Influenza and COVID-19 Surveillance graphs

UKHSA publishes a national influenza and COVID-19 surveillance report which summarises the information from the surveillance systems which are used to monitor influenza, COVID-19, and other seasonal respiratory viruses in England.

Additional figures based on these surveillance systems are included in this slide set.

The figures presented in this slide set are based on data from week 32 (between 5 and 11 August 2024).
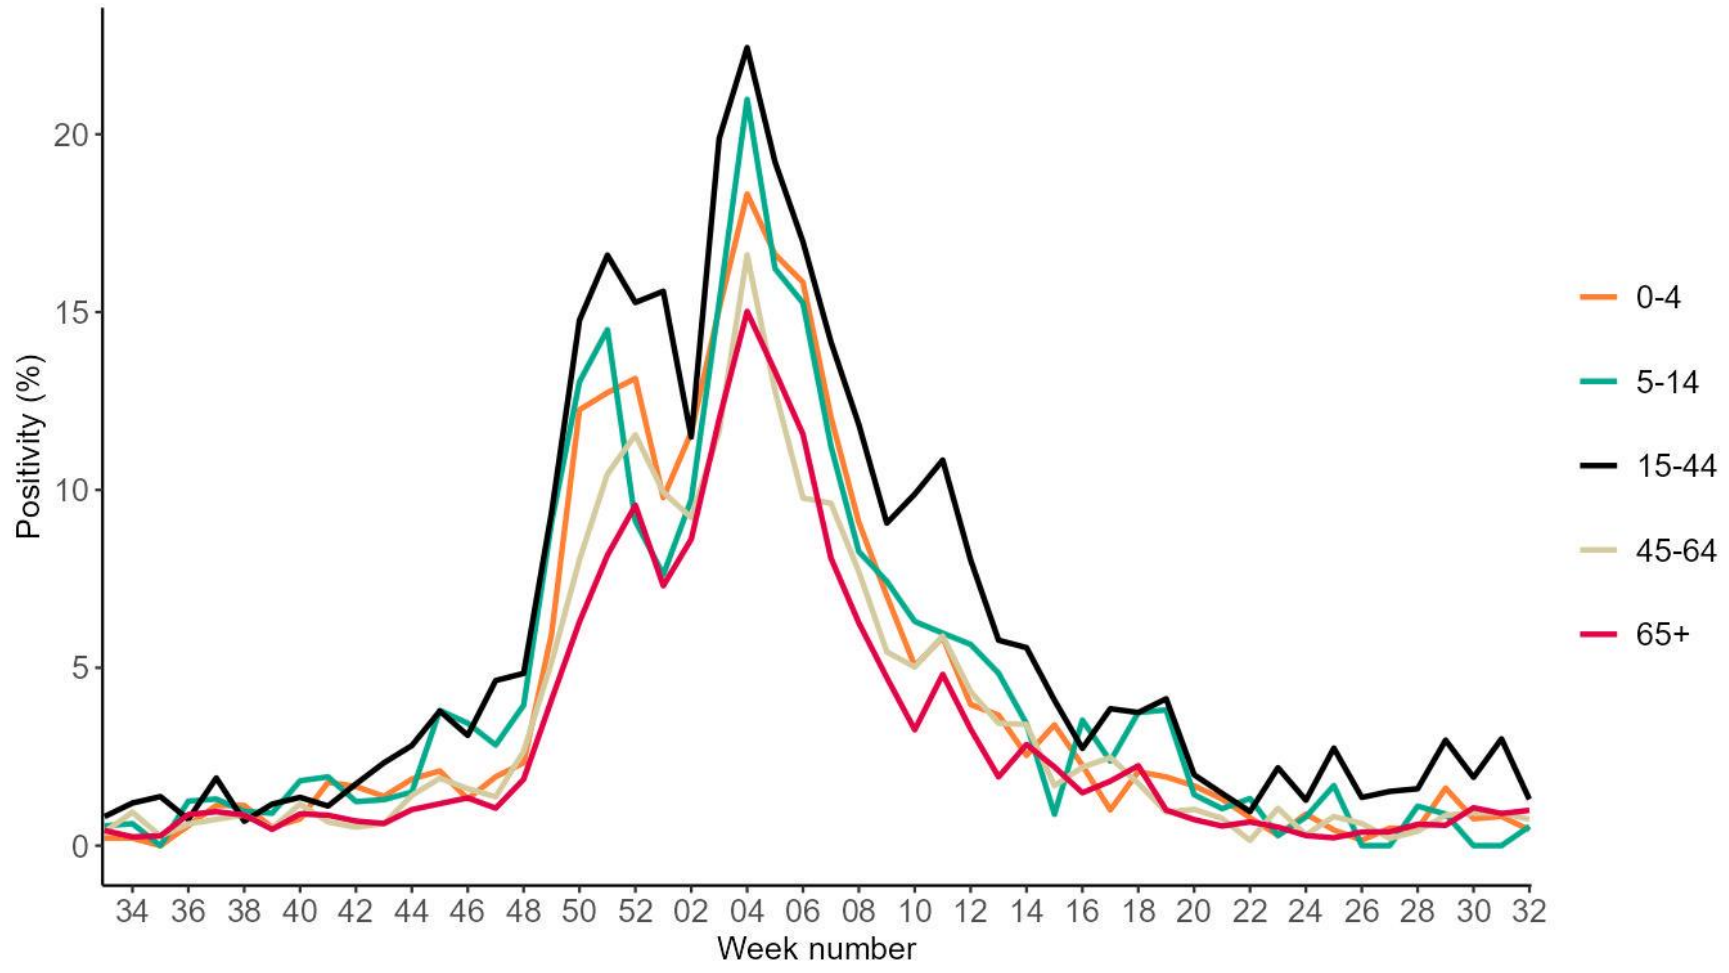

