Foreword

Context

This document sets out the principles and standards underpinning the budgeting system mandated for use by all bodies classified as central government, including departments, devolved governments, and arm's length bodies. This budgeting system is a key part of the UK public spending framework. It enables the Treasury to control public spending, and appropriately incentivises departments to manage spending effectively.

Years of applicability

This budgeting guidance applies to in-year control from 2025-26.

Substantive changes to the guidance for 2025-26:

This section sets out the main areas where the guidance has been changed for 2025-26:

- Technical updates/clarifications have been made in the following areas:
 - The guidance for budgeting for insurance contracts has been updated to reflect the implementation of IFRS 17 – *Insurance Contracts* across central government in 2025-26.
 - The guidance for the budgeting treatment of policy losses for financial transactions has been updated.
 - Clarification on budgeting for profit and loss recognised in accounts on behalf of an associate.
- There are also other minor changes to clarify wording following comments received during the year.

Which bodies does this guidance apply to?

The budgeting guidance in this document applies to all bodies classified by the Office of National Statistics (ONS) to central government.

The sector classification of bodies assessed by the ONS is published in their [Sector Classification Guide publication](#).

The Treasury also publishes a [guidance note on sector classification](#). In broad terms, bodies are in central government if they are owned or controlled by central government bodies and they are not a Public Corporation (which is a separate ONS classification). A body will be controlled, for example, if the sponsoring department appoints a majority of board members.

Sometimes a lesser degree of influence can still be held to give control. The legal form of a body does not tell you what sector it is in. For example, if an Arms Length Body (ALB) sets up a wholly owned subsidiary in the form of a limited company under the Companies Act, that body would be classed as central government because it would be wholly controlled by the ALB.

Subsidiaries, interests in associates and joint ventures classified to central government are consolidated with parent bodies for budgeting. So, if an ALB sets up a public sector body that is not a public corporation, it will be part of the ALB's DEL allocation from the parent department.

Departments and public bodies who are in doubt about an actual or proposed body's sector classification should approach the Treasury for advice. The ONS should only be approached via the Treasury. That restriction on direct access to the ONS is so that the Treasury can:

- advise departments on the interaction of classification and policy (the ONS are independent and are not involved in policy formulation);
- consider the implications for budgeting of any proposal and;
- provide the right information to ONS in the right way, without lobbying, and respecting ONS independence.

Departments that are setting up a new body should contact the Treasury's budgeting and classification branch (Classifications.Classifications@hmtreasury.gov.uk) with their proposals for budgeting, accounting and recording the body. The Treasury will pass the information on to the ONS, who will classify the new body.

The Cabinet Office has a separate process for classifying central government bodies for accountability and governance purposes, using their own criteria. Where departments are setting up a new body, they should also contact the Cabinet Office to discuss the governance arrangements. Throughout the rest of this document, the term 'arms

length bodies' (ALBs) is used to refer to all bodies in a departmental boundary that have been classified as central government by the ONS and will not use the Cabinet Office-specific classifications (such as NDPBs or executive agencies).

Departments should not spend money on consultancy advice regarding national accounts sector classification and should discourage their sponsored bodies from doing so. Sector classification is unlikely to be an area where consultants have expertise. The Treasury will provide advice on request. Devolved governments are part of central government for ONS purposes.

Overview: Introduction to budgeting

- 1.1 This document sets out the principles and standards underpinning the budgeting system mandated for use in central government.
- 1.2 This chapter provides a general overview of the budgeting system. This includes an overview of:
- the purpose of the budgeting system (paragraphs 1.4-1.5)
 - the interaction between budgets and the public spending framework (paragraphs 1.6-1.33)
 - the roles of budgeting system participants (paragraphs 1.34-1.40)
 - budgetary categories (paragraphs 1.41-1.53)
 - adjustments to budgets (paragraphs 1.54-1.65)
 - policies that affect other departments' spending (paragraphs 1.66-1.74)
 - budget exchange (paragraphs 1.75-1.96)
 - different presentations of total spending (paragraphs 1.97-1.105)
- 1.3 Further chapters in this document provide guidance on the budgeting treatment for specific transactions. These chapters are organised by types of budgetary category or types of transactions.

Purpose of the budgeting system

- 1.4 The budgeting system set out in this document is the primary means by which HM Treasury controls public spending.
- 1.5 The budgeting system has two main objectives:
- to provide a structure under which the Treasury can control public spending. This supports the government in realising its fiscal objectives, in return supporting macro-economic stability; and
 - to appropriately incentivise departments to manage spending effectively. This supports the provision of high-quality public services that offer value for money to citizens

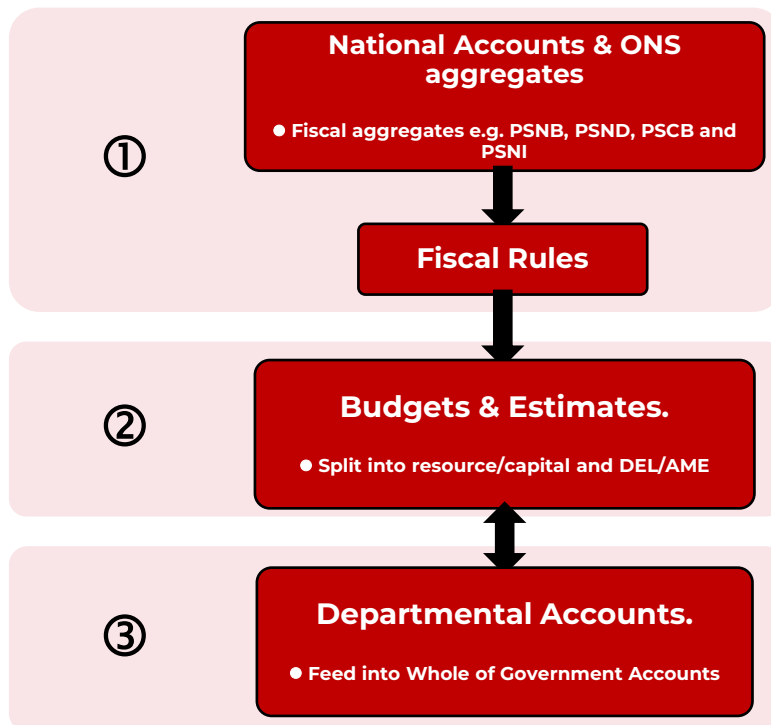

Interaction between budgets and the public spending framework

1.6 The budgeting system is designed to support the UK's public spending framework. It interacts with a number of different elements of the public spending framework:

- fiscal policy and national accounts
- departmental accounts
- Supply Estimates ('Estimates')
- cash requirements

1.7 Diagram 1.A provides a visual overview of the public spending framework.

Chart 1.A: Public Spending Framework

The interaction between the budgeting system and each of these elements of the public spending framework is explained in more detail below.

Budgets, fiscal policy and national accounts

1.8 The budgeting system is designed to support the specific objectives for fiscal policy set by the government.

1.9 As confirmed at Autumn Budget 2024, fiscal policy decisions for at least this Parliament will be guided by the following mandate:

- The current budget must be in surplus in 2029-30, until 2029-30 becomes the third year of the forecast period. From that point, the current budget must then remain in balance or in surplus from the third year of the rolling forecast period, where balance is defined as a range: in surplus, or in deficit of no more than 0.5% of GDP
- 1.10 The Treasury's mandate for fiscal policy is supplemented by:
- a target to ensure debt, defined as Public Sector Net Financial Liabilities (PSNFL), is falling as a share of the economy by 2029-30, until 2029-30 becomes the third year of the forecast period. Debt should then fall by the third year of the rolling forecast period.
- 1.11 To ensure that expenditure on welfare remains sustainable, the Treasury's mandate for fiscal policy is further supplemented by:
- a target to ensure that expenditure on welfare is contained within a predetermined cap and margin set by the Treasury
- 1.12 At the current time, while balance sheet statistics are still being developed and analysed in the UK, the government's approach will not be to target one specific metric but to aim to strengthen over time a range of measures of the public sector balance sheet such as public sector net debt, public sector net financial liabilities and public sector net worth through effective management of assets, liabilities and risks.
- 1.13 These targets are measured with reference to fiscal aggregates, including:
- **Public Sector Net Financial Liabilities (PSNFL)**, which is a wider measure of the balance sheet than public sector net debt (PSND), and includes all financial assets and liabilities recognised in the National Accounts. The differences from PSND are due to including additional liabilities (such as funded pensions obligations and standardised guarantees) and also net of both liquid and illiquid assets (such as equity holdings and loans)
 - **Public Sector Current Budget Deficit (PSCBD)**, which is a measure of the difference between the government's current expenditure (total expenditure excluding capital investment) and its current receipts (principally tax receipts), plus depreciation costs
 - **Public Sector Net Investment (PSNI)**, which is a measure of the capital investment made by the government. This includes the acquisition of fixed assets (such as hospitals or other infrastructure), less any disposals, plus capital grants. This measure is presented net of public sector depreciation costs
- 1.14 The PSNFL and PSCBD aggregates, along with other fiscal aggregates, are aligned with national accounts concepts, which are a set of accounts showing economic activity throughout the UK, both in the public and private sector.

- 1.15 The Office for National Statistics (ONS), acting as an independent agency, prepares the UK's national accounts in accordance with the '[European System of Accounts 2010](#)' (ESA10) framework and the accompanying [Manual on Government Deficit and Debt 2022 \(MGDD\)](#). ESA 10 in turn is consistent with the [System of National Accounts](#) (SNA08), is an internationally agreed standard adopted by the United Nations and used globally. ESA10 and SNA08 provide a standardised international framework for preparing national accounts.
- 1.16 In summary, the budgeting framework supports the government's fiscal objectives, which are measured using fiscal aggregates derived from the national accounts. Therefore, the budgeting rules, where possible, are consistent with the ESA10 framework used to prepare national accounts.

Budgets and departmental accounts

- 1.17 Departmental accounts are laid in Parliament and publicly available, audited, annual report and accounts that report how departments have used the resources at their disposal. They are based on International Financial Reporting Standards (IFRS) as interpreted by the [Financial Reporting Manual](#) (FReM) (which is produced by the Treasury). The vast majority of transactions are treated in the same way in departmental accounts and national accounts: for example, pay is a current expense in any system of accounts.
- 1.18 Moreover, as part of the 'Clear Line of Sight' Treasury Alignment Project, the budgeting framework was amended to substantially align the treatment of transactions between budgets, Estimates and departmental accounts. Most of the spending by departments and their arm's length bodies (ALBs) scores in the budgets and Estimates at the same value and with the same timing as in departmental accounts. This ensures that financial reporting is consistent, transparent, accurate and straightforward, and keeps compliance costs down for departments.
- 1.19 However, there are some differences between budgets and departmental accounts. Most of these differences are largely due to differences between the ESA10 framework (on which national accounts, and therefore budgets, are based) and the IFRS framework (on which departmental accounts are based). For example, ESA10 has different rules regarding the treatment of research and development costs as compared to IFRS.
- 1.20 Additionally, there are differences between budgets and departmental accounts where controlling spending against information in departmental accounts may not provide the right incentives for departments. Annex A lists the main differences between budgets and departmental accounts.

- 1.21 When there are differences between budgets and departmental accounts, Estimates will normally follow the budgeting treatment (see [section on budgets and Estimates below](#)).
- 1.22 Considering that budgets and departmental accounts are substantially aligned, it will likely be most cost-effective for departments to determine how to score a transaction for budgeting purposes in the following way:
- start by considering the treatment of the transaction in departmental accounts
 - consider whether the budgeting treatment is the same as the departmental account treatment or different, and so establish the budgeting and Estimates treatment
 - as budgeting information generally feeds into national accounts, once you know the budgeting treatment and how it aligns with national accounts you can determine the fiscal effect of the transaction. This document spells out where budgeting information is not aligned to national accounts
- 1.23 In some places this budgeting guidance summarises or describes the accounting treatments in departmental accounts. This is done to provide context for the budgeting rules. However, the only authoritative description of accounting treatments is in the [FReM](#).

Budgets and Estimates

- 1.24 Estimates are the mechanism by which Parliament authorises departmental spending. Estimates are generally presented using the budgetary framework in this document.
- 1.25 Estimates require Parliament to vote limits for different budgetary categories of spending, as well as any voted spending outside of budgets and the department's Net Cash Requirement. These voted limits may differ from the figures in departmental budgets, as elements of the department's budgets may fall within non-voted spending. The sum of voted and non-voted spending in Estimates will equal the figures in departmental budgets.
- 1.26 In the same way as budgets, Estimates are voted net of retained income. Generally, any income retained in budgets will net off against voted limits in the Estimate. This is discussed in more detail in Chapter 4.
- 1.27 The [Supply Estimates guidance manual](#) contains full guidance on Estimates.

Budgets and cash requirements

- 1.28 The budgeting system is based on accruals accounting rather than cash accounting, consistent with both national accounts

and departmental accounts. Accruals accounting provides a better basis for spending control, giving a more accurate picture of the expense incurred by a department in any period.

- 1.29 Cash is, therefore, not controlled directly through the budgeting system. Cash balances do not convey spending power and the availability of cash does not translate into budget cover.
- 1.30 However, cash is controlled elsewhere in the public spending framework. The Net Cash Requirement for Supply Expenditure is controlled through the Estimates processes. The concept of annuality is important in cash management; departments cannot carry forward cash from year to year. Departments need to return any unspent cash at the end of each financial year
- 1.31 Changes in the expected level of use of cash provide useful monitoring information. For example, unexpected increases in cash outflows can serve as a trigger to check whether spending is rising above expectation. Departments should discuss the reasons for planned increases in the level of cash spending with their Treasury spending teams.
- 1.32 The [Supply Estimates guidance manual](#) provides more guidance about the Net Cash Requirement and the process for returning cash.

Summary of the interaction between this guidance and other public spending framework documents

- 1.33 This document only provides guidance on the budgeting framework. As described above, there are a number of other documents that provide guidance on other areas of the public spending framework. Please refer to Annex E for a complete list of other areas of guidance. Some of the most important pieces of guidance are summarised below:

Table 1.A: Public spending framework documents

Topic	Guidance
National accounts	European System of Accounts 2010 (ESA10)
Departmental accounts	Financial Reporting Manual (FReM)
Estimates	Supply Estimates guidance manual
Managing Public Money (i.e. guidance around accountability, governance, Parliamentary reporting responsibilities, etc.)	Managing Public Money

Roles of budgeting system participants

- 1.34 There are two main participants in the budgeting system: departments and the Treasury.

Throughout this document, references are made to 'departments.' This document generally applies to devolved governments as well; however, some unique budgeting arrangements might be agreed between the Treasury and devolved governments. Further information on arrangements for the devolved governments is in the Statement of Funding Policy.

Role of the department

- 1.35 The budgeting system aims to ensure that departments have appropriate incentives to manage their business well, to prioritise across areas of spend, and to obtain value for money (as defined in the [Green Book](#)). Departments' roles in improving spending control are further set out in Chapter 2, and in [Managing Public Money](#).
- 1.36 Sometimes departments or public bodies commission consultants to offer them suggestions for ways around the spending control framework. The Treasury has no interest in such schemes. Departments are asked to go with the spirit of the spending control framework. If a transaction is clearly just a way around the letter of the rules, then departments should follow the spirit of the rules. If you are in doubt, talk to your Treasury spending team.

Role of HM Treasury

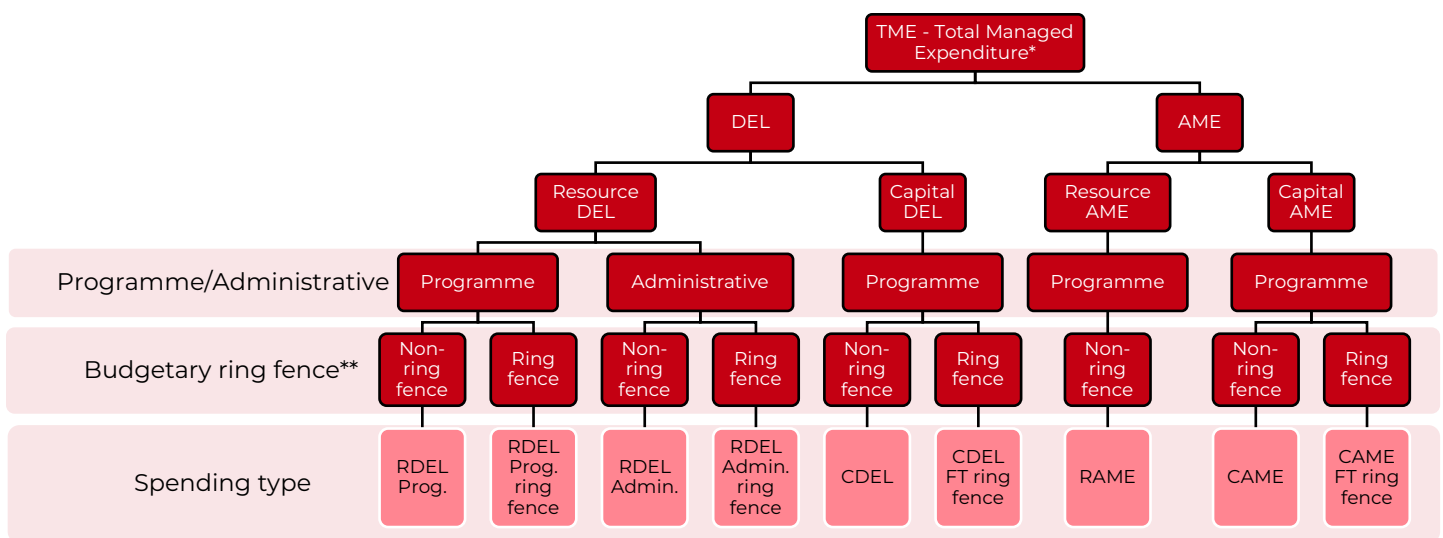

- 1.37 The Treasury is responsible for the design of the budgeting system and can offer advice and explanations in applying this system. It is only the Treasury which may finally determine the budgeting treatment of a transaction.
- 1.38 The guidance in this document cannot cover every case. Sometimes it is deliberately kept simple for departments because transactions are rare or typically small. There may be cases where if a large instance of such a transaction were to take place it would impact on the fiscal framework. In such cases the Treasury will sometimes impose restrictions, even if the guidance does not provide for them, to protect the fiscal framework or to provide better incentives for departments. If departments face new circumstances, which might lead to difficulties for the fiscal framework or where the budgeting is unclear, they should contact their Treasury spending team before they undertake the transaction.
- 1.39 Treasury ministers have the right to modify the budgeting guidance at any time, although in practice we try to keep changes to a minimum and consult departments before making significant changes.

Budgetary categories

1.40 The budgeting framework disaggregates a department's budget into a number of different budgetary categories, each with its own control limit. These controls support the achievement of the fiscal framework and provide management incentives for departments. Each category, and the importance of spending control, is summarised below.

1.41 Chart 1.B provides an overall summary of the different budgetary categories.

Chart 1.B: Budgeting Framework

*Total Managed Expenditure is made up of DEL and AME, plus accounting adjustments

** Budgetary ring fences (the depreciation and impairment resources budget ring fence and the financial transactions capital budget ring fence) are separate policy ring fences. Not all departments are subject to the financial transactions ring fences.

Departmental Expenditure Limits (DEL) and Annually Managed Expenditure (AME)

1.42 Departmental budgets are first disaggregated into two different categories:

- **Departmental Expenditure Limits (DEL)** –this budgetary category captures spending that is subject to limits set in the Spending Review (SR). Departments may not exceed the limits that they have been set
- **Annually Managed Expenditure (AME)** –this budgetary category captures spending that is subject to budgets set by the Treasury. Departments need to monitor AME closely and inform Treasury if they expect AME spending to rise above forecast. Whilst Treasury accepts that in some areas of AME

inherent volatility may mean departments do not have the ability to manage the spending within budgets in that financial year, any expected increases in AME require Treasury approval

- 1.43 Within both DEL and AME, departments are expected to pursue efficiencies and prioritise expenditure in order to optimise value for money (as defined in Box 18 of the [Green Book](#)).
- 1.44 The combination of the resource/capital budgetary categories (described below) with the DEL/AME categories gives rise to a number of separate budgetary control and planning totals (for example capital DEL, resource AME). Departments and their Treasury spending teams should at all times have a shared understanding of what the control and planning totals are and how the department's spending matches up against them. See Chapter 2 for a more detailed discussion of tracking control and planning totals.
- 1.45 Appendix 2 to this chapter sets out the budgetary categories diagrammatically. Appendix 3 sets out a list of a department's control and planning totals.

Criteria for treatment in DEL or AME

- 1.46 The following paragraphs provide a brief overview of whether transactions should be recorded in DEL or AME.
- 1.47 Generally, all areas of spend are in DEL unless the Chief Secretary of the Treasury has determined that they should be in AME. The Chief Secretary may agree to put areas of spend into AME if:
- they are not only demand-led but also exceptionally volatile in a way that could not be controlled by the department and where the areas of spend are so large that departments could not be expected to absorb the effects of volatility in their DELs (for example, most welfare spending) or
 - for other reasons, they are not suitable for inclusion in firm multi-year plans set in the SR. For example: lottery spending funded by the National Lottery which may not be reprioritised elsewhere. Certain levy-funded bodies, which serve particular industries, are also in AME – Appendix 4 to this chapter sets out the criteria determining whether levy-funded bodies should be in AME
- 1.48 Additionally, transactions may score in AME when they do not have an immediate impact on the fiscal aggregates (for example, revaluations or provisions). This document provides detailed guidance for these transactions.
- 1.49 The Treasury regularly reviews whether areas of spend in AME are still suitable for AME treatment. Where appropriate these are moved into DEL.

- 1.50 Normally, an area of spend will have both its resource and capital budget impact in either DEL or AME, but there are some exceptions. Where a department agrees an exception with Treasury it should be included in their settlement letter during the SR process.

Resource and capital budgets

- 1.51 In addition to being split into DEL or AME, departments' budgets are also split into *resource* and *capital* categories.
- **Resource budgets** capture current expenditure (including depreciation, which is the current cost associated with fixed assets). It is paramount for Treasury to retain control over the level of current spending. Within the resource budget some transactions will have an immediate or near-immediate impact on fiscal aggregates, for example pay and procurement. Other transactions will only have an effect in future periods, for example the take-up of provisions. Resource budgets are discussed further in Chapters 3 and 4
 - **Capital budgets** capture new investment and financial transactions. It is important to control capital budgets alongside resource budgets because spending in this budget increases public sector net debt and government's borrowing requirements. Capital budgets are discussed further in Chapters 6 and 7

Programme and administration budgets

- 1.52 Resource budgets are further split into programme and administration budgets.
- **Programme budgets** capture expenditure on front line services
 - **Administration budgets** capture any expenditure not included in programme budgets. They are controlled to ensure that as much money as practicable is available for front line services. Administration budgets are discussed further in Chapter 5

Types of adjustments to budgets

- 1.53 Budgetary limits in each budgetary category are set at each SR. However, there can be subsequent adjustments within or between these budgetary limits. These adjustments fall into three categories. In summary:
- **Policy/plan adjustments** reflect deliberate decisions by departments to increase or decrease spending in a particular policy area, or in the way a policy is delivered (for example introducing a charging regime). These represent 'real world' changes in spending or plans. There are restrictions on the adjustments that departments can make to budgetary limits

in this area; this is discussed further in paragraphs 1.60-1.63 below

- **Classification adjustments** reflect changes in budgetary totals driven by changes in the way spending is classified rather than by actual changes in the level of spending. For example, changes in IFRS accounting standards or ESA10 national accounts standards that are implemented in the budgetary framework are classification adjustments. Classification adjustments also include Machinery of Government changes where responsibility for spending moves from one central government body to another. Accounting policy changes – whether driven by the department or by the National Audit Office – also count as classification changes; note that accounting policy changes need the agreement of the Treasury
- **Inter-departmental adjustments/budget cover transfers** reflect changes in spending plans as a result of an agreed transfer of budgetary cover from one department to another. Examples of where a transfer is appropriate include where there is an allocation from a ‘shared pot’, or when a department agrees to transfer cover to another department to cover costs incurred as a result of a change in policy

1.54 The changes are implemented in different ways in budgets:

- Departments are expected to accommodate the effects of **policy/plan adjustments** in their budgets, making offsetting reductions in spending
- **classification adjustments** lead to budgets being restated, normally across all the open years on the Online System for Central Accounting and Reporting (OSCAR) system
- **inter-departmental adjustments/budget cover transfers** lead to restated limits of the departments concerned

1.55 In addition, departments may record changes to their expenditure numbers as **budgetary outturn adjustments**, which are not a change to the budget – they are used to describe changes against final budget allocations and are used for recording outturn.

1.56 It is the Treasury that ultimately determines what type of adjustment a change is. Departments that are in doubt should contact their Treasury spending team.

1.57 Annex E sets out where to find further guidance on types of adjustment. Appendix 4 to this chapter provides more guidance on Prior Period Adjustments, i.e. adjustments to budgets in prior periods.

Policy/plan adjustments and 'switching' across categories

1.58 As stated previously, departments are expected to accommodate policy/plan adjustments (which are real-world changes in spend) in their existing budget limits. One way they can achieve this is if spend increases in one area of a budgetary category (for example, capital DEL), a department can reduce spend in another area of that same budgetary category. Another way of accommodating policy/plan switches is to 'switch' budget provision from one budgetary category to another.

1.59 So that control totals are effective, departments are restricted in the switches they may make between budgetary categories:

- departments may not switch provision from AME to DEL. Departments may not exceed the DEL limits set in each SR; they cannot avoid exceeding these limits by switching provision from AME to DEL. Where the actions/inaction of a department increase AME, they are assumed to fund the increases in AME by reductions in their DEL budgets
- departments may not switch provision from capital budgets to resource budgets; such switches would mean that money that had been earmarked for investment was used for current spending. It is paramount for Treasury to retain control over the level of current spending via the resource budget; this control should not be risked via switches from capital to resource budgets. Departments may switch provision from resource budget DEL to the capital budget DEL but not from ring-fenced elements of those budgets

1.60 Departments are expected to manage their resource budget DEL as an integrated whole, optimising spending across different areas (including areas managed by ALBs and those involving Public Corporations). In order to encourage value for money and to support achievement of the fiscal framework, there are some general restrictions on the freedom to move provision across resource DEL:

- departments may not switch from programme budgets to administration budgets. Such switches would mean increasing provision for back-office or policy staff at the expense of frontline staff and programmes. Departments are free to switch provision from administration budgets to programme budgets
- depreciation and impairments of fixed assets are ring-fenced within resource DEL (or exceptionally resource AME) and budget cover may not be reprioritised from within the ring-fence. Departments may freely switch provision from outside of the ring-fence to depreciation and impairments costs

- finally, there are also restrictions on switching into and out of support for local authorities
- 1.61 To relax any of the above restrictions could impact on the government's fiscal mandate or its administration costs target and would therefore need to be absorbed by the Reserve (see Chapter 2). For this reason, any request to waive the above restrictions is viewed in the same way as a request for support from the Reserve and the same process (which is outlined below) will be followed. Note that requests to switch budget cover out of the resource DEL depreciation ring-fence will not be approved.
- 1.62 In addition, as part of the SR settlement or through subsequent agreement, some spending might be subject to specific policy ring-fences. If so, departments may not move money across these ring-fences, except as specified in their SR settlement. Ring-fences are normally set at the level of resource DEL or capital DEL. However, closer controls (for example on administration spending) may be set.

Policies that affect other departments' spending

- 1.63 One department's policies may affect the spending of another department. Sometimes the link is obvious, for example where several departments have joint responsibility for a change to outcomes. In other cases, the link may be less clear: for example, the creation of a new offence may impose burdens on the police, prosecutors, legal-aid, and offender-management budgets.
- 1.64 There is a long-standing set of general principles governing the question of policy changes with resource implications affecting more than one department. These include:
- any department proposing new policies, in whatever context, must always quantify the effects on public expenditure prior to a policy decision being made. In doing so, it must assess the effects not only on its own spending but also on the spending of other government departments, the devolved governments for Scotland, Wales and Northern Ireland, and local authorities
 - decisions on how to finance a new proposal must be taken simultaneously with the policy decision. It is for the department proposing a change to consult those concerned (including the Treasury and any other departments for which there are dependencies that could have spending implications) and agree new policy, including the finance of that policy, before a proposal goes forward for collective consideration
 - the agreement on financing the downstream costs of new policy on another department may provide either that the

costs be met by the originating department or that they be met by the department on which those costs fall

- in the absence of explicit agreement to the contrary, the normal presumption is that the originating department will absorb the cost
- where consultation has not taken place, the default is that all costs, including those affecting other departments, will be absorbed within existing budgets by the department responsible for the policy change that creates additional costs. The Chief Secretary will not consider any requests to provide further funding for pressures which arise as a result of consultation not taking place
- where the originating department absorbs the cost, it should make budget transfers to affected departments covering the whole of the SR period
- where the costs fall, or come fully on stream, in the next SR period, it is for the department(s) that will meet the costs to conduct the SR discussions with the Treasury on funding in the next SR period. Where that department is the originating department, it should make budget transfers after the conclusion of the SR
- these arrangements include cases where a department's policies impact on the AME spending of another department. The originating department may be expected to make DEL offsets to cover increases in AME spending
- Treasury agreement is needed for all new policies with expenditure implications (see [Managing Public Money](#)). However, the Treasury does not arbitrate between departments on the question of who should bear downstream costs and will not provide funding where no agreement has been reached

1.65 Where a department introduces a policy that benefits another department, it may seek a contribution to the costs to the implementation of that policy, and this should be explored ahead of any policy decision. Cost-sharing may only be appropriate in some circumstances, but discussion between departments to understand potential benefits, costs and dependencies should support improved spending and policy decisions. This is to be agreed between affected departments and again the Treasury will not arbitrate.

1.66 The budget consequences of any new proposals, regardless of where they originate, fall to the department responsible for implementing the proposals.

Charging for services

- 1.67 Where a department introduces charges for a service previously provided for free or moves from a subsidised service to full cost recovery, it should normally transfer DEL cover to any customers in the central government sector to leave them no better and no worse off.

New burdens on local authorities

- 1.68 Where a department wishes to impose additional burdens on local authorities, it is responsible for securing the necessary resources and fully funding them. A new burden is defined as any policy or initiative which increases the cost of providing local authority services. This includes duties, powers, or any other changes which may place an expectation on local authorities, including new guidance.
- 1.69 The policy applies to any new burden imposed on local authorities (including police and fire authorities) except for policies which apply the same rules to local authorities and to private sector bodies (for example a change in the rate of employers' National Insurance contributions).
- 1.70 Departments contemplating a potential new burden should contact the Ministry of Housing, Communities and Local Government (MHCLG) at the earliest possible stage to discuss the procedures to be followed – newburdens@communities.gov.uk

Transactions between departments

- 1.71 Transactions between public sector bodies should be constructed simply. For example, where Department A buys an asset from Department B, the purchase price should normally be paid in full in cash on the day of completion. Departments should not enter into or spend money on complex deals which do not have a clear justification in fairness or incentives as these are unlikely to be good value for the public sector overall. Departments should not seek to exploit differences in budgeting rules between different public sector entities. Where departments are unsure how best to construct a transaction with a public sector body they should consult the Treasury.

Budget Exchange

- 1.72 Budget exchange is a mechanism that allows departments to carry forward a forecast DEL underspend from one year to the next. Budget exchange provides departments with flexibility to manage their budgets, while strengthening spending control and providing greater certainty in order to support effective planning.
- 1.73 Under budget exchange, departments may return a forecast DEL underspend in advance of the end of the financial year (by means

of a DEL reduction in the Supplementary Estimate) in return for a corresponding DEL increase in the following year, subject to a prudent limit.

- 1.74 There is no scope to carry forward underspends that are not forecast in advance of the Supplementary Estimate.
- 1.75 Departments may not generally carry-forward an underspend if they are simultaneously seeking to draw funds from the Reserve (the Reserve is discussed in more detail in Chapter 2). As always, Reserve support is subject to an assessment of need and so emerging underspends should be deployed to meet pressures before additional funding is sought. For example, a department with a capital pressure and a resource underspend should not seek to Budget exchange the latter. Budget exchange is available on all DEL control totals (including non-voted DEL). This is subject to the usual restrictions on switches discussed in paragraphs 1.60-1.64.
- 1.76 Separate arrangements apply to the devolved governments.

Approval process

- 1.77 Treasury approval is required for any increase to DELs. However, it is intended that approval to utilise budget exchange will be granted automatically up to a prescribed limit and subject to the other conditions detailed below, though Treasury reserves the right to withhold approval in exceptional circumstances.
- 1.78 The amounts that departments will be permitted to carry forward are set out in the table below, where the limit is expressed as a percentage of resource DEL and capital DEL in the year in which the underspend is forecast to occur. These limits vary by size of department in recognition of the difficulties faced by smaller departments in managing slippage between years and there are separate limits for resource DEL and capital DEL.

Table 1.B: Separate arrangements apply to the devolved governments

Size of Department	RDEL Limit	CDEL Limit
Total DEL ¹ less than £2billion	2%	4%
Total DEL greater than £2billion but less than £14billion	1%	2%
Total DEL greater than £14billion	0.75%	1.5%

¹ Where total DEL = Resource DEL excluding depreciation + Capital DEL

- 1.78 Resource DEL carried forward through budget exchange may not be switched between administration and programme budgets or between the ring-fences.

Preventing the accumulation of spending power over time

- 1.79 To further ensure that the fiscal cost of budget exchange is manageable, and that spending power is not allowed to accumulate over time, budget exchange will only be permitted from one year to the next. This works by any carry-forward from the previous year being netted off the amount that can be carried forward into the next year. A worked example is shown below for a department with £1 billion DEL each year:
- in year one the department forecast an underspend of £20 million. It reduces its year one DEL to £980 million and increases its year two DEL by a corresponding amount to £1,020 million
 - in year two the department forecasts an underspend of £30 million (against its new DEL of £1,020 million). It reduces its DEL by this amount, to £990 million. However, the amount brought forward from year one must be netted off the amount that the department is allowed to carry into year three. Therefore, the department is only allowed to increase its year three DEL by £10 million to £1,010 million
 - in year three the department forecasts an underspend of £10 million (against its new DEL of £1,010 million) and reduces its DEL by this amount, to £1,000 million. However, it cannot carry anything forward to year 4 as the £10 million carried over from year two is netted off
- 1.80 In the above example, we assume all other budget exchange rules are in effect.

Timing

- 1.81 The budget exchange process is run to a Supplementary Estimates timetable. The exact timing will be confirmed in a Public Expenditure System (PES) paper ahead of the Supplementary Estimate, but it is likely that departments will need to inform the Treasury of the amounts that they wish to carry forward by late November/early December.
- 1.82 The in-year DEL reductions will be reflected in the Supplementary Estimate, with the corresponding DEL increase awarded at the time of the Main Estimate the following year.

Overspends

- 1.83 There is no scope to change DELs after the Supplementary Estimate. Any department that uses budget exchange and then

subsequently breaches a DEL control total will be treated like any other overspend and will be subject to the same process outlined in Chapter 2. Departments will need to take this into consideration when making a budget cover return for a forecast underspend. Departments are under no obligation to return their entire forecast underspend.

Flexibility for managing large capital projects

- 1.84 Managing large projects can pose significant challenges to departments, who currently have to manage spending within annual budgets which may have been set several years before the start of the project.
- 1.85 To recognise this challenge, departments are offered greater flexibility to carry-forward capital DEL underspends related to significant investment programmes:
- to qualify for additional flexibility, the programme must have a capital DEL budget of over £50 million in the year in question
 - carry forward will not count towards the standard capital DEL budget exchange limits, but may not exceed 20% of the programme's capital DEL budget in the year from which it is being carried forward
 - carry forward may be spread across multiple years
 - this will be subject to the following conditions:
 - the Treasury will consider each application on a case-by-case basis, taking into account the overall value for money of the programme and the likelihood of successful project delivery being enhanced by the carry forward. Departments will be expected to provide evidence to support their application
 - the programme in question must continue to be delivered to the originally agreed timescale
 - departments must notify their Treasury spending team 6 weeks ahead of the Supplementary Estimate if they wish to take advantage of this flexibility, to allow time for the effect on the fiscal aggregates to be assessed

Flexibility for the retention of income from asset sales

- 1.86 It can be challenging for departments to match asset-sale proceeds with capital expenditure perfectly on an annual basis. Therefore, departments will automatically be allowed to carry forward the capital DEL proceeds from the sale of surplus property assets (i.e. assets no longer serving a policy purpose), in line with any asset disposal targets. Departments can retain 100% of capital DEL proceeds from asset sales, up to 1.5 times their

target and 50% between 1.5 and 5 times the target. Further guidance on the scoring of asset disposal proceeds, including on the treatment and retention of resource DEL profits/losses recorded as a result of the sale, is covered in section 4.46-4.49.

