No: 8404 NFG

EHC for entry into the EU or NI of semen of ovine and caprine animals, collected processed and stored after 20 April 2021, and dispatched from a collection centre.

NOTES FOR GUIDANCE (NFG) FOR THE CERTIFYING OFFICER (CO) AND EXPORTER

1. APPLICABLE LEGISLATION

[Regulation \(EU\) 2016/429](#)

[Regulation \(EU\) 2020/692](#)

[Regulation \(EU\) 2020/686](#)

[Regulation \(EU\) 2020/999](#)

[Regulation \(EU\) 2021/403.](#)

[Regulation \(EU\) 2020/688](#)

[Implementing Regulation \(EU\) 2024/351 - Model EHC amending Implementing Regulation \(EU\) 2021/403](#)

Consolidated legislation

Consolidated texts, which integrate the basic instruments of EU legislation with their amendments and corrections in a single, non-official document, are available. Each consolidated text contains a list of all legal documents taken into account for its construction.

You can search for consolidated texts by using the 'find results by document number' option on the European Commission website. Once you have selected the relevant legislation, click 'document information', and then scroll down to 'all consolidated versions' and select the most recent version.

<https://eur-lex.europa.eu/homepage.html>

Please note that the consolidated text may not contain the latest amendment to the legislation, as it takes several weeks for this to be updated.

Texts provided in this section are intended for information only. Please note that these texts have no legal value. For legal purposes please refer to the texts published in the 'Official Journal of the EU'.

IMPORTANT

These notes provide guidance to COs (OVs or Official Inspectors as per section 3 below) and exporters. The NFG should have been issued to you together with

the relevant export certificate. The NFG should not be read as a standalone document but in conjunction with the veterinary certificate.

We strongly suggest that exporters obtain full details of the importing country's requirements from the veterinary authorities in the country concerned, or their representatives in the UK, in advance of each consignment.

[Please note, policies are being reviewed. NFG will be further amended to provide specific guidance. Traders should look at NFGs regularly for any updates]

2. SCOPE OF THE CERTIFICATE

This certificate is intended for entry into the EU or NI of semen of ovine and caprine animals, collected processed and stored after 20 April 2021, and dispatched from the collection centre where it was collected.

This certificate may also be used for these products transiting the EU to another third country.

3. CERTIFICATION BY AN OV

In **England, Scotland and Wales**, this certificate must be signed by a Government Veterinary Officer (e.g. APHA, FSA or FSS employed veterinary officers) or by an OV appointed by the APHA on behalf of Ministers in Defra, the Scottish Government or the Welsh Government and who hold the appropriate Official Controls Qualification (Veterinary) (OCQ (V)) authorisation.

OVs must sign and stamp, with the OV stamp, the health certificate in ink of a different colour to that of the printing of the EHC. There is no requirement to sign and stamp in a specific colour.

The OV should keep a copy of the signed certificate and any supporting documents for at least two years after signature or receipt / dispatch of the consignment, whichever is later. These can be electronic copies.

The RCVS Certification principles must be complied with.

<https://www.rcvs.org.uk/setting-standards/advice-and-guidance/code-of-professional-conduct-for-veterinary-surgeons/supporting-guidance/certification/>

EHC in foreign language/s of the EU Member States (MSs).

EHC should be in English and the foreign language of the Border Control Post (BCP) of entry in the EU. The original copy of the required EHC must accompany the consignment to the BCP of entry.

Listing of the EU MS BCPs can be found here: https://ec.europa.eu/food/animals/vet-border-control/bip-contacts_en

The foreign language certificate as received from the APHA Centre for International Trade at Carlisle or via the Export Health Certificates Online system (EHCO) and bearing the same unique reference number as the English certificate, should be considered an official and accurate translations of the English, as published in EU legislation.

