

## Quarterly Official Statistics | Background Quality Report | January 2026

### Introduction

This background quality report assesses the quality of quarterly official statistics for the planning Inspectorate using the European Statistics System (ESS) Quality Assurance Framework (QAF). This is the method recommended by the Government Statistical Service (GSS) Quality Strategy. Statistics are of good quality when they are fit for their intended use.

The ESS QAF measures the quality of statistical outputs against the dimensions of

- relevance
- accuracy and reliability
- timeliness
- accessibility and clarity
- comparability and coherence

The GSS also recommends assessment against 3 other principles in the ESS QAF. These are:

- trade-offs between output quality components
- confidentiality and transparency
- balance between performance, cost and respondent burden

These dimensions and principles cross the three pillars of trustworthiness, quality and value in the Code of Practice for Statistics.

This quality assessment covers the quarterly statistical release which provides summary information on appeals, which represent the highest volume (in terms of number of cases) of the work of the Planning Inspectorate.

These statistics are produced each quarter to allow anyone to see how the Planning Inspectorate are performing. The focus is on timeliness as that is an area in which stakeholders have an interest. Also included are information on the decisions that have been made; and on the number of Inspectors available to make those decisions.

### Background and Context

The Planning Inspectorate's job is to make decisions and provide recommendations and advice on a range of land use planning-related issues across England. This is done in a fair, open and timely way.

The Planning Inspectorate deals with planning appeals, national infrastructure planning applications, examinations of local plans and other planning-related and specialist casework in England.

The Planning Inspectorate is an executive agency, sponsored by the Ministry of Housing, Communities and Local Government

## Methodology and Production

The Planning Inspectorate have a policy of taking all data extracts for Official Statistics on or after the third working day of the following month.

The casework statistics provided in this publication has used data from:

- The casework management systems used for processing appeals casework, Horizon and Manage Appeals. These have been used to produce the statistics on our casework. Analysis is based on data extracted from these systems on:
  - number of decisions – 6<sup>th</sup> January 2026
  - number of receipts – 6<sup>th</sup> January 2026
  - mean, median, standard deviation of valid to decision time – 6<sup>th</sup> January 2026
  - open cases – 6<sup>th</sup> January 2026
  - decision outcomes – 6<sup>th</sup> January 2026
- Employee central – The Human Resources system database used to store all information regarding members of staff. This data source has been used to provide statistics on the number of inspectors. Analysis is based on data extracted from Employee central on 6<sup>th</sup> January 2026.
- Spreadsheets – Some of the casework data, for Tree Preservation Orders, High Hedges appeals and Hedgerow appeals, community infrastructure levies, and Local Plans is also extracted from source MS Excel spreadsheets. This data has been used in conjunction with Horizon data to calculate performance data; extracted on 6<sup>th</sup> January 2026.
- The [Find a National Infrastructure Project website](#) – This website provides public access to a complete list of Nationally Significant Infrastructure Projects; extracted on 6<sup>th</sup> January 2026.

Within the publication there is a primary focus on three different types of casework:

1. Planning covers s78 planning appeals, Householder appeals, Commercial appeals, s20 Listed Building appeals, Advertisement appeals, s106 Planning Obligation appeals and Called In Planning Applications.
2. Enforcement covers s174 Enforcement appeals, s39 Enforcement Listed Building appeals and Lawful Development Certificate appeals.
3. Specialist casework includes Common Land, Rights of Way orders (including Schedule 14 cases), Purchase orders, Tree Preservation Orders, High Hedges appeals, Hedgerow appeals, Wayleave, Compulsory Purchase Orders, Secretary of State, Transport, Environmental Permitting Appeals and Coastal Access. Additional casework types have been added to this category over time.

## Relevance

The Planning Inspectorate has proactively decided to produce these statistics quarterly to better meet user needs. We welcome feedback and will continue to develop the statistic over time to ensure we continue to meet user needs.

The release can be used to answer press queries, parliamentary questions and Freedom of Information requests. The report is also useful for internal customers to support evidence-based decisions and to support discussions with external stakeholders.

## Accuracy and Reliability

The Planning Inspectorate use administrative data from operational delivery systems to compile these statistics, as these data come from live systems there are occasions when this data changes. Data used in the publication is based on data recorded in these systems at the time of extraction.

