This document is the complete DASOR Taxonomy, its purpose is to provide a quick reference guide for Investigators to assist in the codification of DASORS either by PDF or on ASIMS. The guide lists each of the taxonomies used within the Findings section of the DASOR, the Findings section is comprised of the Outcome, Cause and Causal Factors and each component must be coded when completing the DASOR.

# **OUTCOME**

	OUTCOIVIL
/ABM/ALI -> Airfield Management -> Air	field
Arrestor/Barriers Availability Degraded	Where an outcome relates to the serviceability of safety barriers on an airfield, such as the RHAG.
	Where an outcome relates to the degradation or inadequacy of airfield infrastructure, for example the condition of the Air Traffic
Degraded/Inappropriate Infrastructure	Tower or ATM equipment buildings.
Emergency Power Failure	Where an outcome relates to the interruption of an emergency power source feeding essential BM equipment.
Inadequate Lighting (Adequacy)	Where the outcome relates to sub-standard, non-compliant or absent aerodrome lighting.
Inadequate Markings	Where the outcome relates to sub-standard, non-complaint or absent airfield markings.
Inadequate Signage	Where the outcome relates to sub-standard, non-complaint or absent airfield signage.
Power Failure	Where the outcome relates to a loss of power to all or some BM equipment.
/ABM/ALI -> Airfield Management -> Em	ergency Services
	Where the outcome relates to a communication issue between the ATM and airfield emergency services, for example an incorrect
Communication	or absent emergency state message or broadcast.
	Where the outcome relates to a poorly coordinated response to an emergency, for example emergency vehicles proceeding to the
Response Effectiveness	incorrect location on the airfield.
	Where the outcome relates to an inappropriately slow response to an emergency by one or more of the the required emergency
Response Time	vehicles.
/ABM/ALI -> Airfield Management -> Ope	erating Surface
	Where an outcome relates to the degradation of the airfield operating surfaces, such as break up of a runway/taxiway or reduce
Degraded Integrity	PCN.
Excursion	Where an outcome relates to a planned, unplanned or emergency excursion of the operating surface.
	Where an outcome relates to the unapproved use of an operating surface by an aircraft, vehicle or individual, whether intended
Incursion	accidental.
/ABM/ALI -> Airfield Management -> Wil	Idlife Control
Airfield Incursion	Where an outcome relates to wildlife entering an operating surface.
	Where the outcome relates to wildlife interaction with an air system, including domestic animals including birds e.g. horses,
Wildlife Strike	rodents, swarms of insects.
/ABM/ALI -> ATS Provision Error -> Comm	munication
Circuit Information Error	Where the outcome relates to the provision of incorrect information regarding the position or intent of air systems in the circuit.
	Where the outcome relates to either an incorrect clearance issued by a controller or where a clearance has been misheard or
Clearance Error	misinterpreted by the aircrew.
Congestion	Where the outcome is related to an unusually congested circuit and/or radar pattern.
Coordination Error	Where the outcome relates to the incorrect coordination of air systems between controllers.
Congestion	Where the outcome is related to an unusually congested circuit and/or radar pattern.

Essential Calls Error	Where the outcome relates to a missing or incorrect essential radio call, for example a missed landing gear check.
Handover Error	Where the outcome relates to the incomplete or incorrect handover of an air system between controllers.
	Where the outcome relates to incorrect or poor phraseology. This includes poor use of the English language by a non-native
Incorrect ATC English	speaker or directions that were given in a foreign language that was not understood by an English speaking (only) pilot.
Liaison Error	Where the outcome relates to poor, absent or untimely liaison between controllers.
Warning Error	Where the outcome relates to an incorrect or absent warning call.
C/ABM/ALI -> ATS Provision Error -> Ser	vice
	Where the outcome relates to an incorrect or absent avoiding action call, or where the issued avoiding action turn is ineffective
Avoiding Action Error	or inappropriate.
	Where the outcome relates to the incorrect division of attention by a controller, for example a controller missing an essential cal
Division of Attention	due to his or her attention being directed towards another air system at an inappropriate time.
	Where the outcome relates to an excessive controller workload; usually a combination of the number of speaking units on
Excessive Workload	frequency and the complexity of the task.
Incorrect Priorities	An outcome where a controller has incorrectly elected to prioritise a less time-critical or less important task.
Mis-Identification	Where the outcome relates to the controller's mis-identification of an air system.
	Where the outcome relates to incorrectly planning appropriately for an air system, either already on frequency or pre-noted to a
Planning Error	controller.
	Where the outcome relates to a controller having exceeded the limits of their own capacity, resulting in reduced awareness of the
	air picture; usually a combination of the number of speaking units on frequency, the complexity of the task and controller
Reduced Capacity and Awareness	experience.
	Where the outcome relates to either the inappropriate application of the reduced separation rules or a loss of safe separation
Reduced Separation	between 2 or more air systems.
·	Where the outcome relates to a controller failing to maintain a constant scan of all air systems on frequency, usually related to
Scan Breakdown	division of attention and/or incorrect prioritisation.
	For example, incorrectly planning for sufficient 'open' consoles for the task or inappropriate band-boxing of multiple
Sector/Console Management Error	positions/sectors.
, ,	Where an outcome relates to inappropriate sector or controller allocation for a planned air system, for example where the
	intentions have not been fully understood or where the receiving controller is not appropriately trained to conduct the
Track Allocation Error	required task.
Traffic Information Error	Where an outcome relates to incorrect or absent traffic information from a controller to an air system.
C/ABM/ALI -> FOD Exposure -> FOD	
,,	
On Control Surface/Aircraft Skin	Where the outcome was a foreign object interacting with an operating surface such as 'main or tail rotor blade, flap or aileron et
on control ourrace, morare ourr	Where the outcome was a foreign object that was located on the ground in the vicinity of manoeuvring areas or maintenance
On Ground/ASP	facilities.
Other	Where the outcome was a Foreign Object that was located in an area that is not already specified or defined.
C/ABM/ALI -> Oversight/Procedure Erro	
Incorrect Briefing/Outbrief/Debrief	Where the outcome relates to an error in the execution of a brief using endorsed briefing checklists or procedures.
Not Followed	Where the outcome relates to an error in following an endorsed checklist or procedure.

Drocodura Incorrect	Where the outcome relates to the use of a shocklist or procedure that contains arrors or emisions
Procedure Incorrect	Where the outcome relates to the use of a checklist or procedure that contains errors or omisions.
Drocodure Micapplied	Where the outcome relates to use of the wrong procedure for a given set of circumstances due to a knowledge or rule-based
Procedure Misapplied	mistake.  Where an endorsed checklist/process exists and is used but has been superseded by a new version or is out of date for review.
Revision Management	
ATC/ABM/ALI -> Positional Error -> Air	•
	Where the outcome relates to a controller issuing a level or airspace block that is inappropriate given the position of an air system
	This could be due to the controller losing situational awareness, poor controller understanding of the airspace, or a poor position
Altitude/Level Bust	report from the air system.
	Where the outcome relates to an air system failing to maintain or not achieving an altitude or height level they were cleared to
Altitude/Level Deviation	operate at.
	Where multiple air systems operating in the same airspace are assigned, or have selected, levels and/or headings that
	could result or have resulted in a conflict. This could be due to the controller losing situational awareness, poor
Confliction	controller understanding of the airspace, or a poor position report from the air system.
Congestion	For example, where an excessive number or air systems have entered the same area of airspace.
	Where an outcome relates to instructions issued by a controller inadvertently leading an air system to exit the allocated airspace
	due to a misunderstanding of the position of the air system; generally related to the use of segregated airspace. This could be do
	to the controller losing situational awareness, poor controller understanding of the airspace, or a poor position report from the
Excursion	system.
Heading Deviation	Where the outcome relates to an air system failing to maintain or not achieving a heading they were cleared to operate on.
	Where an outcome relates to instructions issued by a controller inadvertently leading an air system to enter controlled or
Incursion	segregated airspace due to a misunderstanding of the position of the air system.
	Where the outcome was that an air system entered notified airspace without appropriate clearance following instructions issued
Infringement	by a controller due to a misunderstanding of the position of the air system. (Controller induced occurrence)
ATC/ABM/ALI -> RPAS -> Mission Plan	ning
En-Route Procedures	
Pre-Flight	
ATC/ABM/ALI -> RPAS -> Weapons Coi	ntrol
Clearance Error	Where the outcome relates to release of a weapon without appropriate clearance.
ATC/ABM/ALI -> Technical Fault -> Tec	hnical Fault
	Outcome caused by any ATC equipment failure for equipment that has been correctly manufactured, maintained and operated
Technical Fault	IAW maintenance instructions.
Air Operations -> Degraded Aircraft In	tegrity -> Item Detached from Aircraft
Attached Loads	Where the outcome relates to the detachment of an attached load, this may include those that are attached to hard points.
Carry On Items	Where the outcome relates to the loss overboard or detachment of items brought on to the aircraft by passengers or crew.
Integral Component	Where the outcome relates to the detachment of a component that is normally installed or fitted securely to the aircraft.
Observations	Where the outcome relates to an item being seen to have detached from either the subject aircraft or another air system.
Temporary Load	Where the outcome relates to the loss or detachment of a temporary or underslung load.
	ental Conditions -> Landing Visibility Decrease
Brownout	Where the outcome relates to a restriction in visibility due to sand or dust in the air.
Diownout	where the outcome relates to a restriction in visibility due to sail a or dust in the all.

