Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A23J

Specific: No Wall Cladding

Descriptive: 10,001 - 20,000m2

Tech 1: Eaves Height - 36m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £596

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Unit of measurement: m2

ERC: £749

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A10K

Specific: No Wall Cladding

Descriptive: 101 - 250m2

Tech 1: Eaves Height - 21m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £833

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41T20A

Specific: No Wall Cladding

Descriptive: 251 - 500m2

Tech 1: Eaves Height - 10m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £601

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A11K

Specific: No Wall Cladding

Descriptive: 251 - 500m2

Tech 1: Eaves Height - 7.5m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £597

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

Tech 1: Eaves Height - 8.5m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £575

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

ERC: £599

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A07S

Specific: No Wall Cladding

Descriptive: 0 - 100m2

Tech 1: Eaves Height - 3m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £846

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A09D

Specific: No Wall Cladding

Descriptive: 0 - 100m2

Tech 1: Eaves Height - 31m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £987

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A16F

Specific: No Wall Cladding

Descriptive: over 20,000m2

Tech 1: Eaves Height - 4.5m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £508

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Variations: If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A17S

Specific: No Wall Cladding

Descriptive: over 20,000m2

Tech 1: Eaves Height - 34m

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £554

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Uninsulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; Single phase electrics, lighting and power; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage). Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

CG Code: 41R06F

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 1,001 - 5,000m2

Tech 2: Eaves Height - 5m

Unit size: -

Unit of measurement: m2

ERC: £582

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

CG Code: 41R06V

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 1,001 - 5,000m2

Tech 2: Eaves Height - 9m

Unit size: -

Unit of measurement: m2

ERC: £611

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 1,001 - 5,000m2

Tech 2: Eaves Height - 33m

Unit size: -

Unit of measurement: m2

ERC: £830

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Unit size: -

Unit of measurement: m2

ERC: £661

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A04Q

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 10,001 - 20,000m2

Tech 2: Eaves Height - 6m

Unit size: -

Unit of measurement: m2

ERC: £567

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A05D

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 10,001 - 20,000m2

Tech 2: Eaves Height - 15m

Unit size: -

Unit of measurement: m2

ERC: £598

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A05S

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 10,001 - 20,000m2

Tech 2: Eaves Height - 28m

Unit size: -

Unit of measurement: m2

ERC: £690

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 42A21M

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 10,001 - 20,000m2

Tech 2: Eaves Height - 41m

Unit size: -

Unit of measurement: m2

ERC: £734

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P498

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 101 - 250m2

Tech 2: Eaves Height - 24m

Unit size: -

Unit of measurement: m2

ERC: £1,597

Superseded codes: 41P262

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P520

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 251 - 500m2

Tech 2: Eaves Height - 24m

Unit size: -

Unit of measurement: m2

ERC: £1,131

Superseded codes: 41P292, 41RO3U

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

ERC: £1,476

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P568

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 5,001 - 10,000m2

Tech 2: Eaves Height - 24m

Unit size: -

Unit of measurement: m2

ERC: £700

Superseded codes: 41P352, 41RO8U

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P66B

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 5,001 - 10,000m2

Tech 2: Eaves Height - 3.5m

Unit size: -

Unit of measurement: m2

ERC: £588

Superseded codes: 41P08C, 41P28C, 41R08B, 41U28C, 41U48C

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P67E

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 5,001 - 10,000m2

Tech 2: Eaves Height - 9.5m

Unit size: -

Unit of measurement: m2

ERC: £606

Superseded codes: 41P09G, 41P29G, 41R08X, 41U29G, 41U49G

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P543

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 501 - 1,000m2

Tech 2: Eaves Height - 24m

Unit size: -

Unit of measurement: m2

ERC: £909

Superseded codes: 41P321, 41RO4U

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P64B

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 501 - 1,000m2

Tech 2: Eaves Height - 3.5m

Unit size: -

Unit of measurement: m2

ERC: £589

Superseded codes: 41P06C, 41P26C, 41R04B, 41U26C, 41U46C, 41Z06C, 41Z16C

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Industrial Buildings

CG Code: 41P65E

Specific: Uninsulated Buildings

Descriptive: Sheet Metal Cladding

Tech 1: 501 - 1,000m2

Tech 2: Eaves Height - 9.5m

Unit size: -

Unit of measurement: m2

ERC: £670

Superseded codes: 41P07G, 41P27G, 41R04X, 41U27G, 41U47G, 41Z07G, 41Z17G

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

ERC: £1,001

Superseded codes: 41P00A, 41P20A, 41U20A, 41Z00A, 41Z10A

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with DPM and Mesh,150mm thick up to 10,000m2, 200mm thick over 10,000m2 GIA; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: -

Cost information notes: The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

CG Code: 51Z003A

Specific: Mooring Dolphin

Descriptive: Multi Pile

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: Each

ERC: £2,315,695

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: A mooring dolphin is a structure designed to resist mooring line (rope, cable or chain) tensions, rather than berthing impact forces. Generally, the loading applied to mooring dolphins is less than berthing dolphins, with mooring loads resisted by a number of lines fixed to multiple structures.

Referencing details: Number and type of dolphins (monopile or multi pile).

