

# **GP Out-of-Hours Syndromic Surveillance System Bulletin (England)**2025 Week 38

# Key messages

#### Data reported to: 21 September 2025

During week 38, GP out-of-hours daily contacts for acute respiratory infections and acute bronchitis/bronchiolitis increased within seasonally expected levels. These increases were mainly in children aged under 15 years. There was also a small increase in influenza-like illness contacts.

Contacts for difficulty breathing/wheeze/ asthma in children aged 5-14 years stabilised, as expected following the start of the school autumn term. Contacts for chest pain also increased slightly nationally.

# Syndromic indicators at a glance

Table 1: The current trend (based on previous weeks, not only the current week) and the level (compared to the expected baseline), of each indicator included in this bulletin.

Indicator	Trend <sup>1</sup>	Level
Total contacts (Figure 1)	Increasing	No baseline
Acute respiratory infections (Figure 2)	Increasing	Similar to baseline
Influenza-like illness (Figure 3)	Increasing	Above baseline
Acute bronchitis/bronchiolitis (Figure 4)	Increasing	Similar to baseline
Difficulty breathing/wheeze/asthma (Figure 5)	No trend	Similar to baseline
Fever (Figure 6)	Increasing	Below baseline
Acute pharyngitis (Figure 7)	No trend	Similar to baseline
Gastroenteritis (Figure 8)	No trend	Above baseline
Diarrhoea (Figure 9)	No trend	Above baseline
Vomiting (Figure 10)	No trend	Above baseline
Chest pain (inc. myocardial infarction) (Figure 11)	Increasing	Above baseline
Heat or sunstroke (Figure 12)	No trend	Similar to baseline
Insect bites (Figure 13)	No trend	Below baseline
Eye problems (Figure 14)	No trend	Similar to baseline

<sup>&</sup>lt;sup>1</sup> Current trend reports on the trend seen over previous weeks

# About this syndromic surveillance system

This bulletin presents data from the UK Health Security Agency (UKHSA) GP out-of-hours\ unscheduled care syndromic surveillance system.

Syndromic surveillance can be used to:

- assess current trends
- assess current trends and levels compared to historical baselines
- compare trends between age groups/areas

Syndromic surveillance should not be used to:

- estimate total burden or number of 'cases' of a condition (see Notes and caveats)
- compare levels between age groups/areas

Fully anonymised, daily GP out-of-hours (OOH) and unscheduled care service provider data are analysed and reported here, to identify and describe trends for a variety of syndromic indicators:

- syndromic indicators include groupings such as acute respiratory infections, fever and gastroenteritis
- syndromic indicators are based on:
  - diagnoses recorded during OOH patient contacts
  - o diagnoses are based on signs/symptoms and not laboratory confirmed
  - o not all contacts include a diagnosis
  - some contacts include more than one diagnosis, so may be included in more than one syndromic indicator
- Key messages
- describes any notable trends nationally (England) and by age group
- the full list of syndromic indicators reported here, along with their current level and trend, are summarised in Table 1
- charts are provided for each syndromic indicator, on a national basis and by age group. Each chart includes data from April 2023:
  - 7-day moving averages (adjusted for weekends and bank holidays) to aid in the identification of trend
  - statistical baselines (where available) to aid in the assessment of level compared to historical expectations

For further information please see the **Notes and caveats** section.

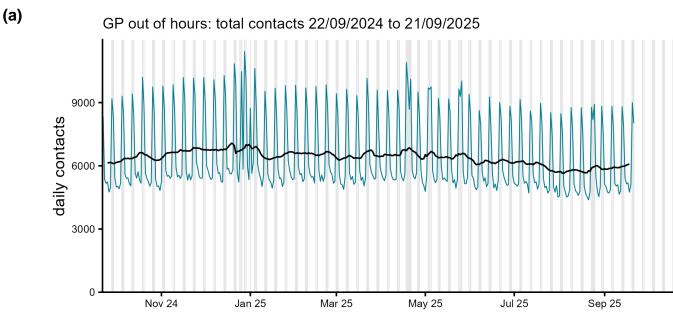

Previous weekly bulletins from this system are available here.

#### Data quality issues of note this week

Please note: we are continuing to investigate a potential change in coding practice by one GP out-of-hours service provider during week 32 (from Monday 4 August) which may have impacted national trends, causing small increases in some syndromic indicators from the beginning of August.

