No: 8333 NFG

For export of processed animal protein (PAP), other than those derived from farmed insects, not intended for human consumption, including mixtures and products other than pet food containing such protein, intended for dispatch to or for transit through the European Union (EU) or Northern Ireland (NI).

NOTES FOR GUIDANCE (NFG) FOR THE CERTIFYING OFFICIAL VETERINARIAN (OV), CERTIFICATION SUPPORT OFFICER AND EXPORTER

1. APPLICABLE LEGISLATION

[Council Regulation \(EC\) No 1069/2009](#) and [Commission \(EU\) Regulation 142/2011](#) (as amended)

Any other EU legislation referenced in the certificate must be complied with and can be accessed on the following link:

<https://eur-lex.europa.eu/homepage.html>

IMPORTANT

These notes provide guidance to Certifying Officers (CO) and exporters. The NFG should have been issued to you together with the relevant export certificate applicable for exports of processed animal protein, other than those derived from farmed insects, not intended for human consumption, including mixtures and products other than pet food containing such protein, intended for dispatch to or transit through the EU or NI. The NFG should not be read as a standalone document but in conjunction with the veterinary certificate.

We strongly suggest that exporters obtain full details of the importing country's requirements from the veterinary authorities in the country concerned, or their representatives in GB, in advance of each consignment.

[Please note, policies are being reviewed. NFG will be further amended to provide specific guidance. Traders should look at NFGs regularly for any updates]

2. SCOPE OF THE CERTIFICATE

NOTE: AT PRESENT PAP OF MAMMALIAN ORIGIN (EXCEPT PORCINE BLOOD ORIGIN) CANNOT BE CERTIFIED BECAUSE THE REQUIRED TREATMENT METHOD CANNOT BE MET.

This Model 8333 veterinary certificate may be used for the export of processed animal protein (PAP), other than those derived from farmed insects, not intended for human consumption, including mixtures and products other than pet food containing such protein, intended for dispatch to or transit through the EU or Northern Ireland, in accordance with the relevant requirements described in Regulation (EU) No 142/2011.

PAP is defined in Annex I of Regulation (EU) No 142/2011 as animal protein derived entirely from Category 3 material, which have been treated in accordance with Section 1 of Chapter II of Annex X (including blood meal and fishmeal) of Regulation (EU) No 142/2011 so as to render them suitable for direct use as feed material or for any other use in feeding stuffs, including pet food, or for use in organic fertilisers or soil improvers. However, it does not include blood products, milk, milk-based products, milk-derived products, colostrum,

colostrum products, centrifuge or separator sludge, gelatine, hydrolysed proteins and dicalcium phosphate, eggs and egg-products including eggshells, tricalcium phosphate and collagen.

Category 3 materials referred to in Article 10(a), (b), (d), (e), (f), (h), (i), (j), (k), (l) and (m) of Regulation (EC) No 1069/2009 may be used.

3. CERTIFICATION BY AN OFFICIAL VETERINARIAN (OV)

In **England, Scotland and Wales**, this certificate must be signed by a Government Veterinary Officer or by an OV appointed by the Animal and Plant Health Agency (APHA) on behalf of Ministers in Defra, the Scottish Government or the Welsh Government and who hold the appropriate Official Controls Qualification (Veterinary) (OCQ (V)) authorisation.

OVs must sign and stamp, with the OV stamp, the health certificate in ink of a different colour to that of the printing of the Export Health Certificate (EHC). There is no requirement to sign and stamp in a specific colour.

The OV should keep a copy of the signed certificate and any supporting documents for at least two years after signature or receipt/dispatch of the consignment, whichever is later. These can be electronic copies.

EHC in foreign language/s of the EU Member States (MSs).

EHC should be in English and the foreign language/s of the Border Control Post (BCP) of entry in the EU, as well as in the language of the EU MS of destination if this a different country from the point of entry to the EU. The required EHC must accompany the consignment.

Listing of the EU MS BCPs can be found here:

https://ec.europa.eu/food/animals/vet-border-control/bip-contacts_en

The foreign language certificate as received from the APHA Centre for International Trade at Carlisle or via the Export Health Certificates on-line system (EHCO) and bearing the same unique reference number as the English certificate, should be considered an official and accurate translations of the English, as published in EU legislation.

