| Risk Level | Serious |
| Risk Description | <p>Some batches of model numbers 2021-MTK-012 and 2019-MTK-008 may pose a risk of asphyxiation due to an inconsistency in the size and shape of the teether. Some batches were found to have a larger overall shape as well as wider set feet, resulting in the feet of the teether protruding through the template.</p> <p>Affected large kangaroo teethers are of a certain shape/size that could press on the back of the throat of a small child who is too young to sit up unaided. This means that it could become impacted in their airway and potentially cause a blockage.</p> <p>The affected batches of the above models only do not comply with the Toys (Safety) Regulations 2011.</p> |
| Corrective Measures | One batch has been destroyed, and one batch has been withdrawn from the market. |