#### **Total contacts**

Figure 1: Daily number of GP out-of-hours and unscheduled contacts with a clinical code (with 7-day moving average adjusted for bank holidays) recorded in this sentinel syndromic surveillance system in England (a) nationally and (b) by age.

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

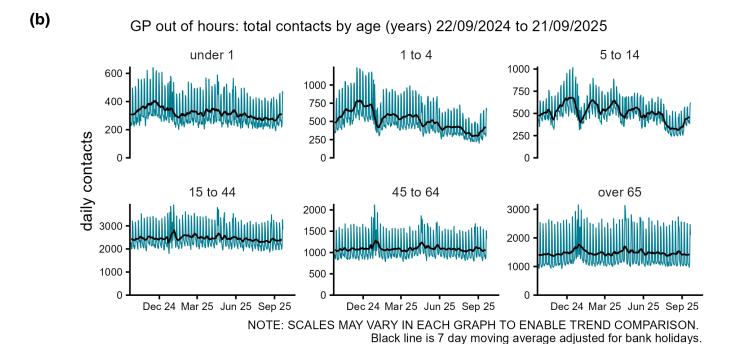

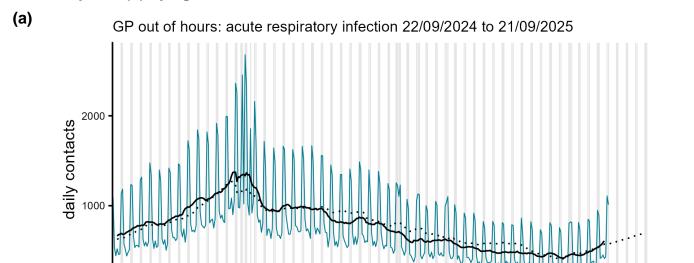

Table 2: The number of GP out-of-hours contacts in this sentinel syndromic surveillance system in England recorded each day in the most recent week.

Date	Number of contacts	
15 September 2025	25,411	
16 September 2025	23,208	
17 September 2025	23,442	
18 September 2025	23,262	
19 September 2025	25,084	
20 September 2025	36,501	
21 September 2025	30,653	

# **Respiratory conditions**

# Acute respiratory infections

Figure 2: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for acute respiratory infections, England (a) nationally and (b) by age.

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

# Difficulty breathing, wheeze or asthma

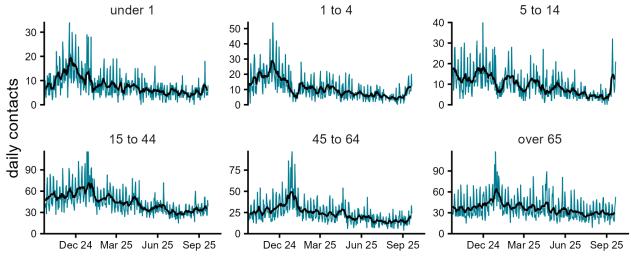

Figure 5: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for difficulty breathing, wheeze or asthma, England (a) nationally and (b) by age.

GP out of hours: difficulty breathing or wheeze or asthma 22/09/2024 to 21/09/2025

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

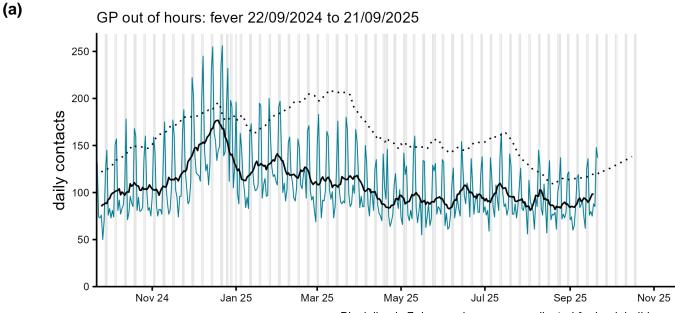

NOTE: SCALES MAY VARY IN EACH GRAPH TO ENABLE TREND COMPARISON.

