Dear Sir / Madam

**THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING
AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS
2020
GILDEROY
EXPLORATION WELL 15/28b- 15/28b- J PLANNED WELL**

I refer to your amended application dated 19th December 2024, reference DR/2484/1 (Version 1).

It has been determined that the proposed changes to the project is not likely to result in a significant effect on the environment, and therefore an environmental impact assessment is not required.

A screening direction is therefore issued for the changes to the project. An amended schedule of conditions, comments, and main reasons for the decision on the amended application, are attached. A copy of this screening direction will be forwarded to the application consultees, the Oil and Gas Authority and published on the gov.uk website.

If you have any queries in relation to this screening direction or the attachments, please do not hesitate to contact [REDACTED] on [REDACTED] or email the Environmental Management Team at opred@energysecurity.gov.uk.

Yours faithfully

**THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING
AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS
2020**

**SCREENING DIRECTION CONFIRMING THAT AN ENVIRONMENTAL IMPACT
ASSESSMENT IS NOT REQUIRED**

**GILDEROY
EXPLORATION WELL 15/28b- 15/28b- J PLANNED WELL**

DR/2484/1 (Version 1)

Whereas CHRYSAOR PRODUCTION (U.K.) LIMITED has made an application dated 19th December 2024, under The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020, and whereas the Secretary of State has considered the application and is satisfied that the project is not likely to have a significant effect on the environment; in exercise of the powers available under regulation 6, the Secretary of State hereby directs that the application for consent in respect of the project need not be accompanied by an Environmental Impact Assessment, provided that the project is carried out as described in the application for the screening direction and in accordance with the conditions specified in the attached schedule.

In giving a screening direction under regulation 6 of the above Regulations, the Secretary of State accordingly gives agreement to the Oil and Gas Authority to the grant of consent for the project as detailed in the application, WONS/16722/0/IDA/1 Version 1

Effective Date: 23rd December 2024

Offshore Petroleum Regulator
for Environment & Decommissioning

THE OFFSHORE OIL AND GAS EXPLORATION, PRODUCTION, UNLOADING AND STORAGE (ENVIRONMENTAL IMPACT ASSESSMENT) REGULATIONS 2020

SCHEDULE OF SCREENING DIRECTION CONDITIONS

The grant of this screening direction is conditional upon the screening direction holder complying with the following conditions.

1 Screening direction validity

The screening direction shall be valid from 6 August 2024 until 23 December 2024.

2 Commencement and completion of the project

The holder of the screening direction must notify the Department for Energy Security & Net Zero (hereinafter called the 'Department') of commencement and completion of the project within two days:

- a) of commencement of the project and
- b) of completion of the project.

Notification should be sent by email to the Environmental Management Team Mailbox: opred@energysecurity.gov.uk

3 Prevention of pollution

The holder of the screening direction must ensure that appropriate measures are taken to minimise discharges, emissions and waste, in particular through the appropriate use of technology; and to ensure that necessary measures are taken to prevent incidents affecting the environment or, where they occur, to limit their consequences in relation to the environment.

4 Inspections

Should the Department consider it necessary or expedient for an inspector appointed by the Secretary of State to investigate whether the conditions of the screening direction are being complied with, the holder of the screening direction shall afford the inspector with such facilities and assistance as the inspector considers necessary to exercise the powers conferred by the regulations. The holder of the screening direction shall additionally ensure that copies (electronic or paper) of the screening direction and any other relevant documents are available for inspection by the inspector at:

- a) the premises of the holder of the screening direction; and
- b) the facilities undertaking the project covered by the screening direction.

5 Check monitoring

Should the Department consider it necessary or expedient to undertake an independent monitoring programme to assess the impact of the project covered by the screening direction, the screening direction holder shall afford the Department with such facilities and assistance as the Department considers necessary to undertake the work.

6 Atmospheric emissions returns

Following completion of the project covered by the screening direction, the holder of the screening direction shall report all relevant atmospheric emissions, such as combustion emissions, extended well test emissions or flaring and venting emissions relating to a well test, using the appropriate Environmental Emissions Monitoring System (EEMS) reporting forms. In the case of atmospheric emissions relating to drilling projects undertaken from a fixed installation, they should be included in the annual EEMS reporting forms for the fixed installation.

7 Unauthorised deposits

Following completion of the project covered by the screening direction, the holder of the screening direction shall recover any materials accidentally or temporarily deposited on the seabed, such as debris, temporary containers, structures or deposits, or scientific instruments, and shall return the materials to land. If it is not possible to recover any of these deposits, full details of the materials remaining on the seabed must be reported to the Department in accordance with the requirements of Petroleum Operations Notice No.2 (PON2).