The possible changes that could occur in these statistics include:

- Data entry error – Some data may be entered in a form that is incomplete or in a format that cannot be processed. An example of this is that there are occasionally errors in date fields; these are highlighted in internal data quality reports and the Inspectorate is working to improve the quality of data that supports this publication.
- On occasions the categorisation of cases may change e.g. the procedure type can change and this will be recorded differently in the latest statistic compared to previous versions.
- Delays in updating records on operational systems mean that changes may apply to data older than the latest time period released.

This information and associated data collection methods will be quality assured, to develop a longer-term solution to collecting these statistics. Definitions of what constitutes an event are different according to the type of casework.

When data is extracted from source systems, data processing can mean that values vary. For example, open cases data is processed using a snapshot method, which is separate to the way data is processed on closed cases. This has led to inconsistencies in trends, where data does not balance. The Coherence and Comparability section below has more information on the impact on open cases data.

Where data is published on events, instances have been found where an event date is recorded for cases that do not require an event, as the cases are dealt with based on only the documentation submitted.

There are instances where case records indicate a case has been closed and a decision (such as whether the appeal has been dismissed or allowed) has been recorded, but no date has been entered. It is not clear whether the decision has been added in error, or the date omitted in error. Any such case record will be excluded from the counts of the number of decisions (which use the month of the decision) which may give an under-estimate. This applies to fewer than 100 cases received in a year, in the context of over 19,000 decisions a year. Further work is required to automatically identify these cases and get any errors amended.

One of the main measures in the report is the number of decisions in a given time period. Also given is a count of the number of closed cases. This count is considerably higher as it includes cases where an appeal is withdrawn, notice is withdrawn, or the appeal is turned away.

We are investigating an issue with our processing of withdrawn and turned away cases that may mean some of these closed cases are being included in decision counts, contrary to our usual definition of 'decided'. This may result in decision counts being revised in future publications. We believe that this affects fewer than 1% of decisions reported for the last year.

Our data on decision outcomes for decided cases is incomplete. We are looking at ways to improve data quality in this area and assessing how our methodology accounts for missing data, which may result in revisions in the future. Initial investigations suggest that measures such as 'percentage of cases allowed' may change by around 1 percentage point for written representations planning appeals and up to 3 percentage points for other casework types where missing data is more common.

Issues affecting the statistics this release are as follows:

- There are 540 cases in the open cases measures (Tables 3 & 4) that do not have a procedure recorded against them, the specific reasons for which are not known. It has been established that these are all specialist cases and are either, Hedgerow, Rights of Way or Tree Preservation Order cases. Further work is needed to determine how best to resolve this issue, thought to be caused by a delay in determining the procedure.
- This release is affected by an issue where the open case data had to be sourced from the MiPINS development environment rather than the live production environment.
- The administration of Local Plans have relied on spreadsheets for casework management, into which casework records are manually entered, reviewed and updated. There have been provisional corrections to Table 1.2a and b in the Quarterly and Annual volumes tables. The corrections are marked as provisional as further investigations are needed to confirm the numbers.
- There have been small changes to Table 1.4 in the Quarterly and Annual volumes tables due to a change in methodology.

In the previous release (October 2025), we identified provisional corrections that needed to be made to the Plans Examinations casework data in tables 1.2a, 1.2b, 1.3a and 1.3b in the Quarterly and Annual Volume Statistics. We have confirmed these provisional corrections, with one exception, and have made a small number of additional minor corrections and revisions to tables 1.2a and 1.2b.

The full list of changes, including those made provisionally in October, comprises:

- Five plans that have had their categorisations revised in tables 1.2a and 1.2b between 2015/16 and 2021/22.
- Three plan submissions that had been previously missed from tables 1.2a and 1.2b in Jul-Sep 2024 (1 Site Allocation Plan) and Apr-Jun 2025 (2 Strategic Plans).
- Three plan reports issued that had been missed from tables 1.2a and 1.2b in Jan-Mar 2024 (1 Strategic Plan) and Apr-Jun 2025 (1 Strategic Plan, 1 Minerals/Waste Plan).
- Two CIL charging schedules that had been missed from tables 1.3a and 1.3b in Jul-Sep 2018 and Jul-Sep 2022.
- One CIL report issued that had been missed from tables 1.3a and 1.3b in Jan-Mar 2019.

The provisional correction made in October that was found not necessary was:

- One CIL charging schedule that was erroneously removed from tables 1.3a and 1.3b for Apr-Jun 2024.