	Where the outcome relates to degraded visibility due to OPSEC/use of NVG goggle and light flares on the ground. This is theatre
Red Illumination	specific where lighting levels are set at below 10MLX.
	Where the outcome relates to a reduction in visibility due to excessive glare from projected information within the Helmet
Visual Acuity	Mounted Display or from an excess of lighting near the intended landing area.
Whiteout	Where the outcome relates to a restriction in visibility due to snow, overcast cloud or fog. Disorientation may also be included.
ir Operations-> Degraded Environmen	tal Conditions -> Natural Operating Factor
Abrasion	Where the outcome was the scraping or wearing away of a surface layer of material or item of equipment.
Accretion	Where the outcome was the gradual accumulation of additional layers or matter, e.g. Ice accretion.
Aquaplaning	Where the outcome was an uncontrollable slide on a wet surface.
Contamination	Where the outcome was the pollution of a substance due to the environment, e.g. rain.
Hail Damage	Where the outcome was damage due to showers of frozen rain.
Icing	Where the outcome was the formation of ice on a surface or piece of equipment.
Lightning Strike	Where the outcome was a lightning strike caused by an electrical storm.
Solar Damage	Where the outcome was damage due to sun exposure.
Visibility Decrease	Where the outcome relates to a decrease in the distance that can be seen as determined by light and weather conditions.
	Where the outcome relates to wildlife interaction, including domestic animals other than birds e.g. horses, rodents, swarms of
Wildlife Strike	insects.
Wind Effect	Where the outcome relates to the general wind strength or behaviour e.g. gusting.
ir Operations -> Emergency Procedure	s -> Aircraft Escape
Accidental Canopy Jettison	Where the outcome relates to the accidental jettisoning of an aircraft canopy.
Ejection	Where the outcome was that the crew exited the aircraft by using the ejection seat.
Ground Egress/Evacuation	Where the outcome was that the crew and/or passengers exited the aircraft under emergency conditions whilst on the ground.
	Where the outcome was that the crew were unable to recover an emergency situation and were forced to exit the aircraft whilst
In Flight Abandonment	airborne (non-ejection seat).
ir Operations -> Emergency Procedure	s -> Diversion/Deviation
	Where the outcome was that an aircraft is forced by an external actor (e.g. intercepting aircraft) or technical malfunction to
Forced	deviate from the intended flight path or to land at an alternative location.
Gilding Landout	Where the outcome relates to a glider landing outside of the Designated Landing Area.
	Where the outcome was that an aircraft deviates from an intended flight path either unintentionally or because of environments
Unplanned	factors precluding the safe operation of the aircraft, including a change of arrival airfield.
ir Operations -> Emergency Procedure	s -> Fire/Smoke/Fumes/Explosion
Explosion	Where the outcome was a violent shattering or blowing apart of an item or equipment.
•	Where the outcome was a process in which substances combine chemically with oxygen from the air and typically give out bright
Fire	light, heat, and smoke; combustion or burning.
Smoke/Fumes	Where the outcome was the physical presence of smoke or fumes eg within a cockpit, cabin, compartment or workspace.
ir Operations -> Emergency Procedure	
Engine Shutdown	Where the outcome was the shutdown (elective or automatic) of an engine.
Power Loss	Where the outcome relates to the loss of power from a gliding launch winch resulting in a launch failure
Reduced Power	Where the outcome was a reduction in the power available (either automatic or elective) of an engine.

Winch Launch Failure	Where the outcome relates to a winch cable break or weak link break resulting in a launch failure.
Winch Operator Error	Where the outcome relates to the incorrect operation of a gliding launch winch resulting in a launch failure.
Air Operations -> Emergency Procedures ->	Physiological
G-LOC	Where the outcome was G induced loss of consciousness.
Нурохіа	Where the outcome relates to a deficiency in the amount of oxygen reaching the body's tissues.
Illness	Where the outcome relates to the illness of the aircrew or passengers.
Loss of Pressurisation	Where the outcome relates to the effect on aircrew or passengers of a loss of pressurisation.
Air Operations -> Environmental Conditions	s -> Natural Operating Factor
Sinking Air	Where the outcomes relates to the effect of sinking air on an air system.
Birdstrike	Where the outcome relates to a Birdstrike and wildlife control was not a factor.
Air Operations -> FOD Exposure -> FOD	
	Where the outcome was a foreign object that was located in any part of the aircraft other than the cockpit or engine, e.g. an
In Aircraft	equipment compartment or bay.
In Cockpit/Cabin	Where the outcome was a foreign object that was located in the cockpit or cabin only.
In Engine/Lift Fan	Where the outcome was a foreign object interacting with an engine, lift fan, engine bay or nacelle.
On Control Surface/Aircraft Skin	Where the outcome was a foreign object interacting with an operating surface such as 'main or tail rotor blade, flap or aileron etc.
on control surface/Aircraft skiil	Where the outcome was a foreign object that was located on the ground in the vicinity of manoeuvring areas or maintenance
On Ground/ASP	facilities.
Other	Where the outcome was a foreign object that was located in an area that is not already specified or defined.
Air Operations -> Loss of Safe Separation ->	
apa ara a ara ara ara ara ara ara ara ar	Where the distance and/or relative positions and speed have been such that the safety of the aircraft involved may have been
	compromised between co-operating aircraft e.g. during formation flying, affiliation training, air refuelling, air combat training or
Co-operating	other exercises where co-operation is intended.
	Where the distance and/or relative positions and speed have been such that the safety of the aircraft involved may have been
	compromised in all instances where no co-operation was planned or intended by either party. Liaison to separate activities by tim
Non co-operating	or geography does not count as co-operation.
Air Operations -> Loss of Safe Separation ->	Automatic Ground Collision Avoidance System (AGCAS)
AGCAS Activation	Where the outcome was an activation of the Automatic Ground Collision Avoidance System (AGCAS).
Air Operations -> Loss of Safe Separation ->	CFIT
	Where the outcome was a collision between an air system and structure whilst airborne where the pilot remained in control of the
Structure	air system throughout the event.
	Where the outcome was a collision between an air system and the ground where the pilot remained in control of the air system
Surface	throughout the event.
	Where the outcome was a collision between an airborne air system and ground object (e.g. moveable objects and terrain features
Surface Based Object (obstruction)	such as trees) where the pilot remained in control of the air system throughout the event.
Air Operations -> Loss of Safe Separation ->	Collision (Ground/Hover Manoeuvring)
Aircraft	Where the outcome was a ground collision between 2 or more aircraft.

Ground Equipment	Where the outcome was a ground collision between an aircraft and a piece of ground equipment.
Personnel	Where the outcome was a collision between a manoeuvring aircraft and 1 or more people.
Structure eg Hangar	Where the outcome was a collision between a manoeuvring aircraft and an airfield structure.
Terrain	Where the outcome was a collision between a ground manoeuvring aircraft and a terrain feature (e.g. ditch or bank)
Vehicle	Where the outcome was a ground collision between a manoeuvring aircraft and a vehicle.
ir Operations -> Loss of Safe Separation -	> Mid Air Collision (MAC)
	Where an unintended in-flight contact between co-operating aircraft has been made e.g. during formation flying, affiliation
Co-operating	training, air refuelling, air combat training or other exercises where co-operation is intended.
	Where an unintended in-flight contact has been made for all instances where no co-operation was planned or intended by either
Non co-operating	party. Liaison to separate activities by time or geography does not count at co-operation
ir Operations -> Loss of Safe Separation -	> Near CFIT
	Where the outcome was a near miss with a ground structure whilst airborne where the pilot was in control of the aircraft
Structure	throughout the event.
Surface	Where the outcome was a near miss with the ground where the pilot was in control of the aircraft throughout the event.
	Where the outcome was a near miss with a ground object whilst airborne where the pilot was in control of the aircraft throughou
Surface Based Object (obstruction)	the event.
ir Operations -> Loss of Safe Separation -	> TCAS-RA
Confliction	Where the outcome was a loss of safe separation that resulted in a TCAS alert to avoid collision.
Erroneous Warning	Where the outcome was a spurious TCAS alert that did not correspond to an actual loss of safe separation.
ir Operations -> Loss of Safe Separation -	> UFIT
	Where the outcome was a collision between an air system and structure whilst airborne where the pilot was not in control of the
Structure	air system throughout the event.
	Where the outcome was a collision between an air system and the ground where the pilot was not in control of the air system
Surface	throughout the event.
	Where the outcome was a collision between airborne air system and ground object (e.g. moveable objects and terrain features
Surface Based Object (obstruction)	such as trees) where the pilot remained in control of the air system throughout the event.
ir Operations -> Oversight/Procedure Erro	or -> Aircraft Documentation/IT
	Where the outcome relates to an aircraft being accepted and operated by Aircrew personnel, without the correct Aircrew
Not Signed For	personnel signatures in the Aircraft Documentation/IT.
ir Operations -> Oversight/Procedure Erro	
· · · · · · · · · · · · · · · · · · ·	When the outcome relates to a task being conducted in error, by personnel who are not qualified, authorised, 'in date for current
Authorisation Error/Exceedance	or the tasking conducted exceeded what was originally authorised.
Supervision Error	When the outcome relates to an error that was made as a result of a task being incorrectly supervised or a lack of supervision.
ir Operations -> Oversight/Procedure Erro	
Incorrect Briefing/Outbrief/Debrief	Where the outcome relates to an error in the execution of a brief using endorsed briefing checklists or procedures.
Not Followed	Where the outcome relates to when an endorsed briefing checklist or procedure was not followed.
Procedure Incorrect	Where the outcome relates to the use of a checklist or procedure that contains errors or omisions.