The (sub-) paragraphs / options and how they are numbered and formatted is identical in the English and foreign language editions and to the legislation published by the European Commission. Therefore, the same phrases / sentences in the foreign language versions as in the English version should be struck through and these deletions should be stamped and initialled in both versions. Both versions must also be signed (as opposed to being initialled) and stamped by the OV, the foreign language certificate is deemed to be a genuine and properly authorised translation of the English version.

This also applies to any instructions in the guidance notes to strike out certain paragraphs or to certify statements that the country is free of certain notifiable diseases etc.

Additional information can be found in the APHA Vet Gateway:

http://apha.defra.gov.uk/External_OV_Instructions/Export_Instructions/Certification_Procedures/index.htm

SIGNING AND STAMPING

When signing a certificate, the CO should ensure that the certificate contains no deletions or alterations, other than those which are indicated on the certificate to be permissible and any corrections to permitted entries, subject to such changes being initialled and stamped (in the margin) by the CO. Permissible deletions are normally indicated in the 'Notes' section at the end of the certificate, with the instruction 'Keep as appropriate' or 'delete if not applicable'.

Where the certificate contains optional or contextual statements, the statements which are not relevant shall be crossed out, individually initialled, and stamped by the CO, or completely removed from the certificate.

- Permitted paragraphs and sections may be crossed out by applying a 'Z' across the section or paragraph rather than crossing out line by line.
- There is no requirement for a date and time to accompany each stamp. The date is only entered at the required entry field in Part I of the certificate, and at the end where the CO signs, stamps and dates that action.
- We are aware of some BCPs demanding that all handwritten information in Part 1 of the EHC is initialled and stamped, including handwritten scoring out of otherwise blank boxes. There is no legal requirement in EU legislation that all the hand-written information entered in the certificate must be signed and stamped. It is only in the case of correction, in any part of the certificate, or in the case of statements to be crossed out, that the certifier must add signature (or initials) and stamp. This has been confirmed by the European Commission.

The Commission noted however, in the case of a hand-written certificate, it is expected that the same one person completes the document. If not, the BCP might suspect that empty boxes were completed by another person after the certificate has been signed by the official

You should consider checking with the specific BCP regarding their preference when it comes to the stamping and initialling of handwritten scoring out of otherwise blank boxes in Part I of the EHC.

- **Clarification from the European Commission means that all pages (as opposed to sheets of paper) are signed and stamped once individually in place of fan stamping and in addition to any permitted alterations. There is no requirement to fan stamp.**
- **COs are reminded to consult the NFG prior to the certification of each EHC. NFG will be updated with this new information in due course.**

Further Information COs should make sure they are familiar with all relevant guidance and other documents relating to EHCs and that they discuss requirements with exporters in advance.

See <http://apha.defra.gov.uk/official-vets/Guidance/exports/ehc-online.htm>

You can also contact APHA's Centre for International Trade (CIT) on 03000 200 301.

PART I: DETAILS OF THE CONSIGNMENT

All boxes in Part I of the certificate must be completed. When a box is not applicable / optional, and not filled, please score it through. Please use schedule to be attached to the certificate if there is not enough space to fill the information. See Section 'Addition of Schedules' below.

Please complete all the boxes in Part I of the certificate in accordance with the guidance laid down in Chapter 4 of Annex I to [Commission Implementing Regulation \(EU\) 2020/2235, Amended by Implementing Regulation \(EU\) 2023/2744](#).

The Harmonised System (HS) Code is a commodity classification system used as a basis for customs tariffs and for international trade statistics.

It is the exporter's responsibility to ensure that the HS code is entered correctly and accurately reflects the product(s) being consigned.

Further information on HS Codes can be found online at:

<https://www.gov.uk/trade-tariff/sections> and
<http://madb.europa.eu/madb/euTariffs.htm>

'Test' has been added to I.27. Refer to the guidance within the Notes section for information on how to complete.

PART II: CERTIFICATION

II.1 Health information

The OV signing the EHC must ensure they are aware of the provisions of all the relevant regulations (Please see Part I), and subsequent amendments, detailed in the entirety of the EHC, which lay down the animal health and semen collection, processing and storage requirements, which permit the entry into the EU or NI of consignments of semen of Ovine and Caprine animals.