These discrepancies occurred partly due to changes in administrative data that reflect genuine changes in how casework is classified, and partly due to data processing errors. The administration of Local Plans Examination data has for a long time relied on spreadsheets for casework management, into which casework records are manually entered, reviewed and updated. The Planning Inspectorate is currently building an improved casework management system and, alongside that, is additionally creating an improved system for processing and reporting on data. This involves a review of data held in multiple sources that was previously published as Official Statistics and on the Local Plans Monitoring Progress gov.uk page at <https://www.gov.uk/government/publications/local-plan-monitoring-progress>.

We expect the new systems and processes being built to improve the quality of our administrative data and reduce the likelihood that we would need to make revisions or corrections in the future.

## Timeliness and Punctuality

Figures are published quarterly within a month of the end of the reporting period. This is to allow time to produce the statistics while ensuring they are timely for users.

The release date for this publication was pre-announced on the Planning Inspectorate's Calendar of Upcoming Releases section of GOV.UK. There is also a 12-month release calendar with a specific release date given at least four weeks in advance where practicable provided on the GOV.UK website.

## Coherence and Comparability

For most of the data in this publication there is only one source of data and therefore it is not possible to cross-reference this with another data source – but it is possible to compare this quarter's data with what was published the previous quarter. The **core tables** in the bulletin present monthly data. For these, we have highlighted in the Statistics any values which have changed by more than five (when measuring number of decisions/ cases) or more than 0.5 weeks (for mean, median or standard deviation of weeks).

The number in brackets is the difference between this quarter's value and the previous quarter's value.

### Changes in Table 2:

- **Events Held:** April (11), June (9), July (7), August (6) and September (59) 2025
- **Decisions:** January (-6), March (-6), June (-10) and July (-12) 2025

### Changes in Table 3:

- **Received:** September (-37) 2025
- **Closed:** January (9), April (-23), July (-6), August (15) and September (8) 2025
- **Open:** January (10), February (10), March (14), April (10), May (11), June (14), July (17) and September (-74) 2025

### Changes in Table 5:

- **Written Representations:** June (-9) and July (-9) 2025

- **Total Decisions:** January (-6), March (-6), June (-10) and July (-12) 2025

#### Changes in Table 6:

- **Inquiries Valid to Decision (Median weeks):** August (6.2) 2025
- **Hearings Valid to Decision (Mean weeks):** September (0.9) 2025
- **Inquiries Valid to Decision (Mean weeks):** March (-3.4), June (0.6), July (0.7) and August (2.0) 2025
- **Hearings Standard Deviation (weeks):** September (3.8) 2025
- **Inquiries Standard Deviation (weeks):** March (-9.4), June (0.7) and July (0.7) 2025

#### Changes in Table 9:

- **Planning:** June (-6) 2025
- **Specialist:** July (-9) 2025
- **Total Decisions:** January (-6), March (-6), June (-10) and July (-12) 2025

#### Changes in Table 10:

- **Enforcement:** Valid to Decision (Median weeks): January (0.7) and June (1.0) 2025
- **Specialist:** Valid to Decision (Median weeks): February (2.6), May (1.1), June (8.6), July (9.7), August (9.2) and September (5.7) 2025
- **Specialist:** Valid to Decision (Mean weeks): February (2.6), April (1.0), June (5.5), July (5.4), August (8.8) and September (3.3) 2025
- **Specialist:** Standard Deviation of Decision (weeks): February (-0.9), March (-6.1), June (0.7), July (0.7) and September (1.2) 2025

#### Changes in Table 11:

- **Headcount:** September (-9) 2025
- **FTE:** September (-8.4) 2025

#### Changes in Annex A:

##### **Planning Measure**

- **Written Representations (Decisions):** June (-7.0) 2025
- **Hearings (Decisions):** June (1.0) 2025
- **Hearings (Mean weeks):** June (0.6) 2025

##### **Enforcement Measure**

- **Written Representations (Decisions):** January (-1.0), June (-1.0), August (1.0) and September (1.0) 2025
- **Hearings (Decisions):** January (-2.0) 2025
- **Hearings (Median weeks):** January (0.7) 2025

##### **Specialist Measure**

- **Written Representations (Decisions):** January (-2.0), February (-1.0), March (-1.0), April (-1.0), June (-1.0), July (-6.0), August (-1.0) and September (-1.0) 2025
- **Written Representations (Median weeks):** February (1.9), May (1.2), June (10.5), July (6.7), August (3.6) and September (2.8) 2025

