic failure of the primary storage vessel should be considered either explicitly in the design of the containment, or by making a suitable freeboard allowance. Quantification of such effects has been researched as summarised in Box 4.5.

Box 4.5 Summary of research on overtopping of bunds

Laboratory testing by Liverpool John Moores University for the Health and Safety Executive (Atherton, 2005) considered the overtopping of a vertical bund wall following the catastrophic failure of a primary containment tank. Such failures are rare, however experience has shown that when they do occur, a large proportion of the liquid is likely to escape over the surrounding bund wall or embankment even if the force of the wave impact does not damage the retaining structures.

The experimental work considered a number of tank and bund configurations, concentrating primarily on the ratio of the height of liquid stored in the tank to the height of the bund wall and the distance of the tank from the bund wall. As might be expected, a significant proportion (up to 70 per cent) of the liquid stored in a tall tank close to a low bund wall was lost to the containment.

Put into context of perhaps a 'real world' situation, the research indicates that following a catastrophic collapse, approximately 50 per cent of the inventory stored to a depth of 6.0 m in a tank located 7.0 m from a 1.2 m high vertical bund wall would not be retained by the secondary containment. Doubling the height of the wall would reduce this figure to about 25 per cent.

Earth embankment bunds that tend to have sloping faces were not tested, however, it could be anticipated that the losses would be even greater.

Similar experimental work was completed by Greenspan and Young (1978) as cited in WS Atkins Consultants (2001). This experimental work developed a relationship purely based on the ratio of the bund wall height to the height of retained inventory. Using the Atherton example, the Greenspan and Young work suggests that for a vertical wall again approximately 50 per cent of the inventory would be lost following catastrophic failure of the primary containment.

The research included sloping bund walls and as might be anticipated, a greater loss of inventory was predicted.

It is clearly impractical to construct a local secondary containment facility to prevent any spillage of stored materials following the catastrophic failure of the primary containment. While this mode of failure is rare, in high hazard situations consideration should be given to the provision of tertiary containment to cater for the 'failure' of the secondary containment. This mode of failure should be considered as part of the risk assessment process.

The work described in Table 4.7 is largely experimental and there is a degree of uncertainty in applying the results in designing a bund wall to cater for the potential effect of surge. So, in the absence of detailed analysis the following set out in Box 4.6 should be made where catastrophic failure of the primary storage vessel is considered a credible scenario.

Table 4.7 Surge allowance (in the absence of detailed analysis)

Type of structure (see Part 3)	Allowance
<i>In situ</i> reinforced concrete and blockwork bunds	250 mm
Secondary containment tanks	250 mm
Earthwork bunds	750 mm

Case study 4.1

Example of managing potential effects of overtopping, Plymouth, UK

Greenergy Plymouth Tank Farm site dates back to the late 1890s. The Mayflower and Cattedown Terminals were acquired as operating terminals in May 2008 and, following a review of systems and infrastructure, a major terminal upgrade project was completed including the upgrading or replacement of five tank bunds.

The joints to the existing concrete bund walls were re-sealed with fire retardant filler and over-plated stainless steel plate. A geomembrane liner with a basalt stone protection layer was laid over earth bund floors.

Two new bund walls were constructed, one with a propriety precast concrete wall system with joints again sealed with fire retardant filler and over-plated stainless steel plate, and the second using *in situ* reinforced concrete.

A review of major accident hazards determined that the catastrophic failure of one of the tanks could result in overtopping due to its proximity to the bund wall with losses into the adjacent Plymouth Sound estimated to range from 53 to 66 per cent of total tank inventory. To manage this risk a deflector plate was designed to minimise any losses on the seaward side of the tanks as well as prevent inundation from an extreme sea level surge and high waves.

4.5 SUMMARY OF RETENTION CAPACITY RECOMMENDATIONS

In the absence of any regulatory specific recommendations, such as facilities that fall within the scope of the OSR or COMAH containment policy, Table 4.8 summarises the guidance on containment capacity requirements and the process for estimating containment capacity is shown by Figure 4.3.

Table 4.8 Summary of retention capacity recommendations

Factor to be considered	Local containment capacity recommendations	Remote and combined system capacity recommendations
Primary storage capacity (ie possible storage inventory) Note this may be limited by the credibility of the scenario and need not necessarily result in a complete loss of inventory	Capacity at least 100% of primary capacity for single tank installations. Capacity based on risk assessment based on credible scenario for multi-tank installation taking into account tertiary containment provision.	Capacity at least 100% of primary capacity. Include capacity of all primary tanks in multi-tank installations.
Rainfall	For uncovered bunds provide sufficient freeboard for 10% AEP rainfall for: <ul style="list-style-type: none"> ■ 24-hour ■ the duration of the incident, plus ■ eight days (or other period appropriate to the particular site circumstances). 	As for local containment capacity recommendations plus an allowance for rain falling directly on to remote containment and areas of the site draining into it.
Firefighting and cooling water	No allowance specifically for firefighting water. Addressed via tertiary containment. Allowance for cooling water, or procedures for re-circulating cooling water, to be agreed with the Fire and Rescue Service.	Allowance for extinguishing and cooling water delivered through fixed and non-fixed installations based a credible scenario agreed with regulators and the Fire and Rescue Service. Development of the scenario can be informed with reference to the methods contained in ISO/TR 26368:2012 and by BS EN 12845:2004.
Firefighting agents (foam)	Allow freeboard height of containment required for primary inventory and rainwater of not less than 100 mm.	Allow freeboard height of containment required for primary inventory and rainwater of not less than 100 mm
Dynamic effects	Allow freeboard as set out in Box 4.5. For high hazard situations, consider impact of overtopping of the containment resulting from a catastrophic failure of the primary containment. Consider remote secondary or tertiary containment.	More appropriate means of containing inventory following a catastrophic failure of the primary containment.

The designer of the containment system should take into account the probability of a number of events occurring simultaneously. The worst case scenario for containment is represented by the design return period rainfall (eg the rainfall that is likely to occur, eg once in 10 years) coinciding with the sudden and total loss of primary containment and a fire involving applied firefighting water. At low risk sites or sites where it can be demonstrated that the probability of a simultaneous occurrence of events is sufficiently low, it may be possible to apply less stringent capacity requirements. Such relaxations should be subject to the designer's and site operator's discretion and the agreement of the various regulatory bodies in the light of the particular circumstances.

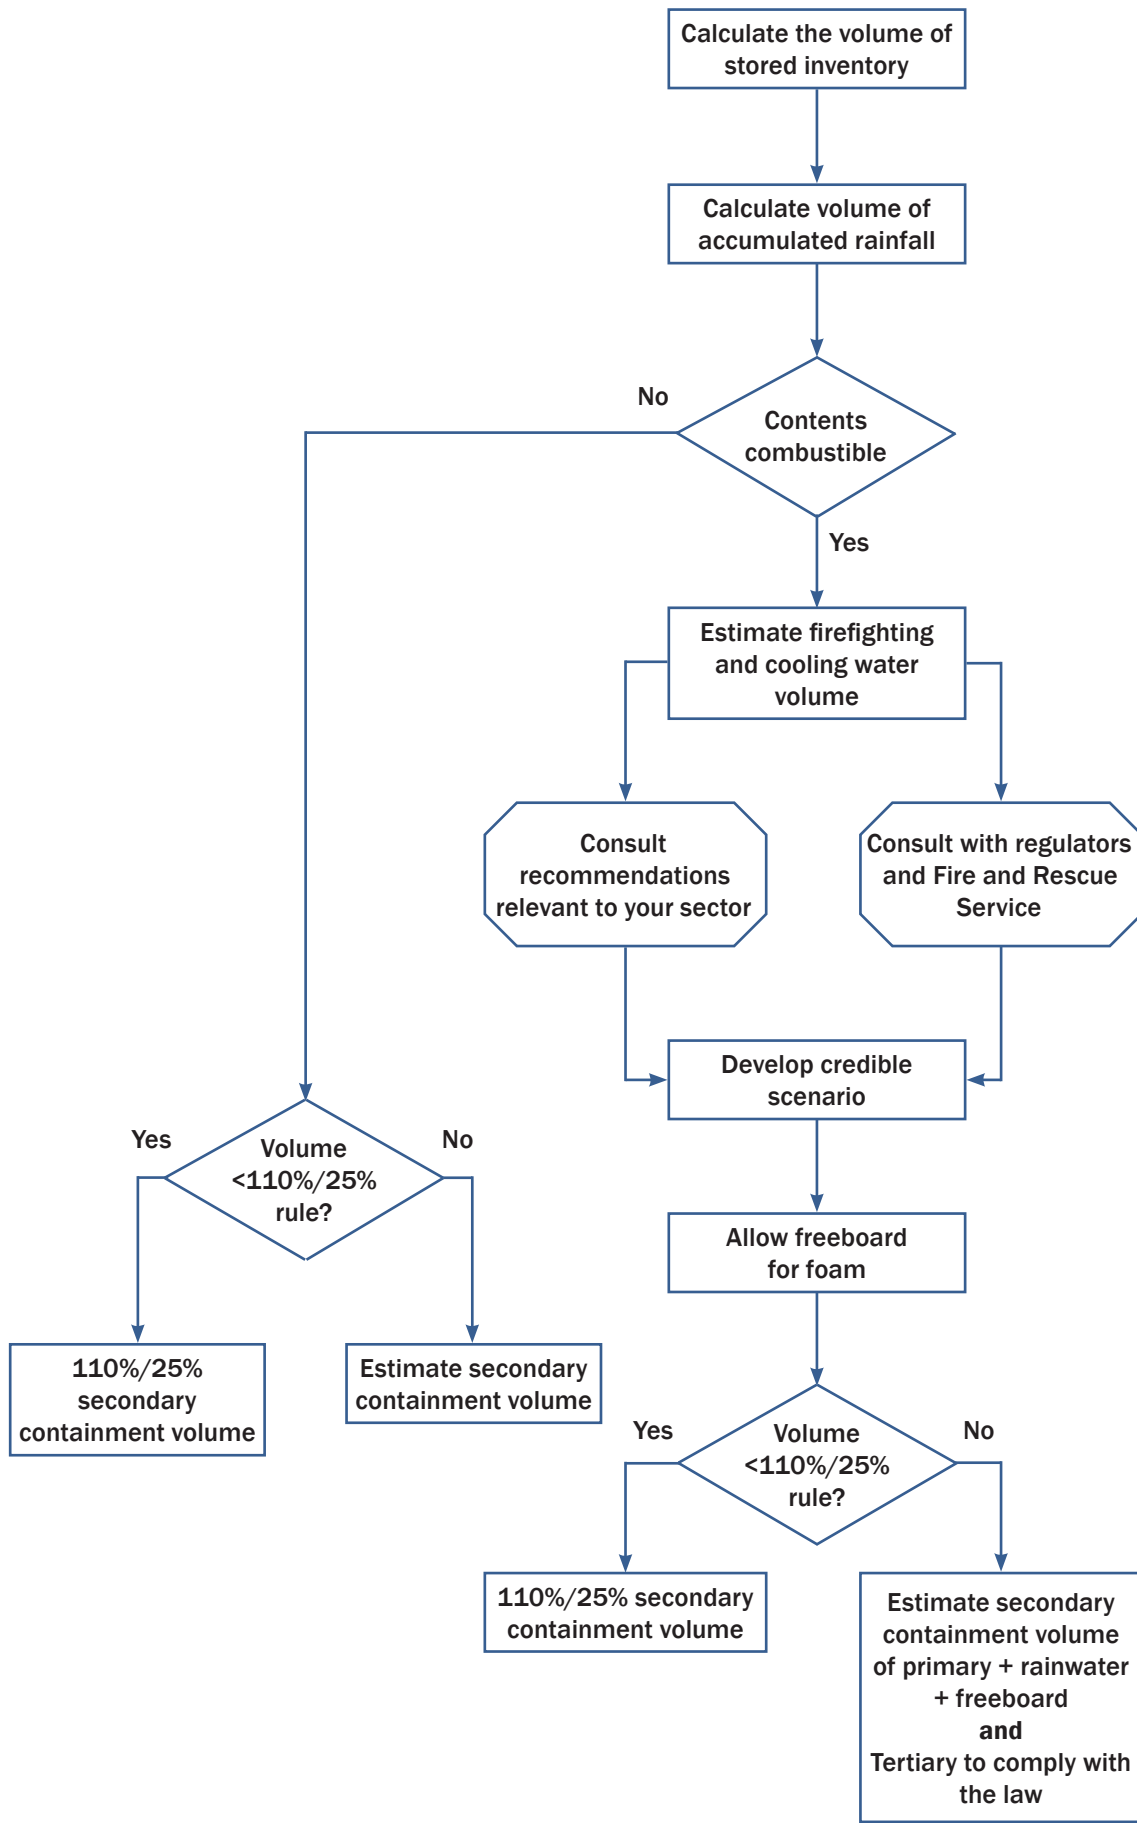

Figure 4.3 Process for estimating containment capacity

5 Existing installations

This chapter provides:

- An introduction to the classification, inspection, maintenance and modification of existing installations (Section 5.1)
- Advice on developing maintenance plans for existing facilities (Section 5.2)
- Advice on the classification of existing facilities based on the risk assessment methodology introduced in Chapter 2 (Section 5.3)
- Guidance on completing a baseline survey of an existing facility where no or limited records are available (Sections 5.4 to 5.7)
- Advice on completion of a gap analysis to establish the extent to which an existing facility meets regulatory requirements (Section 5.8)

5.1 INTRODUCTION

5.1.1 Asset management of existing facilities

In the UK, very few new containment systems are being built at this time. Much of the construction effort in containment systems involves:

- extension to existing facilities
- rearranging the containment to suit new production or process requirements
- upgrading to newer standard, often including a change in ownership of a facility.

As set out in the *Foreword*, CIRIA R164 focused principally on the construction of new containment facilities. However, this update provides guidance on managing existing older facilities. New aspects introduced include assessing the life expectancy of components and how best to inspect, maintain and repair them, as well as advice on modifying and extending them.

Recent inspections of existing containment facilities have identified significant uncertainty regarding the form of the construction and its compliance with good practice recommendations (HSE, 2011). Creating 'as-built' design information provides a sound basis not only to allow the designer and contractor to make informed decisions about how best to extend an existing facility, but also to assist the duty holder to demonstrate to the regulator that good practice is being implemented.

Attention is drawn to the requirements of the scope of the FWMA in relation to containment systems discussed in Chapter 1. Where a containment facility falls within the scope of the Act, a mandatory inspection regime may be required, irrespective of the form of construction.

5.1.2 Overview of chapter

This chapter draws together the recommendations that are relevant to the modification, extension or refurbishment of an existing facility that may also include the situation where a change in the nature of the inventory is required, or if the inventory is re-classified. It aims to enable the duty holder to ensure that their facility meets any minimum legislative or regulatory requirements.

Where records are incomplete or non-existent, a programme of investigation and analysis is likely to be required to demonstrate compliance, or highlight shortcomings with respect to legislative or regulatory requirements.

To consider the performance of a facility against the guidance contained in this publication, it will first be necessary to establish the class required for the installation as defined in Chapter 2. The information required to establish the class will fall broadly under the following headings:

- Volumes of primary and secondary and tertiary containment.
- Nature of material being stored and compatibility with form of construction.

- Potential pathways to sensitive receptors (drainage systems, topography etc).
- Form of construction of containment system (concrete/blockwork/earthworks etc).
- General condition of the facility (integrity of joints/penetrations, defects etc).
- In-service performance (ability to withstand applied loads/fire resistance).

Following this process should result in classification requirements for the containment against which the existing installation can be judged.

It is recognised that establishing the form of construction and in-service performance where no formal construction records are available is likely to require some form of specialist intrusive investigation. Guidance is provided on appropriate means of completing this 'baseline' survey in Section 5.4.

In circumstances where the baseline survey indicates that the class of containment for the existing facility falls short of that required by guidance, advice is provided on appropriate means of addressing the shortfall, ie a 'gap analysis', in Section 5.8. The gap analysis provides both a review of the risk assessment to identify any procedural methods that could be put in place to reduce the risk, as well as measures to address any particular issues with the construction of the containment system.

While the guidance in this chapter is aimed principally at 'benchmarking' a facility against the guidance contained in the rest of this publication, it is likely to be of value in establishing compliance with statutory or regulatory regimes.

The extent to which the benchmarking of a facility would lead to the retrospective application of remedial measures will depend on regime specific requirements. This is discussed in Chapter 1.

A flow chart summarising the process of assessing and classifying existing structures against the guidance contained in this publication is provided in Figure 5.1.

5.2 MAINTENANCE PLANS

A regular maintenance and inspection regime is essential if defects or leaks that could compromise the integrity of the primary, secondary or tertiary containment are to be identified in a timely manner. The EPR, PPC and COMAH Regulations require adequate inspection/maintenance procedures to be in place. Being unaware of defects in the containment facilities would be no defence should a pollution incident occur.

There is currently no specific guidance available on an appropriate inspection regime for containment facilities. However, EI (2010) provides an approach to managing inspection and maintenance as summarised in Box 5.1.