Procedure Misapplied mistake.  Revision Husbandry Where an endorsed checklist/process exists and is used but has been superseded by a new version or is out of date for review.  Air Operations -> Positional Error -> Airspace  Altitude/Level Bust Where the outcome was a deviation from ATC cleared altitude. (> 300' /> 200' in RVSM airspace)  Altitude/Level Deviation Where the outcome was a minor deviation from cleared altitude (< 300'/< 200' in RVSM airspace)  Excursion Where the outcome was where the aircraft exited from a cleared area of airspace without prior ATC clearance.  Heading Deviation Where the outcome was an aircraft deviating from an ATC cleared heading/track.  Where the outcome was that the air system entered notified airspace without appropriate clearance, or under conditions outside of the given clearance. (Aircrew induced occurrence)  Air Operations -> Positional Error -> Navigation  Where the outcome was a navigational error made as a result of aircraft navigation equipment mismanagement (e.g. Incorrectly entered information)  Where the outcome was as a result of system error that caused the crew to believe themselves to be in the correct location but in reality they weren't.  Timing Where the outcome was as a result of not meeting time restriction imposed by orders or ATC. Unsafe Fuel Transfer Where the outcome relates to an unsafe transfer of fuel between aircraft during Air to Air refuelling.  Air Operations -> Specialist Activity -> Air Delivery (non-weapon)  Unsafe Cargo Drop Where the outcome was an equipment malfunction/procedural occurrence that lead to a MALDROP Unsafe Para Drop Where the outcome was an event that lead to abnormal para drop whether causing injury or not.  Air Operations -> Systems Mismanagement -> Fuel Battery Failure (RPAS) The failure of the battery affecting the ability of the RPAS to function. Contamination Where the outcome was the pollution of fuel with another substance e.g. with water Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel. Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed. Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent. Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft operational Limit Exceeded		Where the aircraft relates to an unsafe formation of /on aircraft (either with the tanker and recipient or co-operating recipients)
Air Operations -> Specialist Activity -> Air Delivery (non-weapon)  Unsafe Cargo Drop Where the outcome was an equipment malfunction/procedural occurrence that lead to a MALDROP Unsafe Para Drop Where the outcome was an event that lead to abnormal para drop whether causing injury or not.  Air Operations -> Systems Mismanagement -> Fuel  Battery Failure (RPAS) The failure of the battery affecting the ability of the RPAS to function.  Contamination Where the outcome was the pollution of fuel with another substance e.g. with water  Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel.  Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent.  Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft operational Limit Exceeded  Operational Limit Exceeded	Unsafe Formation	during Air to Air refuelling.
Unsafe Cargo Drop Where the outcome was an equipment malfunction/procedural occurrence that lead to a MALDROP Unsafe Para Drop Where the outcome was an event that lead to abnormal para drop whether causing injury or not.  Air Operations -> Systems Mismanagement -> Fuel  Battery Failure (RPAS) The failure of the battery affecting the ability of the RPAS to function.  Contamination Where the outcome was the pollution of fuel with another substance e.g. with water Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel.  Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent.  Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Unsafe Fuel Transfer	Where the outcome relates to an unsafe transfer of fuel between aircraft during Air to Air refuelling.
Unsafe Para Drop Where the outcome was an event that lead to abnormal para drop whether causing injury or not.  Air Operations -> Systems Mismanagement -> Fuel  Battery Failure (RPAS) The failure of the battery affecting the ability of the RPAS to function.  Contamination Where the outcome was the pollution of fuel with another substance e.g. with water  Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel.  Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent.  Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Air Operations -> Specialist Activity -> Air De	livery (non-weapon)
Air Operations -> Systems Mismanagement -> Fuel  Battery Failure (RPAS) The failure of the battery affecting the ability of the RPAS to function.  Contamination Where the outcome was the pollution of fuel with another substance e.g. with water Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel. Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent. Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Unsafe Cargo Drop	Where the outcome was an equipment malfunction/procedural occurrence that lead to a MALDROP
Battery Failure (RPAS)  Contamination  Where the outcome was the pollution of fuel with another substance e.g. with water Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel. Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent. Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Unsafe Para Drop	Where the outcome was an event that lead to abnormal para drop whether causing injury or not.
Battery Failure (RPAS)  Contamination  Where the outcome was the pollution of fuel with another substance e.g. with water Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel. Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent. Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Air Operations -> Systems Mismanagement -	-> Fuel
Contamination Where the outcome was the pollution of fuel with another substance e.g. with water Incorrect Fuel Type Where the outcome relates to the use of the incorrect type or specification of fuel. Incorrect Quantity Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent.  Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.		
Incorrect Quantity  Jettison  Mismanagement  Where the outcome relates to the wrong amount of fuel being calculated, added or removed.  Where the outcome relates to the jettison of fuel, either elective or inadvertent.  Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft operational Limit Exceeded  Operational Limit Exceeded		
Jettison Where the outcome relates to the jettison of fuel, either elective or inadvertent.  Mismanagement Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Incorrect Fuel Type	Where the outcome relates to the use of the incorrect type or specification of fuel.
Mismanagement  Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.  Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft system.	Incorrect Quantity	Where the outcome relates to the wrong amount of fuel being calculated, added or removed.
Air Operations -> Systems Mismanagement -> Systems Operation  Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft operational Limit Exceeded system.	Jettison	Where the outcome relates to the jettison of fuel, either elective or inadvertent.
Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft Operational Limit Exceeded system.	Mismanagement	Where the outcome relates to the incorrect assessment of fuel quantities required for a specific mission or task.
Where the outcome relates to an operator either inadvertently or electively breaching the operational parameters of an aircraft Operational Limit Exceeded system.	Air Operations -> Systems Mismanagement -	-> Systems Operation
Operational Limit Exceeded system.		
	Operational Limit Exceeded	

### Air Operations -> Technical Fault -> Technical Fault

	Failure of aircraft or airborne equipment that was correctly manufactured, maintained and operated; causing or contributing to
Technical Fault	occurrence during the air system's operation.
r Operations -> Unintended Consequence	ce -> Unintended Effect
Disturbance	For example, when an aircraft landing has caused a disturbance to 3rd parties.
Downwash	Where the outcome relates to the downward deflection of an airstream by an aircraft wing or helicopter rotor blade.
EM Radiation	Where the outcome relates to the inadvertent emission of energy as an electromagnetic wave e.g. radar painting.
Jetwash	Where the outcome relates to the turbulence that forms behind an aircraft as it passes through the air.
Noise	Where the outcome relates to aircraft noise that has (usually) resulted in a distraction or 3rd party disturbance.
Propwash	Where the outcome relates to the disturbed mass of air (normally pushed aft) by the propeller of an aircraft.
Vibration	Where the outcome relates (normally) in an increase in vibration levels or change in harmonic.
r Operations -> Unsafe Aircraft Configur	ation -> Ordnance/Role Equipment/USL
Inadvertent Release/Jettison	Where the outcome relates to an unintended loss of an item of ordnance, role equipment or underslung load.
	Where the outcome relates to the effect of the item of ordnance, role equipment or underslung load which results in a decrease
Unsafe Carriage	overall platform safety.
	Where the outcome relates to the release or jettison of ordnance, role equipment of an underslung load (usually elective) which
Unsafe Release/Jettison	has been carried out outside of directed limitations or procedures.
r Operations -> Unsafe Aircraft Handlinន្	g (Air) -> Approach
	Where the outcome was that the aircraft was not appropriately configured for the required landing type (CTOL/Slow
Incorrect Configuration.	Landing/Vertical Landing).
Missed Approach	Where the outcome was that the pilot executed a go around
	Where the outcome was that the aircraft was not appropriately configured at the correct approach speed, azimuth or glideslope
Unstable Approach	a specified altitude.
r Operations -> Unsafe Aircraft Handlin្	g (Air) -> Control of Aircraft
	Where the outcome relates to an elected control input that has resulted in movement or operation of the aircraft, systems or
Abrupt Manoeuvre/Overcontrol	equipment, outside of normal parameters.
Aircraft Overstress	Where the outcome was that the G Limitations of the aircraft are exceeded.
Control restriction	Where the outcome was that the pilot was unable to move the aircraft controls freely or to their fullest extent.
	Where the outcome relates to an inability to conduct or complete an intended manoeuvre because of a restriction in/insufficien
Insufficient/Undercontrol	range of control or insufficient power being available.
Lost GPS (RPAS)	Loss of GPS signal resulting in the method of flight changing from autonomous to controlled flight.
Pilot Induced Oscillation	Where the outcome was that the pilots control inputs caused an increasing overcontrolling oscillation in any flight parameter.
Spin/Loss of Control	Where the outcome was that the pilot was no longer in control of the aircraft and normal flight profile was lost.
	Where the outcome was a loss of lift, and therefore altitude, as a result of insufficient airspeed of pulling excessive G at slow
Stall	airspeeds.
Uncommanded Manoeuvre	Where the outcome was an aircraft manoeuvre that was not as a direct result from a control input.
r Operations -> Unsafe Aircraft Handling	g (Air) -> Landing
Barrier Engagement	Where the outcome was that the pilot utilise the barrier as a measure to prevent runway overrun.
Cable Engagement	Where the outcome was that the pilot utilise the arrestor cable as a measure to prevent runway overrun/excursion.

