

Avian influenza (bird flu) controls

# Highly pathogenic avian influenza outbreaks from November 2024: table of key dates

Last updated: 19 September 2025

In the rules, the terms ‘restricted meat’ and ‘unrestricted meat’ are defined on the basis of when poultry are slaughtered, and by reference to the date estimated by a veterinary inspector as being the earliest date of infection at a premise in the relevant zone. The following list, for each recent Infected Premises (IP), defines this date.

This information may change as the epidemiology of an outbreak develops.

\*These tables of dates will be updated as the outbreak develops. The earliest infection date and the related “restricted” date may change as the investigations into the source of disease on each infected premises develops. We will update this table to reflect revised dates.

Restricted meat remains restricted despite the ending of the Protection Zone.
