- 1.1.5 Thirty-two (32) dust monitors are installed around these worksites, where works are underway. These sites returned a medium dust risk rating.
- 1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1, together with line charts of monthly data from each dust monitor presented in Figure 8. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.
- 1.1.7 The trigger level for PM₁₀ concentrations of 190 µg/m³, measured as a 1-hour mean, in accordance with the updated guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (December 2018)*' has been applied.
- 1.1.8 No (0) dust trigger alerts were recorded during the monitoring period (April 2024).
- 1.1.9 Data capture was below 90% for multiple monitors due to the Grimms Ditch monitor having an internal hardware fault. Ellesborough Road monitor had a communication issue. Nash Lee Road and Nash Lee Lane was due to a lack of solar charge and battery faults. No data was recorded for Twyford due to a SD card error. The monitor was retrieved for repair on 17th April. Turweston North was reinstalled on 9th April 2024. CHStG-AQMP1 suffered an unknown failure on Mar 28th, and this was investigated on site on the 2nd of April, with data returning from 3rd April. Any sporadic loss of data can be attributed to technical issues and/or loss of power due to insufficient sunlight/wind for monitors using solar/wind power.
- 1.1.10 There were no (0) complaints received during the reporting period (April 2024).