Cost information notes: Costs required for ships in the size range from 10,000 DWT - 300,000 DWT, Ships of less than 10,000 DWT generally do not require berthing dolphins as ships of this size are, usually moored against “fenders” on the berthing head. The cost quoted reflects an addition of 35% for risk bias. No adjustments for contract size, fees and location are appropriate. Risk bias factors include; security restrictions, the method of working out over water, water depth, tidal range, environmental conditions, environmental designation, operational limitations and ground conditions. The level of any such addition should be reviewed taking into consideration the overall parameters on risk bias, as set out in Rating Manual: Section 5a : Valuation of all property types: Jetties Maritime and Waterways and the individual facts relating to the asset. For the purposes of indexation, the cost should be adjusted by reference to the BCIS General Civil Engineering Cost Index, Series 1191.

CG Code: 51Z001B

Specific: Berthing Heads

Descriptive: up to 50,001 - 150000 DWT (deadweight tonnes)

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £5,754

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Berthing heads are jetty structures that vessels berth against ('berth' means the ship is tied up to the jetty/dock for a period of time) and may incorporate strongpoints with berthing and mooring structures located at these. They are typically located in deeper water.

Referencing details: The plan area (m2) and loading capacity are key survey requirements. The plan area should be recorded to include the berthing head and any adjoining pipe rack. These areas should be recorded separately (i.e. berthing head 1000m2, pipe rack 1000m2). The loading capacity should be recorded in deadweight tonnes (DWT). Details including surfacing and the type of structure (steel, concrete, timber) should also be noted.

Cost information notes: This cost should be applied to all berthing heads on "T" shaped jetties. Costs required for ships in the size range from 10,000 DWT - 300,000 DWT, Ships of less than 10,000 DWT generally do not require berthing dolphins as ships of this size are, usually moored against "fenders" on the berthing head. The cost quoted reflects an addition of 35% for risk bias. No adjustments for contract size, fees and location are appropriate. Risk bias factors include; security restrictions, the method of working out over water, water depth, tidal range, environmental conditions, environmental designation, operational limitations and ground conditions. Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Pontoons are flotation devices or floating structures used to create platforms, floating docks, boat hulls, bridges, work platforms, and floating homes. They are more heavily engineered than the pontoons typically found in marina environments and are normally a concrete structure which is attached to dolphins (piles) which permit the pontoon to move vertically to accommodate changes in water level whether within a dock or due to tidal changes. The dolphins will typically be smaller than those referenced elsewhere in this document and are used simply to anchor a pontoon in place. Both the pontoon and the bridge are measured by reference to the surface area of the structure: length x width. Pontoons are floating platforms capable of accommodating the berthing of off-shore vessels and linked to the adjacent land/wharf by a bridge. They are more heavily engineered than the pontoons typically found in marina environments and are normally a concrete structure which is attached to dolphins (piles), anchors and other forms of attachment which permit the pontoon to move vertically to accommodate changes in water level whether within a dock or due to tidal changes.

Referencing details: The surface area of the structure (m2), length x width.

Cost information notes: The cost quoted here reflects ideal conditions and has not been adjusted for any site specific risks, please refer to the Jetties and Maritime Structures Practice Note for guidance on adjustments to be made. CG Code: 51Z016

Specific: Shore Arm & Approach Way (Access from Shore/Riverside to Berthing Heads)

Descriptive: Piperack / Non Commercial Traffic

Tech 1: Below 10Kn / m2

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £3,169

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: These are jetty structures that provide walkways or roadways and/or pipe racks from shore to boat/ship berths located in deeper water. The typical form of construction is an open structure comprising a suspended reinforced concrete deck supported by steel tubular piles, however structures in shallower water may use a closed structure using granular infill between a pair of walls with ties between. Class 1 – Pedestrian and Light Vehicle Loading /Piperack = 10kN/m2 – This Classification considers the following vehicle types for use. All Vehicles of gross weight of 17 tonnes based on a maximum axle loading of 100KN and an axle spacing of 3.5 and 5.8m. This is attributed to Fire Engines, and light goods vehicles. Class 2 – Roadway > 10kn/m2 but = 40kN/m2 – All Normal Highway traffic without special assessment (Up to gross weight of 44 tonnes based on a maximum axle loading of 115KN). Class 3 – Heavy Load >40kN/m2 – Abnormal Loads

Referencing details: The plan area (m2) and loading capacity are key survey requirements. The plan area should be recorded to include the roadway and any adjoining pipe rack. These areas should be recorded separately (i.e. roadway 1000m2, pipe rack 1000m2). The loading capacity (kN/m2) and the use of the structure should be recorded i.e. is it used for pedestrian loading, for vehicles and/or for heavy loading. Details including surfacing and the type of structure (steel, concrete, timber) should also be noted.

Cost information notes: Costs required for ships in the size range from 10,000 DWT - 300,000 DWT, Ships of less than 10,000 DWT generally do not require berthing dolphins as ships of this size are, usually moored against “fenders” on the berthing head. The cost quoted reflects an addition of 35% for risk bias. No adjustments for contract size, fees and location are appropriate. Risk bias factors include; security restrictions, the method of working out over water, water depth, tidal range, environmental conditions, environmental designation, operational limitations and ground conditions. The level of any such addition should be reviewed taking into consideration the overall parameters on risk bias, as set out in Rating Manual: Section 5a : Valuation of all property types: Jetties Maritime and Waterways and the individual facts relating to the asset. For the purposes of indexation, the

cost should be adjusted by reference to the BCIS General Civil Engineering Cost Index, Series 1191.