The OV may also require, where appropriate, support certification / declaration and / or evidence from the authorised centre veterinarian due to their knowledge of the operations of the establishment, to facilitate certification of the certificate.

II.1.1 – This can be certified based on the knowledge that the semen was obtained from donor animals originating from a third country, territory or zone which is listed in Annex X to Commission Implementing regulation (EU) 2021/404 (amended by Regulation 2021/634 to include GB and crown dependencies).

II.1.4 – This can be certified, as vaccination against the diseases listed in II.1.4 is prohibited in the UK, and vaccination against the listed diseases is currently prohibited for imports into GB. There are two sub-options: ‘Either’ and ‘or’. ‘Either’ can be certified, as vaccination against FMD is prohibited in the UK, and vaccination against the FMD is currently prohibited for imports into GB. ‘Or’ option must be deleted.

GB import requirements can be found on:

<https://www.gov.uk/government/collections/health-certificates-for-animal-and-animal-product-imports-to-great-britain>

II.1.2, II.1.3, II.1.4, II.2.1 and II.4.1 - First option of these clauses can be certified for the time periods specified based on the disease notification clearance and the prohibition of vaccination against rinderpest, peste des petits ruminants, sheep and goat pox, contagious caprine pleuropneumonia and Rift Valley fever in the UK and in the absence of outbreak of these diseases (Section 4 Notifiable Disease Clearance).

Second option of II.1.2 may be struck through in the absence of FMD.

II.2.2, II.2.3 (first option for ovine animals only), II.2.4, II.2.5, II.2.6 and II.2.7 - These can be certified based on the Ovine / Caprine semen SUP which should have been obtained prior to entering the quarantine / semen collection centre by the Semen Collection Centre appointed vet.

II.2.3 - Tuberculosis attestations ‘either/or’ options:

The **first** (‘either’) option may be certified for sheep only where there has been no report of TB in the holding for a period of at least 42 days prior to the date of commencement of quarantine. Herds in the holdings, and individual animals in the herds, must not have been under any official tuberculosis related restrictions in the last 42 days. **This includes restrictions (TN02) served for the whole herd or part of the herd e.g. following the discovery of inconclusive reactors, clinical suspicion or confirmed cases of TB.** Carlisle Centre for International Trade (CIT) will need to

undertake checks on the APHA database to determine if, within the specified time, TB has not been diagnosed on the holding or suspected and movement restrictions have not been in place. CIT will provide clearance for this using the ET101 SUPNDC on receipt of the 8404NDR prior to the animals entering quarantine. This will enable the OV to complete the Veterinary Declaration part of the Ovine / Caprine semen SUP.

The **second** ('or') option applies to goats only and can be certified based on an attestation from the semen collection centre appointed vet and/or private vet and owner of the herd of origin. The requirements in Part 1 of Annex II to Regulation [2020/688](#) (as amended) must be complied with. This refers to the establishment implementing a pre-movement TB surveillance programme in the last 12 months, which includes:

- Post-mortem inspection of all slaughtered goats from the establishment.
- Post-mortem examination of fallen stock of all goats older than 9 months, unless impossible for logistical reasons or not necessary for scientific reasons.
- An annual animal health visit carried out by a veterinarian.
- **Annual testing** of all goats kept on the establishment, **whether kept for breeding or export or other purposes**, with negative results:
 - The test can be the tuberculin skin test, which is recommended and listed by the [EU Reference Laboratory \(EURL\)](#) as an approved diagnostic test for TB in goats.
 - At present, there is no compulsory national routine TB surveillance programme for goats in Great Britain. Therefore, voluntary private TB testing must take place with prior permission from APHA. Further information on private TB testing can be found here: http://apha.defra.gov.uk/External_OV_Instructions/TB_Goat_Instructions/Skin_Test/index.htm.
 - If the goats are 6 weeks or younger at the time of annual TB testing, then they do not require a TB test at the time of annual testing of the herd.