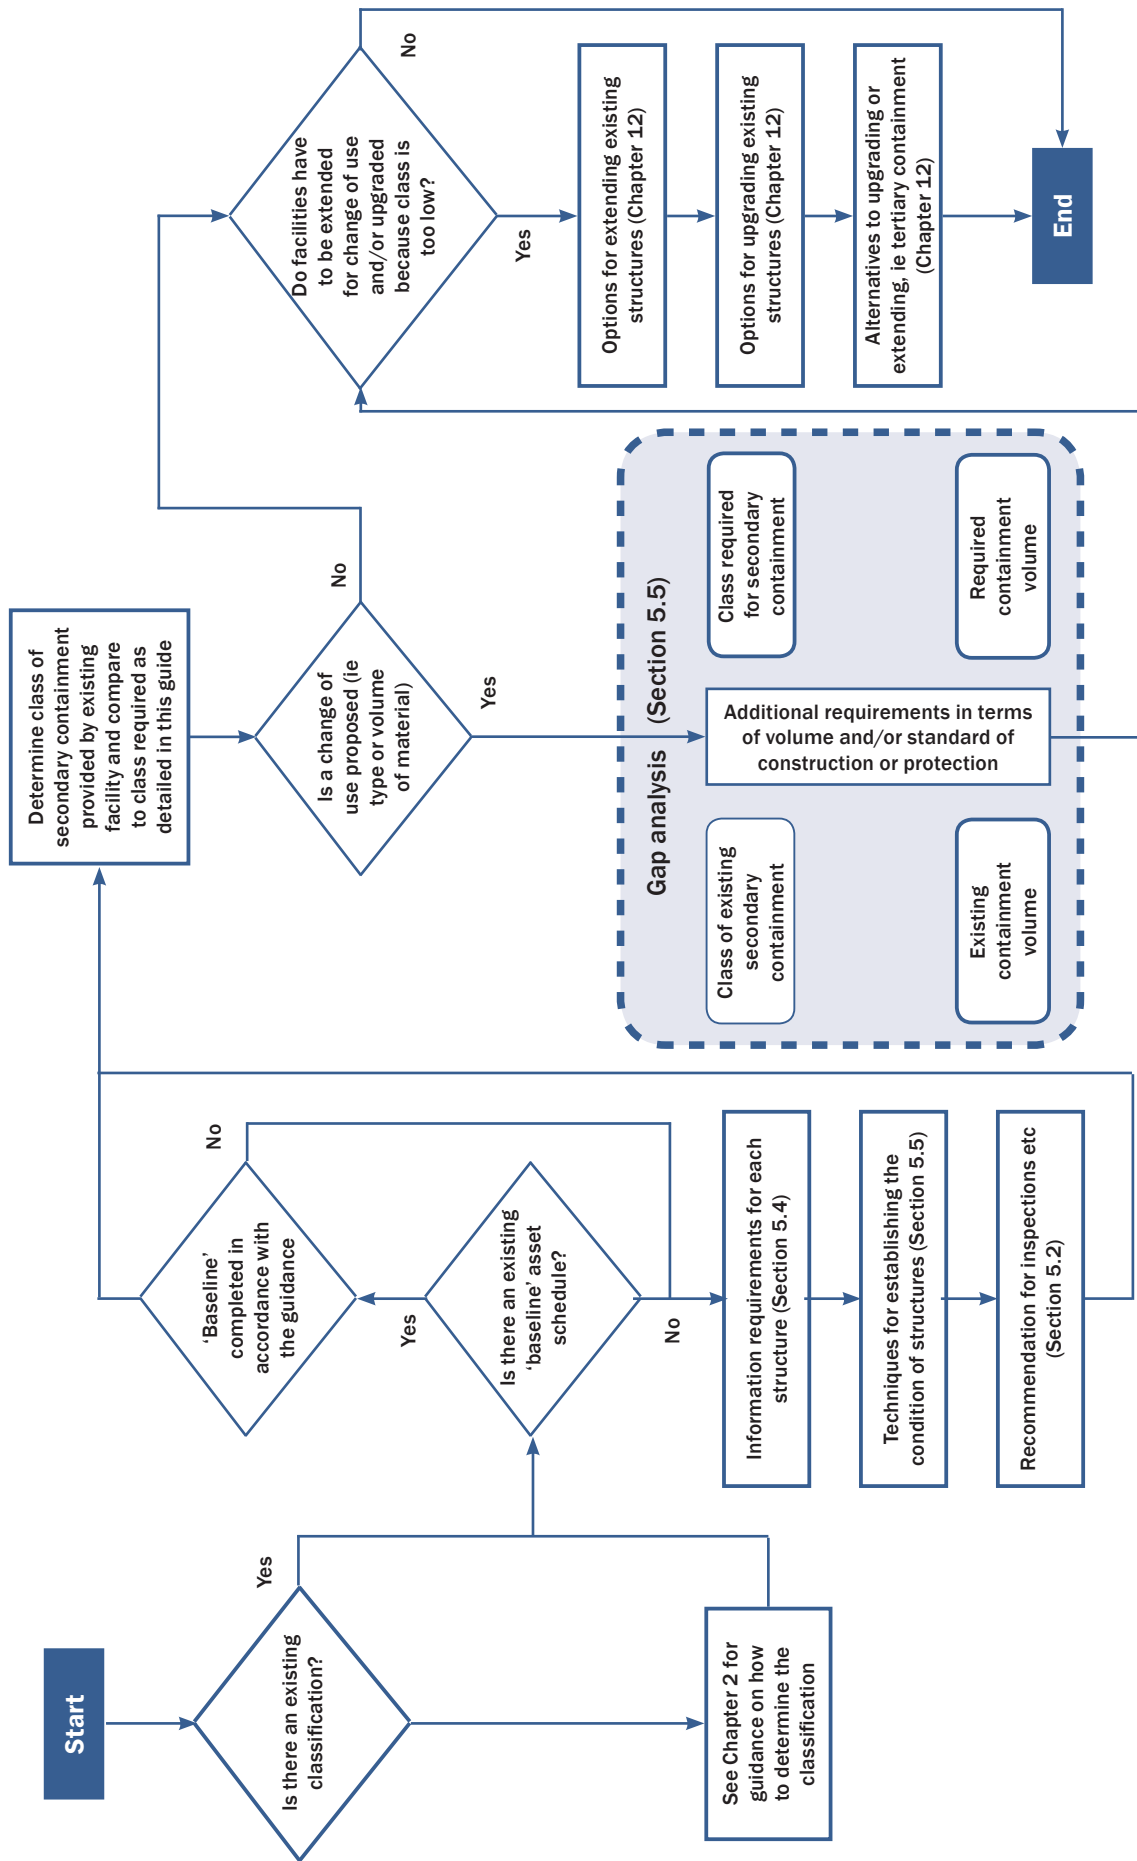

Figure 5.1 Assessing and classifying existing structures

Box 5.1 *Summary of high level framework for process safety management (from EI, 2010)*

Maintaining the integrity of plant and equipment is an essential requirement for health, safety and environment (HS&E) and process safety.

Management must ensure that the necessary inspection and maintenance requirements are identified and carried out to reduce the likelihood of a significant incident as a result of failure of plant or equipment.

It is recommended that:

- 1 Assets are uniquely identified on an asset register, which provides up-to-date asset lists and equipment records, including location and equipment specification data. The asset register provides a basis for inspection and maintenance planning.
- 2 The asset inspection and maintenance programmes are risk based and address and integrate long term asset integrity, HS&E and process safety compliance assurance.
- 3 There are procedures to ensure that asset inspection and maintenance programmes are reviewed regularly commensurate with risk, using findings from the programmes, industry experience and incidents to identify and address issues and opportunities for improvement, so that they are kept up-to-date as living systems.
- 4 Feasible plans and schedules are developed for execution of asset inspection and maintenance programmes.
- 5 Adequate numbers of competent personnel are available to carry out the inspection and maintenance programmes.
- 6 There are procedures to ensure that findings and recommendations from the asset inspection and maintenance programmes are appropriately prioritised and followed up.
- 7 Inspection and maintenance programmes are approved by specific named competent individuals.
- 8 Deviations from approved inspection and maintenance programmes are approved by specified named competent individuals commensurate with the risk.
- 9 Arrangements for inspection and maintenance programmes are understood and followed, and understanding of arrangements and compliance with them is regularly tested.

Compliance and performance trends are reviewed by specified levels of management.

Advice on developing an asset register for containment systems is provided in Section 5.4 and should be developed on a site by site basis.

Recommendations on asset inspection and maintenance programmes can be found in Chapter 5 of EI (2007) and is summarised in Box 5.2.

Box 5.2 *Suggested inspection and maintenance regime based on advice contained in environmental guidelines for petroleum distribution installations (after EI, 2007)*

Daily

- Walk round the site, identify and clear up any waste materials.
- Note signs of any deterioration of tanks or surroundings.
- Note any small leaks or spills, fix them and clean them up immediately.
- Check the separator(s) to ensure they are operating correctly.
- Inspect the tank bund valves to ensure they are closed.
- Remove any excess water from tank bunds (and other compounds) in accordance with the agreed procedures at the site. If rainwater is not accumulating where it might be expected, this can provide indication of a leakage from the containment and should be investigated further.
- Check drip trays and pans.

Weekly

- Remove any surface oil in the separator.
- Check that drain covers/grids are clear of debris.
- Wet stock reconciliation: compare metered usage of product recorded through pumps, and usage of stock in tank storage measured through regular tank dips.

Monthly

- Sample outflow from separators and analyse to check for compliance.

After rainfall

- Check external floating roofs and drain off accumulated water.
- Draw off water from external floating roof tanks if required.
- Check tank bunds and remove any excess water in accordance with the agreed procedures at the site. The oil-water separator should be inspected regularly. Arrange for accumulated silt to be removed when required, ensuring that the separator is refilled with water.

Containment facilities

Inspection and repair of containment structures should be carried out on a regular basis and the results recorded. For example, cracks in concrete, failure of flexible seals around pipes as they pass through bund structures and animal damage to earth bunds can all compromise the integrity of secondary containment systems. Instruction signs should be maintained and essential equipment, such as valve keys, should be checked to ensure they are in place. The location of any faults or defects should be recorded on a plan and linked to maintenance records of the actions taken to remediate them.

Inventory checks

These checks are based on:

- The level of the product in the tank (level check), or
- The mass of the product in the tank under static conditions (mass check), or
- The difference between the volumes pumped in and out of the tank over long periods compared to the change in stored volume.

The inventory checks are of particular importance as they can give the first indication of leakage from the primary containment where it is not necessarily visible.

Where components are critical to the performance of the containment system, the inspection should be completed by a competent person experienced in the particular type of structure, ie reinforced concrete walls, reinforced masonry walls, earth embankments, lining systems etc.

As a general guide it might be expected that:

- daily/weekly inspections are completed by the operations staff
- there is a formal inspection of the containment facilities by the works engineer every 6 to 12 months
- a detailed inspection of the containment facilities by a competent person or persons every five years.

However, the inspection regime should be developed in consultation with the regulator to be appropriate to risk and the age of the facility.

5.3 RISK ASSESSMENT AND CLASSIFICATION OF CONTAINMENT SYSTEMS

The starting point for any assessment should be a site risk assessment as described in Chapter 2. The output from the risk assessment is used to determine the appropriate class of secondary containment.

A duty holder should be able to demonstrate that the class of the existing containment is appropriate to the site risk rating, or if it is not, that there are other measures in place to reduce the risk of a loss of primary containment sufficiently to satisfy the law. This may be, for instance, the provision of tertiary containment.

The site risk assessment and containment classification should be reviewed periodically, but at least every five years or any other period agreed with the regulators, or where:

- there are any modifications made to the primary, secondary or tertiary containment
- the volume of material in the primary containment is increased
- the nature of the material in the primary containment is changed
- the nature of the material is reclassified
- the potential pathways and/or receptors have changed.

The third point is particularly relevant as this may increase the class of containment required and this might be difficult to achieve with the existing arrangement. For instance, blockwork bund walls are not suitable for providing class 2 or class 3 containment, or where fire resistance is required (see Section 7.3).

5.4 BASELINE SURVEY

5.4.1 Introduction

For facilities constructed post-1994, a full set of design documentation and construction (as-constructed) drawings should be available for a containment facility for all but the smallest sites. These records would have formed part of the health and safety file, which was a requirement of the Construction (Design and Management) (CDM) Regulations 1994 and more recently the Construction (Design and Management) (CDM) Regulations 2007.

However, it is commonplace, particularly for older sites, to find situations where the original design and/or as-constructed drawings are not available or are unclear. In these circumstances a baseline asset survey of the facility should be completed and reviewed by a competent person to demonstrate it is reducing risk sufficiently to satisfy the law. This type of baseline survey is often completed for bridges and older concrete structures where modifications are planned.

For a containment facility the baseline survey should include, but not be limited to, the information contained in Box 5.3.

Box 5.3 *Suggested scope of baseline asset survey*

Primary containment

- Volume.
- Nature of inventory.

Containment

- Local, remote and/or combined.
- Secondary and/or tertiary.
- Containment volumes for individual containment elements and site wide.
- Was the facility constructed to conform to a particular containment class (if known).

Type of construction (see Part 3)

- Concrete, blockwork, earth bund, tank etc.
- Design standards used, ie CP 110-1:1972, BS 8110-1:1997, BS 8007:1987 or BS EN 1992-1-1:2004 (Eurocode 2) etc (if known). If the year of construction or modification can be established, the design standard used can be established with reference to Boxes 5.4 and 5.5.
- Details of any linings/coating to the containment and the substrate this has been applied to (eg concrete or masonry).
- Reinforced masonry walls – check for the presence of reinforcement that is continuous and passes into the anchoring beam or slab.
- Where the bund is constructed in concrete or blockwork, the location, orientation, spacing and detailing of any joints and their ability to provide watertight containment.

Potential leakage pathways (see Part 3)

- Presence of waterstops in walls and floors across joints, including type/material.
- Presence of joint armouring plates across joints.
- Penetrations through the containment – type, method and type of sealing and age.
- General watertightness.
- Leak detection systems if installed.
- Means of emptying rainwater.
- Full details of the site drainage system.

Defects noted should be recorded on a plan, dated, photographed where appropriate and details of remedial works recorded along with date completed. Defects that should be recorded might include, but not be limited to:

- leaking cracks
- spalling of concrete or blockwork walls or base
- signs of corrosion in reinforced concrete or block work wall (rust staining etc)
- failures of sealing of pipe penetrations, wall joints and floor joints
- sealant has exceeded lifetime recommended by supplier

- misaligned sections of wall
- slumping of earth banks or noticeable variation in level along the crest
- animal burrows in earthwork embankments
- torn or damaged liners
- coatings de-bonding from the wall.

Failures that clearly compromise the containment integrity, for example holes or cracks that penetrate the bund wall, collapsed walls, missing floor sections etc should be rectified using risk-based prioritisation.

Figure 5.2 Arrow shows leaking crack in a bund wall (courtesy CH2M Hill, with permission from the Environment Agency)

Figure 5.3 Spalling of concrete over corroding reinforced bar, where cover is reduced by groove feature (courtesy CH2M Hill, with permission from the Environment Agency)

Figure 5.4 Rust staining that may indicate corroding reinforcement (or a metal fixing) (courtesy CH2M Hill, with permission from the Environment Agency)

Containment facilities should be inspected by a competent person who is familiar with the type of construction. This requirement applies to all persons involved in any subsequent repair process, including scheme designers, contractors and works inspectors.

5.4.2 Volumes of primary, secondary and tertiary containment

Volume of primary containment

Assessing the volume inventory held by the primary containment is addressed in Section 4.3.2.

Volume of secondary and tertiary containment

For smaller containment areas, where the base appears relatively level and the crest of the containment is at a constant height, it will be satisfactory to estimate the volume from the plan area and height to the crest of the containment.

For extended containment areas, simply multiplying the plan area of the containment by the height of the wall at its lowest point might overestimate the containment volume if there are significant variations in the level of the base (for instance if it is sloping to facilitate drainage). This is particularly the case for embankments with sloping sides. In these circumstances a topographic level survey of the base and walls should be completed to ensure the volume of containment is calculated to a reasonable degree of accuracy.

The topographic survey should also confirm that the crest of the bund is level. If not, calculating the effective containment volume should be based on the level of the lowest point on the crest of the bund.

Figure 5.5
Slumping of earth embankment

A topographic survey can also be used to generate a detailed plan layout where one does not exist.

When comparing against the 110 per cent capacity rule (see Section 4.2.1) the volumes of any parts of primary containment capacity below the level of the secondary containment except for the largest tank in the bund should be deducted from the overall secondary containment volume. This includes any supports, bases, pipework etc. When comparing against the 25 per cent rule, the volumes of any parts of primary containment capacity below the level of the secondary containment, supports, bases (including all tanks that are assumed to be

undamaged) and the like should be deducted from the overall secondary containment volume. This is shown in Figure 5.6.

Where there is a combined containment systems in place (local and remote) there may be significant containment volume in the transfer system. It may be appropriate to take this into account subject to a survey to confirm the volume and condition of the transfer system (see Chapter 10). When assessing the storage potential of the transfer system, care should be taken on sloping sites to ensure only the volume in the system up to the lowest point is taken, rather than the capacity of the pipes, manholes and/or channel.