	Where the outcome relates to an aircraft touching down at a point further along the runway than was originally intended. This
Deep Landing	term is also known as a 'long landing'.
Ditching	Where the outcome relates to the an elective or forced landing on water.
Ground Loop	Where the outcome relates to a rapid rotation of an aircraft in the horizontal plane (yaw axis) whilst on the ground.
Hazardous Landing	A general term where the outcome relates to a landing where an increased level of risk was associated with its execution.
Heavy/Hard Landing	Where the outcome was that the aircraft exceeded the landing G limit.
Overshoot	Where the outcome was that the pilot initiated a go around.
Precautionary Landing	Where the outcome relates to an elective yet unintended landing of an aircraft as a result of the occurrence.
Runway Excursion	Where the outcome was that the aircraft departed the landing surface other than overrunning the end. (e.g. left or right)
Runway Overrun	Where the outcome was that the aircraft failed to safely land and stop before the end of the landing surface.
Undershoot	Where the outcome was that the aircraft landed short of the intended landing surface.
Unplanned Recovery (RPAS)	A landing that was not intended or planned.
Wake Turbulence	Where the outcome was that an aircraft experiences turbulence from the wake of the aircraft in front.
Wing Drop	Where the outcome relates to a glider wing dropping, including striking the ground, during landing.
ir Operations -> Unsafe Aircraft Handlin	
Deviation from clearance	Where the outcome relates to an RPAS deviating from cleared airspace as a result of a lost control link.
No deviation from clearance	Where the outcome relates to a loss of RPAS control link but no deviation from cleared airspace took place.
r Operations -> Unsafe Aircraft Handlin	
Aborted Take Off	Where the outcome was that the intended take-off was halted for an unsafe condition.
Failed Launch (RPAS)	An aircraft launch that was attempted but failed.
Hazardous Take Off	A general term where the outcome relates to a take-off where an increased level of risk was associated with its execution.
Incorrect Configuration	Where the outcome was that the aircraft was not appropriately configured for a Short or Conventional Take-off.
<b>0</b>	Where the outcome was that the aircraft departs the side of the runway during the take of role because of a loss of directional
Runway Excursion	control.
,	Where the outcome was that the aircraft failed to get airborne during the take-off roll or failed to stop during an abort before th
Runway Overrun	end of the runway.
Wake Turbulence	Where the outcome was that an aircraft experiences turbulence from the wake of the aircraft in front.
Wing Drop	Where the outcome relates to a glider wing dropping, including striking the ground, during take-off.
	ng (Ground) -> Aircraft Ground Handling
Handling	Where the outcome relates to the movement, taxiing or positioning of an air system whilst on the ground.
Loading	Where the outcome was that an aircraft was incorrectly loaded and that resulted in compromised aircraft safety.
	Where the outcome relates to either a marshalling signal being missed, ignored or incorrectly given whilst the aircraft is being
Marshalling	manoeuvred on the ground.
	Where the outcome relates to the insertion or removal of ground safety pins/blanks or flags whilst the aircraft is being manouvr
Safety Pins/Flags/Blanks	or positioned on the ground. This may include landing gear castor pins.
Towing	Where the outcome relates to the movement or ground handling of an aircraft being towed.
ir Operations -> Unsafe Aircraft Handlin	
Operating Surface Excursion	Where the result was the aircraft departed the designated aircraft operating area.
Sperding Surface Execusion	Where the result was the all orall departed the designated all orall operating area.

Where the result was the aircraft proceeding past the stop bar, traffic light or sign and onto the active runway without ATC **Runway Incursion** clearance. Airworthiness -> Maintenance Management Issue -> Apply Limit Documentation Where the outcome relates to the documentation associated with a MF703 Limitations Log entry. Non-compliant Where the outcome relates to a MF703 Limitations Log entry that was exceeded. Procedure Incorrect Where the procedure to enter or clear a MF703 Limitations Log entry was carried out incorrectly. Where the procedure to enter or clear a MF703 Limitation Log entry was misapplied e.g. certified by non-authorised personnel. **Procedure Misapplied** Airworthiness -> Maintenance Management Issue -> Component Cannibalisation Authorisation Where the cannibalization of a component was either not authorised or authorised by the incorrect organisation or individual. Records Relates to the documentation associated with component cannibalization, e.g. Log Cards, MF746D etc. Where the outcome of the event led to an operational need to cannibalize a component. Requirement Airworthiness -> Maintenance Management Issue -> Configuration Control Where the outcome was a mismatch between two specific standards or levels e.g. installation of components/material at differing **Configuration Error** specification. Airworthiness -> Maintenance Management Issue -> Data Where the outcome was due to the interpretation or conclusions made from data e.g. incorrect completion of tasks from GOLDesp **Analysis Error** forecasts. Where the outcome was due to the collection of data e.g. automated systems or HUMS that collect engine running hours or start Collection cycles. Integrity Where the outcome was due to accuracy of data e.g. GOLDesp records. Airworthiness -> Maintenance Management Issue -> Defect Deferral Documentation Where the outcome relates to the documentation associated with a MF704 Acceptable Deferred Faults Log entry. Where the outcome relates to a MF704 Acceptable Deferred Faults Log entry that was exceeded. Non-compliant Where the procedure to enter or clear a MF704 Acceptable Deferred Faults Log entry was carried out incorrectly. **Procedure Incorrect** Where the procedure to enter or clear a MF704 Acceptable Deferred Faults Log entry was misapplied e.g. certified by nonauthorised personnel. **Procedure Misapplied** Airworthiness -> Maintenance Management Issue -> Extension Where the outcome relates to the documentation associated with an extension to Scheduled Maintenance. Documentation Non-compliant Where the outcome relates to a Scheduled Maintenance extension that was exceeded or overflown. Where the procedure to enter or clear an extension to scheduled maintenance was carried out incorrectly. Procedure Incorrect Where the procedure to enter or clear an extension to Scheduled Maintenance was misapplied e.g. certified by non-authorised personnel. Procedure Misapplied Airworthiness -> Maintenance Management Issue -> Installation **Inadequate Training** Where an item was (often incorrectly) installed and the level of training available to do so was inadequate. Incorrect Installation Where an item was incorrectly installed, including an incorrect item. **Incorrect Tools** Where the incorrect tooling was used to install an item. This may include the incorrect use of the correct tooling. **Airworthiness -> Maintenance Management Issue -> Modification** Incompatible Where a modification has been embodied that is not compatible e.g. as a result of Software or Role Fit.

Not Embodied	Where a modification is available but has not been embodied, this is normally from a physical perspective.
Not Recorded	Where a modification has been either embodied or de-embodied and no work recording action has taken place.
Unauthorised	Where an unauthorised or unsupported modification has been installed.
irworthiness -> Maintenance Manageme	
Monitoring and Control Error	When the outcome relates to a check (usually of documentation) that is incomplete, missing or incorrect.
irworthiness -> Maintenance Manageme	
Enemy Action	The outcome was as a result of activity of a military enemy or combative force.
Natural Environmental Conditions	The outcome was as a result of weather.
Physical Environmental Conditions	The outcome was as a result of sea state, terrain or topography.
irworthiness -> Maintenance Manageme	
Delay	The outcome was a delay to the task or mission.
Planning Error	The outcome of the occurrence was an error to the planning phase of the task or mission.
	The outcome of the occurrence was an error to the scheduling of the task or mission. This may relate to concurrent operations of
Schedule Error	tasks.
irworthiness -> Maintenance Manageme	nt Issue -> Scheduled Task
Forecast	The outcome relates to the forecasting of Scheduled Maintenance, usually as a result of a task being missed.
	The outcome relates to an incomplete scheduled maintenance task. This may be as a result of other factors such as tools,
Incomplete	personnel or documentation or human factors error or violation.
Overdue	The outcome relates to an overflown or overdue scheduled maintenance task.
Records	The outcome relates to the records associated with a scheduled maintenance task. This could be electronic or paper forecasts.
irworthiness -> Maintenance Manageme	nt Issue -> Support to Forward Organisation
Maintenance	The outcome relates to the Operational Support provided e.g. by a depth unit to a forward unit for a specific maintenance task.
Repair	The outcome relates to the Operational Support provided e.g. CAT 3 repair.
irworthiness -> Maintenance Manageme	nt Issue -> Technical Record (Log)
	The outcome related to lapses with the integrity of technical data caused by human error/mistake or the software integrity level
Information Integrity	(SILS) of the software storing the information.
Information Validity	The outcome relates to technical data/records that are incorrect or incomplete.
irworthiness -> Policy Issue -> Directive	
	The outcome relates to the timing of policy directives. This may be as a result of a requirement to comply within an unachievable
Inappropriate Timescales	deadline.
Unclear Direction	The outcome relates to the ambiguity of the rationale or specific detail of policy directives.
irworthiness -> Policy Issue -> Mitigation	Strategy
Disproportionate	The outcome relates to a series of mitigations that are (usually) overly restrictive to the level of risk associated.
Inappropriate	The outcome relates to a mitigation that may be valid but has no relevance or does not mitigate the associated risk.
Ineffective	The outcome relates to a mitigation that does not act as a barrier to the associated risk.
Unaffordable	The outcome relates to a mitigation strategy that which may be effective but is not reasonable to apply.
irworthiness -> Policy Issue -> Publication	ıs
Husbandry Error	The outcome relates to an error with the publications that deal with the anti-deterioration maintenance of equipment.

Inaccuracy	The outcome relates to an error, omision or lack of detail with the publications to support a mission or task.
Insufficient Availability	The outcome relates to the physical availability of publications to support a mission or task.
Airworthiness -> Policy Issue -> Stand	
Ambiguous	Where directed standards or requirements do not specifically detail what needs to be done.
,	Where directed standards or requirements have been issued but either not promulgated or the information has not been
Communication Issue	disseminated.
Contradictory	Where two (or more) standards/requirements (at the same hierarchal level) give contradictory direction.
Inconsistent	Where one or more standards/requirements do not follow a proportionate doctrine or give a mixed message.
Airworthiness -> Policy Issue -> Traini	
SQEP	Where the training policy has provided a level of training that (usually) results in personnel unable to be declared SQEP.
Airworthiness -> Project Managemen	
Contract Error	Where the outcome relates to contracting errors for the acquisition of systems or equipment e.g. contracted delivery dates.
Financing Error	Where the outcome relates to finance errors for the acquisition of systems or equipment e.g. services/items no longer affordable.
Non-compliant	Where the outcome relates to an element that does not meet the acquisition plan of a new system or equipment.
Planning Error	Where the error relates to an error in the acquisition plan for a new system or equipment.
Airworthiness -> Project Managemen	t Issue -> Performance
,	Where the outcome relates to the output or performance of a system or equipment being incorrectly stated. It may refer to an
Specification Error	exceedance.
Under Performance	Where the outcome relates to a system or equipment not performing to the required or specified standard or output.
Airworthiness -> Project Managemen	t Issue -> Procurement
Financing Error	Where the outcome relates to finance errors for the acquisition of systems or equipment.
Insufficient	Where the outcome relates to the acquisition of systems or equipment e.g. not enough kits bought.
Non-compliant	Where the outcome relates to acquisition processes not being followed.
Planning Error	Where the outcome relates to an error in the acquisition requirements or assumptions made.
Airworthiness -> Project Managemen	t Issue -> Risk
	Where the outcome relates to the mis-management of a known risk e.g. not meeting or adhering to the published Safety
Error in Management	Management Plan.
Hazard Not Identified	Where the outcome relates to a new hazard that has been identified as a result of the occurrence.
Not ALARP	Where the outcome relates to the status of the known risk and whether it is As Low As is Reasonably Practicable.
Airworthiness -> Technical Fault -> Te	chnical Fault
	Failure of aircraft or airborne equipment that was correctly manufactured, maintained and operated; causing or contributing to ar
Technical Fault	occurrence during maintenance activity on the air system.
General -> Hostile/Unfriendly Action	-> Kinetic Attack
Air-Air	For example, Air Launched Missile strike whilst airborne.
Air-Ground	For example, Air Launhced missile strike whilst on the ground.
Ground-Air	For example, Ground Launched missile strike whilst airborne.
IED	The outcome was as a result of an Improvised Explosive Device.