The (sub-) paragraphs / options and how they are numbered and formatted is identical in the English and foreign language editions and to the legislation published by the EU Commission. Therefore, when the same phrases/sentences in the foreign language version(s) as in the English version are struck through, both versions can and must be signed (as opposed to being initialled) by the OV as a genuine and properly authorised translation of the English.

This also applies to any instructions in the guidance notes to strike out certain paragraphs or to certify statements that the country is free of certain notifiable diseases etc.

Signing, stamping and pagination

The foreign language version/s and any schedules (if any) may be stapled to the English version but doing so and then fan stamping the multiple sheets is not enough to create one indivisible single document according to the EU Commission.

Therefore, each page (including schedules) should be individually signed and stamped and bear the reference number of the certificate. The pages comprising the complete document should be sequentially numbered so they are part of a finite sequence which covers the English, foreign language version/s and any schedule pages.

For example, if the certificate consists of four A4 pages printed back to back on two sheets of A4 paper with a schedule that is three A4 pages long, all 11 pages must be stamped and **signed** (as above) and numbered 1/11 to 11/11.

COs will have to make handwritten corrections to page numbering as may be required. E.g. 1/4 to 4/4 (if present) on the foreign language parts in the example given above will need to be crossed out and the 1/11 to 11/11 entered.

The EHC accompanying the consignment will then comprise the original English EHC and any required additional foreign language/s. These should be arranged in order with the English version on the top, followed by the foreign language/s version/s, and finally the page(s) of the schedule (if any) at the bottom.

As per general guidance for certifiers on APHA's [Official Veterinarian Training](#), any handwritten corrections or permitted deletions to a certificate should be stamped and **initialled**. This includes the deletion of optional statements in Part II of the certificate and alterations to content in Part I. The same applies if a pre-populated text in a box in Part I of the EHC needs to be amended. (E.g. if Box I.7 which is pre-populated as 'United Kingdom' 'GB', needs to be amended for triangular trade where third country origin 'Products Of Animal Origin' are being certified in the original third country packaging with the original third country Identification Marks, in which case the country of origin will be the third country in question and not the United Kingdom). Please follow the guidance on corrections in the link below:

[Instruction: Official Veterinarian Training](#)

We advise that individual stamping and initialling of diagonal lines drawn through blank boxes in Part I is not necessary. This is to reduce excessive stamping on the certificate. However, we are aware that some BCPs advise otherwise and request stamping and initialling of manually crossed out blank boxes in Part I of the certificate. In such cases OV should conform to the BCPs request to facilitate the clearance of the goods.

You can find further information on Export Health Certificates (EHC) Online Guidance for Certifiers in the link below:

[Using export health certificate \(EHC\) online: certifier guidance - GOV.UK](#)

UK approved establishments will be uploaded to [Europa](#) website in due course, until the establishments are in Europa website you can find the list of UK approved establishments in the link below:

<https://www.gov.uk/government/publications/businesses-approved-to-export-to-the-eu>

Please check the guidance on completion of Part I of the EHC at the bottom of the EHC and in the links provided in the NFG. For completion of Box I.8 - Region of Origin Code, if applicable; the territory code should be as listed in the relevant legislation that is provided under the notes at the bottom of the EHC. This is only for species or products affected by regionalisation measures or by the setting up of approved zones in accordance with a European Community Decision. The approved regions or zones must be indicated as described in the Official Journal of the European Union.

PART I: DETAILS OF THE CONSIGNMENT

Please complete all the boxes in Part I of the certificate.

The Harmonised System (HS) Code is a commodity classification system used as a basis for customs tariffs and for international trade statistics.

It is the exporter's responsibility to ensure that the HS code is entered correctly and accurately reflects the product(s) being consigned.

Further information on HS Codes can be found online at:

<https://www.gov.uk/trade-tariff/sections> and

<http://madb.europa.eu/madb/euTariffs.htm>

PART II: CERTIFICATION

Animal Health Attestation

The OV signing the certificate must have read and understood Regulations (EC) No 1069/2009, in particular Article 10, and Commission Regulation (EU) No 142/2011, in particular Chapter II, Section 1 of Annex X and Chapter 1 of Annex XIV and must ensure that the products meet the requirements of the certificate. The starting material used must be a Category 3 ABP.