Please note, annual testing is not required if APHA, based on a risk assessment, considers the risk of infection as negligible in the territory (i.e. in Scotland or Isle of Man) and the following conditions are fulfilled:

- The pre-movement surveillance programme referred to above has been carried out on the establishment for at least 24 months, and infection with Mycobacterium tuberculosis complex (*M. bovis*, *M. caprae* and *M. tuberculosis*) in goats kept on the establishment has not been reported during this period; AND
- the establishment is situated in a territory free from infection with Mycobacterium tuberculosis complex (*M. bovis*, *M. caprae* and *M. tuberculosis*) in its bovine animal population. This applies to Scotland and Isle of Man at the date of publication of this guidance.

Goats introduced into the establishment must come from establishments complying with the requirements in Part 1 of Annex II to Regulation [2020/688](#) (as amended). Reference to 'reported infection with Mycobacterium tuberculosis complex' is considered to only include cases/incidents of TB affecting goat herds in which *M. bovis*, *M. tuberculosis* or *M. caprae* was confirmed by the positive identification of the

causative organism (by bacteriological culture or PCR performed in an APHA laboratory) in tissue/clinical samples from one or more animals in that herd.

II.3.1 and II.3.2 - Can be certified based on proof that the Semen Collection Centre is an approved and listed establishment. Please refer to listing of approved establishments on the GOV.UK website: <https://www.gov.uk/government/publications/livestock-and-equine-semen-collection-approved-premises>

and EU website: https://ec.europa.eu/food/animals/semen/ovine_caprine_en

II.4.2, II.4.3 and II.4.4 - This can be certified based on a signed declaration by the Centre Veterinarian, referencing personal knowledge, clinical records and official movement records. Only the collecting donor animals must be identified with a 'GB' ISO code as per requirements in Article 21(1) to Regulation 2020/692.

II.4.5, II.4.6 and II.4.7 – This can be certified based on notifiable disease clearance and on a signed declaration by the Centre Veterinarian.

Please note, regarding the reference to 'single establishment' in II.4.5, the Commission has confirmed to Defra that the 30-day period prior to the date of collection and during the collection period includes any location (i.e. Quarantine unit and collection centre). Therefore, donor animals can be used for collection of semen after pre-entry quarantine.

II.4.8. – II.4.8.1 can be certified based on the notifiable disease clearance and support certification from the centre veterinarian.

II.4.8.2 - shall be deleted as seasonally free disease zone requirements do not apply to GB.

II.4.8.3 - can be certified subject to APHA approval of the vector protected establishment and their verification that measures have been applied effectively throughout the time period required. Vector protection establishment requirements are stipulated in Article 44 and Chapter 3 of Part II of Annex V to Regulation (EU) 2020/686.

II.4.8.4 and/or II.4.8.5 - can be certified if the donor animals comply with the testing requirements. Support certification and evidence from centre veterinarian is required.

II.4.9. - Regarding Epizootic Haemorrhagic Disease, the first paragraph of this section may be certified for the time period specified based on the notifiable disease clearance. All the other paragraphs can be struck out.

II.4.10 & II.4. 11 & II.4.12 – This can be certified based on a signed declaration by the Centre Veterinarian.

II.4.13 – This section can be certified by the OV on the basis of the scrapie related controls in place in the UK. The first attestation in this section may be certified if the animals are at least 3 years old and originate from holdings with Negligible or Controlled Risk of Classical Scrapie and are listed as such through membership of the Scrapie Monitoring Scheme (SMS) (see section 8). If the animals originate

from NI then this can be certified if the animals are at least 3 years old and originate from holdings with Negligible or Controlled Risk of Classical Scrapie and are listed as such through membership of the DAERA Scrapie Monitored Flock Scheme (SMFS): <https://www.daera-ni.gov.uk/articles/scrapie>

The second attestation in this section may be certified if the sheep are of the ARR/ARR prion protein genotype as defined in Annex I to Commission Decision 2002/1003/EC and their holding of origin is not subject to any official (e.g. CSFS) - restrictions for scrapie. If such restrictions are in place, movement of such sheep, including for trade, will not be allowed (see section UK Animal Health Scheme below).