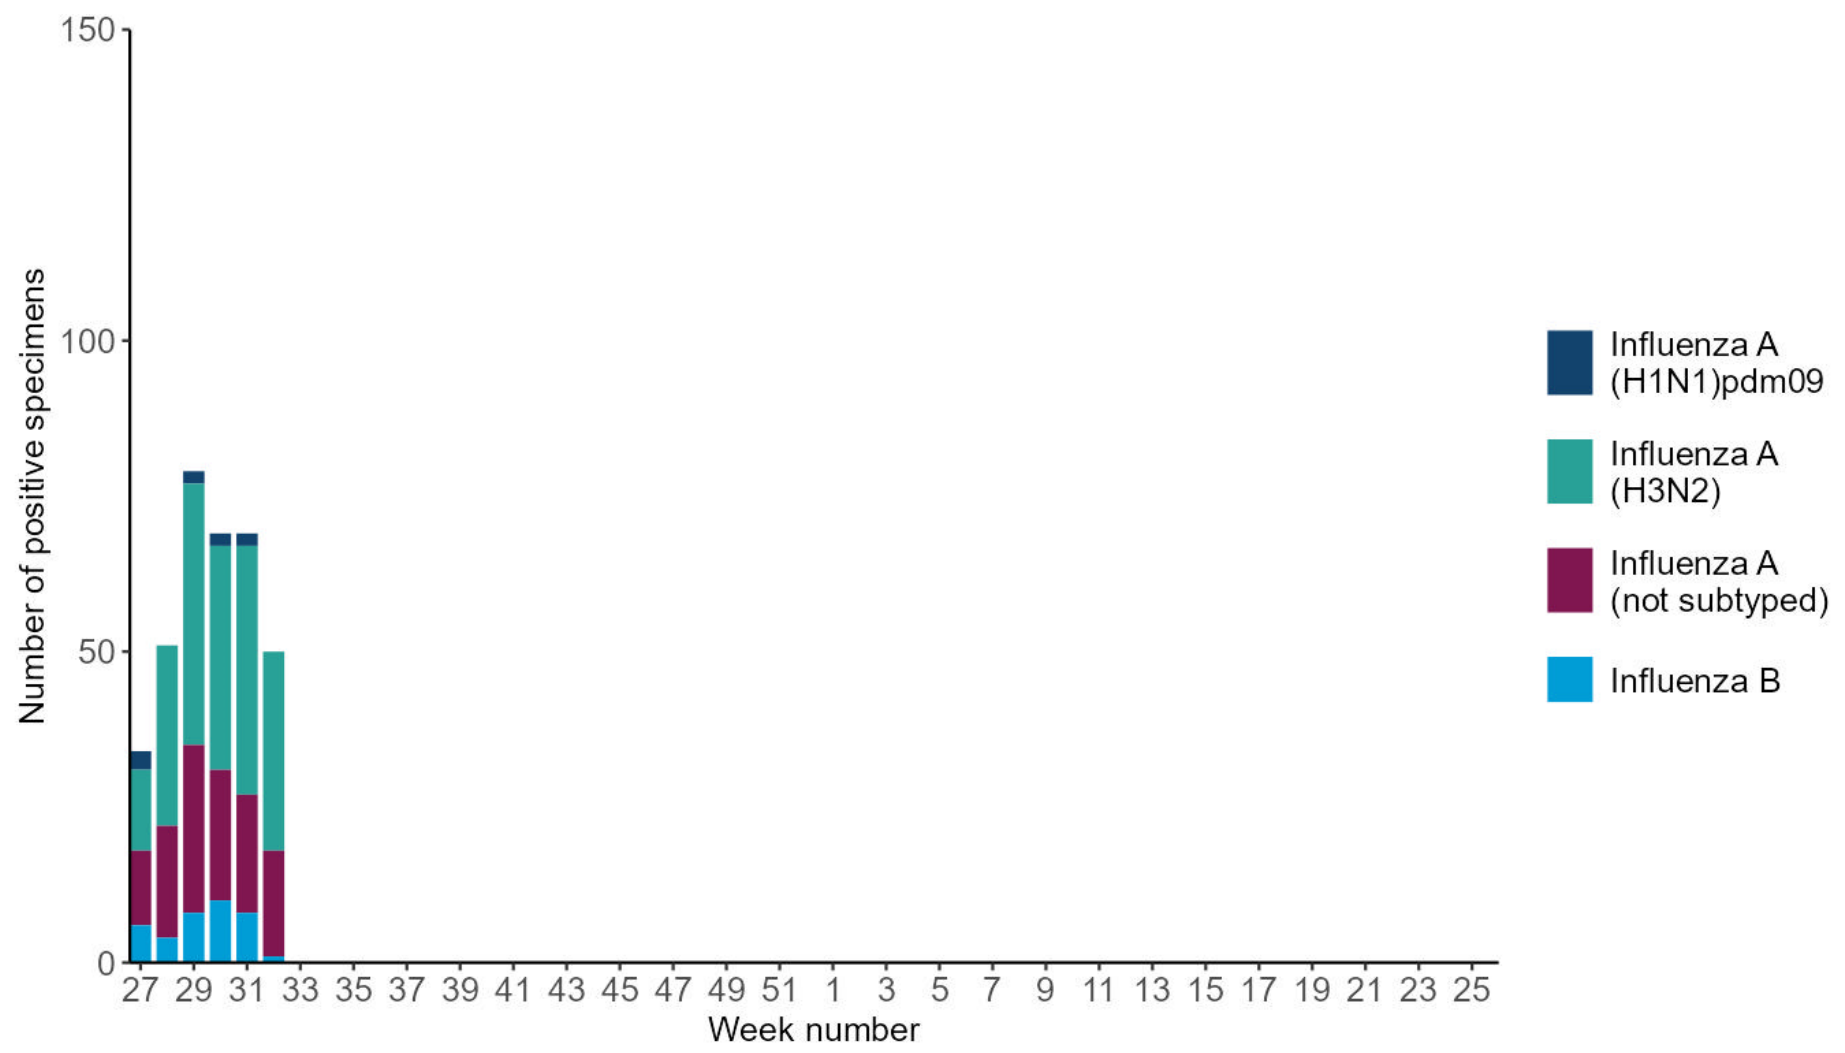

Contents

1)

Respiratory Datamart system (England)

Respiratory DataMart – influenza weekly positivity by age

Respiratory DataMart - samples positive for influenza by type and subtype
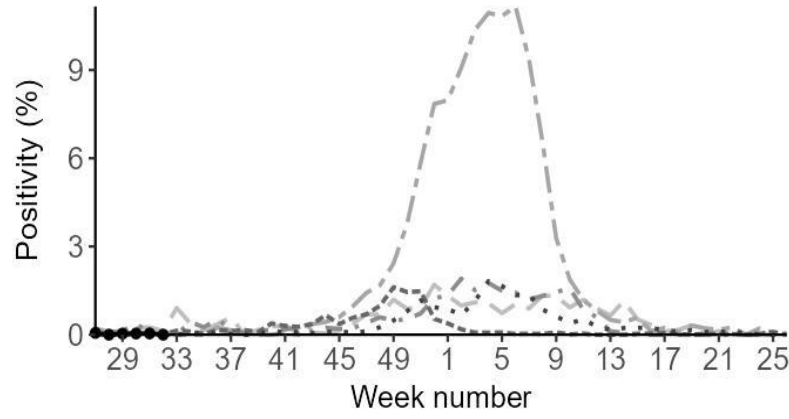

