## **Encounters with possible Vulnerable Marine Ecosystems (VMEs)**

7.2. The master of a fishing vessel in the course of bottom fishing shall quantify the catches of Vulnerable Marine Ecosystem (VME) indicators where evidence of VMEs is encountered. VME indicators has the same meaning as in UK retained Regulation (EU) 2016/2336 Annex III.

7.3. An encounter with a possible VME is defined as:

- a) for a trawl tow, and fishing gear other than longlines: the presence of more than 30 kg of live coral and/or 400 kg of live sponge of VME indicators; and
- b) for a longline set: the presence of VME indicators on 10 hooks per caught per 1000 hook segment or per 1200 m section of long line, whichever is the shorter.

7.4. Where the quantity of VME indicator species amounts to an encounter in a fishing operation, the master shall:

- a) if the encounter is discovered in connection with the hauling of trawl gears, cease fishing and move out of an area defined as a 2 nautical mile wide band (polygon) on both sides of the track of the trawl haul during which an encounter occurred; the track is defined as the line joining consecutive VMS positions, supplemented by the most precise available positioning information, between the start and the end of the tow, extended by 2 nautical miles at both ends;
- b) if the encounter is discovered in connection with other bottom fishing gear, cease fishing and move away at least 2 nautical miles from the position that the evidence suggests is closest to the exact encounter location.

7.5. The master shall use all available sources of information and report without delay to UKFMC the details of the incident, including the track or position determined pursuant to condition 7.4, points (a) and (b).