Page 12 of 25 Issue 6 AL12 Updated May 2025

Indiract Fire	The outcome was as a result of a projectile's impact whose source was not within direct line of sight
Indirect Fire	The outcome was as a result of a projectile's impact whose source was not within direct line of sight.
Sabotage	The outcome was as a result of a deliberate act to damage or destroy.
Small Arms Fire	The outcome was as a result of projectile impact from a man-portable firearm.
eneral -> Hostile/Unfriendly Action -> Non	
	The outcome relates to an act or attempt, successful or unsuccessful, to gain unauthorized access to, disrupt, or misuse electronic
Cyber	systems or information stored on such systems.
Electronic Warfare	The outcome relates to the use of electromagnetic and directed energy e.g. radar jamming.
	The outcome relates to the 'acquisition' or 'blooming' of an aircraft e.g. by an enemy radar system, laser or light source emanatin
Illumination	from the ground.
eneral -> Organisational Fault -> Organisat	ional Fault
Equipment	A Policy/management issue with air, engineering or administration staff under Service control relating to the Equipment DLoD.
Information	A Policy/management issue with air, engineering or administration staff under Service control relating to the Information DLoD.
Infrastructure	A Policy/management issue with air, engineering or administration staff under Service control relating to the Infrastructure DLoD
Logistics	A Policy/management issue with air, engineering or administration staff under Service control due to the Logistics DLoD.
Organisation	A Policy/management issue with air, engineering or administration staff under Service control relating to the Organisation DLoD.
Personnel	A Policy/management issue with air, engineering or administration staff under Service control relating to the Personnel DLoD.
Policy/Doctrine	A Policy/management issue with air, engineering or administration staff under Service control relating to the Doctrine DLoD.
Training	A Policy/management issue with air, engineering or administration staff under Service control relating to the Training DLoD.
Working Together (Interoperability)	A Policy/management issue with air, engineering or administration staff under Service control relating to the Interoperability DLo
eneral -> Other -> Other	
Other	All other Level 1 General outcomes, not previously specified.
eneral -> Personal Injury -> Personal Injury	<i>,</i>
	Where the outcome was as a result of a body part being caught on/in or between an item or surface. RIDDOR may be required in
Caught In/On/Between	addition to the DASOR.
<u> </u>	Where the outcome was as a result of a bodily contact or exposure with a hazardous substance, including RADHAZ.
Hazard Contact/Exposure	RIDDOR/COSHH reports may be required in addition to the DASOR.
Incorrect Technique	For example, incorrect manual handling. RIDDOR reports may be required in addition to the DASOR.
	Where the outcome was as a result of a slip, trip or fall from or on an object. RIDDOR reports may be required in addition to the
Slip/Trip/Fall	DASOR.
	Where the outcome was as a result of a body part being struck by or hitting an item or piece of equipment. RIDDOR may be
Struck by	required in addition to the DASOR.
round Operations -> Emergency Procedure	•
Explosion	Where the outcome was a violent shattering or blowing apart of an item or equipment.
	Where the outcome was a process in which substances combine chemically with oxygen from the air and typically give out bright
Fire	light, heat, and smoke; combustion or burning.
Indication/Warning	Where the outcome was an indication or activation of a warning system e.g. Fire Warning lights.

Smoke/Fumes	Where the outcome was the physical presence of smoke or fumes e.g. within a cockpit, cabin, compartment or workspace.	
ound Operations -> Failure to maintain	safe separation -> Collision - Involving Aircraft	
Aircraft	Where the outcome relates to the collision of one aircraft into another, whilst being handled or moved on the ground.	
Ground Equipment	Where the outcome relates to the collision between an aircraft and an item of Ground Equipment.	
Personnel	Where the outcome relates to then collision between and aircraft and personnel.	
Structure eg Hangar	Where the outcome relates to the collision of an aircraft with a structure, whilst being handled or moved on the ground.	
Vehicle	Where the outcome relates to the collision of an aircraft with a vehicle, whilst being handled or moved on the ground.	
ound Operations -> Failure to maintain	safe separation -> Collision - Non Aircraft	
Ground Equipment	For example, where the outcome relates to the collision between items of ground equipment.	
Personnel	For example, where the outcome relates to the impact of ground equipment with personnel.	
Structure eg Hangar	For example, where the outcome relates to the impact of ground equipment into a structure.	
Vehicle	For example, where the outcome relates to the impact of ground equipment into a vehicle.	
ound Operations -> FOD Exposure -> FO	D .	
	Where the outcome was a Foreign Object that was located in any part of the aircraft other than the Cockpit or Engine, e.g. an	
In Aircraft	equipment compartment or bay.	
In Cockpit/Cabin	Where the outcome was a Foreign Object that was located in the Cockpit or Cabin only.	
In Engine/Lift Fan	Where the outcome was a foreign object interacting with an engine, Lift Fan, engine bay or nacelle.	
In Open System	Where the outcome was a Foreign Object that was located within an open system.	
	Where the outcome was a foreign object that was located on an operating surface such as 'main or tail rotor blade, flap or aileron	
On Control Surface/Aircraft Skin	etc.	
	Where the outcome was a foreign object that was located on the ground in the vicinity of manoeuvring areas or maintenance	
On Ground/ASP	facilities.	
Other	Where the outcome was a Foreign Object that was located in an area that is not already specified or defined.	
ound Operations -> Maintenance Activi	ty Error -> Aircraft Documentation/IT	
	Where the outcome was an error that relates to aircraft documentation, including associated instructions or software that is not	
Ambiguity	clear and can be misinterpreted.	
	Where the outcome was an error that relates to an error in the correctness of work recording or asset management data, e.g.	
Data integrity	Aircraft structures within GOLDesp/LITS.	
Incomplete	Where the outcome was an error due to gaps within the Aircraft Documentation Set.	
Not signed for	Where the outcome relates to uncertified work, regardless of whether it was physically completed or not.	
	An aircraft was released whilst it was not in an airworthy state. This can elude to aircraft documentation not being completed	
Release of an unairworthy aircraft	and/or checked properly before Aircrew personnel accept the aircraft from Maintenance personnel.	
Signed in Error	Where the outcome relates to work that was certified incorrectly, e.g. for the wrong task or by the wrong person.	
ound Operations -> Maintenance Activi	ty Error -> Fault Diagnosis	
Failed to Isolate Fault	Where the outcome refers to an inability to identify the root of the fault.	
Failed to Isolate Fault Inconclusive Functional Test	Where the outcome refers to an inability to identify the root of the fault.  Where the outcome relates to a functional test that failed to identify or confirm a Technical Fault.	

Inconclusive Operational Test	Where the outcome refers to an operational test that failed to confirm or identify a fault or failure.
System left in Unsafe Condition	For example, where the outcome refers to a system that must be isolated to maintain safety.
<b>Ground Operations -&gt; Maintenance Activity E</b>	rror -> Fuelling
Connection Issue	Where the outcome relates to an error in the connection of fuelling equipment e.g. refuel nozzle to an aircraft.
Contamination	Where the outcome occurred during fuelling and resulted in the pollution of the fuel with another substance.
Incorrect Fuel Type	Where the outcome relates to the use of the incorrect type or specification of fuel.
Incorrect Quantity	Where the outcome relates to the wrong amount of fuel being calculated, added or removed.
Panels/Access Not Secure	Where the outcome relates to fuel panels, covers or caps being unsecured post refuelling.
Spill	Where the outcome relates to the spillage of fuel.
<b>Ground Operations -&gt; Maintenance Activity E</b>	rror -> Installation/Repair
Equipment/Part Missing	Where the outcome refers to a part or item that was not installed upon installation or repair of a higher assembly or component.
	Where the outcome relates to a piece of equipment that was not assembled or installed in accordance with the aircraft document
Incorrect assembly/installation	set.
Incorrect/Unsafe Part	Where the outcome relates to the fitment of an item that is not designed, intended or authorised to be installed in that position.
·	Where the outcome relates to panels, fairings or cowlings that have not been correctly positioned or locked post installation or
Panels/Access Not Secure	repair of a piece of equipment.
Part/Item Damaged	Where the outcome relates to a piece of equipment that was damaged inadvertently during its installation or repair.
	Where any system has been left in an unsafe condition, including pressurised components/hydraulics/explosives etc, e.g. an
System left in Unsafe Condition	electrical system left energised or live post component repair or installation activity.
<b>Ground Operations -&gt; Maintenance Activity E</b>	rror -> Servicing
	Where the outcome relates to the need to change the condition (usually to U/S) of a piece of equipment post an error in the
A/C Component Condition/Serviceability	conduct of scheduled maintenance or flight servicing.
Damage to Aircraft	The Air System suffered damage as a result of an error in a maintenance or flight servicing activity.
Jacking	Where the outcome relates to an error associated with the process of jacking an aircraft.
	Where the outcome relates to a scheduled maintenance or flight servicing activity that was not conducted. This may include
Not carried out	elements of an activity.
	Where the outcome relates to panels, fairings or cowlings that have not been correctly positioned or locked post conduct of
Panels/Access Not Secure	scheduled maintenance or flight servicing activities.
	Where the outcome relates to the replenishment of consumable fluids or gases that has not been conducted in accordance with
Replenishment Error	the aircraft data set.
Safety Pins/Flags/Blanks	For example, when safety flags or orifice blanks have not been removed post a servicing or scheduled maintenance activity.
	For example, when an error has been made an either an incorrect task has been carried out or the correct task conducted, but on
Tasking Error	the wrong aircraft.
Ground Operations -> Oversight/Procedure E	
	When the outcome relates to a task being conducted in error, by personnel who are not qualified, authorised or 'in date for
Authorisation Error/Exceedance	currency'.
Supervision Error	When the outcome relates to an error that was made as a result of a task being incorrectly supervised or a lack of supervision.
Ground Operations -> Oversight/Procedure E	
Incorrect Briefing/Outbrief/Debrief	Where the outcome relates to an issue in the execution of a brief using endorsed briefing checklists or procedures.
micorrect brieffing/Outbrief/Debrief	where the outcome relates to an issue in the execution of a brief using chuoised briefing thethists of procedures.