Jetties Maritime and Waterways

CG Code: 51Z017

Specific: Shore Arm & Approach Way (Access from Shore/Riverside to Berthing Heads)

Descriptive: Roadway

Tech 1: Above 10kn/m2 but below 40kn/m2

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £4,669

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: These are jetty structures that provide walkways or roadways and/or pipe racks from shore to boat/ship berths located in deeper water. The typical form of construction is an open structure comprising a suspended reinforced concrete deck supported by steel tubular piles, however structures in shallower water may use a closed structure using granular infill between a pair of walls with ties between. Class 1 – Pedestrian and Light Vehicle Loading /Piperack = 10kN/m2 – This Classification considers the following vehicle types for use. All Vehicles of gross weight of 17 tonnes based on a maximum axle loading of 100KN and an axle spacing of 3.5 and 5.8m. This is attributed to Fire Engines, and light goods vehicles. Class 2 – Roadway > 10kn/m2 but = 40kN/m2 – All Normal Highway traffic without special assessment (Up to gross weight of 44 tonnes based on a maximum axle loading of 115KN). Class 3 – Heavy Load >40kN/m2 – Abnormal Loads

Referencing details: The plan area (m2) and loading capacity are key survey requirements. The plan area should be recorded to include the roadway and any adjoining pipe rack. These areas should be recorded separately (i.e. roadway 1000m2, pipe rack 1000m2). The loading capacity (kN/m2) and the use of the structure should be recorded i.e. is it used for pedestrian loading, for vehicles and/or for heavy loading. Details including surfacing and the type of structure (steel, concrete, timber) should also be noted.

Cost information notes: Costs required for ships in the size range from 10,000 DWT - 300,000 DWT, Ships of less than 10,000 DWT generally do not require berthing dolphins as ships of this size are, usually moored against “fenders” on the berthing head. The cost quoted reflects an addition of 35% for risk bias. No adjustments for contract size, fees and location are appropriate. Risk bias factors include; security restrictions, the method of working out over water, water depth, tidal range, environmental conditions, environmental designation, operational limitations and ground conditions. The level of any such addition should be reviewed taking into consideration the overall parameters on risk bias, as set out in Rating Manual: Section 5a : Valuation of all property types: Jetties Maritime and Waterways and the individual facts relating to the asset. For the purposes of indexation, the

cost should be adjusted by reference to the BCIS General Civil Engineering Cost Index, Series 1191.

Jetties Maritime and Waterways

CG Code: 51Z020A

Specific: Dredging

Descriptive: Loose Deposits

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m3

ERC: £48

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Dredging is the process of excavating or removing sediment, debris, or other material from the bottom of bodies of water, such as rivers, lakes, harbours, or oceans. It is primarily done to deepen waterways, maintain navigation channels, control erosion, restore water bodies, or extract valuable minerals and resources.

Referencing details: -

Cost information notes: The cost quoted here reflects ideal conditions and has not been adjusted for any site specific risks, please refer to the Jetties and Maritime Structures Practice Note for guidance on adjustments to be made. No adjustments for contract size, fees and location are appropriate.

Description: Three storey building comprising laboratories with open plan write-up offices. Roof mounted plant covers most of the building footprint and services run in a dedicated service zone. Client furniture and fittings are excluded. Building Construction: Foundations - Reinforced concrete pad and perimeter foundations with 200mm thick slab. Frame - Insitu reinforced concrete frame with steel frames to roof plant rooms. Upper Floors - Flat reinforced concrete slabs 300mm thick. Roof - Stainless steel sheets. Stairs - concrete stairs with metal and glazed balustrades. External Walls - Stainless steel sheets and aluminium curtain walling. Windows and Doors - Double glazed aluminium. Internal Walls - Dry-lined full height partitions and glazed screens. Internal Doors - laminate, veneered solid core door sets. Internal Finishes - Walls generally plastered and painted; floors tiled (reception), vinyl sheet and carpet (offices); ceilings metal tiles with some plasterboard. Fittings - Laboratory modular furniture. Services - toilets, heating with cooling to labs controlled by building management system, full electrical installation including UPS, lifts, fire alarm system, intruder detection, CCTV and access controls, medical gas lines.

Referencing details: Measure to GIA Note special gases. Specialist fixed (built in) equipment egg fume cupboards, autoclaves, driers etc.

Cost information notes: Excludes external works and piling.

