Air Quality and Dust Monitoring Monthly Report – November 2025

Three Rivers District Council

Department for Transport

High Speed Two (HS2) Limited has been tasked by the Department for Transport (DfT) with managing the delivery of a new national high speed rail network. It is a non-departmental public body wholly owned by the DfT.

High Speed Two (HS2) Limited,
Two Snowhill
Snow Hill Queensway

Monthly Summary

1.1.1 This Summary Report is published in fulfilment of commitments detailed in the High-Speed Rail (London-West Midlands) Environmental Minimum Requirements, Annex 1: Code of Construction Practice, for the nominated undertaker to present the results of dust monitoring undertaken in the Three Rivers District Council (TRDC) during November 2025.

1.1.2 Figure 1 in Appendix A presents the current worksite together with the dust monitoring locations.

1.1.3 This summary should be read in conjunction with the overview monitoring report available from www.gov.uk/government/collections/monitoring-the-environmental-effects-of-hs2, which highlights the applicable standards and guidance, as well as the air quality and dust monitoring methodologies to be implemented by nominated undertakers throughout construction.

1.1.4 The current worksites, as presented in Appendix A, Figure 1, include:

South Portal site (Phase 10)

- General Plant: Wheel washers, generators and site-wide support plant;
- Earthworks and Drainage: Excavation, drainage, filling & subgrade, ground stabilisation, chalk cake placement, stockpiling and pugmill plant operation;
- Batching Plant 2 and 3: Deliveries and operation (Batching plant 2&3), collection of concrete for tunnel walkways and CP works;
- Tunnelling Works (Surface Support): Cooling plant operation, multi-service vehicles, storage on top of south portal, tunnel walkways and decommissioning of tunnel support activities;
- Concrete Breaking Activities: Concrete processing activities and breaking of building/structure base slabs and V-pier Mock-up;
- South Portal Civils Works: Permanent works and porous works;
- Surface Water Management: Surface water management and pond water treatment plan;
- Landscaping Works: Seeding, planting, and fencing; and
- Site demobilisation: Steel scraping area, Dismantling – Cake Shed, TBM and Warehouse, Tunnel precast factory building dismantling, and batching plant 2&3 aggregate bay dismantling.

1.1.5 Four (4) dust monitors are installed around this worksite, where works are underway. These sites returned a medium dust risk rating.

1.1.6 Dust monitoring locations and results are presented in Appendix B, Table 1, together with line charts of monthly data from each dust monitor, presented in Figure 2. All continuous dust monitoring is undertaken using indicative monitors. Despite being Environment