II.5 and II.6 - The relevant attestations can be certified and, for II.6. the other option deleted. This can be certified on the basis of a signed declaration from the Centre Veterinarian.

The ID marking of the straws or other packages must refer to: date of collection or production of semen; species and ID number of donor animals; unique approval number of the establishment as listed on the EU website; and any other relevant information.

Note, the species reference on the straws or other packages maybe referred to by species code, e.g. 'OVI' for ovine or 'CAP' for caprine. There is flexibility in presenting the species information.

II.6 - Can be deleted if not applicable. If applicable, OV needs to insert the name(s) of the antibiotic(s) added and its (their) concentration or the commercial name of the semen diluent containing antibiotic(s), as required per footnote (12).

4. NOTIFIABLE DISEASE CLEARANCE

Some export certificates for animals and animal products will include statements that will require the OV to certify that specified zones or the entire country of origin are free from certain diseases.

COs must check the following sources of disease information for the United Kingdom immediately prior to certification, to ensure disease freedom statements can be certified:

- the Notifiable Disease Occurrence List for Great Britain (ET171) available on the [Exports > Certification Procedures](#) page of the APHA Vet Gateway
- the UK Status for Non-Notifiable Diseases Relevant to Export Certification (ET152) available on the [Exports > Certification Procedures](#) page of the APHA Vet Gateway.

For Great Britain:

In the absence of a specific Notifiable Disease Clearance (618NDC) from CITC: COs may certify that GB has disease free status or region free status for those diseases mentioned in the health certificate, once they have checked the disease list(s) for the last occurrence of the disease, and have ensured it complies with the time frames in the certificate.

In the event of a disease outbreak that affects a CO being able to obtain their own disease clearance, CITC will notify COs to make it clear which disease freedom statements should not be certified and where necessary, will issue a 618NDC notifiable disease clearance if the EHC can continue to be issued for certain regions that retain free status.

In the event of a disease outbreak after the EHC has been issued that affects the disease clearance, COs must not certify the EHC and must contact CITC immediately for advice on whether certification can still take place. If a disease outbreak affects the disease clearance procedures for this EHC, a 618NDC will be reinstated by CITC which will be issued with the EHC until a time when disease clearance can be reinstated.

NOTE: This does not apply to Transmissible Spongiform Encephalopathies (TSEs) or Bovine Tuberculosis (TB) freedom statements.

5. ON FARM ISOLATION

1. With regard to quarantine of donor animal(s), the OV must be satisfied that the animal(s) in question have been kept in a quarantine/isolation facility away from the remaining animals on the holding.
2. The OV can authorise isolation/quarantine premises provided that the conditions below are met.

Conditions for On Farm Isolation Units

1. Management of the unit

- a) Buildings used for the on-farm isolation premises must be dedicated for the on-farm isolation and be physically separate from any buildings used for other livestock.
- b) Pastures used for on-farm isolation premises must be dedicated for on farm isolation and be physically separate from any pastures or buildings used for other livestock on the premises. A minimum distance of 5 metres is required between the perimeter of the isolation fields and any other livestock. This 5-metre separation would be satisfied with stock proof double fencing.
- c) Animals may only be moved between isolation premises on the same farm under licence of the RVL and under any conditions that the licence may contain.

2. Specification for animals entering and remaining on the on-farm isolation premises

- a) The animals entering the isolation unit must be individually identified.

- b) The animals shall be kept in the isolation unit during the standstill period.

3. Construction for buildings

- a) Any buildings used in the isolation unit must be designed such that any discharges, effluent and manure are retained there or disposed of in such a manner that they do not come into contact with other livestock.
- b) A dedicated loading / offloading facility must be provided for each isolation unit. This facility shall be fully cleansed and disinfected after each use.