- 1.87 Departments manage a range of asset types which are held for policy purposes, such as financial assets, investments in public corporations, and fixed assets. Departments should regularly review assets on their balance sheets and explore potential for disposals where assets are surplus or where there is no longer a public interest rationale for ownership. In addition to the flexibilities on surplus property assets above, the Treasury will welcome proposals from departments regarding flexibility to carry forward a proportion of the capital DEL proceeds from other asset sales across multiple years. The flexibility will be considered on a case-by-case basis, subject to the following conditions:
- For sale of fixed assets, the department can demonstrate clearly that it has approved capital projects in subsequent years on which to spend these receipts
 - the asset sale in question must have been completed before budgets will be adjusted and
 - receipts may not be switched between the general and financial transaction capital DEL boundaries, without prior agreement from the Treasury.
- 1.88 In some cases, departments may prefer to share the resource benefit that results from the Exchequer using asset-sale proceeds to pay down debt and hence reduce interest payments. Therefore, instead of keeping the proceeds from a fixed asset sale, departments may return the proceeds in full to the Exchequer in exchange for a resource DEL uplift equivalent to 3.5% of the proceeds returned. This would be a non-baselined uplift in each year of the period for which resource DEL budgets had been set. The Treasury will consider each application on a case-by case basis.
- 1.89 In order that the Treasury can monitor the overall effect of these policies on the fiscal aggregates, departments should notify their Treasury spending team 6 weeks ahead of a fiscal event if they envisage using either of these flexibilities on asset sales in that financial year.
- 1.90 These flexibilities do not affect any other rules around the retention and utilisation of asset sale income.
- 1.91 For areas of protected spend, the Treasury may not be able to offer the asset-sale flexibilities above. Departments should discuss asset sales in areas of protected spend with their Treasury spending team directly.

Cascading Budget Exchange

- 1.92 Departments are responsible for deciding whether to cascade budget exchange, or an alternative system for carrying forward underspends, to their ALBs. Departments will be responsible for managing any pressures this would create within their DEL.

Presentation of total spending

- 1.93 Budgetary information can be used to present figures about central government spending in a number of different ways. The primary budgetary presentations of spending are summarised below.

Total Managed Expenditure

- 1.94 The government's main measure for reporting overall public spending is Total Managed Expenditure (TME), a measure drawn from the national accounts. TME may be defined as the sum of the public sector's current and capital expenditure. Current expenditure is presented net of sales of goods and services while capital expenditure is presented as net of asset sales.
- 1.95 The composition of TME is discussed in more detail in the [Public Expenditure Statistical Analyses](#) (PESA) document.

Resource and capital budgets

- 1.96 A department's resource budget is the sum of resource DEL and resource AME. The capital budget is the sum of capital DEL and capital AME.
- 1.97 Neither the resource budget nor the capital budget is a control total, since departments may not make switches from AME to DEL. They are still useful numbers to present since they show the total current and capital spending in the budgets of the department.

Total DEL

- 1.98 In addition to the control totals, there is a presentational aggregate; Total DEL. Total DEL is not a control total. It is a standard way of showing total current and capital spending in DEL. It is defined as:
- resource budget: DEL
 - *plus* capital budget: DEL
 - *less* depreciation in DEL
- 1.99 Depreciation here includes DEL impairments.
- 1.100 Depreciation is excluded from total DEL because adding together depreciation and investment may be seen by some as double counting the cost of assets.

Tax impacts on departmental budgets

- 1.101 Budgets will not be changed as a result of changes in tax treatment. This includes where the Chancellor announces tax increases at a fiscal event that impact on departments.

Appendix 1 to Chapter 1: Summary content of budgets

1.102 This table summarises the main standard contents of resource and capital budgets.

Table 1.C: Contents of budgets

	Resource budget	Capital budget
Department's own transactions with the private sector	<p>Expenditure on an accruals basis, including administration costs, pay, superannuation liability charges and other pensions contributions or current service pensions costs, grants to individuals, subsidies to private sector companies.</p> <p>Take up of provisions, movements in value of provisions, and release of provisions (as well as the expenditure offset by the release of the provision – except provisions related to capital expenditure).</p> <p>Profit/loss on disposal of assets.</p> <p>Depreciation and impairments on the department's assets.</p> <p>Less income retained in DEL/AME, for example sale of services.</p> <p>Note: Excludes revaluations charged to revaluation reserve.</p>	<p>Expenditure on new fixed assets on an accruals basis; includes leases and other transactions that are in substance borrowing (i.e. on-balance sheet PPP deals).</p> <p>Less Net book value of sales of fixed assets.</p> <p>Net policy lending to the private sector.</p> <p>Capital grants to the private sector.</p> <p>Research and Development expenditure (per ESA10)</p>
ALB transactions with the private sector	<p>As the department.</p> <p>Note: the department's grant in aid to ALBs is excluded from budgets.</p>	As the department
NHS Trusts (England)	As the department	As the department
Support for local authorities	Current grants to local authorities	Capital grants to local authorities Supported Capital Expenditure (revenue)

Public Corporations	<p>Subsidies paid to Public Corporations</p> <p><i>Less interest and dividends received from Public Corporations</i></p>	<p>Investment grants paid to Public Corporations</p> <p>Net lending to Public Corporations (Voted and NLF)</p> <p>Public Corporations' market and overseas borrowing (including on balance sheet PPP)</p> <p><i>Less equity withdrawals from Public Corporations</i></p>
---------------------	--	--

Appendix 2 to Chapter 1: The department's control and planning totals.

- 1.103 Departments and their Treasury spending teams should at all times have a shared understanding of what their control and planning totals are, whether the department's spending is on track to stay within limits, and what the risks are.
- 1.104 The control totals are:
- resource DEL (broken down into the non-ringfenced and depreciation ringfenced budgets)
 - administration budget
 - capital DEL (for some departments, broken down into the non-ringfenced and financial transaction ringfenced budgets)
 - any department-specific policy ring-fences
- 1.105 The planning totals are:
- resource AME
 - capital AME

Appendix 3 to Chapter 1: Criteria for AME treatment of levy-funded bodies

- 1.79 The Chief Secretary has determined that the spending of a number of levy-funded bodies should be in AME rather than DEL. The Chief Secretary takes such decisions case by case using the criteria below. The AME treatment of individual bodies is kept under review.
- 1.80 Where an AME treatment has been approved for spending, the income from the levy must also be recorded in AME by the body.
- 1.81 While the Treasury has no plan to recommend to the Chief Secretary that any further levy-funded bodies should have AME treatment, the criteria that the Chief Secretary uses are set out below.

Box 1.A: Criteria for deciding whether a levy-funded body should score in AME

- the body should in broad terms provide services (“services” could include a compensation fund) to an industry or group of industries or the workforce in that industry
- the body should be wholly or mainly funded by a levy on the industry. There should be substantial industry consensus involved in the setting of the levy or the direction of the expenditure or both
- the expenditure must be suitably ring-fenced. Normally, that would mean that the whole body should fall into this category
- the body should be self-financing in cash terms. With no recourse to departmental grants or subsidies. Where, exceptionally, grants or subsidies are paid, the expenditure funded by those grants would score in DEL
- draw-down of reserves should be permitted and normal short-term modest size overdrafts. But the bodies should not normally borrow long term. Where, exceptionally, borrowing other than short-term overdrafts, finances expenditure, it would normally score in DEL
- the body should meet relevant efficiency and other criteria:
 - the licence or levy is appropriate, i.e. applied in the economically most advantageous way in the circumstances
 - introducing the levy or licence should not materially restrict the government’s fiscal policy
 - there should be adequate efficiency regimes in place to keep costs down, including stretching targets and regular efficiency reviews
 - suitable arrangements should exist to prevent the body from abusing its power to set the level of the levy. For example, the levy might need approval by the minister
 - there will be periodic reviews involving the Treasury of the operation of the levies, including whether they should exist at all, what scale of activity is appropriate, and the level of charges set

Appendix 4 to Chapter 1: Prior Period Adjustments

1.106 Prior period adjustments (PPAs) are adjustments where data for an earlier year needs to be restated. PPAs are primarily an accounting concept. They negate the need to re-open accounts where a material error or omission is found from previous years, or where a department makes a material change to its accounting policies. All PPAs should be discussed with the auditor at the earliest possible opportunity.

PPAs in Estimates

1.107 Although PPAs are primarily an accounting concept, they also impact Estimates. From an Estimates perspective PPAs fall into two categories:

- a restatement of outturn data following a change in accounting standards or other changes to accounting policy outside the department's control or
- the correction of an error or omission in the previously recorded data, or a change in accounting policy under the department's control

1.108 Where a PPA results from a change in accounting standards, this is treated as a classification adjustment for budgets. There is therefore no need to seek Parliamentary authority, but the change and its impact should be identified in "Note F Accounting Policy changes" in the next available Supply Estimate.

1.109 Where a PPA results from the correction of an error, or a department's choice to change accounting policy, it has the potential to change net budgets and thus the reported outturn for previous years. In such cases the Treasury believes it is proper that Parliamentary authority is sought for the budgetary cover that should have been sought previously had the expenditure been identified correctly. Such PPAs must therefore be included as non-budget expenditure in an Estimate.

1.110 This is required even when the department was in a position to fund the expenditure from budget cover if it had been recognised in the correct year initially (i.e. there were underspends in previous years).

1.111 PPAs can only be made for genuine errors, omissions, or changes in accounting policy. Estimates non-budget cover is only appropriate for known and costed PPAs that have been discovered at the time of preparing the Estimate. It follows that non-budget cover should not be sought for potential PPAs.

Materiality

- 1.112 There is no such concept of materiality in budgets (the database goes down to the nearest £1,000). If the NAO have accepted at the time of the preparation of the annual report and accounts that a PPA is not material in accounting terms, they may propose that the PPA is absorbed in that year's budgetary outturn. HMT will not contest that decision.

Excess Votes

- 1.113 Normally departments do not have any non-budget provision unless a genuine PPA is identified before the Supplementary Estimates are finalised. If the need for a PPA is discovered whilst departmental accounts are being compiled, it will be allocated to the non-budget section of the Statement of Parliamentary Supply (SoPS). The PPA should reflect the prior-year data only but capped by the start of resource accounting in government (i.e. departments should not seek cover for events prior to 2001-02, the first full year of resource accounting).
- 1.114 If there is insufficient non-budget provision in the Estimate for the PPA, then it will lead to an Excess Vote. The normal process for regulating Excesses will then be followed.

Negative PPAs: no need for approval

- 1.115 Whilst it is possible to have negative PPAs in accountancy terms, Supply does not require Parliament to approve a smaller number. Parliament approves a ceiling for expenditure against which departments are judged; it has no need to vote something which is already within an approved limit.

Re-recording budgets on the database

- 1.116 Once the year in which the PPA features has passed, departments should re-state budgets to reflect the corrected budgetary outturn (DEL or AME, resource or capital) in the years affected on the OSCAR database. Note that the database will only hold outturn for five previous years; any impact beyond that cannot be captured electronically but should be reported in the departmental accounts and noted in the Estimate.

Appendix 5 to Chapter 1: Machinery of Government Change (MOG)

- 1.117 A Machinery of Government (MOG) change occurs when there is a transfer of function between one (or more) government departments and there is a resulting change in the Departmental Accounting Officer responsibility. Departments should begin the process of agreeing amounts and budgets to be transferred as soon as a MOG has been announced. In accounting a MOG change would be treated as a 'Transfer by Merger'. Departments should refer to the [MOG guidance](#), but should be aware of the following key points when reflecting a MOG change:
- a MOG in isolation should not affect the spending power of either the transferring or receiving department (i.e., no department should be left better or worse off as a result of the transfer of the budget)
 - the transfer must completely net out between the two (or more) departments, (for example DEL budget being transferred by one department must be recorded as DEL by the receiving department). Each department involved in the MOG should ensure that the information being provided by them is checked and agrees with that being provided by the other department to ensure that information provided is complete, consistent and correct
 - should the function (following the transfer) require provision in excess of the amount being transferred, the additional provision will not be part of the MOG, and the receiving department may seek additional budget. As normal, access to the Reserve will only be given in exceptional circumstances.
- 1.118 The Accounting Officer in the transferring department will have formal responsibility for the transferred function up until the relevant Supply Estimate and related legislation has received Parliamentary approval. From that point onward, the Accounting Officer in the receiving department will be fully accountable for the transferred function (i.e. not only in the current and future year but also for the historical period). It is therefore essential that the Accounting Officer in the receiving department seeks assurance about the values of transferred items and that they receive all documentation relating to the function from the transferring department.
- 1.119 Other transfers of functions within the public sector, for example, transfers between ALBs within a single departmental group, (regarded as transfer by absorption in accounts) will not require historic restatement. The net impact of assets and liabilities transferring should not affect the spending power of the transferring or receiving department. The FReM provides further

guidance on the accounting treatment for all business combinations under common control.

Spending Control

Introduction

- 2.1 This chapter provides an overview of the overall spending control framework that allows the government to manage public money effectively. The budgetary framework is an important part of spending control.
- 2.2 At a high level, spending control is achieved through robust spending plans, set at Spending Reviews (SRs), and supported by a framework for delivering the government's priority outcomes. Delivering these plans requires efforts in each of the following areas:
- **Monitoring spending:** ensuring there is accurate and timely management information about what is being spent in all parts of the public sector. This allows the government to monitor progress and intervene when plans go off track (see paragraphs 2.4-2.25)
 - **Managing spending:** improving capacity and capability to manage spending and ensure that efficient and sustainable choices are made about how public funds are used. This requires systems and processes that allow the government to act to mitigate risks, and where risks do materialise, managing them within the spending limits set at SRs (see paragraphs 2.26-2.64)
 - **Delivering priority outcomes:** ensuring that policy proposals are aligned to priority outcomes based on evidence of what works, there is a plan for prioritising key outcomes, aligning activity towards delivering them and using data on progress against priority outcomes to drive improved delivery (see paragraphs 2.65-2.72)
 - **Governance, scrutiny and oversight:** from those responsible for managing public money at Ministerial and Official level and on Departmental Boards, to ensure that progress and practice is regularly reviewed and challenged (see paragraphs 2.73-2.101)
- 2.3 Each of these areas is summarised in this chapter, with a summary checklist at the end of each section for departments to consider. Additionally, refer to the [Government Finance Function Strategy](#) document for more detail on how efforts are being made to improve each of these areas across government and the [finance functional standard](#) for more detail on the expectations for a high performing finance function.

Monitoring spending

- 2.4 The public sector, on behalf of the citizens, manages over £900 billion of public spending a year. It is essential that the government has good information about what it plans to spend, and what it actually spends. This information should be:
- Robust and reliable: so that data is accurate, and forecasts are as good as they can be
 - Consistent: within and between organisations and
 - Timely: so that data is provided on a monthly basis and with minimum delay
- 2.5 This is a prerequisite for effective spending control and is the kind of information that any well-run organisation should have in any case. It enables the government to monitor spending; intervening where necessary to ensure the government delivers its plans.
- 2.6 All organisations that are part of the central government have the same responsibilities to produce and share robust, timely financial information to support the management of the public finances. Working with the Treasury, departments should agree with their ALBs how this need will be met. This duty is entirely consistent with the freedoms and flexibilities that departments and ALBs have to manage their money.
- 2.7 Departments and devolved governments provide financial information to the Treasury via the Online System for Central Accounting and Reporting (OSCAR).
- 2.8 This information is published in a number of reports for Parliament and the public, providing the main source of central government expenditure data for the Budget, Supply Estimates, Public Expenditure Statistical Analyses (PESA), monthly Public Sector Finances and the national accounts.
- 2.9 Additionally, this information should be used in evaluation plans for new and existing programmes of spend (discussed in more detail below).
- 2.10 The Government Finance Function has also established a set of principles¹ for the design of reporting processes, systems and technology, with departments should refer to. Departments should also refer to the [NOVA reference model](#) for more detailed collateral on the design of finance processes, finance data standards and performance indicators.

¹ [NOVA: Striving For Functional Brilliance \(civilservice.gov.uk\)](#)

Robust, relevant data

- 2.11 Decisions about the management of public money must be made on the basis of robust and relevant information. This information must allow frontline organisations, departments and the Treasury to assess whether spending control totals will be met based on current plans and on actual spend to date. And it must allow risks to spending control to be identified and mitigated.
- 2.12 For the purposes of on-going spending control, all departments and devolved governments must monitor and share spending information with the Treasury on a monthly basis.
- 2.13 Departments and the Treasury must agree what information will be provided, focusing on the core information needed to manage the public finances. The exact requirements for each department will be agreed with the Treasury, but will, at a minimum, include accurate information on actual and planned spend. This should include robust forecasts of full year spend, and a breakdown of monthly spend, every month from the beginning of the financial year. Forecasts should be based on departments' best information and an assessment of risks.
- 2.14 This is necessary to provide information to ministers about forecast levels of public spending, both to enable them to monitor the overall fiscal position but also to take spending decisions and to ensure expenditure is allocated in a way that provides value for money. Sound forecasts enable the government to ensure that departments are not overspending but also to identify in good time, and then reallocate, any underspends.
- 2.15 Departments and devolved governments should confirm the accuracy of their OSCAR data by reconciling it to internal management information. Good practice is to have OSCAR fully aligned at every level or to be able to explain any differences.
- 2.16 The Treasury will support departments and devolved governments by providing clear and comprehensive guidance on the classification of public spending data, and by providing a robust system (OSCAR) to collect, analyse and report this information.
- 2.17 Where the information currently provided is insufficient to monitor public spending effectively, the Treasury will agree with departments the steps needed to rectify this and how the department can be supported to achieve this. In addition to data on actual and planned spend, departments should provide detail on how SR plans will be implemented and achieved.
- 2.18 Where departments have a good track record of providing accurate and timely information, OSCAR data will already mirror internal management information, and flexibilities such as

Budget Exchange will be fully available to these departments within the rules set out in this document.

- 2.19 For departments who produce or share less accurate or incomplete information, the Chief Secretary may take steps to minimise the risk to the public finances and to incentivise improvement. These may include restrictions of access to Budget Exchange and other budgetary flexibilities, lowered delegated authorities and mandating Departmental Unallocated Provision (DUP).

Consistent data

- 2.20 There must be consistent information about what the government is spending, both within and between organisations. Data should not be withheld. This ensures that decisions are taken on the basis of financial information that is as accurate and comparable as possible. Data supplied should be consistent with rules as set out in this document, and with definitions as stated in the Treasury Chart of Accounts.
- 2.21 Sharing of information must also be consistent. Departments should under no circumstances withhold basic data about public spending. The public has a right to know how its money is being spent. The Treasury is responsible for ensuring that spending is managed effectively, on behalf of citizens and Parliament. This fundamental role on behalf cannot be fulfilled without complete transparency about what is being spent.

Timely data

- 2.22 Without timely information, the government cannot take action to prevent plans going off track before it is too late.
- 2.23 A minimum of monthly data should be the presumption for spending departments and devolved governments, and it should usually be available no more than one month in arrears.

Evaluation plan

- 2.24 As part of monitoring spending, everyone involved in the implementation of a new policy or programme should understand what its success or failure would look like. This makes it necessary to reach agreement on appropriate metrics for evaluating impact at the start, which can only be measured accurately if implementation is designed to facilitate collection of that specific data.
- 2.25 Bids for new projects and programmes (and preferably legacy spend) should have robust evaluation plans included. Business case approval will not be secured without commitment to some measuring impact, an understanding of which is best gained through rigorous experimentation, for example a randomised control trial. Data collection and evaluation of this standard

should be carried out throughout the policy's life – which should in the first instance be a pilot, with continuation subject to meeting the agreed success level against the observed metric. Please refer to the [Green Book](#) for more detail on business cases and spending bids.

Box 2.A: Monitoring spending checklist

- 1 All departments and devolved governments must monitor and share spending information with the Treasury on a monthly basis. Departments and the Treasury must agree what information will be provided, focusing on the core information needed to manage the public finances. All organisations that are part of the public sector have the same duty to produce and share robust, timely financial information. The exact requirements for each department will be agreed with the Treasury, but will, at a minimum, include accurate information on actual and planned spend. Departments and devolved governments should confirm the accuracy of their OSCAR data by reconciling it to internal management information. Good practice will be to have OSCAR fully aligned at every level or to be able to explain any differences.
- 2 The Treasury will support departments and devolved governments by providing clear and comprehensive guidance on the classification of public spending data, and by providing a robust system (OSCAR) to collect, analyse and report this information.
- 3 Departments and devolved governments must provide robust forecasts of full year spend, and a breakdown of monthly spend, every month from the beginning of the financial year, which reconciles with their internal management information.
- 4 The data provided to the Treasury must be consistent with the data departments use for internal management purposes, so that decisions are taken on the same basis and there is an agreed position on what departments are spending. Departments and devolved governments should therefore confirm the accuracy of their OSCAR data each month by reconciling it to their internal management information.
- 5 Departmental Boards, supported by their Non-Executive Directors, are responsible for ensuring that the data provided to the Treasury is consistent with the information used internally.
- 6 A minimum of monthly data should be the presumption for spending departments and devolved governments, and it should usually be available no more than one month in arrears.
- 7 All new programme spend (and ideally legacy spend) must have an evaluation plan.

Managing spending

2.26 Good business planning is an essential part of managing spending. Each public sector organisation should plan to use the limited budget that it has to achieve good value for money and ensure that efficient and sustainable choices are made about how public funds are used. This means keeping an eye on the medium- and long-term picture, re-assessing risks and evaluating alternative ways of achieving policy objectives. Departments must follow the principles and methodology laid out in the Green Book when determining whether a prospective proposal would be value for money.

2.27 In order to manage spending, departments need to assess risks and change priorities effectively. Key to this is:

- good risk management
- a robust approach to contingency so that when risks do materialise, they can be managed within existing budgets
- having the right skills and embedding spending control in the culture of public sector organisations
- controlling spending throughout the year and
- efficient cash management

Risk management

2.28 The Treasury has a range of risk management processes, based on its principle of devolving responsibility for managing spending as far as possible. In particular:

- Treasury spending teams work closely with their respective departments to identify and monitor risks to delivering SR plans
- those risks of the highest order, which would have a significant impact on the government's overall fiscal position, are monitored by the Chief Secretary on a monthly basis, when the latest intelligence on likelihood and scale of risks, and departments' plans to mitigate these are scrutinised
- the Chief Secretary conducts a programme of bilaterals with the relevant departments on a regular basis, to discuss how these risks are being managed and
- the Chief Secretary updates the Chancellor on a regular basis, ensuring oversight of the top-level risks

2.29 Complementing this process, departments are expected to have:

- a rigorous approach to assessing risk, conducting an evidence-based assessment of the likelihood and scale of risks occurring, and sharing this with the Treasury. To support this,

departments should regularly review their departmental financial risk management systems in discussion with the Treasury, agreeing priorities for improvement

- a proactive and collaborative approach to risk management: Public sector organisations, departments and the Treasury should work together to mitigate risks before they hit the public finances, using early warning systems to intervene in a timely way. Departments should share their in-depth assessment of spending risks with the Treasury on a monthly basis, agreeing mitigating actions and monitoring systems as presented to departmental boards and
- a process for continually monitoring AME, with an understanding of the volatility of the area of spending should be used to identify when spending is off track and where interventions should be made to bring costs back to planned levels so that forecasts are met

2.30 Please refer to the [Orange Book](#) for a more detailed description of risk management across government.

Approach to contingency

2.31 Apart from in a small number of exceptional cases, departments are expected to manage new pressures within their existing budgets. Departments are therefore expected to have a robust approach to contingency.

2.32 All departments must identify around 5 per cent of their allocated DEL that could be reprioritised to fund unforeseen pressures in their area of responsibility, and to share these plans with the Treasury. This amount can be made up either by having a list of contingency plans for how the department could reprioritise resources should this ever be necessary, or by a DUP, or a combination of the two.

2.33 While recognising the differences between DEL and AME, departments with particularly large non-pension AME spending should consider options for reprioritisation across Total Managed Expenditure.

2.34 Bilaterals with the Chief Secretary to the Treasury will provide the opportunity for departments to discuss contingency plans with the Treasury. The level of assurance required by the Treasury on this will depend on the Spending Team's judgement of the level of risk presented to the Exchequer.

Departmental unallocated provision (DUP)

2.35 Departments are encouraged not to allocate their DELs fully against their programmes at the start of a financial year but to hold some provision back to deal with unforeseen pressures that

emerge subsequently, including utilisation of provisions. This unallocated budget is referred to as the DUP.

- 2.36 DUP is reported in the Main Estimate as the difference between budgetary limits and the amounts allocated to specific functions; it is included within its own separate Estimate Line (within voted DEL) but cannot be spent by the department unless it is subsequently reallocated to appropriate functions in the Supplementary Estimate. Note that there is no such concept as negative DUP: this is a way of disguising over-programming and is forbidden.

The Reserve

- 2.37 Departments are expected to manage within their DEL budgets. If pressures arise in one part of a DEL, departments should respond by:

- managing the pressures down
- using their DUP
- re-prioritising and making offsetting savings elsewhere in the budget
- deferring spending elsewhere in the budget and
- transferring provision from resource DEL to capital DEL (if the pressure is in capital DEL).

- 2.38 As part of the spending plans announced in SRs, the government allocates a Reserve for genuinely unforeseen contingencies that departments cannot absorb within their DELs. Separate Reserves are held for resource and capital DEL; both are small.

- 2.39 Exceptionally, a department may seek support from the Reserve. The Reserve can only be used for genuinely unforeseen, unaffordable and unavoidable pressures, or certain special cases of expenditure that would otherwise be difficult to manage, as agreed with the Chief Secretary.

- 2.40 The drawdown of funding from the Reserve is subject to an assessment of need, realism and affordability at the time at which the funds are released. Reserve claims approved by the Chief Secretary must be voted at Estimates.

- 2.41 The Reserve should not be used for:

- Discretionary spending on new commitments
- Spending that was known during the course of the Spending Review but could not be accommodated in the allocation at that time
- Spending increases due to tariff adjustments or price increases

- Spending that could be delayed until such time that it is affordable in department's budgets, or can be considered as part of the next Spending Review
 - Spending that is recurrent, or could lead to increased spending in future years which is not affordable in department's budgets
- 2.42 In some cases, departments may be tracking risks which, if they materialise significantly above the central scenario, would be difficult for them to manage within their DEL and might prompt a request for future Reserve access. The department and HMT may wish to make an agreement on how the risks will be managed by the department and HMT, and under what circumstances Reserve access might be considered (noting that the CST and Parliament would ultimately still need to approve.)
- 2.43 Departments that think they might require support from the Reserve should contact their Treasury spending team early so that alternative courses of action can be fully discussed while there is still time to put them into effect. Departments' proposals should set out:
- the size of the pressure
 - the cause of the pressure and why it was unforeseen
 - the offsetting actions that have been taken and could be taken to manage the pressure and to absorb it, including cutting costs, cutting inefficiencies, cutting unnecessary programmes and cutting lower priority budgets
 - the residual pressure, split into capital and resource, and the administration costs and programme elements and
 - the corrective actions they mean to take if support from the Reserve is agreed, as regards the substance of the policy, improved financial management, and paying back the amount provided
- 2.44 If, after discussions have concluded, and no alternative courses of action are identified, departments should submit a formal application requesting access to the Reserve. This should be with the full agreement of the relevant Treasury Spending Principal. All formal applications for Reserve funding should be sent to the Treasury in the form of a Ministerial letter to the Chief Secretary at the time of the request.
- 2.45 In addition:
- the process for assessing Reserve claims will take account of the department's or devolved government's capability and past performance. This will include an assessment of the departments approach to setting and using an unallocated

provision, the amount of Reserve funding allocated in the past, the number of Reserve applications received, and any cases where Reserve funding has been allocated and gone unspent in previous years

- particular conditions and/or penalties will be applied to Reserve claims that relate to failures of financial management, and inappropriate Reserve claims will be rejected
- The failure to hold sufficient contingency/unallocated provision will count against the department when decisions about granting support from the Reserve are taken. If the Chief Secretary agrees to provide support to a department from the Reserve, then the amount may be repayable the following year by means of a reduction in the department's DEL
- the Chief Secretary may ask for a lessons learned review in each case where Reserve support is approved. This review will be an independent or peer review as appropriate

2.46 The Chief Secretary may also consider further remedial action for those who break the rules or clearly fall below expectations. This may include asking the NAO to investigate the value for money that the department achieves, conducting a financial management review, reducing delegated authorities, removing access to Budget Exchange and/or making deductions to administration budgets. In all cases, the Treasury retains the right to apply whatever penalties are appropriate to incentivise good financial management and value for money.

2.47 All additional funding from the Exchequer should be presumed to be a Reserve claim, except where agreed as part of the Budget Exchange system or explicitly stated otherwise in writing by the Chief Secretary.

The Reserve and contingent liabilities

2.48 Departments are required to report contingent liabilities to Parliament. This process is separate from budgeting. The recording of contingent liabilities does not guarantee departments' access to the Reserve. If a contingent liability crystallises, the normal budgeting procedures apply. That is, departments are expected to cover the costs by making offsetting savings as normal.

Keeping track of the numbers

2.49 Departments are expected to keep track of their authorised control totals on OSCAR, including any changes from Machinery of Government changes, other classification and transfer changes, issues from central funds, authorised transfers to resource DEL, and – exceptionally – issues from the Reserve. Departments and spending teams should at all times use OSCAR to have a mutual understanding of the authorised levels of:

- resource DEL (broken down into the non-ringfenced and depreciation ringfenced budgets)
 - administration budget
 - capital DEL (for some departments, broken down into the non-ringfenced and financial transaction ringfenced budgets)
- 2.50 Departments and spending teams should also have a mutual understanding of the planned levels, and risks of variance to plans, of
- resource AME
 - capital AME
- 2.51 Departments are expected to monitor spending against plan and to share information with their Treasury spending team (via bilaterally agreed information supply) and the Treasury collectively (via OSCAR).

Breaches of budgetary limits

- 2.52 Any breach of a budgetary limit is treated seriously, and departments need to take remedial action. Note that breaches can arise as a result of past errors treated as Prior Period Adjustments (PPAs) in accounts. See Chapter 1 for more details of how PPAs should be treated in budgets.
- 2.53 This passage sets out the process to follow where a department's final outturn breaches the final level set for any of the following limits:
- resource DEL (including the ringfenced and non-ringfenced limits, and the administration budget)
 - capital DEL (including the financial transactions ringfence)
 - resource AME
 - capital AME
 - non-budget expenditure

Note that there are separate Parliamentary consequences of breaching budget control totals described in the [Supply Estimates guidance manual](#).

- 2.54 For breaches in DEL the responsible minister should write to the Chief Secretary as soon as practicable after the end of the year setting out:
- the size of the breach
 - why it occurred and
 - the remedial action that the department is proposing, including

- improvements in financial management to deal with the specific cause of the breach
 - improvements in financial management to improve overall forecasting and control of the department's control totals and
 - information that will be provided to the Departmental Board and to the Treasury to demonstrate these improvements
- 2.55 The Treasury may also request a similar process for any ringfences set within the limits listed above.
- 2.56 When departments overspend against their control totals, there may be an offsetting reduction in the corresponding control total in the following year.
- 2.57 Breaches in departmental AME do not automatically incur a penalty (although they may result in an Excess Vote if the Voted limit is exceeded—see the [Supply Estimates guidance manual](#) for further details). However, unforeseen changes in spending may indicate poor financial management by departments. The department should therefore write to their Treasury spending team providing the same information as set out for breaches in DEL above. This should include the options for offsetting the higher spending through savings elsewhere in either the department's DEL or AME.
- 2.58 Departments should discuss with their Treasury spending teams their proposals before their Minister writes to the Chief Secretary.

Box 2.B: The process for making Reserve claims

Departments and devolved governments should contact their spending team at the earliest possible opportunity if they are considering applying for Reserve support, to ensure they have sufficient time to present their case. Where a decision is required urgently, and convincing evidence has not been provided, the presumption will be that the pressure can be managed by the Department or devolved government.

Applications for Reserve support must be supported by written evidence, which includes a credible and detailed assessment of offsetting actions that have been taken and could be taken to manage the pressure and absorb it. More detail is set out in this chapter.

The drawdown of funding from the Reserve is subject to an assessment of need, realism and affordability at the time at which the funds are released. The final draw down of Reserve claims approved by the Chief Secretary will therefore be decided, and voted on, at Supply Estimates when such an assessment can most easily be made. In some cases HMT may stipulate that Reserve claims must be repaid the following year by means of a reduction in the Department's, or devolved government's, DEL.

Controlling spending through the year

- 2.59 Good spending control demands that public sector organisations monitor performance against objectives through the year and make adjustments to stay on track. This requires prompt and accurate management information systems coupled with active top management engagement.
- 2.60 There is no place for excess expenditure or low-value spending in the last quarter of the financial year. Any evidence of excessive spending at the year-end in areas that will not generate savings in future years will be taken into consideration in future decisions on spending issues, including the allocation of funding.
- 2.61 Spending must be properly managed throughout the year and Accounting Officers are in breach of their duties if they permit expenditure to be incurred without the due approvals in place.

Cash management

- 2.62 Together, public sector organisations handle a great deal of public money and carry out many financial transactions every working day. It is essential that these are handled in a way that is efficient and safe for the Exchequer as a whole. Accounting Officers are responsible for the credit risk to which public funds are exposed when held in commercial banks. It is important that they manage this risk actively, so that it is kept to a minimum.
- 2.63 For most public sector organisations, this in practice means using the Government Banking Service (GBS). Any excess cash is automatically entered into the Exchequer accounts at the Bank of England, both during and at the end of each working day. This enables the Debt Management Office (DMO) to manage the Exchequer's cash position efficiently by financing any net government overnight debt or investing any overnight balance. Any other arrangement would expose the government to increased credit risk and mean greater government borrowing, costing the Exchequer more overall.
- 2.64 Each public sector organisation should run its cash management and money transmission policies to minimise the cost to the Exchequer as a whole. This would normally mean using the Government Banking Service.

Box 2.C: Controlling spending checklist

Risk management

- 1 To support risk management, departments should regularly review their departmental financial risk management systems in discussion with the Treasury, agreeing priorities for improvement. Departments should share their in-depth assessment of spending risks with the Treasury on a monthly basis, agreeing mitigating actions and monitoring systems as presented to departmental boards.

Contingency

- 2 All major spending departments will be asked to identify around 5 per cent of their allocated DEL that could be reprioritised to fund unforeseen pressures in their area of responsibility and to share these plans with the Treasury. This amount can be made up either by contingency plans or by a DUP, or a combination of the two. While recognising the differences between DEL and AME, departments with particularly large non-pension AME spending should consider options for reprioritisation across Total Managed Expenditure.

The Reserve

- 3 The Chief Secretary may ask for a lessons learned review in each case where Reserve support is approved. This review will be an independent or peer review as appropriate.
- 4 The process for assessing Reserve claims will take account of the department's or devolved government's capability and past performance. This will include an assessment of the amount of Reserve funding allocated in the past, the number of Reserve applications received, and any cases where Reserve funding has been allocated and gone unspent in previous years.
- 5 Particular conditions and/or penalties will be applied to Reserve claims that relate to failures of financial management or are inappropriate.
- 6 Departments may be expected to pay back Reserve funding in the following year.
- 7 The Chief Secretary may consider further remedial action for departments who break the rules or clearly fall below expectations.

Controlling spending throughout the year

- 8 Any evidence of excessive spending at the year-end in areas that will not generate savings in future years will be taken into consideration in future decisions on spending issues, including allocation of funding.

Cash management

- 9 Each public sector organisation should run its cash management and money transmission policies to minimise the cost to the Exchequer as a whole. This would normally mean using the Government Banking Service.

Delivering Public Value

- 2.65 The government is committed to ensuring spending decisions maximise value for taxpayers and place a strong emphasis on real-world outcomes for citizens. These outcomes should be reflected in the business case for policy proposals – in line with the Green Book and accompanying business case guidance.
- 2.66 Spending Review 2021 (SR21) supported this commitment by publishing an updated set of [priority outcomes and metrics for government departments covering 2022-25](#), as part of implementing the [Public Value Framework](#).
- 2.67 It also placed a stronger focus on the strategic goals of proposals by requiring departments to demonstrate how each of their bids would support their priority outcomes – including an estimate of the impact on their metrics – based on evidence of what works. This information was used to inform decisions by Ministers on bids.
- 2.68 In line with this approach, departments are expected going forward to align their policy proposals to their priority outcomes, and to explain and evidence how proposals would contribute to them. For each proposal, departments should:
- Identify the priority outcome(s) the proposal would contribute to. This can include cross-cutting outcomes led by other departments where relevant
 - Summarise the case for change for the proposal, its scope and key constraints. Where relevant, the case for change should be supported by data on historical performance against priority outcome metrics for the outcome
 - Set out the key priority outcome metrics the proposal is expected to affect, providing a quantitative assessment of expected impact(s) where feasible, and a qualitative assessment where not. In cases where the proposal is expected to affect an agreed trajectory and/or target for a metric, departments should specify its expected quantitative impact in relation to that trajectory and/or target
 - Explain how and why the bid will have the impact you have estimated. This should draw on the theory of change in your department's Outcome Delivery Plan (ODP) where appropriate
 - Summarise any important evidence to support the expected impact on the outcome, provide an assessment of the strengths of that evidence and summarise plans to improve the evidence base. This should draw on the Magenta Book where appropriate

- 2.69 This information should be reflected in the strategic case of the business case for policy proposals – in line with the Green Book and accompanying business case guidance. This updated approach will allow departments to link spending decisions more closely to real-world outcomes for citizens and will drive greater accountability and improved delivery across government.
- 2.70 To support the implementation of this approach, departments are encouraged to use the Infrastructure and Projects Authority's Project/Programme Outcome Profile going forward. This tool has been developed with input from departments and provides a framework for linking business cases for programmes and projects to priority outcomes on an ongoing basis.
- 2.71 The updated priority outcomes and metrics published at SR21 will form the basis for updated ODPs, covering 2022-2025. Departments are required as part of SR21 settlements to report on a quarterly basis to HMT and Cabinet Office on performance against these plans, including their latest data for agreed priority outcome metrics.
- 2.72 Information on performance will be used by Ministers and officials to identify where delivery against priority outcomes may be under pressure, as well as which programmes are not delivering expected results. The government will then be able to take prompt action to improve performance and make better-evidenced decisions on future spending. The No. 10 Delivery Unit will also provide delivery support to departments in the PM's mission areas, by tracking performance and undertaking regular deep dives into complex policy areas.