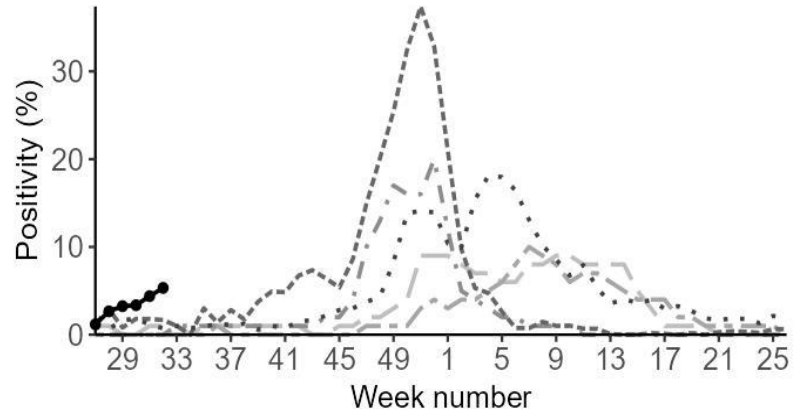

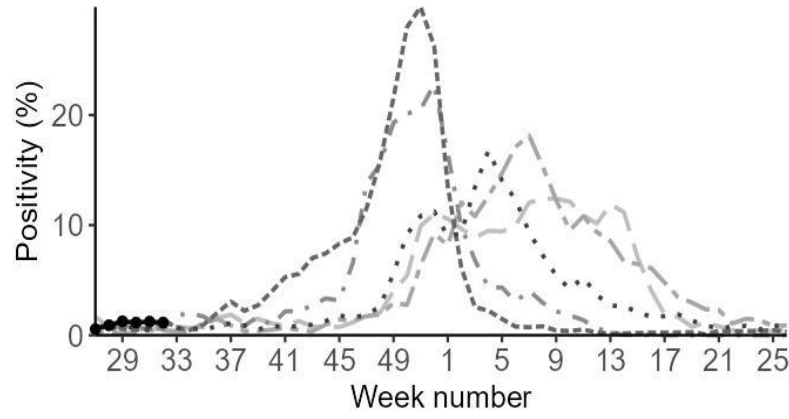

Please note y-axis uses different scales across graphs

# Respiratory DataMart – influenza weekly positivity by UKHSA super