The following specific guidance in conjunction with the RCVS Principles of Certification may be followed: **OVs should develop due familiarity with the sourcing, procurement, segregation, processing, handling and storage arrangements in place at the establishment to ensure that the consignment meets the conditions required in the certificate. This should be supported as necessary by physical inspection and by examination of relevant documentation or other records including commercial documentation, veterinary statements, laboratory analysis and valid declarations.**

Where the OV is required to certify conditions outside of their personal knowledge, they must request and be provided with appropriate supporting documentation from another veterinarian (if appropriate) and/or the exporter.

II.1 The initial statement in relation to the nature of the consignment (processed animal protein) can be certified on the basis of the OV's knowledge of the operational arrangements

in place at the establishment as supported by physical inspection and by examination of relevant documentation and valid declarations. In relation to the intention for export; the OV should also require a declaration from the exporter confirming that the animal protein is not intended for human consumption.

II.1 (a) The OV must establish that the plant is approved and supervised by the competent authority as an animal by-product processing plant. This can be established as detailed in Section 6 - GB APPROVED ESTABLISHMENTS TO EXPORT TO THE EU. The OV may ask to see a copy of the approval document.

II.1 (b) Starting/source material

The starting materials must be Category 3. The correct subcategory, or sub-categories, of ABP under II.1(b) must be selected, and the other subcategories deleted as instructed. Familiarity with the sourcing arrangement of the raw material by the establishment is necessary as supported by physical inspection and by examination of relevant documentation or other records including commercial documents, veterinary statements and valid written exporter declarations to ensure the correct sub-category or sub-categories is/are selected.

II.1 (c) Processing method

This may be certified on the basis of familiarity with processing arrangements at the approved processing establishment and examination of relevant records, including the approval document detailing the processing method that the plant is approved for and a valid written declaration from the plant operator that the process appropriate to the starting material has been applied to the consignment. Only one option should be selected and the others deleted.

Mammalian derived protein (excluding porcine blood) must be treated by Method 1, and therefore would require selecting the first option.

The first option can also be used if the PAP has been derived from multiple sources of protein that have all been subjected to this processing standard.

NOTE: AT PRESENT PAP OF MAMMALIAN ORIGIN (EXCEPT PORCINE BLOOD ORIGIN) CANNOT BE CERTIFIED BECAUSE THE REQUIRED TREATMENT METHOD CANNOT BE MET.

The second option relates to non-mammalian protein other than fishmeal and requires the OV to manually enter a specific method.

The third option relates to fishmeal and requires the OV to manually enter a specific method.

The fourth option relates to porcine blood and requires the OV to manually enter a specific method

II.2 Bacteriological testing

This attestation can be certified if the consignment has been analysed by random sampling of at least five containers from each processed batch by laboratory diagnostic methods to ensure adequate heat treatment of the whole consignment as foreseen under point II.1(c) has taken place, in accordance with Commission Regulation (EU) No 142/2011, Annex X, Chapter II, Section 1. The consignment should remain identified and accessible to the OV/CSO until these results are available and the certificate is signed.

To establish that the heat treatment has been adequate the lab results should confirm compliance with the following bacteriological standards:

- Salmonella: absence in 25 g, n=5, c=0, m=0, M=0
- Enterobacteriaceae: n=5, c=2, m=10, M= 300 in 1 g

Where:

n= number of samples to be tested

m= threshold value for the number of bacteria; the result shall be considered satisfactory if the number of bacteria in all samples does not exceed m;

M= maximum value for the number of bacteria; the result shall be considered unsatisfactory if the number of bacteria in one or more samples is M or more; and

c= number of samples the bacterial count of which may be between m and M, the sample shall still be considered acceptable if the bacterial count of the other samples is m or less.

II.3 Precautions to avoid recontamination with pathogens

The OV must establish that hygienic processes are in place to prevent contamination by pathogenic agents after treatment through familiarity with processing, handling and storage arrangements at the establishments and should obtain a relevant written declaration from the plant operator confirming these measures have been taken.

II.4 and II.5 The OV must establish that the conditions in relation to hygiene of the packaging or transit containers, labelling and storage of end product are met through knowledge of procedures in place at the establishment supported by visual inspection, inspection of records and valid declarations by the plant operator. The non-applicable option in II.4 should be deleted.