Laboratories

CG Code: 42F21F

Specific: Research and Production

Descriptive: 2 or 3 Storeys

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £4,450

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Three storey building comprising laboratories with open plan write-up offices. Roof mounted plant covers most of the building footprint and services run in a dedicated service zone. Client furniture and fittings are excluded. Building Construction: Foundations - Reinforced concrete pad and perimeter foundations with 200mm thick slab. Frame - Insitu reinforced concrete frame with steel frames to roof plant rooms. Upper Floors - Flat reinforced concrete slabs 300mm thick. Roof - Stainless steel sheets. Stairs - concrete stairs with metal and glazed balustrades. External Walls - Stainless steel sheets and aluminium curtain walling. Windows and Doors - Double glazed aluminium. Internal Walls - Dry-lined full height partitions and glazed screens. Internal Doors - laminate, veneered solid core door sets. Internal Finishes - Walls generally plastered and painted; floors tiled (reception), vinyl sheet and carpet (offices); ceilings metal tiles with some plasterboard. Fittings - Laboratory modular furniture. Services - toilets, heating with cooling to labs controlled by building management system, full electrical installation including UPS, lifts, fire alarm system, intruder detection, CCTV and access controls, medical gas lines.

Lagoons

CG Code: 208L11

Specific: Unlined

Descriptive: 3.0m deep

Tech 1: Based on Gross Internal Volume (GIV)

Tech 2: -

Unit size: m3

Unit of measurement: m^3

ERC: £48

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Lagoons, without clay, polythene or butyl lining. Used for overflow or balancing water flows or for temporary or permanent storage. NOTE: When calculating the surface area for linings it should be assumed that the side walls of the excavation slope at an angle not exceeding 45 degrees (measured internal surface of excavation). Butyl linings are laid over geotextile layer on sand blinding

Referencing details: Costs are £/m3 based on Gross Internal Volume (GIV) of lagoon. All calculations are from existing ground level. Excludes any banks or retaining structures above ground level. NOTE: The lagoon formation is calculated on the volume of earth removed. Where the removed spoil is used to form banks or levees around the excavation to increase the height/volume, then these will need to be a separate calculation. (see earth bunds)

Cost information notes: Excludes, sumps, pumps, chamber and channels. Excludes all External Works such as safety fencing, roads, paths or conduits which will have to be separately costed.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

CG Code: STD020

Specific: Wet side accommodation with 25m long swimming pool

Descriptive: Applicable to a wet only leisure centre with a 25m long swimming pool or the wet side accommodation with a 25m long swimming pool only of a leisure centre with wet and dry facilities.

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £3,141

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: There are great varieties between leisure centres, a few provide just swimming pool facilities whilst other also have dry facilities. This cost is for the wet side accommodation only - a 25m long swimming pool. Generally a two storey building, commonly housing either a 25m long single main swimming pool or a 25m long main pool and a smaller secondary pool together with changing facilities with showers and toilets, café and ancillary storage and office space. Additional wet side facilities may also comprise saunas and spa areas. All facilities may not be present in all buildings. Variations in design, external finishes and construction between buildings. Steel frame with external walls finished with a range of cladding materials is common. Internally the finishes comprise emulsion or ceramic tiling/uPVC sheeting to plastered walls, combination of painted plasterboard and suspended ceilings or exposed underside of roof coverings and combination of vinyl, carpet and ceramic tiling floor coverings on screed. Reception desk, cubicles, lockers and benches together with seating to viewing areas, kitchen fittings to café (if present) and staff areas. Services provision generally comprises specialist pool equipment including water filtration and heating, space heating, extensive sanitary, plumbing and ventilation installations to changing and toilet areas, power, lighting, lift, fire and intruder alarms, data and Audio Visual (AV) installations with possible swimming timing system, additional security installations and sustainable features.

Descriptive: Rubberised Buckets

Tech 1: 10m Height

Tech 2: 60 Degree Slope

Unit size: Each

Unit of measurement: m

ERC: £6,529

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: A continuous belt with flexible, strengthened "rubberised" buckets. These can be made from steel. Driven by a motor and complete with controls and instrumentation. The belt may be contained within support structure with sidewalls. Support structure to belt and motor is included in the cost as is a "flexible" chute to aim the product into a hopper. Construction, angle of lift, type of product, rate of delivery all can vary the cost. The cost provided is an average cost and includes design, erection, installation and on-costs etc.

Referencing details: Record the vertical height of the elevator, length and width of belt (length travelled not total belt length). If available the tonne per hour capacity. The costs relate to the length of the elevator / conveyor not the vertical lift.

Cost information notes: Total length of belt is from end to end of belt. Costs include: Belt, motors, controls, immediate support to belt and side walls, chute to hopper. Costs do not include: Main supporting frame or existing storage hoppers, stairways, housings / covers to belt.

Rateable element: Class 3 (b) escalators

Non-rateable element: -

Adjusted plant and machinery: The item can typically be found on an industrial, commercial or office complex. Some hereditaments may have multiple items, in which case the ERC needs to reflect the number of items.

Number of items adjusted: Supports foundations, hoppers, stairways, walkways and platforms.

Contract size adjustment: See Appendix BEAMS Note 1

Unit of measurement: Each

ERC: £118,534

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Typical modern escalator found in retail and office type locations. 30 degree incline, travelling at 0.5m/sec, standard balustrades have brushed steel panels bolted to a frame. An additional cost is required for glass or enamelled balustrades

Referencing details: Measure floor to floor height. Note quality of the finish, especially the balustrades.

Cost information notes: The costs are based on a standard finish at 0.8m and 1.0m step widths. If it has an enhanced finish, for example enamelled steel or glass, then add using code 3350V1 to the cost of each escalator.