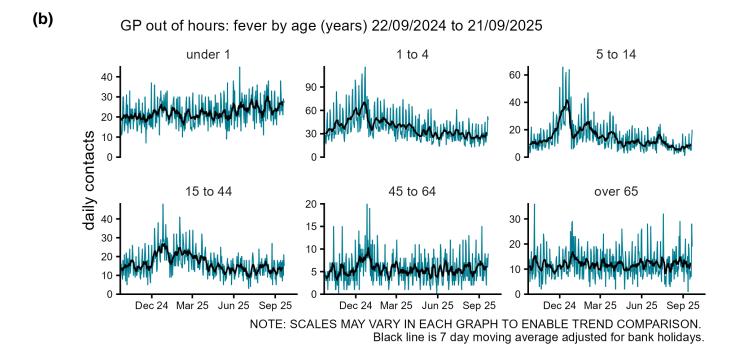

Black line is 7 day moving average adjusted for bank holidays.

#### Fever

Figure 6: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for fever, England (a) nationally and (b) by age.

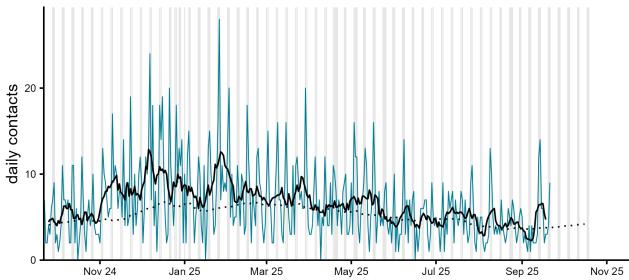

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

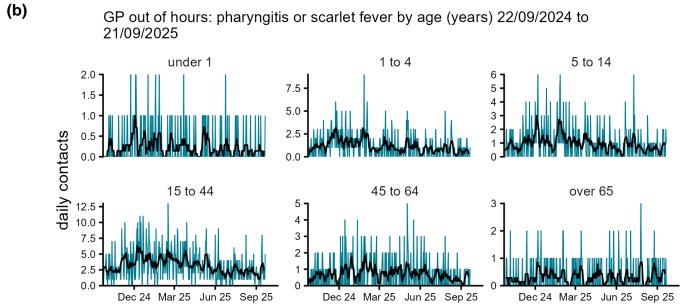

# Acute pharyngitis

Figure 7: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for acute pharyngitis, England (a) nationally and (b) by age.

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

NOTE: SCALES MAY VARY IN EACH GRAPH TO ENABLE TREND COMPARISON.

Black line is 7 day moving average adjusted for bank holidays.

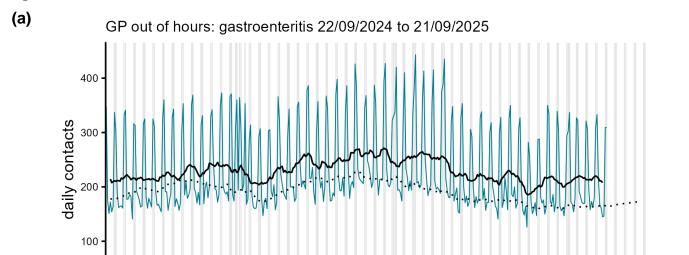

#### **Gastrointestinal conditions**

#### Gastroenteritis

Nov 24

Jan 25

Figure 8: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for gastroenteritis, England (a) nationally and (b) by age.