Governance, scrutiny and oversight

- 2.73 Robust governance, scrutiny and oversight are integral to ensuring that spending is controlled effectively. This means ensuring that:
- the authorities for departments to spend or commit public funds without prior Treasury approval are delegated in a way that reflects the level of risk to the Exchequer and
 - mechanisms are in place through which those accountable for managing public money at ministerial and official level can ensure that the government's spending control objectives are delivered

Delegated authorities and approvals

- 2.74 The Treasury controls public expenditure. Parliament looks to the Treasury to make sure that:
- departments use their powers only as it has intended and

- revenue is raised, and the resources so raised spent, only within agreed limits
- 2.75 This means that formally, Treasury consent is required for all commitments to expenditure.
- 2.76 Without it, expenditure is irregular. This applies to both resource and capital spending.
- 2.77 Treasury approval:
- must be confirmed in writing, even where initially given orally
 - cannot be implied in the absence of a reply and
 - must be sought in good time to allow reasonable consideration before decisions are required
- 2.78 In practice, however, the Treasury delegates authority to departments to enter into commitments and to spend within predefined limits without specific prior approval. This is important for ensuring that those closest to the decisions on the ground have the authority to manage public money efficiently and effectively.
- 2.79 The Treasury agrees these delegated authorities in writing with each department, so there is clarity about where Treasury approval is required. Authorities are considered carefully to ensure they strike the right balance between the need for the Treasury to account to Parliament for the use of public money, and for the government to function efficiently. These authorities are subject to regular review.
- 2.80 In order to secure approvals, it is essential that big projects are appraised critically as business propositions. For large spending projects, there is a standardised process that all projects needing Treasury approval must follow.
- The Treasury Approval Process (TAP) process applies to all spending proposals related to projects and programmes that are above Delegated Authority Limits (DAL) set by the Treasury. See Box 1.A of the [Treasury Approvals Process for projects and programmes](#) for a list of the characteristics of a major project or programme that qualifies for the Treasury approval process
 - Departments should engage with HMT, Infrastructure and Projects Authority (IPA) and Cabinet Office in a timely manner where a proposal will be subject to the Treasury Approval process, particularly through early agreement of an Integrated Assurance and Approval Plan (IAAP)
 - Programmes must have a programme business case which is reviewed as a minimum annually. Treasury approval is required at a minimum of each updated programme business case

- Many projects are part of an overarching programme. The classic model for project development, scrutiny and approval consists of three stages, which are Strategic Outline Case; Outline Business Case; and Full Business Case. Treasury approval is required at each stage as agreed in an Integrated Assurance and Approval Plan. The Treasury will not normally approve business cases unless an assessment of delivery confidence has been carried out by the IPA, or before receiving an up-to-date Approval and Assurance Plan
- 2.81 Treasury will decide the level of scrutiny appropriate for each project/programme approval under the Treasury Approval Process Framework, full details of which can be found here

Ministerial governance

- 2.82 It is for Secretaries of State to ensure delivery of their own spending plans. The Treasury has a role in scrutinising these plans, ensuring that the overall plan is delivered.
- 2.83 The Chief Secretary conducts a rolling programme of bilateral meetings with the main spending departments, discussing progress in delivering their plans and the steps departments are taking to strengthen their approach to spending control. The Chief Secretary reports to the Cabinet, which oversees progress at the highest level.

Official level governance

- 2.84 The Accounting Officer role is a strength of the UK budgeting system and ensures that every public sector organisation has someone whom Parliament may call to account for the stewardship of the resources within its control. Accounting Officers are responsible for ensuring their organisation meets specific standards, as set out in Chapter 3 of [Managing Public Money](#). These standards include:
- respecting Treasury spending limits and achieving sustainable spending plans
 - ensuring that forward spending plans are sustainable in the medium term
 - operating effective management information systems so that the department can give timely, accurate and realistic reports of its business to the Treasury
 - acting within the law and meeting Parliament's expectations about transparency
 - avoiding fraud, waste and other misuse of public funds and
 - securing good value for the use of public money in the furtherance of ministers' objectives

- 2.85 Accounting Officers in departments are appointed by the Treasury. The Chief Secretary will write to the Secretaries of State and the Head of the Civil Service where they are concerned that Accounting Officers may fall short in fulfilling their responsibilities for managing public money.
- 2.86 In relation to the devolved governments in Scotland, Wales and Northern Ireland, the Treasury will continue to explore opportunities to promote the sharing of best practice.

Departmental Boards

- 2.87 Each department is led by a Board chaired by the senior Minister in the department and supported by several Non-Executives with relevant business experience. The board guides the Permanent Secretary in implementation of the department's policies and spending plans. Members of the board are expected to challenge the department constructively to ensure that plans are robust and effective. They also seek to assess the more remote or subtle risks the department faces so that contingency plans can be put in place.
- 2.88 An effective board is able to view the department's business in a broad context, enabling it to improve its delivery, its readiness for exogenous shocks and its resilience. Such support for the permanent staff underpins the department's capability, including its ability to live within its budget.
- 2.89 Non-Executive Directors have a significant role to play in good management within departments including strengthening spending control through supporting and challenging the executive's decisions around the management of the department's business. The senior Non-Executives from each department form a network, which enables good practice to be propagated and can promote accurate delivery of spending plans. Lead Non-Executive Directors give a high priority to improving management information and risk management systems within departments, and work closely with their departmental boards to drive changes in these areas.

Scrutiny

- 2.90 It is important that departments secure good value for money for the resources they deploy. It is good practice to work cooperatively with the NAO, where studies of particular areas of departments' business can suggest greater efficiency or other improvements.
- 2.91 Departments that do not operate effective control and management systems, or which achieve poor value for money, can expect censure from the NAO.

Box 2.D: Governance, scrutiny and oversight checklist

Ministerial governance

- 1 The Chief Secretary conducts a rolling programme of bilateral meetings with the main spending departments.

Official level governance

- 2 The Chief Secretary will write to the Secretaries of State and the Head of the Civil Service where he is concerned that Accounting Officers may fall short in fulfilling their responsibilities for managing public money.

Minimising the risk to public finances and incentivising improvements

- 2.92 To ensure taxpayer money is spent well, Parliament continues to look to HM Treasury to make sure departments use their spending powers only as intended, and ensure resources are spent only within the agreed limits. Therefore, HM Treasury must continue to set the ground rules for the administration of public money and account to Parliament for doing so.
- 2.93 Departments and arm's length bodies are expected to follow the letter and spirit of the spending control framework, as set out earlier in this chapter and in Managing Public Money. All accounting officers must make sure the actions of the public organisation they lead meet the four accounting officer standards of regularity, propriety, value for money and feasibility expected by Parliament and the public for use of public resources.
- 2.94 The Treasury expects ministerial departments to monitor the activities of their arm's length bodies, and to take the necessary steps to ensure compliance. If a department or one of their arm's length bodies fails to comply, the Treasury may take steps to minimise the risk to public finances and to incentivise improvements.

Actions that do not comply with the spending control framework

- 2.95 Actions that do not comply with the spending control framework may be identified during the course of the year, or as part of the annual Accounting Officer appraisal exercise. Examples of poor performance include, but are not limited to:
- Failure to provide the information the Treasury needs to monitor public spending effectively, including accurate information on actual and planned spending, based on

departments' best information and an assessment of risks, fully aligned to internal management information (or with differences explained)

- Failure to hold sufficient contingency to manage pressures within budgets
- Repeated requests for access to the Reserve, or failure to spend funding granted from the Reserve in previous years
- Failure of financial management, including regarding compliance with Treasury conditions attached to funding or project approvals
- Failure to obtain appropriate Treasury authorities in accordance with delegated authority limits and the contingent liability approval framework, or seeking Treasury approval retrospectively
- Overspending against control totals or Treasury ringfences
- Presenting estimates to parliament which are not taut and realistic, resulting in significant underspending against control totals or Treasury ringfences
- Incorrect classifications of expenditure (for example treating administration spending as programme).

Steps the Treasury may take to address non-compliance

2.96 Where department actions do not comply with spending control expectations, the Treasury will discuss with departments the steps needed to rectify this and how the department can be supported to achieve improved performance.

2.97 In all cases, the Treasury retains the right to apply whatever penalties are appropriate to incentivise good financial management and value for money. The Chief Secretary may consider remedial action for those who break the rules or clearly fall below expectations, including but not limited to:

- Restricting access to the Reserve, Budget Exchange, and other budgetary flexibilities
- Increased scrutiny of activities, including through the lowering of delegated authorities
- Mandating Departmental Unallocated Provision (DUP)
- Referring proposals to further review under the Treasury Approvals Process
- Asking the NAO to investigate the value for money that the department achieves on specific programmes or projects
- Conducting a financial management review
- Making deductions to administration budgets
- Requiring an – internal or independent – lessons learnt review, or Accounting Officer assessment of the financial management control environment
- Requesting additional bilateral meetings with the relevant Secretary of State to discuss progress in delivering their plans

and the steps departments are taking to strengthen their approach to spending control

- 2.98 If the Treasury Director General of Public Spending is concerned that Accounting Officers may fall short in fulfilling their responsibilities for managing public money, they may address their concerns through the Accounting Officer appraisal process.
- 2.99 Departments that do not operate effective control and management systems, or which achieve poor value for money, can also expect censure from the NAO and Parliament.

Incentives for high performing departments

- 2.100 The Treasury will continue to explore opportunities to promote the sharing of best practice across departments, and to reward high performance. This includes recognising the strength of performance through the Accounting Officer appraisal process.
- 2.101 Where departments have a good track record of complying with Treasury expectations, flexibilities such as Budget Exchange will be fully available within the rules set out in this document. Compliance with the public spending framework is also the Treasury's key consideration in the determination of delegated authorities.

Box 2.E: Forecasting case study

HM Treasury expects all departments and their arm's length bodies to provide robust and accurate forecast. This is required to enable the Treasury to monitor public spending effectively. Inaccurate forecasts risk:

- **Borrowing more than we needed to or paying more to borrow at short notice.** Borrowing excess debt, or more expensive debt, significantly adds to the rising costs of debt servicing. Higher debt costs roll forward to future years, reducing the budgets available for departmental settlements.
- **Inefficient allocations of funding.** Basing spending plans on forecasts that aren't as good as they could be stops the Treasury allocating money properly across departments.
- **Failure to meet Parliament's expectations.** Parliament expects to be presented with taut and realistic spending plans; where spending plans are based on inaccurate forecasts, they are not taut and realistic.

Guidance for improving forecasts

To help departments improve their forecasts, the Government Finance Function has published principles for forecasting, setting out leading practice examples of how departments could prepare and adjust forecasts and manage risks. The Finance Board Pack Reporting Project materials also set out how departments can improve the quality and consistency of financial information, including forecasts, in board packs. These principles and materials are available on OneFinance.²

In addition to these principles, departments are expected to:

- Avoid including contingency in their forecasts, particularly when central spending scenarios have changed since budgets were awarded
- Ensure forecasts reflect the best understanding of how much departments think they will actually spend over the entirety of the financial year, rather than size of their current budgets (or current budgets amended for anticipated budget adjustments)
- Ensure all data shared with the Treasury is robust and reliable, consistent with the information shared within organisations, and provided on a timely basis with minimum delay
- Avoid unnecessarily inflating forecasts to provide a buffer in Estimates in case of unexpected additions

Forecasting actions that do not comply with Treasury expectations

Departments that do not comply with Treasury expectations on forecasting will be identified through the end-of-year benchmarking process of forecasts against outturn. They may also be identified in-year through reviews of monthly forecasts. Examples of poor performance include, but are not limited to:

- Being in the bottom quartile of departments in the benchmarking process, or otherwise not forecasting to within 1% of their eventual outturn in Period 6 of the financial year
- Presenting estimates to Parliament which are not taut and realistic, resulting in significant underspending against control totals or Treasury ringfences
- Failing to provide on a monthly basis the information the Treasury needs to monitor public spending effectively, including producing or sharing less accurate or incomplete forecast or year-to-date spending information

² Forecasting principles: <https://gff.civilservice.gov.uk/global-design-principles-1/finance-processes/reporting/processes/forecasting/>

Finance Board Pack Reporting Project: <https://gff.civilservice.gov.uk/standards-policy-and-procedures/finance-insight/finance-board-pack-reporting-project/>

- Significant and unexplained fluctuations in forecasts or year-to-date spending
- Overspending against control totals or Treasury ringfences

Of course, there may be some circumstances where it is not possible to forecast the impact of large, one-off transactions, particularly those planned for around the end of the financial year. In such circumstances, departments should speak to Treasury spending teams about how best to manage these transactions to ensure value for money.

Steps the Treasury may take in response to poor forecasting

Departments that forecast poorly will be asked to set out a plan to the Treasury on how they intend to improve their forecasting. The Treasury will take their forecasting performance into account in future decisions around access to the Reserve and other budgetary flexibilities.

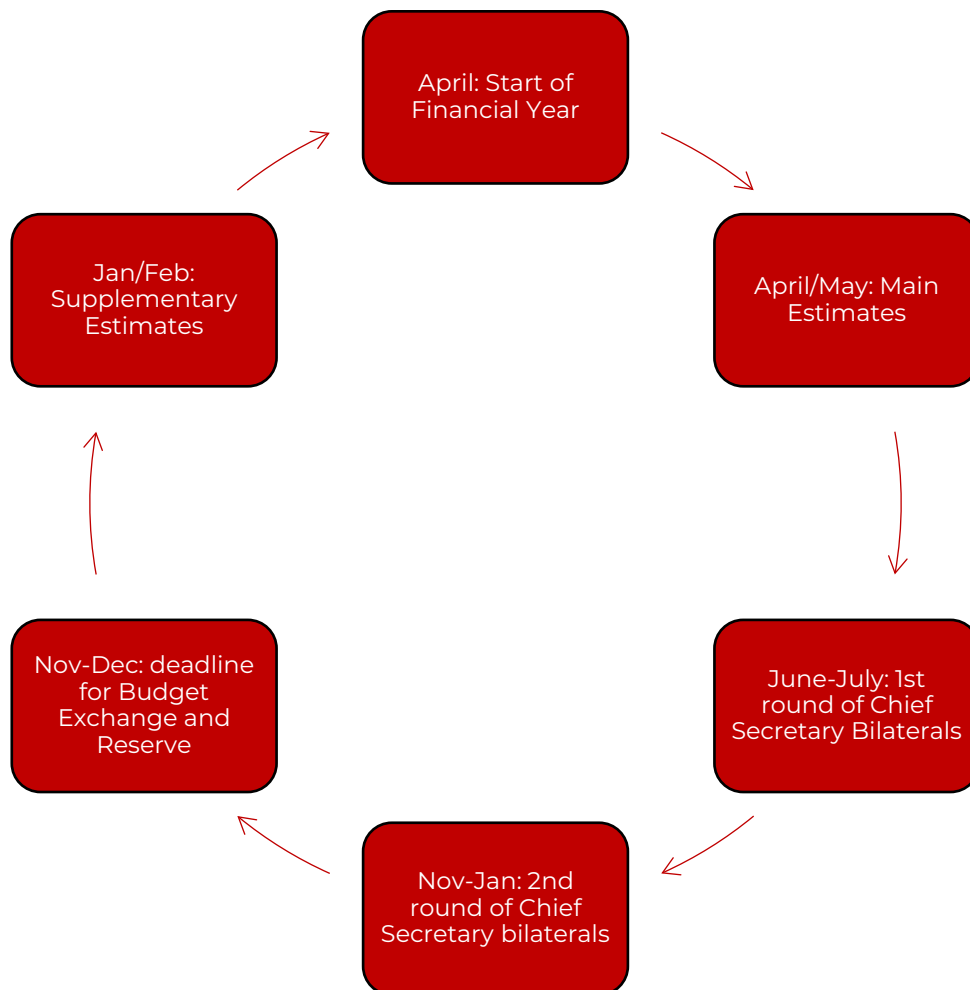

Given the impact of departmental forecasting on the Office for Budget Responsibility's (OBR's) forecasts, departments may also be asked to meet with the OBR to explain their forecasts and how they intend to improve these. The Treasury may also apply other penalties.

Appendix 1 to Chapter 2: The annual spending control cycle

2.102 Monthly recurring actions:

- OSCAR returns
- Publication of the Public Sector Finances statistical bulletin.

Chart 2.A Spending control cycle

Resource Budget

Introduction

- 3.1 Current expenditure by government is one of the most targeted areas of spending control. The Public Sector Current Expenditure (PSCE) fiscal aggregate specifically monitors current expenditure. Current expenditure is also a key component of Public Sector Current Budget (PSCB) and Public Sector Net Borrowing (PSNB). Current expenditure is controlled through the **resource budget**.
- 3.2 The resource budget includes expenditure on pay; current procurement; current grants and subsidies; depreciation; and the creation, revaluation and release of provisions. The resource budget contains both transactions that have an immediate impact on the fiscal position (for example pay and procurement), and those that will have an impact in the future (for example impairments and provisions).
- 3.3 Since the resource budget includes the resource consequences of acquiring and owning assets (for example, depreciation and maintenance), departments should consider the inter-relationship of the resource and capital budgets when planning and monitoring expenditure. That consideration should help departments manage their entire asset base as well as considering annual changes to the asset base through new investments or disposals.
- 3.4 This chapter covers in detail the treatment of some specific areas of expenditure in the resource budget. This chapter provides guidance on the following areas:
- Grants and subsidies (paragraphs 3.7-3.15)
 - Fixed assets (including depreciation, impairment and revaluation) (paragraphs 3.16-3.48)
 - Current assets and liabilities (including inventory, trade debtors (receivables), and accounts payable) (paragraphs 3.49-3.64)
 - Employee benefits (paragraphs 3.65-3.66)
 - Provisions (paragraphs 3.67-3.79)
 - Other miscellaneous areas (insurance, tax credits, notional audit fees and European Union spending) (paragraphs 3.80 – 3.96)
- 3.5 See Chapter 4 for the treatment of income in resource budgets. See also Chapter 5 for the rules governing the division of the resource budget into administration and programme totals. See

separate chapters for the resource budget implications of financial transactions, leases, PPP deals, pensions, support for local authorities and support for public corporations.

- 3.6 For elements of current expenditure not specifically referenced in this document, departments should assume that this expenditure scores in the resource budget at the same value and with the same timing as in the Statement of Comprehensive Net Expenditure (SoCNE) in the departmental accounts. Consult the Treasury with any queries.

Grants and subsidies

Overview

- 3.7 Departments may make unrequited transfer payments to businesses or individuals for a number of reasons. These payments must be classified for budgetary purposes as either capital grants, current grants or subsidies. Current grants and subsidies score in the resource budget; capital grants score in the capital budget.
- 3.8 There is a misalignment between departmental accounts and the national accounts in terms of accounting for grants and subsidies. The budgeting requirements in this area align with the national accounts framework.
- 3.9 The national accounts distinguish between current grants, subsidies and capital grants. Current grants and subsidies are recorded as current expenditure in the national accounts while capital grants form part of capital expenditure; as such, they affect the Public Sector Net Investment (PSNI) fiscal aggregate.
- 3.10 Departmental accounts do not distinguish between current grants, subsidies and capital grants. All grants and subsidies score as an expense in the departmental accounts and there is no associated capital impact.

Distinction between capital grants, current grants and subsidies

- 3.11 Capital grants are unrequited transfer payments, which the recipient must use to either:
- buy fixed assets (land, buildings, machinery etc.)
 - buy inventory
 - repay debt (but not to pay early repayment debt interest premia) or
 - acquire long-term financial assets, or financial assets used to generate a long-term return

- undertake R&D activities which meet the criteria for capitalisation in budgets, where the recipient is a private sector body (refer to Annex C for guidance on the criteria)
- 3.12 Payments of compensation to owners of capital goods destroyed or damaged by acts of war or natural disasters should be classified as capital grants. Major payments in compensation for extensive damage or serious injuries not covered by insurance policies may also count as capital grants – departments should consult the Treasury regarding these payments.
- 3.13 Subsidies are current payments paid to profit-making bodies designed to influence levels of production, prices or wages.
- 3.14 Where an unrequited payment does not meet the descriptions in paragraphs 3.11-3.13, it should be treated as a current grant.
- 3.15 Where grants are paid that may be used at the recipient's discretion either on capital or on current expenditure they should be treated as current grants. Capital grants, current grants and subsidies should be recognised when the payment is due to be made.

Fixed assets

Overview

- 3.16 Tangible (for example land, buildings, IT systems) and intangible (for example patents, IT software, trademarks) assets are referred to collectively in this document as 'fixed assets'. Fixed assets do not include financial assets such as investments (see Chapter 8 for their budgeting treatment).
- 3.17 Fixed assets impact on the resource budget mainly in terms of their subsequent measurement after they are acquired: through depreciation, maintenance costs and impairments. This chapter provides more guidance on these areas, including whether these elements should score in DEL or AME.
- 3.18 Chapter 4 sets out the resource budget impact of gains or losses on the disposal of fixed assets. Chapters 6 and 7 provide further guidance on the capital budget impact of new spending on fixed assets and their disposal.

Depreciation

- 3.19 Depreciation is a way of allocating the cost of an asset over its useful life. It is a measure of the decline in value of a fixed asset, as a result of normal wear and tear or obsolescence.
- 3.20 Depreciation is charged on fixed assets annually and scores in the resource budget. Depreciation is charged in budgets so that departments are held to account for the current cost associated with ownership of an asset.

- 3.21 Depreciation is a feature of both departmental accounts and national accounts. In national accounts, it is known as consumption of fixed capital, and impacts a number of fiscal aggregates.
- 3.22 Departmental accounts and national accounts use different methods to calculate depreciation. For budgetary purposes, depreciation values from departmental accounts should be used even though these do not affect fiscal aggregates. These will depend on the accounting policies and estimation techniques used by departments. Departments should consult with the Treasury before changing significant accounting policies and estimation techniques where it appears that there could be a potential impact on budgets.
- 3.23 Within the resource DEL budget, depreciation scores to administration or programme depending on whether the underlying assets are used to support administration or programme delivery.
- 3.24 Departmental accounts use the phrase depreciation for tangible assets, and amortisation for intangible assets—budgets refer to depreciation for all fixed assets.
- 3.25 Depreciation is usually an expense in departmental accounts. Depreciation can in certain circumstances be capitalised under accounting standards where the future economic benefits of one asset (a producing asset) are absorbed in producing another asset (the produced asset).
- 3.26 In departmental budgets, where a contract or programme involving the development of a sovereign defence capability gives rise to the recognition of assets (producing assets) that are used solely in the production of assets (produced assets) under the same contract/programme, depreciation on the producing assets will be outside of budgets. The other general rules on depreciation scoring set out within this manual would apply, including when scoring depreciation on the produced assets, and this treatment does not affect the financial reporting requirements under the FReM.

DEL vs. AME

- 3.27 The general rule is that depreciation scores to DEL. The Treasury will agree that depreciation should score to AME only in exceptional cases.
- 3.28 Some of these cases include:
- where the purchase of assets is funded from the Lottery, from a capital grant, or from the private sector;
 - an asset is a donation in kind;

- an asset is purchased using the proceeds from a donation; or
- a right-of-use asset in a donated or peppercorn lease

In these cases, the depreciation should be recorded in AME rather than DEL. Where an asset is part-funded through a capital grant, only that element of the depreciation that relates to the grant will be recorded in AME, the rest of the depreciation will be in DEL as normal.

- 3.29 The intention of this exceptional treatment is to ensure departments have appropriate incentives and budgetary flexibility to accept grants. Chapter 7 contains further detail on the budgeting for receiving capital grants.

Depreciation ring-fence

- 3.30 As discussed in Chapter 1, the budgets for fixed asset depreciation and impairments scoring in DEL are within a ring-fenced part of the resource DEL budget¹. Departments should have a shared understanding with Treasury of what part of their resource DEL budget is within this ring-fence. Resource DEL budget can be switched freely into the ring-fence, but this ring-fenced cover cannot be moved out to fund other resource or capital DEL spending.
- 3.31 The same principles apply in the exceptional cases where Treasury has agreed that the depreciation scores to AME budgets.

Impairment

Overview

- 3.32 Impairment is used to measure declines in value of fixed assets that are not captured by depreciation (for example, due to unforeseen damage or obsolescence that was not built into a depreciation schedule). Impairments of fixed assets score to the resource budget so that departments are held to account for the cost associated with these declines in value.
- 3.33 Impairments of fixed assets are recognised at the same time, and at the same amount, in budgets as in departmental accounts. The concept of impairment is not recognised in national accounts.
- 3.34 Impairments for fixed assets are scored in a ring-fenced budget with depreciation, as described above.

DEL vs. AME

- 3.35 When a tangible fixed asset is impaired, the scoring of the impairment to AME or DEL is dependent on the reason for

¹ In rare cases, depreciation of fixed assets may score outside the ringfence with Treasury approval.

incurring the impairment. The same principles apply to intangible fixed assets, but where a department believes an intangible fixed asset is subject to one of the categories of impairment below it should first contact the Treasury.

3.36 The general principle used to distinguish whether an impairment scores to AME or DEL is whether the reason for the impairment is in a department's control (in which case, an impairment should score to DEL). In order to provide support for departments' management decisions, impairments are split into six different categories, some of which score in AME and the others in DEL. The below categories are based on descriptions of impairment in the FReM.

3.37 The following types of impairment score in DEL budgets:

- loss or damage resulting from normal business operations. The department has a choice about how it manages assets to reduce the risk of damage, accident and theft
- abandonment of projects. Abandonment results from managerial decisions, and can be an indicator that a stronger project approval process and business case evaluation is necessary
- gold plating. Gold plating is the unnecessary over specification of assets; this could be prevented through improved control processes. Construction to a necessarily high standard for legitimate reasons (security for example) should not be considered gold plating

3.38 The following types of impairment score in AME budgets:

- loss caused by a catastrophe. This sort of loss is outside the normal experience of a department, so the only trade-offs that should be made are between the capital cost of replacing this asset and doing other capital work. Where a department believes, an impairment should score as catastrophic loss it should first contact the Treasury, as these are rare events
- unforeseen obsolescence. Where the asset has been rendered obsolete by the acquisition of a new technologically advanced asset, the investment appraisal of the new asset should have covered the option of continuing to use the old one. Unforeseen obsolescence can also arise as a result of changes to legislation. When a department believes an impairment should score as unforeseen obsolescence it should first contact the Treasury.
- other – Scores as AME. This category includes:
 - changes in market price (in some cases—see paragraph below)

- write downs where an asset is to be used for a lower specification purpose than originally intended
- write downs as result of asset being seized without compensation provided (usually by other governments)
- When a department believes an impairment should score in the 'other' category and it is not included on this list they should contact the Treasury

3.39 An impairment due to changes in market price will not automatically score in budgets. To the extent such an impairment can be offset against any revaluation reserve in the departmental accounts for the asset in question (see paragraphs 3.41-3.45 on revaluation), there is no budgetary impact. Once that element of the reserve is exhausted, impairments due to changes in market prices should score in AME (as they score to net expenditure in departmental accounts). This category of impairments includes:

- write-downs of development land to open-market value
- write-downs of assets held at depreciated replacement cost to open-market value immediately prior to sale (where an asset not measured using depreciated replacement cost is to be written down it should be treated as accelerated depreciation or profit/loss on disposal as appropriate) and
- write-downs of newly constructed properties to depreciated replacement cost on the initial professional valuation

Theft

3.40 Theft of assets is treated as a write off or impairment of fixed assets or inventory, depending on what is stolen. Either way, the write off or impairment will score to resource DEL (under the category of loss or damage resulting from normal business operations).

Revaluation

3.41 Revaluation involves periodically remeasuring fixed assets to ensure they are measured at a current value after taking into account impairment and depreciation (as opposed to a historical cost model). Revaluation can reflect both increases and decreases in the value of an asset.

3.42 In departmental accounts, some revaluation changes impact net expenditure; it is only these revaluations that score in resource budgets. In the national accounts, revaluations of fixed assets are reflected as a balance sheet change and do not impact current expenditure.

- 3.43 Where a revaluation results in a fall in value of an asset it will be necessary to establish whether any of the fall in value is as a result of:
- consumption of economic benefit (for example physical damage) or a deterioration in the quality of service provided by the asset or
 - a change in market price
- 3.44 A fall in value relating to consumption of economic benefit or deterioration in the quality of service provided by the asset should be treated as an impairment, recognised in net expenditure in the departmental accounts, and would score in DEL or AME depending on the cause of impairment (see earlier section on impairments). A fall in value relating to changes in market price should first be offset against a revaluation reserve (for the asset in question), and once that element of the reserve is exhausted the fall in value should be recognised in net expenditure in the departmental accounts and will score in AME.
- 3.45 Revaluations that result in an increase in the value of an asset will not score in budgets, as these are not recognised as part of net expenditure in departmental accounts.

Write offs

- 3.46 Fixed assets are usually disposed of when they are sold to another party or when the department has consumed all of the economic benefits embedded in that asset and has depreciated or impaired the value of the asset to zero.
- 3.47 In some cases, fixed assets will need to be derecognised, even when there has been no sale, or the value of the asset has not yet been depreciated or impaired to zero. This is referred to as a 'write off.'
- 3.48 Write offs of fixed assets should be recognised in the resource budget in the opposite category as where they were originally scored (for example, if the purchase of the asset originally scored in DEL, the write off should be scored in AME and vice versa).

Current assets and liabilities

Inventories

- 3.49 Inventories are either goods that are intended to be sold or assets used in production of goods and services for sale. In general terms, inventories will impact on the budget only when they are consumed, impaired (reduced in value) or written-off, when they are scored to resource DEL. In exceptional instances, certain purchases treated as increases in inventory are included in the capital budget – see Chapter 6.

- 3.50 This is consistent with the national accounts framework; the consumption of inventory scores to current expenditure and affects fiscal aggregates accordingly. In the departmental accounts, inventory is recognised as a current asset as it is purchased, and an expense is recognised when it is consumed.
- 3.51 For purposes of calculating a potential impairment of inventories, they should be valued at the lower of cost and Net Realisable Value (i.e. the actual or estimated net sale proceeds).

Impairment

- 3.52 The impairment of inventories always scores to the resource budget. Whether this impairment scores inside the fixed asset depreciation and impairment ringfence, and whether it scores to AME or DEL, depends on the initial budgeting treatment:
- the normal budgeting treatment of inventories is that inventory acquisition does not score in budgets, but use, impairments and write off do score. In this case, all impairment of inventory would score in non-ringfenced DEL whatever the cause
- 3.53 Exceptionally, the acquisition of some inventory scores in capital budgets (again, see Chapter 6). In that case, inventories are generally analogous to tangible fixed assets, meaning impairments would score within the fixed asset depreciation and impairment ringfence, and the rules for the DEL/AME treatment of impairments would follow the treatment for tangible fixed assets. For theft of inventories, refer to the theft subsection within the fixed assets guidance in Chapter 3.

Trade debtors (receivables) and prepayments

- 3.54 Departments can create current assets when they have delivered goods and services but are yet to receive payment (these assets are referred to as 'trade debtors (receivables)' in this document), or they have prepaid for goods or services. These assets generally represent a movement in working capital, and only impact the budgeting framework through expected credit losses and write offs.

Expected credit losses and write offs

- 3.55 The expected credit loss (ECL) framework described in Chapter 8 applies to trade debtors (receivables). However, ECL is recognised in resource AME for trade debtors (receivables), as opposed to resource DEL for loans.
- 3.56 For National Accounts and budgeting there is a need to distinguish between trade debtors (receivables) written off by "mutual consent" and those extinguished unilaterally. Although some trade debtors (receivables) are termed as being written off by "mutual consent" there does not need to be a formal

agreement with the debtor. It is enough for the department to not pursue a debt that could economically be recovered.

3.57 The table below summarises the position.

Table 3.A Budgeting treatment of a write off

Expenditure / accrued income	Type of write off	Original scoring	Write off
Expenditure	Unilateral write off	DEL	AME
		AME or outside budgets	DEL
	Mutual consent write off	DEL	AME
		AME or outside budgets	DEL
Accrued income	Unilateral write off	DEL	DEL
		AME	AME
	Mutual consent write off	DEL	DEL
		AME	AME

3.58 The effect on the fiscal position of a debt written off by mutual consent is the same as the effect of a unilateral debt write off; the government's debt position is worse off relative to what it would have been had the debt been received.

3.59 Where a write off scores in DEL, any previous ECLs recognised in AME must also be reflected in DEL to the full value of the write off.

3.60 The recording on OSCAR also reflects the distinction between debts being written-off by mutual consent and those regarded as being unilateral write offs, with the latter simply recorded as being a bad debt written off.

Long-term debtors (receivables) and prepayments

3.61 In certain cases, these types of transactions are more akin to net lending, for example in complex contractual scenarios over an extended timeframe (that is, more than one year). In these cases, the budgeting system scores these transactions as financial transactions in the capital budget of the department concerned. That scoring is intended to capture and control the impact of what is in effect lending.

- 3.62 Accordingly, departments should treat the whole amount of transactions that meet both of the following criteria as financial transactions in their capital DEL budgets:
- first, the transaction is either
 - a long-term debtor (receivable) or prepayment (that is a debtor (receivable) that will last over 12 months at the point that the prepayment is made) or
 - a short-term debtor (receivable) or prepayment where there is an expectation that it will be renewed so that it is in effect long-term
 - second, the total value of the debtor (receivable)/prepayment involved is above £20 million (where there is a related group of prepayments, the £20 million limit applies to the group)
- 3.63 There is further guidance on the treatment of these long-term debtors (receivables) and prepayments in Chapter 8.

Creditors (accounts payable)

- 3.64 Similar to current assets, departments can create current liabilities where they have not yet paid for goods or services consumed, or they have received payment in advance of providing the goods or services to which the payment relates. These liabilities are referred to as 'creditors (accounts payable)' in this document. These liabilities are treated as changes in working capital in the budget.

Employee benefits

- 3.65 Under departmental accounting requirements, accrued employee benefits must be recognised on the balance sheet. This includes any untaken staff leave of employees as a liability and prepayments of employee compensation as an asset. Net changes in the balance sheet position of accrued employee benefits will go through the SoCNE in the departmental accounts.
- 3.66 The net changes in the SoCNE will be reflected in budgets as a resource cost in DEL.

Provisions

Overview

- 3.67 A provision is a liability of uncertain timing or amount. A provision is recognised in the departmental accounts when:
- a department has a present obligation (legal or constructive) as a result of a past event,
 - it is probable that a transfer of economic benefits will be required to settle this obligation, and

- a reliable estimate can be made of the amount of the obligation (for example early retirement costs) but where there is some uncertainty, either as to the amount or timing

For further guidance on when provisions should be recognised and how to value them please refer to the [FReM](#).

3.68 The resource budget recognises the creation of a provision in AME at the same time that the departmental accounts do and in DEL when the provision is utilised. When recording provisions in the resource budget there are three key stages:

- the initial **recognition**, and any **revaluation** of the provision (such as the unwinding of the discount, or writing back down of the liability), score in resource AME
- the **release of the provision** scores as an equal and opposite (negative) amount in resource AME.
- if the provision is released because it is utilised, the corresponding **recognition of a certain liability** or the **payment of cash** scores in the resource DEL budget

The release and utilisation of a provision will net to zero in the resource budget. However, any utilisation of the provision does not net to zero within DEL. The additional budgetary impact from the release is to be absorbed within existing DEL budgets.

3.69 In rare cases, for example when the underlying spend scores in AME, the third bullet above will score in AME rather than DEL.

Rationale

3.70 In departmental accounts the drawdown of the provision and the release of the provision are simply a movement on the Statement of Financial Position (SoFP) (debit liabilities and credit accrued liabilities or cash).

3.71 However, the budgeting system recognises these entries as well as the initial recognition and any revaluations that appear in the SoCNE.