Details of disinfectants approved for this purpose can be accessed via:

http://disinfectants.defra.gov.uk/DisinfectantsExternal/Default.aspx?Module=ApprovalsList_Sl (as amended).

II.6 BSE risk status

NOTE: AT PRESENT PAP OF MAMMALIAN ORIGIN (EXCEPT PORCINE BLOOD ORIGIN) CANNOT BE CERTIFIED BECAUSE THE REQUIRED TREATMENT METHOD CANNOT BE MET.

NOTE: THIS ATTESTATION ONLY APPLIES WHERE ABP OR ABP PRODUCTS ARE DERIVED FROM RUMINANTS.

Species material other than ruminants.

This section should be deleted in its entirety.

The OV should obtain a written declaration from the exporter confirming the species of the source materials. The OV must be familiar with the plant sourcing procedures and complete a documentary check of the records.

Ruminant species material

Ruminant processed animal protein must originate from a country or region posing a negligible BSE risk. That prohibits ruminant PAP products from Great Britain being certified for export to the EU.

Imported material

If imported ABP material can be used then the OV should refer to Section 5 - (CONSIGNMENTS OR PARTS OF THE CONSIGNMENT ORIGINATING FROM, NI, EU MEMBER STATES OR FROM THIRD COUNTRIES (TRIANGULAR TRADE)).

II.7 TSE attestation

The first paragraph – the “either” option, applies to consignments which do not contain ovine/caprine origin milk or milk products or is not intended for feeding to farmed animals (except fur animals). This statement can be certified where the OV can establish the conditions are being met through inspection, familiarity with the plant operations and supported by a valid declaration from the exporter in relation to species of origin and/or intended purpose after export. The second paragraph – the “or” option - should be deleted in its entirety.

The second paragraph - the “or” option, applies to consignments which contain ovine/caprine origin milk products and the products are intended for feeding to farmed animals (except fur animals). In this case the first paragraph option “either” should be struck through in the usual manner.

The certifying veterinarian must establish the species of origin and intended purpose for export through inspection, familiarity with the plant operations and supported by a valid declaration from the exporter.

Paragraphs (a)(i) to (a)(v) of the second indent may be certified on the basis of the scrapie-related controls laid down in the Transmissible Spongiform Encephalopathies (England) Regulations 2018 (as amended) and by equivalent legislation in force in Scotland, Wales and Northern Ireland.

To certify (b) and (c), details of the holdings of origin of the milk are required.

If the details of the holdings of origin of the milk can be obtained, paragraphs (b) and (c) of the second indent may be certified provided written authority to do so has been obtained from the Specialist Service Centre – Exports, Carlisle, on form 618NDC.

Where details of the holdings are unavailable or impractical to obtain, this option cannot be certified.

Imported material

If imported ABP material can be used then the OV should refer to Section 5 - (CONSIGNMENTS OR PARTS OF THE CONSIGNMENT ORIGINATING FROM, NI, EU MEMBER STATES OR FROM THIRD COUNTRIES (TRIANGULAR TRADE)).

II.8 is applicable where the consignment contains, or is derived from, animal by-products of non-ruminant origin and may be certified on the basis of a declaration from the establishment.

- If the product is not intended for the production of feed for farmed animals, other than fur animals then the first sub paragraph should be certified and the second sub paragraph should be deleted.
- Where the PAP is intended for the production of feed for non-ruminant farmed animals, other than fur animals a written declaration must be obtained from the establishment/ consignor stating that the Border Control Post of entry will be provided with the results of the analyses carried out in accordance with the methods set out in Annex VI to Commission Regulation (EC) No 152/2009 regarding polymerase chain reaction (PCR) testing. The first sub paragraph should be deleted.

4. COLLECTION OF EVIDENCE

Personnel may be authorised to collect evidence which may be used to support veterinary certification. In GB, the Certification Support Officer (CSO) role has been developed by APHA.

CSOs can be utilised by OVs for gathering evidence relating to this certificate. The CSOs must be authorised by APHA and they must hold the appropriate Official Controls Qualification (Animal Health Professional) (OCQ (AHP)-CSO) qualification.

The OV must direct the CSO as to how and where any necessary evidence relevant to the requirements of the Export Health Certificate (EHC) should be obtained. CSOs may not carry out any functions that require the exercise of veterinary judgement, and are restricted to the execution of administrative checks.