8 Screening direction variation

In the event that the holder of the screening direction proposes changes to any of the particulars detailed in the application for a screening direction, the holder must notify the Department immediately and submit an application for a post screening direction amendment. The post screening direction must be in place prior to the amended proposals taking effect.

Offshore Petroleum Regulator
for Environment & Decommissioning

COMMENTS ON THE APPLICATION FOR SCREENING DIRECTION

Section 1

The attention of screening direction holders is drawn to the following provisions regarding The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Assessment) Regulations 2020.

1) You are deemed to have satisfied yourself that there are no barriers, legal or otherwise, to the carrying out of the project covered by the screening direction. The issue of a screening direction does not absolve the screening direction holder from obtaining such authorisations, consents etc that may be required under any other legislation.

2) The Department would draw your attention to the following comments:

N/A

3) All communications relating to the screening direction should be addressed to:

opred@energysecurity.gov.uk

SCHEDULE OF SCREENING DIRECTION DECISION REASONS

The Secretary of State has decided that, based on the information provided, the project is not likely to have a significant effect on the environment. The main reasons for this decision are:

1) Decision reasons

The following provides a summary of the assessment undertaken by OPRED to determine whether an Environmental Impact Assessment is required for this project, summarises the information considered, the potential impacts and sets out the main reasons for the decision made. In considering whether an Environmental Impact Assessment is required or not, the following has been taken into account:

- a) the information provided by the developer.
- b) the matters listed in Schedule 5 of The Offshore Oil and Gas Exploration, Production, Unloading and Storage (Environmental Impact Regulations 2020) (the Regulations).
- c) the results of any preliminary verifications or assessments of the effects on the environment of the project; and
- d) any conditions that the Secretary of State may attach to the agreement to the grant of consent.

Characteristics of the Project

Having regard to the matters identified at paragraphs 1(a) to (g) of Schedule 5 to the Regulations, the characteristics of the project include the following:

Summary of the Project

Drilling of the Gilderoy 15/28b well in three sections: 42"x36" and 17 " using Water Based Mud (WBM), and 12 " section using Oil Based mud (OBM)
WBM cuttings and mud will be discharged to seabed, while OBM cuttings and mud will be transferred onshore for treatment and disposal
Vertical Seismic Profiling (VSP) survey
Well clean up with fluids discharged overboard
Slops generation from cleaning of the Mobile Offshore Drilling Unit (MODU) will be discharged overboard.

Summary of the change to the project:

A change to the project was requested under DR/2484/1 (version 1) bring forward the permit cessation date as the operations had concluded.

Description of the Project

This project is drilling of the Gilderoy 15/28b exploration well using the Paul B. Loyd Jnr. semi-submersible MODU.

It is estimated that the project will take up to 46 days between August 2024 and the end of July 2025. The well will be drilled in three sections: 42"x36" and 17 " using Water Based Mud (WBM), and 12 " section using Oil Based mud (OBM). VSP of the well will be undertaken. Well clean up fluids will be discharged overboard if within specification. Any slops generated from MODU cleaning will be discharged overboard if within specification.

No cumulative impacts are expected to occur with any other existing or approved projects. The risk of a major accidents and environmental effects from major accidents, such as a well blowout has been assessed. The Developer has control measures in place to reduce the risk of a major accident occurring and the probability of such an event occurring is very low.

There is not likely to be any significant impact of the project on population and human health. It is not considered likely that the project will be affected by natural disasters. No nuisances are foreseen from the project. There are two synthetic oil waste streams resulting from the project which will be analysed before discharge.

Location of the Project

Having regard to the matters identified at paragraphs 2(a) to (c) of Schedule 5 to the Regulations, the environmental sensitivity of geographical areas likely to be affected by the project has been considered as follows: -

The project is in an offshore oil and gas licenced area, approximately 144 km northeast from the Aberdeen coastline in Scotland and 72 km southwest of the UK/Norway median line, in an area where water depth is approximately 147 m and the seabed type is characterised as predominately comprising medium silt. Water circulation in the project location is driven by the influx of North Atlantic waters through the Fair Isle Channel moving southwards along the Scottish coast. Within the region, there is an annual mean significant wave height between 2.11-2.40 m.

The project location is not within any protected areas, with the closest, the Scanner Pockmark Special Area of Conservation (SAC), being approximately 36 km distant.