CG Code: 211A03

Specific: Shafts - Steel Frame - Brick Infill (or Concrete Sectional in lieu of Steel/Brick)

Descriptive: Includes Machine room steel frame - profile walls & concrete pit

Tech 1: 1800mm x 1900mm

Tech 2: Floor to height 6.4m

Unit size: -

Unit of measurement: Each

ERC: £25,670

Superseded codes: 211A53

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Shafts for goods or passenger lifts. Serving floors at 3m intervals and constructed of steel stanchions, beams and braces with brick infill 225mm thick. Motor room constructed of steel frame with profiled steel sheeting enclosure. Pit formed in concrete, including bases for lift shaft stanchions (cost of lift not included).

Referencing details: Measure external dimensions, wall thickness and count number of floors served or total height of shaft.

Cost information notes: Excludes the cost of the lift cage and mechanisms.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Lightning Conductors

CG Code: 203X01

Specific: Copper

Descriptive: Strip

Tech 1: 25mm wide

Tech 2: 3mm thick

Unit size: Linear metre

Unit of measurement: m

ERC: £45

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Copper strip bar on all tall objects but mainly chimneys and towers. The top usually extends 1 metre above the structure. The bottom finishes in an earthing rod (min 2.44m depth), which is either hammered into the ground or encased in concrete. In some cases this earth is in the form of a mat set in a pit (where unable to put a rod into the ground). Diameter of earthing rods are 16mm or 20mm. Earthing mats are 900mm x 900mm x 3mm and are buried in pit at least 450mm deep.

Referencing details: Thickness and width of band and height/length.

Cost information notes: Earthing mats and rods may not be accessible to identify on the ground. ss record drawings indicate sizes and locations note of location only will be practicable. Where rods and mats cannot be specifically identified, costs for lowest range items may be used.

Rateable element: Class 2 Table 2 (f) Protection from Hazards Lightning conductors (This would include the earth rod) Earth mat and pit (i) Foundations

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: The item can typically be found on an industrial, commercial or office complex. Some hereditaments may have multiple items, in which case the ERC needs to reflect the number of items.

Contract size adjustment: See Appendix BEAMS Note 1

Maltings

CG Code: 98B001

Specific: Drum Maltings

Descriptive: Germination House (excludes intermediate floors)

Tech 1: 101-250m2

Tech 2: Standard insulated industrial building 14m high, heavier floor slab

Unit size: -

Unit of measurement: m2

ERC: £1,422

Superseded codes: 98B004

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with damp proof membrane (DPM) and Mesh, 250mm thick due to specialist nature of building up to 10,000m2; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with insulation on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal insulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power; Gas fuelled hot air burners; Under slab storm drainage from internal downpipes on building area greater than 1,000m2;

Referencing details: GIA

Cost information notes: Single storey insulated medium process factory building. Excludes any piling and external works. The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Superseded codes: 98B005

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with damp proof membrane (DPM) and Mesh, 250mm thick due to specialist nature of building up to 10,000m2; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with insulation on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal insulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power; Gas fuelled hot air burners; Under slab storm drainage from internal downpipes on building area greater than 1,000m2;

Referencing details: GIA

Cost information notes: Single storey insulated medium process factory building. Excludes any piling and external works. The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Maltings

CG Code: 98B017

Specific: Saladin Maltings

Descriptive: Kilns

Tech 1: Measured as Gross External Volume (GEV)

Tech 2: -

Unit size: m3

Unit of measurement: m3

ERC: £1,992

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Kiln designs are typically simple circular or rectangular, lined stainless steel vessels with a heat source at the bottom, one or two floors — perforated for air flow — to hold the grain, and vents at the top for air evacuation. The modular construction allows for quick and accurate erection at site. Heating systems utilise modern indirect firing methods and as kilning is a highly energy-intensive process, most malting plants use various heat exchangers to reclaim heat from the hot air that leaves the kiln.

Referencing details: External volume of the kiln. Construction details.

Cost information notes: -

Rateable element: Kilns, being a named item in Class 4 Table 4

Non-rateable element: -

Adjusted plant and machinery: Other Class 4 items of plant for consideration as being rateable will include:- Rail tracks and transfer ways for kiln cars Weighbridge pits

Maltings

CG Code: 98B019

Specific: Malt Dresser House

Descriptive: Industrial building Shell (24m height) [as 41P498]

Tech 1: 101 - 250m2

Tech 2: 24m high

Unit size: -

Unit of measurement: m2

ERC: £1,757

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Building Area only; Site strip vegetation; Strip foundations; Column bases; Insulated Concrete GF slab with damp proof membrane (DPM) and Mesh , 250mm thick due to specialist nature of building up to 10,000m2; Steel Portal frame with bolts and baseplates; Coated galvanised trapezoidal roof sheets with no insulation, on steel purlins; Roof lights; valley gutters; matching fascia and soffit; Rainwater downpipes and gutters; trapezoidal uninsulated wall system cladding on cladding rails; External roller shutter doors and personnel doors; Single phase electrics, lighting and power ; EXCLUDES heating ; Under slab storm drainage from internal downpipes on building area greater than 1,000m2

Referencing details: GIA

Cost information notes: Single storey uninsulated medium process factory building. Excludes any piling and external works. The data consists of a typical Industrial shell. Works include the Industrial shell as described and includes works up to 1m perimeter to the building (1m wide paving slabs & foul/storm drainage), The cost include 2 no. personnel doors and roller shutters are included at 1 door up to 1,000m2 , 2 roller doors over 1,000m2 (GIA), and 4 roller doors over 5,000m2. Costs are for the shell only and do not include for internal rooms such as offices or toilets which should be added for separately. See Variations for assistance.

