

# Report a notifiable disease or public health hazard

Report an urgent notifiable disease case or chemical or radiation exposure within 24 hours by telephone to your local [UKHSA health protection team](#):

Report all cases online within 3 days at [www.gov.uk/guidance/report-a-notifiable-disease](http://www.gov.uk/guidance/report-a-notifiable-disease)

## You must report:

- any suspected notifiable disease
- any suspected infectious disease that may present a significant risk to human health
- any radiation or chemical exposure, for example to carbon monoxide, lead or mercury, that may present a significant risk to human health

Do not wait for laboratory confirmation of a disease. By law, registered medical practitioners must report any suspicion of a notifiable disease.

## What is an urgent notifiable disease?

Report a case as urgent if:

- it's part of a current outbreak
- the suspected disease is uncommon in the UK
- the suspected disease spreads easily, or its spread is hard to control
- the patient is high risk, for example because of their age or job

If you are not sure, treat the case as urgent.

## What happens when you make a notification?

A member of your local [UKHSA health protection team](#) will review your notification and take appropriate public health action.

They may use your information to:

- provide public health advice
- carry out contact tracing
- encourage urgent vaccination of contacts of a case
- send additional diagnostic test kits
- identify disease trends and risks

## Notifiable diseases

Disease	Whether likely to be routine or urgent	Disease	Whether likely to be routine or urgent
● Acute encephalitis	Routine	● Meningococcal septicaemia	Urgent