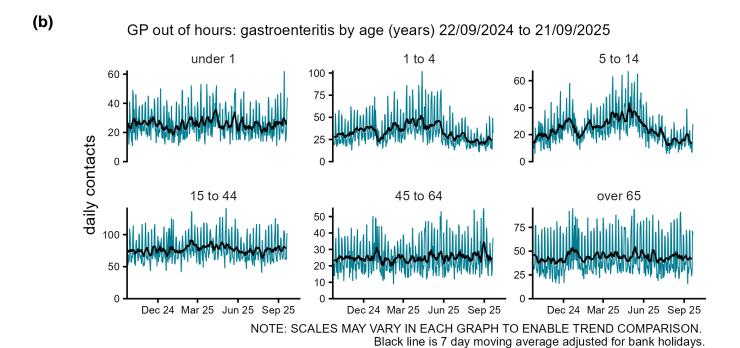

Mar 25

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

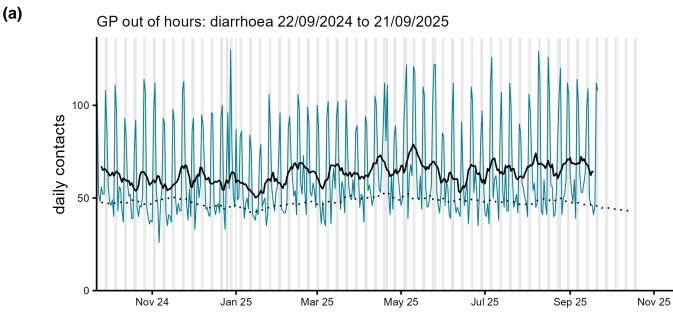

Jul 25

May 25

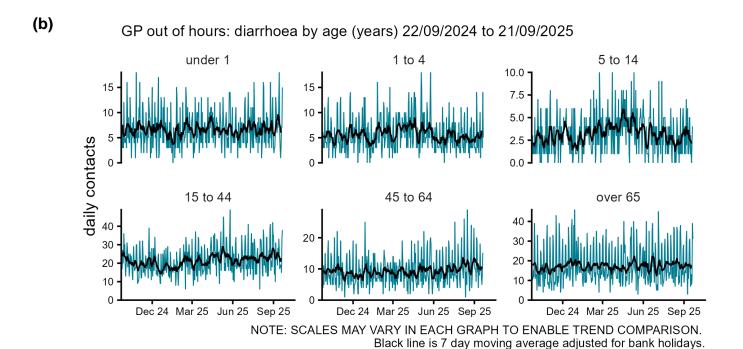

#### Diarrhoea

Figure 9: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for diarrhoea, England (a) nationally and (b) by age.

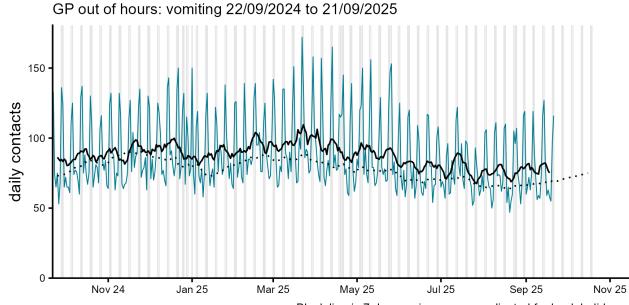

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

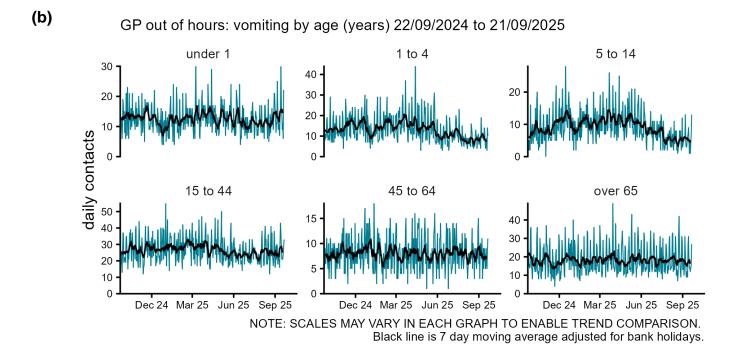

# Vomiting

Figure 10: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for vomiting, England (a) nationally and (b)