3.72 This dual recognition is because in the national accounts the initial recognition of the provision does not score, rather the actual transfer scores when the liability becomes certain. Scoring the separate elements to the transaction in this way ensures that the information required for the national accounts is available and allows the Treasury to control spending in support of the fiscal framework.

3.73 This need to support the fiscal framework is a key consideration when looking at the impact of provisions in resource budgets.

Scoring examples

- 3.74 The example below illustrates the scoring of provisions and related expenditure, in the case of making a payment. Note that the transactions in provisions are scored in AME and the associated expenditure is normally in DEL.

Table 3.B: Example of sample provision in respect of DEL spending

Resource budget Impact	Year 1	Year 2	Year 3	
<i>Recognition of provision</i>	+£10			Resource AME
<i>Revalue provision upwards</i>		+£2		Resource AME
<i>Utilisation of provision</i>			-£12	Resource AME
<i>Make a payment</i>			+£12	Resource DEL

Exceptions to general treatment

- 3.75 Certain provisions in respect of capital spending score in capital budgets – see Chapter 6.
- 3.76 Regulators that are wholly or substantially funded from income will exceptionally score all provisions in DEL.
- 3.77 These rules do not apply to provisions in respect of student loans, whose treatment is set out in Chapter 8.

Contingent liabilities

- 3.78 A contingent liability is a liability that may be incurred depending on the outcome of a future event. Amounts for contingent liabilities are not included in the resource budget, nor recognised as actual liabilities on the department's SoFP, but are disclosed in notes to their accounts. Departments should consider in the course of drawing up their budget whether any contingent liabilities are likely to crystallise and plan to absorb the impact of such a risk within the existing budget.
- 3.79 Departments should refer to the requirements within [Managing Public Money](#) and the [Contingent Liabilities Approvals Framework](#) when considering taking on any contingent liabilities.

Insurance

- 3.80 Generally, departments and public sector bodies do not insure because government as a whole is well placed to absorb the risk, rather than paying to transfer that risk to the private sector. However, in certain circumstances departments will have insurance. Payments of insurance premia are current costs in resource DEL.
- 3.81 Where an insured asset is lost, stolen or otherwise written-off, a charge will be recognised in the SoCNE and resource budget to reflect that cost. The subsequent payment from the insurance company should be recognised as income in the SoCNE and resource DEL in the accounting period in which it was recognised.
- 3.82 Replacement of the asset will require the appropriate (most likely capital) budgetary cover.

Notional insurance payments

- 3.83 Under standards set out in the FReM, notional insurance should not be shown in the SoCNE or the Estimate. Any department that is recording notional insurance should therefore remove it.
- 3.84 If any department believes that it should record notional insurance in the SoCNE or the Estimate or the budget, they are asked to write to their normal Treasury spending team explaining the circumstances in order to obtain agreement before submitting data.

Insurance - entity as insurance contract issuer

- 3.85 This section applies to insurance contracts within the scope of IFRS 17 *Insurance Contracts* where the department is the issuer of the insurance contract.
- 3.86 N.B. where entities already have an agreed budgeting approach for their groups of insurance contracts it will be assumed that this will continue; the budgeting approach described here will apply where there is no previously agreed budgeting approach with HM Treasury.
- 3.87 Under IFRS 17, insurance liabilities will be accounted for differently and in a more consistent way than under IFRS 4 (the previous accounting standard for insurance). Guidance on accounting for insurance contracts under IFRS 17 can be found in the FReM and the IFRS 17 application guidance found in [this page](#). This will affect budget control totals and improve the management of insurance-type arrangements in government. The guiding principle is that the budgeting impacts of insurance transactions should align to the timing and amount of the

departmental accounts impacts in the SoCNE, with the exception of the crystallisation of insurance contract liabilities whose budgeting impact is aligned to the fiscal impact.

3.88 In summary, the budgetary impacts are as follows:

- Recognition of losses on onerous insurance contracts: RAME.
- Payment of incurred claims, reclassification of the liability for remaining coverage to liability for incurred claims, or recognition of expenditure attributable to the provision of insurance services: CDEL. For onerous contracts, there will also be a reversal to the previously recognised hit to RAME to the extent of reversals to the loss component of the liability for remaining coverage (LRC).
- Insurance income: RDEL.
- Revaluations and unwinding of the discounted cash flows (to the extent they impact the SoCNE): RAME.

3.89 There are three worked examples for budgeting in the IFRS 17 application guidance found on this page:

<https://www.gov.uk/government/publications/government-financial-reporting-manual-application-guidance>

3.90 The budgeting treatment described above reflects both departmental accounting and national accounts impacts. The initial RAME budgeting treatment mirrors the IFRS 17-related expenditure for the recognition and changes in the insurance liability in the SoCNE. The CDEL recognition of the crystallised net insurance expenditure mirrors the national accounts impact for one-off guarantees, which only recognises expenditure when the insurance liability becomes certain.

3.91 The initial budgetary impact for insurance contracts differs based on whether the contract is profitable, break even, partly onerous or wholly onerous (as the accounting transactions also differ). Within central government, many insurance contracts will often be partly onerous or wholly onerous as they are not provided on commercial terms and are often provided for policy reasons.

3.92 The key difference between profitable/ breakeven contracts and onerous contracts is that, for onerous contracts the onerous element of the contract is recognised as expenditure at initial recognition of the contract. For example, if a contract issued charged £100 insurance premium income but had expected claims of £120 over the lifetime of the contract, that £20 difference would be recognised as expenditure from a departmental accounts perspective, with a corresponding RAME hit in budgets. The remaining £100 would be recognised as insurance service expenditure over the life of the contract in RDEL with the £20 reclassified from RAME to CDEL on

crystallisation of the risk/ payment to the policyholder.
Profitable/breakeven contracts will not have this initial RAME hit.

- 3.93 It is expected that most insurance contracts will be treated as one-off guarantees from a national accounts perspective. This means that the budgeting also reflects the national accounts impact, where spending is recognised as guarantees crystallise. However, for those insurance contracts treated as standardised guarantees or insurance for national accounts purposes, a different budgeting treatment may be needed to ensure the budgeting impact also aligns to the fiscal impact of the transactions. Any departments whose insurance contracts might not be treated as one-off guarantees and may be treated as either standardised guarantees, or insurance contracts (for national accounts purposes) should approach their Treasury spending team in the first instance.

Tax credits

- 3.94 Tax credits are transfers of resources made through the tax system. The recording of tax credits is complicated by the different demands for information in the national accounts and in departmental accounts. Classification of tax credits is based on two criteria:

- 3.95 **Integral to the tax system.** Tax credits must be classified to determine whether they are a refund of tax or are more akin to payments made through the benefits system. The national accounts judge this, in part based on whether the credit is integrated into the tax system or the benefits system. Indicators that the credits should be treated as “integral to the tax system” include:

- measures of income being aligned with the tax system
- periods of assessment for entitlement being aligned with tax periods of assessment
- length of awards being aligned with the tax year
- underpinning definitions originating from the tax system

Indicators that the credits should not be treated as integral to the tax system include such measures, assessment periods, award lengths or underpinning definitions instead arising from other pre-existing systems such as the benefits system, or other indicators that the credits have evolved from such systems. Additionally, a further indicator is where entitlements and payments adjust during the year to reflect changes in income and circumstances.

- 3.96 **Payable vs. non-payable.** Payable tax credits are those where the credits a) may exceed the tax liability, and b) if they do exceed the liability, will be paid anyway. If a credit is designed that it may not exceed the tax liability, then it is classified as non-payable.

3.97 The classification of tax credits, based on the above criteria, and the subsequent reporting is set out in the table below:

Table 3.C: Classification of tax credits

	Departmental budget (usually AME)	Other AME	TME	DRAs	Trust statement
<i>Tax credits treated as an integral part of the tax system for national accounts</i>					
Non-payable tax credit	x	x	x	x	✓
Payable tax credit	✓	✓	✓	✓	x
<i>Tax credits not treated as an integral part of the tax system national accounts</i>					
Non-payable tax credit	✓	x	✓	✓	x
Payable tax credit	✓	x	✓	✓	x

Those credits which are treated as public expenditure add to TME. The other credits which are recorded as a refund of tax net off government's income.

Notional audit fees

3.98 Notional audit fees score in the department's DEL as resource expenditure within administration costs. The expenditure needs to be separately identifiable on the Online System for Central Accounting and Reporting (OSCAR) database in order that it can be removed in the AME accounting adjustments to line up with Total Managed Expenditure as measured in the national accounts.

Costs of European Union spending under the Withdrawal Agreement

3.99 Under the Withdrawal Agreement the UK makes residual financial contributions to the EU budget and receives funding covering a variety of policy areas under the 2014-20 Multiannual Financial Framework (MFF). This creates a cost to the Exchequer, through increasing the UK's gross contribution to the budget and reducing the UK's abatement.

3.100 In order to maintain sound incentives on departments, the Treasury expects departments to be responsible for any additional costs to the Exchequer that arise from changes to EU spending proposals. In all cases, departments should engage with the Treasury at as early a stage as possible.

Annual budget negotiations

3.101 Annual budget negotiations for the 2014-2020 MFF have now ended. However, there may be further changes to budgets through, for example, receipt of fines or adjustments to budget calculations. For financial year 2022-23, the mechanics of accounting for the receipt and costs of additional EU spending and income depends whether the department in question receives the EU funding directly. However, whether EU funding is included inside or outside departmental accounts, the principle that departments may be held responsible for additional costs to the Exchequer remains.

Funding inside departmental accounts

3.102 In most cases where the EU provides funding for activities under the 2014-2020 MFF, it will be by way of a grant to the department. This grant will be recorded as income in departmental accounts.

3.103 In order to make the costs of additional income explicit the Treasury may adjust departmental DEL downwards, equivalent to the cost to the Exchequer of additional income from the EU. This will take place at the next appropriate Estimates. In some circumstances, the cost may be greater than the income.

Funding outside departmental accounts

3.104 Where departments do not include EU funding in their departmental accounts, it will typically be for one of two reasons:

- while the department is responsible for an area of EU spending, the funds are distributed directly by the EU and never go to the department or
- the funding passes straight through the department, which is determined to be acting only as an agent in accounting terms

3.105 In such circumstances the budgeting follows the accounting, and these transactions will be outside of budgets. Such income and spending will nonetheless incur a cost to the UK under the financial settlement, including through the impact on the abatement. The Treasury may choose to reflect this cost through a charge within DEL that reflects the cost to the Exchequer of any changes in EU spending.

Income and the Resource Budget

Introduction

- 4.1 Departments will sometimes earn income, for example from the sale of assets, providing services, or from licenses or levies. In the budgetary context, there is an important question about whether or not this income should be retained in budgets and used to manage control totals via being set against gross expenditure. Generally, departments and ALBs may not retain income in budgets except where permitted (for example where retaining this income was agreed at the Spending Review).
- 4.2 This chapter specifically talks about the treatment of income in the resource budget.
- 4.3 This chapter provides:
- an overview of resource budget income, including Estimates and national accounts treatment of that income (paragraphs 4.5-4.15)
 - an overview of the different mechanisms by which income can be retained in the resource budget (paragraphs 4.16-4.25)
 - further guidance on individual types of income, including:
 - sales of goods and services (paragraphs 4.26-4.27)
 - royalties and rents (paragraphs 4.28-4.38)
 - income where special Chief Secretary permission is required for retention in the resource DEL budget (paragraphs 4.39-4.45)
 - profit or loss on disposal of assets (paragraphs 4.46-4.49)
 - other income (donations, National Lottery distributing bodies, and VAT) (paragraphs 4.50-4.58)
 - the requirements around the retention of resource DEL income beyond what was agreed in Spending Review (SR) settlements (paragraphs 4.59-4.71)
- 4.4 See Chapter 7 for guidance on income in the capital budget; Chapter 8 for guidance on income from financial transactions; and Chapter 11 on departments' income from public corporations.

Overview

- 4.5 When considering whether income should be retained in the resource budget, the general principle is that income that passes through the Statement of Comprehensive Net Expenditure (SoCNE) in the departmental accounts should normally be retained in resource budgets, at the same value and with the same timing.
- 4.6 Income passing through a department's Trust Statement is normally outside of budgets.
- 4.7 If income is retained in resource budgets, it means that it can be offset against gross expenditure and, therefore, can be used as a means of managing a department's resource budget control total. Resource budget income and expenditure are generally presented separately in Estimates but are used to arrive at a single net resource budget control total.
- 4.8 Although income can be used as a means of managing the resource budget control total, there are restrictions over the amount of income that a department is allowed to retain beyond what was agreed in their SR settlements. This is discussed in more detail in paragraphs 4.59-4.71.

Estimates treatment

- 4.9 Generally, Estimates follow the budget treatment. So, income that can be retained in the resource budget can also be retained in Estimates and will reduce the voted limits. Additionally, some income may be recorded in Estimates that is not recorded in budgets ('non-budget income').
- 4.10 In some cases, there will be exceptions to the above where income is retained in budgets, but the associated cash must be returned to the Consolidated Fund in the Estimate. These exceptions are referred to as Consolidated Fund Extra Receipts (CFERs).
- 4.11 Within Estimates, income is usually shown in an income column, except in certain circumstances, for example income from ALBs or where the department is acting as an agent, where it is netted off from gross spending.
- 4.12 See the [Supply Estimates guidance manual](#) for further details.

National accounts treatment

- 4.13 The presentation of income in budgets is different from their treatment in national accounts. This different presentation has no fiscal effect.
- 4.14 Although presentation of income is different in budgets and national accounts, national accounts criteria are relevant for determining the budgetary classification of income in some

cases, such as sales of goods or services and taxes. These areas are discussed in more detail later in this chapter.

4.15 It is the Office for National Statistics (ONS) acting as an independent agency that determines the treatment of income in the national accounts. Annex E gives links to some guidance notes describing the national accounts treatment of income. If you are in any doubt about the national accounts treatment or the budgeting treatment you should approach HM Treasury.

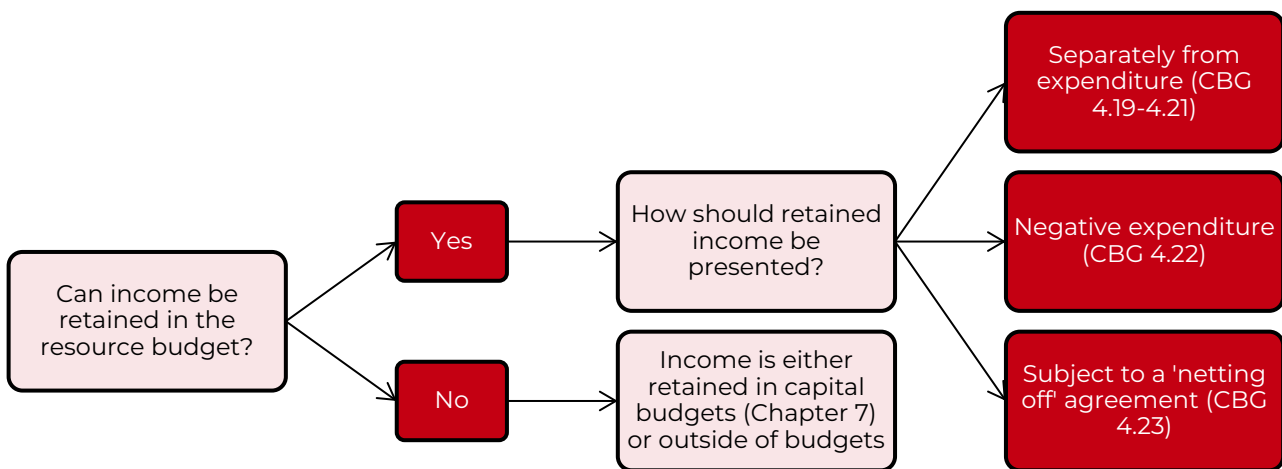

Budgetary classification of income

4.16 When determining the budgetary treatment of income there are two important questions to answer:

- Can the income be retained in budgets?
- How should the income be presented?

4.17 The diagram below gives an overview of the different budgetary classifications of income, based on the above questions.

Chart 4.1: Budgetary classification of income

4.18 The following paragraphs provide more detail on how to answer the above questions by identifying the types of income that fall into different budgetary classification categories:

Income retained in the resource budget and presented separately from expenditure

4.19 The following forms of departmental income are retained and presented separately from expenditure in resource budgets:

- sales of goods and services (paragraphs 4.26-4.27)

- royalties and associated payments for use of Intellectual Property Rights (paragraphs 4.28-4.35)
- sales of some licences where the ONS has determined that there is a significant degree of service to the individual applicant
- income from insurance payments
- income in respect of compensation (where the ONS treat the income as impacting on the current budget)
- income from operating leases of property, plant and equipment (rental income) (paragraphs 4.36-4.38)
- those donations that are treated as current in the national accounts (donations can be capital as well) (paragraphs 4.50-4.53)
- income obtained from National Lottery distributing bodies that finances current expenditure (paragraphs 4.54-4.55)
- some income associated with financial transactions, such as interest and dividends (see Chapter 8 for further details)
- income from the EU that finances current expenditure (see Chapter 3 for further details).

DEL vs AME

- 4.20 By default, income which is recognised in the resource budget will score in DEL in budgets. Income will score in AME where the associated programme or body responsible for the income is also recorded in AME. Income associated with fair value changes for financial assets will also score in AME.
- 4.21 Departments and ALBs may find that some of the expenditure incurred in generating income will fall in AME due to its transaction type (for example provisions, revaluations etc.). This does not mean that the income, or even a portion of the income, should be recorded in AME.

Income retained and presented as negative expenditure in resource budgets

- 4.22 Profit on disposal of fixed assets is treated as negative expenditure in resource budgets. That is, it reduces the resource expenditure total rather than being presented separately as income. Profit on disposal of fixed assets is discussed in more detail later in this chapter in paragraphs 4.46-4.49.

Income retained and subject to a 'netting off' agreement in resource budgets

- 4.23 Income from levies and licenses treated as tax in national accounts, and fines and penalties, is normally not retained in the

resource budget. However, this income can be retained where the Chief Secretary to the Treasury has explicitly agreed this through a 'netting off' agreement. This is discussed in more detail in paragraphs 4.39-4.44.

Income that may not be retained in resource budgets

4.24 The following income may **not** be retained in resource budgets:

- taxes, licence fees treated as tax in the National Accounts and levies, unless the Chief Secretary has specifically agreed to retain this income (see paragraphs 4.39-4.44)
- fines and penalties, unless the Chief Secretary has agreed to retain this income (see paragraphs 4.39-4.44)
- economic rents, other than those classed as rent of land
- income treated as capital (see Chapter 7 for further details), including
 - developer contributions that are capital in nature
 - income from the EU that finances capital expenditure
 - equity withdrawals/super dividends

4.25 The first three bullets above would normally be recorded in a Trust Statement by the department with responsibility for collecting the money (or the department with policy lead by agreement). There is an exception to this however, where Treasury agrees this income may be netted-off of expenditure the income will be recorded as in DEL budgets and within the SoCNE (see paragraphs 4.39-4.44).

Further guidance on individual types of income

Sales of goods and services

4.26 Sales of goods and services can be retained as income in resource budgets provided, they meet the criteria to score as sales of goods or services in national accounts. In brief:

- there is a clear and direct link between the payment of the charge and the acquisition by the payer of specific goods and charges. The issue of regulatory licences may count as the sale of a service if there is a direct benefit to the person paying for the licence such as providing them with an objective measure of fitness or suitability and
- unless the good or service is being sold in an open competitive market, the price should not exceed the cost of production (on a full cost basis, including depreciation but excluding capital expenditure)

- 4.27 The Treasury has provided a [guidance note](#) on when transactions are sales of goods and services in the national accounts.

Royalties and rents

Royalties

- 4.28 Royalties, as defined in national accounts, are retained as income in resource budgets. Appendix E contains a link to a guidance note on the national accounts treatment.
- 4.29 In brief, royalties are payments for the right to use produced assets made and sold in an open market, such as inventions given patent protection, computer software, copyright material, artistic and literary originals, and the income from allowing use of a government agency's logo by a commercial organisation.
- 4.30 For something to be a produced asset, it should be an intangible asset of a sort that is or could be produced by the private sector. So, an invention made in a government scientific laboratory could be an open market asset, since a private sector firm could have run such a laboratory and made the invention, even if in practice firms do not do research in this area. But if the government has for example a legal monopoly, which has led to the creation of the asset, then it is less likely to be seen as an open market asset.
- 4.31 The market value of the royalty should be the value recognised as income– in essence, what the market will pay. So the whole of the amount received for the royalty should be treated as income.

Resource or capital

- 4.32 There are scenarios where it is difficult to tell whether the income associated with intangible assets is a royalty (which is treated as current income in national accounts, and therefore in the resource budget), or a sale of the underlying intangible asset (which is treated as capital income in national accounts, and therefore in the capital budget). This is particularly the case when a single payment covers a number of years or a payment is spread over a number of years.
- 4.33 The tests used by departmental accounts will be a guide as to whether an intangible asset has been sold, or is earning royalties. For more material cases, departments should consult the Treasury to ensure that they are treating the income in accordance with the national accounts.
- 4.34 In general:
- resource income - royalty for the use of an asset - would be an arrangement offering the user a right to use the asset for a period of time, where underlying ownership of the asset or resource stays with the vendor. Changes in the value of the

asset would not normally affect the buyer as they would not be able to sell on their rights

- capital income - sale of an asset - would be when the buyer had obtained
 - all significant rights or other access to benefits relating to that asset and
 - all significant exposure to the risks inherent in those benefits

Economic rents and other cases that are not royalties

4.35 The term “royalty” may be used in a number of cases other than as defined in national accounts. Such income is normally classified as economic rent in national accounts and is outside of budgets—it is not retained. This income includes:

- “royalties”, sales, or rents in respect of assets created in nature, for example North Sea Oil, the radio spectrum, or water (however, see rent of land in paragraph 4.36 below)
- “royalties” or sales in respect of concessions or franchises given by the government to run a commercial or government operation

Rent of property, plant and equipment

4.36 Where a lessor has an operating lease in departmental accounts, rental income from leases of property, plant and equipment scores to and is retained in the resource budget. Property in this case includes buildings and land. For more information about receipts associated with operating and finance leases, please refer to the [IFRS 16 supplementary budgeting guidance](#).

4.37 Where the owners of inland waters and rivers receive rental payments for the right to exploit such waters for recreational and other purposes, these should also score to and be retained in the resource budget. This category does not include rents on sub-soil assets, or of other natural assets (spectrum, etc.), which are generally recognised as economic rents and are outside of budgets.

4.38 Any proposal to retain income from rents of natural assets needs explicit Treasury agreement.

Chief Secretary agreements for income retention and netting-off: tax, licences, levies, fines and penalties

4.39 National accounts define taxes as ‘compulsory, unrequited payments’ to government. This definition includes some licenses and levies, and fines and penalties. “Unrequited” means that the payer obtains nothing personal in return. That includes not only obvious taxes like income tax, but also cases where a tax is

hypothecated, perhaps to provide services generally for business in an area, or to recover costs from businesses that are in general the cause of some harm that needs to be remedied (for example pollution).

- 4.40 Generally, taxes should not be retained as income in budgets. However, in exceptional cases, the Chief Secretary to the Treasury may agree that this income can be retained as resource DEL income. Such agreements are called 'netting-off' agreements.
- 4.41 The Chief Secretary will bear in mind the criteria below when considering applications (there are separate criteria for licenses and levies, and fines and penalties):

Box 4.A: Criteria to be applied to applications for new licences and levies

- 1 the service delivered should be closely linked to the payer of the licence or levy, either because they are the beneficiaries of the service, or because they are the cause of the expenditure being incurred
- 2 the licence or levy is appropriate, i.e. applied in the economically most advantageous way in the circumstances
- 3 introducing the levy or licence should not materially restrict the government's fiscal policy (as measured by Public Sector Net Debt)
- 4 the activity financed by the levy or licence must further the government's economic goals
- 5 netting off the income would improve the efficiency with which resources are allocated, for example because of a difficulty in matching resources to unpredictable changes in externally driven demand. There needs to be a clear advantage over simply increasing DEL funding
- 6 where appropriate, charges should be set up using the principles of Treasury's [Managing Public Money](#) guide, and surpluses would have to be returned
- 7 there should be adequate efficiency regimes in place to keep costs down, including stretching targets and regular efficiency reviews, often tied in with a SR
- 8 day-to-day decisions on the level of charges and an efficient level of costs should be taken separately from the body raising the levy, to prevent abuse of its monopoly power. Normally this would be by the departmental minister
- 9 there will be periodic reviews involving the Treasury, of all the operation of the licences and levies including: whether they should exist at all; whether netting off remains the most appropriate means of funding; what scale of activity is appropriate; and the level of charges set. The

periodicity of the review shall be set as part of the agreement to allow netting off

Box 4.B: Criteria to be applied to applications for new fines and penalties

- 1 will performance against policy objectives, for example crime fighting and prevention, be likely to be improved
- 2 are arrangements in place which will ensure that the activity will not lead to the abuse of fine and penalty collection as a method of revenue raising, and that operational priorities will remain undistorted
- 3 will revenues always be sufficient to meet future costs, with any excess revenues over costs being returned
- 4 can costs of administering the programme be readily identified and apportioned without undue bureaucracy, and with interdepartmental and inter-agency agreement, where necessary
- 5 can savings be achieved through the change (from a normal DEL funding regime to a netting-off regime) and are adequate efficiency regimes in place to control costs, including regular efficiency reviews. The periodicity of the review shall be set as part of the agreement to allow netting-off and will involve the Treasury. It will consider whether the fines and penalties should exist at all; whether netting-off remains the most appropriate means of funding; what scale of activity is appropriate; and the level of fine set

- 4.42 Departments who wish to propose that the above income be retained and netted off expenditure should contact their Treasury spending team for advice.
- 4.43 Consideration of netting-off proposals should normally be linked to SR discussions. Where this is not possible Treasury will consider proposals as they arise, but the strong presumption must be that any agreement on netting-off will not alter the level of funding agreed to in the last SR. As such an agreement to net-off income will be reached alongside an agreement to reduce the department's resource DEL budget by a compensatory amount.
- 4.44 Transactions treated as tax in the national accounts are normally recorded in a Trust Statement by the relevant department. However, where Treasury agrees to a netting-off treatment the accounting will follow the budgeting, and the tax will be recorded as income in the department's SoCNE.

Imputed tax and spend

- 4.45 The ONS has classified certain obligation-based levy-funded schemes as taxation and public spending in the national

accounts and impute these economic flows through the public sector. Tax and spend arising from these types of schemes should be monitored and controlled like any other departmental spending and included in departmental budgets. Departments should seek guidance from HM Treasury on the classification and budgeting treatment of such schemes and on the mechanism for reporting to Parliament. They should also consult [Managing Public Money](#) and their Treasury spending team when considering the design of new schemes.

Profit/loss on disposal of fixed assets

- 4.46 Departmental accounts divide the proceeds from the sale of a fixed asset into an element that covers net book value and either a profit, loss or capital grant on disposal.
- 4.47 The net book value scores as capital income (discussed further in Chapter 7). The profit/loss on sale scores in the resource budget. Any income associated with profit on sale is presented as negative expenditure—that is, it directly reduces a department's expenditure rather than being presented separately from expenditure with other retained income.
- 4.48 The level of profit on disposal scoring retained in resource DEL is limited to a maximum of £20 million, or 5% of the net book value of the disposal, whichever is the lower. In cases where profit exceeds this maximum departments should contact Treasury to discuss the treatment; Treasury may require some or all of the additional profit to be retained in capital DEL.
- 4.49 The treatment described above is different from national accounts treatment. In national accounts, capital expenditure is recorded net of income from sales of assets. National accounts do not separate the profit/loss on disposal from the net book value element of sales income. Both of those components of the transaction are taken through the capital account of national accounts. In other words, the disposal at open market value reduces total capital expenditure in aggregate.
- 4.50 See Chapter 6 for budgeting for fixed asset sales when the sale price is below net book value, and there may be grounds for the difference to be accounted for as a grant from a departmental accounts perspective.

Donations

- 4.51 Donations received may benefit either resource or capital budgets. Donated assets and donations in kind are recognised in the capital budget and are dealt with in Chapter 7. Other donations should be treated as income in the resource budget if they meet the description below.
- 4.52 Donations must be entirely voluntary. They must be unrequited – that is the donor should receive no direct benefit in return. They

also must come genuinely from outside the body that receives them, i.e. not be financed or backed in some way by the recipient.

4.53 Donations that are made to finance expenditure for the common good and that are directed by the donor to a specific project, programme or body should be retained as income in the resource budget. The following are examples of such donations:

- a gift left in the collection box of an individual museum to be spent at that museum's discretion
- sponsorship funds raised for a specific venture to the benefit of the public

4.54 There are certain types of donations that should be excluded from budgets. Examples of donations that may not be retained in budgets include:

- donations related to income that would otherwise be classified as revenue anyway, for example, conscience money (people guiltily and voluntarily paying over money in respect of past unpaid tax) and
- donations that relate directly to the public sector's balance sheet – for example legacies to reduce the national debt.

Income from National Lottery distributing bodies

4.55 The government's hypothecated income from the National Lottery is a tax. The spending by the National Lottery distributing bodies scores as expenditure in AME.

4.56 Where a government department or ALB that is not a National Lottery distributing body obtains income from a distributing body to finance spending in resource DEL, it should retain the income in resource DEL.

VAT

4.57 Departments' budgets should be set net of any recoverable VAT. Departments may retain VAT refunds for business activities and also for certain non-business activities. Refunds should therefore not be included in budgets.

4.58 The actual cash paid corresponding to the VAT leads to an increase in debtors (receivables) for the department. When the VAT is repaid that leads to a decrease in debtors (receivables) and an increase in cash. The net movement in these debtors (receivables) feeds into the departmental Net Cash Requirement and must be recorded in the additional information section of the Standard Chart of Accounts (SCOA) as a movement in working capital.

4.59 VAT output tax charged as an addition to the cost of services or goods supplied is outside the scope of budgets. Tax received

results in an increase in accounts payable until paid over to HMRC (or offset against recoverable input tax). The payment then clears the accounts payable balance.

Retention of additional resource DEL income beyond SR settlements

Background

- 4.60 In many cases current income does no more than cover the costs of production of the activity to which it relates. For example, fees and charges for statutory services are typically constrained by law to recover no more than current costs, including depreciation (refer to [Managing Public Money](#) for further detail). In such cases it is illegal to plan to run surpluses and any surplus income would normally need to be returned to fee payers.
- 4.61 To ensure that they obtain the right level of income from such sources, departments will want to consider whether they have any services where less than full costs are currently recovered and which should move towards full cost recovery, or other services which may be appropriate candidates for the introduction of user charging.
- 4.62 In other cases, usually where departments are providing discretionary commercial services into a competitive market, income can generate returns that far exceed current costs of production. In these cases, the Government must balance two considerations:
- consistent with increasing public value, departments should be encouraged to identify and obtain such income by being allowed to retain and spend it; and
 - government funds should be prioritised across the whole range of spending to where they would do most good

Retention rules

- 4.63 Departmental budgets are set in the SR net of resource DEL income. The SR settlement therefore has to be informed by the expected level of resource DEL income. The SR process should be used to identify the expected level of departments' income; any expected changes; and an assessment of the potential for new income. It will look especially at the prospects of moving under-recovering services towards full cost recovery and/or identifying new sources of income from user charging. The SR settlement will include an explicit statement of the expected level of income in the years of the SR period.
- 4.64 Departments will be allowed to keep the DEL income that they obtain in the SR period up to the amount that was taken into account in the SR. Departments may, in any year, where no other retention limit exists, and where the relevant Treasury spending

team has approved it, also retain resource DEL income up to 10% above the level envisaged for that year as part of the SR settlement without an adjustment to budgets: as income cannot be predicted wholly accurately, and the Treasury wishes to encourage departments to find new income streams where appropriate.. Note that this budgetary arrangement does not provide cover for departments to retain surpluses generated on statutory services where there is a legal requirement to charge only to cover costs (see paragraph 4.59 above).

- 4.65 DEL income in respect of co-funded ALBs that originated from other departments does not count towards the 10% limit. It follows that income of ALBs – which is netted off in the Supply Estimate – does not contribute to the calculation of the 10% limit.
- 4.66 Where the SR settlements did not clearly set out an expected level of income, departments may in any year where no other retention limit exists, retain total resource DEL income up to 5% of net spending in resource DEL without an adjustment to budgets.
- 4.67 If departments expect to retain more resource DEL income than provided for above, they should talk to the Treasury about whether they may retain all or part of the income without an adjustment to budgets. When considering proposals, the Treasury will tend to look favourably on requests to retain income above forecast where:
- the additional income has arisen as a result of improved asset management, including commercialisation of retained assets; and
 - the department can demonstrate value for money plans for the utilisation of the income
- 4.68 For clarity, the Treasury will generally continue to look favourably on requests to retain income above forecast where the department has significantly improved their debt or fraudulent payment recovery processes. Departments should refer to the Debt Management Guidance in Annex B for guidance on debt management approaches and principles.
- 4.69 The Treasury recognises that, in exceptional circumstances, the 10% limit may act as a constraint on departments pursuing certain commercial opportunities that would represent value for money, and that were unforeseeable at the point of the last SR. The Treasury encourages departments to discuss such opportunities with their Treasury spending teams where this is the case.
- 4.70 The circumstances where a department produces recurring revenue benefits from improved asset management may be rewarded with a proportionate resource DEL uplift. These are broad and could include improved maintenance or

commercialising retained assets (for example through the sale of licenses or shares in joint ventures). The Treasury encourages departments to discuss such options with their Treasury spending teams.

- 4.71 The Treasury recognises that some departments may wish to adopt innovation programmes whereby proceeds (including those in excess of forecast) from knowledge assets exploitation and innovation are reinvested in further research, development, Intellectual Property rights enforcement and protection for example patents, or partly distributed through bonuses to innovators. In these circumstances the Treasury is happy to consider the terms of such schemes in advance and provide comment as to whether it appears such schemes may constitute value for money uses of income in excess of forecast. However, when considering approval, the Treasury will want to consider other factors, including the quantum of income and the specific plans for their use.
- 4.72 Finally, where, under departmental accounts, all the revenue from multi-year licensing contracts is required to be recognised up-front, it may be the case that departments cannot realise the benefit from this income, either as income received exceeds settlement limits or there is too narrow a time-frame for any income to be used. Where this occurs, the Treasury will consider giving departments increased spending power in later years, to properly incentivise departments to obtain value for money from multi-year licensing contracts.

Administration Budgets

What are administration budgets?

- 5.1 In Spending Reviews (SRs), administration budgets are set for entities classified as central government bodies for national accounts purposes including executive agencies and other arm's length bodies (ALBs) that receive government funding unless specific exemptions have been agreed.
- 5.2 Although devolved governments are not set administration budgets in SRs, they do operate their own arrangements for constraining the costs of running central government.
- 5.3 Expenditure that does not fall within administration budgets set in SRs is known as programme expenditure. Expenditure in AME is programme.

The boundary between administration budgets and programme spending

- 5.4 Administration budgets cover the costs of all central government administration other than the costs of direct frontline service provision. In core departments support activities that are directly associated with frontline service delivery are considered to be programme, but in ALBs if there is no clear distinction between support for the frontline and for non-frontline activities, all support activities are deemed to be within administration budgets. In practice administration budgets include activities such as provision of policy advice, business support services, back-office administration of benefits, advice on and administration of grant programmes and technical or scientific support.
- 5.5 To keep the number of reclassifications to manageable levels, the Treasury is only willing to consider cases that represent a substantial body of on-going work. Also, the merits of very substantial reclassifications need to be weighed against the potential effects on the administration budgets regime overall as well as presentational and timing issues.
- 5.6 Where a department believes that expenditure should be reclassified from administration spending to programme spending, they should contact their Treasury spending team. Departments should not reclassify expenditure without Treasury approval. All reclassifications from administration budgets lead to restated limits; reclassifying administration expenditure as programme expenditure will not help departments respond to pressures in their administration budgets because the budget cover will also move to from administration to programme.

- 5.7 The split between administrative and programme expenditure happens above the level of the individual civil servant. Departments are encouraged to classify spend according to the work of the business area rather than trying to split business areas along proportional lines.
- 5.8 To help Departments understand what constitutes administration budgets, case studies are provided in an appendix to this Chapter. Departments are encouraged to consult their Treasury spending teams if they are unclear on the definition of administration spending.

Definition of administration budgets

- 5.9 Administration budgets are simply a sub-set of resource DEL and share most of the characteristics of DEL. They are set net of DEL income that relates to administration expenditure. The chief components of expenditure within administration budgets are:
- **employee costs**, including civil service pay, superannuation, training, travel and subsistence
 - current expenditure on **office services** including stationery, postage, telecommunications and computer maintenance, HR, accounting etc.
 - current expenditure on **professional fees** including legal and audit
 - current expenditure on comparable **contracted-out services** (including some consultancy costs, see below)
 - **depreciation** charges incurred carrying out activities falling within administration costs (and where fixed assets are used for both administration and programme work, these costs should be apportioned)
- 5.10 Payments to staff as a result of early exit, where a case explicitly linked to improved efficiency has been agreed in advance with the Treasury, may exceptionally be excluded from administration budgets and scored to programme.