The macrofauna community across the Gilderoy survey area was observed to be mostly homogenous and dominated by the polychaeta *Levinsenia gracilis*, along with Arthropoda (Malacostraca), Mollusca and Echinodermata (amongst other taxa) (Garline, 2024a). The faunal composition and abundances recorded in the Gardline study in 2024 are typical of the CNS. The habitat, sea pen and burrowing megafauna communities, was also noted to be present.

The project works and timing will take place at a time when a number of fish species may be found to use the area as spawning, juvenile or nursery locations. Sightings of

cetaceans are most common between the months of August to October. Seals are not expected to be seen at the remote location. Seabirds are most common in the area during in the months after the breeding season, June onwards. The project area is primarily used for demersal and shellfish fishing, but with a relatively high historical effort. Shipping intensity at the project location is low. The surrounding area comprises other oil and gas infrastructure within 40 km, but is not within a military activity zone, with no telecommunications cables, marine aggregate sites or renewable energy locations in proximity. There are four wrecks in the area of the project but no historic marine protected areas.

Given the location of the project, the areas identified at paragraphs 2(c)(i), (iii), (iv) (vi), (vii) and (viii) of Schedule 5 are not likely to be affected by the project.

Type and characteristics of the potential impact

In accordance with paragraph 3 of Schedule 5 to the Regulations, the likely significant effects of the project on the environment have been considered. Potential effects to the environment from the activities associated with the project were assessed, with focus on the predominant impacts resulting from physical presence from the MODU / vessels, atmospheric emissions from vessel use, planned discharges to sea from chemical use, drilling discharges, and accidental events such as an oil spill.

The MODU has the potential to cause interference to other users of the sea, namely fishermen and vessel traffic, however the rig and support vessels will be located in a 500m safety zone. Their presence within the safety zone means only authorised vessels would be allowed within the 500 m radius of the MODU, therefore excluding other users of the sea. Although the area has relatively high importance for fishing, the low vessel traffic, and with the drilling project being a temporary activity - the impact is deemed insignificant. An emergency response and rescue vessel will be on site continually to monitor for vessel traffic and provide alerts to other users of the sea.

Offshore registered chemicals will be used and discharged during the drilling of the well. The use and discharge of the chemicals have been risk assessed and modelled in accordance with other regulatory requirements. The use and discharge modelling shows a low risk to the environment from the chemicals. Use and discharge of chemicals are not expected to have a significant impact on the environment. The impacts of drilling discharges on water quality and benthic fauna is predicted to be minimal as affects will be localised and short-lived. Moreover, given that recovery of the seabed and the associated benthic communities are likely to begin once drilling has been completed, the environmental impact of the discharged cuttings, within the impacted area, can be considered insignificant.

Emissions to air will occur from combustion plant used on the MODU and support vessels. The quantity of carbon dioxide equivalent from the MODU and support vessel use amounts to 0.135% of the 2022 total emissions from offshore oil and gas activity. The MODU and support vessel emissions will not have a detrimental effect to

local air quality over the long-term, nor are they expected to inhibit the ability to reach wider climate change goals. The environmental effects from emissions to air are not expected to have a significant impact on the environment. The impact of the vessel emissions will be mitigated by utilising Harbour Energy's Carbon and Energy Reduction Strategy with actions such as using VSP rather than well test with flaring.

Underwater noise will be generated by the VSP activities which may impact upon cetaceans and fish. However, with a combination of soft start procedures and marine mammal observers ensuring a 500m mitigation zone, there is no significant impact upon cetaceans predicted. Regarding impacts upon fish, no significant impacts are predicted beyond 82m from the noise source.

In the event that an unlikely and unplanned accidental spill scenario from a well blow-out was realised the total volume of hydrocarbon that would be released from the well has been estimated at 195,856 m³. In the unlikely event that a well blow out were to occur, hydrocarbons may cross median lines and beaching of oil is predicted to occur a major environmental incident is considered likely if no active response measures are taken. However adequate preventative measures are considered to be in place and an approved Oil Spill Emergency Plan to manage hydrocarbon releases will be in place prior to activities being undertaken.

Decision

Taking the above considerations into account, the Secretary of State has concluded that the project is not likely to have a significant impact on the environment and that an environmental impact assessment is not required.

2) Mitigation of significant effects

The following are features of the project or measures envisaged that the developer has proposed to avoid or prevent what might otherwise have been significant adverse effects on the environment:

N/A