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: If Cavity Wall construction to lower walls then measure relevant wall area and use code 41P1V1, single block walls are cost neutral. Additional roller shutter doors over and above the beacon specification should be added using code 41P1V2 . Additional personnel doors over the assumed 2no. - add Code 41P1V3. If heating is required an addition using code 41P1V4 (GIA) should be made to the beacon cost. Internal offices (in Industrial complexes) should be added by reference to Cost Guide code series 42P04A - 42P40V, Internal WC - 42P40W

Maltings

Descriptive: Kilns

Tech 1: Measured as Gross External Volume (GEV)

Tech 2: -

Unit size: m3

Unit of measurement: m3

ERC: £1,992

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Kiln designs are typically simple circular or rectangular, lined stainless steel vessels with a heat source at the bottom, one or two floors — perforated for air flow — to hold the grain, and vents at the top for air evacuation. The modular construction allows for quick and accurate erection at site. Heating systems utilise modern indirect firing methods and as kilning is a highly energy-intensive process, most malting plants use various heat exchangers to reclaim heat from the hot air that leaves the kiln.

Referencing details: External volume of the kiln. Construction details.

Cost information notes: -

Rateable element: Kilns, being a named item in Class 4 Table 4

Non-rateable element: -

Adjusted plant and machinery: Other Class 4 items of plant for consideration as being rateable will include:- Rail tracks and transfer ways for kiln cars Weighbridge pits

Description: Freestanding tower, triangular or square on plan, comprising galvanized tubular steel legs with lattice work rod or angle section bracing struts. Mass concrete foundations or individual concrete bases to all legs and complete lightning protection and triangular steel mount. Heights range from 15-60m. Typically the sides of a triangular shaped tower can be up to 7m on plan at base and the tower can comprise of 6m long sections.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: A picocell provides more targeted coverage specific to a particular environment such as within a building. These are normally found inside buildings where coverage is poor or where there are a high number of users such as airport terminals, train stations or shopping centres. They are designed to service specific requirements, hotels, conference centres, floors in buildings, and individual businesses/companies. The power levels are far lower than that of a micro cell determined by the specific requirements of facility to be covered. The coverage is significantly less than micro cells, but antennae can provide 360 degree short distance coverage or uni-directional coverage dependent upon design of site.

Mechanised Coal Depots

CG Code: 52A00A

Specific: Haulage House

Descriptive: -

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £1,001

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: The cost is for a typical basic quality haulage engine shed found at mainly coal industry properties but can be found at other older industrial complexes. Portal Frame, Uninsulated Metal Clad walls & roof, concrete foundations & floor. Can be open fronted with metal mesh screen or enclosed with framed steel door access. The shed will normally have electric light and power. Typical dimensions are buildings up to 35 m2 in foot print and 2.75m high to eaves.

Referencing details: Measure to GIA m2

Cost information notes: -

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: Haulage Machinery

Mechanised Coal Depots

CG Code: 52A00F

Specific: Wagon Unloading

Descriptive: -

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £907

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: The cost is for a basic rail wagon unloading shed. Typically a steel portal frame, plasticoated steel sheet cladding to walls and roof, open ended for access. Also, a concrete floor but some can include a tippler pit. No electrics. 7m high to ridge.

Referencing details: Measure to GIA m2

Cost information notes: Cost is for building construction only and excludes rail tracks, buffers, pits

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: Rail track, buffers and pits.

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Mechanised Coal Depots

CG Code: 52A00K

Specific: Handling

Descriptive: Bagging Plant

Tech 1: -

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £742

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Cost is for a typical bagging shed found at mechanised coal depots but also other mineral handling and bagging plants. The cost provided is for a typical steel portal framed structure which is frequently two storey to provide access to lorries from hoppers on the second floor. The upper part is normally clad with plasticoated steel profile sheeting to roof and walls. The shed can also feature concrete loading ramps, lean to roof over the loading canopy. Cost includes electric light and power.

Referencing details: Measure to GIA m2

Cost information notes: Based on Industrial Building 7m Eaves; uninsulated. Excludes external works or any plant & machinery

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: Conveyors, trestles, pits, walkways, hopper supports if separate from frame of building

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Offices (Fit Out)

CG Code: 34000C

Specific: Cat A (Previously Cat A - Medium)

Descriptive: Construction costs to develop a shell & Core office space to fitted out Cat A

Tech 1: Cost of Cat A is to be added to Code 34000A for complete cost of build up from inception to Cat A

Tech 2: -

Unit size: -

Unit of measurement: m2

ERC: £672

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Usually the Mechanical & Electrical services will be in place, such as, Electrical outlets, Heating & Air conditioning, toilets, raised access floors, suspended ceilings, fire protection systems & basic decorations. A blank canvas.