They may only carry out such inspections, factual verification and evidence collection as specified by the directing OV, who remains responsible for the certification of the product. CSOs are not authorised to sign an EHC in their own right or on behalf of an OV.

Any documentary evidence collected by the CSO must be stamped, signed and dated by the CSO, before being submitted by them as supporting evidence to the OV. It is required that the OV is familiar with the product process and evidence required to start with, before directing the CSO to provide future evidence on an ongoing basis.

Additional guidance and principles of implementation are provided in the OV Instructions [Export document](#) section of the APHA [Official Veterinarian Training](#).

5. CONSIGNMENTS OR PARTS OF THE CONSIGNMENT ORIGINATING FROM, NI, EU MEMBER STATES OR FROM THIRD COUNTRIES (TRIANGULAR TRADE)

This section of the guidance applies to exports to the EU and movements from GB to NI but does not apply to movements of retail products to Northern Ireland under the Northern Ireland Retail Movement Scheme (NIRMS).

An ABP consignment for export from GB can contain animal products that originate from NI, EU and third countries, only if those products have undergone further processing in GB. Processing should be understood in the context of Commission Regulation (EU) No 142/2011 and is different than the definition that applies in the context of products of animal origin for human consumption.

ABP imported into to GB, which is only unloaded, stored, and reloaded, or which is only rewrapped in GB, cannot be re-exported to the EU or moved to NI except under the NIRMS or under the customs transit procedure (see below). Guidance on triangular trade can be found here: [Triangular Trade Briefing Note](#)

To avoid the restriction applicable to triangular trade, businesses can make use of the customs transit procedure for goods from third countries landed in GB, to move through GB, directly to NI. Consignments being moved under the customs transit procedure are not subject to triangular trade rules. Guidance on the transit procedure can be found in the triangular trade briefing note above.

6. GB APPROVED ESTABLISHMENTS TO EXPORT TO THE EU

The exporting establishment must be authorised and listed by the GB as a 'GB approved establishment' for ABP not for human consumption. A list of approved establishments can be found on the European Commission's list of approved establishments' link below:

https://ec.europa.eu/food/safety/international_affairs/trade/non-eu-countries_en

Please note that the list is updated regularly and ONLY establishments on the list are approved to export to the EU and does not include establishments with pending applications for approval/registration.

If the final product contains animal products from other establishments, or products were previously processed in different establishments in the production chain, then these establishments should also be listed on the EU website as GB approved establishments.

For approved establishments in Northern Ireland the “EC” suffix which is present in the health/ID mark of approved food establishments, should not be included when referring to establishment approval numbers in the certificate. This may also be relevant to certain ABP consignments – e.g. where the ABP is generated at an approved slaughterhouse without separate ABP approval.

7. CERTIFIED COPIES OF EXPORT HEALTH CERTIFICATES

When completing export certification, the CO and, if applicable, FCCO must make photocopies of, or scan and save all documents they certify. OV's must retain copies of certification documents in accordance with RCVS Certification principles:

<https://www.rcvs.org.uk/setting-standards/advice-and-guidance/code-of-professional-conduct-for-veterinary-surgeons/supporting-guidance/certification/>

COs must retain copies of all export documentation for a period of two years. A certified copy of this EHC does not need to be returned to the APHA CITC. For the purposes of completing routine Quality Assurance checks on export certification, CITC may request certified copies of certification from COs.

Further details on Post Certifying Procedures, ‘certified copies’ of certification and the types of documents that should be retained by COs can be found on the OV Instruction Exports [document](#) of the APHA Official Veterinarian Training.

8. LEGAL STATEMENT

References in this guidance to “assimilated EU Regulation” should be interpreted as references to assimilated law, as defined under the European Union (Withdrawal) Act 2018.

9. DISCLAIMER

This certificate is provided on the basis of information available at the time and may not necessarily comply fully with the requirements of the importing country. It is the exporter's responsibility to check the certificate against any relevant import permit or any advice provided by the competent authority in the importing country. If these do not match, the exporter should contact the Animal and Plant Health Agency (APHA) in Carlisle, via the link below: <https://www.gov.uk/government/organisations/animal-and-plant-health-agency>