Consultancy costs

- 5.11 Consultancy fees and contract charges should be charged against administration budgets where the consultancy relates to some component of administration expenditure listed above, or where the work carried out might otherwise be carried out by staff funded from administration budgets. The presumption should be that consultancy spending should be scored within administration budgets. Where a department believes consultancy spending associated with a particular programme should be classified as programme spend, they should agree this with their Treasury spending team. Administration expenditure should include:

- any costs associated with out-sourcing of support services. For example: payroll services, some types of accommodation contracts etc
 - provision of policy advice or support by consultants employed in substantially the same role as if a civil servant was carrying out the work
- 5.12 This rule is designed to avoid any perverse incentive to contract out functions, or use consultants in place of civil servants, simply because the resulting work would then be charged under programme costs. Decisions on how support or policy services should be supplied should be made purely on an assessment of what offers the best combination of value for money and effectiveness, rather than because programme cover may be more readily available than administration cost cover or vice-versa.

Allowable income

- 5.13 Departments may offset resource budget DEL income relating to administration costs against their administration budget. This includes income from ALBs and other UK public sector bodies, where classified as administration income.

Comparability with departmental accounts

- 5.14 Departmental accounts must include a note reporting outturn against final administration budgets.
- 5.15 The element of net operating costs that falls with administration budgets is reported in the SoCNE as net administration costs. The only differences between outturn against administration budgets and net administration costs are the differences that apply generally between the SoCNE and resource budget set out in Table A.1 of Annex A.

Approval for changes to administration budgets

- 5.16 All changes to administration budgets – including changes to expenditure and income provision within administration budgets – require Treasury approval.
- 5.17 HMT spending teams may give approval at official level for:
- a switch from programme to administration for the funding of redundancy costs in exceptional circumstances
 - transfers between departments where the overall effect is neutral and
 - some increases to the administration budget, including:

- changes to expenditure and income provision within administration budgets where the administration budget itself remains unchanged or is reduced
- 5.18 Approval from the Chief Secretary to the Treasury is required for most other changes to the administration budget:
- increases involving claims on the DEL Reserve
 - transfers from programme funds

Interactions with departmental accounts and Estimates

- 5.19 Departments should be careful to classify administration expenditure correctly and, as with all spending, departments or agencies and their Accounting Officers have to take ultimate responsibility for ensuring an outturn within administration budgets.
- 5.20 Under the [FReM](#), departments must include a statement of administration costs incurred, with a comparison against the administration costs limit, in their departmental accounts.

Departments must note that, although the administration budget is not specifically voted as a limit by Parliament, it is included within the department's Supply Estimate and any breach of the limit will lead to an Excess Vote. Detailed guidance on administration costs and Estimates is available in the [Supply Estimates guidance manual](#)

Box: 5.A: Administration classifications: case studies

To improve consistency in the categorisation of programme and administration expenditure across government, the Treasury has provided some examples of activities with explanations as to how the classification was determined. These are simplified examples, and departments will need to consider all of the facts and circumstances of a particular case before making a classification decision rather than structuring their considerations around these examples. All classification changes must be discussed with the Treasury before being made by departments.

Example 1 – back-office programme support and policy design

Scenario: A directorate in a government department was responsible for project managing delivery of frontline services. The expenditure delivery of these frontline services was classified as programme. Staff within the directorate provided policy advice on the services offered, alongside technical support. The department asked the Treasury if they could classify expenditure on these staff as programme.

Principle: The chief components of expenditure within administration budgets includes employee costs and activities such as provision of policy advice and technical or scientific support.

Classification: Whilst expenditure on the delivery of frontline services itself was classified as programme, these kinds of supporting activities are still classified as administration. The department's request was therefore rejected.

Impact on budgets: There was no change in classification, so budgets were unchanged.

Example 2 – expenditure on consultants

Scenario: An ALB submitted a request to the Treasury to classify expenditure on consultants as programme, rather than administration. Following discussions between the ALB and the Treasury, evidence was provided that this is not a role that could be undertaken by a civil servant (even with the relevant training), and the consultants' activities related to frontline service provision.

Principle: The presumption should be that consultancy spending should be scored within administration budgets. This rule is designed to avoid any perverse incentive to contract out functions, or use consultants in place of civil servants, simply because the resulting work would then be charged under programme costs.

Classification: The consultants under discussion were agreed as being programme. However, a subsequent unrelated request from the ALB to classify further consultants as programme was rejected on the basis that these consultants were found to be undertaking roles which could be done by civil servants or were related to some component of administration expenditure as listed in 5.9. They were therefore classified as administration.

Impact on budgets: Administration budgets were reduced in line with the change in classification. Non-ringfenced resource DEL programme budgets were increased by a corresponding amount (such that the overall resource DEL control total was unchanged).

Example 3 – external technical advice

Scenario: A government department was procuring external technical advice, including legal and financial. They submitted a request to classify this as programme on the basis that the technical advice would be used to shape the future provision of frontline services.

Principle: The chief components of expenditure within administration budgets include current expenditure on professional fees including legal and financial.

Classification: These types of costs are pure administration; the request was refused on the basis that these costs would not be incurred in the provision of a direct front line service – and were instead the provision of policy advice and technical support.

Impact on budget: There was no change in classification, so budgets were unchanged.

Capital Budget

Introduction

- 6.1 The main elements of capital budgets include the following:
- expenditure on fixed assets
 - capital grants
 - right of use assets for on balance sheet leases (see Chapter 13 for guidance on leases)
 - financial transactions (for example, lending and equity investments—see Chapter 8 for more detail)
 - capital budget income, including the net book value on disposal of fixed assets (see Chapter 7 for guidance on capital budget income)
- 6.2 Capital spending by departments and ALBs generally scores in the capital budget at the same value and with the same timing as in accounts.
- 6.3 When budgeting for capital expenditure, departments should consistently follow agreed accounting policies when deciding what costs of a project should be capitalised. In most cases this should be uncontroversial but there are a few categories of expenditure, such as some consultancy costs, that could be either capital or resource, and departments should approach this carefully.
- 6.4 This chapter provides the following guidance for specific areas of the capital budget:
- Predicting capital values (paragraphs 6.6-6.8)
 - Capital grants and grants-in-kind (paragraphs 6.9-6.12)
 - Inventories treated as capital in budgets (paragraphs 6.13-6.18)
 - Long-term debtors (receivables) and prepayments treated as capital in budgets (paragraph 6.19)
 - Provisions which score to the capital budget (paragraphs 6.20-6.30)
 - Payables in respect of fixed assets (paragraph 6.31)
 - Research and development costs (paragraph 6.32-6.34)
 - Military equipment (paragraphs 6.35-6.38)

- 6.5 See separate chapters for the capital budget implications of financial transactions, leases, PPP deals, support for local authorities and support for public corporations.

Predicting capital values

- 6.6 In line with the [Government Financial Reporting Manual](#) (FReM), fixed assets are carried at current values rather than being based on historical costs. Departments can use depreciated historical cost as a proxy for fair value for assets with short lives or low values (or both). Otherwise, departments should use the most appropriate valuation methodology available (for example, professional valuations, indices, etc.).
- 6.7 Departments need to make assumptions about future expected disposals and acquisitions of fixed assets and movements in the value of fixed assets held, to be able to budget for the resource consequences (depreciation, maintenance and impairments) of holding these items.
- 6.8 Past trends and movements in indices should provide evidence to support departments' forecasts for the revaluation of assets. As the assumptions used in forecasting fixed asset values will no doubt change over time, departments should regularly review their continued appropriateness, and bring any significant changes to the early attention of their spending team.

Capital grants and capital grants-in-kind

- 6.9 Chapter 3 sets out the difference between current grants (which score to the resource budget) and capital grants (which score to the capital budget).
- 6.10 When departments sell fixed assets below net book value and they think they are able to account for the difference between net book value and sale price as a donation from a departmental accounts perspective, they should consult the Treasury on whether treatment in capital budgets would be appropriate.
- 6.11 Additionally, departments can provide capital grants-in-kind (i.e. gifted fixed assets). Where a fixed asset is gifted by a department, capital budgets will show no net impact. However, departments should note that gifting an asset does not represent a write off or a loss on disposal – as capital grants-in-kind, they are a transfer of value from the department to a third party.
- 6.12 To achieve the correct recording required for national accounts, departments must make up to two equal and opposite entries:
- the disposal of asset, as income in the capital budget equal to the net book value of the asset (as described in Chapter 7); and
 - a capital grant, as a cost to the capital budget equal to the disposal value

- 6.13 There are no net budgetary consequences of this grant, but departmental accounts will show a cost in the SoCNE. The capital grant (and therefore the disposal of the asset) will be equal in size and timing as the impact in accounts.

Inventories treated as capital in budgets

- 6.14 Departmental accounts do not treat purchases of inventories as investment in fixed assets. Rather, inventory movements are treated as changes in current assets. Normally, budgets follow accounts in their treatment of inventories, and inventories are excluded from budgets until they are used, disposed of, impaired or written-off. See Chapter 3 for details.
- 6.15 The net acquisition of inventories is an item of capital spending in national accounts and increases TME. Therefore, it would be appropriate to score all net acquisitions of inventories in capital budgets. However, in the interest of keeping down compliance costs, the Treasury normally asks departments to follow the treatment in departmental accounts.
- 6.16 Different budgeting rules are, however, appropriate where the item being acquired for inventories would be the acquisition of a fixed asset if it were not being acquired for inventory. For example, land acquired by English Partnerships for reclamation and development scores as capital expenditure in capital budgets.
- 6.17 Similarly, if inventory acquisitions are large, or set to increase significantly, it may be appropriate to score them in capital budgets.
- 6.18 Where departments are aware of inventory acquisitions that might fall into the categories above, or they think that the sale of inventory below net book value can be accounted for as a donation, they should consult the Treasury on whether treatment in capital budgets would be appropriate.
- 6.19 Where inventories score in capital budgets, they score like fixed asset transactions. The net acquisition of inventories scores to capital budgets. Impairments would score within the fixed asset depreciation and impairment ringfence, and the rules for the DEL/AME treatment of impairments would follow the treatment for tangible fixed assets (see Chapter 3).

Long-term debtors (receivables) and prepayments treated as capital in budgets

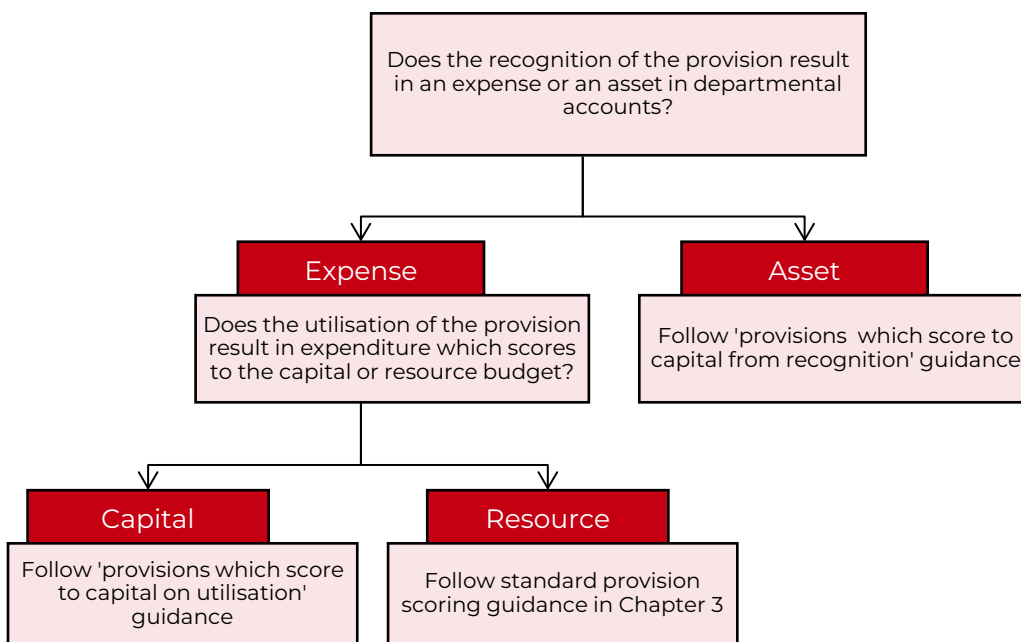

- 6.20 Normally, movements in long-term debtors (receivables) and prepayments are treated as working capital and do not impact directly on budgets. However, in limited cases long-term debtors (receivables) and prepayments are treated as imputed lending

and impact the capital budget as financial transactions. See Chapter 3 and Chapter 8 for more detail.

Provisions which score to the capital budget

- 6.21 Chapter 3 provides general guidance on provisions, which normally score to the resource budget. Departments will sometimes need to score provisions to the capital budget. This can happen in two cases: provisions which score to the capital budget only on utilisation, and provisions which score to the capital budget from the point of initial recognition.
- 6.22 The flowchart below illustrates the correct budgetary scoring of provisions in relation to their treatment in departmental accounts:

Chart 6.A: Budgetary scoring of provisions

Provisions which score to capital on utilisation

- 6.23 As with standard provisions outlined in Chapter 3, the creation of these provisions is recognised in resource AME. This reflects their recording in departmental accounts at recognition (debit expense, credit provision liability).
- 6.24 However, in these cases the provision concerns the uncertain future cost of expenditure which should be scored as capital in budgets at the time the expenditure occurs. This could relate to providing for the future payment of a capital grant or ESA10 research & development expenditure, or for remedial work on

fixed assets the department will need to carry out but which accounting standards do not allow to be capitalised at the time the provision is created but will allow for capitalisation when the provision is utilised. In these cases, the take-up, revaluation and release will score to resource AME budgets in the same way as provisions relating to resource spending. However, the utilisation will score to capital DEL, rather than resource DEL as for standard provisions.

- 6.25 The example below illustrates how provisions which score to capital on utilisation should be recorded in budgets.

Table 6.A: Provisions which score to capital on utilisation

Budget impact	Year 1	Year 2	Year 3	
Recognition of provision	£10			Resource AME
Revalue provision upwards		£2		Resource AME
Utilisation of provision			-£12	Resource AME
Make a payment			£12	Capital DEL

Provisions which score to capital from recognition

- 6.26 In some cases, the recognition of the provision liability is also the trigger point to recognise an asset in departmental accounts. They would therefore be recorded in departmental accounts at recognition as debit asset, credit provision liability.
- 6.27 Provisions which score to the capital budget from the point of initial recognition will include lease dilapidation provisions which are capitalised as part of the right-of-use asset (see Chapter 13 for further guidance on lease accounting).
- 6.28 If a department believes that it should be capitalising their provisions in this way, they should contact their usual Government Financial Reporting (GFR) team account manager in the first instance (this will not be needed for lease dilapidation provisions).
- 6.29 Where HMT's GFR team have been contacted and are content that the department has made an informed account judgement

that the provision should be capitalised from recognition, the capital AME budget will score the recognition of the liability. This will maintain alignment between departmental accounts and budgets. To note, OSCAR account codes may describe provisions which score to capital from recognition as 'capitalised provisions'.

- 6.30 When the actual cash payment is transacted, this will score in capital DEL. The provision in capital AME will be released.
- 6.31 The table below illustrates how provisions which score to capital from recognition should be recorded in budgets.

Chart 6.B: Provisions which score to capital through recognition

Budget impact	Year 1	Year 2	Year 3	
Recognition of provision	£10			Capital AME
Revalue provision upwards		£2		Capital AME
Utilisation of provision			-£12	Capital AME
Make a payment			£12	Capital DEL

Creditors (payables) in respect of fixed assets

- 6.32 No special treatment applies where a department has a payable in respect of the acquisition of a fixed asset. In other words, the capital expenditure scores in the capital budget at the same time as the asset is recognised in the departmental accounts. The cash transaction is then a movement in cash and payables in departmental accounts and outside the budgeting framework.

Research and development costs

- 6.33 Departments should score as in capital budgets any development costs that are capitalised in departmental accounts. In addition, where costs (other than depreciation) do not meet the criteria to be capitalised in departmental accounts but meet the ESA10 definition of research and development, they should be recognised as capital spending in budgets. Departments will only recognise depreciation in budgets for assets recognised in departmental accounts.
- 6.34 The definition of Research and Development (R&D) under ESA10 is based upon and viewed as equivalent to the definition of R&D in the OECD Frascati Manual is as follows:

“Creative work undertaken on a systematic basis to increase the stock of knowledge, and use of this stock of knowledge for the purpose of discovering or developing new products, including improved versions or qualities of existing products, or discovering new or more efficient processes of production”.

- 6.35 When capitalising costs within the scope of the above definition departments should include all costs, other than depreciation, that are directly attributable to the activity and can be reliably measured. Further guidance on what falls within the ESA10 definition of R&D can be found in Annex C.

Military equipment

- 6.36 Military equipment is primarily held by the Ministry of Defence, and so the Ministry of Defence will be the primary department to whom the below guidance will apply.
- 6.37 National accounts do not differentiate between single and dual use military equipment. National accounts instead differentiate between (single use) military inventories and (single use) weapons systems. The former are durable military goods (i.e. ammunition, rockets, some missiles, bombs, torpedoes, etc.) and are treated as inventories. Spending on single use military inventories will be included within the capital DEL budget when the purchase of such equipment takes place. The value of inventories consumed during the year, as well as any items that are written -off, will be included within the resource DEL budget (and should be netted off in the capital DEL budget). Where estimated impairments are recorded and then reversed prior to write off (in accordance with a specific accounting treatment for the Ministry of Defence’s military inventories), these should be both recorded and then reversed through ringfenced RDEL.
- 6.38 Expenditure on weapons systems (such as ships, planes, tanks and other large single use capital items) is to be treated as capital spending in national accounts like the spending on dual use military equipment discussed below. Spending on these items should be recorded on a staged payment basis in line with departmental accounts. In the national accounts, these assets will be depreciated using a similar methodology to other fixed assets.
- 6.39 Expenditure on dual use military equipment is treated as capital in national accounts. Dual use assets are those that could be used by civilian organisations for the production of goods and services such as airfields, docks, roads and hospitals. Expenditure on almost all fixed structures will be treated as capital expenditure in the national accounts as is that on types of equipment which have alternative non-military uses - such as transport equipment, computers and communication equipment and hospital equipment.

Income and the Capital Budget

Introduction

7.1 Just as in the resource budget (described in Chapter 4), some income can be retained in departments' capital budgets to help departments manage their capital budget control totals. This chapter provides guidance on income that can be retained in capital budgets.

7.2 The following items of capital income may normally be retained in capital budgets within the terms set out below:

Chapter 1 income from fixed asset sales—limited to the net book value of the asset, and intangible asset income (paragraphs 7.4-7.6)

- income obtained from National Lottery distributing bodies that finance capital expenditure (paragraphs 7.7-7.8)
- capital grants from the private sector including developer contributions and capital donations (paragraphs 7.9-7.13)
- income received from exercising an overage (claw-back) agreement (paragraphs 7.14-7.17)
- income from sale of inventories that score in the capital budget (see section on inventories in capital DEL in Chapter 6)
- privatisation proceeds (see Chapter 8)
- income received from disposal of financial assets (see Chapter 8)

Only income in connection with DEL programmes scores in capital budget DEL.

7.3 This chapter also provides guidance on:

- The timing of recording income in the capital budget (paragraphs 7.18-7.19)
- When capital budget income can be retained above Spending Review (SR) settlements (paragraphs 7.20-7.21)

Further information on certain types of capital budget income

Disposal of fixed assets

7.4 When a department or ALB disposes of an asset, the net book value of this asset scores as capital DEL income.

- 7.5 Any profit or loss on disposal, i.e. the difference between net book values and actual sale value, scores in the resource budget—see Chapter 4 for more details.

Intangible asset income from sales/disposals

- 7.6 There are scenarios where it is difficult to tell whether the income associated with intangible assets is a royalty (which is treated as current income in national accounts, and therefore in the resource budget), or the disposal of the underlying intangible asset (which is treated as capital income in national accounts, and therefore in the capital budget). This is discussed in detail in Chapter 4. Again, income from the sale of the underlying intangible asset is retained in the capital budget.

Income from National Lottery distributing bodies

- 7.7 The government's income from the National Lottery is a tax. The spending by the National Lottery distributing bodies counts as expenditure in AME.
- 7.8 Where a government department or ALB that is not a National Lottery distributing body obtains income from a distributing body to finance spending in the capital budget DEL it should take the income into budgets as capital DEL income.

Capital grants and capital grants-in-kind

- 7.9 The distinction between capital grants and current grants is described in Chapter 3.
- 7.10 Receipts of capital grants from outside of the public sector should be treated by departments as capital DEL income.
- 7.11 Receipts of capital grant income from within the public sector, that is intended to be used for capital purposes should be treated by departments as capital DEL income.
- 7.12 Donated assets and gifts of fixed assets should be recorded in the same way as an asset purchased by way of a capital grant. Budgets will show two equal and opposite transactions in the capital DEL budget:
- a capital grant equal to the market value of the asset which should be recorded as capital DEL income
 - purchase of the asset at market value, this will score as capital DEL expenditure
- 7.13 Where a department receives an asset by way of donation or uses a capital grant to buy fixed assets, the depreciation of the asset should exceptionally be recorded in AME. See section in Chapter 3 on depreciation for further details.

Overage agreements

- 7.14 When a department disposes of surplus property, it will enter into an agreement with the purchaser; it is common for these agreements to contain a clause on overage/claw-back. The intention of an overage clause is to allow the department to gain some benefit if the purchaser should sell the property on in the future for a profit above that envisaged at the time.
- 7.15 This clause represents a financial asset and should be recorded on the department's SoFP accordingly. The amount and timing of this financial asset will be subject to uncertainty, and departments may find it difficult to value. In these circumstances departments should refer to accounting guidance and use the same valuation in budgets.
- 7.16 Since this financial asset comprises part of the value of the property being disposed it, in effect, allows the public sector to retain part of the value of the property. So, on disposal the scoring in capital DEL should be:
- total net book value of the disposed asset (capital DEL income)
 - profit/loss on disposal of the asset (resource DEL)
 - the Open Market Value (OMV) of the overage agreement (capital DEL expenditure)
- 7.17 The accounting for revaluations and impairment of assets received in overage agreements is the same for other investments. When the financial asset is disposed of, either because of maturity or open-market sale, the amount received by the department will score as capital DEL income.

Timing of recording of income

- 7.18 In general, departments should record capital income for budgets at the same time as they record it in the departmental accounts.
- 7.19 Income from capital transfers (i.e. grants, developer contributions and donations received) other than income from the EU should be recorded for budgeting purposes at the time that the receipt, is due to be received. That may be different from the recording in departmental accounts if exceptionally the accrual of the income has been related to work done at a quite different time.

When departments may retain additional capital DEL income

- 7.20 The same general principles discussed in Chapter 4 regarding income retention for resource DEL income apply to capital DEL income, with the addition that where a department earns income through asset sales, they may retain a proportion of the capital DEL proceeds from the sale as discussed in Chapter 1,

section 1.89 and 1.90. In brief, departmental budgets are set in the SR net of capital DEL income. Departments are allowed to keep the capital DEL income that they obtain in the SR period up to the amount that was predicted in the SR.

- 7.21 Departments can also, in any year, where no other retention limit exists, retain capital DEL income up to 10% above the level envisaged for that year without an adjustment to budgets. If departments expect to obtain more income than provided for above, they should talk to the Treasury about further income retention. Again, see the guidance in Chapter 4 regarding when the Treasury will look favourably on income retention.

Financial Transactions

Introduction

- 8.1 Financial transactions are defined in national accounts as transactions in financial assets and financial liabilities, such as lending or equity transactions. Financial assets and liabilities generally involve claims between parties that are settled in cash.
- 8.2 Financial transactions do not score as capital expenditure in national accounts. As they are exchanges of financial assets or liabilities, generally of equal value, the transactions do not score as spending and there is no immediate effect on Public Sector Net Financial Liabilities (PSNFL).
- 8.3 However, financial transactions with the private sector generally impact the amount of cash the government has to borrow, and affect other measures of public debt. For example, if a department loans money to the private sector, it is exchanging a liquid asset (cash) for an illiquid asset (the financial claim from the loan). This will increase public sector net debt (PSND), which is measured as the difference between the public sector's debt liabilities (for currency and deposits, debt securities and loans) and liquid assets, and also increase the central government net cash requirement (CGNCR).
- 8.4 Consequently, financial transactions with bodies outside the budgeting boundary scores to a department's capital budget to reflect this impact to PSND and CGNCR. This is the case even though the transactions are not classified as capital in national accounts.
- 8.5 Financial transactions are generally referred to as financial instruments in departmental accounts.
- 8.6 If departments are unsure if the policy would give rise to a financial transaction, they should contact the Treasury for guidance.
- 8.7 Some financial transactions qualify as Official Development Assistance (ODA). The rules that govern the statistical reporting of ODA do not affect their treatment in the national accounts or budgets.
- 8.8 This chapter:
 - gives an overview of financial transactions, and outlines treatment for policy losses created at initial recognition of a financial transaction (paragraphs 8.9-8.20)
 - details specific guidance for types of financial transaction:

- loans (including expected credit losses, loan commitments and write offs) (paragraphs 8.21-8.37)
- long-term debtors (receivables) and prepayments (paragraphs 8.38-8.40)
- equity (paragraphs 8.41-8.46)
- privatisation (paragraphs 8.47-8.49)
- financial guarantee contracts (paragraphs 8.50-8.60)
- exchange rate changes (paragraphs 8.61-8.69 and Appendix 1)
- student loans (in Appendix 2)

Overview of budgetary implications for financial transactions

8.9 The guidance below provides an overview of how financial transactions impact both the capital and resource budgets.

Capital budget impact

8.10 As described above, financial transactions impact on the capital budget when they are first entered into, and as they are settled.

8.11 For all departments, financial transactions should form a separate ringfence within capital DEL budgets. Departments may not switch budget cover out of their financial transactions ringfence without the explicit approval of the Chief Secretary.

8.12 Financial transaction budgets are presented on a net basis, unless specifically stated otherwise. This means that income from settlements of financial transactions may be recycled by departments, as long as the annual net financial transactions total is not exceeded.

Resource budget impact

8.13 Financial transactions involve the exchange of financial assets and liabilities. Financial transactions mainly impact on the resource budget through the returns received or paid on these financial assets or liabilities (for example, interest received/paid on a loan, or dividends received/paid on equity). Financial assets also impact on the resource budget through changes in their valuation.

8.14 There are a number of different classifications of financial assets in departmental accounts. The budgetary treatment of valuation changes of these assets is dependent on their classification in departmental accounts. Generally, changes in the value of financial assets which are recognised in the Statement of Comprehensive Net Expenditure (SoCNE) should score to the resource budget.

- for financial assets measured at amortised cost, expected credit losses generally score to resource DEL¹ (see paragraphs 8.30-8.33)
- for financial assets measured at fair value through other comprehensive income (OCI), expected credit losses generally score to resource DEL¹ (see paragraphs 8.30-8.33). Other changes in fair value recognised in OCI should be budgeted for following the same principles as fixed asset revaluation. Decreases in fair value will score to resource AME once any previous upwards fair value changes for that class of asset have been eliminated. Any other changes in fair value will not impact budgets
- for financial assets measured at fair value through profit or loss, changes in the fair value of these assets score to resource AME. If a department chooses to disaggregate interest or dividend income for these assets in its departmental accounts, that income should score as a benefit to resource DEL

8.15 For all financial assets, write offs score in the resource budget.

8.16 As with fixed assets, the treatment of valuation changes for financial assets in budgets does not mirror their treatment in national accounts. National accounts do not recognise expected credit losses and treat changes in fair value as balance sheet movements only.

Policy losses created at initial recognition of a financial transaction

8.17 The Financial Reporting Manual ([FReM](#)) contains an adaptation to IFRS 9 which changes how financial transactions which meet certain criteria should be measured. This will generally arise when financial transactions are issued at an amount not aligned with fair value for policy reasons².

8.18 At the point a balance sheet value in line with the adaptation is applied to a derivative financial transaction, the associated loss (which is the difference between the transaction price and the fair value measurement of the derivative instrument) should be scored to resource AME. This is the case whether this is applied as an adjustment or from initial recognition.

8.19 At the point a balance sheet value in line with the adaptation is applied to a non-derivative based financial transaction, the associated loss (which is the difference between the transaction price and the fair value measurement of the non-derivative

¹ Expected credit losses for trade debtors (receivables) and guarantees score to resource AME.

² See FReM Chapter 8, IFRS 9 adaptation 5 for further details

<https://www.gov.uk/government/collections/government-financial-reporting-manual-frem>

instrument) should be scored to resource DEL. This is the case whether this is applied as an adjustment or from initial recognition.

- 8.20 This does not affect the budgeting for student loans, which is addressed separately in Appendix 2.

Summary

- 8.21 The above only provides a general overview of the treatment of financial transactions in budgets. The rest of this chapter goes into more detail about different types of financial transactions: loans (including expected credit losses and write offs); equity transactions; and financial guarantees. The chapter also provides guidance about the impact of exchange rate changes on budgeting for financial transactions.

Loans other than student loans

Overview

- 8.22 One major category of financial transaction is loans. Loans are payments made to another party where the expectation is that the payment will be wholly repaid, normally with interest, and normally to a fixed regular payment schedule.
- 8.23 There is unique guidance on student loans contained in Appendix 2.
- 8.24 Departments normally loan money, rather than borrow money. This is because public sector borrowing is normally done centrally through the Exchequer and not through individual departments. Therefore, this guidance is written from the perspective of departments as lenders.
- 8.25 Loans need to be distinguished from deposits. In loans, a liquid asset (cash) is exchanged for an illiquid asset (the claim from the borrower). In deposits, a liquid asset (cash) is exchanged for another liquid asset (the deposit with the bank).
- 8.26 The making and withdrawing of deposits do not score in budgets. However, deposits themselves may attract interest income, and this income would score in budgets in resource DEL.

Summary of budget treatment of loans

- 8.27 In a loan's budgetary treatment:
- the capital budget will score
 - a) net lending (i.e. transactions in loan principal)
 - b) capitalised interest as appropriate
 - the resource budget will score

- c) interest income (resource DEL income)
 - d) arrangement fees (resource DEL income)
 - e) expected credit loss (resource DEL—see paragraphs 8.27-8.30)
 - f) other changes in fair value of the loan (resource AME if at all—see paragraph 8.14)
 - g) write offs (resource DEL—see paragraphs 8.31-8.32)
- 8.28** This treatment generally captures the impact of loans on national accounts, and departmental accounts. Valuation changes in the financial assets associated with loans, namely expected credit losses and other changes in fair value, impact departmental accounts but not national accounts in most cases.
- 8.29** In exceptional cases, where expected losses are significant at the inception of a loan, the value of the expected losses may be treated as upfront capital spending from a national accounts perspective. If a department thinks this is the case, they must notify their spending team, who will work with HMT colleagues to determine the national accounts impact of such a loan.
- 8.30** The above treatment is mainly applicable to loans which are measured at amortised cost or fair value through other comprehensive income in departmental accounts. For loans measured at fair value through profit or loss, fair value changes will score in resource AME, as described in paragraph 8.14. However, there should be a resource DEL impact for any write offs, and interest income, if a department chooses to disaggregate interest income.

AME vs. DEL

- 8.31** Normally, lending scores in DEL. Where exceptionally a loan scheme may score in AME, the associated transactions will score in resource AME. However, an exception to this is if the debt is written off by mutual consent, i.e. a policy decision has been taken not to pursue the debt. In such cases it scores in DEL, regardless of the initial loan being in AME.

Expected credit losses

- 8.32** Under the Expected Credit Loss (ECL) model, an entity calculates an allowance for credit losses on loans, or in other words the risk that loans will not be paid back because of a deterioration in the credit quality of a borrower. The ECL model is a forward-looking model, which means that predictions of future credit quality should be included in the assessment of risk.
- 8.33** Entities should calculate the ECL by considering on a discounted basis the cash shortfalls it would incur in various default scenarios for future periods and multiplying the shortfalls by the

probability of each scenario occurring. The allowance is the sum of these probability weighted outcomes.

- 8.34 Changes in the value of loans receivable that relate solely to the application of the ECL model will score to the resource DEL budget. Where departments apply the ECL model, the forecast used should be robust and the amounts recognised should be discussed with Treasury spending teams. When a department applies the ECL model, Treasury expects departments to offset the increase with a reduction in their DEL elsewhere – i.e. there will be no increase to resource DEL budgets as a result of the ECL model being applied. See table below for an example.

Table 8.A: Example of charges to DEL budgets for loans with ECL provisions

	CDEL (ringfenced FT)	RDEL
Creation of Loan	£100	
Initial ECL valued at 10%		£10 (but no increase in overall resource DEL control totals, these charges to the resource DEL budget have to be absorbed by adjusting spending elsewhere)
ECL revalued at 20%		£10 (but no increase in overall resource DEL control totals, these charges to the resource DEL budget have to be absorbed by adjusting spending elsewhere)
ECL crystallised		(£20) (but no increase in overall resource DEL as this covers half the Write off)
Write off of loan – now at 40%		£40 (£20 offset by the switch from the ECL)

- 8.35 ECLs are referred to as impairments in departmental accounts. However, they are not treated as impairments in budgets. Therefore, they are not included in the ring-fenced budget for depreciation and impairments of fixed assets.

Loan commitments

- 8.36 Any expenses associated with the recognition or change in value of loan commitments within the scope of IFRS 9 will score to the resource AME budget.
- 8.37 The derecognition of a loan commitment within scope of IFRS 9 scores as a benefit to resource AME (similar to the release of provisions as described in Chapter 3). If a loan is recognised upon derecognition of the loan commitment, the guidance set out earlier in this chapter should apply to the loan.

Write offs

- 8.38 All write offs for financial transactions should score in DEL. Any previous changes to fair value recognised in AME must also be reflected in DEL to the full value of the write off.
- 8.39 Where departments are considering large write offs of debts – greater than £200 million – they are asked to inform the Treasury beforehand. That gives the Treasury warning of the fiscal effects.

Long-term debtors (receivables) and prepayments

- 8.40 Chapter 3 provides guidance for when trade debtors (receivables) or prepayments should be treated as lending and therefore budgeted for as a financial transaction. Briefly, trade debtors (receivables) or prepayments should be treated as lending when they are long-term and over £20 million. The scoring in such cases would be:
- the full amount of the long-term debtor (receivable) or prepayment that would score as a loan in capital budgets
 - any increase in the value of the long-term debtor (receivable) or prepayment as the discount unwinds would score as increased net lending (a cost)
 - as the long-term debtor (receivable) or prepayment is utilised, it is treated as the repayment of a loan
 - any ECLs or write offs for the long-term debtor (receivable) or prepayment would score according to the general principles for loans set out earlier in this chapter

In other words, the treatment would be on a net basis like the treatment of loan principal. This scoring is intended to capture and control the impact of this lending on PSND.

- 8.41 Note that the transaction financed by the debtor (account receivable) or prepayment would also score in budgets as normal.
- 8.42 Note also that if the pre-payment is discounted, the SoCNE will show a credit entry as that discount unwinds (the credit entry

represents an interest payment from the holder of the prepaid cash). This transaction scores in resource DEL.

Equity transactions

- 8.43 Purchase and sale of shares or other equity in private sector bodies scores in capital DEL, as with other types of financial transactions.
- 8.44 Note that purchase or sale of shares will affect the amount of control the public sector has over a body. Where this transfer of control is significant then departments should consider the impact on classification of the body as part of the public or private sector – see Chapter 1 for details of classification.

Dividends and equity withdrawals

- 8.45 A dividend is a payment made to a shareholder in consideration of having put equity finance into a body. The equity finance may be in the form of Companies Act shares, Public Dividend Capital (PDC) or the implied equity in a statutory Public Corporation. Public sector bodies may hold equity in other public sector bodies or in private sector organisations. Dividends are payments made out of current earnings.
- 8.46 If dividends are greater than the sum of the profits, before income and tax, of the current and two previous years – super-dividends - they count as equity withdrawals in the national accounts (a financial transaction as opposed to a current receipt in the national accounts). Equity withdrawals count as capital income for budgeting. A more detailed definition of when a payment is a dividend as opposed to a withdrawal of equity for budgeting purposes is given in Chapter 11 (the chapter on public corporations).
- 8.47 In departmental accounts, reductions of equity in the form of sales of shares or PDC reductions would not normally go through the SoCNE. But special payments from bodies that are not accompanied by actual reductions in equity holdings would go through the SoCNE; they may be termed super-dividends. Such super-dividends would be equity withdrawals in the sense above.
- 8.48 “Dividends” received from bodies within central government, including joint ventures classified to the central government sector, are not dividends but transfers within Government and as such are not generally treated as income in budgets.

Privatisation proceeds

- 8.49 Privatisation proceeds score in AME, even where the asset or business being sold was on a DEL programme.
- 8.50 Sale of shares in a **private sector PPP** represents the disposal of a financial asset by the department. As a form of privatisation, the income scores as a benefit to capital AME.