- **Written Representations (Mean weeks):** January (-0.9), February (1.4), March (1.1), April (1.1), June (5.6), July (4.2), August (4.8) and September (0.8) 2025
- **Written Representations (Standard Deviation):** July (1.0), August (2.0) and September (0.7) 2025
- **Hearings (Decisions):** June (-1.0) 2025
- **Hearings (Median weeks):** February (3.7), July (10.4) and September (36.0) 2025
- **Hearings (Mean weeks):** January (-4.7), February (8.5), June (1.3), July (7.2) and September (32.1) 2025
- **Hearings (Standard Deviation):** January (-10.1), February (-7.7), June (0.7), July (-4.2) and September (21.3) 2025
- **Inquiries (Decisions):** February (-1.0), March (-2.0), June (-1.0), July (-3.0), August (-3.0) and September (-1.0) 2025
- **Inquiries (Median weeks):** February (17.8), June (10.9), July (26.1), August (50.7) and September (6.7) 2025
- **Inquiries (Mean weeks):** February (6.1), March (-4.2), June (12.9), July (15.1), August (31.5) and September (15.2) 2025
- **Inquiries (Standard Deviation):** March (-36.9), June (-9.4), July (6.5), August (-16.5) and September (-15.4) 2025

## Linked cases

In some cases, the “lead” case has had a decision date added but linked cases (which can be referred to as “child” cases), which have their decision issued at the same time, have not had the required fields updated. This makes the number of open cases appear higher than it should; and distorts the timeliness figures. For the October 2023 publication onwards, we changed the method for counting events. Previously, only a single event would be counted for a group of linked appeals. We now attribute an event to each appeal in the group. This brought the methodology in line with that for counting decisions.

## Open cases

Due to an issue with the processing of the snapshot data the data for this run was taken from a development space. This should have no impact on the numbers as both the production area and development space have the same inputs and snapshot dates.

An in-depth investigation has been carried out into anomalies between the snapshot data used to count the number of open cases, and data captured about how many appeals have been received and closed during a month. If the data was accurate and consistent, though being from different sources, it should balance – but it does not. The reasons for the data not balancing are:

- There are instances where case records indicate a case has been closed (due to the processing data entered onto our operational systems) but no date has been entered. Therefore, the case is excluded from snapshot data but is not counted in a closed cases measure.
- As noted above, delays in registering appeals onto relevant systems mean that the open cases figure can increase in a particular month, but the receipts are recorded from potentially several months before. The Inspectorate are investigating how to improve the quality of this data by updating older snapshots of data to provide a more accurate estimate of open cases when new cases are added that were received in earlier months.

- There are delays with registering Tree Preservation Orders that are affecting the open cases measure.
- There is an issue with the exact date to capture snapshot data (the last date of the month excludes those cases registered on that day).
- Withdrawn or closed cases being re-opened for consideration of awarding costs.

## **Inspectors**

The Planning Inspectorate employs five categories of decision makers: Salaried Planning Inspectors, Fixed Term Planning Inspectors, Appeal Planning Officers, Apprentice HEOs and Planning Appeal Decision suppliers (formally known as Non-Salaried Inspectors (NSIs)). Appeal Planning Officers make recommendations to Salaried Inspectors on planning appeals; the recommendations are signed off by Inspectors who have the delegated authority to make decisions on behalf of the Secretary of State (SoS). Apprentice HEOs are an initiative started by the Planning Inspectorate to increase the diversity in the Planning Profession.

This statistical release reports the headcount and full-time equivalent of Salaried Planning Inspectors only.

## **Recommendations**

Cases which are decided by recommendation, including called ins and recovered s78's, are currently included in all decision counts. The logic behind this is that these cases still represent a completed decision-making process and therefore contribute to overall performance measures, even though the final decision is made by the Secretary of State rather than the Inspectorate alone.

## **Redetermined cases**

We do not count redetermined cases in our statistics due to the dates being overwritten in our system. This would lead to us not being able to accurately measure the decision times for these cases.