Figure 5.6 *Interpretation of the 110% capacity rule*

Case study 5.1

Example of inadequate secondary containment and drainage, Huddersfield UK (courtesy Environment Agency)

This case study relates to a manufacturer and repackager of a variety of chemicals such as fungicides, insecticides, pharmaceutical products and polymers. The site in the North East was bounded on the north side by the Huddersfield Narrow Canal, and on the remaining three sides by the River Colne.

In the early hours of 24 May 2010 a fire broke out in the engineering block in the north-west corner of the site. The fire is thought to have been caused by a pinhole leak of diesel fuel spraying onto the hot surface of the boiler and eventually igniting. The fire quickly spread to the waste area adjacent to the engineering block. This, in turn, ignited intermediate bulk containers (IBCs) containing solvents, which were stored in an open air waste compound adjacent to the engineering block and initiated a running pool fire, which soon overwhelmed the secondary containment available and spread to the warehouse building and then towards the bulk storage containment area in the centre of the site. The fire and rescue service were able to provide cooling to prevent the fire from spreading into the bulk storage area.

Approximately 5000 m³ of firefighting water and 20 m³ of foam were applied to the site in the first five hours of fighting the fire. The site's tertiary containment system was not able to cope with the quantities of firefighting water runoff and foam generated and consequently significant quantities escaped the site boundary into the River Colne.

Investigation of the incident identified that there were a variety of issues including the following:

- Inadequate drainage. Some of the drains were too small and the drains had not been inspected for a number of years and were unable to cope with the large volume of firefighting water runoff products. In addition, the part of the drainage system that relied on pumps was overwhelmed due to a lack of pump capacity and finally became unavailable when site power was switched off for safety reasons.
- The secondary containment to the bulk tanks was inadequate and in particular around the effluent tanks where the capacity was less than 110 per cent of the largest tank in the bund. It was also noted that the bund wall was cracked.
- Tertiary site containment was a combination of the effluent tanks, kerbing and drainage and was approximately 470 m³ – considerably less than the firefighting water and foam applied during the May 2010 incident.
- Poor storage of portable containers containing, in particular, flammable materials. During the fire, there were some plastic IBC containing flammable materials, which melted. The flammable materials caught fire and became mixed with other liquid materials that had escaped from plastic containers, at the site to cause a running pool fire across the ground, spreading the fire further.

Since the fire the company has made the following improvements:

- Repaired the kerbing along the southern boundary of the site, which is the most vulnerable area due to the slope of the site.
- Surveyed and traced all the site drainage to understand how firefighting water is transported around site during an incident.
- The quantity of firefighting water runoff, which might be generated during a future incident, has been assessed to evaluate what needs to be managed during the case of any future incident. With improvements on handling materials on site and discussions with the Fire and Rescue Service, the maximum quantity of firewater runoff has been estimated at approximately 3000 m³.
- Designed and built a containment system to contain the full contents of all the portable containers such as IBCs, containing flammable materials to minimise the risk of a fire involving the liquids in those containers spreading to neighbouring parts of the site.
- Reviewed their procedures for segregation of incompatible chemicals such as oxidisers and flammable materials.
- Improved bunding of bulk storage tanks containing flammable liquids.

Work is still ongoing at the site focusing in particular on combining the information gathered during the drain survey and calculation of firewater runoff to derive a plan for managing firefighting water runoff from future incidents.

There is also a programme in place to repair and improve the remaining existing bunds and also to establish a tertiary containment plan. The plan is likely to require improvements in transferring firewater runoff to the lowest part of the site by use of bund walls around the site boundary and large pumps, which will runoff an alternative power supply to the main site supply.

5.4.3 Nature of material being stored and compatibility with form of construction

Over time the nature of the material contained in the primary containment may have changed from when the facility was first installed.

It is therefore important to establish if the contents would be damaging to the containment system, ie are they likely to be aggressive to any existing concrete or blockwork walls or bases, joint sealants, lining systems, coatings or drainage systems where installed?

Where more than one material is stored within a common containment system, the effect of the 'cocktail' of chemicals on the bund and lining system should be assessed. However, chemicals that react with each other liberating heat and/or noxious gasses (ie incompatible materials defined in CA, 2008a) should not be stored within tanks protected by a common bund.

5.4.4 Potential pathways to sensitive receptors

Means of emptying rainwater

The means of emptying accumulated rainwater from within the bund should be established. Under no circumstances should an uncontrolled gravity discharge of rainwater from a containment bund be permitted, even where routed via an interceptor, unless it is draining to a further (tertiary) stage of containment.

Where this is a gravity connection, even when controlled by a penstock or valve, for a class 2 facility, this should be taken out if practicable. However, for a class 3 facility, these arrangements should be replaced with either a portable or fixed installation pump.

Rainwater that has accumulated within a containment bund may be contaminated by spillages and leakage from the primary containment. Rainwater should be tested before discharge to any drain or sewer, unless it is to be routed to treatment works specifically designed to accommodate this effluent. Procedures should be in place to remove any contaminated rainwater to a WWTW.

Site drainage and transfer systems

Should a containment system fail, it is important to identify all the possible pathways by which contaminants could reach sensitive receptors. One of the most common pathways is the site drainage system that might, for instance, discharge to a water body or to the ground.

Where there is any uncertainty about the layout, condition or capacity of drainage systems for trade waste a survey should be carried out. Potential hazards in terms of the system's ability to cope with major incidents should be identified. Typical hazards might include:

- combined surface and trade waste systems, especially where provided with storm overflows on or off-site
- direct runoff to surface and groundwaters (ie rivers and soakaways respectively)
- infiltration of contaminants through defective drainage
- unprotected clean water gullies and other devices for collecting stormwater from areas likely to become contaminated
- unprotected downpipe pipes on buildings that, if damaged (typically in a fire), could allow pollutants to enter storm drainage
- inadequate or poorly maintained valves and other devices used for flow control
- defective pipes or joints
- blocked gullies, pipes and drains
- inadequately sized systems (hydraulic capacity of the pipe is less than the estimated maximum flow – see Chapter 10)
- inadequate robustness or durability.

Any gullies or drains within the secondary containment should be identified and traced to ensure they do not provide a pathway for contaminants. Care should be taken on older sites, particularly those that may have been redeveloped to check for the presence of historic redundant systems, such as land drains, soakaways, abandoned boreholes sewers etc, which can provide such paths and compromise the integrity of the containment systems.

If comprehensive records are either not available or have not been maintained, the site drainage system (including surface water, foul and trade effluent systems) should be surveyed. This is normally completed by a CCTV survey that will also provide evidence of physical defects with the pipe work such as broken pipes, misaligned joints, root intrusion etc.

Figure 5.7
CCTV survey equipment and of a defect in a pipe (courtesy InSewer Surveys)

Note the blue PVC waterstop in the centre of the wall and full-depth honeycombed concrete in the lower core hole that is not evident at the surface.

Figure 5.8 Investigation of a wall joint (courtesy Environment Agency)

Once potential pathways have been established, the integrity of the pipe runs should be checked using a falling head test completed in accordance with BS EN 1610:1998.

Any drainage system that could provide a pathway for contaminated water if the secondary containment fails should have a means of closing the outfall at the site boundary or point of discharge. There are a number of proprietary systems available that can be operated remotely, or in reaction to changes in the quality of the discharge.

It should be noted that many sluice valves require a pressure head to seal effectively and therefore at low flows may not provide effective containment. So, if a valve is to be relied upon as part of the site containment, care should be taken to ensure it will provide an effective seal under the anticipated operating conditions.

However, once the outfall has been closed, the capacity of the drainage systems and any interceptors may be exhausted very quickly during an incident and may lead to spillage from manholes and chambers. This scenario should be considered during the risk assessment process to ensure that spillage from manholes can be contained.

In many cases the surface water drainage system on an industrial site will be provided with an interceptor to remove hydrocarbons washed from the surface of internal roads and areas of hardstanding. However, these are unlikely to be effective during an incident where the secondary containment fails and should not be relied upon to retain contaminated water entering the system as their operating capacity is likely to be exceeded. It should also be noted that firefighting foam inhibits gravity separation of hydrocarbons.

5.5 ASSESSMENT OF SPECIFIC CONSTRUCTION TYPES

5.5.1 Introduction

Determining the specific type of construction can be the most problematic issue in situations where no records exist. Fundamentally, the containment has to withstand the hydrostatic and hydrodynamic pressures should the primary containment fail and remain watertight for a minimum of eight days. This

is because following an incident, it may take a number of days to arrange for the disposal of the inventory and any contaminated firefighting water and foam.

In addition, where flammable materials are stored, the containment, including all its components (eg waterbars and sealants) should be capable of withstanding a fire.

The guidance set out below provides advice on assessing the integrity and structural performance of a secondary containment facility.

5.5.2 Competence

Where structural and/or geotechnical investigation and analysis is required to determine the form of construction of an existing facility, the advice of a competent person should be sought.

5.5.3 Investigation approaches

It should be noted that intrusive investigations, ie coring, can carry risks such as creating pollutant pathways through poor quality reinstatement of the core hole. Therefore, care should be taken to design the investigation to minimise such risk such as coring from the top, or from the outer face.

Where intrusive investigation is required, it should be co-ordinated with periods of routine maintenance (eg examination of form of construction of joints to coincide with sealant replacement, which should occur in accordance with the manufacturer's recommendations).

There are also a range of non-destructive tests (Bungey *et al*, 2006) that can provide information on the form of construction.

However, intrusive investigations should be not delayed if:

- the containment system is required to be class 3 and there is a lack of required asset information
- concerns have been raised (inspection/testing/rainwater leakage) over the integrity/suitability of the existing containment.

Where it is not reasonably practicable or considered uneconomic to determine the integrity and performance of a containment system, alternative means of reducing the potential risks sufficiently to satisfy the law should be sought such as providing tertiary containment.

5.5.4 Blockwork/brickwork

A well-rendered wall may easily be mistaken for a reinforced concrete wall. It may also be difficult to confirm if the wall has been reinforced. The retrofitting of cladding (sometimes undertaken for visual as opposed to pollution control reasons) may further obscure the condition.

Figure 5.9
A cover meter survey (courtesy
CH2M Hill, with permission from the
Environment Agency)

The structural strength of a blockwork or brickwork wall and its ability to withstand the loads imposed upon it depend not only on the reinforcement (if present) but the foundations.

If there are no details available, this will require investigation and is likely to include a dimensional survey, a cover meter survey to locate and size any reinforcement, and localised excavation of the foundations. Some intrusive investigation (breaking out local areas of wall) may also be required.

Figure 5.10 A metal waterstop in a wall joint (courtesy Environment Agency)

With the results of such an investigation, and with reference to design codes that were in force at the time when the wall was constructed, it may then be possible to estimate the structural strength of the wall. However, in practice, it is likely to be preferable to complete an *in situ* load test on the wall to determine if there would be significant movement or failure under service conditions. This is discussed in Section 5.7.2.

It should be noted that reinforced blockwork and brickwork is suitable only for class 1 containment, where no fire resistance is required and where it has been designed and constructed in accordance with a recognised code of practice (see Section 7.3). Good reinforcement should be continuous for the whole height of the wall and properly tied into the foundations. Typical details of properly reinforced blockwork and brickwork walls are given in Appendix A7.

If the blockwork or brickwork wall is unreinforced, then a structural assessment and risk assessments should be carried out to confirm satisfactory performance under relevant loads. If it is considered unfit for purpose, then engineering solutions should be considered to improve the integrity of the structure. This could involve replacement, strengthening, or the introduction of alternative containment measures such as using the blockwork wall as permanent formwork for a new reinforced concrete wall.

5.5.5 Reinforced concrete walls (with and without concrete bases)

As with blockwork walls, the structural strength of a reinforced concrete wall depends on the reinforcement, the specification of the concrete mix, and its foundations.

If the age of the structure is known, then it may be possible to infer some details of the construction from the structural code that prevailed at the time. The first national code of practice for reinforced concrete published in the 1930s has evolved ever since. A summary of the principal changes in reinforced concrete codes for structural and water retaining elements from CP 110-1:1972 and BS EN 1992-1-1:2004 (Eurocode 2) are provided in Boxes 5.2 and 5.3. For details of concrete design codes that preceded CP 110 earlier reference can be made to Clarke (2009).

As for blockwork walls, a dimensional survey, a cover meter survey, localised excavation of the foundations and intrusive investigations are likely to be required to estimate the structural strength of the wall.

Class 2 and class 3 containment systems should be constructed as properly reinforced concrete structures built to a water retaining code of practice (see Section 7.2.2).

Box 5.4 History of reinforced concrete design codes

The first code for concrete structures was introduced in 1934. This table lists evolution of the key codes of practice.

Date	Design codes
1938	<i>Code of practice for the design and construction of reinforced concrete structures for the storage of liquids</i>
1948	CP 114 <i>The structural use of normal reinforced concrete in buildings</i> (revised version published in 1957, published in metric form as Part 2 in January 1969)
1959	CP 115 <i>The structural use of prestressed concrete in buildings</i>
1960	CP 2007-2 <i>Design and construction of reinforced and prestressed concrete structures for the storage of water and other aqueous liquids</i> (published in metric form in 1970)
1965	CP 116 <i>The structural use of precast concrete</i>
1972	CP 110 <i>Code of practice for the structural use of concrete</i>
1973	Technical memorandum (bridges) BE 1/73 <i>Reinforced concrete highway structures</i> , BE 2/73 <i>Prestressed concrete highway structures</i>
1976	BS 5337 <i>Code of practice for the structural use of concrete for retaining aqueous liquid</i>
1984	BS 5400 <i>Steel, concrete and composite bridges, Part 4, Code of practice for design of concrete bridges</i>
1984	BS 6349 <i>Maritime structures</i>
1985	BS 8110 <i>Structural use of concrete, Part 1 Code of practice for design and construction, Part 2 Code of practice for special circumstances, Part 3 Design charts for singly reinforced beams, doubly reinforced beams and rectangular columns</i>
1987	BS 8007 <i>Code of practice for design of concrete structures for retaining aqueous liquids</i>
1990	BS 5502 <i>Buildings and structures for agriculture</i>
1997	BS 8110 <i>Structural use of concrete, Part 1 Code of practice for design and construction (revised)</i>
2004	BS EN 1992-1-1:2004 (Eurocode 2) <i>Design of concrete structures. General rules and rules for buildings</i>
2004	BS EN 1992-1-2:2004 (Eurocode 2) <i>Design of concrete structures. General rules. Structural fire design</i>
2005	BS EN 1992-2:2005 (Eurocode 2) <i>Design of concrete structures. Concrete bridges. Design and detailing rules</i>
2006	BS EN 1992-3:2006 (Eurocode 2) <i>Design of concrete structures. Liquid retaining and containment structures</i>

Reinforced concrete design**CP 110**

CP 110 described as 'the unified code' brought together codes for reinforced, prestressed and precast concrete. From CP 110 to current codes design has been based on specified concrete strengths. CP 110 was published in three parts:

- Part 1 *Design, material and workmanship*
- Part 2 *Design charts for singly reinforced beams, doubly reinforced beams and rectangular columns*
- Part 3 *Design charts for circular columns and prestressed beams*

The design charts in Parts 2 and 3 are based on the guidance given in Part 1. The code introduced the concept of limit state design, partial safety factors being applied to both material properties and loads (ie 'actions' in Eurocode terminology)

Characteristic strengths were specified for high yield reinforcement dependant on bar diameter and method of manufacture (410 N/mm², 425 N/mm² and 460 N/mm²), a partial safety factor of 1.15 was then applied to the characteristic steel strength.

BS 8110

BS 8110 was also published in three parts:

- Part 1 *Code of practice for design and construction.*
- Part 2 *Code of practice for special circumstances.*
- Part 3 *Design charts for singly reinforced beams, doubly reinforced beams and rectangular columns.*

In BS 8110, unlike CP 110, only a single characteristic steel strength of 460 N/mm² was specified for high yield reinforcement. A partial safety factor of 1.15 is applied to the steel strength.

In 1997 BS 8110-1 was revised with the characteristic strength for high yield reinforcement being increased to 500 N/mm².