Referencing details: -

Cost information notes: Note: there is a term used by some landlords called Cat A plus, this is where the landlord provides basic office equipment, sometimes referred to a 'Plug & play'. Whilst having the same fit out as a Cat B, it will not be the same quality or specific to the company

Offices in Industrial Complexes

CG Code: 42P04S

Specific: Administration

Descriptive: 500m2 - 5000m2

Tech 1: Up to 3 storey prestige quality

Tech 2: Superior Industrial

Unit size: -

Unit of measurement: m2

ERC: £2,906

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Modern detached office building. Prestige offices as part of a chemical, oil, or other processing complex or operation. Constructed in high quality materials, contemporary design concealed services etc, for occupation in industrial locations. Construction: Substructure Pad foundations and reinforced 200mm thick concrete ground slab. Frame: concrete or steel. Minimum storey height 3m to accommodate air conditioning. Upper floors: Composite precast concrete with screed topping. Roof: Pitched roof with high quality profiled metal sheeting or slate / tile covering. External walls: Brick cavity wall, rain screen; metal, cladding, curtain walling etc. or a combination of these materials. Windows and Doors: Coated aluminium double glazed windows and external doors automatic / revolving. Internal walls and partitions: Mainly open plan blockwork walls plaster finish and paint some areas with specialised finishes. Toilet cubicles veneer finishes etc. Internal doors: solid doors hardwood veneer finish in hardwood frame matching skirtings and architraves. Floor finishes: High quality raised access flooring, heavy duty edged outlets. Carpets and vinyl's often laid to patterns. Stone or ceramic to common areas. Ceiling finishes: High quality suspended ceilings (concealed grid, moisture resistant, veneers, acoustic) with commensurate computer light fitments. Fittings: Feature areas such as an atrium to the reception / entrance area with hardwood furniture. High quality kitchen (gloss, solid timber units marble work surfaces) and toilet accommodation. High quality / feature sanitary ware (low level close coupled toilets dual flush modern design). Tiled and well equipped kitchen many appliances stainless steel, servery etc. Air conditioning including heating and air cooling. 8 person Lift. Protective installations. Typically rateable firefighting equipment, fire alarms, lightning protection, CCTV and security systems included in the cost.

Pissoir

CG Code: 217P01

Specific: Rising Urinal

Descriptive: Self contained hi tech pop up urinal.

Tech 1: Mains Connected

Tech 2: Remote Control

Unit size: -

Unit of measurement: Each

ERC: £113,331

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Usually located in city centre sites. These items are located below ground during the day but are raised up at night or at relevant times. They are usually raised and lowered by remote control but can be manually operated. The units have 3 stalls (urinals) with wing screens only and are located on a star basis. The unit is telescopic and thus requires a pit only half its height. The pit is concrete lined and has a connection to the main sewer. There is a hydraulic pump (and motor), which raises the central "pole " to which the Pissoir is attached. There is an electrical connection to the mains and a water connection to mains drainage for flushing purposes. The unit is illuminated at night. The pit is some 1.5m in dia. and 1.4 m depth. The Pissoir is some 2.2 m in height when fully extended.

Description: Pits and ducts comprising 300mm thickness reinforced concrete walls and floors rectangular or square on plan. Excludes any pre cast material

Referencing details: Measure internal dimensions and wall thickness where practicable

Cost information notes: For adding a cover to pits and ducts add for the effective floor area of the pit the cost using code 3000V1 ; (in situ composite floor). For differing wall thicknesses adjust 300mm to reflect: 200mm (-20%), 400mm (21%) and 500mm (44%)

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Number of items adjusted: -

Contract size adjustment: See Appendix BEAMS Note 2

Variations: -

Tech 2: 400.0m³

Unit size: -

Unit of measurement: m3

ERC: £243

Superseded codes: -

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: Pits and ducts comprising 300mm thickness reinforced concrete walls and floors rectangular or square on plan. Excludes any pre cast material

Referencing details: Measure internal dimensions and wall thickness where practicable

Cost information notes: For adding a cover to pits and ducts add for the effective floor area of the pit the cost using code 3000V1 ; (in situ composite floor). For differing wall thicknesses adjust 300mm to reflect: 200mm (-20%), 400mm (21%) and 500mm (44%)

Rateable element: -

Non-rateable element: -

Adjusted plant and machinery: -

Description: Generally multi-storey building mainly comprising a custody suite, interview rooms and a van dock. Secondary operational accommodation includes various stores, locker rooms, shower and toilet facilities and offices in addition to ancillary space such as plant rooms. Other accommodation, such as a laboratory may also be present. Commonly of framed construction with a range of cladding to elevations surmounted by a flat or a metal clad pitched roof. Internal finishes and fixtures vary depending on accommodation usage with resin flooring, painted plaster or tiling to walls and fixed furniture to cells. Services comprise central heating, air conditioning, lighting and power with a back-up system, sanitary and plumbing installations with vandal resistant sanitary ware to custody areas, lifts, extensive data, communication and security installations including CCTV, cell call, fire detection and alarm systems. In addition, various sustainable features, such as photovoltaic panels, may be present.