## **Nationally Significant Infrastructure Projects**

Data for nationally significant infrastructure projects is available on the [Find a National Infrastructure Project website](#). The statistics provided in Tables 1.1a and 1.1b of the Official Statistics publication are inclusive of any subsequently withdrawn projects. Due to our data retention policy, details of projects whose applications have been accepted are removed from the website 1 year after the date of their withdrawal. Therefore, there will be minor discrepancies in some quarters between the number of projects reported in the Official Statistics and numbers totalled using the live table.

## **Annual and Quarterly Volumes Tables**

We have made a change which we hope makes these Tables easier to navigate.

The tables which give case totals by financial year have been removed from the Quarterly and Annual Volume statistics for this release - with the exceptions of Tables 1.2a and 1.3a which have been kept because they include corrections to previous data.

Annual totals are still available - they can be found in the previous release tables here: [Previous releases of Quarterly and Annual Volume Statistics - GOV.UK](#)

From April 2026 we plan to separate these out into three workbooks:

- one containing the time series information, broken down as totals by quarter;
- one containing the time series information, as annual totals; and

- one for the number of decisions by LPA and inspectors.

We also plan to make other minor changes to these workbooks to further improve their ease of use. This includes not updating historic annual totals.

Please send any feedback on this proposal to: [statistics@planninginspectorate.gov.uk](mailto:statistics@planninginspectorate.gov.uk)

## Trade-offs between Output Quality Components

Where possible the cost to Government of producing these statistics has minimised by using data already collated for operational delivery purposes. The main sources of data used for compiling these statistics are the casework management systems, HORIZON, PICASO<sup>1</sup> and Manage Appeals. These systems are large administrative databases, and as such, data quality across fields is of varying quality and completeness.

These statistics are produced each month, less than a month after the period on which they are reporting. This provides limited time for checking of the quality of the data. This decision is made to allow users timely information. Quality improvement is a key focus area, in which improvement is continuously sought.

## Quality Assurance

Data feeding the publications undergoes quality checks to ensure the correct data has been extracted and the appropriate filters have been applied. Subsequently, the layout and presentation of the data in the statistical release is read by multiple members of The Analysis Service to ensure that the data is presented appropriately to ensure the correct interpretation by the user.

## Assessment of User Needs and Perceptions

Publication of this report has been in response to requests for information from the media and the general public about the Planning Inspectorate's performance. This report also contributes to the Planning Inspectorate's commitment to release information where possible.

The Planning Inspectorate invite users to provide feedback to any of their publications or reports using the contact information within the publication.

## Performance, Cost and Respondent Burden

The production of the quarterly Official Statistic requires less than one FTE per annum.

The report uses administrative data sources already collected by the Planning Inspectorate. As such, there is no respondent burden, and the main cost is the production of the statistics including quality assurance and data interpretation.

## Confidentiality, Transparency and Security

The Analysis Service involved in the production of this Official Statistic have completed the Government wide Security and Data Protection training and they understand their responsibilities under the Data Protection Act and the Official Statistics Code of Practice.

---

<sup>1</sup> Picaso is no longer a live operational casework system

The Analysis Service adhere to the principles and protocols laid out in the Code of Practice for Statistics and comply with pre-release access arrangements. The Pre-Release Access list for our publications is available on the GOV.UK website.

## Contact Details

The Planning Inspectorate welcome feedback on our statistical products. If you have any comments or questions about this publication or about our statistics in general, you can contact us as follows:

**Media enquiries** 0303 444 5004 email [press.office@planninginspectorate.gov.uk](mailto:press.office@planninginspectorate.gov.uk)

**Public enquiries** email [statistics@planninginspectorate.gov.uk](mailto:statistics@planninginspectorate.gov.uk)

## Official Statistics Designation

The Planning Inspectorate quarterly Statistical bulletin is designated as Official Statistics. The bulletin, and this associated Background Quality Report, are produced according to the principles of Trust, Quality and Value. We are reviewing our complete Official Statistics offering to assess how it is meeting user needs. If you would like to provide feedback to contribute to this, please contact: [statistics@planninginspectorate.gov.uk](mailto:statistics@planninginspectorate.gov.uk)

Our statistical practice is regulated by the Office for Statistics Regulation (OSR). OSR sets the standards of trustworthiness, quality and value in the [Code of Practice](#) for Statistics that all producers of official statistics should adhere to. You are welcome to contact us directly with any comments about how we meet these standards. Alternatively, you can contact OSR by emailing [regulation@statistics.gov.uk](mailto:regulation@statistics.gov.uk) or via the OSR website.