Eurocode 2

There are four parts to Eurocode 2:

- Part 1-1 *General rules and rules for buildings*
- Part 1-2 *Structural fire design*
- Part 2 *Bridges*
- Part 3 *Liquid-retaining and containment structures*

Part 1-1 is the principal part, which is referenced by the three other parts. There are a number of differences between Eurocode 2 and BS 8110. The key differences are:

- Eurocode 2 is generally laid out to give advice on the basis of phenomena (eg bending, shear) rather than by member types as in BS 8110 (eg beams, slabs, columns).
- Design is based on characteristic cylinder strengths not cube strengths.
- The Eurocode does not provide derived formulae (eg for bending, only the details of the stress block are expressed). This is the traditional European approach, where the application of a Eurocode is expected to be provided in a textbook or similar publication.
- It allow for this type of detail to be provided in non-contradictory complementary information (NCCI) (see *Glossary*).
- Notations and units have been amended.
- The partial factor for steel reinforcement is 1.15. However, the characteristic yield strength of steel that meets the requirements of BS 4449 will be 500 MPa, so overall the effect is negligible.
- Eurocode 2 is applicable for ribbed reinforcement with characteristic yield strengths of 400 to 600 MPa. There is no guidance on plain bar or mild steel reinforcement in the Eurocode, but guidance is given in the background paper to the UK National Annex.
- The effects of geometric imperfection ('notional horizontal loads') are considered in addition to lateral loads.
- Minimum concrete cover is related to bond strength, durability and fire resistance. In addition to the minimum cover an allowance for deviations due to variations in execution (construction) should be included. Eurocode 2 recommends that, for concrete cast against formwork, this is taken as 10 mm, unless the construction is subject to a quality assurance system in which case it could be reduced to 5 mm or even 0 mm where non-conforming members are rejected (eg in a precast yard).
- It is recommended that the nominal cover is stated on the drawings and construction tolerances are given in the specification.
- Higher strengths of concrete are covered by Eurocode 2, up to class C90/105. However, because the characteristics of higher strength concrete are different, some expressions in the Eurocode are adjusted for classes above C50/60.
- The 'variable strut inclination' method is used in Eurocode 2 for the assessment of the shear capacity of a section.
- The punching shear checks are carried out at 2D from the face of the column and for a rectangular column, the perimeter is rounded at the corners.
- Serviceability checks can still be carried out using 'deemed to satisfy' span to effective depth rules similar to BS

8110. However, if a more detailed check is required, Eurocode 2 guidance varies from the rules in BS 8110-2.

- The rules for determining the anchorage and lap lengths are more complex than the simple tables in BS 8110. Eurocode 2 considers the effects of, among other things, the position of bars during concreting, the shape of the bar and cover.

Water retaining structures

CP 2007

The design approach in CP 2007 was based on CP 114 and CP 115, with some modifications. The code gave guidance on the provision of movement joints and details of various types of watertight joint. General guidance was given on construction.

BS 5337

The revised code was published in 1976 and the accompanying handbook was published in 1979. Two different design approaches were given:

- In-line with CP 110 (ie limit state design).
- In-line with CP 114 and CP 115 (permissible stress design as used in CP 2007).

The code defined two conditions for concrete exposed to water with limits to crack widths for each as follows:

Class A: Exposed to moisture or subject to alternate wetting and drying	0.1 mm
Class B: Exposed to continuous or almost continuous contact with liquid	0.2 mm

An alternative method of design was to limit the steel stresses.

BS 5337 required checks on early thermal stresses and required checks on critical reinforcement ratio, where reinforcement exceeds this ratio checks on crack spacing and crack width due to early thermal stresses are required.

BS 8007

The design approach in BS 8007 is to be in full accordance with BS 8110, the option for permissible stress design being removed.

Although the approach for dealing with early thermal effects was as the previous code (BS 5337), it was modified with more detailed guidance given. The equations for calculating crack widths due to flexure were modified to be in-line with BS 8110.

Eurocodes

Part 3 covers additional rules to those in Part 1 for the design of structures constructed from plain or lightly reinforced concrete, reinforced concrete or prestressed concrete for the containment of liquids or granular solids

Principles and application rules are given in Part 3 for the design of those elements of structure, which directly support the stored liquids or materials (ie the directly loaded walls of tanks, reservoirs or silos). Other elements that support these primary elements (for example, the tower structure that supports the tank in a water tower) should be designed according to the provisions of Part 1-1.

Part 3 does not cover:

- structures for the storage of materials at very low or very high temperatures
- structures for the storage of hazardous materials the leakage of which could constitute a major health or safety risk
- the selection and design of liners or coatings and the consequences of the choice of these on the design of the structure
- pressurised vessels
- floating structures
- large dams
- gas tightness.

Also, Part 3 is only valid for stored materials that are permanently at a temperature between -40°C and $+200^{\circ}\text{C}$. For the selection and design of liners or coatings, reference should be made to appropriate documents.

It is recognised that, while this code is specifically concerned with structures for the containment of liquids and granular materials, the clauses covering design for liquid tightness may also be relevant to other types of structure where liquid tightness is required.

In clauses relating to leakage and durability, this code mainly covers aqueous liquids. Where other liquids are stored in direct contact with structural concrete, reference should be made to specialist literature.

5.5.6 Earth bunds (including earth bases with reinforced concrete and blockwork walls) and liners

Unlined earth bunds rely entirely on the impermeability of the soils forming the base and walls to provide containment. In addition, the bund walls have to be designed to withstand the hydrostatic and hydrodynamic pressures should the primary containment fail. There are also a number of facilities comprising concrete wall and earth bases. In these situations the integrity and strength of the walls should be established as discussed in Section 5.5.5.

The impervious nature of soils is clearly a key aspect of ensuring containment. It is common practice to achieve this by providing a one metre depth or thickness of soil with a maximum permeability of $1 \times 10^{-9} \text{ ms}^{-1}$ (see Section 8.2.1).

An investigation is likely to include *in situ* and/or laboratory testing of the soils in the base and walls of the containment facility to establish the permeability of the soils and the ability of the embankment walls to withstand the imposed loading. Advice on commissioning a ground investigation and laboratory testing is provided in Chapter 8. A dimensional survey of the bund walls is also likely to be required.

Class 2 and class 3 earth bunds should be lined and therefore integrity testing (EA, 2009b) of the liner should be completed if there is no leak detection system in place (leak detection systems should generally be provided for a class 3 containment system – see Section 8.12). Beyond inspection for obvious damage to the liner, integrity testing should be completed by a specialist contractor.

EI (2014) provides advice on the design of lining systems (see Chapter 8). Some limited advice on the inspection and maintenance of existing liners can also be found in Chapter 7.

Where there is no liner in place, the decision to install one should be based on reducing risk sufficiently to satisfy the law and discussed with the regulator. For instance, the risk may be adequately mitigated by a sufficient depth of impermeable soil.

5.5.7 Remote secondary containment tanks

Where possible, the particular standard to which the tank was constructed should be established and inspected against the requirements of the standard.

External visual inspection of a secondary containment tank will indicate areas of corrosion, or signs of leakage through joints. However, it may not reveal any leakage through the tank bases.

Severe corrosion can significantly reduce the strength of a tank and its ability to withstand the hydrostatic and hydrodynamic forces imposed upon it should the primary containment fail. Where corrosion is found, specialist advice should be sought to assess if this will significantly impair the performance of the tank and advice sought on suitable repair measures. In extreme cases, the tank may have to be replaced.

Any signs of leakage at joints should be remedied as soon as is practicable.

Advice on the inspection and repair of storage tanks can be found in EEMUA (2003).

5.6 INTEGRITY OF CONTAINMENT SYSTEMS

5.6.1 Joints

Joints in walls and bases are the main source of weakness. The integrity of bunds relies on the performance of the sealant and waterstops. Older bunds from the 1960s to perhaps the 1980s were often constructed using profiled sheet copper across the joints. If present, these would resist chemicals

and heat. However, more recently, PVC waterstops have been used, which may be attacked by heat and chemicals. Several bunds at Buncefield constructed after 1990 and one built in 2000 were constructed without any waterstops.

It is important to establish if the joints in walls and bases are watertight as well as what material, if any, is across the joint. One method is to core down from the top of the wall to confirm if there is a waterstop, or investigate with a borescope inserted into the joint. However, this would probably require removal of any fibreboard and joint sealant.

Figure 5.11
A plated joint (courtesy CH2M Hill, with permission from the Environment Agency)

fire, with a heat-resisting (intumescent) seal bonding the plate to the concrete. Typical plating over and repair details are provided in Chapter 12.

Adjacent wall panels should be orientated such that differential movement caused by thermal expansion during a fire will not cause bursting at the joints. All joints should be fully dowelled and establishing if they have been installed should be included as part of the investigation of the structural strength of the wall. However, it is likely to require an intrusive investigation on at least a sample of joints. Details of appropriate joint details are provided in Appendix A5.

The main function of the sealant is to keep stones out of the joint, so that when it expands thermally, the stones do not spall the edges and stop the joint closing. Their secondary function is to restrict ingress or egress of liquids, but cannot be guaranteed to stop them.

Where waterstops have not been provided, or it is not possible to determine if they were installed during construction, consideration should be given to upgrading the waterproofing at joints. In its simplest form this might involve plating over the joints with sheet steel, anchored to the concrete with provision for thermal expansion, and where there is the risk of

Figure 5.12
A joint that has failed due to thermal expansion because of inadequate dowel provision across the joint. Note also that the tie bolt holes at the foot of the wall also leaked during the incident (courtesy CH2M Hill, with permission from the Environment Agency)

Figure 5.13 A kicker joint (note the use of hydrophilic sealants is not recommend)

Note the pipe is bearing on the formed hole such that the infill concrete or mortar beneath will not form an adequate seal. In addition there is no puddle flange on the pipe.

Figure 5.14 A retrospectively installed pipe penetration. (courtesy CH2M Hill, with permission from the Environment Agency)

Kicker joints where the wall has not been properly tied into the foundation are also one of the main areas for potential failure. Checking for continuity of reinforcement across this joint should be included in the structural investigation. Honeycombing of the concrete is a common problem at the kicker due to poor compaction, and the concrete should be carefully inspected for this defect at this location for signs of leakage, dampness or lime staining.

The typical components of a reinforced concrete wall are shown in Appendix A6.

5.6.2 Penetrations through the containment

The location of all penetrations through the containment should be noted. It is important that each one of these should be tested for watertightness (see Section 5.7.3).

Particular attention should be paid to any grouted-up tie-bolt holes, or sealing of old pipes, cable duct etc. These have been shown to be a particular source of weakness, although they might be difficult to locate on older structures, or where a coating has been applied.

The means of sealing the penetration through the wall is important, as during a fire the seal can fail either because of the high temperatures, or significant loads that can develop due to differential movement where the pipe is anchored by a puddle flange or similar. Advice on sealing pipework, ducts and other penetrations through bund walls is provided in Section 12.7.

Penetrations through a containment wall (apart from overflows in the 'freeboard zone') should be avoided where possible. Those that are necessary should be constructed in accordance with the details provided in Chapter 7.

Where penetrations have been made in existing containment walls, the key issues are the suitability of the waterproofing and provision for movement in the event of a fire. Examples of potentially problematic installations include:

- pipes in over-sized holes
- pipes in over-sized holes with (flammable) gaiters
- pipes cast into the wall that expand and cause the concrete to fail because it is not reinforced and properly tied in
- pipes that have no puddle flanges or have inappropriate flange spacing.

The survey of the facility should include details of all the penetrations and, where possible, details of how they have been installed in the containment wall.

*Figure 5.15
Over time, sealants will detach from the sides of joints and must be regularly inspected and replaced (courtesy CH2M Hill, with permission from the Environment Agency)*

5.7 IN-SERVICE PERFORMANCE

5.7.1 Details of any linings/coating to the containment

Linings to earth bunds are discussed in Section 5.5.6.

Where possible, the details of any protective coating that have been applied to concrete and blockwork walls should be established.

If no details are available and there are no obvious signs of coatings having been applied (penetrative coatings for instance may not be visible) then it should be assumed that none have been applied.

Some surface coatings can have a service life as little as two years. However, if no records are available and the coating is older than two years it should be treated as ineffective, unless its integrity can be demonstrated.

It should be noted that rendering a blockwork wall does not make it suitable for providing class 2 or class 3 containment. Blockwork walls or rendered blockwork walls in class 2 or class 3 situations should either be replaced, or alternative measures put in place such as tertiary containment to reduce risk sufficiently to satisfy the law.

5.7.2 *In situ* load testing

An alternative to confirming the structural strength of a blockwork or reinforced concrete wall through detailed investigation is to complete an *in situ* load test. This requires applying a horizontal force to the wall equivalent to the full hydrostatic pressure plus any dynamic forces that could occur, and monitoring the wall for signs of movement or the development of cracks.

5.7.3 Watertightness

Testing watertightness on anything other than a small bund is likely to be problematic due to the volumes of water required, its subsequent disposal and the ability to detect very small drops in water level attributable to leakage (see Section 6.3.7).

One of the most vulnerable locations for leakage other than at joints is it at the kicker joint. Where rainwater regularly accumulates within a bund, tell-tale signs of leakage at the kicker joints are sometimes apparent on the outside face of the wall.

So, as a minimum, joints and bund penetrations should be tested for watertightness using a local 'limpet dam' or similar. For class 3 containment, a selection of wall panels should be tested in addition to the joints.

Advice on leakage testing joints and wall panels should be sought from a specialist contractor.

5.7.4 Containment tanks

Tanks used to provide secondary or tertiary containment should be inspected at regular intervals informed by manufacturer's recommendations and a risk assessment.

Where it is not possible to visually assess signs of leakage (such as for tanks constructed off the ground) and detection monitoring is not installed, periodic watertightness tests should be completed (see Section 6.3.2).

Items subject to deterioration should have particularly detailed inspections and regular maintenance including:

- welded joints
- bolted and riveted joints
- joint sealants
- laps and seams
- tank bottoms (if accessible)
- protective coatings
- pipe and other connections
- valves
- access hatches
- surfaces subject to corrosion by weathering or aggressive attack.

Welded joints corrode more rapidly than the parent metal, particularly at the base of tanks and at positions subject to exposure and aggressive conditions. Ultrasonic and X-ray techniques can test weld integrity. Site welding repairs must be carried out to the same standard as the original tank specification. Advice on integrity testing of containment tanks can be found in EEMUA (2003).

5.7.5 Leak detection systems (if installed)

Where installed, advice on testing leak detection systems should be sought from the manufacturer and/or installer. An overview of leak detection systems is provided in Section 8.12.

Case study 5.2

A baseline study: compliance and options assessment – bulk fuel tanks and bunds, UK

A tank farm terminal in the north-west of the UK provided storage for around 50 000 tonnes of gasoline, fuel oil and other petroleum products. The CA required that as the site had 'in-scope' gasoline tanks the installation should update their major accident prevention measures with a risk assessment (RA) and assess compliance against the minimum standards for primary, secondary and tertiary containment.

The operator commissioned a consultant to:

- identify representative (credible) release scenarios and complete the RA
- assess compliance of plant, equipment and containment measures against current guidance (HSE, 2009a), CA (2008a) and CIRIA R164)
- identify options for enhancing and upgrading the containment
- implement operational and management (O&M) improvement measures.

The RA required the development of a conceptual source-pathway-receptor model. Sources and release volumes were determined from an assessment of foreseeable (credible) release events. The principal pathway was identified as site drainage and receptors identified through an assessment of the environment setting of the site.

The scope of the compliance and options assessment included:

- primary containment and equipment including tanks, pipelines, flow lines, vent systems etc
- secondary containment comprising the earth bunding to bulk tanks, concrete and masonry bunds to the biofuels and additives tanks and kerbing to the yard, equipment and transfers areas
- tertiary containment including infrastructure drainage, sumps and interceptors, bypass and overspill lagoons, attenuation areas etc
- an asset register was developed for the primary, secondary and tertiary containment based on an examination of engineering drawings and maintenance records together with a site inspection to identify all tanks and equipment. O&M controls were also examined
- the review of the secondary containment highlighted several construction issues, including the use of non fire-resistant mastics in joints. Inspection of the earth bund walls and floor indicated that they generally met with surge and impermeability requirements, however, settlement had compromised bund capacity. A remedial works plan was therefore developed and agreed with the CA to enhance the bund arrangements
- the assessment of the tertiary containment included a review of CCTV surveys and drainage plans and calculation of the required a site-wide containment capacity. The tertiary containment capacity was found to be inadequate for several of the credible scenarios considered. The remedial works plan included measures to enhance tertiary containment arrangements.

5.8 GAP ANALYSIS

The primary aim of the baseline asset survey should be to identify any defects or issues with the secondary containment that would render it ineffective irrespective of class. These defects should be addressed using risk-based prioritisation, or alternative measures put in place, such as tertiary containment, to reduce the risk sufficiently to satisfy the law.

By comparing the results of the baseline asset survey with the specific recommendations for the design and construction of containment systems discussed in Part 3 of this guide, the class of containment provided by the existing installation can be determined.

The class of the existing installation can then be compared to the class required by the risk assessment completed following the guidance in Chapter 2. Should the class of the existing containment fall short of that required by the risk analysis, a gap analysis should be completed to identify the particular shortcomings. Chapter 12 provides advice on the repair and upgrading of existing installations.

Where practicable, these shortcomings should be addressed. However, if it is not considered practical then alternative measures should put in place such as tertiary containment to reduce the risk sufficiently to satisfy the law.

5.9 KEY RECOMMENDATIONS

The key recommendations drawn from this chapter are summarised in Table 5.1.

Table 5.1 **Key recommendations**

Duty holders should prepare an appropriate inspection and maintenance regime for their facilities.
Where one does not exist, each containment facility should be classified using the methodology set out in Chapter 2 of this guide. The classification should be reviewed at least once every five years, or where: <ul style="list-style-type: none">■ there are any modifications made to the primary or secondary containment■ the volume of material in the primary containment is increased■ the nature of the material in the primary containment is changed.
A baseline asset survey of each secondary containment facility should be completed to enable the class to be determined.
A gap analysis should be completed to highlight any shortcomings with the existing secondary containment facility compared to the class required by the use. Where practicable, these shortcomings should be addressed. However, if it is not considered practical then alternative measures should put in place such as tertiary containment to reduce the risk sufficiently to satisfy the law.