- 8.51 Sale of shares in a **public-sector PPP** increases the public sector's financial liabilities. As above, the income scores as a benefit to capital AME.

Financial guarantee contracts

- 8.52 Departments sometimes guarantee the debt of bodies outside the public sector—these promises are generally known as financial guarantees. In national accounts, financial guarantees are classified as either standardised or one-off guarantees. ONS have the responsibility for classifying guarantees as standardised or one-off.
- 8.53 Standardised guarantees have a fiscal impact upon recognition, whilst one-off guarantees generally do not have a fiscal impact unless they are called.
- 8.54 Financial guarantee contracts do not score to the financial transaction ring-fence.

Standardised Guarantees

- 8.55 Generally, guarantees are classified as standardised guarantees by the ONS if there is a large volume of guarantees given on identical terms and conditions, where there is pooling of risk across the guarantees and departments are able to estimate their expected loss based on available risk profiles.
- 8.56 There are relatively few standardised guarantees in central government; most guarantees are classified as one-off guarantees. Departments should contact their Spending Team in the first instance if they believe they have a standardised guarantee.
- 8.57 Standardised guarantees should score to capital DEL when the guarantees are given, at the value of expected losses on the guarantee (net of any expected income on the guarantee). This should generally be the same amount as the value of the guarantee recognised in departmental accounts.

One-off Guarantees

- 8.58 The budgeting treatment of one-off guarantee contracts will depend on their treatment in departmental accounts. In departmental accounts, financial guarantees are recognised when they are provided if they meet the IFRS 9 definition of a 'financial guarantee contract.' For financial guarantee contracts, the treatment in budgets should generally follow the accounting. Other financial guarantees that are not recognised in departmental accounts would be outside of budgets until they are called. For national accounts purposes, all one-off guarantees

only have a fiscal impact when they are called (the call scores as a capital transfer).

8.59 One-off guarantees that meet the definition of financial guarantee contracts in IFRS 9 impact on budgets in the following ways:

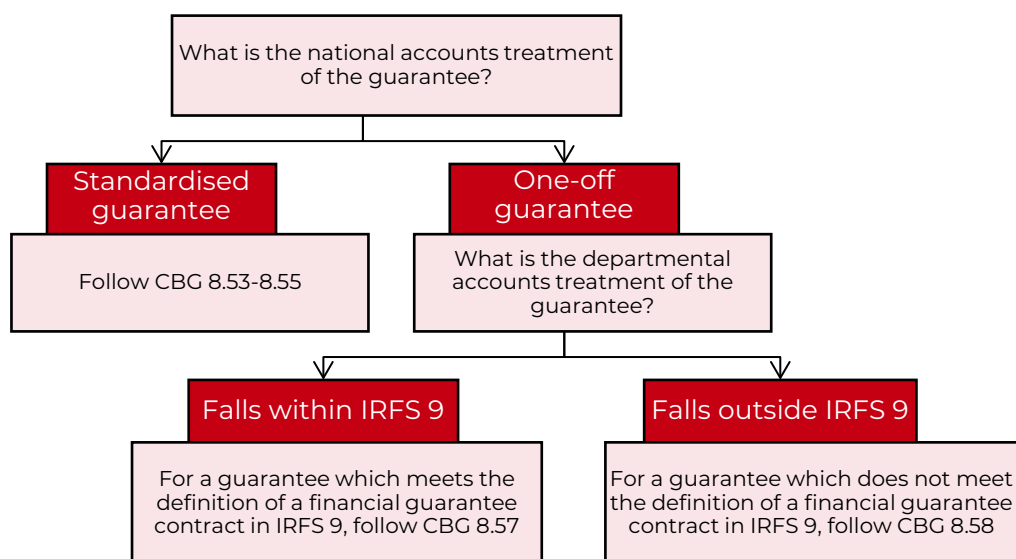

- an initial resource AME cost when the financial guarantee contract is provided; this will be recorded as the SoFP value of the contract
- a benefit to resource AME when any guarantee fees are recognised
- resource AME impacts where remeasurement of the financial guarantee contract goes through the SoCNE (including any remeasurements for ECLs)
- a benefit to resource AME when the guarantee is derecognised
- capital DEL cost for payments associated with the calling of the guarantee

8.60 Again, one-off guarantees that do not meet the definition of financial guarantee contracts in IFRS 9 are outside of budgets until they are called. Any payments associated with calls on these guarantees should score as a hit to capital DEL. This reflects their treatment in national accounts.

8.61 Where a financial guarantee could be assessed as a contingent liability, departments will need to apply the same considerations as for other contingent liabilities. Further information is available in Chapter 3 and guidance is available in the form of the [Contingent Liability Approval Framework](#). Department should contact their Spending Teams in the first instance.

8.62 The following flowchart summarises the budgetary treatment for guarantees:

Diagram 8.A - Budgetary treatment of guarantees

Exchange rate movements

8.63 Departments may engage in transactions denominated in a foreign currency. Where there is a timing difference between the transaction being recorded in accounts and the cash being paid, any movements in the exchange rate of the foreign currency will affect the value of the financial asset or financial liability.

8.64 Departments should record movements in exchange rate as follows:

- at the point the income/expenditure is recognised in accounts, departments should record the impact in AME
- when exchange rates fluctuate the revaluations of the financial asset or financial liability should be recorded as income/cost in AME with the same timing and value as shown in accounts
- when the cash is paid there is no impact in the SoCNE, but the cumulative AME transactions should be switched to the DEL budget

8.65 Departments have the option to hedge against exchange rate risks to protect their budgets against adverse movements. Guidance on recording hedging is included below.

Exchange rate hedging

8.66 Where departments carry out transactions in foreign currencies, their expenditure or income will be subject to the risk of

exchange rates moving unfavourably. Departments have the option of hedging against this risk to gain certainty on outcomes and mitigate against the risk of unfavourable movements in the exchange rate. [Managing Public Money](#) contains more detail on the appropriateness of hedging.

- 8.67 National accounts treats a forward contract used in a hedge in the same way as any other financial instrument. So any revaluations over the life of the contract would score to the revaluation account; and at maturity of the contract all flows are recorded as financial transactions.
- 8.68 In order to maintain hedging as a useable option in budgets, the budgeting does not follow the national accounts treatment in this case. Instead the benefits/costs of a hedge are realised when the department incurs the associated expenditure or receives the income.
- 8.69 The following items must be recorded in budgets for exchange rate hedges that qualify for hedge accounting under IFRS 9:
- capital DEL
 - a) cost of purchasing the initial forward contract (usually this will be zero)
 - b) any capital expenditure funded through the forward contract. This should be valued at the daily spot rate at the point of incurring the expenditure
 - c) the difference between the value of b) and the value of the capital expenditure at the forward contract rate
 - resource DEL
 - d) any current expenditure funded through the forward contract. This should be valued at the daily spot rate at the point of incurring the expenditure
 - e) the difference between the value of d and the value of the current expenditure at the forward contract rate
 - resource AME
 - f) revaluations of the contract whilst held by the department (for fair-value hedges); and transfers from the hedging reserve to the SoCNE on maturity (for cash-flow hedges). This net resource AME movement of a hedging instrument is moved out of resource AME and to RDEL and/or CDEL at maturity (depending on the resource or capital nature of the expenditure the cash is used for).
- 8.70 This recording is necessary to capture the correct treatment in both budgets and national accounts. A basic worked example of the recording of an exchange rate hedge is available in Appendix 1.

- 8.71 When hedging against a specific cost or income stream, departments may find that the timing of the budgeting impacts for exchange rate moves are different to the timing of the hedging impacts. Where departments find this creates pressure in their budgets, they should discuss the correct treatment with Treasury.

Appendix 1 to Chapter 8: Example exchange rate fair value hedge

Table 8.B: Example exchange rate fair value hedge

Date	Transaction	Exchange rate: £1 equivalent	Budgeting Impact (£000's)		
			RDEL	RAME	CDEL
1 April	Enter into contract to buy \$200,000 on 1 January at \$2 = £1	\$2			0
1 July	Exchange rate changes	\$1.50		-33.3	
1 October	Exchange rate changes	\$1.75			
1 January	Forward contract matures	\$1.75	-3.6		-10.7
	Spend \$150,000 on capital procurement				85.7
	Spend \$50,000 on current procurement		28.6		
	Totals		25	0	75

Note: the £33,300 credit to AME represents the gain on the forward contract from the first movement in the exchange rate. The subsequent £19,000 charge represents the loss on the subsequent exchange rate move. The accumulated net gain/loss is reversed from RAME at maturity of the contract, and scored to RDEL and/or CDEL (depending on the resource or capital nature of the expenditure the cash is used for). In the example, the gain on the contract is £14,300 of which £3,600 has been used in RDEL and £10,700 in CDEL, matching the split of the expenditure which the forward contract was bought to cover.

Appendix 2 to Chapter 8: Student loans guidance

Impairments

- 8.72 Because of the soft terms on which student loans are offered, the departments and devolved governments who issue student loans must calculate the impairment resulting from the cost at which the loans are delivered.
- 8.73 **Subsidy impairment** – Student loans are offered at a loan rate lower than the government’s cost of capital, as such over the lifetime of the loans there is an effective subsidy. The main student loans impairment is to account for this subsidy and will be valued as the difference between the expected income from the loans and the costs of delivering them at the Government’s cost of capital (HM Treasury’s financial instrument rate).
- 8.74 **Impairment relating to policy write offs** – The second impairment is to account for “policy” write offs. When loans are issued, it is the policy of the department that these will be written-off in certain circumstances (for example death or disability of the debt owner, or age of the debt). These amounts are recognised at the point the loan is made. Where these debts are deemed to be policy write offs, they will be recorded as capital transfers in the National Accounts at the time the loan is formally written-off; there is however no transaction in Departmental Accounts or budgets.
- 8.75 The arrangements described in this chapter for student loans are only applicable to loans owned by government and do not apply to loans which have been sold (such as the 1998-99 student loan book and ICR loans sold in 2017 and 2018).
- 8.76 In August 2013, loans were introduced in further education for learners aged 24 and above, studying courses at level three and above. The following guidance applies to Further Education student loans, Higher Education student loans currently subject to a sale and Higher Education student loans not subject to a sale. The following budgeting guidance will apply equally to England and, where appropriate, the Devolved governments.
- 8.77 The Treasury will set a target impairment for loans at the start of each Spending Review period.
- 8.78 **In year one, when loans are issued:**
1. Cash value of the loans issued are a charge on capital AME
 2. When loans are issued, any portion of the impairment arising from changes made to the discount rate since the target was set will be treated as a classification change in budgets and ringfenced within RAME.

3. The remaining impairments up to the target are charged to RDEL. The budget for this spending is ring-fenced within RDEL, which may not be reprioritised to other RDEL or CDEL spending, although transfers across from non-ringfenced RDEL are allowable without Treasury agreement.
4. Any impairments in excess of the target (the additional impairment) will be charged to RAME. To note – this will then be switched to non-ringfenced RDEL over a maximum of 30 years beginning from year two (the year after the impairment). See 'in year two and subsequent years' section below.

8.79 In year one, and subsequent years, budgets will record the following impacts:

5. The interest receivable from the loans scores as a benefit to Resource AME. This is irrespective of the fact that no cash may have been received
6. The interest receivable will be capitalised and a cost to Capital AME. This is equal and opposite to (5), and reflects the fact that capitalising interest is effectively new lending
7. The unwinding of the discount scores as a benefit to Resource AME. The discount is created and unwound at the Government's long-term cost of borrowing (HM Treasury's financial instrument rate).
8. Where policy changes are made which increase impairments, impairments arising from the change are to be scored as non-ringfenced RDEL in the year(s) that they occur.

8.80 In year two and subsequent years:

9. Repayments of principal, or of capitalised interest, are treated as negative Capital AME
10. Where additional impairments had arisen upon loan issue in year one, if employing the maximum 30 year period, one thirtieth of the total additional impairment will be removed from RAME budgets annually and charged to non-ringfenced RDEL budgets (with no overall impact on TME), beginning from year two (the year after impairment). This will span thirty years commencing in year two.
11. Should any revaluations of existing loans occur, the following applies:
 - a. **For revaluations that occur because the original values were based on forecasts that have turned out to be incorrect, or because of updates made to the student loans model –** Revaluations up to the target impairment level are charged to ringfenced RDEL. Revaluations in excess of the target impairment level will be charged to RAME, and switched to non-ringfenced RDEL over a maximum of thirty years commencing in

year two (the year after impairment). When using the maximum period of thirty years, one-thirtieth of the additional impairment will be switched from RAME to non-ringfenced RDEL each year for 30 years commencing in year two. The net effect of these entries in RDEL and RAME each year will equal the annual impairment charge due to these forecast/model changes.

- b. **For revaluations that occur because of a change in discount rate since the target was set** - These will be treated as a classification change within budgets and ring-fenced within RAME.
- c. **For revaluations that occur for any other reason, including where policy changes are made which increase impairments** - These will be scored to non-ringfenced RDEL in the year(s) that they occur.

Example of additional impairments arising under scenario a)

- 8.81 HM Treasury have set a figure of 28% as the target level of impairment for loans. The impairment calculated in the year is above the target set by HM Treasury. The amount in excess of the target impairment level (the additional impairment) is £30million. The cause of the revaluation was due to the original values being based on forecasts which have turned out to be incorrect, and because of updates made to the student loans model. This sum (£30million) will be initially charged to the department's RAME budget in the first year, and then switched to non-ringfenced RDEL over a maximum of 30 years, commencing in year two (the year after the impairment).
- 8.82 In the first year, £30million will be charged to RAME. In the second year, £1million (1/30th) will be charged to non-ringfenced RDEL with the charge to RAME being reduced to £29million (effectively an AME/DEL switch). This treatment will continue until the full impairment has been charged to RDEL.

Table 8.C: Budgetary impact of additional impairment of £30 million beyond target

	Year 1	Year 2	Year 3	Year 4	Year 31
DEL	£0	£1 million	£1 million	£1 million	£1 million
Cumulative AME	£30 million	£29 million	£28 million	£27 million	£0

Table 8.D: Additional loans with possible impact on additional impairment charged

Year	Additional impairment beyond target incurred in year	Year 1 budget charges		Year 2 budget charges		Year 3 budget charges		Year 4 budget charges	
		DEL	AME	DEL	AME	DEL	AME	DEL	AME
Year 1	£30 million	£0	£30m	£1m	(£1m)	£1m	(£1m)	£1m	(£1m)
Year 2	£90 million			£0	£90m	£3m	(£3m)	£3m	(£3m)
Year 3	£150 million					£0	£150m	£5m	(£5m)
Total charged in year		£0	£30m	£1m	£89m	£4m	£146m	£8m	£(9)m
<p>Assuming no further beyond target impairments were incurred past Year 3, the process would continue until all impairments have been charged in full to non-ringfenced RDEL (Year 33)</p>									

Arm's Length Bodies

Introduction

9.1 This chapter applies to the budgeting of all bodies in the central government sector (as defined by the Office for National Statistics) other than government departments (including executive agencies), and bodies referred to in the following two paragraphs. An ALB could therefore be:

- an executive or advisory NDPB
- other advisory bodies
- a tribunal
- a commission
- expert committees
- an inspectorate
- an office holder etc

9.2 The term ALB refers to most non-government departments regardless of whether or not they have been classified by the Cabinet Office. This chapter does not apply to **public corporations**. Most **trading funds** are public corporations, but some may be central government bodies. This chapter applies to any trading fund that is a central government body.

Overview

9.3 ALBs' resource consumption and capital expenditure score in the department's resource and capital DEL in the same way as the department's own spending. Departments should normally use the output from the ALB's own accounts as the basis for working out the ALB's impact on budgets.

9.4 Grants and grant-in-aid paid by the department and any other financing facilities made available by the department are outside the department's budget. This treatment will align with the accounting which eliminates intra-group transactions between a department and its ALBs. The financing of ALBs through grant-in-aid is excluded from Estimates and budgets, but other intra-group transactions, such as the purchase of shared services by an ALB from the parent department, will need to be removed by the department and not recorded on the OSCAR database. Full guidance on the consolidation of intra-group transactions can be found in the [Supply Estimates guidance manual](#).

- 9.5 ALBs are set administration budgets; these should be scored in the same way as the department's own administration budgets. See Chapter 5 for more detail on administration budgets.

Subsidiaries

- 9.6 Where an ALB has a subsidiary that is itself a body in the central government sector that subsidiary will be consolidated with the ALB for budgeting purposes.
- 9.7 Where an ALB has a subsidiary that is a public corporation, that subsidiary will score in budgets like public corporations accountable directly to Ministers and the public corporation will impact on the parent department's overall DEL. Departments may place the DEL impact in the DEL allocated to the ALB.
- 9.8 Where an ALB enters into a joint venture, departments need to be clear whether the joint venture is classified to the public or private sector. If to the public sector, departments need to be clear where the budgeting impact falls.

Planning and monitoring

- 9.9 Departments are expected to set their ALBs firm resource and capital DEL budgets for the year ahead. Departments are generally advised to set firm or indicative budgets for forward years to help ALBs plan.
- 9.10 Departments should monitor in-year both:
- the ALB's drawdown of cash grant-in-aid
 - the ALB's expenditure in budgets

ALB income and receipts

- 9.11 The ALB's impact on the department's resource budget DEL is made up of its gross resource consumption less its retained DEL income. Similarly, the capital budget DEL is net only of retained DEL income. Whether ALB income can be retained in DEL follows the same rules as for departmental income (see separate chapters). So, for example, charges for the sales of goods and services can typically be retained in DEL and the receipt of taxes are typically not. Expenditure financed in cash terms by non-budget income scores gross in budgets.
- 9.12 Where an ALB obtains income that cannot be retained in DEL, the department may arrange for the ALB to pass the cash to the department for return to the Consolidated Fund. Alternatively, the cash may be retained by the ALB and offset the ALB's need for cash grant-in-aid. Either way, income that is not retained in DEL does not convey spending authority.
- 9.13 Where a levy-funded body over recovers income due to an incorrectly set levy, any excess income should be classified as a payable as it should be returned to the levy payers in due course.

Such excess does not therefore form part of the budgetary income of the body.

Borrowing and use of reserves

- 9.14 Normally, ALBs are not allowed to borrow. Where exceptionally they are allowed to borrow the spending financed by borrowing scores gross in budgets. This applies whatever the source of borrowing (for example department or market). The cash raised by borrowing does not score as income in DEL.
- 9.15 Use of reserves – i.e. the run-down of savings – has the same effect overall as borrowing. Therefore expenditure financed by the use of reserves counts as spending in budgets.

Corporation Tax

- 9.16 Exceptionally, some ALBs pay Corporation Tax. Such payments are resource AME, because payments within central government of taxes on income are consolidated out in national accounts. As set out in [Managing Public Money](#), ALBs should not devote resources to tax minimisation or tax planning.

Depreciation

- 9.17 Depreciation charges may only be recorded in AME for grant funded assets where the grant originated from the sponsoring department.

Co-funded ALBs

- 9.18 This section applies to all grants from a central government body to an ALB, regardless of whether they are grant-in-aid or capital. It does not apply to bodies purchasing services from ALBs.
- 9.19 Where an ALB receives grant from more than one department then the following budgeting treatment will apply.
- 9.20 Department A makes a voted cash payment to department B. It is for the departments concerned to decide how the ALBs costs should be apportioned, and therefore how large department A's payment should be. Department B is the sponsor of the ALB and pays it a single grant-in-aid, including an element in respect of the payment made by department A. Department B takes responsibility for the budgetary impact of the ALBs expenditure. The ALB's expenditure should score in department B's budgets (resource or capital and DEL or AME as appropriate). Department B's grant-in-aid to the ALB scores outside the budget in the normal way. Department A's payment to department B scores in department A's DEL as a cost, and in department B's DEL as a benefit – thereby sharing the budgetary impact.

9.21 In the numerical examples:

- department A contributes £100. There are no AME costs associated with these activities and
- the ALB's total spending in DEL from all sources is £950 and it needs cash of £850.

Table 9.A: Departmental budgets and co-funded ALBs

Department A's budget	Department B's budget		Department B's grant-in-aid to the ALB
	Departmental element	ALB element	
£100	-£100	£950	£850

9.22 This treatment will apply to all grants that move between central government budgeting boundaries. So, in the example above department A could just as easily be replaced by ALB A – the grant would still be required to go through department B.

Certain levy-funded bodies

9.23 The spending of a number of levy-funded bodies, defined against the criteria in Appendix 4 to Chapter 1, is in AME, rather than DEL.

NHS Trusts

9.24 All NHS Integrated Care Systems (ICS) and NHS Provider Trusts are central government bodies – this includes Foundation Trusts. ICSs are recorded in budgets in the same way as NDPBs, as set out earlier in this chapter. The budgetary treatment of NHS Provider Trusts (including Foundation Trusts) is set out below.

Resource budget

9.25 The departmental resource DEL and AME budgets score the majority of transactions in the same way as any ALB. The only items where the treatment of a transaction is different to the standard ALB model are:

- CCGs and DHSC's payments to NHS Provider Trusts are recorded as procurement in accounts but for national accounts and budgets they are classified as grants

- the element of procurement that covers Provider Trusts' depreciation charges scores in resource DEL. Unlike other depreciation charges, NHS Trust depreciation is not included in any ring-fence
- corporation tax paid by Provider Trusts scores as a cost in RDEL budgets

Capital budget

- 9.26 All capital transactions of Provider Trusts are treated in the same way as capital transactions of ALBs. Capital transactions between the Trust and the department score in the same way as transactions between an ALB and its sponsor department.
- 9.27 For further information on the treatment of PPP in budgets, please see Chapter 13.

Devolved governments

- 9.28 NHS Trusts in Wales and Northern Ireland score in budgets in the same way as ALBs. NHS Trusts no longer exist in Scotland, and funding is channelled through NHS and special health boards.

Support for Local Authorities

- 10.1 Departmental budgets include government support for local authorities. They do not include self-financed local authority spending.

Resource budget

- 10.2 The resource budget includes current grants to local authorities.
- 10.3 Departmental accounts do not distinguish between current and capital grants. Both go through the Statement of Comprehensive Net Expenditure (SoCNE). National accounts do distinguish between current and capital grants, and the budgeting treatment follows the national accounts distinction, with capital grants going through the capital budget. See Chapter 3 for descriptions of current and capital grants.

Capital budget

- 10.4 Capital budgets include:
- Supported Capital Expenditure (Capital)
 - Supported Capital Expenditure (Revenue)

Supported Capital Expenditure (Capital)

- 10.5 Supported Capital Expenditure (Capital) is the local government finance term for capital grants. See Chapter 3 for the distinction between capital grants, current grants and subsidies.

Supported Capital Expenditure (Revenue)

- 10.6 Supported Capital Expenditure (Revenue) (SCE(R)) is the local government finance term for the amount of borrowing which government is prepared to support. A stream of current support to cover local authority borrowing to this level is provided as non-ring-fenced revenue as part of the Local Government Finance Settlement. Ongoing revenue support for specific local government PPP projects that are on-balance-sheet for national accounts is also SCE(R).
- 10.7 Departmental budgets score the capital value of SCE(R). The current support is paid by MHCLG as part of the Revenue Support Grant.
- 10.8 For certain outturn years, departments score the capital values of the predecessor regime, credit approvals.

- 10.9 Self-financed borrowing by local authorities under the prudential borrowing regime that is not supported by central government does not score in departmental budgets.

Debt repayment grants

- 10.10 Grants to enable local authorities to repay debt principal score in capital AME budgets. Any payment of such a grant requires specific Treasury approval. Normally, approval of such a grant will be associated with offsetting budgetary adjustments.
- 10.11 Where a department gives a grant that covers both debt repayment and the payment of any associated debt interest premia by the local authority to the debt provider the two elements of the grant should be separated. The element that covers debt interest premia should score as a current grant in DEL budgets.
- 10.12 Where a local authority uses a debt repayment grant to repay debt and receives a discount on that debt because of that then:
- in the majority of cases the department will have paid a grant to the local authority that was less than the amount of debt principal. The whole of the grant would count as a debt repayment grant
 - if the department shares in the value of the discount in the form of a payment from the LA this income will be retained in capital AME

Arm's Length Body support to Local Authorities

- 10.13 ALBs' support to local authorities is treated in the same way as support for local authorities provided by departments.

Support to LA PPP projects including PPP arrangements

- 10.14 As part of the SR settlement departments are allocated a specific amount of resource DEL to fund the ongoing cost of local authority PPP projects.

Public Corporations accountable to Local Authorities

- 10.15 Transactions between local authorities and their public corporations are recorded as transactions between those two sectors. If a department provides grants to a local authority which it in turn uses to support its public corporations then the transaction at the departmental level should be recorded as a

transaction between central and local government, in resource or capital budgets as appropriate.

- 10.16 Similarly, where a department provides SCE(R), which is for ultimate use by a public corporation accountable to a local authority it will score in the department's budget in the usual way.

Capitalisation directions

- 10.17 MHCLG and the devolved governments have the power to issue directions to local authorities to capitalise certain expenditure. Such directions do not change the nature of the expenditure from current to capital. Rather, broadly, they allow local authorities to borrow or use capital receipts in order to finance current spending.
- 10.18 There may be arguments for allowing local authorities to spread the incidence of certain lumpy current expenditure payments such as large redundancy payments. However, capitalisation directions run contrary to Treasury's position to constrain public sector net borrowing.

New burdens on Local Authorities

- 10.19 If a department introduces a new policy that places new burdens on local authorities, they are required to conduct a new burdens assessment. This assessment will determine if there is a net additional cost to the sector. If so, the department is responsible for providing funding to local authorities for new burdens arising from its policy decisions. Where a department considers that it requires additional resources to do this, it is responsible for securing those resources. If a department introduces offsetting measures at the same time to reduce other burdens on local authorities, it will need to fund the net additional cost.
- 10.20 Departments should not consider general efficiency savings within a local authority to be an available source of funding for new burdens, nor should they assume that local authorities can absorb the cost of a new burden through reduced expenditure on existing functions. Departments should inform MHCLG (Local Government Finance directorate) at the earliest possible stage of any new policy affecting local authorities – see Annex D for contacts and Annex E for guidance.

Public Corporations

Definition of Public Corporations

- 11.1 Public Corporations (PCs) are defined for the national accounts by the Office for National Statistics (ONS). ONS publish a list of PCs in the [Public Sector Classification Guide](#). If a body is not listed in the Public Sector Classification Guide and you are in doubt as to whether it is a PC, or if you are considering setting up a body that might be a PC, you should contact the Treasury.
- 11.2 PCs are bodies that are controlled by government or another public corporation and that are market bodies (i.e. their income comes mainly from trading activities). Certain regulatory activities may count as trading.
- 11.3 PCs may take various legal forms, including statutory bodies and Companies Act companies. Not all statutory bodies or government-owned Companies Act companies are PCs; they may be ALBs for example.
- 11.4 Most **trading funds** are PCs. However, trading fund is a legal designation leading to a particular Estimates treatment. The ONS need to consider separately whether a particular trading fund meets the national accounts criteria for PC status. This chapter applies to trading funds that are PCs, with some special features – see below. Those trading funds that are not PCs are budgeted for as departments or ALBs as appropriate. Some **Public Private Partnerships** (PPPs) may be PCs - see the passage on PPPs below. If they are PCs they are budgeted for like other PCs.
- 11.5 Certain special arrangements apply to **self-financing Public Corporations** (SFPCs), which are set out below in this chapter. Like other AME spending, departments are responsible for monitoring this spend and taking steps to prevent undue increases. As part of this, departments are expected to obtain all information about PCs' planned spending (see paragraph 11.91)
- 11.6 This chapter applies to public corporations answerable to Ministers. UK subsidiaries of a public corporation are included within the budgeting controls of the parent **Public Corporation**. Departments should discuss with the Treasury the budgeting arrangements for non-resident subsidiaries of a public corporation. These budgeting rules also apply to public corporations that are a joint venture of one or more public corporations accountable to ministers. Different arrangements apply to public corporations answerable to local authorities (see chapter on support for local authorities).

The objectives of the budgeting system for Public Corporations

- 11.7 The **aims of the budgeting framework** with regards to public corporations are:
- to support the government's fiscal objectives
 - to provide sensible and transparent incentives to managers in public corporations and in departments. This implies both
 - ensuring that public corporations and their sponsoring departments face good incentives for the PC to generate the right return on capital
 - appropriate levels of freedom to exercise commercial judgement, within appropriate delegated authority arrangements that protect departments
- 11.8 In addition, the budgeting framework aims to reduce compliance costs for departments, by being based as far as is practicable on entries in departmental accounts and the PCs' accounts.
- 11.9 The government's **fiscal framework** applies to the whole of the public sector, that is general government (central and local government) and public corporations. In the fiscal framework:
- PCs' gross operating surplus is a benefit to the current balance. Payments of interest and dividends to the private sector and depreciation make the current balance worse
 - PCs' capital investment increases PSNI and net borrowing, and their liabilities contribute to net debt
- 11.10 Most internationally recognised debt and deficit measures apply to general government. They exclude the performance and spending of public corporations but include certain departments' transactions with public corporations. That helps to explain why we need accurate measures of government's dealings with public corporations even though domestically we measure performance at the public sector level. It is for departments to manage their relationship with their public corporations in the way that best meets their needs. Departments should take advice from **UK Government Investments (UKGI)** where appropriate. UKGI is a Treasury-owned company that operates both in an executive function for departments in relation to some PCs and as advisors alongside departmental shareholder team for others. The Treasury issues guidance on public corporations policy in general and on trading funds policy.
- 11.11 Departments are expected to set PCs clear objectives and challenging targets covering Return on Capital Employed, dividend levels, efficiency, and quality of goods and services. The corporate plans of PCs should be subject to agreement by the

department. That is particularly important where PCs have been underperforming against profits targets; face risks to performance, or might generate substantial levels of excess cash.

Treatment of PCs in budgets

11.12 Public corporations are recorded in budgets on an “external finance basis”. This means that the transactions of the PC are, in most cases, outside of the department’s budget. The budget of the sponsoring department will show all transactions between the department and the PC. Additionally, should the PC undertake any borrowing the financing raised will be recorded in the budget of the sponsoring department.

Table 11.A: Main elements of scoring PCs on an external finance basis

	Resource budget	Capital budget
External Finance basis	<p>Subsidies paid to Public Corporations</p> <p>Less interest and dividends received from Public Corporations</p>	<p>Investment grants paid to Public Corporations</p> <p>Net lending to Public Corporations (voted and NLF)</p> <p>Public Corporations’ market and overseas borrowing (PCMOB) (including on balance sheet property lease arrangements and on balance sheet PPP)</p> <p>Less withdrawals from Public Corporations</p>

11.13 Most PCs are recorded on a consistent external finance basis as described above. However, a selected few bodies have been classified as self-financing public corporations (SFPCs) and these have a different treatment in budgets which places more transactions in AME. The detailed budgetary requirements for SFPCs are set out later in this chapter.

External finance basis

11.14 This section sets out the resource budget and capital budget scoring of public corporations on an external finance basis.

Resource budget

11.15 For a public corporation, the departmental resource DEL scores:

- subsidies paid to the PC
- *minus* interest and dividend income received by departments from PCs (including interest on NLF loans) plus interest payable to the NLF
- *plus* a charge for the impairment of any investment in PCs

Interest

11.16 When debts are repaid early,

- interest premia received from the PC count as current income in the departmental accounts alongside other interest
- interest rate discounts paid by the department to the PC count as current payments in resource DEL alongside other payments of interest a department may make

National Loans Fund Interest

11.17 Where a department's accounts show interest payable from PCs in respect of NLF loans and the subsequent payment of interest to the NLF then both should be reflected in the resource budget

Dividends

11.18 A dividend policy should be agreed between the PC and its department as shareholder. The department may choose not to recover the full rate of return (as agreed with Treasury) as a dividend (in order to allow for reinvestment of its profits by the PC). But, the eventual cost of this under recovery should be borne by the department. As such budgets should be set at SRs on the expectation that the full agreed rate of return will be achieved.

11.19 The timing of dividend recognition in budgets generally follows departmental accounts. However, not all receipts treated as dividends in departmental accounts count as dividends for budgeting. Please see the section on equity withdrawals below.

Capital budget

11.20 The capital budget scores:

- capital grants paid by the department to the PC

- loans to the PC (includes voted loans, National Loans Fund loans and Public Works Loan Board loans), net of repayments
 - Public Corporations Market and Overseas Borrowing net of repayments (PCMOB)
 - injections of equity into PCs net of repayments of equity by PCs. Equity includes Companies Act shares and Public Dividend Capital
 - *minus* equity withdrawals
- 11.21 Loans score in the capital budget whatever their purpose, that is whether they have been taken out to finance working capital or fixed assets investment.
- 11.22 Note that the capital budget does not score capital expenditure by the PC, only the external support for capital expenditure. Subject to their agreeing their business plans with their department as shareholder, PCs are therefore free to invest insofar as they are able to finance their investment from asset sales, income that covers depreciation and a level of profits that exceeds what is needed to pay interest and dividends as agreed with the department.

Capital grants

- 11.23 Capital grants are unrequited transfer payments that are intended to finance investment by the PC. Investment includes the acquisition of any fixed asset (land, buildings, vehicles, machinery, etc.) and any financial asset (lending, company securities, etc.). Grants to finance stock-building should also be treated as capital grants. Grants to refinance pension funds are capital grants.
- 11.24 Capital grants should be paid whenever the NLF has made a loan to a PC that the PC would otherwise be unable to repay – this demonstrates transparency to Parliament. For voted loans, follow the procedures in [Managing Public Money](#).
- 11.25 Capital grants should also be paid where a department wishes a PC not to be burdened by a loan that it could not repay, perhaps as part of a restructuring.
- 11.26 Grants from the department to make good a shortfall in a real pension fund score as capital grants in budgets and may need special recording. Departments contemplating such a grant should contact the Treasury.

Public Corporations Market and Overseas Borrowing (including property leases and on balance sheet PPP arrangements)

- 11.27 Expenditure financed by PCMOB scores in the government's fiscal framework like any other expenditure. Therefore, PCMOB

should be controlled. Where PCs wish to borrow on the market or overseas, departments should discuss proposals (other than for overdrafts) with HM Treasury. Approval for borrowing from the private sector will be permitted only in exceptional cases.

- 11.28 PCs may normally only borrow from the market or overseas where at least one of the following applies:
- a facility is not provided by the public sector, for example overdrafts, and that facility is either necessary to the normal conduct of business or offers better value for money than other forms of finance
 - it would be cheaper for the PC to borrow on the market than for the government to borrow – this will almost never be the case, although some bodies may offer cheap loans. Where a PC or department believes that a body's borrowing would be cheaper than the Exchequer's cost of borrowing it should first verify the assessment with the Treasury
 - it would be better value for money for the PC to borrow on the market than to borrow from government. This might apply to some on-balance sheet PPP procurement, for example
 - there is no power for government to lend to the PC
- 11.29 PCMOB scores as a cost in capital budgets of the sponsor department.
- 11.30 PCMOB does not include movements in PCs' bank deposits or other liquid financial securities.
- 11.31 Where a PC has property leases taken out from the private sector, there is a CDEL hit to PCMOB for lease liabilities and a CDEL benefit for lease principal repayments, where the lease was entered into on or after 1 April 2022 (or the date of IFRS 16 adoption in departmental accounts, if earlier). This reflects their scoring as borrowing in national accounts. This is not applicable for non-property leases which are not on balance sheet in national accounts.
- 11.32 See Chapter 13 for the PCMOB treatment of on balance sheet PPP arrangements.
- 11.33 Further details of the Treasury's approach to lending to PCs, particularly ensuring an appropriate lending rate is used, can be found on the [HMT Dear Accounting Officer \(DAO\) letters](#) site.

Setting the rate of return on Capital Employed

- 11.34 Public corporations, by definition, are market bodies majority financed by sales of goods or services. Where comparable bodies operate in the private sector, they must achieve a return on investment appropriate to the risk of operating in that market. As

such the sponsor department should require its PCs to generate a certain rate of return on the capital employed in producing services.

- 11.35 Departments must agree with Treasury on what is an appropriate rate of return for each of their PCs. This anticipated level of return should be considered alongside other sources of income at Spending Reviews (SRs) - see Chapter 4 for details on income in the resource budget.
- 11.36 In exceptional cases a department may choose to subsidise a PC for policy reasons and collect a level of income lower than the level agreed with Treasury. In these cases, SR calculations should always use the agreed level of income rather than the subsidised level. Departments should be careful to comply with trading fund guidance on disclosure to Parliament where appropriate.

Weighted Average Cost of Capital

- 11.37 Departments should begin by establishing an appropriate post-tax Weighted Average Cost of Capital (WACC) for the PC. To work out the WACC, departments should consider the whole of the Capital Employed in the PC, not just the department's share.
- 11.38 Looked at from funding, Capital Employed comprises total equity, reserves, debt including all interest-bearing liabilities and un-funded or under-funded pension liabilities. This may not always match the figures reported on a department's balance sheet.