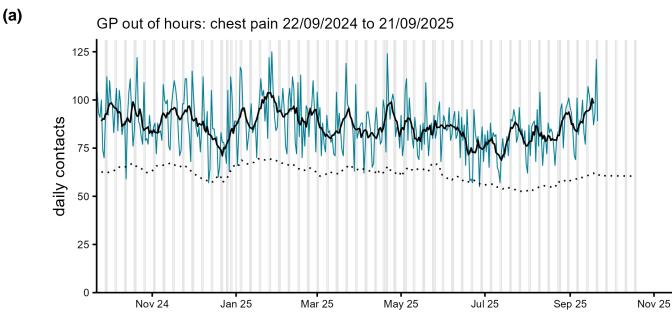

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

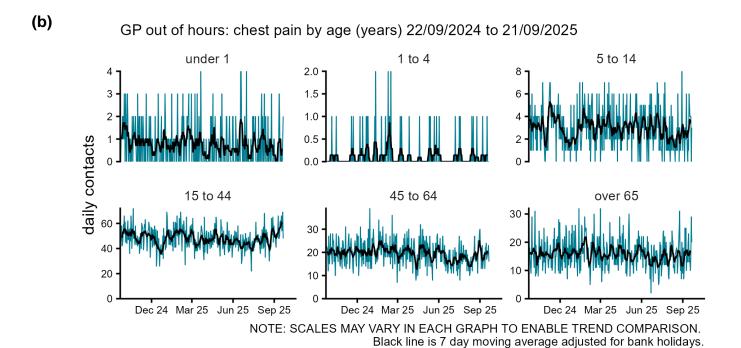

#### **Cardiac conditions**

# Chest pain (including myocardial infarction)

Figure 11: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for chest pain (including myocardial infarction), England (a) nationally and (b) by age.

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

6

## Seasonal environmental conditions

UKHSA and the Met Office operate a weather-health alert system that includes both heat and cold weather alert periods. Syndromic indicators are used to monitor the impact of both extreme hot and cold weather in England during these periods and will be routeinely included below (where an appropriate syndromic indicator is available).

Cold weather alert period: 1 November to 31 March

Heat-Health Alert period: 1 June to 30 September

Highest weather alert level during the current reporting week:

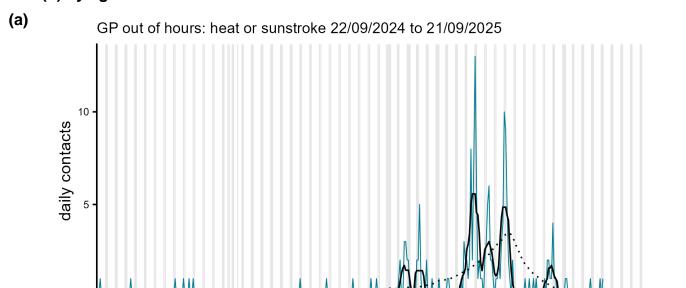

No alerts issued

#### Heat or sunstroke

Nov 24

Jan 25

Figure 12: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for heat or sunstroke, England (a) nationally and (b) by age.

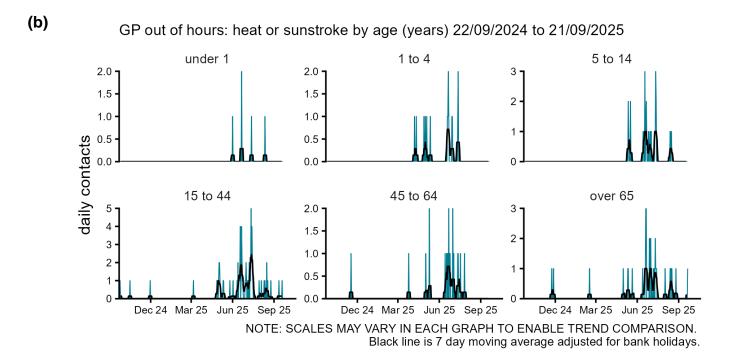

Mar 25

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

Sep 25

Nov 25

May 25

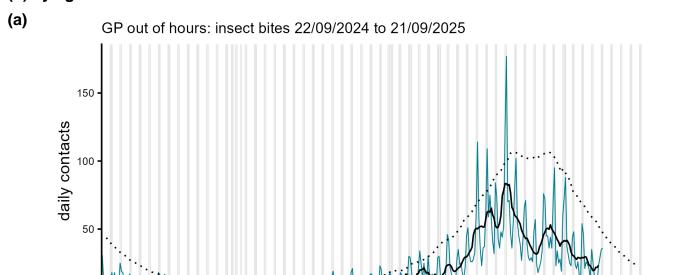

Nov 24

Jan 25

#### Insect bites

Figure 13: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for insect bites, England (a) nationally and (b) by age.