6 Introduction to bunds

This chapter provides:

- A definition of a bund (Section 6.1)
- A general overview of design and performance requirements for a bund (Section 6.2)
- Advice on design issues (Section 6.3)
- A summary of general arrangement recommendations (Section 6.4)

6.1 DEFINITION OF BUND

The definition of the term ‘bund’ in the context of this guide is provided in Section 3.2.

“a facility (including walls and a base) built around an area where potentially polluting materials are handled, processed or stored, for the purposes of containing any unintended escape of material from that area until such time as remedial action can be taken. Bunds are usually structurally independent from the primary containment tank”.

As discussed in Chapter 3, the site-wide containment has to retain not just the content of the primary containment but rainfall and, where potentially flammable materials are present firefighting, and cooling water and firefighting foam. These products have to be retained for a minimum of eight days and in some circumstances a considerable period longer while arrangements are made for disposal.

In some sectors of industry the term ‘catchpit’ is used in place of bund. It implies, generally, a small facility, however, as this guide deals with all sizes of facility from small to very large, the term bund is used throughout.

Bunds may be used in a number of different situations, providing local secondary containment at, for example, IBC/drum stores, a small single tank installation, extensive tank farms (see Figure 6.1) and large chemical processing plants. In general where used to provide local containment, bund walls tend to be low in relation to the height of the primary container and for reasons of jetting (see below) and surge (see Section 4.4) there is ideally a large clearance between the two.

Figure 6.1 A bunded tank farm (courtesy Steve Flynn, Rawell Environmental Ltd)

An alternative form of bund, commonly termed a collar bund, is shown in Figure 6.2. Full height collar bunds are built close to the primary vessel, with a height equal to the maximum storage depth of liquid in the primary vessel. Three-quarter collar bunds are not as high but the gap between them and the primary vessel is larger. These are also referred to as ‘cup-tanks’ and are referenced in European Commission (2006). As the annulus between primary and secondary containment is likely to constitute a confined space, a particular issue with collar bunds is that it makes it difficult to inspect the primary containment and visually inspect for signs of leakage. However, detection systems can be installed to monitor for leakage.

It should be noted that while collar bunds may appear similar to double skinned tanks, they differ in that the ‘bund’ element is structurally independent from the primary containment. This is not the case for double skinned tanks and for this reason the second skin of the double skinned tank is not considered to provide secondary containment.

However, where class 1 containment is required, the range of products marketed as ‘integrally bundled tanks’ may be appropriate subject to meeting the requirements set out in Section 7.4.1.

Figure 6.2 Collar bunds

Bunds can also be used in linear form to protect against leaks from pipework. For pipework laid below ground the bund normally takes the form of a covered channel or culvert (although below-ground pipework should be avoided where possible). They can also be used to protect against the failure of primary containment within buildings. The recommendations presented in this section are applicable to each of these situations.

6.2 OVERVIEW OF DESIGN AND PERFORMANCE REQUIREMENTS

This section provides a general overview of the performance requirements for bunds and introduces a number of key design and construction considerations.

The design recommendations differentiate between containment classes 1, 2 and 3, as defined in Chapter 2, by specifying a range of structural design standards and physical arrangements to permit effective performance and monitoring specific to each class.

Specific design and performance criteria for various forms of bund construction are provided Chapters 7 to 9 (see Table 6.1).

Table 6.1 *Forms of bund construction*

Type of construction	Chapter
<i>In situ</i> reinforced concrete and masonry bunds	7
Earth banked containment basins (lagoons), earth bunds and earth floors	8
Secondary containment tanks	9

In general bunds provide a passive defence against escape of pollutant in that they do not require operator intervention in the event of failure of the primary containment. For this reason they are usually seen as the first line of defence against pollution, frequently in combination with remote secondary or tertiary containment systems (see Section 3.2). However, active intervention may be required during some incidents. This may involve managing cooling and firefighting water.

Bunds provide visible protection, which may be both an advantage and a disadvantage. Visibility is an advantage in so far as a bund's superficial condition and fitness for purpose (or alternatively, defects) will be readily apparent. The physical presence of a bund is also a constant reminder to operatives that hazardous or polluting materials are present. However, visibility is a disadvantage in that it can lead to a false sense of security, resulting in the view that other protective measures, including safety and environmental management procedures, need not be taken seriously. For example, small but important changes that could affect the performance of the bund during an incident (breakdown of seals, widening of cracks in winter etc) may go unnoticed on a day to day basis by operations staff.

The monitoring and maintenance of bunds may sometimes be overlooked. However, they should be considered as important assets and a fundamental part of the overall process infrastructure with an inspection and maintenance regime to match. Advice on appropriate inspection and maintenance regimes is provided in Chapter 5.

The Buncefield incident in December 2005 highlighted many shortcomings with the design and construction of the secondary containment facilities at the site that failed leading to a MATTE. The subsequent HSE (2011) report contained a number of recommendations for the design and construction of secondary and tertiary containment that have been reflected in this guide.

The recommendations in this section relate equally to the maintenance, extension and modification of an existing bund as well as the construction of a new containment facility.

In summary, bunds should be designed and constructed to comply with a number of performance criteria that should take into account all credible:

- modes of escape of pollutant from the primary storage vessel
- modes of failure of the bund
- incident scenarios
- loadings
- chemical and physical exposure (particularly fire).

These are discussed in Section 6.3 and summarised in Box 6.8.

Most of the good practice recommendations described in Part 3 apply equally to all classes of containment with restrictions or enhancements for the higher risk classes. Table 6.2 provides an indication of the nature of the different requirements, although it is important that the reader is aware of the context in which they are made, and should refer to the relevant sections in Part 3 of this guide.

Table 6.2 Summary of key design recommendations

Design Issue	Section	Comments
Chapter 4 Containment system capacity		
Fire duration	Box 4.1	All classes
Local secondary containment	4.2.1	All classes
Site-wide capacity	4.3	All classes
Chapter 6 Introduction to bunds (see also Boxes 6.6 and 6.7)		
Height of wall	6.3.1	All classes
Freeboard	Box 6.2	All classes
Proximity to bund wall	6.3.1	Only a consideration for class 2 and class 3
Jetting	6.3.1 and Box 6.3	Only a consideration for class 2 and class 3
Leakage detection from primary containment vessel	6.3.2	Only a consideration for class 3 where primary containment vessel rests on bund floor
Drainage from bunds	6.3.2	No provision for gravity drainage should be made for class 2 and class 3
Pipework	6.3.3	No penetration of the bund wall should be permitted for class 2 and class 3
Impermeability testing	6.3.7	Leak testing of all joints and penetrations upon completion of construction works a requirement of class 2 and class 3
Structural independence	6.3.10	All classes although integrally banded tanks may be suitable for class 1
Chapter 7 In situ reinforced concrete and masonry bunds		
Competence	7.2.1	Design and construction should be completed by competent personnel
<i>In situ</i> reinforced concrete bunds	7.2.2	Design EN 1992-3:2006 as liquid containing and retaining structure
Joints	7.2.4	Waterbars to be installed in expansions and contraction joints and be resistant to attack by inventory and fire resistant where flammable inventory is stored
Kicker joints	7.2.4	Waterbars installed in kicker joints for class 2 and class 3
Reinforced masonry bunds	7.3.1	Only suitable for class 1 and where inventory is not flammable
Chapter 8 Earth banked containment basins (lagoons), earth bunds and earth floors		
Competence	8.1	Design and construction should be completed by competent personnel
Site investigation	8.1	Detailed site investigation required for all classes to BS EN 1997-2:2007
Design	8.1	Design to be in accordance with BS EN 1997-1:2004
Maximum permeability of soils used for earth embankment construction	8.2.1	$1 \times 10^{-9} \text{ ms}^{-1}$
Earth floors to bunds and lagoons	8.2.1	Equivalent of 1 m depth of soil with a maximum permeability of $1 \times 10^{-9} \text{ ms}^{-1}$
Liner	8.3	Required for class 2 and class 3 unless a significant depth of <i>in situ</i> low permeability soil is present in which case this may be relaxed in consultation with the regulator
Leak detection	8.3	Required for class 3 unless a significant depth of <i>in situ</i> low permeability soil is present in which case this may be relaxed in consultation with the regulator
Chapter 9 Containment tanks (see also Tables 9.1 and 9.2)		
Leak detection	6.3.2	For class 3 leakage detection where tank rests directly on the ground
Chapter 10 Transfer systems (see also Table 10.1)		
Catchment surfacing	10.4	Resistant to inventory and fire plus additional redundancy for higher classes
Catchment construction	10.5	Number of options available including soils, paving, concrete slabs and asphalt and dense bitumen macadam
Transfer system capacity	10.4	Designed to cater for flows arising from a credible scenario

Table 6.2 Summary of key design recommendations (contd)

Pipework and channels	10.4	Designed to be liquid tight and resistant to inventory. Material suitability
Dual purpose systems	10.4	Surface water drainage system should not be used a part of the transfer system
Pumps	10.4	Where the transfer system is reliant on pumping, provision for failure
Monitoring systems	10.4	CCTV surveillance of above ground pipe networks, flow metering of pipe runs, alarm systems and other forms of remote monitoring
Chapter 11 Sacrificial areas and temporary containment		
Sacrificial areas and temporary containment	11.1	Used only as means of mitigating the failure of secondary containment, rather than a replacement for it

6.3 DESIGN CONSIDERATIONS

6.3.1 General arrangement

This section provides:

- bund shape and compartmentation
- height of bund walls
- proximity to primary storage
- jetting.

Bund shape and compartmentation

The shape of a bund should be kept as simple as possible, taking operability requirements into consideration. Complicated footprint shapes tend to lead to difficult structural detailing at corners with a consequent increased risk of failure. The footprint area will be determined by the assessed capacity requirement for the bund discussed in Chapter 4 together with any height limitations for the bund wall. In some circumstances it may be preferable to provide a larger bunded area than the capacity requirement dictates, simply to avoid complicated detailing.

Compartmentation of large bunds (eg bunds around tank farms) into smaller areas means that minor spillages from the primary containment may be confined to a relatively small area, typically the immediate vicinity of a leaking tank. This has several advantages including:

- separation and handling of contents
- a reduction in the risk of escape of polluting material from the bund (because the area it occupies is smaller)
- easier recovery of the material from the bund, and less contamination of that material
- fire control and making the recirculation of firefighting or cooling water easier (greater depth for pick-up for a given volume of water)
- a reduction in the risk of damage to neighbouring tanks and facilities
- maintaining reserve capacity while emptying or during maintenance works.

A typical example of compartmentation is shown in Figure 6.3.

Figure 6.3
A compartmentalised bund (courtesy Seaman Corporation)

It is not necessary for the dividing walls in a bund to be impermeable to the same extent as the bund walls. If the compartmentation is to be designed to be effective during a major incident, the dividing walls should clearly be strong enough to withstand a full hydrostatic head of liquid and surge loads. Care should be taken to ensure that the dividing walls do not compromise the integrity of the bund floor.

Making the height of dividing walls lower than the perimeter walls provides a further level of protection, allowing full bunds to overflow into adjacent compartments.

Height of bund walls

A bund wall should be high enough to retain the contents of the primary storage, with appropriate allowances for rainwater and firefighting water (see Chapter 4). In addition, ‘fixed’ freeboard allowance for firefighting foam and for surge should be provided. These are summarised in Table 6.3.

Table 6.3 Freeboard allowances

Minimum allowance for firefighting agents (foam)	100 mm
Plus surge allowance (in the absence of detailed analysis) for:	
■ <i>in situ</i> reinforced concrete and blockwork bunds	250 mm
■ secondary containment tanks	250 mm
■ earthwork bunds	750 mm

While these considerations dictate the minimum wall height, there are a number of considerations that should be taken into account in deciding the maximum height. Generally bund walls should not exceed 1.5 m in height to:

- enable visual inspection of the bund walls and floor
- facilitate firefighting operations
- ensure relatively easy egress from a bunded area in the event of an emergency
- reduce the risk of the bunded area becoming a confined space by encouraging natural ventilation.

There will be circumstances where, for operational or conflicting safety reasons, it will be necessary for a bund wall to exceed 1.5 m high and in such cases a risk assessment should be completed and the HSE and, if appropriate, the Fire and Rescue Services consulted. It will be essential to provide adequate means of escape for personnel (eg steps or step irons) and to make deep bunds secure against unauthorised access (eg security fencing). The increased risks to operatives from denser than air hazardous vapour accumulations in deeper bunds should also be considered.

Where, due to the constraints on the maximum height of wall, it is not practical to accommodate for the effects of surge in the design of the local secondary containment, an alternative is to provide tertiary containment.

Clearly the height recommendation cannot be applied to collar bunds where the issues to do with firefighting, access by personnel and ventilation are very different and should be addressed specifically for each installation.

Proximity to primary storage

The greater the distance between a bund wall and the primary containment, the less is the risk of failure or bund overflow through:

- surge (see Section 4.4)
- a damaged bund wall falling onto and damaging primary containment (and vice versa)
- jetting.

Given the wide variability of sites, it is not possible to provide definitive recommendations on appropriate minimum distances. However, increasing the distance between the primary containment and the bund will require greater space on a site and can significantly increase the cost of construction.

For class 3 containment the bund wall should be situated so that no structure within the bund is closer to the wall than a distance equal to the structure's own height.

Jetting

The failure of a storage tank through, for example, a rupture or corrosion of the side wall, could result in the escape of a jet of liquid with sufficient force that it projects over the bund wall. This phenomenon is referred to as jetting.

The potential for failure through jetting is minimised by:

- keeping primary storage tanks as low as possible
- increasing the height of the bund wall
- building the bund wall as far away from the tank as necessary.

Box 6.1 provides a method for calculating the minimum height of a bund wall, or the minimum distance from a tank to a bund wall, to ensure that any discharge through jetting is contained within the bund.

Where it is not practical to locate the bund wall so as to contain jetting discharge, baffle plates can be installed.

For exceptionally high primary vessels where there is a risk of fire, following this guidance might result in limiting the effectiveness of firefighting due to the large distances from the bund wall to the vessel. The Fire and Rescue Services should be consulted on this matter.

Box 6.1 Method for calculating bund geometry to prevent jetting

For a small diameter sharp edged discharge orifice, it can be demonstrated that:

$$l^2 = 4 C_v^2 (z-h) (H-z)$$

where C_v = coefficient of velocity

In practice, $C_v \cong 0.99$. Assuming $C_v = 1$ leads to the conservative solution:

$$l^2 = [4(z-h)(H-z)]^{0.5}$$

For a given value of h , it may be shown the l is a maximum when:

$$z = 0.5H + 0.5h$$

which leads to the solution:

$$l_{max} = H-h$$

Figure 6.4 shows an example of an installation vulnerable to jetting failure.

Figure 6.4 Example of installation vulnerable to jetting of fuels over the bund wall (courtesy CH2M Hill, with permission from the Environment Agency)

6.3.2 Drainage and leakage detection

This section provides:

- arrangements for drainage within bunds
- detection of leakage from the primary storage vessel within bunds
- drainage from bunds.

Drainage within bunds

Drainage within a bund (or compartment where dividing walls are provided) should:

- collect any liquid that enters the bund (eg rainwater) and provide a means for it to be emptied
- drain spilled material away from the immediate vicinity of the primary tank to another part of the bund where it will be less of a hazard and easier to deal with. This is particularly relevant to larger multi-tank sites where flammable or volatile liquids are stored.

Within small bunds, the floor should be laid to a cross fall to prevent rainwater or leakage from the primary tank from ponding. A minimum fall of one per cent (1 in 100) is recommended as in practice it can be difficult to construct a bund floor to a shallower fall. A sump at a low point in the bund floor will facilitate emptying, but can make construction more difficult. Slot or channel drains across part or the whole width of the bunded area are an alternative to a single sump. These should be designed to be integral to the bund floor construction and not simply cut into an existing slab. Reinforcement cover should be maintained.

For extensive bunded areas it is not normally practicable to provide a fall across the whole site and, in any case, this would be undesirable since it could encourage the spread of escaped liquid. Where extensive bunded areas are compartmented, a sump can be incorporated within each compartment but care should be taken over its construction to ensure that it is not a potential source of leakage.

Where there is the potential for immiscible inventory to be collected in a sump (ie oils) there is a risk that it could be emulsified during pumping allowing it potentially to bypass any downstream interceptors. This should be considered in the design of the drainage disposal system.

Where sumps are provided, and especially if they are to be used to remove firefighting water during an incident, they should be accessible without having to enter the bund. In practice, therefore, sumps should be placed adjacent to bund walls, rather in the centre of the containment area.

Leakage detection from the primary containment

It is important to be able to detect if there is leakage from a primary storage vessel so that remedial action may be taken. If a tank is supported clear of the floor of a bund, any leakage should be relatively easy to detect. However, if the base of the tank rests directly on the bund floor, any leakage is likely to go undetected until there is enough to seep out from beneath the tank and form a visible accumulation in the banded area. Even then, the leakage could be mistaken in some circumstances for rainwater. Also, if there was a defect in the bund floor in the area beneath the primary tank, any leakage could escape to the environment without detection.

The installation of leak detection systems (see Section 8.12) is one of the additional measures that distinguish a class 3 containment from class 1 and class 2 and their installation should therefore be subject to a risk assessment. However, they should be installed in circumstances where there is insufficient clearance between the base of a primary containment and the bund floor to enable visible inspection for class 3 containment systems.

