

Transparency Data

Justice Transcribe Data

Background

This publication presents transparency data on the use of Justice Transcribe, an AI-enabled transcription and meeting summarisation tool used by Probation staff. The statistics are derived from internal product analytics collected for service monitoring and improvement purposes. Data were extracted on 12 February 2026. Coverage period: 7 October 2025 to 12 February 2026

Key measures

Total meetings summarised

Between 7 October 2025 and 12 February 2026, over 150,000 meetings were summarised using Justice Transcribe. This figure represents meetings where the product was used to generate a meeting summary during the reporting period.

Illustrative time saving

Probation Workforce Transformation (PWT) within HMPPS has advised that, as a broad operational assumption, use of Justice Transcribe may save around 10 minutes per meeting.

Applying this assumption to 150,000 meetings gives an indicative total of approximately:

- 1.5 million minutes
- 25,000 hours

Important: This is an illustrative estimate only. It is not a formal statistical estimate and does not account for variation in meeting length, meeting type, user practice or summary quality.

Data source and limitations

The meeting count is derived from Justice Transcribe usage analytics.

The figure:

- reflects only meetings where Justice Transcribe was used
- does not represent all probation meetings
- is based on recorded usage events during the reporting period

Quality assurance checks were conducted prior to publication, including validation of counting logic and review of trends over time.