Not Followed	Where the outcome relates to an issue brought about through failing to follow an endorsed briefing checklist or procedure.
Procedure Incorrect	Where the outcome relates to an issue brought about through failing to follow an endorsed briefing checklist or procedure.  Where the outcome relates to the use of a checklist or procedure that contains errors or omisions.
Procedure incorrect	·
Procedure Micapalied	Where the outcome relates to use of the wrong procedure for a given set of circumstances due to a knowledge or rule-based
Procedure Misapplied	mistake.  Where an endersed shocklist/process exists and is used but has been superceded by a new version or is out of data for review.
Revision Management	Where an endorsed checklist/process exists and is used but has been superseded by a new version or is out of date for review.
ound Operations -> Security Compromised	•
Security Compromised	Where the outcome relates to a break down in the required security barriers, this could be either physical or cyber.
Threat to Aircraft/Equipment	Where the outcome relates to a reduction in the level of physical, this may be perceived or actual.
Threat to Personnel	Where the outcome relates to a reduction in the level of physical, this may be perceived or actual.
ound Operations -> Security Compromised	-> Cyber
Cyber Security Event	Where an attempt to gain access to an unauthorised system, regardless of intent or whether the attempt was successful, occurs.
Data Integrity; Poor / Missing	Where the accuracy and/or completeness of data capture has been compromised.
Incorrect Load	Where the load provision contains incorrect data.
	Where the preservation of data is compromised due to the lack of, or incorrect, machine, wiring, physical computer components
Lack of / Incorrect Hardware	other electronic system.
Lack of / Incorrect Software	Where the preservation of data is compromised due to the lack of, or incorrect, program or other operating information.
	Where the maintainer/user is unable to complete a task and assure that data integrity is not compromised due to unfamiliarit
Lack of / Incorrect training for system	with the system in use.
Unable to Load	Where the ability to load data onto a system is inhibited due to Hardware or Software incompatibility.
ound Operations -> Technical Fault -> Tech	nical Fault
·	Failure of aircraft or airborne equipment correctly manufactured, maintained and operated which has caused or contributed to
Technical Fault	occurrence.
ound Operations -> Unsafe Aircraft Handli	ng (Ground) -> Aircraft Loading
·	Where the outcome relates to items or equipment that has been either loaded or secured in the incorrect pattern or order or
Incorrect Configuration	orientation.
Loading/Off Loading Error	Where the outcome relates to the incorrect loading/unloading of items or equipment.
9.	For example when an aircraft has been overloaded with correctly marked stores or equipment or an item has been incorrectly
Weights/Measures Error	weighed or measured and this has led to an overloaded aircraft.
ound Operations -> Unsafe Aircraft Handli	
•	Where the outcome relates to an aircraft marshaller either giving the wrong signal, failing to give a signal or notice a signal being
Marshalling Error	given.
Parking/Restraint/Hangarage Error	Where the outcome relates to an aircraft that has been incorrectly parked, stowed, secured or lashed down.
Safety Pins/Flags/Blanks	For example, a failure to fit or remove nosewheel castor lock pins or flags.
Towing Error	Where the outcome relates to a towing arm incorrectly fitted or a towing activity incorrectly conducted.
	uipment -> Ground Support Equipment/Vehicle
Defective	Where the outcome relates to a U/S or broken piece of equipment e.g. tractor or huchin.
	which the dutedine relates to a 075 or broken piece of equipment e.g. tractor of machine.

	Where the outcome relates to the conduct of anti-deterioration maintenance (whilst in use or during a period of storage) of
Husbandry/Storage	ground support equipment or vehicles.
	Where the outcome relates to the use of Ground Support Equipment or vehicles in a manner for which they were neither designed
Improper Use	or intended.
	Where the outcome relates to the incorrect conduct and execution of Ground Support Equipment/vehicle scheduled/preventative
Maintenance Error	maintenance or repairs.
Ground Operations -> Vehicle/GSE/Tools/Ed	quipment -> Tools and Equipment
Defective	Where the outcome relates to a U/S or broken tool or piece of test equipment.
	Where the outcome relates to the use, control (by hand) of tools and test equipment. The way in which a tool or piece of
Handling	equipment is used.
	Where the outcome relates to the conduct of anti-deterioration maintenance (whilst in use or during a period of storage) of tools
Husbandry/Storage	and test equipment.

	Where the outcome relates to the use of a tool or piece of test equipment in a manner for which they were neither designed or
Improper Use	intended.
	Where the outcome relates to the incorrect conduct and execution of tool/test equipment scheduled/preventative maintenance or
Maintenance Error	repairs.
Not controlled	Where the outcome relates to use of tools or test equipment outside of Tool Control procedures and principles.

# **CAUSE**

<b>Environmental</b>	-> Airhorne	Particulates
LIIVII OIIIIICIILAI		i ai ticulates

ivironinental -> Airborne Particulate	=5
Abrasion	The occurrence was caused by the process of scraping or wearing something away. E.g. Sand abrasion.
Accretion	The occurrence was caused by the gradual accumulation of additional layers or matter. E.g. Ice accretion.
Chemical Etching	The occurrence was caused by the chemical removal of surface material.
Visibility	The occurrence was caused by the presence of a substance e.g. dust that affected the ability to see or be seen.
nvironmental -> Physical Environme	nt
Bird Activity	The occurrence was caused by the migratory transit or gathering of birds or overflight of nesting areas.
Contamination	The occurrence was caused by the pollution of a substance e.g. rain within a fuel container.
	The occurrence was caused by contact with water e.g. wave strike, water landing, fire hose, waterfall etc. excluding direct
Immersion/Splash	precipitation
Sea State	The occurrence was caused by the associated movement of the fightdeck/ship due to the sea's wave height, period or power.
	The occurrence was caused by the shape of the surrounding land, vegetation and buildings i.e. obstructions, gradient, surface and
Terrain	potential for airborne debris.
	The occurrence was caused by the migratory transit or gathering of wild animals or insects or interaction with /overflight of wild
Wildlife Activity	animals.
vironmental -> Weather	
Changing Weather	The occurrence was caused by an unexpected or unplanned for change in weather, or the rapidity of change.
Clear Air Turbulence	The occurrence was caused by the turbulent movement of air masses in the absence of any visual cues such as clouds
Cold	The occurrence was caused by a low temperature, cold weather or cold environment.
Crosswind	The occurrence was caused by a wind blowing across the direction of travel.
Hail	The occurrence was caused by operating in showers of frozen rain.
Heat	The occurrence was caused by operating in a hot/high temperature.
Humidity	The occurrence was caused by the amount of water vapour in the atmosphere.
lcing	The occurrence was caused by the formation of ice on the surface of the aircraft or system's/equipment's operating surface.
Lightning	The occurrence was caused by lightning flash, strike, or electrical disturbance/interface caused by an electrical storm.
Precipitation	The occurrence was caused by operating in rain, snow, sleet or hail.
Space Weather	The occurrence was caused by the Space environmental conditions.
Tailwind	The occurrence was caused by a wind blowing in the direction of travel; a wind blowing from behind.
Thunderstorm	The occurrence was caused by operating in a thunderstorm not directly attributed to a single lightning strike event.
Turbulence	The occurrence was caused by operating in airflow characterised by chaotic property changes.