The design of systems for leakage detection from primary containment is outside the scope of this guide, however, some sources of guidance are provided in Box 6.2.

Box 6.2 Leakage detection guidance

- API (2005) *Welded storage tanks for oil storage*: details of a number of systems recommended by API (2005) are provided in Appendix A3)
- Appendix H of BS EN 14015 *Specification for the design and manufacture of site built, vertical, cylindrical, flat-bottomed, above ground, welded, steel tanks for the storage of liquids at ambient temperature and above*
- CDOIF (2013b) *CDOIF guidance – leak detection*: provides guidance on the detection of hydrocarbons following the failure of primary containment)

Inventory (wet stock) reconciliation may also provide a means of detecting leakage. However, reliance on this method of leakage detection should be discussed and agreed with the regulator.

Drainage from bunds

Bunds should not be equipped with means for gravity discharge, even if lockable valves are provided, unless the bund is part of a larger combined system (see Section 3.2) designed to the same class as the bund itself.

Provision should be made to empty rainwater and other liquids from bunds using mobile or fixed pumps.

As it is likely that any rainwater in a bund will become contaminated, unless it is to be drained to an on-site treatment works, or discharged with the appropriate consent to a trade effluent sewer, it should be routinely sampled and analysed so that it may be disposed of in an appropriate manner.

For this reason pumps should only be operated manually following a visual inspection of the bund contents, rather than relying on automatic starting triggered by interface probes (or similar) to detect pollution of accumulated rainwater.

6.3.3 Pipework and associated equipment

Piercing the walls or floor of a bund for pipework, ducts, control cable etc, introduces a source of potential leakage and, with the exception of overflow pipes, should be avoided unless there is no practical alternative.

Where practical, pipework should be routed over the top of the bund wall, rather than through it.

However, where penetrations cannot be avoided, careful detailing of the means of sealing these is essential. This is covered in Chapters 7 and 8 for *in situ* reinforced concrete and blockwork and earthwork bunds respectively.

Where bunds may be required to retain flammable liquids, which are less dense than water, they should incorporate syphon overflow arrangements. In the event of the bund capacity being exceeded (eg by firefighting water) these will prevent burning liquid spilling over and thereby spreading the fire to other parts of the site. In this situation the preferred option is to provide an aqueous phase removal system that does not require piercing the bund wall, however, where this is not possible, the piercing should be within the freeboard zone. The principle is illustrated in Figure 6.5.

Figure 6.5 Bund overflow arrangements to inhibit spread of fire (courtesy CH2M Hill, with permission from the Environment Agency)

Pipework, pumps, valves and associated equipment are frequently most vulnerable elements to failure and leakage. Where possible, this equipment should be located within the banded area such that the inventory would be contained in the event of failure. However, such equipment should be suitably ignition protected where it may need to operate in a flammable atmosphere and consideration should be given to operability.

An alternative may be to locate pumps in their own separate banded or contained area.

6.3.4 Capacity

Detailed guidance on calculating the required capacity of bunds is presented in Chapter 4.

6.3.5 Retention period

Any liquid that has collected in a bund following an incident should be removed as soon as possible to minimise the risk of subsequent leakage from the bund, or damage to the bund caused by aggressive materials that were part of the inventory.

Where an incident involves only an individual storage tank, or a discrete area of a plant, it may be possible to make provision for emptying the bund and the safe disposal of the contents within a few days. However, in the case of major incidents, emptying and disposal of the contents of a bund may take weeks, even months.

The duration over which the contents may have to be retained has particular implications for the selection of construction materials or the choice of protective coatings where aggressive materials are to be contained.

6.3.6 Impermeability

In most cases it is uneconomic to construct and maintain a bund to be completely impermeable or 'watertight' and the performance specification should ideally include recommended levels of impermeability. The impermeability of a bund is a function of the:

- intrinsic porosity of the material(s) used in its construction (eg concrete, earth, steel)
- way in which the bund is designed and constructed or fabricated using those materials.

However, it would be impracticable to build a bund to a precisely specified level of impermeability and indeed to measure whether that impermeability had been achieved. Consequently, with the exception of soil structures, this guide does not include a performance criterion for impermeability, but prescribes instead a method specification, ie recommends methods of design and construction that if executed in accordance with the specification will result in an adequate level of impermeability.

In practice, where the concern is 'short-term' retention of liquids, it is normally the design detailing of the bund and workmanship during construction (honeycombing, cracks, joint sealing etc) that has the most significant impact on the permeability of the structure, rather than the porosity of the materials themselves.

For bunds that are prefabricated using steel sheet, or built *in situ* using concrete or masonry, adequate impermeability will be achieved provided they are designed and constructed in accordance with the relevant British Standards and codes of practice and the other recommendations given in Chapters 6, 7 and 8 of this guide.

6.3.7 Testing for leakage

For bunds up to 25 m³ capacity and constructed from concrete or masonry it is practical to test for leakage by filling with water using the following recommended methods:

- 1 On a dry day the bund should be filled to brimful capacity (ie until the bund begins to overflow) with water containing a marker dye.
- 2 The bund should be covered (to reduce evaporation) and left for six hours after which there should be no drop in the water level.
- 3 If the bund is found not to be watertight then the source of the leak should be identified and remedied.
- 4 The test should be repeated until the bund is found to be watertight.

However, this will only provide evidence of gross leakage as shown by the example in Box 6.3.

Box 6.3 Impermeability test calculation

- Assume a nominal bund 1.5 m high and 3 m by 5 m in plan area.
- The total internal surface area is 26.5 m².
- Assume a permeability of the walls and base to be $1 \times 10^{-9} \text{ ms}^{-1}$.
- The flow rate through the bund wall and base is $2.65 \times 10^{-8} \text{ m}^3\text{s}^{-1}$.
- Over a period of six hours the loss of water would be $5.72 \times 10^{-4} \text{ m}^3$.
- Over the 15 m² plan area the drop in level would be 0.04 mm and is not practically measurable.

For larger bunds, testing by filling with water becomes increasingly impractical in terms of dealing with both the supply and disposal of the quantity of water involved. However, testing of sections of bund can be completed by installation of a local dam.

Leak testing of all joints and wall penetrations should be completed for class 2 and class 3 bunds upon completion of the construction works.

6.3.8 Strength

Bunds, or proposed modifications to existing bunds, should be designed to withstand:

- The static and dynamic loads that would be exerted by the escape of liquid in the event of the failure of the primary containment.
- The weight of the primary containment when filled with liquid, and any other forces arising from

activities carried out within the bunded area, acting on the base of the bund. The primary storage vessel should not be supported on the bund walls, for example on joists spanning across the top of the walls, as the primary storage vessel and the bund would no longer be structurally independent. If the tank was supported in this way, any impact on the bund may have an adverse effect on it, possibly causing it to fall.

- External actions (for example vehicular impact against the wall).
- Wind loading. This is only likely to be a significant issue for taller (collar) bunds.
- Stresses induced by ground conditions, for example, differential settlement.
- Normal thermal and shrinkage movement of the wall itself.
- Expansion of any embedded components (eg penetrating pipes or other inserts in the wall, heated by solar gain or a fire).
- Additional thermal expansion arising from leakage of warm inventory into the bund and/or its subsequent ignition and burning for several hours.

These loadings and actions are considered below.

Hydrostatic loads

The hydrostatic load should be calculated using the specific gravity of the heaviest liquid that could enter the bund. However, the specific gravity should be taken as not less than 1.0, even where the contained liquid has a lower specific gravity. This is to allow for the possibility that a bund will be filled with firefighting or cooling water.

Depending on the nature of construction, primary storage vessels should be designed to resist floatation should the bund fill with water when they are empty. In some circumstances, it may be necessary to provide adequate foundation to the concrete bund to prevent floatation.

Hydrodynamic loads

The sudden failure of a primary liquid storage tank can result in a wave or surge of liquid across the bunded area. At the same time, because its mass is far less than its liquid contents, the ruptured tank could be propelled in the opposite direction to the main release. There are therefore two loading components to be considered:

- the hydrodynamic force of the wave of liquid hitting the bund wall
- the impact on the bund wall, and possibly other primary tanks, of debris from the ruptured primary tank.

These loads can be difficult to quantify (see Box 6.4).

Box 6.4 *Hydrodynamic forces*

Wilkinson (1991) has reviewed work on model experiments that predict peak hydrodynamic pressures of up to six times the hydrostatic head in collar bunds and later theoretical work that predicts three times hydrostatic head. The impact force of any debris from the damaged primary tank will clearly be heavily dependent on the form of construction of the primary container and the nature of the incident.

3D computational fluid dynamics is an evolving branch of fluid mechanics that may provide a solution to quantifying the hydrodynamic forces that can act on a bund wall following the catastrophic failure of the primary containment. However, the application of CFD in the design of containment systems is beyond the scope of this guide and specialist advice should be sought.

Due to the uncertainty with respect to hydrodynamic loading on shallow bunds, a pragmatic approach should be adopted by assuming that the hydrodynamic forces are taken into account. This can be achieved by designing the walls for a hydrostatic head calculated in relation to the bund height inclusive of the minimum freeboard of 250 mm for dynamic effects. For example, on a typical bund wall designed for 1.3 m depth of liquid, the inclusion of a 250 mm freeboard in the hydrostatic loading calculations results in an increase in pressure of 36 per cent and of 69 per cent in bending moment at the foot of a

wall (see Box 6.5). Where remote secondary and/or tertiary and/or combined containment is in place, ie sole reliance is not being placed on a local secondary bund, the consideration of hydrodynamic forces is less important. However, this is provided there is sufficient site-wide containment constructed to an appropriate class in place to deal with a failure due to hydrodynamic effects.

Box 6.5 Calculation of hydrodynamic loads on bund walls

Water from fire and rescue service hoses

The force of water issuing from fire brigade hoses is unlikely to be a significant issue except in the case of earth bunds where this might cause erosion. Earth bunds are considered in Chapter 8.

However, a number of the Fire and Rescue Services are now equipped with pumps that can operate at high pressure. The designer should confirm with the Fire and Rescue Service the equipment that is likely to be deployed during an incident.

External actions (impact etc)

Accidental impact damage from vehicles operating in the vicinity of the bund should be considered. If a risk assessment concludes that there is a significant likelihood that an impact could occur, it may be more appropriate to provide mitigation measures in the form of crash barriers, rather than accommodate in the design of the bund wall. However, crash barriers should not be secured to the bund wall.

Wind loading

Wind is unlikely to be a significant component of loading except for collar bunds, where the recommendations of EN 1991-1-4:2005+A1:2020 should be followed.

Collar bunds should be designed for a 50-year return period loading, making the assumption that the annular space between the primary tank and the bund is empty. Where the annular space is open to the atmosphere, particular attention should be paid to wind suction forces in accordance with the advice contained in BS 6399-2:1997.

Stresses induced by ground condition

Uneven ground bearing pressure can result in differential settlement, which may cause cracking and leakage in bunds. The risk of differential settlement should be assessed by a detailed ground investigation. Following construction, periodic checks should be made to check differential settlement

has not occurred. Advice on the inspection of existing facilities is provided in Chapter 5, and for on-site investigations in Chapter 8.

Shrinkage

Concrete will shrink inducing stress in the walls and slabs as part of the curing process, when temperatures drop, or when exposed to leakage of cold inventory. Catering for shrinkage in the design of concrete bund walls and slabs is considered in Section 7.2.3.

Expansion of embedded components

While not recommended by this guidance, it may be necessary to route pipework and other conduits through the bund wall. Guidance on ensuring a liquid-tight seal around a penetration is provided at Section 7.2.5). This may require the pipe or conduit to be rigidly fixed into the bund wall using a puddle flange or similar. Any loads induced in the pipe or conduit, such as thermal expansion during a fire, would therefore be transferred into the wall.

The potential loads imposed by pipes or conduits anchored into the bund wall should be accounted for in the structural design.

Thermal expansion

When exposed to heat such as from the leakage of warm inventory or a fire, bund walls will expand. Catering for expansion in the design of concrete bund walls and slabs is considered in Section 7.2.3.

6.3.9 Durability

A bund and all its components should have a design life of 50 years (although it may be appropriate to review the design life as part of the design process) and is capable of withstanding:

- 1 **Weather:** in most situations a bund wall will be exposed to the weather on both faces and should be designed accordingly. Where bunds are located on industrial sites where corrosive materials are handled, the effects of atmospheric corrosion should also be taken into account.
- 2 **Aggressive materials present in the ground:** the most frequent problem is with naturally occurring sulphates, which attack concrete. As a consequence of previous industrial use the ground may be contaminated with other materials, which are harmful to some construction materials. Ground conditions should be assessed as part of a detailed site investigation and appropriate precautions taken. For concrete in contact with the ground, it should be specified in accordance with BS 8500-1:2006+A1:2012
- 3 **Disturbance:** durability should include resistance to burrowing animals and tree roots.
- 4 **Abrasion:** floors of bunds may be subjected to traffic abrasion where materials are moved around within the bund. Heavily loaded fork lift trucks can be particularly damaging. Surface treatments and finishes should be designed accordingly. Where surfaces have become eroded, crack detection is much more difficult.
- 5 **Fire:** a bund and its components should be able to withstand the effects of a fire of the anticipated maximum duration and intensity, without collapsing or leaking. In the absence of any advice from the Fire and Rescue Service (see Box 4.1).
- 6 **Material that escapes from the primary storage:** a bund should be able to resist the damage from inventory that escape from the primary storage vessel, without collapsing or leaking, for the specified retention period (a minimum of eight days).

It should be noted that it is all components of the bund construction, including waterstops and joint fillers that should be durable and able to withstand the environmental factors. Recommendations for joints in bund walls and floors are provided in Chapter 7.

To achieve the required durability, it may be necessary to apply a surface protection system to the bund construction. Appendix A4 lists the chemical, fire and weathering resisting properties of a range of protective surface protection systems that are available for protecting concrete and masonry.

6.3.10 Structural independence

To ensure its effectiveness, a bund should be built so that it acts independently of the primary containment and other ancillary structures such as crash barriers etc.

Although, it is not possible to avoid altogether the risk that the failure of the primary container will affect the bund (eg it may simply fall on it), or vice versa, structural independence minimises that risk significantly.

6.3.11 Accessibility

Adequate accessibility is important for three reasons:

- 1 To permit visual monitoring for leakage from the primary containment.
- 2 To allow inspection of the inside face of the bund for signs of deterioration.
- 3 To facilitate maintenance of the bund.

A minimum clearance of 750 mm should be provided to allow access to the inside face of a bund wall, and 600 mm for access to the floor underneath the primary containment. However, larger storage tanks are usually built off a prepared base resting on the bund floor, so access to the bund floor is not possible. In such cases leakage detection measures should be installed to give early warning of leakage from the base of the primary tank. Details of leakage detection systems are given in Section 6.3.2.

Close proximity of the bund wall to the primary containment may render it a confined space, which would hinder regular inspection.

This is particularly important because it is this area of the bund floor that is often most heavily loaded and is therefore most vulnerable to failure. In the absence of leakage detection, chronic leakage through the base of the tank and through a cracked bund could go unnoticed.

6.4 SUMMARY OF GENERAL ARRANGEMENT RECOMMENDATIONS

Table 6.4 summarises the general performance criteria for bunds.

Table 6.4 Performance criteria for bunds

Aspect of performance	Criteria
General arrangement	Size and layout should take account of all credible modes of failure of primary containment.
Drainage and leakage detection	Gravity discharge arrangements from the bund should be avoided where possible unless part of a combined system (see Chapter 3). Leak detection is provided beneath primary containment where there is insufficient clearance to make visual inspections.
Pipework and associated equipment	Penetrations of bund walls avoided where possible. Overflow arrangements to draw off aqueous phase during an incident provided for potentially flammable inventory. Pumps, pipework, valves and associated equipment located within containment.
Capacity	See Chapter 4.
Retention period	Should be designed as a liquid retaining structure.

Table 6.4 Performance criteria for bunds (contd)

Impermeability	For earth structures: not less than the equivalent of 1 m depth of soil with a permeability coefficient of 1×10^{-9} m sec ⁻¹ . In addition lining systems may be required (see Chapter 7). All other forms of construction: 'watertight' or liquid retaining as defined by compliance with British Standards or other recognised standards appropriate to the form and/or materials of construction and containment class.
Strength	Capable of withstanding the static and dynamic loads associated with: <ul style="list-style-type: none"> ■ release of liquid from primary storage tanks ■ release of water from hoses during firefighting operations ■ wind. Bund floor to be capable of withstanding loads from activities within bunded area and the effects of differential settlement.
Durability	Capable of resisting the effects of weather, aggressive ground conditions and abrasion (in each case assuming a durability life of 50 years unless otherwise specified), fire and, depending on the primary storage inventory, corrosive materials (for the duration of the specified retention period).
Structural independence	Bund walls to be structurally independent from the primary containment. Where possible, bund walls to be supported independently from primary containment.
Accessibility	Walls and, where practicable, floors to be sufficiently accessible to permit inspection and for maintenance to be carried out. Where access to parts of the floor is not practicable (eg large tanks sited directly on the bund floor) provision should be made to detect any leakage through the base of primary containment.

Table 6.5 summarises the key performance recommendations for each class of containment.

