

# Instructions for Use

## Minor Structural Features, Damage & Completed Repair Online Register

### Minor Structural Features, Damage & Completed Repair Online Register

1. **General.** This MOD Form 799/3D(RC-135W) will remain in the MOD Form 700C to direct use of the Minor Structural Features, Damage & Completed Repair Online Register hosted on the Rivet Joint Mil CAMO SharePoint site. The online register is to be used for registering minor structural features, damage or completed repairs which are within ADS limits, require no further inspection, monitoring or rectification and have no impact for Aircrew. These have the definition of a feature which is not considered to ever be rectified either at forward or PDM – as judged by a G703 holder.

2. **Raising an Entry.** A MWO is to be raised for all instances of minor structural features, damage or completed repairs, detailing the assessment for continued use of the structural feature, damage or completed repair, with the authorized level G703 holder's signature. The MWO Supervisor is responsible for transferring verbatim the MWO details to the online register, sign for doing so on the MWO and ensure all fields on the online register are completed.

3. **Multiple Entries.** Should one MWO be raised to cover more than one structural feature, damage or completed repair, then each shall be identified as a separate entry on the register using the same MWO SNOW reference.

4. **References.** Policy direction and further instruction for use of the Minor Structural Features, Damage & Completed Repair Online Register is provided in AP101B-8400-2(R)1 and RAF Waddington AESOs.