4. Operating Procedures

- a) Dedicated protective clothing for staff must be provided for the isolation unit.
- b) Protective clothing to be provided for visitors.
- c) Disinfectant footbaths to be provided and used at the entrance(s) to the isolation units
- d) Any person entering the isolation unit must wear protective clothing and footwear and use the disinfectant footbaths at the entrance(s).
- e) Any unused feeding stuffs, fodder, bedding etc. intended for animals in the isolation unit must remain there while animals are present.
- f) All equipment, pens, hurdles, etc. in the isolation premises must remain there until the quarantine period has been satisfactorily completed.

Conditions for Semen Collection Centre (SCC) Isolation Units

The quarantine/isolation requirements as referred to for on farm isolation (see above) must be strictly complied with for animal(s) subject to quarantine in the SCC. The OV can authorise isolation/quarantine premises provided that the relevant conditions above are met. However, the OV may only authorise such quarantine provided the premises is emptied of animal(s) susceptible to the same diseases, i.e. no resident donor animal(s) at the time of quarantine of new entrant animal(s) at the SCC.

6. COLLECTION OF EVIDENCE

Certification Support Officers may not be utilised for gathering evidence relating to this certificate.

7. UK APPROVED ESTABLISHMENTS ELIGIBLE TO EXPORT TO THE EU

The exporting establishment must be listed as a 'UK approved establishment' and a list of UK approved establishments for import of germinal products to the EU, can be found on the European Commission's list of approved establishments' link below:

https://ec.europa.eu/food/animals/semens-oocytes-embryos_en

Please note that the list is updated regularly and ONLY establishments on the list are approved to export to the EU, and this does not include establishments with pending applications for approval.

If the final product contains germinal products from other establishments, then these establishments should also be listed as UK and/or EU approved establishments.

8. ANIMAL HEALTH SCHEME

Scrapie Statement

Relevant Scrapie text can be certified on the basis that the UK implements a Scrapie Monitoring Scheme (SMS), provided by the SAC Consulting: Premium Sheep and Goat Health Schemes (part of Scotland's Rural College (SRUC)). Scrapie is a notifiable disease in the UK and Scrapie control is enforced under the TSE Regulation 2018 (England and Wales) and the TSE Regulation 2010 (Scotland).

Holdings with Controlled or Negligible Risk of Classical Scrapie are listed on the SAC website and provides robust evidence that the holding complies with the requirements at point 1.2 of Section A of Chapter A of Annex VIII to Regulation (EC) No 999/2001. Certificates showing membership of such Schemes should also be requested and checked to ensure they are valid.

ARR / ARR genotype sheep, can be certified if the sheep are of the ARR / ARR prion protein genotype as defined in Annex I to Commission Decision 2002/1003/EC and their holding of origin is not subject to any official – e.g. CSFS - restrictions for classical scrapie. If such restrictions are in place, certification of ARR/ARR sheep for trade is not allowed. If unsure as to whether the holding is under such restrictions, the OV may contact the local APHA office or CIT Carlisle.

The genotyping must be either carried out at a APHA laboratory or SAC / SRUC or any officially approved EU laboratory with ISO17025 accreditation OR the individual sheep must have a genotyping certificate issued under the National Scrapie Plan (NSP) or the Compulsory Scrapie Flocks Scheme (CSFS) by a laboratory which is* / was* authorised by the government to carry out genotyping under the plan/scheme.

Any such genotyping certificates issued under the scheme/plan before it/they closed remain valid, but the OV must ensure that the identification of the animal as recorded on the genotyping certificate correlates with the official ear tag on the animal as recorded on the EHC; if only the electronic identification number is recorded on the genotyping certificate, then the OV must scan and check the electronic identification of the sheep to confirm correlation between the certificate, the sheep and the official ear tag number on the Certificate. Unless genotyping was carried out officially under the NSP or CSFS, all blood samples for genotyping must be taken by a veterinary surgeon.