Table 6.5 Summary of key performance recommendations by class

Recommendation	Containment class		
	Class 2	Class 2	Class 3
a Provide not less than 750 mm clearance between primary tank and bund walls for maintenance access.	Desirable	Recommended	Recommended
b System to detect leakage from primary tank in situations where not practicable to provide clearance between base of tank and bund.	Desirable	Desirable	Recommended
c No structure within bund to be closer than its own height to the bund wall.	Not necessary	Desirable	Recommended
d Pumps*, valves, couplings, delivery nozzles and other items associated with the operation of a primary container to be located inside the bund or within a separately bunded area.	Desirable	Recommended	Recommended
e Penetrations of the bund wall to be avoided.	Desirable	Recommended	Recommended
f No provision for rainwater draw-off via a valved outlet in bund wall.	Desirable	Recommended	Recommended
g Take account of possible jetting failure.	Desirable	Recommended	Recommended
h Take account of surge effects.	Desirable	Desirable	Recommended

Note

* pumps should be selected to be suitably ignition protected where they may need to operate in a flammable atmosphere.

7 *In situ* reinforced concrete and masonry bunds

This chapter provides:

- A brief introduction to *in situ* reinforced concrete and masonry bunds (Section 7.1)
- Advice on the design, detailing and construction of *in situ* reinforced concrete bunds (Section 7.2)
- Advice on the design, detailing and construction of *in situ* reinforced masonry bunds (Section 7.3)
- Advice on prefabricated bund construction (Section 7.4)

7.1 INTRODUCTION

This section gives general guidance on designing and building bunds using reinforced concrete and reinforced masonry. This guidance is equally applicable to the modification or extension of an existing bund as it is to the design and construction of a new facility

This guidance fills the gaps in current structural design code, BS EN 1992-3:2006, whose scope specifically excludes structures containing polluting materials.

The quality of design and construction is fundamental to the integrity of the containment system. It is therefore imperative that any designer, contractor or maintenance works operative engaged to construct, extend or modify a containment system is experienced in designing and constructing to the relevant class of containment. As a minimum, the parties should have a proven history of carrying out the relevant type of work.

All works need to be properly designed, whether it is the construction of a new or replacement bund, the extension or modification of an existing bund, or repair and maintenance work as set out in current standards.

7.2 *IN SITU* REINFORCED CONCRETE BUNDS

7.2.1 Introduction

Designing impermeable, durable and buildable bunds requires careful consideration of the way concrete as a material behaves. It is also important to consider how concrete structures react to loads, temperature changes, drying shrinkage determination due to local atmospheric conditions and differential movement of supports.

There is much general advice available on reinforced concrete structures and many professionals who are experienced in their design and construction. For this reason, this guide focuses on the important performance differences between what is ostensibly a reinforced concrete wall and a water-retaining containment bund that will need to retain liquids for long periods and, where flammable inventory is present, resist a fire.

The differences are to produce reinforced concrete that has specific detailing (eg at construction and movement joints), a narrower structural crack width (eg caused by shrinkage) and is durable.

It is for these reasons that the design of a bund, or modification or extension to an existing bund, should be completed by a competent person experienced in the particular performance requirements

of a containment system set out in this guide. Similarly, the works should be completed by a contractor familiar with the particular methods of construction and workmanship required to deliver a durable, watertight bund (ie designed as a liquid-retaining structure).

It is also good practice for the construction works to be independently verified (ie the works are supervised) to ensure what is built meets the owner/operator's objectives and complies with relevant guidelines and statutory duty (as applicable).

7.2.2 Design approach

Reinforced concrete bunds should be designed and built to comply with the requirements of BS EN 1992-3:2006 and specifically tightness class 1 for all classes of containment together with the specific additional requirements set out in this chapter.

BS EN 1992-3:2006 is concerned with liquid retaining and containment structures. However, where aggressive substances may be present, additional corrosion protection may need to be considered.

BS EN 1992-1-1:2004 provides guidance on the general design principles for reinforced concrete including designing for durability.

7.2.3 Crack control

To achieve an impermeable concrete structure requires cracking in the finished product to be controlled and the elements of the structure to be properly joined. There are two types of crack structural and non-structural, which are discussed in Section 7.1.

Adhering to the design codes will limit predicted structural cracking to acceptable limits. For BS EN 1992-3:2006 tightness class 1, these are specified as 0.2 mm where the ratio of hydrostatic pressure to thickness of the wall is less than or equal to 5 and 0.05 mm where the ratio exceeds 35. For intermediate values of this ratio linear interpolation may be used.

Non-structural cracking occurs in many structures due to:

- stresses due to applied loads
- thermal expansion or contraction
- shrinkage as the concrete dries, hardens and cures
- settlement of the concrete in its wet state
- poorly constructed daywork joints
- differential settlement of the underlying ground
- application of service loads before the concrete has fully cured.

Joints provide the greatest risk of failure, so their number should be minimised as far as is reasonably practicable by increasing the amount of reinforcement and thickness of the slab and walls. An alternative option to minimising the number of joints in floor slabs is to use steel fibre reinforced concrete, or low shrinkage concrete. Advice is provided by Concrete Society (2009a).

7.2.4 Joint detailing

'Movement joint' is the general term for joints intended to open and close. Movement joints intended to allow expansion are formed with a compressible foam spacer and movement joints intended to allow contraction are often formed with a crack inducer to permit shrinkage. There are also construction joints that are not intended to open (eg kicker joint).

The designer needs to consider long-term drying shrinkage movement, thermal movement (summer to winter) and risk of exceptional movement such as in the event of a fire. Movement during a fire can be

minimised through adopting a low thermal expansion design philosophy by, for example, specifying a limestone coarse aggregate.

Movement joints in walls should be formed with de-bonded dowels to prevent differential rotational movement and the failure of seals where there is a fire risk. If joints are provided in the angle of a corner, then when the wall expands in a fire, the thermal expansion can force the walls out of plane and once the fire is extinguished, the cooling, contracting wall may leave a large gap between wall sections.

To prevent out of plane movement during an incident, dowels should be provided across all joints:

- for **expansion joints**, these are de-bonded dowels
- for **contraction joints** and construction joints, the reinforcement is carried through the joint and acts as a dowel.

De-bonded dowels should be provided in base slab joints to prevent differential vertical movement between slabs when subjected to loading and during curing as these movements could put extra (unnecessary) stress on waterstops. Dowels are provided in walls for similar reasons but particularly in the event of a fire where substantial expansion is likely.

Typical joint details are provided in Appendix A5.

Waterstops should be installed within both expansion and contraction joints. Note that the waterstop should be resistant to attack from the primary inventory and where flammable materials are stored, are fire resistant. Stainless steel and/or copper waterstops can be manufactured for such situations as shown by Figure 7.1.

Notes

- 1 Fire retarding rope to be placed on both sides of an internal bund wall.
- 2 Waterstop, rope and fire resistant sealer to be omitted in bundwalls footings.
- 3 Stainless steel for waterbar to be grade 316 and 1.0 mm thick.

Figure 7.1 Stainless steel waterstop joint detail (from HSE, 2009a)

It should be noted that reinforced concrete walls are often constructed off ‘kickers’, which are construction joints at the base of the wall. Construction joints (the joint between different concrete pours where no movement joint is required) do not normally require waterstops provided the concrete is carefully scabbled and cleaned prior to casting the wall.

However for class 2 and class 3 bunds, waterstops should be included in the kicker joint (see also Section 7.2.12 on the suitability of waterstops).

7.2.5 Penetrations

Where penetrations through bund walls cannot be reasonably avoided, careful detailing is required to ensure they do not provide a leakage pathway during an incident. Large differential movements can occur during a fire and, if a pipe is restrained as it passes through the bund, the forces generated can cause the wall to fail.

An arrangement with a puddle flange cast into the wall inherently provides fire resistance and, if installed correctly, a watertight form of construction. In particular the flange should be adequately tied into the wall by ensuring the concrete is properly compacted around the flange and the reinforcement above the flange should be continuous to the top of the wall. As discussed, if this type of penetration is to be adopted then the potential loads imposed on the bund wall should be considered in the design.

An example puddle flange penetration detail is shown in Figure 7.2.

Figure 7.2 Example of a puddle flange penetration (from HSE, 2009a)

Where the pipe or duct is not tied into the wall, a sealed sleeve arrangement will be required to enable the annulus to be adequately sealed. Where potentially flammable inventory is to be stored, metal split fire protection plates should be installed to provide fire protection to the sealant.

An example penetration detail is shown in Figure 7.3.

Figure 7.3 Example wall penetration (from HSE, 2009a)

Penetrations through floor of the bund are **not** recommended.

7.2.6 Joint sealants

The sealant is not the primary means of waterproofing a joint, but is intended to assist and to keep debris out of joints. Surface sealing of joints is wholly inadequate for a liquid-retaining structure, as the seal will deteriorate and may fail under hydrostatic pressure or may burn in the event of a fire.

Careful specification and application of joint sealants is necessary to ensure the satisfactory performance of a bund. This is particularly important given the potentially aggressive environment within which they may have to perform, eg from interaction with the hazardous substances that they may need to contain when released from primary containment, or exposure to fire.

There is a wide variety of sealants available. While some are designed for general purpose applications others have been developed for very specialised and specific situations. Sealants differ in physical and chemical composition, methods of application, durability and cost. Guidance on sealant selection and application is given in BS EN ISO 11600:2003+A1:2011, BS 6213:2000 and CIRIA (1991).

To ensure satisfactory performance of sealants, the manufacturers' instructions should be followed closely.

It should be noted that sealants have a finite life and therefore the planned maintenance for the bund should include their replacement approximately every 10 years. Advice on the lifetime of the sealant should be sought from the manufacture. Any existing sealant will need to be raked out back to sound material, which is then cleaned thoroughly, primed and then new sealant applied.

7.2.7 Surface protection systems

Surface protection systems are discussed in Section 12.2.3.

7.2.8 Concrete production

Ready mixed concrete should be obtained from suppliers who are registered with the Quality Scheme for Ready Mix Concrete (QSRMC) (see *Websites* box at the end of this chapter). This provides a quality management system and product conformity certification for the design, production and supply of ready mixed concrete.

Batching should not be completed on site as it will not fall within the QSRMC unless it is a fully certified plant operation to BS EN ISO 9001:2008.

Concrete should be specified to BS EN 206-1:2000 and BS 8500-1:2006+A1:2012. In addition, the guidance of BS EN 1992-3:2006 should be allowed with respect to cement content requirements.

7.2.9 Shuttering and formwork

Shuttering for bund walls should be robust and adequately secured by means of braces and props. Avoid through-wall tie-bolt holes when constructing concrete bund walls, or where this is not possible, use proprietary 'leave-in-place' flanged or water-stopped versions (see Figure 7.4).

Figure 7.4 A 'leave in place' flanged tie bar

Formwork should be erected such that:

- any joints are impervious
- it will withstand the hydrostatic pressure of the fresh concrete
- it forms a seal against previous concrete construction (kickers etc).

This will prevent the loss of fines during casting that can lead to honeycombed, porous concrete.

7.2.10 Reinforcement fixing

Reinforcement should be fixed accurately and securely to prevent it being displaced while the concrete is being placed and compacted. Displacement can result in serious structural weakening and/or durability problems. For example, increasing the reinforcement cover compared to that designed can significantly reduce the structural strength of a wall in bending. Conversely, reducing the cover will lead to reduced protection to the reinforcement, so shortening their life by accelerating corrosion.

7.2.11 Slip membrane

A slip membrane of 1000-gauge polyethylene or similar material should be laid beneath bund floor slabs to:

- prevent loss of cement and fines from the concrete mix
- provide a smooth and regular slip surface to minimise resistance to thermal and shrinkage movements of the bund floor.

The membrane should be laid on minimum 50 mm sand blinding to prevent puncture by the underlying sub-base or formation. Adjacent sheets should be joined using either taped or double folded laps to make them waterproof. It should be noted that the membrane should not be considered a 'waterproof membrane' in terms of the containment system unless it is specifically designed to fulfil this role.

Where the bund floor is to be designed as a fully restrained slab (with no provision for movement around the perimeter), using a slip plane should be avoided. Instead, the bund floor should be cast on top of

a lean-mix concrete blinding laid on top of a prepared sub-grade without a polyethylene membrane to ensure the bund floor, blinding layer and subgrade act monolithically.

In general, the workmanship should follow the recommendations by Concrete Society (2009a).

7.2.12 Waterstops and joints

For waterstops to be effective, they should be positioned carefully, joined using the methods specified by the supplier and the concrete thoroughly compacted around them. A poorly installed waterstop can result in a greater leakage through a joint than if one had not been installed in the first place.

Hydrophilic waterstops are used widely in reinforced concrete construction. However, these should not be used for bunds as they do not work with non-aqueous liquids and are not particularly effective in conditions where the joint is generally dry, with only occasional aqueous wetting, as is the case with a bund wall or floor.

Note
The thickening of the edge of the slab for the ring beam

Figure 7.5 Waterstop tied into reinforcement cage at the kicker and rear face waterstops at the planned slab joints (courtesy H W Coates Ltd)

7.2.13 Concrete placing and compaction

The general advice contained in Concrete Society (2008) should be followed when placing and compacting concrete. It also provides advice in concreting in hot and cold weather.

It is essential that the concrete is thoroughly compacted to remove any air pockets and small air bubbles if the desired design strength, impermeability and durability of the bund are to be achieved. It is important also to avoid over-compaction, particularly in bund floor construction as this can lead to segregation.

The concrete should be placed as quickly as possible. Double-handling should be avoided to minimise segregation.

When casting slabs, the passage of wind over the surface will cause shrinkage that might lead to cracking and provision should be made to prevent this with wind breaks. Surfaces should be sheltered from direct hot sunlight with covers (eg polythene), which will also aid curing.

The concrete producer can add water to ensure the correct consistency is achieved, but once supplied, the contractor should not add any extra water to the mix and should ensure all forms are clean and free from standing water in them.

Walls should be cast full height (above the 'kicker' joint) in one pour to avoid horizontal joints that can provide a potential leakage path.

7.2.14 Concrete finishing

In most situations, bund floor slabs should be power float finished or finished with a vibrating beam/razorback and bull float to close surface pores and cracks. Consideration should also be given to a final finish with a broom to give a slight anti-slip texture.

7.2.15 Concrete curing

Immediately after compaction, concrete slabs and the cast tops of the walls should be covered with polythene, ideally a tent arrangement over slabs or with wet hessian covered by polythene sheeting. Alternatively a curing membrane may be applied. Over-rapid drying results in a poor-quality surface with reduced strength and durability and can lead to plastic shrinkage cracking (see Figure 7.6).

Figure 7.6 Plastic shrinkage cracks (courtesy Concrete Society)

Curing should be maintained for a period of seven days. For walls, formwork should be struck and then sheet protection such as polythene should be applied to cure the concrete effectively. Loading a slab before the concrete has fully cured can lead to deformation and cracking.

7.2.16 Typical reinforced concrete bund details

Typical details for a reinforced concrete bund are provided in Appendix A6. These are for illustrative purposes only and should not be used as the basis for a detailed containment bund design.

7.3 REINFORCED MASONRY BUNDS

7.3.1 Introduction

This section gives guidance on designing bunds using reinforced masonry (blockwork and brickwork). Unreinforced masonry should not be used for bund construction because of its susceptibility to thermal and shrinkage cracking and vulnerability to impact damage.

The use of reinforced blockwork should be restricted to bunds for class 1 containment only as, even if lined with waterproof render, it is unlikely to resist fire without significant thermal expansion, cracking and possible failure. Reinforced brickwork, other than grouted cavity construction should not be used for bunds.

Blockwork bund walls should be designed in accordance with BS EN 1996-1-1:2005+A1:2012.

7.3.2 Forms of construction

Forms of masonry wall construction are set out in Table 7.1 and typical details for a reinforced masonry bund are provided in Appendix A8. These are for illustrative purposes only and should not be used as the basis for a detailed containment bund design.

Given the relatively large amount of thermal and drying shrinkage movement that occurs in blockwork walls it is necessary to incorporate movement joints with waterstops at approximately six metre intervals. Such movement joints are very difficult to seal effectively and blockwork should not be used for any class of bund other than for small bunds, ie where the walls will be less than six metres long.

The inside face of a blockwork bund should be rendered with a sand/cement render. Further protective coatings may then be required depending on the material stored in the primary containment.

Table 7.1 Forms of masonry wall construction (for class 1 only unless otherwise stated)

Form of construction		Suitability for bund wall construction
a	Structural concrete blockwork with vertical reinforcement in filled cores.	Susceptible to thermal and drying shrinkage.
b	Concrete blockwork used as facing skin or cladding for reinforced concrete bund wall.	Suitable for all classes provided that the reinforced concrete wall is properly designed and constructed. Provides protection to concrete in the event of fire.
c	Structural brickwork with reinforcement in bed joints only.	Should not be used. Insufficient strength to withstand lateral loads from liquid in the event of an incident. Poor resistance to impact damage. Susceptible to thermal and shrinkage cracking.
d	Brickwork as facing skin as in (b).	Suitable for all classes as (b).
e	Grouted cavity brickwork (brickwork acts as permanent shuttering for reinforced concrete (see Figure 7.7).	Suitable for all classes provided reinforced concrete in cavity is properly designed. Brickwork skin provides additional protection to concrete.
f	Pocket wall, Quetta bond wall and vertical slot walls in blockwork or brickwork (see Figure 7.7).	May be suitable subject to incorporation of sufficient reinforcement and provision of adequate concrete cover.