Visibility	The occurrence was caused by operating where the distance that can be seen as determined by light and weather conditions has had an effect (usually poor).
Wind	The occurrence was caused by the general wind strength or behaviour e.g. gusting (usually strong).
Wind shear	The occurrence was caused by the general wind strength of behaviour e.g. gusting (usually strong).  The occurrence was caused by a difference in wind speed and/or direction over a relatively short distance.
uman Factors Performance -> Action/Execution	
Cognitive Breakdown	The occurrence was caused by a person(s) lapse in perception, attention or memory.
Control/Handling	The occurrence was caused by a person(s) operation of equipment or aircraft.
F2FP - Following Incorrect Process/Procedure	The occurrence was caused by a person(s) adherence to a series of actions or steps that are incorrect.
	The process/procedure was inappropriate due to ambiguity, factual inaccuracies or poor wording and the outcome occurred as the
F2FP - Inappropriate Process/Procedure	procedure was not followed as intended.
F2FP - Intentional and Unauthorised Deviation	
From a Suitable Process Procedure	A suitable process/procedure was available; however, it was intentionally deviated from without appropriate authority.
F2FP - Undetermined Deviation From Suitable	
Process/Procedure	It is not possible to determine, with certainty, the reasons behind deviations from procedure.
F2FP - Unintentional Deviation From Suitable	
Process/Procedure	A suitable process/procedure was being followed but executed incorrectly.
Human Fatigue	Where Human Fatigue was the cause for taking a particular action or execution of task which resulted in an occurrence.
Operation/Use	The occurrence was caused by a person(s) employing or using an item, system or equipment.
Other	The occurrence was caused by a person(s) or any activity that is not specified within the Level 3 Taxonomy.
Previous synthetic action/decision	Where a previous action made in the simulator triggered an error in the air.
uman Factors Performance -> Cause Undeterm	nined
Cause Undetermined	The occurrence was caused by a person(s) but the detail is unknown and it cannot be determined due to a lack of evidence.
uman Factors Performance -> Decision - Hazaro	d Plan/Mitigation
	The occurrence was caused by a person(s) conclusion or resolution after consideration, with regard to the hazards and/or
Option/Decision Process	mitigation of a specific course of action, e.g. Dynamic assessment or judgement.
uman Factors Performance -> Perception - Situ	
uman ractors remormance -> refeeption - Situ	The occurrence was caused by a person(s) belief (and level of knowledge) that the risks associated with the hazards were
Hazard Assessment	acceptable.
Hazard Awareness	
	The occurrence was caused by a person(s) belief (and level of knowledge) that the hazards were known.
on-Service Control -> Non-Service Control	
Non-Service Control	The occurrence was caused by 3rd Party actions outside of the influence of the MoD.
echnical -> Design/Manufacture	
	The occurrence was caused by a defect, imperfection or blemish that was generated during the equipment or system(s)
Faults/Flaws	design/manufacture stage.
	The occurrence was caused by the use of material that is outside of the documented requirements during the design or
Material Spec	manufacture stage or the original design specification was incorrectly determined.
	The occurrence was caused by the use of a sub-standard or inadequately designed or manufactured system, item or piece of
Not Fit For Purpose/Unsatisfactory Equipment	equipment.

Technical -> Fault Not Positively Determine	ed ed
	The occurrence was caused by a technical fault that cannot be recreated or where a fault exists but cannot be found due to a lack
Fault Not Positively Determined	of evidence.
Technical -> Operation/Performance	
	The occurrence was caused by operation or use outside of the specified maximum parameters for the item, system or piece of
Design limit	equipment.
Failed to Function as Designed	The occurrence was caused by a fault within the part, component or software but no other information is known.
Wear and Tear	The occurrence was caused by the degradation of equipment or components through usage over time.
	The occurrence was caused by the detachment (including partial or loss of torque) of a join/union between a component(s) during
Worked Loose/Disconnected	its use.

#### **Unfriendly/Hostile Action -> Unfriendly/Hostile Action**

	The occurrence was caused by: Hostile- the activity of a military enemy or combative force. Or Unfriendly - the activity of an
Unfriendly/Hostile Action	external actor that affects the safe operation of the aircraft or equipment, e.g. directing a laser at an aircraft.

# **CAUSAL FACTOR**

<b>Environmental Factors -&gt; Natural Enviro</b>	onment
Airborne Particulates	Airborne particulates with the potential to cause effects other than reduced visibility e.g. volcanic ash or sand.
Bird Activity	Relating to the migratory transit or gathering of birds or overflight of nesting areas.
Changing Weather	Unexpected or unplanned for changes in weather, or rapidity of change affecting task
Clear Air Turbulence	Clear-air turbulence (CAT) is the turbulent movement of air masses in the absence of any visual cues such as clouds
Cloud	Where the presence or density of cloud formations has had an effect.
Cold	Where the suitable or systems or kit to operate in a cold climate has impacted the task or mission.
Crosswind	A wind blowing across the direction of travel
Hail	Where operating in showers of frozen rain has had an effect on personnel, systems, mission or task.
Heat	Where operations in a hot/high temperature has had an effect on personnel, systems, mission or task.
Humidity	Where the amount of water vapour in the atmosphere has had an effect on personnel, systems, mission or task.
Immersion/Splash	Contact with water e.g. wave strike, water landing, fire hose, waterfall etc. excluding direct precipitation
Light Levels	The amount of light available (and suitability of) available to complete the mission or task
Lightning	Lightning flash, strike, or electrical disturbance/interface caused by an electrical storm
Precipitation	The effect of rain, snow, sleet or hail has impacted on the task, mission, personnel or equipment.
Sea State	The effect on a work or operating environment due to wave height, period or power.
Space Weather	Where the nature of the Space environmental conditions had an effect on personnel, systems, mission or task.
Tailwind	A wind blowing in the direction of travel of a vehicle or aircraft; a wind blowing from behind.
	The shape or features of the surrounding land and/or vegetation i.e. obstructions, gradient, surface and potential for airborne
Terrain	debris.
	Any effects from a storm with thunder and lightning typically also heavy rain or hail. Effects should not directly be attributed to a
Thunderstorm	single lightning strike event.
Turbulence	Airflow characterised by chaotic property changes.

	Where the distance that can be seen as determined by light and weather conditions has had an effect on personnel, systems,
Visibility	mission or task.
	All wildlife including domestic animals other than birds (note: this is covered by bird activity) e.g. horses, rodents, swarms of
Wildlife Activity	insects
	The effect of the perceptible natural movement of the air, especially in the form of a current of air blowing from a particular
Wind	direction, on personnel, systems, mission or task.
	The effect of a variation in wind velocity occurring along a direction at right angles to the wind's direction and tending to exert a
Wind shear	turning force, on personnel, systems, mission or task.
Environmental Factors -> Workspace	
Air Pressure	The effect of air pressure within the immediate working environment, e.g. Cockpit or hangar.
Configuration/Layout	The impact of the layout of a system or equipment within a workspace, e.g. buttons/switches too close together.
Ergonomics	The impact to a person's ability to conduct tasks efficiently within their working environment e.g. within a Hangar or cockpit.
Life Support	The impact of specialized equipment to maintain essential physical functions, e.g. within a cockpit, hangar, ATC tower or ship.
Lighting	The effect of the arrangement or suitability of lighting within a working environment, e.g. cockpit, hangar, ATC tower or ship.
Manoeuvring Forces in Flight	Where the momentum generated by aircraft manoeuvres has an effect on personnel, systems, equipment, task or mission.
Manoeuvring Forces on Ship	Where the momentum generated by a ships manoeuvres has an effect on personnel, systems, equipment, task or mission.
	Where the sound generated within a workplace (especially one that is load or unpleasant) has an effect on personnel, systems,
Noise	equipment, task or mission.
Safety	Where the workspace e.g. cockpit or hangar, has affected the condition of being protected from danger, risk or injury.
Signs/Markings	Where workplace signage or markings are ineffective or incorrect (including position) and has an impact on the event.
	Where the temperature (either hot or cold) within a workspace has a direct effect on personnel, equipment, system, task or
Temperature	mission.
	Where the ventilation (most likely inadequate but can be too much) within a workspace has a direct effect on personnel,
Ventilation	equipment, system, task or mission.
	Where the vibration felt by a person, persons, equipment or system, that is generated by the aircraft, ship or vehicle and has an
Vibration	effect.
Visibility	Where the ability to see or be seen is affected by the workspace the task or mission is being conducted in.
Individual Factors -> Competence	
	Where the amount of knowledge or skill acquired over a period of time and exposure to very similar tasks has had an impact on
Experience	the event. This could also refer to a lack of experience.
	Where an understanding of the activity/task/process and any implications or common hazards; as well the theoretical or practical
Knowledge	knowledge of a subject has had an impact on the event. This could also refer to a lack of knowledge.
	Where the ability to do something or demonstrate effective practised performance of the activity/task/process has had an impact
Skills	on the event. This could also refer to a lack of skill.
Individual Factors -> Performance	
Actions/Execution	Where the process of carrying out a plan, order or task is impacted by the performance of the individual.
Compliance	The effect of a person complying with or meeting Regulation or standards. This could also refer to a lack of compliance.
·	The series of actions or steps taken in order to achieve a particular task or mission. This could also reflect a poor decision-making
Decision Making Process	process.
· · · · · · · · · · · · · · · ·	·

Distraction	Where a person's ability to conduct or concentrate on a task or mission is interrupted or provented by compathing also
Distraction	Where a person's ability to conduct or concentrate on a task or mission is interrupted or prevented by something else.
Hazard Awareness/Perception	Where a person's knowledge of the hazard or beliefs associated with it have a direct link to the event being reported.
Lluman Fatigua	Where Human Fatigue was a causal factor when taking a particular course of action or execution of task which resulted in an
Human Fatigue	Occurrence.
Perceived Pressure/Stress	Where a state of mental or emotional strain or tension is experienced as a result of adverse or demanding circumstances.
Performance	The effect of a person's ability to successfully complete a task or mission.
Task Fixation	When an individual concentrates solely on a task or mission and loses awareness of surroundings or wider relevant activity.
	Relates to the number of tasks or actions being undertaken by an individual. Note: determining whether this is too high or low is
Workload	subjective and can only be accurately determined by the individual concerned.
Individual Factors -> Precondition	
	Emotional health issues are subject to confidentiality and the Data Protection Act. Where an individual's emotional health (be it
Emotional State	poor or otherwise) may have played a part, advice should be sought on what should be recorded on the DASOR.
	Health issues are subject to confidentiality and the Data Protection Act. Where an individual's health (be it poor or otherwise) may
Health	have played a part, advice should be sought on what should be recorded on the DASOR.
Learned Behaviours	Where actions follow behaviours learned in the synthetic environment, or on a different aircraft type
Mental Capacity	An individual's ability to cope with the level of concurrent, or speed of change of, activity/information processing.
Physical Capability	An individual's capacity to undertake the physical tasks required e.g. strength or speed
Physical Characteristics	A feature or quality associated with an individual, e.g. height, weight etc.
	This is a more subjective and limited assessment on the ability by which the body perceives and external stimulus, i.e. to see, hear,
Sensory Ability	smell, sense/feel etc, e.g. the potential indicators of a problem.
Non Identified -> Non Identified	
Non Identified	Not positively determined.
Non-Service Control -> Non-Service Control	
	Where an event has occurred that is outside of the ability of the Service to influence. Usually used when a non-MOD Organisation
Non-Service Control	has influenced the event being reported.
Organisation Factors -> Acquisition/Provision	<u> </u>
Equipment	Equipment is either available and not provisioned or is provisioned but not yet in Service.
Finance	Funding availability to progress recommendations or undertake actions e.g. work or training. This may include a lack of.
rindirec	Any issues associated with supporting Information Technology, i.e. hardware, software and connectivity. This does not include IT
IT	integrated on/within platforms
	This relates to the procurement (either in progress or a lack of) of the basic physical and organizational structures and facilities e.g.
Infrastructure	buildings, roads, power supplies and airfield facilities.
iiii asti ucture	The activity of organising and transporting equipment. Primarily used when a piece of equipment relevant to the event is not
Logistics	available or in course of supply.
Personnel	Where (usually a lack of) personnel of the correct specialisation or level of SQEP has a direct link to the event being reported.
Training	Where the level of training provided or sourced is not suitable (usually inadequate) for the task or mission being completed.
<u> </u>	where the level of training provided of sourced is not suitable (askairy madequate) for the task of mission being completed.
Organisation Factors -> Communication	E.g. hotwoon a Unit and Droject Team relating to a specific system or piece of agriculture
Between Organisations on task	E.g. between a Unit and Project Team relating to a specific system or piece of equipment.