region

*Changes in positivity in London should be interpreted with caution as there was a low number of samples this week and is subject to retrospective updates
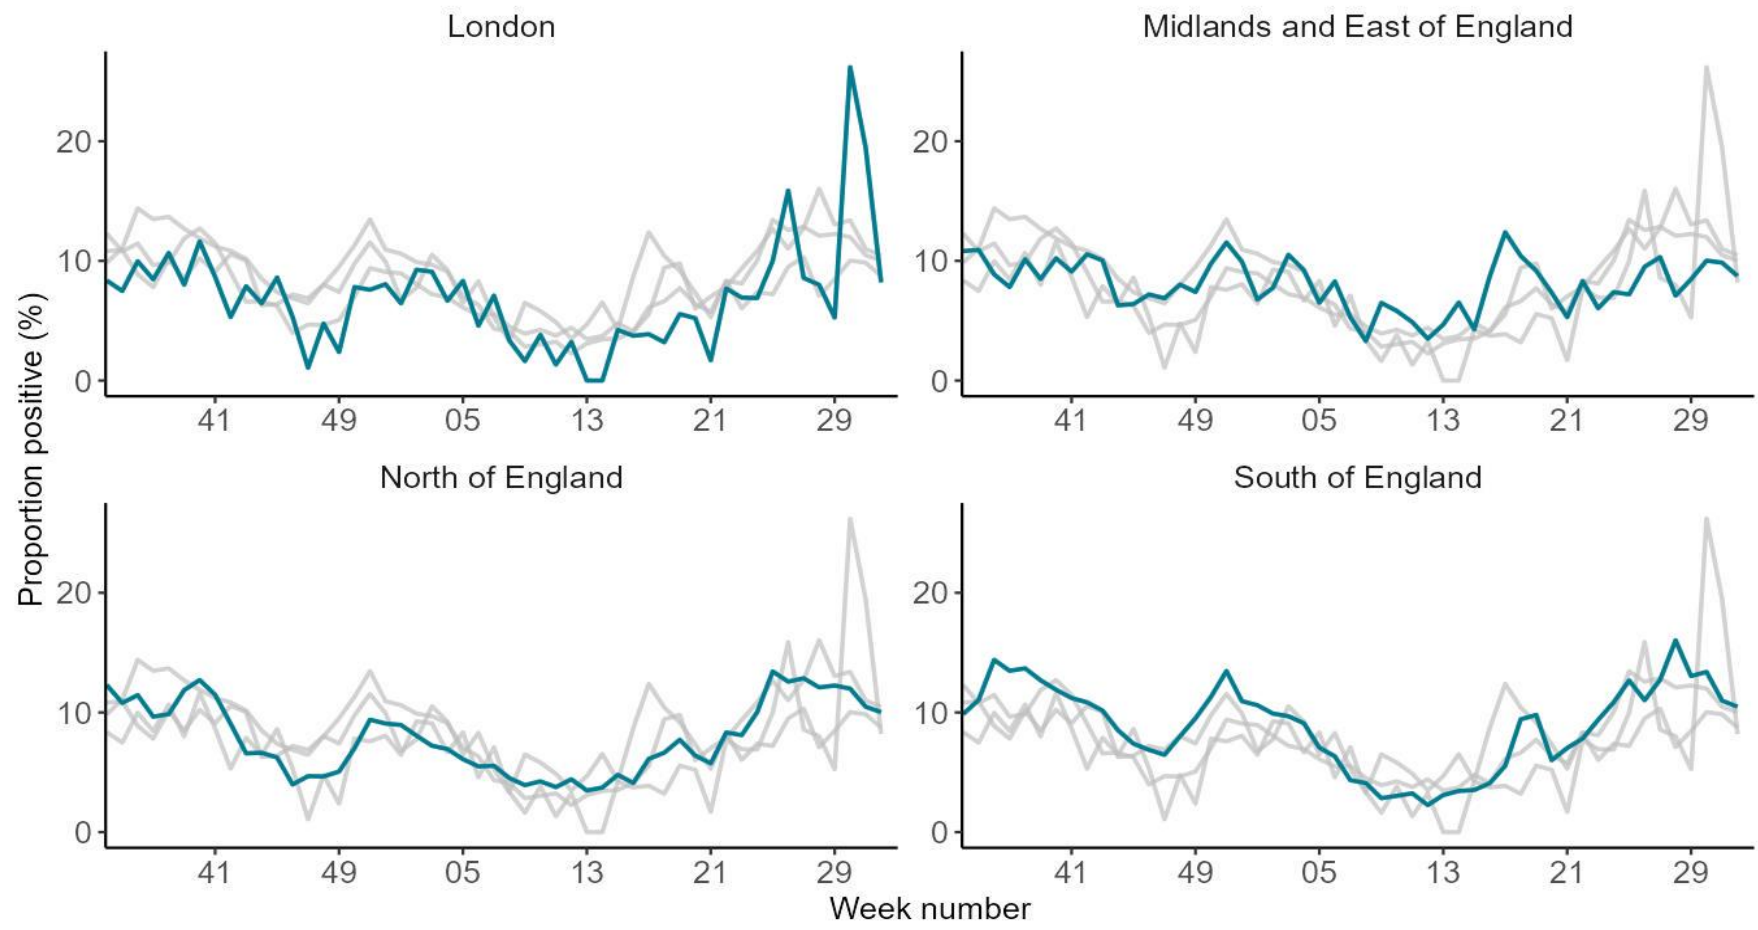