Mar 25

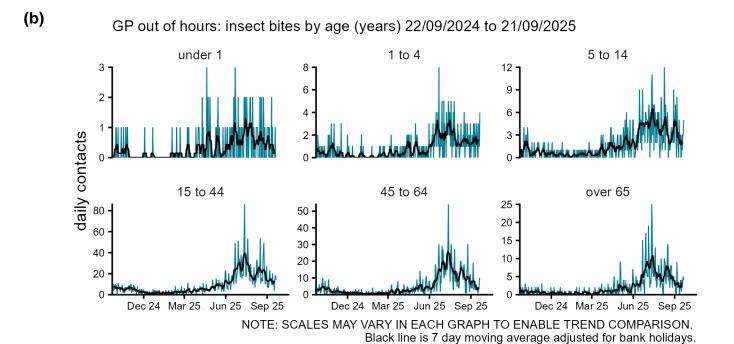

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

Jul 25

Nov 25

Sep 25

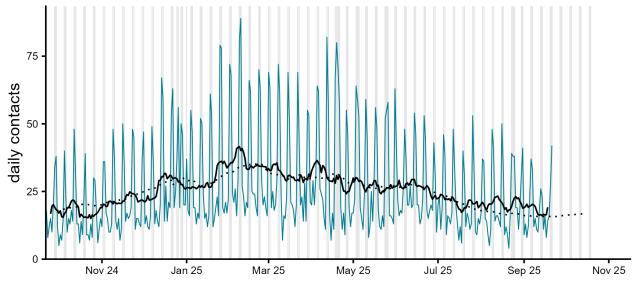

May 25

# Eye problems

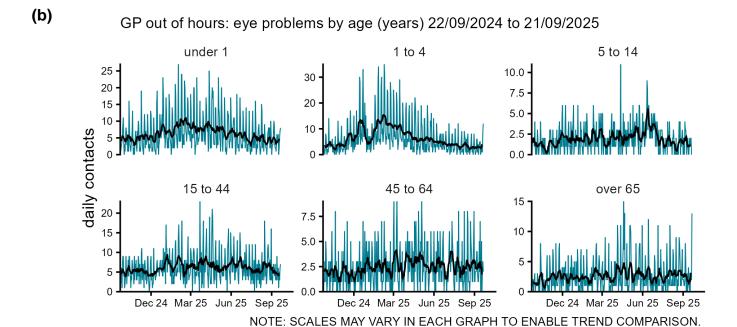

Figure 14: Daily number of GP out-of-hours and unscheduled contacts (and 7-day moving average adjusted for bank holidays) for eye problems, England (a) nationally and (b) by age.

(a) GP out of hours: eye problems 22/09/2024 to 21/09/2025

Black line is 7 day moving average adjusted for bank holidays. Black dotted line is baseline. Grey columns show weekends and bank holidays.

Black line is 7 day moving average adjusted for bank holidays.

#### **Notes and caveats**

The following additional caveats apply to the UKHSA GP out-of-hours/unscheduled care syndromic surveillance system:

- the data presented should be used to monitor trends rather than numbers of 'cases':
  - this is a sentinel syndromic surveillance system; not all GP OOH service providers in England are included,
  - coverage varies by location
  - Table 2 shows total contacts which are higher than Figure 1 which shows total contacts where a clinical code is available for mapping to a syndromic indicator
- some syndromic indicators are hierarchical:
  - o acute respiratory infections includes:
    - influenza-like illness
    - acute bronchitis/ bronchiolitis
    - other and non-specific acute respiratory infections
  - gastroenteritis includes:
    - diarrhoea
    - vomiting
    - other and non-specific gastroenteritis
- baselines:
  - were last remodelled March 2021
  - are constructed from historical data since July 2009
  - o represent seasonally expected levels of activity
  - take account of any known substantial changes in data collection, population coverage or reporting practices:
    - the COVID-19 pandemic period is excluded
- We did not receive daily GP out-of-hours contact data from 4 August 2022 until 22
   April 2023 due to technical issues. The trends and levels presented in Table 1 of the
   report are based upon data received from 23 April 2023 onwards with baselines
   constructed from historical data as described above.
- The GP out-of-hours system coverage is currently poor across some of the UKHSA regions and therefore we are currently unable to publish data at regional level in this bulletin.

# **Acknowledgements**

We are grateful to Advanced and the GP OOH and unscheduled care service providers who have kindly agreed to participate in this system.

# About the UK Health Security Agency

UKHSA is responsible for protecting every member of every community from the impact of infectious diseases, chemical, biological, radiological and nuclear incidents and other health threats. We provide intellectual, scientific and operational leadership at national and local level, as well as on the global stage, to make the nation heath secure.