Table 11.A: Capital employed

	Spontaneous finance	Capital employed
Debtors, stocks & prepayments	Trade creditors	Short-term debt
Fixed assets		Long-term debt
		Convertibles
		Preferred stock
		Equity and retained earnings

- 11.39 The appropriate WACC should be calculated using a cost of equity and cost of debt commensurate with the returns equity and debt investors would expect to receive from investing in a comparable private sector business with the same level of risk.
- 11.40 For some regulated businesses it may be appropriate to use a Regulatory Asset Base or Regulatory Capital Value (RCV) in respect of all or part of the PC as the Capital Base upon which a cost of capital charge is levied. If you think that would be the appropriate Capital Base you should talk to HM Treasury.
- 11.41 UKGI will be able to provide support and expert advice to departments in determining the appropriate cost of equity or debt.

Setting a target rate of return

- 11.42 A PC should be set a target return to earn at least its WACC multiplied by the overall Capital Employed. You should use the average Capital Employed over the year.
- 11.43 In the case of PCs performing essentially government-type functions, 3.5% real will normally be appropriate. A PC competing in the market should typically be expected to return a higher rate to reflect the prevailing market rate.
- 11.44 Where a PC has a monopoly, departments should ensure that the rate of return set is not exploitative.
- 11.45 The right rate for the PC should be agreed with the Treasury when a new PC is set up and as part of the SR process.

- 11.46 Once the total Capital Employed and target rate of return has been worked out, the department's expected receipts are calculated by deducting those elements on which the public corporation owes a return to another funder.
- 11.47 In principle, the calculation is:
- total rate of return
 - *less* returns owed on loans from the private sector, including finance leases and other interest bearing liabilities
 - *less* returns owed on the value of private sector equity stakes in the business
 - *less* returns owed on unfunded or under-funded pension liabilities (which are a sort of debt owed to the household sector). Typically, we would expect these returns to be equal to either ASLC contributions or the return on corporate bonds
 - *less* the amount of interest that the PC has to pay on any National Loans Fund (NLF) loan (since the departmental asset in respect of a NLF loan is matched by a liability to the NLF)

Regulated businesses

- 11.48 Budgets are set net of other departmental receipts. As a result, departmental allocations will take the expected receipts from PCs into account. For example, if a department had agreed a total spend of £500 million and it had a PC with expected interest and dividend payments to the department of £30million, the net Resource budget would be equal to £470 million.

Tax planning

- 11.49 The government obtains a return from public corporations partly through the normal tax on corporations and partly as owner. PC's may undertake normal tax planning but should not incur wasteful expenditure on tax mitigation.
- 11.50 The passage on WACC above assumed that public corporations have not operated in a way designed to reduce their tax bill. Where public corporations have undertaken tax mitigation – in particular where public corporations have high levels of interest-bearing debt – departments should consult the Treasury on how to work out the WACC so as to counteract the effects of tax mitigation.
- 11.51 [Managing Public Money](#) (4.2.6 and Annex 4.4) gives more guidance to departments and ALBs on tax planning.

Trading funds

- 11.52 Trading funds that are public corporations are normally budgeted for exactly like other public corporations.

Trading funds that are departments in their own right

11.53 The budgeting for trading funds that are treated as departments is exactly the same as all other PCs. Where the PC is engaging in borrowing from the NLF or Public Corporations Market and Overseas Borrowing (PCMOB) then the amount borrowed must score in the CDEL budget of a parent department.

Subsidies

11.54 Subsidies are unrequited current payments to trading bodies:

- “Unrequited” payments should be distinguished from payments for goods and services, where the department obtains something direct in return for the payment. That the department obtains a general policy benefit from a subsidy does not stop it being unrequited
- Departmental accounts do not distinguish between subsidies and capital grants. Departments need to do so for budgets following national accounts principles. The distinction is needed because subsidy and expenditure financed by capital grants score differently in the fiscal framework: in effect, subsidies affect the current balance, while capital grants do not. Capital grants are unrequited transfer payments that are intended to finance investment by the PC (see below)

Underperformance

11.55 Departments have to obtain a return from their PCs that covers the rate of return agreed with Treasury. The return comes in the form of interest and dividend income from the PC. In order to be able to pay the necessary amount of interest and dividends, the PC needs to achieve a high enough level of earnings, and the department should ensure that the PC is set sufficiently challenging targets and that they are met. A dividend policy should then be agreed between the PC and its department as shareholder.

11.56 If the PC’s level of earnings do not allow it to pay the right level of interest and dividends, the department should pay a subsidy to the PC so that it can make those payments. The reason for this requirement is to make it transparent to Parliament and public that a PC is under-performing and needs a subsidy to be paid. Where a department has no power to pay a subsidy or where such a subsidy would represent state aid, the overall effect on budgets is still the same, since it is the initial shortfall in PC performance against the cost of capital that impacts on the budget. However, in these cases the department should still disclose the effective subsidy in a note to the departmental accounts.

- 11.57 No subsidy need be paid if the Treasury and the department agree that the PC's underperformance was due to normal volatility.
- 11.58 It is important to make clear to PCs that only making the expected return after receiving a general subsidy is not good enough. The payment of a subsidy needs to be accompanied by the PC's development of a recovery plan to get performance back on track.

Social policies

- 11.59 Where a department wishes a PC to perform a social policy function then it should pay for that explicitly out of its budget rather than seeking to recover the costs by accepting PC underperformance or by overcharging PC customers. A department has two choices:
- it may pay a subsidy to the PC
 - it may set up an arrangement whereby the PC as a handling agent. Here the department would pay the PC for its services in handling a transaction, while the transaction itself would score in the budgets and departmental accounts of the department acting as principal. This route should be used when PCs are involved in the payment of grants to the private sector or local authorities, since grant-giving is not a market activity appropriate to PCs
- 11.60 It may be appropriate for subsidies to be paid by a department other than the sponsoring department where it is the other department that wants the social policy function to be carried out.
- 11.61 Where a department wishes a PC to perform a social policy function and does not have legal power to pay a subsidy the department should contact HM Treasury to establish how best to obtain transparency.
- 11.62 Departments should ensure that payment of subsidies is compatible with EU state aid legislation.

Early debt redemption

- 11.63 Where a department supports a PC to repay debt early and the PC has to pay an interest rate premium, the element of grant that covers the premium scores as a subsidy.
- 11.64 That is the case even if the department makes a single grant payment in support of both principal repayment and early redemption premia: the two elements must be divided into a subsidy and a capital grant.
- 11.65 Where the department is supporting only a part of the PC's total payment covering debt repayment and premium, the grant

should be divided into subsidy and capital grant in the same proportions as the total payment by the PC is divided into premium and debt principal repayment.

Excess cash balances and equity withdrawals

- 11.66 Departments should ensure that PCs do not build up excessive cash balances. Cash balances are excessive if they are more than the amount needed to fund expenditure in the next three years as set out in the corporate plan that has been agreed with the department. Excess cash balances should be taken out of PCs so that the spending power that they represent is prioritised across the departmental group as a whole. Excess cash balances are normally taken out by means of equity withdrawals.
- 11.67 Equity withdrawals benefit capital budgets. So a department may in effect borrow spending power from its PC, extracting cash in one year (obtaining a capital DEL benefit) and making spending power available to the PC through capital DEL in a later year.
- 11.68 Equity withdrawals are exceptional payments from accumulated reserves or cash balances. They should be distinguished from dividends in that dividends should be paid out of the profits of the current year or the two previous years.
- 11.69 Equity withdrawals do not need to result in an actual repayment of shares or PDC. That is, they may simply be a cash transaction.
- 11.70 In departmental accounts, equity withdrawal of this type will go through the SoCNE as special dividends, in the same way as ordinary dividends. There is no impact on the department's Statement of Financial Position other than the increase in cash. However, because of the differing treatment in national accounts and budgets, departments need to distinguish equity withdrawals from dividends according to the principles described above.
- 11.71 In the national accounts for general government, income from dividends scores as current income, while income from equity withdrawals scores 'below the line' as a financial transaction. They thus have a different impact on certain of the fiscal measures.
- 11.72 Where equity withdrawals do result in an actual repayment of shares or PDC then there is no difference in treatment between departmental accounts and budgets. Where a profit is taken to the SoCNE the department should discuss proposals with their Treasury spending team.

PPP and similar arrangements

- 11.73 For the treatment of PPP in budgets, please see Chapter 13 on PPP.

Treatment of Self-Financing Public Corporations

11.74 Certain PCs have been designated by the Treasury as Self-Financing Public Corporations and have special budgeting treatment. The transactions that score in budgets, and treatment of resource/capital, are consistent with all other PCs; but SFPCs place different transactions in AME or DEL.

Rationale and criteria for SFPCs

11.75 The main rationale underpinning SFPCs is that the SR is used to prioritise spending financed by taxes. Where public corporations expect to recover expenditure from fee-payers in a competitive open market, that expenditure may be excluded from the SR prioritisation process.

11.76 However, SFPCs are still public bodies, their spending is still public spending, their activities impact on the fiscal framework, and their liabilities contribute to net debt. They therefore need to be managed and monitored.

11.77 It is for the Chief Secretary to the Treasury to designate an SFPC where it is appropriate to the Treasury's conduct of the SR. The criteria that guide the Chief Secretary include:

- the PC must have traded profitably for a number of years, not requiring subsidies, and must be able to demonstrate that this state of affairs will continue into the future
- the PC must be selling goods and services into an open market. It should not be selling regulatory services
- the PC must either
 - be selling primarily to customers outside general government
 - be a publicly announced candidate for privatisation or a PPP in the private sector

List of SFPCs

11.78 The following PCs have been designated as SFPCs: British International Investment, Channel 4, the Crown Estate, and the Royal Mint.

Control of SFPCs

11.79 Departments control Self-Financing Public Corporations in the same way as other PCs. In the SR, departments agree a forward plan in respect of the SFPCs alongside but not in the normal SR process. At this point, the status of the SFPC as self-financing should also be reviewed as to whether it still fulfils the classification criteria. As with other spending in AME,

performance against the plan is monitored formally by departments and the Treasury in the run-up to each Budget report.

- 11.80 The plan will include the appropriate rate of return and the arrangements for underperformance, see below.

Scoring in budgets

- 11.81 Self-Financing Public Corporations face the same budgeting rules and are scored in the same way as set out above, except that certain transactions score in AME rather than DEL. So, for SFPCs budgeted for on the external finance basis:

- resource AME scores
 - interest and dividends paid by the SFPC to the department (and loan arrangement fees, where payable and where not excessive)
- resource DEL scores
 - any subsidy paid by the department
 - underperformance charges
- capital AME scores
 - loans to SFPCs (net)
 - equity injections in SFPCs (net)
 - purchase or sale of the shares of SFPCs
 - minus capital repayments made by SFPCs
 - minus equity withdrawals
 - plus PCMOB (net)
- capital DEL scores
 - any capital grants paid to SFPCs

- 11.82 The subsidy formally paid to the Crown Estate to cover certain administration costs scores in resource AME. Dividend income received from the Crown Estate is outside budgets.

Underperformance by SFPCs

- 11.83 SFPCs should cover the agreed rate of return through their payments of interest and dividends.
- 11.84 When returns from the SFPC fall short of the department's rate of return, an underperformance charge equal to the short-fall will be charged to departmental resource DEL. This underperformance charge reflects the budgeting guidelines for PCs and is intended to incentivise departments to manage

SFPCs appropriately as well as provide visibility of underperformance to Parliament and the wider public.

- 11.85 In other words, the underperformance charge will be equal to:
- the expected return, as calculated by the rate of return agreed between departments and Treasury
 - *plus* retained loss after interest and dividend payments, if applicable
 - *less* any interest and dividends that the SFPC has paid to the department
- 11.86 During the SR period, departments may be able to negotiate a cap on their exposure to underperformance charges. On an exceptional basis (for example if the SFPC is undergoing a restructuring programme), it may also be possible to use a recovery target rate of return for calculation of the underperformance charge. However, when an SFPC underperforms on an ongoing basis, reclassification as a PC should be considered as part of the SR process.

Public private partnerships (PPPs)

- 11.87 PPPs that are entities in their own right may be classified by the ONS to the public or private sectors. In some PPPs, shares may be sold and the PC remains in the public sector. In other cases (for example National Air Traffic Service (NATS)), shares may be sold and the PC may move into the private sector. The ONS takes into account a range of factors when considering classification and not simply the percentage of government shareholding.
- 11.88 In the case of SFPCs, PCMOB may only be undertaken in line with the agreed forward plan. The plan will set out what should be done with the sum realised by a share sale. In default of other arrangements, the sum should be taken out of the SFPC by way of an equity withdrawal in order to offset the PCMOB.

Privatisation

- 11.89 Sale of shares on the privatisation of a public corporation is the disposal of a financial asset by the department. The income scores as a benefit to the capital AME budget.

Supplementary information on Public Corporations

- 11.90 Departments are asked to provide certain financial information about PCs in addition to the budget data.

Capital expenditure

- 11.91 Even though for most PCs capital expenditure does not score in budgets, departments are responsible for monitoring this expenditure and taking steps to prevent undue increases.

Departments are to obtain information about all PCs' outturn and planned capital expenditure and to pass it on to the Treasury via OSCAR using a non-budget identifier.

- 11.92 This information needs to be accurate and kept up to date because:
- it is information that departments should use in any event as part of their monitoring of PCs
 - the information feeds into the national accounts measures of spending and borrowing, including the fiscal framework
 - the information is published in PESA separately for each PC and is used in the functional and regional analyses of public sector spending, including tables that appear in Departmental Reports
- 11.93 The information that is required is:
- gross capital expenditure, including land, buildings, vehicles and machinery
 - *less* (actual) sales proceed
 - additions to inventories (net)

Gross Operating Surplus

- 11.94 In addition, for the larger public corporations, the Treasury seeks special non-OSCAR returns of outturn and plan gross operating surplus (broadly, profit before depreciation).
- 11.95 This information is useful to the Treasury as gross operating surplus is an item on the revenue side of the Surplus on the current budget, used to measure achievement of the temporary operating rule.

Joint Ventures

- 11.96 Where the public sector engages in a joint venture with a private sector partner the new entity will be subject to the same classification considerations as any other new body (see Chapter 1 for details). Annex E contains a link to guidance on the public sector's involvement in joint ventures.
- 11.97 Where it the public sector has engaged in a joint venture with a private sector partner and controls and voting rights are equally split, and if the ONS has classified the joint venture as a 'deadlocked' market body then it should be partitioned in half, and 50% of its expenditure, income, assets and liabilities should be treated as if a public corporation. The parent department will then reflect what it has to for a public corporation. If the joint venture is deemed to be a non-market body, then it should in its entirety should be classified to the central government sector and consolidated into its parent department's accounts.

11.98 If the body is not owned by exactly equal percentages by each of the public or private parties, the ONS will classify the body to either the public or the private sector. If the joint venture is classified to the private sector, any profit or loss recognised on behalf of the body's activities in line with departmental accounting rules is outside the scope of budgets. If this would be the public body, then the joint venture will be classified within the government sector if it has a predominant non-market activity. If it is recognised as a market producer, then it will be treated as a public corporation and the parent department should then reflect what it has for a public corporation.

Associates

11.99 Where the public sector recognises profit or loss when accounting for its investment in an entity that is recognised as an associate in line with departmental accounting rules, this is outside the scope of budgets.

Pensions

12.1 This chapter is split into separate sections for the following cases:

- a) unfunded pension schemes, covering employing departments and ALBs who contribute to multi-employer unfunded pension schemes
- b) funded pension schemes: departments and ALBs who contribute to and run funded pension schemes
- c) unfunded by-analogy arrangements: departments and ALBs who run their own unfunded, by-analogy, pension schemes – that is schemes run by-analogy to the multi-employer pension schemes
- d) bulk transfers to funded schemes

Section A: Unfunded pension schemes, used by employing departments that contribute to multi-employer unfunded pension schemes

12.2 Departments are required to recognise in their budgets the accruing cost of their existing staffs' pension liabilities that will need to be met in future periods. For those departments whose staff are members of the large unfunded multi-employer schemes (such as the Civil Service, Teachers' or NHS schemes) IAS 19 allows departments to account only for the employer contributions payable to the pension scheme administrator (the accruing superannuation liability charge (ASLC)).

12.3 The employing department bears the cost of that ASLC in its resource DEL, as part of its salary bill.

12.4 The department bears no further liability in respect of pensions.

12.5 The employee may also pay a contribution into the scheme. Such payments are made by the employee out of her or his pay. The department will have shown pay as a cost in its resource DEL. It should not show anything further in respect of the employee contribution.

12.6 This section of the budgeting guidance applies to the administrators of the multi-employer unfunded schemes (schemes under Section A):

- Principal Civil Service Pension Scheme (PCSPS)
- Alpha pension scheme
- NHS pensions schemes

- Teachers' pension schemes
- Armed forces pension schemes
- Judicial pension schemes
- UK Atomic Energy Authority (UKAEA) superannuation schemes
- Overseas Pension Department (OPD) schemes
- Royal Mail unfunded pension scheme

12.7 This section applies to the budgeting of the schemes themselves. It does not cover employing departments' contributions to the schemes – see earlier paragraphs of this Chapter.

12.8 The transactions of these schemes are scored in AME. The transactions follow those that are recorded in the departmental accounts, and are as follows:

Expenditure:

- current service costs (defined as “the increase in the present value of the scheme liabilities expected to arise from employee service in the current period”)
- past service costs (normally expected to be zero) interest on scheme liabilities (the unwinding of the discount on the scheme liability)
- increase in future liability arising from employees purchase of added years and group and individual transfers in
- there may be occasions where actual pensions benefits paid pass through the revenue account if they are not charged to a provision on the balance sheet

Income:

- employers' contributions
- employee contributions – normal
- employee contributions – purchase of added years
- group and individual transfers in

Unfunded pension benefits payable

12.9 Pension benefits payable to retired members, and group and individual transfers out, score only in the departmental accounts via the balance sheet as it is simply a discharge of a provision. It represents the movement of cash and liabilities. As such it has no overall budgetary impact, as the discharge and use of provisions cancel each other out within the same budget boundary. However, to record the discharge of the provision correctly departments should record on OSCAR matching entries (a series

2 CoA with a negative and a 9 series CoA with a positive) within the AME budgeting boundary to ensure that the correct cash required can be calculated and that information required for the national accounts is captured.

- 12.10 Bulk transfers to the private sector score as capital transactions in national accounts and are treated as a cost in the resource budget offset by the release of provision.
- 12.11 Where payments are not covered by an existing provision (i.e. no account has been taken of the build-up of the pension liability), they score as charges in the resource AME budget.

Section B: Funded pension schemes: departments and ALBs who contribute to and run funded pension schemes

- 12.12 Some departments and ALBs run pension schemes with a real fund (as distinct from a notional fund used for unfunded schemes). Such departments and ALBs also have to comply with the accounting standard IAS 19.
- 12.13 IAS 19 covers the position where:
- there is a deficit in the pension fund (i.e. there is a shortfall in the value of the assets of the scheme over the present value of the scheme's liabilities)
 - the deficit is identifiable as belonging to the employer
 - the employer has a legal or constructive obligation to make good a deficit in the pension fund
- 12.14 In these circumstances, the employer should recognise that deficit in the fund as a liability on their balance sheet.
- 12.15 The cost in the departmental budget is the same as that shown in the accounts of the department or ALB under IAS 19. Specifically, the movement in the pension scheme liability as recorded in the SoCNE scores as a cost in the resource budget. Any actual contributions to the scheme that serve to reduce the liability score in the cash subsection of the Resource budget offset by a negative amount. However, note that these effects will not net-off within AME and DEL budgets. An example is given below.

Table 12.A: Funded pension scheme example

Department or ALB Accounts	Resource budget		Total
	AME	DEL	
Increase in scheme liabilities			
Cr pensions liability	-110		
Dr Statement of Comprehensive Net Expenditure / I&E	110	110	110
Contribute cash to scheme			
Dr liability	100	-100	-100
Cr cash	-100	100	100
Total	10	100	110

- 12.16 The example assumes that the contributing department pays 100 cash to the scheme but that the accruing cost of the pension liability is 110.
- 12.17 The accruing liability would normally fall to departmental resource AME, whilst the cash costs would fall to DEL. This is more analogous to the costs borne by those departments who contribute to unfunded schemes, and reduces the scope for volatility in departmental resource DELs. Where there is a serious or structural deficit the scheme actuary will ultimately suggest higher contributions or a one-off payment to rectify affairs. This would score against DEL like normal contributions.
- 12.18 Where there is a surplus in the scheme, the department or ALB should recognise that surplus as an asset if the conditions in paragraph 37 and onwards of IAS 19 are satisfied (i.e. to the extent that employers can recover that surplus either through reduced contributions in future or through refunds from the scheme). This will be a benefit to the resource budget in AME. Movements in the value of the surplus then impact on the SoCNE and resource budget.

Section C: Unfunded by-analogy arrangements; departments and ALBs

who run their own unfunded, by-analogy pension schemes

- 12.19 “By-analogy” means schemes run by-analogy to the multiemployer pension schemes. The budgets of departments or their ALBs that run unfunded by-analogy pension schemes should recognise the accruing cost of their existing staff’s pension liability that will need to be met in future periods. Such schemes should be accounted for on an IAS 19 basis as adapted for the unfunded schemes in the central government sector.
- 12.20 The department or body that employs the staff recognises a provision on the balance sheet in respect of the accruing liability to pay pensions in the future, and a cost in their budget based on the change in that liability.
- 12.21 To ensure parity between those bodies who pay into multi-employer schemes and those bodies that run their own unfunded by-analogy schemes the costs borne by the by-analogy schemes in resource DEL are equivalent to those paid by departments who pay into the multi-employer schemes. Accordingly, the following transactions score in resource DEL:
- Expenditure:
- increases in provisions due to current service cost
 - increases in provisions due to past service costs
 - increases in provisions due to any bulk/individual transfers in
 - increases in provisions due to purchases of added years
- Income:
- income from bulk/individual transfers in (funds the increase in the provision due to transfers in)
 - income from employees – normal contributions (goes part way to fund the increase in the provision due to the current service cost)
 - income from employees - added years (funding increase in the provision due to added years)
- 12.22 This treatment is broadly analogous to the costs borne by a department that contributes a multi-employer scheme because the current service cost borne by the department is broadly equivalent to the ASLC that would be paid to multi-employer pension scheme administrators.

Charges to Departmental AME

- 12.23 To ensure parity in the DEL treatment between those departments who pay into the multi-employer schemes and

those that run their own unfunded by-analogy schemes certain transactions score in departmental AME:

- pensions benefits paid, offset by the release of a provision from the balance sheet (in this case there will be a credit to resource AME to represent the discharge of the liability and a net charge to departmental AME to reflect the payment)
- pensions benefits paid, if they are not charged to a provision on the balance sheet
- the departmental accounts - and therefore budgets - score the increase in the liability due to the unwinding of the discount rate. This increase is sometimes termed the interest on the scheme liability. The discount rate is based on AA corporate bond rates, and a CPI inflation assumption derived from market data, and is advised annually

Unfunded board members

12.24 Unfunded broadly by-analogy arrangements for chairs, vice-chairs, board members and other holders of public appointments are also subject to IAS 19 as adapted for unfunded schemes in the central government sector and should be included in any measure of a body's unfunded liabilities.

Bulk transfers of unfunded schemes joining multi-employer public sector unfunded pension scheme

12.25 Where an unfunded scheme joins the multi-employer unfunded scheme it will be required to make a cash payment equivalent to the value of the liability that is being transferred. For the transferring body that has previously recognised a liability in its balance sheet in respect of its unfunded pensions liability, this will be a balance sheet transaction – a movement in cash and liabilities – with no impact on the SoCNE (the SoCNE does not include the discharge of provisions, which is what this effectively is). It follows that there is no overall impact on budgets.

12.26 However, to record the discharge of the provision correctly, departments should record on OSCAR matching entries within AME budgeting boundary to ensure that the correct cash required can be calculated and that information required for the national accounts is correctly captured.

12.27 In addition, any amount of cash that is *required above or below the liability previously recognised* on the transferring body's balance sheet will be a cost/benefit to the SoCNE.

12.28 Budgetary cover for this debit or credit will be provided for as an AME item. The cash required for the transfer will be provided in the appropriate manner - either through supply or grant-in-aid to

the body transferring the liability with no further impact on budgets.

- 12.29 For an unfunded scheme joining an unfunded multi-employer scheme that has not previously recognised a provision on its balance sheet it follows that any payment it makes will be a cost in its SoCNE. Budgetary cover for this cost will be provided for in AME.

Section D: Bulk transfers to funded schemes

- 12.30 Where a public-sector body makes a bulk transfer into a funded scheme this cash payment increases TME. Where departments are considering such payments they must contact the Treasury to obtain consent for the transfer. This is the case whether the transferring body has previously provided for the liability or not, or whether they have been making contributions to a public sector multi-employer scheme or not.
- 12.31 Departments should contact the Treasury early in the process of considering such transfers.

Leases and PPPs

- 13.1 The chapter sets out the budgeting guidance for leases and Public-Private Partnerships (PPPs).
- 13.2 Leases and PPPs both represent areas where their respective treatments in the departmental accounts and national accounts are not fully aligned.
- 13.3 For leases, budgets should generally follow departmental accounts treatment. For PPPs, budgets should generally follow national accounts treatment. The detailed budget requirements for leases and PPPs are provided in this chapter.
- 13.4 This chapter contains guidance for:
- Leases (paragraph 13.5-13.16); and
 - PPPs that do not meet the definition of leases, including Private Finance Initiative (PFI) and Private Finance 2 (PF2). This includes:
 - An overview of the national accounts and departmental accounts recording of PPPs (paragraph 13.17-13.23);
 - Specific budgeting guidance for PPPs, including:
 - The difference between on- and off-balance sheet PPPs (paragraphs 13.24-13.31)
 - Differences for public corporations (PCs) (paragraphs 13.32-13.33)
 - Barter deals (paragraphs 13.34-13.49)
 - Reversionary interests (paragraphs 13.50-13.54)
 - Termination payments (paragraphs 13.55-13.60)
 - The treatment of refinancing gains (paragraphs 13.61-13.70)

Leases: overview

- 13.5 The guiding principle to apply when budgeting for leases is that the budgeting treatment aligns to the departmental accounts treatment. The IFRS 16 accounting standard for leases has been adopted by departments from 1 April 2022, with the exception of a number of departments who adopted this early.
- 13.6 For lessees, under departmental accounts, most leases will be treated as on-balance sheet, with the recognition of an asset for the right to use the underlying asset in the lease (a 'right-of-use asset'), and a liability for the imputed borrowing to acquire the right-of-use asset (as payments for the lease asset will be made

over time). An on-balance sheet lease therefore has the following budget impacts:

- i) capital DEL expenditure at lease commencement, for the right-of-use asset;
- ii) resource DEL ringfenced depreciation, due to depreciation on the leased asset over the life of the lease; and
- iii) non-ringfenced resource DEL expenditure for the interest incurred over the life of the lease (as annual cash payments on the lease now score as working capital movements).

13.7 Any off-balance sheet lease (i.e. short-term leases or low-value leases) will incur resource DEL expenditure as rental expense is incurred in the departmental accounts.

13.8 For lessors, accounting under IFRS 16 is largely unchanged from the previous accounting standard. Lessors will continue to classify leases as either operating or finance leases and account and budget for them accordingly. Appendix B of the [IFRS 16 supplementary budgeting guidance document](#) sets out budgeting for lessors.

13.9 There is more detailed guidance about budgeting for leases and its impact on financial planning in the [IFRS 16 supplementary budgeting guidance document](#)

Further budgeting clarifications

13.10 As above, the guiding principle to apply when budgeting for leases is that the budgeting treatment should align to the accounting. However, please note the following:

- **Transition adjustment to opening balances** – On transition to the IFRS16 leasing standard (on 1 April 2022 for most departments), departments are required to adjust their opening balances in accounts for the impact of the new standard ('cumulative catch-up approach'). No budget entry should be made for the cumulative catch-up adjustment to accounts. Instead, for budgeting, the cumulative catch up is ignored and no Prior Period Adjustment (PPA) is required.
- **Capital expenditure recognised on commencement** – The capital expenditure incurred on commencement of the lease, i.e. the date on which the lessor makes the underlying asset available for use by the lessee, should be equivalent to the asset recognised on-balance sheet¹ (or de-recognised if a lessor). For

¹ The capital hit will normally score entirely to DEL. The only exception to this is if there are dilapidation provisions in the lease which are included in the cost of the right-of-use asset. These will initially score to capital AME – see chapter 6 for more details.

example, the capital hit should allow for any prepayments, which, on an accruals basis, should score on lease commencement.

- **Revaluation, re-measurement or lease modification** – The budgeting for these items is consistent with the principles outlined elsewhere in this document. For example, the creation of a revaluation reserve for a right-of-use asset has no budget impact (see Chapter 3). However, a re-measurement or lease modification that results in either a reduction or increase in both the right-of-use asset and lease liability will have a capital DEL impact.
- **Impairment or early termination** – Again, the budgeting for these items is consistent with the principles outlined elsewhere in this document. For example, whether an impairment is first offset against a revaluation reserve, or is DEL or AME, will depend on the standard application of the impairment guidance for fixed assets in Chapter 3.
- **Peppercorn leases** – The treatment for a peppercorn lease (a lease with nil or nominal consideration) is identical to that of a donated asset/capital grant-in-kind, with depreciation scoring to AME (see Chapters 3 and 6). Modifications and early terminations of peppercorn leases will be treated as extensions or reversals of capital grants-in-kind (and will therefore be budget-neutral).
- **Sale and leaseback** – The budgeting for any sale and leaseback arrangement should follow the accounting in departmental accounts. Any gain/loss on the rights transferred from the seller-lessee to the buyer-lessor should be treated as a gain/loss on the sale of a fixed asset (see Chapter 4).
- **Barter transactions** - There is specific budgeting guidance on sale and leaseback transactions where the sale and leaseback elements are bartered, which is set out in paragraphs 13.34-13.49. Note, for transactions such as these, the accounting treatment for such a transaction may not align to the budgeting treatment.
- **Dilapidation provisions** - As described in Chapter 6, dilapidation provisions relating to right-of-use assets should score to capital AME (and not capital DEL as part of the right-of-use asset). The full depreciation cost should score to the ringfenced resource DEL budget. Any remeasurement or release of the provision follows the normal budgeting for provisions.
- Depreciation under contracts or programmes involving the development of a sovereign defence capability that give rise to the recognition of right of use assets used solely in the production of assets under the same contract/programme – refer to Chapter 3, 3.25-3.26

13.11 Property leases taken on from the private sector by a department's PCs score as Public Corporations Market and Overseas Borrowing (PCMOB). This means that the borrowing

associated with these leases scores to the department's capital budget. See Chapter 11 for more details on PCMOB.

National accounts treatment of leases

- 13.12 Lessee accounting is an area where departmental accounts and national accounts are not fully aligned; again, the budgeting treatment should follow the departmental accounts treatment.
- 13.13 For *property leases* (land and/or buildings), national accounts, departmental accounts and budgets are fully aligned. Property leases are treated as 'on-balance sheet' for lessees; the right-of-use assets and lease liabilities that a lessee takes on in a lease are reflected in departmental accounts, budgets, and fiscal aggregates like PSND, PSNI and PSCB.
- 13.14 For *non-property leases*, national accounts are not aligned to departmental accounts. Departmental accounts treat non-property leases as 'on-balance sheet' for lessees, while in national accounts they are generally treated as 'off-balance sheet.' Again, budgets will align to departmental accounts.
- 13.15 Departments and spending teams should, therefore, note that the fiscal impact of a non-property lease for a lessee is not aligned to the budgeting impact.
- 13.16 The Treasury carries out a central adjustment to adjust non-property lease budget data supplied by departments to the national accounts position. This does not require any input from departments, other than correct OSCAR coding. Given the different treatment of property vs non-property leases in national accounts, it is vital that leases are appropriately coded as either property or non-property in OSCAR.

PPPs: overview

- 13.17 A PPP is a means of procuring services with significant asset content. The choice of means of procurement should be driven entirely by value for money considerations. So:
- A PPP should be used where – and only where - it offers better value for money than other means of procurement
- 13.18 Any PPPs that meet the definition of a lease as set out in departmental accounts should follow the budgeting guidance for leases laid out in paragraphs 13.5-13.16 of this chapter. The remainder of this chapter provides budgeting guidance for PPPs that do not meet the definition of a lease.
- 13.19 Departments must follow the principles and methodology laid out in the [Green Book](#) when determining whether a prospective PPP project would be value for money. At Budget 2018 the

Chancellor of the Exchequer announced that PF2 would not be used for new government projects.

Recording of PPPs or similar arrangements

- 13.20 There is specific guidance in the [Financial Reporting Manual](#) (FReM) on how to account for PPPs in departmental accounts (namely, in the FReM's interpretation of IFRIC 12). However, this guidance is *not* applied when determining the budgetary treatment of a PPP transaction.
- 13.21 The budgetary treatment for PPPs should follow the national accounts treatment. This ensures that budgets reflect the fiscal impacts of a PPP transaction.
- 13.22 The treatment of PPPs in national accounts is covered in Part 6 of the ESA10 [Manual on Government Deficit and Debt 2022 \(MGDD\)](#).
- 13.23 Budgeting and national accounts standards fit together as follows:

On / off balance sheet for national accounts purposes

- 13.24 If a project is in substance borrowing then it is held to be on balance sheet. On-balance-sheet projects are in effect capital expenditure by the purchasing authority that has been financed by borrowing from the contractor. Off-balance-sheet projects are purchases of services by the purchasing authority from the contractor who has created an asset in order to deliver the services. Departments should be aware that public sector controls on the individual entities involved in the procurement arrangement could affect the classification of those entities and the project as a whole. These issues are covered in Part 6 of the [Manual on Government Deficit and Debt 2022 \(MGDD\)](#) and in the supporting guidance on the statistical treatment of PPPs.
- 13.25 It is the department's responsibility to come to a view on the expected classification of a project, where possible with the agreement of its auditor. The department is at risk in cases where the eventual classification by the auditor or by the Office for National Statistics (ONS) does not match the department's expectations. The ONS will not consider the classification of most projects, but can consider any classification they wish as part of the national accounts process.
- 13.26 Additionally, the Treasury may choose to scrutinise any PPP project regardless of the recording under the different standards. In the first instance departments and procuring authorities should consult their Treasury spending team while preparing the project's Outline Business Case to determine if it requires Treasury approval.

13.27 In the fiscal framework, on-balance-sheet projects:

- score in PSNI and PSNB
- score in PSND
- score in the Maastricht general government measure of the deficit and stock of debt

13.28 The budgeting system reflects the distinction between on and off balance sheet projects, with technical differences in the way that the distinction impacts on departments and ALBs versus PCs.

Budgeting – departments and ALBs

Projects on balance sheet for national accounts purposes

13.29 Projects on balance sheet for national accounts purposes score in capital budgets like capital expenditure undertaken directly by the department or ALB. The value of the capital expenditure and the timing of recognition should follow the treatment in national accounts set out above.

13.30 Annual repayments under the PPP contract, i.e. the unitary charge, will be treated in the resource budget as a mix of:

- service charges (resource DEL)
- repayment of the imputed loan to the private sector (outside budgets) and
- the full amount of interest charged on the loan (resource DEL)
- depreciation of the asset (ring-fenced resource DEL)

Projects off balance sheet for national accounts purposes

13.31 Where the project is off balance sheet for national accounts purposes, the budgeting impact is as if the department or ALB is purchasing services. Any associated capital expenditure is an investment by the private sector and does not appear on the procuring authority's budget. The only entries in the budget of the department or ALB are the payments under the unitary charge, which are payments for services and score in the resource budget.

Budgeting – Public Corporations

Projects on balance sheet for national accounts purposes

13.32 For most public corporations the budgeting system scores their external finance. External finance includes PCMOB. A PPP that is on balance sheet for national accounts purposes is a form of PCMOB and is treated in the same way:

- the borrowing implied by on-balance-sheet capital expenditure of public corporations scores in the capital budget
- as the debt is reduced the capital budget of the sponsor department is credited back and
- the profit that public corporations make should be calculated after the payment of the interest and service elements of service charge on the finance lease and after the deduction of depreciation on the PPP financed asset

Projects off balance sheet for national accounts purposes

13.33 Projects that are off balance sheet for national accounts purposes do not score in capital budgets (except to the extent there is a reversionary interest to be accrued over the length of the contract). The public corporation's payments of the unitary charge are a cost of doing business in the calculation of profits like any other purchase of services.

Barter deals

Definition of barter

13.34 A barter transaction is one in which party A disposes of an asset, good or service to party B; party A then receives an asset, good or service in return from party B. Money is not used as the medium of exchange or is used for only a proportion of the transaction. Barter deals can involve the creation of financial assets and liabilities such as loans if the goods and services are exchanged at different times.

Example of a barter deal

- 13.35** Sale and lease-back deals may include an element of barter. In this scenario a department disposes of buildings to a private sector company at no charge, or at a price below the normal market value. In return the company provides the department with serviced office accommodation at below market price for a number of years. The reduction in the cash charge for service payments is a way for the department to obtain value from its asset, instead of getting the full market value in cash.
- 13.36** In effect part of the value of the building is bartered for future serviced office space. The reduction in the selling price is in effect a pre-payment of rentals. You can view this as a loan to the private sector company financed from the receipt from the disposal of the building.
- 13.37** However, this is only one example, and these general principles apply equally to barter deals that do not involve property or PPPs.