15 August 2024
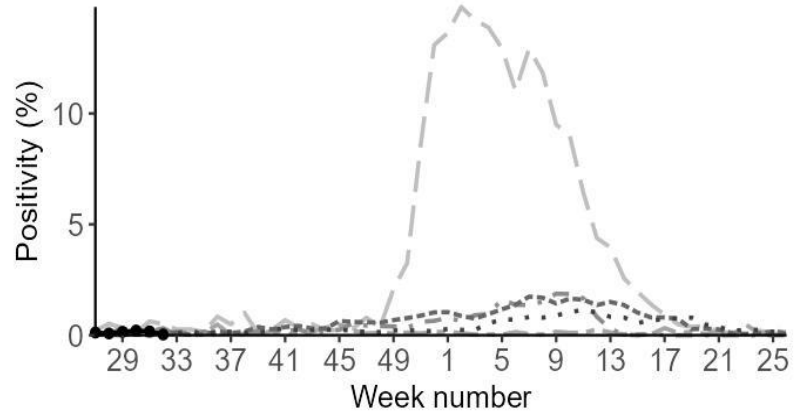

# Respiratory DataMart – SARS-CoV-2 weekly positivity by age

Respiratory DataMart – SARS-CoV-2 weekly positivity by UKHSA super region
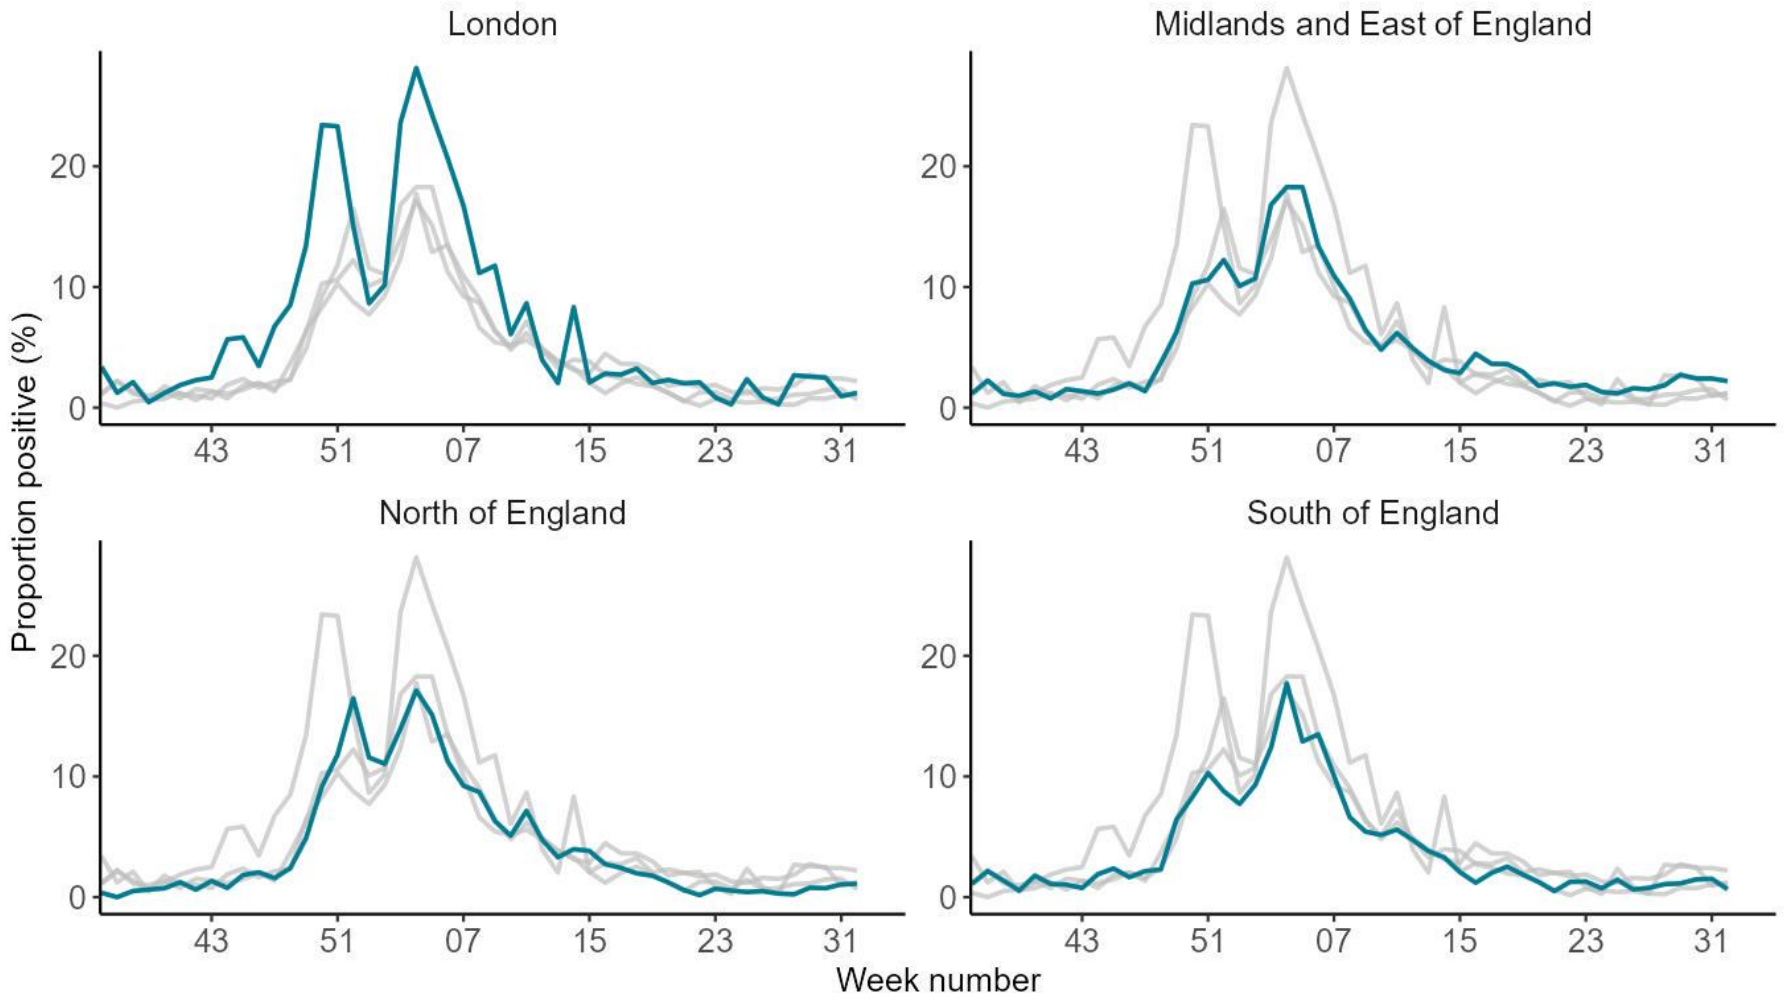

*Changes in positivity in London should be interpreted with caution as there was a low number of samples this week and is subject to retrospective updates