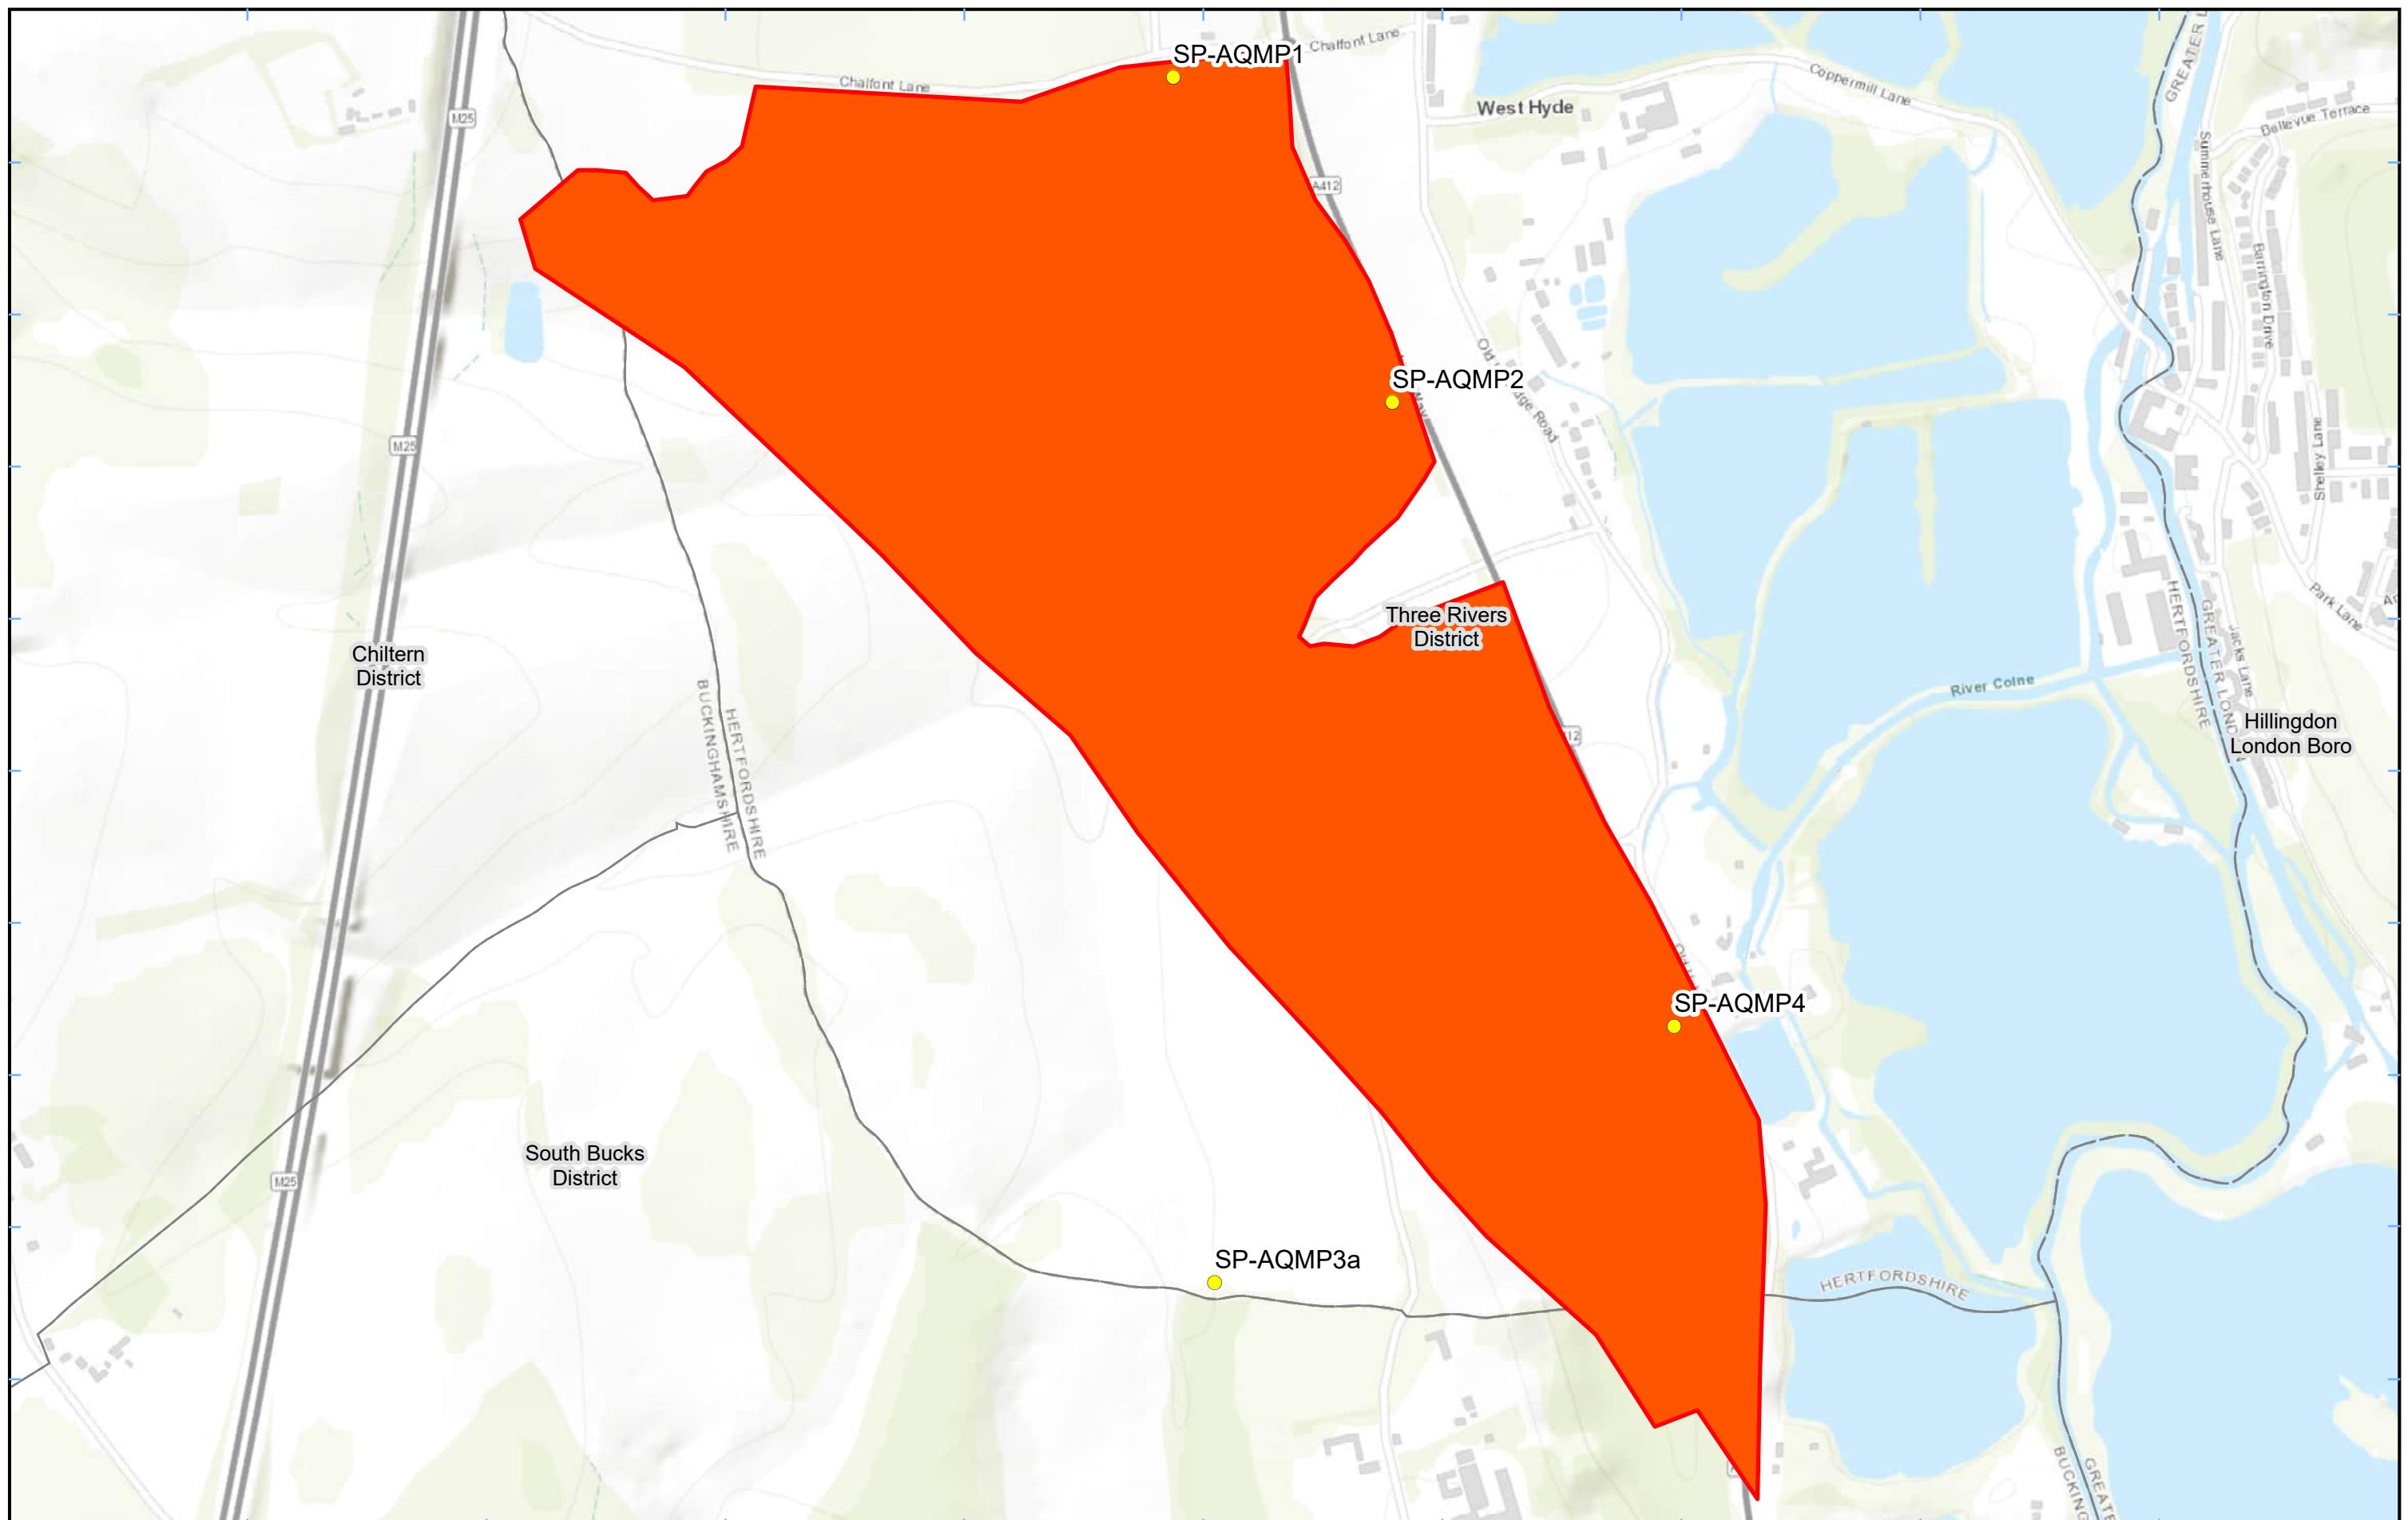

Agency (MCERTS) certified, indicative monitors carry a higher level of uncertainty than reference monitors, and therefore cannot be strictly compared with Air Quality Standards for human health and the environment. The purpose of the monitoring undertaken is to ensure the effectiveness of the on-site mitigation.

- 1.1.7 The trigger level for PM₁₀ concentrations of 190 µg/m³, measured as a 1-hour mean, in accordance with the updated IAQM guidance document '*Guidance on Monitoring in the Vicinity of Demolition and Construction Sites – (October 2018)*' has been applied.
- 1.1.8 No (0) dust trigger alerts were recorded during the monitoring period (November 2025).
- 1.1.9 Data capture was below 90% for multiple monitors due to:
 - Missing data at SP-AQMP2, SP-AQMP3a and SP-AQMP4 is due to limited solar power due to the solar panel location. The installation team are considering alternative monitors to allow for better solar power as alternative power sources are not possible at these locations.
 - Data loss at SPAQMP-1 was due to ALIGN removing power from the location during site investigations, power was restored on the 24th of November.
- 1.1.10 There were no (0) complaints received during the reporting period (November 2025).