Principles of recording barter deals

- 13.38 Barter deals should be recorded as if the exchanges had taken place in cash at current market prices. This recording applies to accounts, budgets and in the national accounts.
- 13.39 National accounts aim to score transactions at the Open Market Value (OMV). Scoring barter transactions at zero or another price would not reflect the economic substance of the transactions and misstate the balance of expenditure between sectors of the economy.
- 13.40 The real economic value of the asset disposed of is the OMV not nil or just the cash sum received; the annual running costs should also be measured at the OMV cost of accommodation and not just the cash sum paid.
- 13.41 If the delivery of bartered assets, goods and services occur at different times it might be necessary to record a financial transaction. For example, if a department sells a building at below OMV in return for reduced future rents, there is in substance a loan from the department to the company. The reduction in the selling price is a prepayment of rents and represented as such in the departmental accounts.
- 13.42 For a barter transaction to be a viable proposition, the reduction in sale price would have to be at least equal to the net present value of the future rent reductions – using a discount rate reflecting the cost of capital of the government. So, the imputed future rents have to be recorded as being equal to the cash actually paid, plus the amount being financed by the prepayment, plus an extra amount (representing a finance charge on the prepayment).

Open Market Value

- 13.43 OMV is the price of the asset, good or service that would be paid in an open market transaction without any element of barter. When assets, goods or services are bartered it is necessary to determine their OMV so that accounts can be recorded properly (i.e., using OMVs) and also for investment appraisal to ensure that the barter deal is good value for money.
- 13.44 It is for departments to determine and record OMVs.
- 13.45 Broad information for establishing OMVs should be available from information in the investment appraisal undertaken before the department decided to structure the deal in a particular way, in the supplier's bid documentation, and in the contract documentation and supporting papers.
- 13.46 For accounts, it should be assumed that the goods bartered have equal value. This means that once the OMV has been determined for the assets, goods or services supplied, the value of the assets, goods or services received in exchange will be known. For

example, consider the case of a building being sold at below OMV in return for being able to pay reduced rents (i.e. at below OMV) in the future. The OMV of the building could be estimated as the cash price paid plus the net present value of the future rent reductions (using 3.5 per cent discount rate); or the rent reductions could be estimated from the difference between the cash received and OMV of the building sold; or if both components can be estimated reliably the residual would be the implied discount rate for the financing charge. The method used should be agreed with Treasury.

- 13.47 Note that the OMV of an asset for this purpose may differ from the amount recorded in the department's balance sheet if that has not been updated recently. In such cases the difference between the balance sheet figure and OMV would be recorded in departmental accounts and budgets as a loss/gain on sale. The difference between the OMV and the cash amount actually received as a result of the barter deal (i.e. that part of the value of the building that is bartered) would not be recorded as a loss on sale, in our example this would be shown as a prepayment.
- 13.48 For investment appraisal it is of course necessary to measure as directly as possible the OMV of all components - to identify which option is best value for money.
- 13.49 Appendix 1 to this chapter shows a worked example of the accounting and budgeting for a sale and lease-back deal that includes a bartered element, where the deal is on balance sheet.

Reversionary interests in PPPs

- 13.50 Some deals involve the legal transfer of the asset to the public sector at the end of the deal period. In some cases the asset will not be expected to have a value and in other cases it will. Where the asset is expected to have a value the department is said to have a reversionary interest (RI).
- 13.51 In many cases the existence of a reversionary interest will point to the public sector having the whole of the asset on its balance sheet for the life of the deal, as the public sector is taking residual value risk. In that case the reversionary interest rules are irrelevant.
- 13.52 However, in some cases the deal may be judged to be off balance sheet and the department is taking residual value risk, departments are required to score against CDEL the reversionary interest that would have applied under UK GAAP – note this only applies to projects signed before April 2009.
- 13.53 Under UK GAAP, where a department had an RI it would build up an RI asset on its Statement of Financial Position over the life of the contract. At the end of the contract the asset would revert to the department who would debit non-current (infrastructure)

assets and credit the RI asset. In other words, the RI asset built up over the life of the contract will finance the acquisition of the infrastructure asset at the end of the period. In order to build up the RI over the life of the contract part of the unitary payment would have been capitalised. This would have resulted in a lower SoCNE-cost scoring in the departmental accounts and an increase in the RI asset on the balance sheet.

13.54 Where schemes are off balance sheet for budgets, but there would have been a RI charge under UK GAAP, the budgets will not follow the departmental accounts but will show.

in capital DEL:

- movement in the RI on the balance sheet over the life of the contract and
- the acquisition of the asset at the end of the period

in resource DEL:

- The resource budget simply shows the costs that are in the SoCNE, i.e. the unitary payment less the amount that is capitalised as the RI

PPP Termination payments

13.55 Termination payments may be payable if a PPP contract is ended early.

13.56 In the case of on balance sheet PPPs, termination payments could represent just the extinguishment of the liability, and so not be shown in budgets, or in addition to the repayment of debt there could be a cost in budgets. That difference in treatment would depend upon the level of the balance sheet liability compared with the termination payment and what, if any, other assets come on the balance sheet.

13.57 Where the amount of cash paid is different to the outstanding liability, and the department is not gaining any other assets, then the national accounts treat this element of the payment (difference between liability on the balance sheet and cash paid) as a capital grant to the contractor. This is a cost (or potentially a benefit) in the departmental capital budget (DEL).

13.58 Where the department is receiving additional assets as part of the termination deal then it may be appropriate to capitalise the cash payment above the value of the liability. In effect the department is purchasing the additional assets from the contractor, and the price paid is the value of the cash payment above the liability that is being extinguished. Departmental budgets treat this in the same way as any other capital addition, i.e. in capital budgets (DEL).

- 13.59 Termination payments paid under off-balance-sheet deals lead to a cost in the SoCNE and a charge to the Resource budget (assuming no asset arrives in return).
- 13.60 Any department facing a termination payment should contact your normal Treasury spending team to seek advice.

PPP refinancing gains

- 13.61 This section of the guidance briefly sets the background and the policy of sharing refinancing gains on PPP deals, and details the treatment of the associated transactions in the national accounts, departmental accounts and budgets. The guidance deals with the scenario where the PPP contractor goes to the private sector debt markets to refinance their debt.

Background

- 13.62 When a private sector contractor enters into a PPP deal they will borrow from the market to finance the capital expenditure they are undertaking. The market will charge the contractor a certain interest rate on that borrowing; this will be based on many things including the amount of risk perceived by the lender. The contractor will take this rate of interest into account when setting the unitary charge that is charged to the public sector for the use of the infrastructure created under the PPP contract.
- 13.63 It is common practice for the PPP contractor to refinance or restructure their debt once the project is up and running. The contractor will, at this point, be able to negotiate a lower interest rate, as they can demonstrate that the amount of risk has reduced.
- 13.64 Guidance on how procuring authorities with PPP contracts should be able to access these gains and split the benefit with the private sector partner can be found in the Treasury publication "[Refinancing of Early PFI transactions](#)" and in Eurostat's publication "[A Guide to the Statistical Treatment of PPPs](#)".

Refinancing

- 13.65 When refinancing occurs the contractor's cost of providing the service drops thanks to the restructured debt profile. This is shared with their customers (the public sector) via a reduced price to buy the service, an increased level of service to buy the service, or as a one-off payment.
- 13.66 Where the gain is shared via a cheaper service cost this is simply less current expenditure in the national accounts, departmental accounts and departmental budget over the remaining life of the contract.
- 13.67 Where the gain is shared via a one-off windfall payment to the public sector we risk distorting measures of GDP in the economy

if we record this as less consumption by the public sector in one year. It is more correct to view the lump sum as a portion of the on-going savings to the contractor, which has been rolled up and then split between the parties. The view in such a situation is that the private sector has lent the public-sector cash up front and has an asset on their balance sheet, each month this would unwind to finance the reduction in the unitary charge. In effect the contractor is pre-paying a reduction in the service charge.

13.68 This means that the refinancing gain is recorded as a benefit to the public sector matched to the time frame in which it is viewed to have accrued. A simple example ignoring any discounting is given below.

- public sector receives lump sum of £15million in respect of a refinancing gain, to be accounted for over 15 years, the remaining life of the contract
- suppose that the public sector continues to pay a unitary charge of £10million per annum for 15 years
- the cash lump sum should be recorded as a financial transaction – in effect borrowing from the private sector. The department would show cash of £15million and a matching liability. Each year the public sector continues to pay the contractor a £10million cash unitary charge for the year

13.69 In departmental accounts, on receiving the cash the department shows an increase in liabilities (payables). Then annually:

- the SoCNE score £9million unitary payment and
- cash out the door would be £10million and the liability would reduce by £1million

13.70 The budgets follow the departmental accounts. In other words, the upfront receipt of the cash does not benefit the Resource budget, but the lower annual service charge does.

Appendix 1 to chapter 13: On-balance sheet PPP with sale and leaseback bartered element

13.71 This appendix sets out the accounting and budgeting treatment for a sale and lease-back deal including a bartered element where the deal is an on-balance sheet PPP. This does not relate to service concession arrangements.

Background

- 13.72 Department Yellow enters into a PPP deal for a new headquarters building with the Reader Sinclair Consortium. The consortium will design and build and then operate the HQ for a period of 30 years from the date of occupation. In addition, the consortium will provide the IT systems for seven years, after which that part of the contract will terminate. The building will revert to Department Yellow at no cost at the end of the contract period. This is determined to be an on-balance-sheet PPP deal.
- 13.73 The cost to Department Yellow comprises two elements: annual Unitary Payments (UP) and the transfer of properties (Barter Deal). The transfer of properties under Barter Deal results, over time, in lower service payments. Annual UPs cover capital, a finance charge, and a service payment. The Barter Deal comprises the transfer of five properties at various stages throughout the project, including two prior to occupation of the new HQ. The final transfer can be deferred by five years. If Department Yellow opts for deferral, the department will pay compensation to the Consortium in the form of an upfront cash payment equal to the value of the property under the contract at the original transfer date. Upon vacation of the property, the Consortium will repay to Department Yellow the value of the property at that date.
- 13.74 The contract takes effect from 1 April YEAR 0. The new HQ will be occupied from 1 April YEAR 3.

Table 13.A: Schedule of Barter Deal transfers

Plot 1	1 April YEAR 0	Land only
Plot 2	1 April YEAR 1	Land only
Plot 3	1 April YEAR 2	Land only
Plot 4	1 April YEAR 4	Land and Buildings
Plot 5	1 April YEAR 10 (with possible deferral to 1 April YEAR 15)	Land and Buildings

13.75 The total value of the new HQ and IT is £250 million. It is estimated that £229 million is in respect of the new HQ and £21 million relates to the IT element. In addition, the UP includes total interest of £320 million and total service costs of £15 million. (Total value of UP over 30 years is £560 million). The values of the five plots included in the Barter Deal are shown below. The year YEAR-1 is the year prior to the contract coming into effect.

Table 13.B: Plot values

	Book values	Barter Deal Values				
		1 April: YEAR -1	1 April: YEAR 0	1 April: YEAR 1	1 April: YEAR 2	1 April: YEAR 4
Plot 1	4.5 million	4 million	3 million	4 million	1 million	13 million
Plot 2	2.5 million					
Plot 3	4 million					
Plot 4	1.5 million					
Plot 5	13 million					

Table 13.C: Schedule of Ups starting in 1 April YEAR 3

01-Apr	31-Mar	Calculation	£ million
YEAR 3 -	YEAR 4	0 year at 23.5 = 23.5	23.5
YEAR 4 -	YEAR 10	5 years at 23.25 = 139.5	23.25
YEAR 10 -	X029	22 years at 17.25 = 396.75	17.25
Balancing payment:			0.25
Total:			560

13.76 The value of the plots in Department Yellow's accounts needs to be adjusted for 1 April YEAR 0 to reflect the Barter Deal value at the future date of transfer, taking account of projected movements in value in the intervening period, during which the plots continue to be recognised as fixed assets by the department. (Note: this assumes that the values have been agreed at the time the contract is signed.)

Table 13.D: Accounting for the Barter Deal – asset valuations

At 31 March YEAR 0 (the end of YEAR -1)		Budget impact	Departmental accounts
Plot 1	The value is written down by £0.5 million.	resource AME cost with write down in value	Dr Revaluation reserve or SoCNE (FRem 5.2.34) Cr Fixed assets
Plot 2	Upwards revaluation to £3 million.	None	Dr Fixed assets Cr Revaluation Reserve
Plot 3	No change	None	None
Plot 4	The split between land and buildings is £0.75 million land and £0.75 million buildings. Without the PPP deal, the buildings had a remaining economic useful life of 10 years, with residual value of £0.3 million. It is assumed that the value of the plot at 1 April YEAR 4 will comprise land at £0.75 million and buildings at £0.25 million. Department Yellow has four years' use of the property. The value of Plot 4 is written down to £1.20 million, comprising land at £0.75 million and buildings at £0.45 million. Over the four years ending March YEAR 1, YEAR 2, YEAR 3 and YEAR 4, depreciation of £0.05 million will be charged annually.	resource AME cost with write down of £0.3 million. Routine depreciation is reflected in RDEL	Dr Revaluation reserve or SoCNE (FRem 5.2.34) Cr Fixed assets, Routine accounting entries
Plot 5	The split between land and buildings is £10 million land and £3 million buildings. Because the transfers are not due to take place until YEAR 10, the value at YEAR -1 is agreed as proxy for the value at YEAR 10, taking into account increases in land values offset by changes in the value of the buildings on the site.	None	None

13.77 Department Yellow accounts for the plots as they are transferred to the Consortium prior to the occupation of the new accommodation as follows

Table 13.E: Accounting for the Barter Deal – transfers of property prior to occupation

	Date of transfer	Value	Budget impact	Departmental Accounts
Plot 1	1 April YEAR 0	£4 million	CDEL income for the NBV of the transfer	Dr Prepayments Cr Fixed assets
Plot 2	1 April YEAR 1	£3 million	CDEL income for the NBV of the transfer	Dr Prepayments Cr Fixed assets
Plot 3	1 April YEAR 2	£4 million	CDEL income for the NBV of the transfer	Dr Prepayments Cr Fixed assets

Accounting for the occupation of the new building

13.78 When Department Yellow occupies the new accommodation, the property is valued at £250 million (see background section) and is brought on balance sheet.

13.79 The accounting entries are:

- Dr Fixed assets
- Cr Long-term lease liability of £250 million

13.80 The £250 million is a capital DEL hit.

13.81 Department Yellow accounts for the transfer of Plot 4 after the occupation of the new building as follows:

Table 13.F: Accounting for the transfer of Plot 4

	Date of transfer	Value	Budget impact	Departmental Accounts
Plot 4	1 April YEAR 4	£1 million	CDEL income for the NBV of the transfer	Dr Prepayments (if prepayment against service/interest charged)
				Cr Fixed asset

Subsequent accounting

13.82 Each year until the end of the lease, there will be a cash requirement in respect of the UP. There will be a resource DEL hit equal to the imputed interest rate. As the building is on balance sheet, depreciation also scores in both the SoCNE and resource DEL. The capital repayment, i.e. the movement in the long-term liability is outside of budgets.

13.83 The accounting entries are:

- Dr Long-term lease liability for capital element of UP
- Dr SoCNE for service and interest elements of UP
- Cr Cash

(In addition to the service and interest elements, depreciation also passes through the SoCNE.)

13.84 In addition, Department Yellow can now start to release the pre-payment. Because it represents the lower service payment, it should be released over the period of the reduced service payment (in this example, considered to be the life of the contract).

13.85 The accounting entries are:

- Dr SoCNE
- Cr Prepayment

13.86 The release of the pre-payment has no budgetary impact – as noted it is the full SoCNE costs that are reflected in the budget.

Department Yellow defers the final stage of the Barter Deal

13.87 In X008, Department Yellow determines that it needs to retain Plot 5 beyond YEAR 10. Under the contract, therefore, the department will have a cash requirement of £13 million to pay to the Consortium.

13.88 The accounting entries are:

- Dr Long-term lease liability
- Cr Cash

13.89 Since the value of the Plot 5 is included in the overall valuation of the new accommodation, there is no DEL hit involved in the deferral, as the cash is used to repay the liability. (Note: the accounting entries do not deal with Supply in respect of the net cash requirement.)

13.90 During the five years of the deferral, the department will continue to revalue and depreciate Plot 5 in the normal manner.

Final deal

13.91 Under the terms of the contract, Department Yellow has to vacate the property in X015, and the Consortium pays to the department the value of the property at that date.

13.92 The accounting entries are:

- Dr Cash
- Cr Fixed Assets

There is capital DEL income in respect of the disposal of the asset.

Annex A

Difference between Budgets and Departmental Accounts

- A.1 There are very few differences between departmental accounts and budgets. The majority of transactions should, therefore, be recorded in budgets at the same value and with the same timing as in accounts. There are, however, some outstanding misalignments, these are set out in the tables below. Treasury will continue to try and minimise the differences between budgets and accounts consistent with the principles of alignment.
- A.2 Table A.1 below shows the main differences between the SoCNE in departmental accounts and the resource budget. Table A.2 shows the main differences between capital budgets and additions to fixed assets and investments in departmental accounts.

Table A.1 The main differences between the Statement of Comprehensive Net Expenditure (SoCNE) and Resource budgets

Departments' own spending	The SoCNE includes capital grants; these score in capital budgets.
	The SoCNE score the creation of provisions. The release and payment are both movements on the Statement of Financial Position. In budgets, the creation and release score to AME whereas the payment scores to DEL.
Departments' income	Income that is classified as a capital grant, such as a donation that is to be used to finance acquisition of a fixed asset, scores in the capital budget.
Support for local authorities	Capital grants to local authorities score in the SoCNE and in capital budgets.
Public Corporations	Capital grants to public corporations score in the SoCNE and in capital budgets for public corporations on the external finance basis.
	Equity withdrawals from PCs may score in the SoCNE as special dividends and will in all cases score in capital budgets for public corporations on the external finance basis.

PPP	PPP contracts recorded as service concessions in accounts will be recorded in budgets on the basis of national accounts (ESA10) standards, which may lead to a different balance sheet treatment of the asset. See chapter 13 for full details.
Research and Development	Research and development expenditure that meets the criteria under the national accounts are recorded as capital in budgets (See Annex C for details). This may differ to the treatment in departmental accounts where research expenditure is usually expensed in the SoCNE and development expenditure is capitalised in accordance with IAS 38 <i>Intangible Assets</i> as adapted by the FReM

Table A.2 The main differences between the capital budget and the Departmental Account entries for total net additions to fixed assets and investments

Departments' own spending	Capital budgets include capital grants; these score in the SoCNE
	In a limited range of cases, purchase and disposal of inventories scores in capital budget, but are not transactions in fixed assets in departmental accounts, which treats the transaction as dealing in current assets.
Departments' income	Income that counts as capital transfers in the national accounts, such as a donation to finance construction of an asset, passes through capital budgets.
	There are limits on the quantum of income from the sale of assets that departments may keep in their budgets.
Support for Local Authorities	Capital grants to local authorities score in the SoCNE and in capital budgets
	Capital budgets include Supported Capital Expenditure (Revenue) which does not feature in departmental accounts
Public Corporations	Capital grants to public corporations score in the SoCNE and in capital budgets
	Budgets for public corporations include Public Corporations Market and Overseas Borrowing (PCMOB) which is not included in departmental accounts (see Chapter 11)
	If a trading fund that is a department in its own right borrows from the National Loans Fund the "parent" department for budgeting purposes will show no accounting entry. However, its budget will show borrowing net of repayments

	Equity withdrawals from PCs may score in the SoCNE as special dividends and will always score in capital budgets for PCs on the external finance basis.
Service Concessions	Service concession arrangements which are subject to IFRIC 12 in accounts, are measured according to ESA10 standards set out in the Manual on Government Deficit and Debt (see Chapter 13 for details)
Research and Development	Research and development expenditure that meets the criteria under the national accounts are recorded as capital in budgets (See Annex C for details). This may differ to the treatment in departmental accounts where research expenditure is usually expensed in the SoCNE and development expenditure is capitalised in accordance with IAS 38 <i>Intangible Assets</i> as adapted by the FReM

Debt Management Guidance

- B.1** Good debt management is a key part of achieving the government's objectives for fiscal policy. These objectives are set out in the Charter for Budget Responsibility (section 3.1) and in the Consolidated Budgeting Guidance.
- B.2** Debt owed to government includes, but is not limited to, overdue tax liabilities, benefit overpayments, tax credits overpayments, staff salary overpayments, loans, outstanding fines, penalties, court confiscation orders, erroneous payments made under government fiscal relief schemes and debt arising from fraudulent activity. It should be recognised that while most debt owed to government sits within the UK, a proportion of it sits outside the UK.
- B.3** The Covid-19 pandemic led to the overdue debt balance reaching a historical high of £64.3bn at March 2021 through the creation of additional debt and the aging of debt. While the overdue debt balance has since fallen, overdue debt owed to government is still significantly increased.
- B.4** The indicative overdue debt balance owed to central government was c.£53.9bn¹ at 31 March 2024 (c.5.5% of government income). Money recovered by government is used to pay for vital public services, therefore overdue debt must be managed efficiently and effectively in order to provide fair outcomes for both government and the public. Debt recovery, losses and the write off / remittance of debt must be considered when managing departmental budgets.
- B.5** Further to this, debt must be managed sensitively as it can create financial and social strain on households and businesses. Debt has been linked to adverse mental health outcomes, increased homelessness and crime rates, and reduced consumer spending all of which can hinder economic growth, resulting in significant costs to the exchequer and those who owe debt.

Debt management

- B.6** The Government Debt Management Function works to bring in money to support the funding of public services, minimising

¹ The overdue debt balance and its percentage of government income is an indicative figure at the time of publishing and will be updated once the data is available.

losses to the exchequer and ensuring taxpayers' money is spent in the most efficient and effective way whilst minimising unnecessary stress on those that owe debt.

- B.7** The GDMF Functional Centre sets the strategic context for how government manages its debt through the [Government Debt Strategy](#), aiming to achieve the vision of Fair Debt Outcomes for All. The government aims to ensure fairness to taxpayers and those that do pay on time by taking a proportionate response to those that do not, while ensuring those who cannot pay through financial, mental or physical vulnerability are identified and provided with relevant support. This also ensures recovery and enforcement activity can focus on those who are deliberately avoiding repaying their debts - including fraudsters and criminals.
- B.8** Debt owning organisations should work closely with the GDMF Functional Centre to implement the Government Debt Strategy, which aims to further improve how debt owed to government is managed.
- B.9** Departments, their ALBs and public bodies managing debt owed to government must have robust debt management strategies in place to tackle aged debt. These must be reviewed annually, signed off by Senior Management Teams and shared with the GDMF Functional Centre. HMT Spending Teams must also review debt management strategies where organisations manage a debt balance over £50million to provide a holistic view of the impact of debt on the public purse and inform spending decisions.
- B.10** These strategies must be in line with Managing Public Money and the Balance Sheet Review's debt performance measures. Organisations must work with the GDMF Functional Centre and wider HMT to achieve the vision of Fair Debt Outcomes for All. The following principles and activities should be embedded within organisations and reflected in debt management strategies:
- Prevent the creation of avoidable overdue debt, including considering the impact of policies or fiscal relief schemes on both debt creation and the management of existing debt, ensuring debt that does occur is adequately addressed,
 - Embed the expectations set out in the [Debt Functional Standard](#), regularly assessing organisational maturity and identifying opportunities for continuous improvement,
 - Embed the principles set out in the [Public Sector Toolkits](#) and [Debt Management Fairness Charter](#) to ensure transparency in debt management practices, affordable and sustainable repayments, and compassion for those who owe debt to government,

- Identify opportunities to help detect and manage debt owed to the public sector, such as sharing data through the Digital Economy Act 2017 information sharing powers,
- Effectively monitor and report debt data to the GDMF Functional Centre through the Consolidated Data Request (CDR) and other ad hoc reporting requests,
- Commit to building capability, upskilling staff and providing opportunities, supporting the development of a Debt Management Profession.

B.11 More information on managing debt owed to government can be found on [OneFinance](#).

Balance sheet review debt management principles

B.12 Following the government's Balance Sheet Review, and in line with the government's commitments announced in the 2018 Budget, departments and their ALBs should also:

- report on key performance measures in their debt management strategies through the Consolidated Data Returns (CDRs) and annual review
- apply the risk management framework on debt developed by Cabinet Office, capturing current and future risks, and report on risk management
- apply the performance management measures set out below to improve the management of overdue debt owed to government
- base debt collection measures on financial year-end forecasts for overdue debt, write offs and remissions
- additional debt metrics on overdue debt in organisational CDRs (as detailed in CDR guidance) to help tackle the challenges on overdue debt and track all overdue debt

Debt Management in Managing Public Money and Consolidated Budgeting Guidance

B.13 The management of debt must be in accordance with [Managing Public Money](#) and the budgetary framework:

- The budgetary framework ensures that departments and other central government bodies have good incentives to manage their business well, to prioritise across programmes, and to obtain value for money – this should include robust debt management.

- The budgeting policies and purpose of control totals apply all to areas of a department's budget including debt owed to government. Chapters 3, 4 and 8 of this document specifically address debt.
- [Managing Public Money](#) sets out how to handle public funds with probity and in the public interest. All aspects of the guidance should be considered however in addition to the main chapters, the key areas from a debt management perspective are:
 - Box 3.1 Standards expected of the accounting officer's organisation
 - Box 4.5 Essential features of systems for collecting sums due
 - Box 4.8 Factors to consider when planning policies or projects
 - Annex 2.2 Delegated authorities
 - Annex 4.9 Fraud
 - Annex 4.10 Losses and write offs
 - Annex 4.11 Overpayments

Guidance on Research and Development under ESA 10

Introduction

- C.1 This annex provides further guidance to help assess whether expenditure meets the ESA10 definition of Research and Development (R&D) for budgeting and national accounts purposes. Appendix 1 provides a decision tree on capitalising R&D costs that is provided for departmental accounting and budgeting purposes. Appendix 2 provides details of activities that are to be included or excluded as R&D.
- C.2 Expenditure that is currently capitalised under IFRS (International Financial Reporting Standards) for in-year accounting should be capitalised and depreciated in budgets and national accounts. Expenditure that does not meet the criteria for capitalisation under IFRS but fits with the ESA10 definition of R&D will be treated as an expense in departmental accounts and as capital within budgets.
- C.3 Under [ESA10, section 3.82](#), R&D is defined as:
“Creative work undertaken on a systematic basis to increase the stock of knowledge, and use of this stock of knowledge for discovering or developing new products, including improved versions or qualities of existing products, or discovering or developing new or more efficient processes of production”¹
- C.4 This definition of R&D is based upon and viewed as equivalent to the definition of R&D in the [OECD 2015 Frascati Manual](#), Chapter 2. Clarifications include:
- ‘creative work undertaken on a systematic basis to increase the stock of knowledge, and use of this stock of knowledge...’ should be interpreted to mean ‘and/or’. That is, all R&D should be included that meets either or both of the conditions in this definition
 - in addition, the term ‘product’ in this definition should be widely interpreted to include a good or a service; all R&D that underpins policy development, design and implementation should be included under this definition
-

- the term R&D covers three types of activity: (a) Basic research (b) Applied research (c) Experimental development

C.5 It may be helpful to note that there are five criteria to help identify R&D. The activity must have elements of all of these:

- 1 aimed at new findings (**novel**). This includes acquiring new knowledge directed primarily towards a specific aim or objective. It also encompasses experimental development projects, aimed at creating knowledge in support of the development of new concepts and ideas related to the design of new products or processes
- 2 based on new concepts or ideas with the objective of improving on existing knowledge (**creative**). This includes R&D to improve methods or ways of doing things
- 3 uncertain about its final outcome (**uncertain**)
- 4 systematically performed. R&D is conducted in a planned way, with the process and outcomes documented (**systematic**) and
- 5 lead to results that have the potential to be reproduced (**transferable and/or reproducible**).

All R&D that serves the purposes of a department's objectives should be included in R&D capital

Staff

C.6 The cost of staff who conduct or manage R&D should be included within R&D expenditure. Programme management offices that solely (or mostly) provide support for running R&D programmes should also be included.

Data collection

C.7 Data collection and surveys solely or primarily conducted as part of the R&D process should be included as R&D. However, data collected for other or general purposes for example, the collection of unemployment statistics, the collection and reporting of management information for annual reporting are to be excluded.

Scientific and technical information

C.8 Scientific and technical information services maintained predominantly for the dissemination and publication of R&D are to be included. However, the activities of central communications, Press Office etc. should be excluded.

Testing

C.9 Activities to devise new or improved methods of testing are to be included. However, organisations and laboratories whose main purpose is to test products and verify standards are met should be excluded.

Experimental development

- C.10 The ESA10 definition of R&D includes experimental development. If work relating to the development of new products or processes fits the definition and criteria to be classified as R&D (as defined in this document), then it should be included as R&D expenditure.

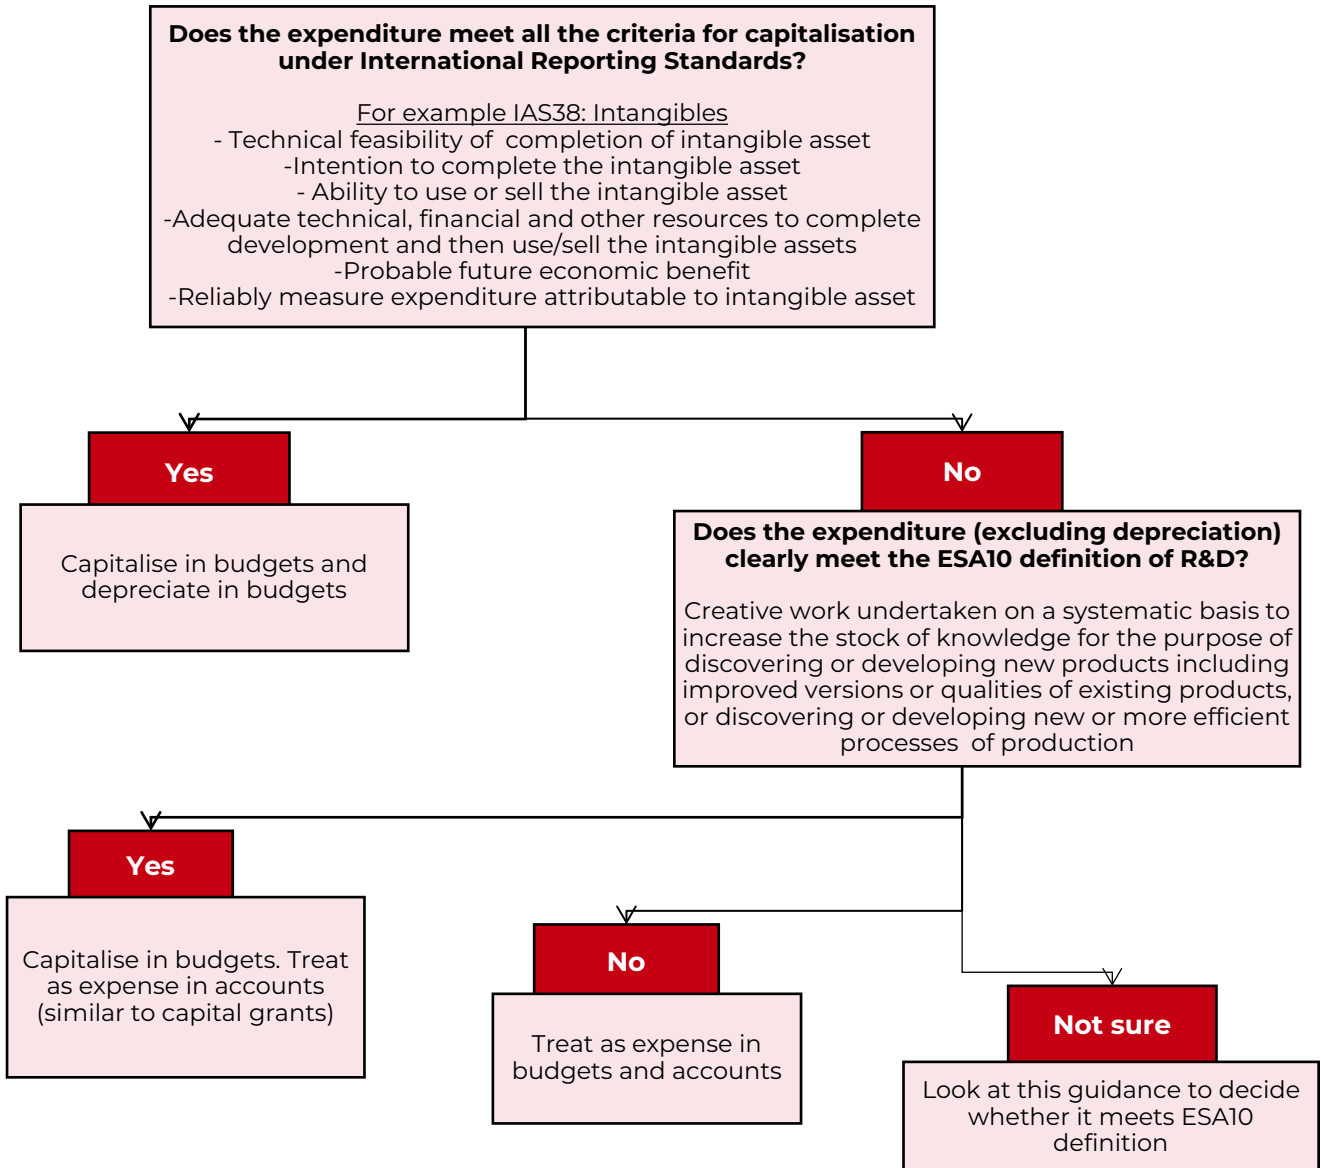

Small Business Research Initiative (SBRI)

- C.11 If work on projects commissioned through the SBRI fits the definition and criteria to be classified as R&D (as outlined in this document), then it should be included as R&D expenditure.

Apportioning costs for partner organisations and internal units

- C.12 Where a considerable proportion (materially all) of a partner organisations or in-house units activities are R&D related, the full budget of the organisation or unit should be included. In other cases, these activities should be distinguished, and costs apportioned where it is administratively sensible to do so. Departments should take a pragmatic approach when apportioning costs.

Chart C.1: Decision tree for capitalising research and development costs in budget.

- C.13 If after having followed the decision tree departments are still unclear as to whether or not expenditure meets the ESA10 definition of R&D, they should consult their HM Treasury spending team.
- C.14 In all instances, the treatment in Estimates is the same as the treatment in budgets. Depreciation is only recognised in budgets on assets recognised in Accounts.

Activities to be included or excluded in R&D Capital

Box C.1: Activities to be included as R&D

Research performed in-house, including by in house research units (intramural R&D)

Research commissioned from an external organisation (extramural R&D)

Resources needed to deliver and manage research, as appropriate, including;

- People who conduct or manage R&D
- Programme management offices that solely (or mostly) procure and manage R&D contracts

Policy (or programmatic) evaluations that employ experimental or quasi-experimental methods. Evaluations conducted by skilled professionals using a rigorous methodology meet the criteria for inclusion²

Data collection and surveys solely or primarily conducted as part of the R&D process

Scientific and technical information services predominantly for the dissemination and publication of R&D

Feasibility studies on research projects as part of R&D³

² Frascati Manual 2015 Section 2.119 – See Annex E for link

³ Frascati Manual 2015 Section 2.114

Box C.2: Activities to be excluded as R&D

Routine data collection and surveys

Routine monitoring and surveillance

Scientific and technical information services

Feasibility studies (for example an investigation of a proposed engineering project using existing techniques to provide additional information before deciding on implementation, is not R&D)³

Policy related activities, generally carried out by policy professionals, for example, provision of policy advice, relations with the media etc. should be excluded. (However, research activities aimed at providing decision makers with a thorough knowledge about social, economic or natural phenomena should be included in R&D)⁴

Purely R&D financing activities, for example, central procurement and commercial units, albeit they may help procure some R&D projects

Indirect supporting activities which support R&D but are not undertaken exclusively for R&D, such as payroll, HR departments, canteen services etc.

Costs to be included as R&D

All costs, other than depreciation, within the scope of the ESA10 definition that are directly attributable to R&D activities and can be reliably measured. Grant funding to private sector bodies to undertake R&D activities can be classified as R&D expenditure

Costs to be excluded as R&D

The following costs do not fall within the scope of the ESA10 definition of R&D and should follow the principles laid out in the corresponding chapters of CBG and would score to non-ringfenced RDEL. This would include, but is not limited to -

- Interest receivable as part of financial transaction repayments
- ECLs on financial transactions
- Upfront lease interest recognition as part of the IFRS16 adaptation

⁴ Frascati Manual 2015 Section 2.116 – 2.118

- Dividends received from public corporation