Respiratory DataMart – RSV weekly positivity by age
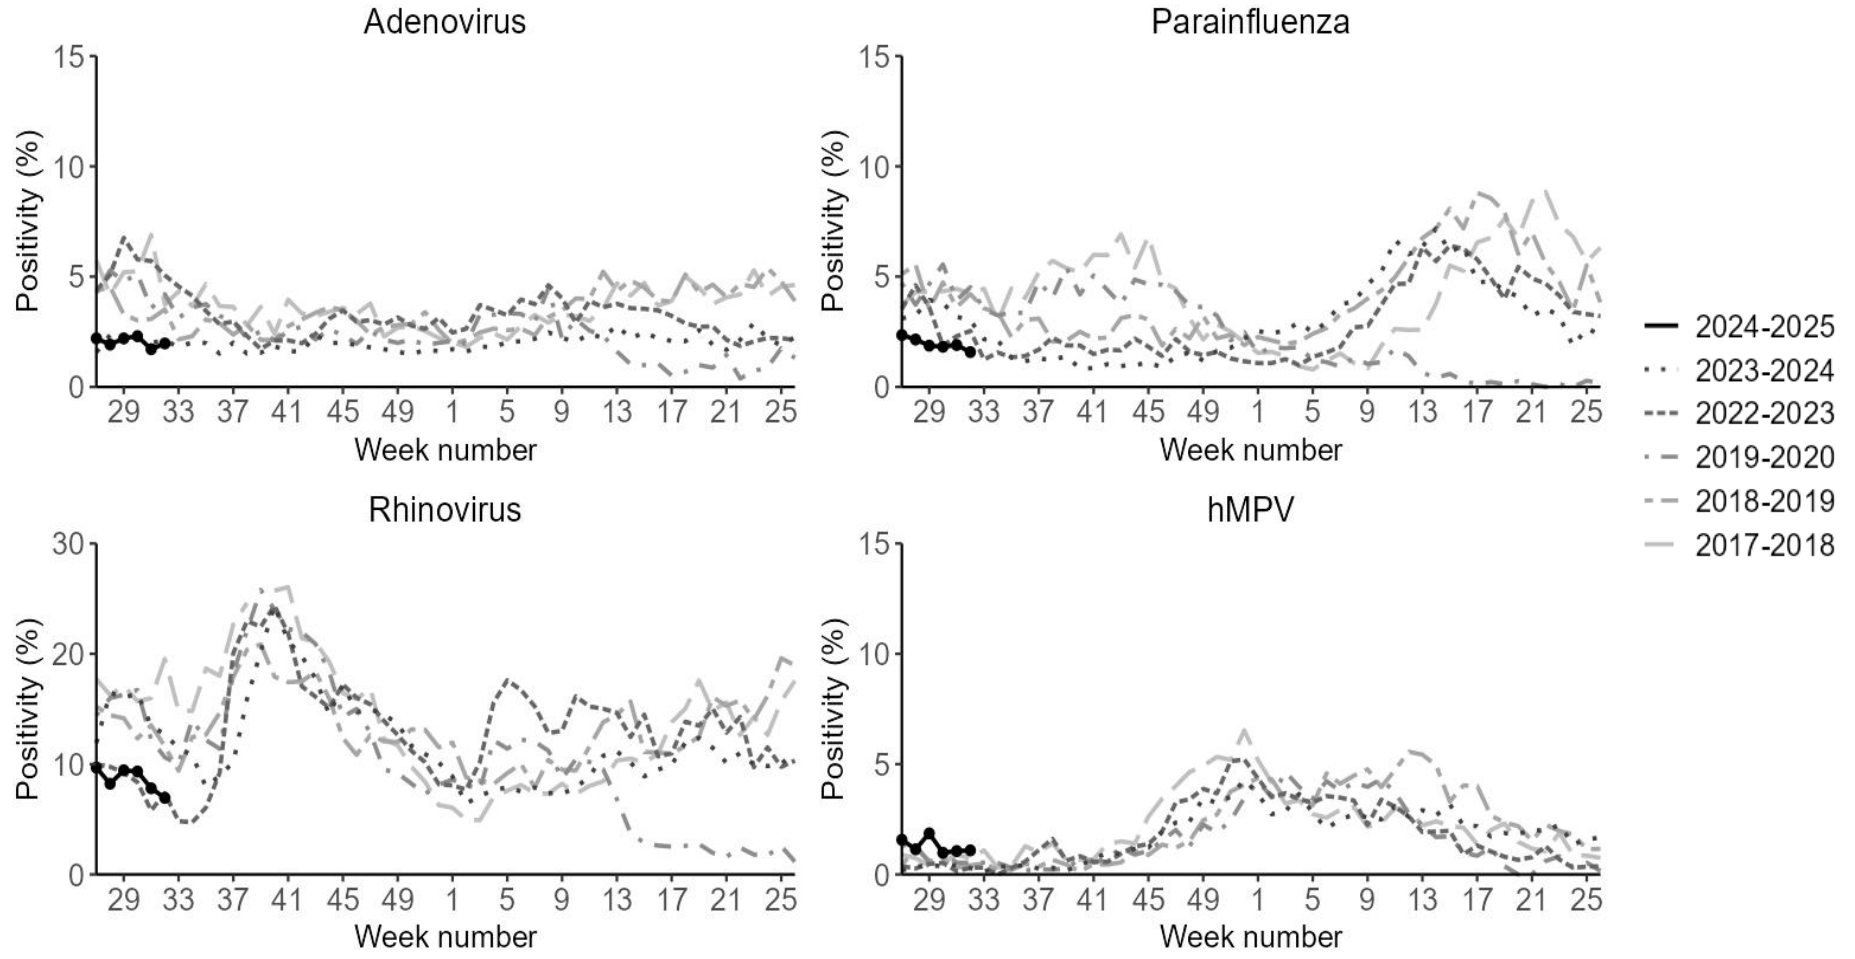

Respiratory DataMart – Respiratory syncytial virus (RSV) weekly positivity by UKHSA region

*Changes in positivity in London should be interpreted with caution as there was a low number of samples this week and is subject to retrospective updates
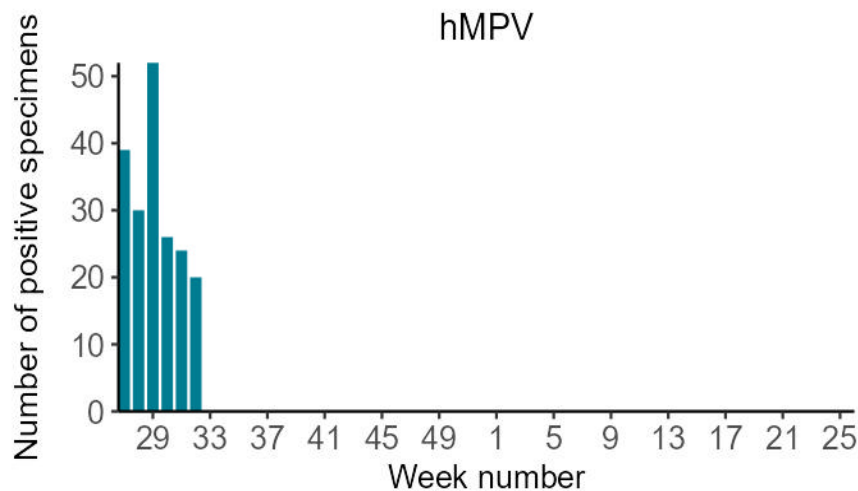