9. ADDITION OF SCHEDULES

When the space in Part I or Part II of the certificate is insufficient to accommodate full details of the consignment a schedule may be used. In the relevant section of the certificate the CO should annotate the certificate 'see attached schedule'. A new schedule should be created (typed or clearly written) containing the same information as that required in the certificate. The schedule must include the certificate reference number on each page and must be signed, dated and stamped by the CO in a colour other than the printed text on each page and under the last entry. The schedule forms

part of the certificate. All pages of the certificate, including the schedule, must be sequentially numbered. Any blank spaces in the schedule or the certificate should be struck through with diagonal lines.

Further guidance is available here:

http://apha.defra.gov.uk/External_OV_Instructions/Export_Instructions/Certification_Procedures/index.htm

10. CERTIFIED COPIES OF EHCs

When completing export certification the CO and, if applicable, FCCO must make photocopies of, or scan and save all documents they certify. OVs must retain copies of certification documents in accordance with RCVS Certification principles.

<https://www.rcvs.org.uk/setting-standards/advice-and-guidance/code-of-professional-conduct-for-veterinary-surgeons/supporting-guidance/certification/>

COs must retain copies of all export documentation for a period of two years. A certified copy of this EHC does not need to be returned to the APHA CITC. For the purposes of completing routine Quality Assurance checks on export certification, CITC may request certified copies of certification from COs.

Further details on Post Certifying Procedures, ‘certified copies’ of certification and the types of documents that should be retained by COs can be found on the [APHA Vet Gateway](#).

11. LEGAL STATEMENT

The existing EU legislation that the UK complied with prior to the end of the Transition Period has been incorporated into our domestic law as “assimilated EU law” under the EU (Withdrawal) Act 2018. References in our guidance and certification to such EU instruments should be taken to be references to this “assimilated EU law”. The EU standards that this legislation includes continue to remain in force, without substantive amendment, as part of UK domestic law (apart from corrections to make the EU legislation fully operable).

12. DISCLAIMER

This certificate and NFG are provided on the basis of information available at the time and may not necessarily comply fully with the requirements of the importing country. It is the exporter’s responsibility to check the certificate against any relevant import permit or any advice provided by the competent authority in the importing country. If these do not match, the exporter should contact the APHA in Carlisle.

8404NFG

Version History:

EHC

I.27: 'Test' added

II.1.4: 'either/or' options added for vaccination status against foot and mouth disease

II.2.3: 'either/or' options added for Mycobacterium tuberculosis complex testing

II.2.4: 'either/or' options amended

II.4.7.2: 'either/or' options added for disease-reporting timeframes

II.4.9: Specified serotypes of Epizootic Haemorrhagic Disease removed

II.4.9.2: 'or' option for seasonally disease-free zone added

II.4.9.3: replaces previous II.4.9.2 for vector-protected establishment

II.6.1: Names and quantities of antibiotics removed

Notes -

Part II: (13) and (14) added

NFG

Version 7: Published 16 August 2024

Part I: Guidance added for addition of 'Test' to I.27

Part II: Guidance for II.2 and II.2.3 amended

Version 6: Published 31 July 2024

Applicable Legislation: Implementing Regulation (EU) 2024/351 and Delegated Regulation 2020/688 added

Part I: Commission Implementing Regulation (EU) 2020/2235, amended by Implementing Regulation (EU) 2023/2744 added

Part II -

II.1.4: wording added

II.4.8.4: This requirement can be certified subject to APHA approval. This paragraph is amended to reflect that.

II.6: wording added

Version 5: Published November 2023:

II.4.8: Further information is added for **II.4.8.1** about the Bluetongue disease.

II.4.8.2 and II.4.8.3: Clarification is added that seasonally disease-free zone requirements do not apply.

II.4.8.4: This requirement can be certified if Centre Veterinarian can demonstrate that the conditions set out in this point can be met.

II.4.8.5 and/ or II.4.8.6: Further clarity is added about the documentary evidence required by the centre's Veterinarian.

Notifiable Disease Clearance: This paragraph is updated with the new version.