	The imparting or exchanging of information by speaking, writing, or using some other medium with personnel not directly involved
Others affected by task or outcome	with the execution of the task. This may include agencies outside of the MOD.
	The imparting or exchanging of information by speaking, writing, or using some other medium with personnel directly involved
Within Organisations on task	with the execution of the task within a unit, Station, ship or ADH.
Organisation Factors -> Culture	
Commercial	This is intended to capture the safety culture within a non-military organisation i.e. industry perhaps putting profit ahead of safety.
	Relates to the lack of commitment to the promotion of an engaged air safety culture from the person(s) who lead or commands a
Leadership	unit, station, ship or ADH including provision of appropriate training, empowerment and responsibility.
	The increased risk due to extenuating circumstances caused by the need to achieve operational tasking, outside of the normal air
Operational	safety envelope.
	Relates to the enduring values and attitudes, regarding Air Safety issues, shared by every member, at every level of an
Safety	organisation.
<b>Organisation Factors -&gt; Information</b>	
	This refers to the promulgation and production of Air specific information such as NOTAMS or (for example) that which is produced
Aeronautical	by No 1 AIDU.
Geographical	This refers to the promulgation and production of information relating to the physical features of an area e.g. Maps.
Marine	This refers to the production and promulgation of Marine information e.g. Admiralty Notices and charts.
<b>Organisation Factors -&gt; Management</b>	
Change	Where the management of a change initiative has an effect.
Program	Where the management of a specific programme has a direct effect.
Safety/Risk	Where Safety or Risk management has a direct effect.
	Where there has been a significant change of management, Organizational Structure or alteration in the Air Safety Management
Structure	System, or where the existing structure has weaknesses that have an effect.
<b>Organisation Factors -&gt; Policy/Doctrine</b>	
	Taught beliefs - the fundamental principles explaining why we do what we do and who we are i.e. our Raison D'être. Formally: AJP-
Doctrine	01, AJP-3, ATP Series, BR1806, Fighting Instructions, FOTI and JDPs.
Policy	An inadequate course or principle of action (non-regulatory policy) that has been adopted by an Organisiation and had an effect.
Requirement	Use of equipment, systems or services outside of the requirement set for which it was originally intended.
Organisation Factors -> Regulation/Ove	rsight
Assurance	Regulator Assurance activity including audits.
Documents	A lack of or inadequate regulation, process or procedure which had an effect.
Guidance	A lack of, or inadequate AMC/verbal/written guidance provided by the Regulator e.g. MAA, CAA, HSE that has had an effect.
Regulation	A rule or directive made and maintained by the Regulator, e.g. MAA, CAA, HSE that has had an effect.
Team/Task Factors -> Communication	
	Weak or lack of exchanging of information by speaking, writing, or using some other medium, between different teams directly
Between teams on task	involved in the task, e.g. between an aircraft and airfield.
Team/Task Factors -> Communication	Weak or lack of exchanging of information by speaking, writing, or using some other medium, between different teams directly

	Weak or lack of exchanging of information by speaking, writing, or using some other medium, between personnel directly involve
Others affected by task or outcome	in the task and others affected by the outcome of the task, e.g. production of NOTAMS etc.
	Weak or lack of exchanging information by speaking, writing, or using some other medium, between personnel directly involved i
Within team on task	the task, e.g. crew briefing or maintenance team briefs.
eam/Task Factors -> Culture	
Leadership	Where the understanding of leaders or a superior's direction has had an impact.
Normal Practice	Where the process has been accepted as the default but not necessarily mandated, documented or confirmed to be suitable.
OpsTempo	Where the rhythm of Operational Tasks or requirement has directly impacted.
Workload	To capture (potentially excessive) under or over working of personnel
Team/Task Factors -> Management	
Change	Where newly introduced or transitionary changes to systems, equipment or roles has had an effect.
Resources/CRM	Assignment of resource, including equipment, SQEP, Compatibility, Suitability etc to tasks
Safety/Risk	Relates to the accepted appetite or awareness of risk and safety considerations.
Structure	Relates to the suitability of an organisational structure or composition of a section or unit, including gapping.
Feam/Task Factors -> Planning	
Aims/Expectations	Were task or mission objectives safe and realistic?
Coordination/Deconfliction	Sufficient awareness and consideration given to other units, assets or personnel.
Information	Relates to the gathering of sufficient data to produce an informed picture.
Team Composition	Involvement of different specialisations or experience/awareness of personnel.
eam/Task Factors -> Process/Task	
Change	Impact of a newly introduced or unfamiliar process.
Clarity	The requirement for, or information relating to the task/mission is ambiguous or not clear.
	The task or mission is beyond the normal capabilities or the personnel or system involved, or the task or mission is overly intricate
Complexity/Difficulty	or complicated.
Irregular Activity	The task or mission is carried out rarely and is unfamiliar to the personnel involved.
Procedures	Usually used when the procedures relating to the task or mission are insufficient, not available or incorrect.
	This relates to an activity that is carried out frequently (often relatively simple), where the familiarity or cognitive thought
Regular/Repetitive Activity	associated with the task is a factor in the event.
eam/Task Factors -> Provision	
	Usually applied when either an insufficient number of items are available to complete a task or mission, or that the equipment
Equipment	available is not suitable.
Finance	Used when the finances available to provide, personnel, services systems or equipment have a link to the event.
	Usually applied when the availability or suitability of IT Services, equipment or software, including a lack of connectivity, have an
IT	impact on the occurrence being reported.
Personnel	Relates to the availability of SQEP/competent personnel to complete a task or mission, e.g. gapping.
Training	When the training available is either insufficient or sub-standard and directly relates to the event taking place.
Feam/Task Factors -> Regulation	
Assurance	The impact of the mandated requirement to make a positive declaration that a task or mission is completed correctly.
Authorisation	The impact of the mandated requirement for specific permission to be granted to a task or mission.
	,

	The impact of the mandated requirement for a specified level of skill, expertise or exposure within a given period, on a task or
Currency/Proficiency	mission.
Documents/Orders	The impact of mandated and prescribed direction or procedures on a task or mission.
Guidance	The impact of regulatory guidance or advice on a task or mission.
Supervision	The impact of the mandated requirement for specified personnel to observe and direct the execution of a task or mission.
chnical Factors -> Aircraft	
Access/Egress	Ease of entering or leaving the Aircraft due to layout, size or shape of the aircraft.
Assembly	The action of fitting together the component parts of a machine or other object.
Configuration	The arrangement of parts or elements in a particular form or combination, e.g. Aircraft set up for dual control
	Relates to physical aspects of the environment and the efficiency with which it is employed, in this case specifically the layout and
Ergonomics	level of comfort of the immediate workspace with a near static operator e.g. seated in pilot's seat or using a particular tool.
Function	Normal function, failure of a function or lack of a function.
	Relates to the identifiability of items within the aircraft such as switches and the aircraft itself such as navigation lights, colour
Identification	schemes and form.
Layout/Space	General layout of the workspace e.g. position of equipment or components within a cockpit.
	Where the quality, integrity and airworthiness of the aircraft from when it was initially assembled and accepted to service has ha
Manufacture	an effect.
Normal Wear and Tear	The accepted degradation of aircraft equipment or components through normal usage over time.
	A measure of the ability of the aircraft to achieve its designed flight envelope or that of equipment fitted to achieve their intended
Performance	function
Sensory Feedback	The degree of awareness provided to operators so they may monitor the consequence of actions.
chnical Factors -> Equipment/Tools	
	Refers to the ability to gain access to a component within a bay or compartment, or use tooling within an area to conduct
Access/Egress	maintenance, e.g. an occurrence caused by a lack of access resulting in a inability to secure an item in place.
Assembly	Where the assembly (or incorrect assembly) of a component or tool has led to the occurrence.
Configuration	Used when the arrangement of parts in a particular form, figure or configuration has had an effect.
Ergonomics	This refers to the efficient usage of the subject tools or equipment, e.g. it is possible to use but involves considerable effort.
Function	Relates to the impact of an item to be used as intended by design.
Identification	Normally used when an item has been or can easily be mistaken for another item that does not perform the same function.
Layout/Space	General arrangement of a tool or a components part's where their location is linked to the occurrence.
Manufacture	Where the items are of the correct design but are assembled or created (usually) incorrectly.
Normal Wear and Tear	The accepted degradation of equipment or components through normal usage over time.
Performance	A measure of the ability of the item to achieve its function as designed.
Sensory Feedback	The degree of awareness provided to an equipment or tool user, so they may monitor the consequence of actions.