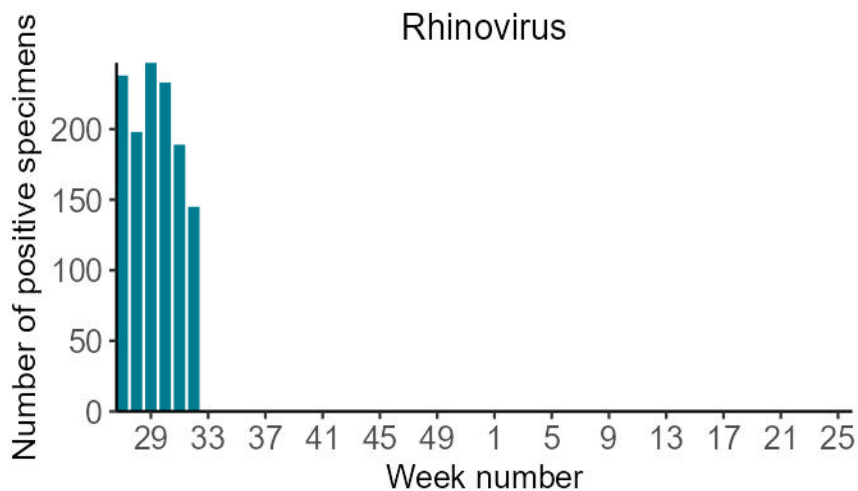

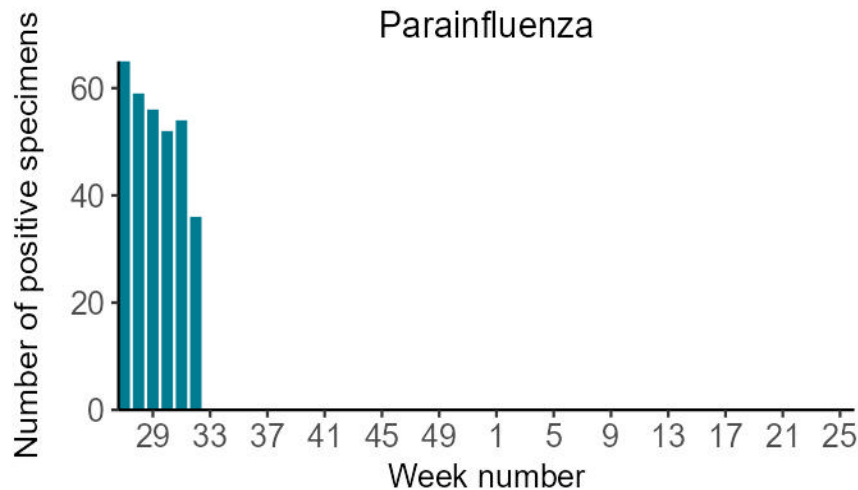

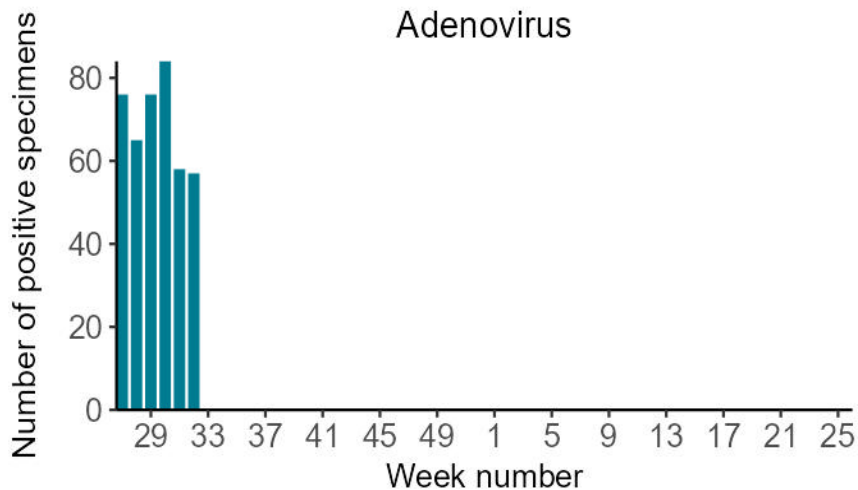

15 August 2024

Respiratory DataMart – other respiratory viruses

Please note y-axis uses different scales across graphs