Figure 7.7 Composite masonry and concrete wall construction

7.4 PREFABRICATED BUNDS

7.4.1 Introduction

The performance criteria developed for bunds in this guide excludes double-skinned tanks on the grounds that the inner and outer containers, which make up the items, are structurally joined or interdependent. In general, these are primary tanks with a second 'skin' placed around it and a very small gap between the two.

However, where class 1 containment is required the range of products marketed ‘integrally bundled tanks’, are considered acceptable as long as they provide sufficient containment to comply with the capacity requirements set out in Chapter 4.

SEPA (2014) advises that:

“Some proprietary integrally bundled tank systems take the volume of the primary tank into account when calculating secondary containment capacity, and provide additional secondary containment capacity of less than 110 per cent of actual primary tank capacity. This is generally acceptable where, if there was a leak in the primary container, inventory could find its own level in both containers. In this instance the primary container contributes to the total containment capacity, which as long as it totals 110 per cent, will be acceptable.”

The construction of bunds or containment tanks with precast concrete segments (multi-straked tanks) is discussed at Section 9.2.8.

The following guidance is therefore concerned solely with prefabricated bunds that conform to the performance criteria set out in Box 6.8.

7.4.2 General description

A prefabricated bund is a prefabricated tank, usually constructed from steel or plastics, inside which the primary container is placed. One-piece prefabricated bunds are available in capacities up to 100 m³, with the maximum size usually being dictated by the difficulties in transportation.

Larger bunds may be constructed on site by joining together two or more prefabricated sections. A lid (or roof) may be provided to keep out rainwater.

7.4.3 Specification and procurement

Prefabricated tanks are manufactured items and their detailed design is outside the scope of this guide. The following information is limited to general guidance.

Prefabricated bunds should comply with the capacity recommendations given in Chapter 6. The requirement for access for inspection, or alternatively provision for leakage detection, are described earlier in this chapter.

Prefabricated tanks used as bunds should be designed in accordance with the relevant material structural codes to withstand the hydrostatic and hydrodynamic forces that would result from a failure of the primary containment. Where there are no relevant structural codes a prospective purchaser should require the supplier to provide evidence, in the form of independently certificated test results or analyses. This is to ensure that the product is capable of withstanding the forces resulting from a failure of the primary storage vessel (see Section 6.3.8) and can provide the service life required by the operator.

A prefabricated bund should not rely on a structural link with the primary tank for its stability.

7.5 INSTALLATION

The installation requirements for prefabricated bunds are product and site-specific. Suppliers should provide the necessary installation instructions to cover a specified range of site situations, and guidance on how to cater for site conditions that fall outside that range.

Installation instructions should cover at least the following aspects of delivery and installation:

- loading and unloading
- support requirements
- any ancillary protection requirements

- health and safety requirements and need for notices
- commissioning.

7.5.1 Testing

Where prefabricated bunds are constructed under factory-controlled conditions in accordance with an appropriate British Standard or code of practice (for example, BS 799-5:2010 for tank manufacture), testing for leakage should be in accordance with those standards or codes. Where this does not apply, or where the relevant standards or codes do not include provision for leakage testing, prefabricated bunds should be tested in the same manner as described for *in situ* bunds (Section 6.3.7).

7.5.2 Maintenance

The supplier of a prefabricated bund should provide full instructions on inspection and maintenance covering at least the following:

- details of any finishes or other protective measures to be applied at time of installation
- frequency of inspection
- preventative routine maintenance requirements
- damage repair.

Prefabricated bunds should be inspected regularly for signs of damage, deterioration or general wear, and to ensure that nothing has collected in unroofed or uncovered bunds to reduce their effective capacity.

8 Earth banked containment basins (lagoons), earth bunds and earth floors

This chapter provides:

- An introduction to earth bunds and lagoons (Section 8.1)
- Advice on appropriate design criteria for lagoons and earth bunds (Section 8.2)
- The measures that distinguish the three classes of construction for lagoons and earth bunds (Section 8.3)
- Determining the required capacity (with reference to Chapter 4) and siting of lagoons in relation to sensitive receptors (Sections 8.4 and 8.5)
- Advice on completing a ground investigation and the permeability requirements for lagoons and earth bunds (Sections 8.6 and 8.7)
- Advice on general design and construction issues, lining systems and anchorage and protection of liners, pipe entries through embankment walls and leakage detection systems (Sections 8.8 to 8.12)
- Advice on maintenance (Section 8.13)

8.1 INTRODUCTION

Where the site topography, land availability and the ground and soil conditions are suitable, earth embankments can provide a cost effective means of providing both local secondary containment (earth bunds) and remote secondary, tertiary or combined containment basins (lagoons) as shown by Figures 8.1 to 8.3. Bunds are also formed with concrete or masonry walls with earth floors.

Figure 8.1 Large earth embankment bund (in service) (courtesy Oil Spill Solutions Ltd)

Figure 8.2 Earth banked lagoons for 'local' containment

Figure 8.3 Earth banked lagoons for 'remote' containment

Earth bunds and lagoons may be constructed either above or below the surrounding ground level and formation level is often determined by the economic advantage of balancing cut and fill. Depending on the soil type, but particularly its impermeability and stability, and the environmental sensitivity of the site (resulting in a site classification – see Chapter 2), they may need to be lined using an impermeable membrane or other suitable liner.

It is expected that few sites will be able to rely on the use of *in situ* soils and it is more likely that soils will need to be imported and reworked, with or without admixtures, particularly where they are to be used for bund walls.

This chapter relates principally to the formation of containment systems from earth embankment sides with earth floors at existing ground level (bunds) or below ground level (often referred to as 'lagoons'). It also applies to the earth floor of a bund where the containment walls are formed in reinforced concrete or blockwork. Recommendations on reinforced concrete walls are provided in Chapter 7 and a typical construction detail is provided in Appendix A8.

This section sets out design criteria with the aim of achieving containment systems that are of an equivalent standard to those constructed using concrete and other conventional construction materials.

The properties of soils can vary significantly, both spatially, seasonally (or as a result of antecedent weather conditions) and over time. The permeability can vary by several orders of magnitude within a matter of metres for what may appear a homogeneous soil, and changes in moisture content can have a marked effect on stability and bearing capacity.

Earth bunds and earth floors should be designed in accordance with the requirements specified in BS EN 1997-1:2004 and the ground investigation executed in accordance with BS EN 1997-2:2007. A general introduction to Eurocode 7 is provided in Driscoll *et al* (2008).

BS EN 1997 explicitly states that appropriately qualified and experienced personnel are to provide the input data for geotechnical designs and that only they should carry out the design and ground investigations.

The variability and relative unpredictability of soil as a construction material, and the absence of recognised design standards, makes differentiation between classes 1, 2 and 3 of construction more difficult than it is with other forms of construction. A simple approach to classification has been adopted Section 8.3.

8.2 DESIGN CRITERIA FOR LAGOONS AND EARTH BUNDS

This section sets out appropriate design criteria and ways these should be satisfied. The essential requirements are an acceptable level of impermeability, stability and durability.

8.2.1 Soil permeability limits

It is not possible to achieve a completely impermeable soil structure and there will be some seepage from any unlined lagoon, however carefully constructed.

Based on industry guidelines drawn from the design of landfill containment systems, it is accepted good practice that a minimum one metre thickness of soil with a permeability of no greater than $1 \times 10^{-9} \text{ ms}^{-1}$ should be provided. This is particularly important beneath a tank or tank floor where any leakage may go undetected for extended periods. Further advice is provided in CA (2008b).

The same performance requirements could be achieved by providing a less thick layer of less permeable material.

Typical values for the permeability of soils are shown in Table 8.1 and it is evident from this that only soils with a high clay content will give the required level of impermeability. It should be noted that there are many instances of naturally occurring clays that do not meet this recommended performance requirement, or contain lenses or bands of higher permeability silts and sands.

Table 8.1 Permeability of soils by broad category

Soil type	Coefficient of permeability (ms^{-1})	Relative permeability
Coarse gravel	Exceeds 10^{-3}	High
Sand	10^{-3} to 10^{-7}	Medium to low
Silt	10^{-7} to 10^{-9}	Very low
Clay	Less than 10^{-9}	Impervious
Concrete (for comparison)	10^{-10} to 10^{-12}	Impervious

8.2.2 STABILITY

Lagoons and bund embankments should be designed and constructed to meet the following stability criteria:

- embankments to be accessible to, and capable of, withstanding the loads from machinery and vehicles used during maintenance and emptying operations
- embankments to remain stable during rapid drawdown and filling
- embankments to be capable of withstanding the erosion from heavy rainfall
- embankments to be capable of withstanding erosion by any firefighting water likely to be used in the event of an incident, or wave action due to wind
- no reliance should be placed on short-life (defined here as less than 20 years) impermeable liners to provide or improve embankment stability (unless the lifetime of the facility is less than 20 years)
- the design should include measures to prevent the actions of burrowing animals
- an appropriate factor of safety should be included. These are described in BS EN 1997-1:2004 as ‘partial factors’ and the choice of value depends on whether the particular parameter was directly observed (ie *in situ* or laboratory testing) or a characteristic value is being used.

8.2.3 Durability

Lagoons and earth bunds should be designed for a durability life of 20 years subject to normal routine maintenance. In assessing durability life, it should be assumed that the lagoon or earth bund remains empty for the whole period and that the earthworks and any lining systems incorporated in the works will be exposed to the weather.

Lagoons that form part of the site-wide containment (local secondary or tertiary – see Section 3.2) should not be used as permanent storage or for balancing purposes (unless for the recirculation of firefighting water) as this would reduce their effective capacity.

8.3 CLASSIFICATION OF CONTAINMENT

There are no British Standards or codes of practice that explicitly cover earth structures for retaining liquids, and therefore it is not possible to define the differences between class 1, class 2 and class 3 containment construction in terms of modifications to 'normal' standards.

However reference to BS EN 1997-1:2004 and BS 6031:2009 should be made in the planning, design and construction of the works. In particular Section 7 of BS 6031:2009 covers the design of earthworks and the stability of slopes.

Nevertheless, it is still important to try to differentiate between the classes to reflect the range of environmental sensitivities that exist and thereby ensure that the most appropriate measures are put in place at each site. This is discussed as follows.

Where the soil conditions are favourable, or can be engineered to be so, in general class 1 containment can be satisfactorily achieved by an unlined lagoon. However, extra precautions should be taken for class 2 and class 3 containment. For a class 2 lagoon the floor and banks should be lined with a suitable impermeable liner. For a class 3 lagoon, the same as class 2 plus a suitable leakage detection system (see Section 8.12) to allow periodic monitoring of the integrity of the containment.

These general requirements are illustrated in Figure 8.4.

However, in some circumstances, it may be possible to demonstrate that the risk can be reduced sufficiently to satisfy the law for class 2 and class 3 containment systems without the provision of a liner. This might be, for instance, when the site is underlain by several metres of homogeneous impermeable clay. This will be a matter for agreement with the regulator.

Figure 8.4 Classification of lagoons

It should be stressed that in all cases the ground and soil conditions should comply with the impermeability, stability and durability criteria set out previously. Where impermeable linings and leakage detection systems are required these are as an **additional** level of protection and **not** to compensate for inadequate ground and soil conditions.

8.4 CAPACITY

The capacity of a lagoon or earth bund should be calculated in accordance with the recommendations given in Chapter 4.

As noted in Section 4.4, the sloping internal face of an earth embankment has been shown to increase the risk of overtopping by surge, and that earth embankments are more prone to settlement and erosion than a concrete or blockwork bund wall.

Therefore a minimum freeboard of 750 mm should be provided for earth embankment bund walls (see Box 4.5).

8.5 LOCATION OF LAGOONS IN RELATION TO RECEPTORS

In the absence of specific controls governing the siting of containment lagoons (secondary or tertiary – see Section 3.2) in relation to watercourse or the sea and subject to obtaining the regulator's approval for a particular site, the requirements included in the Water Resources (Control of Pollution) (Silage, Slurry and Agricultural Fuel Oil) (England) (SSAFO) Regulations 2010 should be adopted. These are currently (2014) being revised.

Schedule 1, Regulation 6 states:

“No part of the silo, its effluent tank or channels or any associated pipes shall be situated within 10 metres of any inland or coastal waters which silage effluent could enter if it were to escape.”

In addition lagoons (see Section 3.2) should not be sited within 50 m of a borehole used to abstract water. Details of licenced abstractions can be obtained from the regulators.

8.6 GROUND INVESTIGATION

BS EN 1997-2:2007 makes compulsory the provision of a ground investigation report as part of the geotechnical design process. Such an investigation survey will normally involve a desk study, reconnaissance of the site and an investigation of the soils. The ground investigation should be managed by a suitably qualified person (normally a chartered geotechnical engineer).

8.6.1 Desk study

The importance of carrying out a thorough desk study in the early stages of planning the works cannot be overstated. A lagoon or earth banked bund may cover a large site area and it is essential that any features, which could affect performance, are identified. A study of maps and plans of the site, particularly older documents, and discussions with the local authority and local utility providers may reveal features, which are no longer apparent, such as infilled drains and wells, dried up streams and old building lines.

In mining areas, enquiries should be made to the Coal Authority about past and present mining operations and any existing, or predicted, problems with subsidence locally (see *Websites* box at the end of this chapter).

Geological maps and borehole records can be obtained from the British Geological Survey (see *Websites* box).

8.6.2 Site reconnaissance

Site reconnaissance entails a methodical physical inspection of the site to identify features that could cause construction difficulties or longer-term reliability problems.

Topography is an important factor, not only in terms of facilitating drainage into the lagoon or bund, and other operational considerations, but also in relation to the possibility of slope instability evidenced by sloping walls, trees and fences. This can occur on slopes as shallow as 1 in 10. Abrupt changes in local topography may indicate changes in ground conditions.

Vegetation is an important indicator of soil types and groundwater levels. Reeds and willows, for example, indicate a high water table (which could make a lined lagoon impracticable), whereas bracken and gorse usually indicate a well-drained soil with a low water table. As with topography, abrupt changes in vegetation may mean significant changes in ground characteristics.

8.6.3 Soils investigation

The two most important characteristics of the soil that govern whether *in situ* soil can be used (with or without modification, eg by incorporation of admixtures, or compaction) are:

- 1 **Permeability:** can a one metre thick layer of soil with a maximum permeability of $1 \times 10^{-9} \text{ ms}^{-1}$ be reasonably achieved?
- 2 **Stability:** the soil should remain stable under changing conditions (particularly moisture content changes) and, when formed into an embankment, meet the requirements of Section 7.2.2.

The physical properties of the soils are generally determined by the recovery of samples for laboratory testing as part of the ground investigation, although some testing is completed *in situ*. The ground investigation should be informed by the desk study and site reconnaissance to ensure that representative samples are obtained across the site. The design of the site investigation to include the location of boreholes and/or trial pits and the suite of *in situ* and laboratory testing required should be completed by competent personnel.

Assessing the suitability of soils to meet the characteristics requires interpretation of the ground investigation and laboratory testing data, and should also be completed by competent personnel.

8.7 SOIL PERMEABILITY

8.7.1 Permeability assessment

The permeability of the soils underlying the site should either be established *in situ* in accordance with BS 5930:1999 or by the laboratory testing of a sample in accordance with BS 1377-5:1990.

It should be noted that the testing methods recommended by these two British Standards are progressively being superseded by BS EN 1997-2:2007.

It will be important when designing the site investigation to ensure sufficient tests are completed to provide a representative estimate of the permeability across the site and for the full depth of soils, ie a minimum of one metre below the proposed floor level of the bund with samples taken at varying depths. Tests should be completed on the material that is to be used to form the walls and floor of the containment area.

Any exploratory holes excavated as part of the ground investigation should be reinstated to ensure they do not provide a potential pathway to groundwaters. Advice for sealing boreholes is provided in EA (2012).

Generally, experience has shown that the most suitable soils for constructing impermeable embankments and lagoons contains between 20 and 30 per cent clay, the remaining fraction being well-drained sand and gravel. Soils of this type are likely to remain stable even when subject to significant changes in moisture content. Soils with a clay content much below 20 per cent are likely to exceed the recommended permeability limit of $1 \times 10^{-9} \text{ ms}^{-1}$ whereas if the clay content is much higher than 30 per cent they are

likely to be difficult to form into a stable embankment and they will have a greater tendency to shrink and crack on drying. The clay content of a soil is determined from particle size distribution analysis completed in accordance with BS 1377-5:1990.

Where the permeability of the soil on site is found to be too high it may be possible, depending on the type of soil, to reduce it to a satisfactory level by consolidation or reworking, or by blending it with imported clay-rich soils or minerals such as bentonite.

8.7.2 Effect of soil consolidation

The impermeability (and shear strength) of a clay soil can be improved by consolidation. During consolidation, the voids between the particles in the soil mass are reduced in size, making it more difficult for water to percolate. The maximum density that can be achieved through consolidation is related to the moisture content of the soil and compactive effort applied. In practice the compactive effort relates to the type and weight of compaction machinery used, the thickness of the layers in which the soil is placed, and the number of passes of the compacting machinery.