Referencing details: GIA - Gross internal area.

Cost information notes: The cost is applicable to all areas of the main building.

Location factor: Location Adjustment Applicable (See Guidance Notes) - ERC = UK mean of 1.00

Description: A shooting range, firing range or gun range, a specialized facility designed for firearms qualifications, training or practice. Firing range walls are usually constructed of poured concrete, precast concrete, or masonry block. The walls must be impenetrable and provide adequate ballistic protection from stray bullets and back splatter. Floors are constructed from dense reinforced concrete with a smooth surface finish. Floors are usually slanted slightly from up range (shooting lanes) toward the bullet trap downrange to allow for better maintenance and cleaning. Indoor firing range roofs are constructed from steel joists or precast concrete panels with a smooth flat surface that will redirect misfired bullets, facilitate maintenance, and prevent lead build-up. Roof baffles are installed, at a 25–30 degree angle protect ceilings, lighting fixtures, ventilation ducts, and any other unprotected element from stray bullets. Baffles are typically constructed of armoured plate steel covered with fire-rated plywood. Deflectors are similar to baffles, but are not usually covered with plywood; they can be installed, either vertically or horizontally and are used to redirect stray bullets from unprotected fixtures and elements inside the firing range such as doors, windows, and ventilation registers. Shields are constructed of plate steel and plywood. Control rooms or stations houses the central controls for the firing range equipment, communication, lights, and security. The controls are operated by the range master and the designated official responsible for range operation and management. The control station must provide the range master with unobstructed line of sight of the firing lanes and all shooters. Control stations are usually constructed of concrete blocks with bulletproof observation windows. Backstops and bullet traps are used to absorb the energy from the bullet and capture it to prevent overflight beyond the range area. Bullet traps come in a variety of designs and are usually constructed of impenetrable metal plates. The thickness of the plates and the materials used depend on the velocity and energy levels of the projectiles to be fired in the range. Most modern traps consist of angled hardened steel plates that deflect the bullets into other metal plates to remove their energy. The plates must

be resistant to penetration, abrasion and metal fatigue. The traps direct the spent bullets to a collection area in front of the trap or, for high-energy projectiles, at the back of the trap.

Tech 1: 2.50m int height

Tech 2: 21.34m²

Unit size: -

Unit of measurement: Each

ERC: £17,368

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Fire resistant high security. Typically used for onsite storage of records or for personal use. Internal layouts can be designed to exact user requirements. They are delivered in volumetric format (i.e. fully factory assembled) and are placed in position on concrete pads or similar hard-standing. Constructed of insulated plastic-coated steel externally with polyester-coated steel ceiling and wall linings internally backed with plasterboard. Doors are insulated steel-faced and windows are hardwood, internally glazed, with galvanised steel guards. Single units may be linked and / or stacked to form larger complexes. Cost includes sheet vinyl floor covering, fluorescent lighting, socket outlets, electric convector heating units and mechanical extract ventilation. Various optional extras are provided to suit individual requirements, these would include various floor coverings, window options and air conditioning

Referencing details: Measure GIA.

Cost information notes: Costs include simple concrete pad foundations, sheet vinyl floor covering, fluorescent lights, 13 amp socket outlets, electric convector units and mechanical extract ventilation.

Portable buildings

CG Code: 42U45A

Specific: Rubb shelters

Descriptive: Galvanised steel framework

Tech 1: PVC covering

Tech 2: R.C slab and strip beam

Unit size: -

Unit of measurement: m2

ERC: £511

Superseded codes: -

Location factor: Considered Not Applicable at time of Publication

Description: Rubb prefabricated portable structures and buildings have two common features, a galvanised steel frame and a PVC impregnated polyester fabric cover which is tensioned over the frame to provide a tight fitting shell. Variations include provision of alternative materials such as steel cladding or aluminium frame members. Any length of Rubb structure is possible in single span width of between 3 metres to over 79 metres (gap between ribs 3m to 5m). Multispan options are also available to provide for even larger structures. Side and gable walls are vertical to provide maximum space utilisation. These buildings are temporary structures although they have a reasonable life expectancy of over twenty years. Such buildings are frequently used for storage purposes and have minimum mechanical and electrical services. Foundations are a reinforced power-floated concrete slab and perimeter ring beam to which the steel frame is attached. Services include incoming electric service providing basic industrial lighting.

Referencing details: Measure GIA.

Cost information notes: Cost includes a perimeter ring foundation (29m x 0.3m x 0.3m) with a 50mm gravel top to hide anchor connections. There is an allowance for topsoil removal, 150mm type 1 stone and a 250mm slab reinforced with A393 mesh (1 layer). No external perimeter walls are included in the cost. All other external works and service connections are excluded. Although lighting and electrics can be added to the structure, none is included in the cost..

Location factor: Considered Not Applicable at time of Publication

Description: Modular prefabricated units which can be distinguished from conventional Public Conveniences in that the entrance door is also the door of the cubicle. However the unit can also be incorporated into an existing building. Features include direct access, no touch flush and no touch exit. Type 1, 2, 5 & 6 vandal resistant self-cleansing 24 hour operation.
