### Introductory note

#### **This introductory note does not form a part of the permit**

Under the Environmental Permitting (England & Wales) Regulations 2016 (schedule 5, part 1, paragraph 19) a variation may comprise a consolidated permit reflecting the variations and a notice specifying the variations included in that consolidated permit.

Schedule 1 of the notice specifies the conditions that have been varied and schedule 2 comprises a consolidated permit which reflects the variations being made. All the conditions of the permit have been varied and are subject to the right of appeal.

This permit variation has been issued to implement guidance “Chemical waste: appropriate measures for permitted facilities”, “Non-hazardous and inert waste: appropriate measures” and “Waste electrical and electronic equipment (WEEE): appropriate measures for permitted facilities”.

#### **Changes introduced by this variation notice/statutory review**

The Industrial Emissions Directive (IED) came into force on 7 January 2014 with the requirement to implement all relevant Best Available Techniques (BAT) Conclusions as described in the Commission Implementing Decision. Article 21(3) of the IED requires the Environment Agency to review conditions in permits that it has issued and to ensure that the permit delivers compliance with relevant standards, within four years of the publication of updated decisions on Best Available Techniques (BAT) Conclusions. The BAT Conclusions for Waste Treatment (the BREF) was published on 17 August 2018 following a European Union wide review of BAT, implementing decision (EU) 2018/1147 of 10 August 2018.

On 18 November 2020, Chemical waste: appropriate measures for permitted facilities guidance was published on gov.uk. On 13 July 2020, Waste electrical and electronic equipment (WEEE): appropriate measures for permitted facilities was published on gov.uk. On 12 July 2020, Non-hazardous and inert waste: appropriate measures for permitted facilities guidance was published on gov.uk. The guidance explains the standards that are relevant to regulated facilities with an environmental permit to treat or transfer waste, providing indicative BAT for those sites.

This permit variation has been issued to update some of the conditions following a statutory review of the permits in the chemical waste treatment and transfer sector, WEEE treatment and transfer, Non-hazardous treatment and transfer, and to implement the appropriate measures guidance. The opportunity has also been taken to consolidate the original permit and subsequent variations where appropriate.

#### **Brief description of the process**

The regulated facility comprises:

- temporary storage of hazardous waste;
- temporary storage of non-hazardous waste.

The facility is a waste transfer station used for the receipt, bulking up, storage and transfer of both hazardous and non-hazardous wastes, prior to third party recycling, recovery or disposal. The site processes hazardous and non-hazardous wastes at a combined annual throughput of 30,000 tonnes. The total storage capacity at the site is a maximum of 350 tonnes for hazardous and non-hazardous wastes at any one time.

The following listed activities are conducted at the installation:

- Section 5.6 Part A (1)(a) - Temporary storage of hazardous waste with a total capacity exceeding 50 tonnes.

A Waste Operation enables storage/bulking of non-hazardous waste and repackaging of hazardous waste.

The site is located at Fourth Way Waste Transfer Facility, Fourth Way, Wembley, Middlesex, in an urban-industrial area with a mixture of commercial, light industrial and some residential areas nearby, National Grid Reference TQ 20008 85968.

There are point source emissions to air from the storage tanks.

Uncontaminated surface water run-off is drained via an interceptor into the Wealdstone Brook through a private surface water drainage system.

The site has a discharge consent with Thames Water that enables the discharge of water from the wheel and vehicle washing to sewer through a separate drainage system.

The management system operated by the site is ISO14001.

The schedules specify the changes made to the permit.

The status log of a permit sets out the permitting history, including any changes to the permit reference number.
